THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 298—No. 1. TUESDAY, MAY 2, 1922. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Renewal of Forfeited Cases.

A petition for the renewal of a forfeited application need not be signed by the inventor or assignee, but may be signed by the attorney.

A power of attorney in the original application authorizing an attorney to transact all business in the Patent Office in connection with the application construed to be of sufficient scope to include the signing of a petition for renewal and the subsequent prosecution of the application. (*Ex parte Agee*, 101 O. G., 1609.)

The Official Gazette.

The Official Gazette is published every Tuesday simultaneously with the weekly issue of patents. From January 1, 1872, (the commencement of its publication) to June 30, 1883, it was published and bound in semi-annual volumes; from July 1, 1883, to December 31, 1902, in quarterly volumes; from January 1, 1903, to December 31, 1908, in bimonthly volumes; since January 1, 1909, in monthly volumes. Terms: Annual subscriptions, $5; monthly, 50 cents. For postage upon foreign subscriptions, except those from Canada and Mexico, $5 or more, as required. Moneys received from foreign subscribers in excess of the subscription price of $5 will be deposited to the credit of the subscriber and applied to postage upon the subscription as incurred. Single copies, 10 cents; if mailed to foreign countries, excepting Canada and Mexico, 10 cents additional for postage. *Payment in advance required. No club rates. No discount to newsdealers. No sample copies.* All subscriptions must commence with the beginning of a volume. None taken for less than an entire volume. All orders should be addressed to "The Superintendent of Documents, Government Printing Office, Washington, D. C."

Important Information.

In ordering manuscript copies much time will be saved if the order states specifically what is desired, viz:

Application as originally filed. (Petition, specification oath, and drawings as received.) Application as amended. (Petition, specification, oath, and drawings with amendments entered.)

Application as allowed. (Petition, specification, oath, and drawings as passed by the Examiner for issue.)

Original application. (Facsimile petition, specification, oath, and drawings at present time.)

Specification as originally filed. (As received in Office.)

Specification as amended. (With amendments entered.)

Specification as allowed. (As passed by the Examiner for issue.)

Original specification. (Facsimile at present time.)

File-wrapper. (File-wrapper only.)

File-wrapper and contents. (File-wrapper, contents of record, including photoprints of any tracings or of prints within file-wrapper. In patented cases, printed copy of the specification and drawings of the patent is furnished.)

File-wrapper, contents, and drawings. (File-wrapper and all of the contents of record, including photoprints of any tracings, exhibits, or prints within the file-wrapper. In pending cases, photoprints of the pending drawings only, omitting any canceled. If patented, copy of the specification and drawings of the patent being furnished, photoprints are not made of the original drawings unless specially ordered. If canceled drawings are wanted, they must also be specially ordered.)

Assignment. (Give the liber and page of the record as well as the name of the inventor.)

Printed publications in possession of the Office. (Give title and date of publication, also page and exact portion to be copied.)

Orders for copies of any other records not mentioned above must state specifically the exact paper to be copied.

NOTICE.—CHANGES IN PATENT OFFICE FEES—EFFECTIVE APRIL 19, 1922.

The act of Congress approved February 18, 1922, amends section 4934, Revised Statutes, so as to provide a fee on filing each original application for a patent, except in design cases, of $20 instead of the present fee of $15.

The act also provides, in addition to the present fees for recording assignments or other papers, that there shall be paid for each additional patent or application included or involved in one writing, where more than one is so included or involved, 25 cents additional.

These new fees are effective on and after April 19, 1922.

Applications for patent, except in design cases, received on or after April 19, 1922, with only $15 filing fee will not be entered, but will be given a filing date and serial number as of the day the full fee of $20 is received by the Office.

Condition of Applications Under Examination at Close of Business April 22, 1922.

(Total number of applications waiting action, excluding Trade-Mark division, 65,203; Trade-Mark division, 8,629. Oldest new case, Feb. 26; oldest amended, Mar. 23, 1921. The dates given are 1921 except where * indicates 1922.)

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
		New.	Amended	
314	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders.	Oct. 24	Nov. 2	834
128	2. BALDWIN, M., Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants, and Flowers.	May 23	July 5	1,817
175	3. RICH, WM. J., Electric Heating and Rheostats; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Aug. 29	May 13	840
234	4. MERRITT, A. D., Conveyers; Conveyers, Fluid Current; Conveyers, Power Driven; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	July 1	Dec. 12	1,512
167	5. MACNAB, J. F., Bookmaking; Books, Strips, and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	June 30	July 9	1,045
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	July 28	Dec. 22	1,317
312	7. JARBOE, C. G., Games and Toys; Optics; Photography; Velocipedes	July 26	Oct. 18	2,357
133	8. CLIFT, J. W., Beds; Chairs and Seats; Flexible-Sheet-Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	*Jan. 27	*Mar. 13	709
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid Current; Pumps.	Mar. 9	*Jan. 6	1,057
235	10. MITCHELL, T. H., Land Vehicles; Land Vehicles, Animal Draft Appliances; Land Vehicles—Bodies and Tops; Land Vehicles—Dumping; Land Vehicles, Wheel Substitutes; Motor Vehicles.	Sept. 9	*Feb. 13	1,120
154	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	Dec. 1	Dec. 22	529
322	12. PIERCE, P. P., Machine Elements	Oct. 1	Dec. 17	1,101
329	13. NIXON, G. A., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Apr. 20	Dec. 21	1,914
323	14. BRUMBAUGH, N. J., Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire Working.	July 1	*Feb. 27	869
308	15. REDROW, W. L., Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	May 9	June 22	1,965
112	16. BACKUS, C. D., Radiant Energy; Telegraphy; Telephony	Apr. 25	May 7	2,000
307	17. RAFTER, G. S., Coating, Label Pasting, and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet-Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Aug. 1	Nov. 7	1,339
229	18. PORTER, M. E., Liquid Heaters and Vaporizers; Motors, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices; Steam and Vacuum Pumps.	Feb. 26	Apr. 22	2,249
236	19. GLASCOCK, E. S., Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Rheostats and Humidostats.	May 9	Aug. 9	1,209
179	20. WRIGHT, H., Artificial Body Members; Miscellaneous Hardware; Closure Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Nov. 1	Oct. 26	1,813
212	21. THURBER, W. L., Continuous-Strip Feeding; Textiles; Textiles, Braiding, Netting, or Lace Making; Textiles, Cloth Finishing; Textiles, Fiber Preparation; Textiles, Knitting; Textiles, Spinning; Textiles, Twisting or Twining; Textiles, Weaving; Winding and Reeling.	June 1	Sept. 19	945
249	22. COLWELL, J. H., Aeronautics, Firearms; Ordnance; Ammunition and Explosive Devices; Ammunition and Explosive-Charge Making.	Sept. 2	Dec. 20	501
217	23. GROESBECK, W. D., Acoustics; Coin Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Mar. 28	Sept. 19	794
144	24. DURAS, C. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	July 2	Nov. 28	1,169
315	25. LIGHTFOOT, J. H., Agitating; Butchering; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	*Jan. 19	*Feb. 17	401
105	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime-Mover Dynamo Plants	Aug. 17	Sept. 23	945
214	27. ANDERSON, L. S., Abrading; Brush, Broom, and Mop Making; Brushing, Scrubbing, and General Cleaning; Laundry; Washing Apparatus.	Aug. 2	Sept. 12	1,856
225	28. BENSON, A. R., Internal-Combustion Engines	Aug. 8	July 14	1,743
147	29. MORRIS, B. N., Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool-Handle Fastenings; Wheelwright Machines; Wood Sawing; Wood Turning; Woodworking; Woodworking Tools.	July 5	*Feb. 15	643
152	30. SULLIVAN, M. R., Illuminating Burners; Illumination; Liquid and Gaseous Fuel Burners; Typewriting Machines.	Oct. 7	*Feb. 3	1,403
172	31. HOLMES, W. N., Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	May 3	July 2	2,167
278	32. BANCROFT, J. F., Gas and Liquid Contact Apparatus; Heat Exchange	June 4	Dec. 24	1,072
70	33. COWLES, W. A., Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Aug. 23	Nov. 12	959
304	34. SIMPSON, G. R., Electricity-Transmission to Vehicles; Pneumatic Dispatch; Railways; Railway Rolling Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track Sanders; Vehicle Fenders.	*Jan. 25	*Feb. 16	413
52	35. REYNOLDS, E. C., Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet.	Nov. 8	*Jan. 13	892
204	36. MORTON, G. L., Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring.	Oct. 27	Oct. 15	1,750
107	37. TAYLOR, E. C., Electricity, Circuit Makers and Breakers	June 8	June 13	1,942
378	38. IDE, G. R., Animal Husbandry; Earth Boring; Fishing, Trapping, and Vermin Destroying; Mining, Quarrying, and Ice Harvesting; Stationery; Stoneworking; Wells.	Sept. 21	Sept. 21	1,588
220	39. COWLES, A. W., Fluid-Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	Mar. 14	May. 3	2,257
273	40. OBERLIN, J. J., Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Apr. 25	July 5	2,891
125	41. BROWN, J. I., Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	Nov. 19	Nov. 8	732
114	42. CUTTING, H. O., Electrical Conduits and Housings; Electric Signaling; Electric Lamps	June 6	May 24	1,871
382	43. HOPKINS, F. M., Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire Extinguishers; Sewerage; Surgery; Liquid Separation or Purification.	May 23	July 11	1,887
253	44. SHAFFER, C. H., Air Guns, Catapults, and Targets; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Refrigeration; Ships.	July 22	*Mar. 21	491
379	45. GILES, A. H., Journal Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices	Sept. 22	*Jan. 7	1,219
332	46. WOLCOTT, C. L., Curtains, Shades, and Screens; Educational Appliances; Fire Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Aug. 26	Oct. 31	1,295
264	47. BARKER, H., Brakes; Clutches and Power Stop Control; Elevators; Fluid-Pressure Brake and Analogous Systems.	June 13	Oct. 10	1,313
118	48. ROEPKE, O. B., Electricity Conductors; Electricity, General Applications	Feb. 26	Mar. 23	2,417

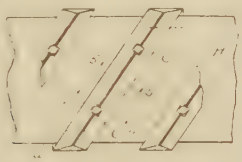
PATENTS

GRANTED MAY 2, 1922

1,414,333. PROCESS FOR THE PREPARATION OF THE DI-ALKYL-AMINO-ETHYL DERIVATIVES OF THEOBROMINE. JEAN ALTWEGG, Lyon, France, assignor to Societe Chimique des Usines du Rhone, (Anciennement Gilliard, P. Monnet et Cartier,) Paris, France. Filed June 29, 1920. Serial No. 392,655. 2 Claims. (Cl. 23—24.)

2. A new derivative of theobromine, di-ethylamino-ethyl theobromine, melting at 67° C., fairly soluble in water, forming aqueous solutions having a strongly alkaline reaction, soluble in most organic solvents, less soluble in ether and petroleum ether.

1,414,334. LUG FOR TREAD SURFACES. NAHUM C. BEMENT, Rockford, Ill. Filed Nov. 15, 1920. Serial No. 424,045. 4 Claims. (Cl. 301—44.)

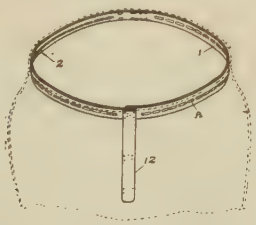


4. Lugs forming tread surfaces of wheel rims, each comprising an angular hollow body member attached directly to the wheel rim, reinforced portions near each end of the lug, a flange at each end of the lug extending at an angle to the longitudinal center thereof, the flanges extending parallel with the edge of said wheel rim, and means extending through the reinforced portions of each lug and the wheel rim for detachably and independently securing each lug to the wheel rim.

1,414,335. PROCESS FOR OBTAINING HALOGEN DERIVATIVES OF INDIGO AND OF ITS HOMOLOGUES. MAURICE BOUVIER, Lyon, France, assignor to Societe Chimique des Usines du Rhone, (Anciennement Gilliard, P. Monnet et Cartier,) Paris, France. Filed Oct. 1, 1918. Serial No. 256,400. 5 Claims. (Cl. 23—24.)

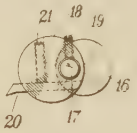
3. The process of manufacturing halogenated derivatives of indigo and its homologues which consists in mixing together a solution of sulphuric chlorhydrin, phosphoric pentoxide and bromine, stirring the mixture, and adding thereto a derivative of ortho-tolylindigo.

1,414,336. GARMENT SUPPORT. WILLIAM HENRY BRASHER, Toronto, Ontario, Canada. Filed Jan. 21, 1921. Serial No. 438,936. 3 Claims. (Cl. 2—142.)



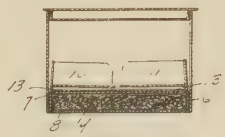
1. A garment support comprising a pair of sections of yieldable material secured together in longitudinally overlapping position and adjustable longitudinally in relation to each other, and straps secured to the free ends respectively of said sections and projecting therefrom at right angles, one of said straps being provided with projections constituting hooks and the other of said straps being provided with loops to receive said projections for securing said straps together in superposed position.

1,414,337. DEVICE FOR BORING CONNECTING RODS. WILLIAM J. BROWN, New York, N. Y. Filed June 2, 1920. Serial No. 386,003. 4 Claims. (Cl. 77—3.)



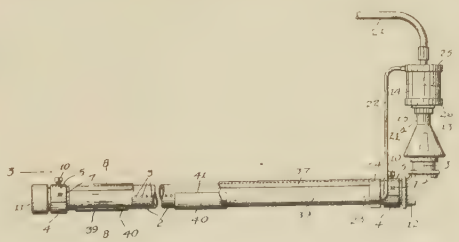
1. In a bearing boring device for connecting rods having a threaded tool spindle, tool spindle feeding means engaging the spindle threads, spring means for keeping said feeding means in engagement with the spindle and facilitating said feeding means to be lifted by the threads of and to disengage the spindle when the latter meets resistance.

1,414,338. COMBINED HUMIDIFIER AND PALETTE ATTACHMENT. EDWARD BRUCK, Spokane, Wash. Filed Apr. 12, 1921. Serial No. 460,860. 2 Claims. (Cl. 41—4.)



1. The combination in a box as described having a close-fitting lid and a hollow, false bottom, removable, and containing absorbent material, of trays having paint stalls as described, and clips on the underside of said trays resting on the false bottom for elevating the trays to permit circulation of humid air.

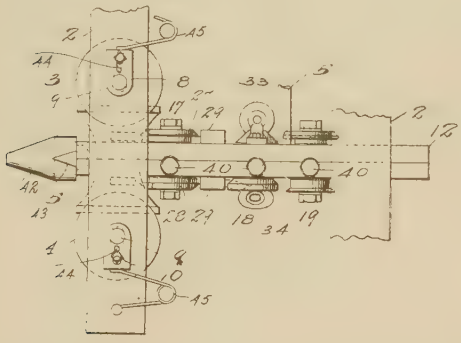
1,414,339. PRINTING PRESS. CHARLES H. COCHRANE, New York, N. Y. Filed Nov. 25, 1918. Serial No. 263,960. 21 Claims. (Cl. 34—18.)



4. In a printing press, means for heating some part of the press, means for supplying fuel to the heating means,

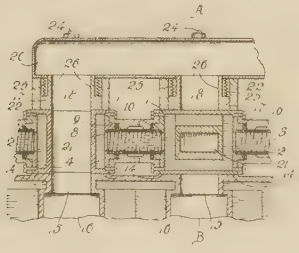
and fuel controlling means, operable by the vibratory movement of the press to permit the feed of fuel when the press is operating at normal speed and operable by the force of gravity to arrest the supply of fuel when the speed of operation of the press is appreciably diminished or the press stopped.

1,414,340. BENDING MACHINE. FREDERICK C. CROWE, Yakima, Wash., assignor to Variety Manufacturing Company, Yakima, Wash. Filed Apr. 12, 1921. Serial No. 460,688. 5 Claims. (Cl. 153—28.)



2. The combination with a longitudinally disposed central housing of guide rollers and progressive bending rollers supported therein and operating means for said rollers within the housing, each set of rollers comprising a pair of rollers at each side of the housing arranged in inverted relation whereby oppositely extending flanges are formed along the proximate edges of a sheet of metal, for the purpose described.

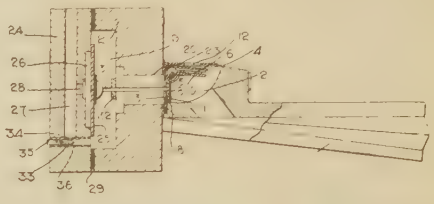
1,414,341. VALVE FOR INTERNAL-COMBUSTION AND OTHER ENGINES. PETER FRANCIS DANIEL, Christchurch, New Zealand. Filed Nov. 18, 1919. Serial No. 338,787. 1 Claim. (Cl. 123—59.)



In a rotary valve the combination of a series of port-faces, a ported rotor adapted to co-act therewith and consisting of a series of sections conjoined end-to-end by flexible connections adapted to permit the flow of a circulation of water therethrough and through hollow cores in said rotor sections, and means for transmitting the necessary drives to said sections and for relieving said flexible connections of torsional strain.

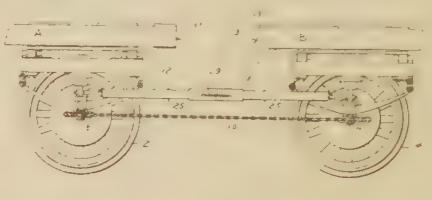
1,414,342. PIANO-PLAYER ACTION. EDGAR HENRY DODDS, Stroud Green, England. Filed Sept. 3, 1920. Serial No. 408,011. 6 Claims. (Cl. 84—50.)

1. In a pneumatic piano player action, a pneumatic, a valve chamber at one end of the pneumatic, an L shaped plate to close the upper and rear faces of this chamber, packing strips around the edges of the valve chamber over which the L shaped plate is secured, recesses in the sides of the valve chamber, a hinged valve plate, a pin located in the angle of the valve plate and projecting into



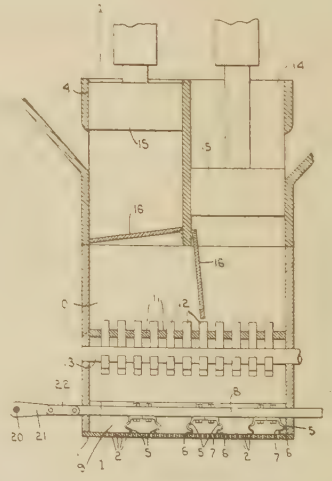
the recesses in the sides of the valve chamber, in which it is secured by the L shaped cover plate.

1,414,343. REACH. LORING B. DOE, San Francisco, Calif. Filed Sept. 22, 1920. Serial No. 412,083. 5 Claims. (Cl. 280—33.2.)



1. A reach for connecting two vehicles composed of a flexible draft means, and a rigid separator means, the latter comprising two members adapted to overlap each other at their meeting ends for a portion of their length, sleeves slidable on said members and adapted to ensleeve said overlapping portions, and means for securing said sleeves together to stabilize the device.

1,414,344. PEAT PRODUCT. FRED T. DOW, Bangor, Me. Filed Nov. 15, 1919. Serial No. 338,344. 4 Claims. (Cl. 44—27.)

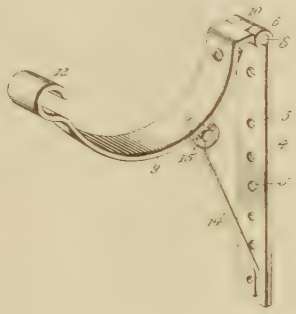


4. A peat product in the form of individual stick-line fragments of closely-compacted peat, each fragment having a substantially uniform cross-sectional dimension from one end to the other which is considerably less than half an inch.

1,414,345. EAVES-TROUGH HANGER. HERMAN EEFTINK, Leopold, Mo. Filed Mar. 23, 1921. Serial No. 454,671. 3 Claims. (Cl. 108—29.)

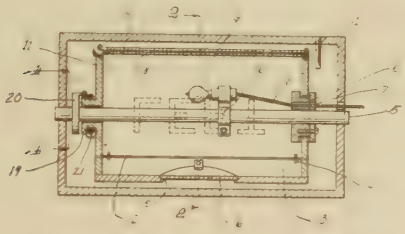
1. An eaves trough hanger comprising a base plate, an arcuated bracket hinged to the upper portion thereof,

and means carried on the underside of said bracket and adjustably connected with said base plate for retaining



the bracket in various adjusted positions and substantially supporting the same.

1,414,346. AUTOMOBILE SIGNAL. JOHN B. EGER, Chicago, Ill. Filed June 20, 1921. Serial No. 478,976. 6 Claims. (Cl. 116—43.)



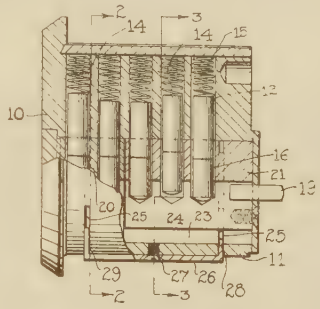
1. In a signal of the character described comprising a casing having an opening therein; a drum mounted in said casing; indicia punched in the periphery of said drum; an opening in said drum; a plate for said opening; spring clips on said plate adapted to secure same in said opening; a lens mounted in said plate, said plate being normally retained before the opening in said casing; and means for revolving said lens and said indicia past the opening in said casing, substantially as described.

1,414,347. PROCESS OF MANUFACTURING TIN PLATES. TALIESIN EVANS, Llanelly, Wales. Filed May 3, 1921. Serial No. 466,626. 1 Claim. (Cl. 29—18.)

A process of manufacturing tin plates, consisting of the following steps: first, heating metallic bars and passing said heated bars through a pair of rolls, at first singly, then in pairs, one superposed upon the other, to reduce them to plate form and attain the required length; secondly, doubling the resulting plates; thirdly, reheating them in a second furnace, and fourthly, passing the doubled and heated plates through a second pair of rolls at first singly and then in pairs, one superposed upon the other.

1,414,348. PIN-TUMBLER LOCK. MORRIS FALK, Leominster, Mass. Filed Mar. 10, 1921. Serial No. 451,138. 3 Claims. (Cl. 70—47.)

1. In a pin tumbler lock, the combination of a pair of independently rotatable cylinders arranged end to end out of contact, each having pin holes for locking pins and having a circumferential groove, a frame provided with a corresponding number of spring pressed locking pins, and a plate having its ends projecting into said grooves for holding said cylinders independently against longitudinal motion.



2. In a pin tumbler lock, the combination of a pair of cylinders placed end to end, each of said cylinders having a row of holes for locking pins, a frame provided with a single row of locking pins, some for engagement in said holes in one cylinder, and the rest for engaging in the holes of the other cylinder, one of said cylinders having a longitudinal key-hole intersecting the row of pin holes and being provided with a longitudinal space extending under the key-hole whereby the bottom of the key-hole is left entirely open to prevent tampering with the pins entering the holes of the other cylinder.

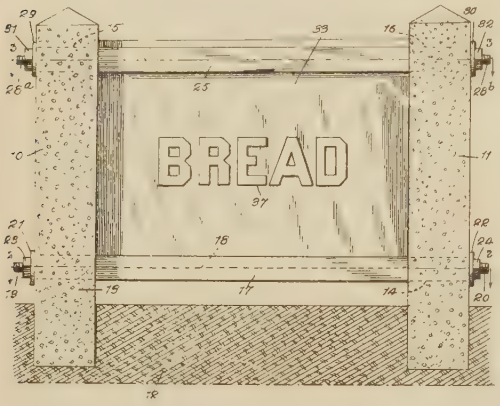
1,414,349. GARMENT. HATTIE FELS, New York, N. Y. Filed Dec. 5, 1921. Serial No. 519,959. 2 Claims. (Cl. 2—144.)

2. As an improved article of manufacture, a garment comprising an upper portion with vertically-disposed enlarged elongated opening, and a bifurcated lower portion, the latter having a rear flap, an elastic band at the upper edge of the said flap, and straps and cooperating means on the flap and upper portion whereby the upper portion may be adjusted vertically relatively to the lower portion in accordance with the height of the wearer.

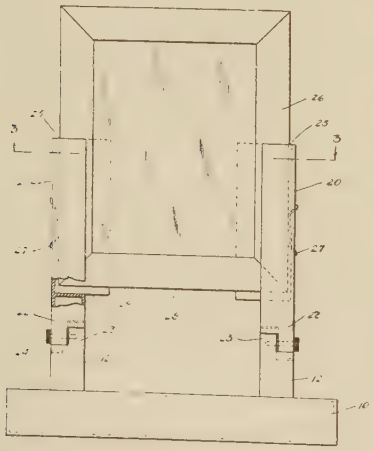
1,414,350. STATIONARY SIGN CONSTRUCTION. WILLIAM B. FINK, New York, N. Y. Filed Aug. 22, 1921. Serial No. 494,354. 3 Claims. (Cl. 40—125.)

1. A sign construction, comprising two columns supported in stationary upright positions in spaced relation and the columns having in their lower parts a removable bar disposed crosswise between the columns and the bar

having a groove in its upper lengthwise edge, two bars removably disposed in spaced parallel relation between the upper parts of the columns so that the space therebetween is in register with the groove of the lower bar, means on the ends of the grooved lower bar for releasably fastening the bar to the columns, means on the ends of the pair of bars for releasably locking the bars together and for detachably fastening the bars to the columns, and a surface element removably mounted in the space and in the groove of said bars between the columns.



1,414,351. PICTURE-FRAME STAND. LEWIS FRITZ, Chicago, Ill. Filed Nov. 30, 1921. Serial No. 518,785. 26 Claims. (Cl. 40—146.)

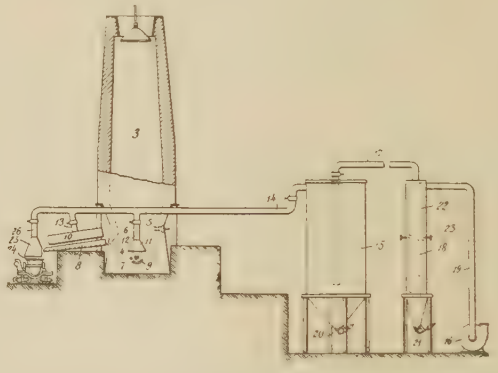


1. A picture frame stand including a base; a groove formed in said base and supporting members mounted in said groove, said members being adapted to be adjusted towards and away from each other, said supporting members comprising parts pivotally connected together, one of said parts adapted to receive a picture frame, substantially as described.

1,414,352. TAKE UP. GEORGE S. GATCHELL, Roselle Park, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed May 23, 1919. Serial No. 299,328. 14 Claims. (Cl. 112—245.)

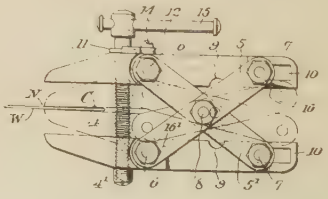
1. In a sewing machine, a movable take-up member having an extended thread-aperture therein, thread-guides cooperating with said take-up member and cast-off means coacting with said aperture to cast off the thread from one part of the aperture to another as the take-up action is completed.

1,414,353. RECOVERY OF POTASSIUM VALUES FROM FUMES. JAMES GAYLEY, New York, N. Y.; Henry B. Gayley and Walter S. Reed executors of said James Gayley, deceased. Filed Nov. 1, 1918. Serial No. 260,757. 1 Claim. (Cl. 23—22.)



The method of operating blast furnaces, which comprises carrying on the blast furnace process to produce metal and slag in the customary manner, tapping the metal and slag from the furnace hearth, collecting the slag in a ladle, and collecting the fume given off from the slag while in the ladle, the giving off of the fumes being promoted by agitation of the stag in the ladle.

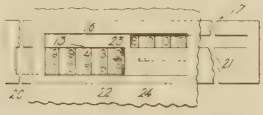
1,414,354. HAND VISE. STARR M. GIBBS, Mt. Rainier, Md. Filed Sept. 6, 1921. Serial No. 498,620. 1 Claim. (Cl. 81—18.)



A hand vise comprising jaws, each jaw including a jaw proper and a body section, an adjusting screw provided with an annular shoulder facing one of the jaws, cross

levers pivoted to each other at their place of intersection and having one pair of ends pivoted to said body sections contiguous to the said adjusting screw and the other pair of ends pivoted in slots in the opposite ends of the said body sections, a retaining device fastened to one of the body sections, one end of which fits over the annular shoulder of the adjusting screw to make the top jaw of the vise follow the annular shoulder of the adjusting screw as the adjusting screw is rotated to open the jaws, a lever handle mounted on said adjusting screw for operating the same, a cap screw on the opposite end of the adjusting screw serving as a safety device to prevent the breaking of the annular shoulder retaining device.

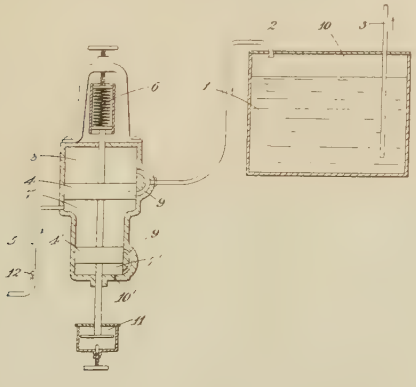
1,414,355. COMPUTING MACHINE. LOUIS E. GILES, New York, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed June 30, 1920. Serial No. 392,964. 22 Claims. (Cl. 235—60.)



9. In an algebraic computing machine, in combination, computing wheels having positive and negative numbers thereon, a shutter adapted to facilitate the reading of a negative result, and means to stop the shutter in proper position to read a negative result, including a member movable parallel to the axis of said computing wheels, and notches in said computing wheels through which said member may pass.

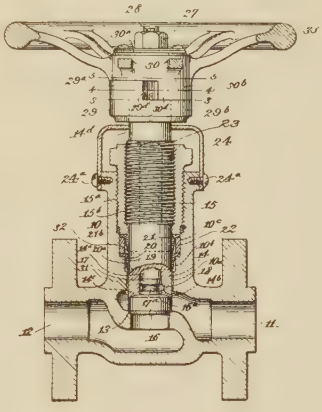
15. In a computing machine, the combination with computing wheels having digits for positive numbers and digits for negative numbers, of a transversely shiftable shutter adapted when in normal right hand position to direct attention to positive digits, means controllable by said wheels for variably arresting the shutter in its leftward movement, so as to direct attention to the correct negative digits when shifted to positions to read negative results, and yielding means normally holding said shutter in its right-hand position and effective to restore the latter thereto when released after use in reading a negative result.

1,414,356. INTERNAL-COMBUSTION ENGINE. LEWIS THOMAS GODFREY-EVANS, West Norwood, London, England. Filed Feb. 9, 1921. Serial No. 443,645. 2 Claims. (Cl. 158—36.) (Granted under the provisions of the act of March 3, 1921, 41 Stat. L., 1313.)



1. Apparatus for governing internal combustion engines, comprising a spring-controlled differential valve, so arranged that a volume of gas determined by a pressure or pressures within the cylinder of the engine at certain points in the expansion curve is allowed to pass the valve and so displace a corresponding volume of liquid fuel from its storage receptacle in order that this fuel may be admitted to the carburetter, substantially as described.

1,414,357. STOP VALVE. LEONARD B. HARRIS, Philadelphia, Pa., assignor to Harris Patents Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 13, 1916. Serial No. 136,658. 10 Claims. (Cl. 251—50.)



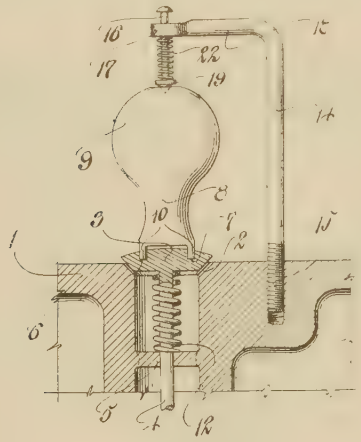
4. In a valve adapted for operation under continuous high-pressure conditions and in combination, a valve body having inlet and outlet ports with a valve seat therebetween, a threaded spindle carrying the valve, said valve body and spindle being complementally formed to provide an annular pocket intermediate the valve and threaded portion of the spindle, packing elements having sleeve-like portions adapted to contact the spindle within said pocket, means for spacing said elements to provide individual contact of said sleeve-like portions at successive points in the direction of length of the spindle, and means for clamping said elements in such positions and with a packing element in permanently-open communication with the flow path through said ports, said means including a bushing or gland threaded to the valve body and having a threaded connection with the spindle.

9. In a valve of the character described and in combination, a valve body having inlet and outlet ports with a valve seat therebetween, a threaded spindle carrying a valve, and means carried by the spindle for rotating it to move the valve to and from its seat, said means including a pair of superposed axially-alined members mounted on the spindle and having opposing faces adapted to co-act during rotational movements of the spindle, said spindle and one of said members having their contacting faces complemental to each other and of noncircular contour, said faces being relatively positioned to produce a lost motion relation between the members to permit a hammer-blow action to be applied to the spindle at will.

1,414,358. VALVE GRINDER. WILLARD H. HEATH, Spokane, Wash. Filed Nov. 5, 1919. Serial No. 335,834. 1 Claim. (Cl. 51—29.)

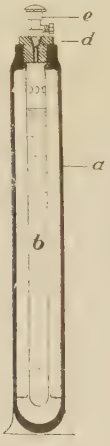
The combination in a hand operated grinding tool of an oscillatable handle and retaining pins on said handle to engage sockets in a valve, a resilient support for the

valve, a supporting post having a bearing, a pin in the bearing and provided with a bearing to engage said



handle, and a spring between the post bearing and pin bearing.

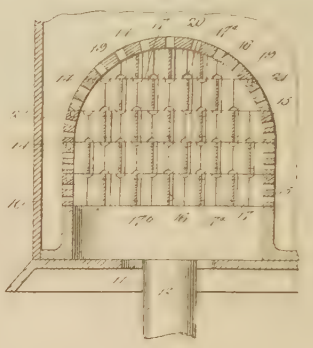
1,414,359. PROCESS FOR FILLING HIGH-PRESSURE VESSELS WITH LIQUEFIABLE GASES. PAUL HEYLANDT, Südende, near Berlin, Germany. Filed Jan. 3, 1921. Serial No. 434,825. 8 Claims. (Cl. 226—20.)



1. The process of filling compressed gas containers, which consists in placing a given quantity of liquefied gas in a vessel of low specific heat capacity suspended within the container, closing the container, and maintaining the walls of the container at a temperature above 0° C. until the enclosed substance has been converted into gaseous form.

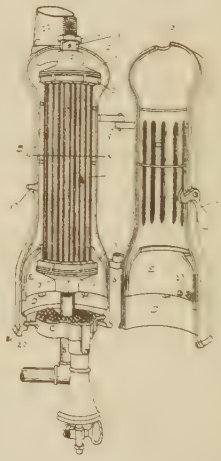
1,414,360. COMBUSTION CHAMBER. JOHN HICKS, Somerville, N. J. Filed Mar. 14, 1921. Serial No. 452,209. 6 Claims. (Cl. 158—99.)

6. A combustion chamber comprising a plurality of separable sections, each of said sections comprising a plurality of baffles arranged parallel with the axis of the burner, the baffles of each section arranged in staggered



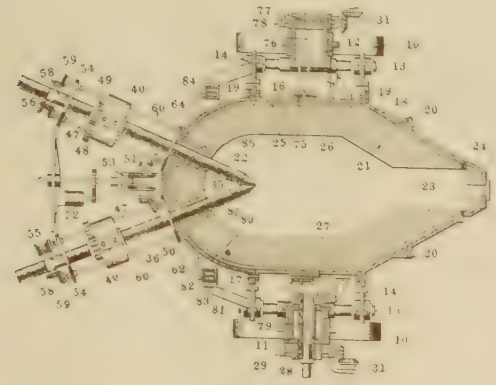
relation to the baffles of adjacent ones of said sections, and each of said baffles comprising a tooth or teeth projecting into the flue defined by such baffle as and for the purpose specified.

1,414,361. WATER HEATER. RUFUS J. HUTCHINS and JOHN KIRBY, Jr., Dayton, Ohio, assignors to The Dayton Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 4, 1919. Serial No. 328,561. 10 Claims. (Cl. 122—333.)



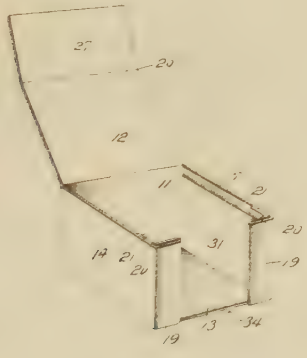
1. In a water heater, in combination, a heating unit, a water supply pipe connected therewith and constituting a support therefor, a casing comprising two sections hinged together adapted to inclose said unit; one of said sections having a vertically disposed flange member at the upper end thereof which engages an annular recess formed in said unit, a threaded extension projecting upwardly from said unit, and a nut operative on said extension having an annular recess formed in the under side thereof to engage the upper end of said flange member; whereby the casing is supported in a suspended position upon and wholly by said unit.

1,414,362. ELECTRIC FURNACE. ARTHUR JONES, Belleville, Ill. Filed May 13, 1920. Serial No. 380,990. 10 Claims. (Cl. 204—64.)



1. In an electric furnace, the combination with a melting chamber of a plurality of electrodes angularly arranged with relation to each other and means for rotating said electrodes during the operation of the furnace to maintain the form of the electrode points.

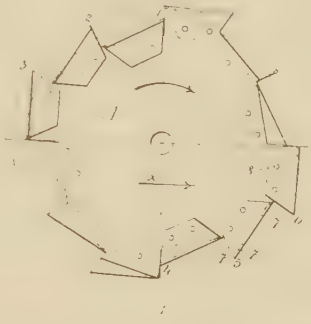
1,414,363. PAPER DISPLAY BOX. GERALD F. KELLY, New York, N. Y. Filed May 29, 1920. Serial No. 385,190. 6 Claims. (Cl. 206—44.)



1. A merchandise display box comprising a bottom, a back, sides, and a front whose corner portions are formed by extensions of said sides folded toward each other and then reversely to form two plies, said front between said corner portions being open and said bottom at its front corner edges having upwardly extending members located between the plies of said corner portions.

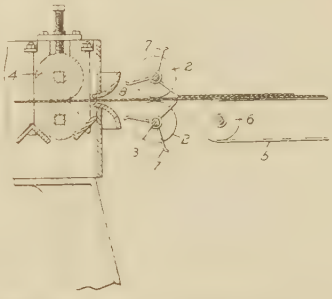
1,414,364. CULTIVATOR FOR TREATING THE SOIL. CHARLES KÖSZEGI, Budapest, Hungary. Filed Nov. 23, 1920. Serial No. 425,940. 2 Claims. (Cl. 99—64.)

1. In a cultivator, the combination with a rotatable disc, of a plurality of exchangeable hoes mounted along the outer edge of the said disc at various distances from the axis of rotation of the said disc, the said hoes being mounted on either side of the said disc in alternating groups, the hoes in each group successively increasing in distance from the axis of the said disc in the direction of its rotation, the groups of hoes on the same side of



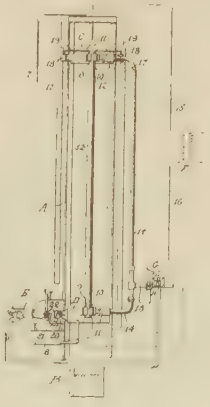
the disc being separated by an inoperative portion corresponding to the length of one group.

1,414,365. TIN-PLATE-CLEANING MACHINE. WILLIAM L. MCKEAN, Martins Ferry, Ohio, assignor to Steel Works Appliance Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 28, 1917, Serial No. 188,625. Renewed Sept. 24, 1921. Serial No. 502,997. 10 Claims. (Cl. 51—16.)



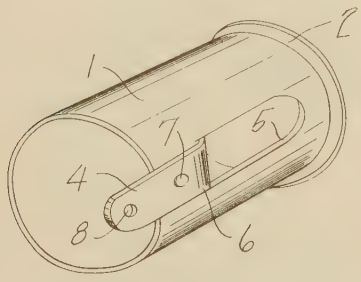
1. The combination of a tin plate cleaning machine with means for feeding the plates to said machine and means adapted to engage the front end of a sheet overlapping another without interrupting the forward movement of the sheet nearer the cleaning machine and to move out of engagement with the rear sheet.

1,414,366. METHOD OF AND APPARATUS FOR HEAT TREATING METALLIC ARTICLES. HARRY P. MACDONALD, Montclair, N. J., assignor to Snead & Company, a Corporation of New Jersey. Filed July 15, 1920. Serial No. 396,372. 24 Claims. (Cl. 148—10.)



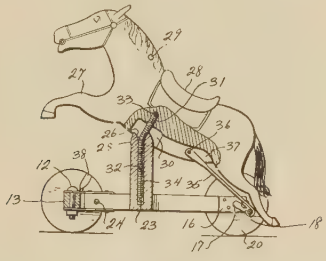
1. The herein described method of heat treating metallic articles which consists in cutting off the heat and in quenching at approximately the end of the critical period.

1,414,367. CHIMNEY THIMBLE. LOUIS B. MALINOWSKY and CLYDE W. KIRK, Patterson, Calif. Filed Nov. 19, 1921. Serial No. 516,336. 2 Claims. (Cl. 126—318.)



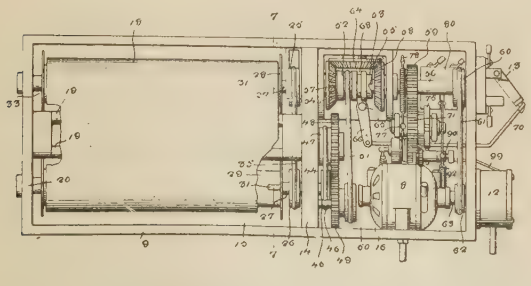
2. In a thimble for stove pipes, an integral retaining flange formed around the inner end, and an integral pipe holding tongue at its outer end, the tongue being cut free and being bent outwardly and down upon the thimble, and having a wire engaging hole at its free end.

1,414,368. ROCKING TOY VEHICLE. CLINTON D. MARLOWE, Sr., Johnstown, Pa. Filed Sept. 26, 1921. Serial No. 503,278. 3 Claims. (Cl. 208—42.)



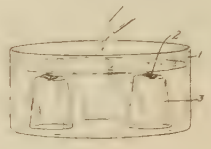
1. A toy of the character described comprising a main supporting frame including a pair of converging bars, upper and lower plates secured upon and projecting beyond the forward end of said frame, a front axle pivoted between said plates and carrying ground engaging wheels, a rear axle journaled through said frame and formed with a crank portion, a ground engaging wheel revoluble upon one end of said rear axle, a ground engaging wheel fixed upon the other end of the rear axle, a standard rising from the intermediate portion of the frame and formed with a triangular extension conformingly fitting between said bars, a rockable element pivoted upon said standard, and a pitman pivotally connected with the rockable member and said crank portion of the rear axle.

1,414,369. STATION INDICATOR. SAMUEL MITCHELL, Detroit, Mich. Filed June 30, 1920. Serial No. 392,923. 6 Claims. (Cl. 40—57.)



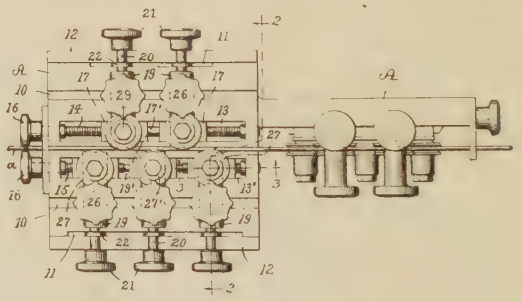
1. An electro-mechanical station indicator having a web bearing the names of stations, electro-mechanical means to move the web, and means to supply the electro-mechanical means with current at intervals in the traverse of a car and comprising automatic means to assure uniform actuation of the indicator irrespective of the speed of the car, said automatic means including a rheostat and an electromagnet.

1,414,370. METHOD OF MAKING PIEZO-ELECTRICAL CRYSTALS. ALEXANDER MCLEAN NICOLSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 2, 1918. Serial No. 226,343. 13 Claims. (Cl. 252.)



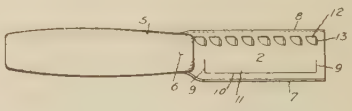
10. The method of growing a thin crystal which comprises supporting said crystal in a horizontal position above the bottom of a vessel containing a concentrated salt solution in such a manner as to reduce growth under the crystal.

1,414,371. WIRE STRAIGHTENER. AXEL H. NILSON, Bridgeport, Conn., assignor to The A. H. Nilson Machine Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 27, 1920. Serial No. 433,288. 8 Claims. (Cl. 140—148.)



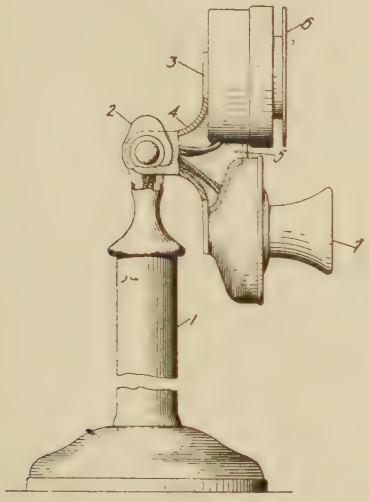
1. In a wire straightener of the class described, a series of aligned rolls, and means for simultaneously adjusting said rolls in such manner that the same can at all times remain equal distances apart.

1,414,372. GREEN-CORN IMPLEMENT. WALTER OLCOTT, South Manchester, Conn. Filed Jan. 6, 1922. Serial No. 527,316. 3 Claims. (Cl. 146—7.)



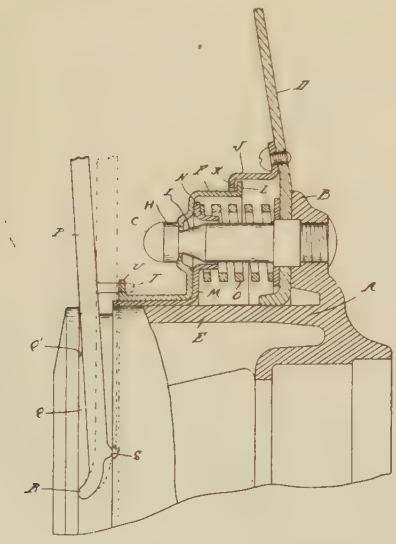
1. An implement of the class described comprising a handle provided with a blade member, the blade member having at one side thereof a blade and provided at the rear of the blade with a squeezing portion, the blade member having on its opposite side a row of teeth and also having back of the teeth a squeezing portion.

1,414,373. ADAPTER FOR CALLING DEVICES. HARRY W. PUGH, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 14, 1919. Serial No. 337,911. 2 Claims. (Cl. 179—90.)



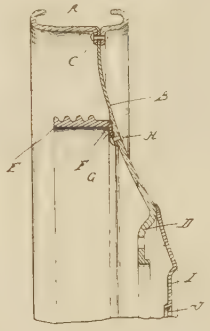
1. A telephone sub-station set including a transmitter, a standard, a calling device, a unitary support comprising a base plate to which said transmitter and calling device are attached, a rearwardly extruded hollow mounting lug integral with said base plate for attaching the support to the standard, and forwardly extending ears on said base plate cooperating with said lug, calling device and transmitter to form an enclosed cord chamber through which conductors may lead from said calling device and the transmitter to said standard.

1,414,374. DEMOUNTABLE WHEEL. ALDEN L. PUTNAM, Detroit, Mich., assignor, by mesne assignments, to Detroit Pressed Steel Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 31, 1919. Serial No. 334,694. 5 Claims. (Cl. 301—9.)



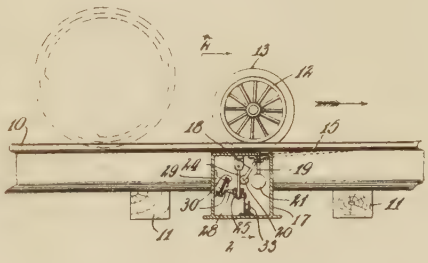
1. The combination with a hub, a disk for mounting thereon, of a stud projecting from said hub and engageable with a registering aperture in said disk, a spring permanently secured on said disk and surrounding the aperture for said stud, a member adjustably secured to said disk having an aperture which in one position of adjustment registers with said disk aperture and having a connecting slot of smaller diameter, and an undercut shoulder on said stud for engaging with the slotted portion of said member in another position of rotative adjustment and when said rotatively adjustable member is under the tension of said spring.

1,414,375. DISK WHEEL. ALDEN L. PUTNAM, Detroit, Mich., assignor to Detroit Pressed Steel Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 15, 1920. Serial No. 374,170. 4 Claims. (Cl. 301—6.)



1. A wheel comprising a rim, a dished disk of tapering section secured to said rim and arranged in such relation thereto that a radially inwardly-extending portion is inclined laterally outward from the central plane of rotation or plane of impact, and a brake flange secured outwardly of the plane of impact to the outwardly inclined portion of said disk.

1,414,376. AUTOMATIC RAILROAD-ACCIDENT PREVENTER. FRANK RUBY, Bridgeport, Conn. Filed Dec. 15, 1921. Serial No. 522,523. 7 Claims. (Cl. 246—90.)

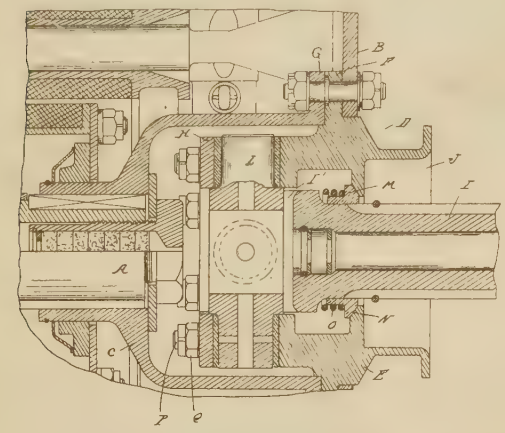


1. In a block signal system, an inclined lever adapted to be mounted adjacent a track rail and be depressed by a passing train, a pivoted arm adapted to be swung by said lever, a solenoid, a solenoid plunger carried by said arm, an electric signal operating element having said solenoid included in its circuit, and a pair of contacts included in said circuit adapted to be bridged by the said arm.

1,414,377. UNIVERSAL JOINT. EARL H. SHERBONDY, Detroit, Mich., assignor to Sidney D. Waldon, Detroit, Mich. Filed Apr. 20, 1921. Serial No. 463,001. 4 Claims. (Cl. 64—91.)

4. A universal joint comprising a shaft, a hollow hub member mounted on said shaft, a member peripherally attached to said hollow hub member and provided with spaced furcations extending thereinto, said member being centrally apertured, a shaft member passing through said central aperture and having a bifurcated end arranged in a plane transverse to the plane of sa difurcations, a cross

member trunnioned to engage the furcations in the transverse planes, and a member sleeved upon the inner shaft



member having a spherical surface engaging a spherical seat on the surrounding member to form an oil tight and dust proof seal for the parts within the hollow hub.

1,414,378. BRAKE LINING AND PROCESS OF MAKING SAME. SUMNER SIMPSON, Bridgeport, Conn., assignor to The Raybestos Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 19, 1917. Serial No. 192,231. 3 Claims. (Cl. 91—70.)

1. A process of making brake linings and clutch facings, which consists in felting unwoven asbestos fiber in sheet form, saturating the felted fiber with a binder of mineral oil and gum contained in a mineral solvent, pressing, drying and curing by heat at a temperature in excess of 250° F., and cutting the lining at a predetermined point.

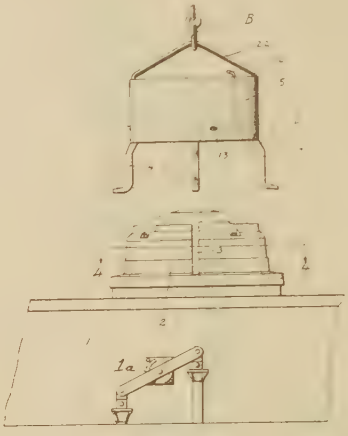
2. A process of making brake linings and clutch facings which consists in felting unwoven asbestos fiber in sheet form, saturating the felted fiber with an adhesive binder of mineral oil, gum and bitumens in a vehicle solvent to unite the fabric, pressing, drying and curing the material and cutting the lining at a predetermined point.

3. A process of making brake linings and clutch facings which consists in felting low grade asbestos fiber in an unwoven sheet, saturating the felted fiber with a binder of mineral oil, gum and bitumens in a vehicle solvent, pressing and drying the sheet, curing by heat at a temperature, in excess of 250° F. to produce a uniform texture product and cutting the lining in a predetermined manner.

1,414,379. PHONOGRAPH CABINET. ALBERT A. SINGLER, Denver, Colo. Filed Aug. 18, 1921. Serial No. 493,341. 4 Claims. (Cl. 45—52.)

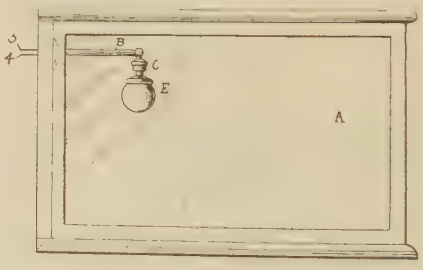
1. In a cabinet of the type used for the housing of sound reproducing machines, a box for the reception of the turntable and sound reproducing arm, a top for said box comprising two members hingedly connected to one another, a frame slidably connected to the top of said box and means for movably securing said top to said frame whereby said frame and said top may be simultaneously moved with respect to said box and the top moved relative to the frame.

1,414,380. STRIPPING MECHANISM FOR WIRE-DRAWING BLOCKS. JOHN SOMMER, Peoria, Ill., assignor, by mesne assignments, to The Union Trust Company, Cleveland, Ohio, a Corporation of Ohio, and John A. Chapman, Chicago, Ill., trustees. Filed Dec. 9, 1919. Serial No. 343,621. 6 Claims. (Cl. 242—81.)



4. A stripper for a wire drawing block, including a cylindrical casing, a plurality of coil supporting members pivoted to the casing interiorly thereof and in supporting position lying next adjacent the casing and protruding from said casing and extending laterally beyond the vertical plane thereof, a member supported to move axially within said casing, and means connecting said supporting member with said axially movable member, said axially movable member assuming its lowermost position when said supporting members are lying next adjacent said casing, and movable to its uppermost position to actuate and withdraw said supporting members when brought into contact with and operated by pressure from a coil receiving means.

1,414,381. HUMIDOR. JOHN V. SPRAGUE, Pittsburgh, Pa., assignor of one-half to Harry W. Cross, Bellevue, Pa. Filed Jan. 8, 1917. Serial No. 141,081. 2 Claims. (Cl. 219—41.)

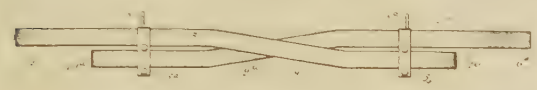


1. A combined humidifier and illuminating device comprising a supported incandescent bulb, a supporting disk carried by and fixedly secured with respect to the incandescent bulb and having a resilient gripping member at the peripheral edge thereof, a translucent fluid reservoir having an open top, said top adapted to fit within the peripheral edge of the supporting disk and to be held therein by the resilient gripping member thereby suspending the reservoir with the incandescent bulb immersed within the fluid therein.

1,414,382. AUTOMOBILE BUMPER. LEWIS F. STAFFORD, Chicago, Ill. Filed May 26, 1921. Serial No. 472,877. 8 Claims. (Cl. 293—55.)

4. A vehicle bumper comprising two impact-receiving members having their front end portions arranged in ver-

tical alinement with each other in different horizontal planes, the intermediate front portions of said members being obliquely disposed whereby said members cross each other at the center of the bumper structure to vertically



reverse the relative positions of the respective portions of said members, and rearwardly extending portions at the opposite ends of the front portions of each member for attachment to a vehicle.

1,414,383. FRICTION FACING. FREDERICK C. STANLEY, Bridgeport, Conn., assignor to Raybestos Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 24, 1919. Serial No. 325,912. 5 Claims. (Cl. 91—70.)

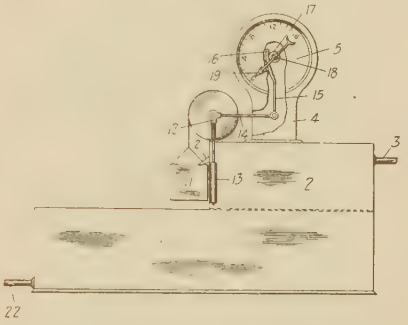
1. A friction facing formed of unwoven fibrous material containing an oxidized binder, and having a tensile strength in excess of 1700 pounds per square inch.

4. A friction facing composed of unwoven asbestos fiber containing an oxidized binder and a non-gaseous oxidizing agent, the binder being substantially insoluble in mineral oil, said facing having a tensile strength of at least 2000 pounds per square inch.

1,414,384. EXPLOSION ENGINE WORKING UNDER INJECTION OF LIQUID FUEL. EUGÈNE HENRI TARTRAIS, Maisons-Laffitte, France. Filed Nov. 21, 1918. Serial No. 263,582. 4 Claims. (Cl. 123—32.)

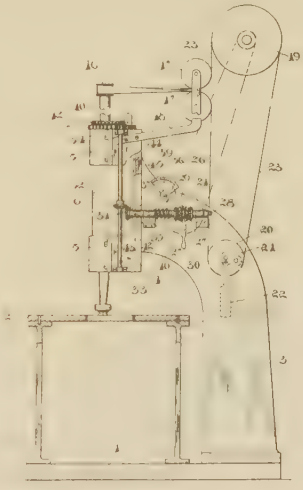
1. An explosion engine working under injection of liquid fuel and comprising in combination: a cylinder, means for cooling said cylinder, means in the wall of said cylinder for effecting the suction of air and the exhaust of burned gases, an uncooled combustion or explosion chamber provided outside the cylinder and coaxially with the latter and having a substantially toroidal form, its central part constituting a capacity in which a liquid fuel distributer atomizer extends axially and uniformly distributes the atomized fuel in radial directions about its axis, a passage in the center of the cylinder head, said passage opening axially into the explosion chamber, a piston working in the cylinder and an extension provided on the face of said piston in line with the opening in the head of the cylinder and having a section somewhat less than that of said opening, said extension entering said opening at the end of the stroke and causing the rapid flowing, into the explosion chamber, of the air compressed between the piston and the head of the cylinder, and an igniter substantially as described and for the purpose specified.

1,414,385. V-NOTCH LIQUID METER. WALTER E. TURNER, Piqua, Ohio. Filed Feb. 27, 1920. Serial No. 361,727. 2 Claims. (Cl. 73—167.)



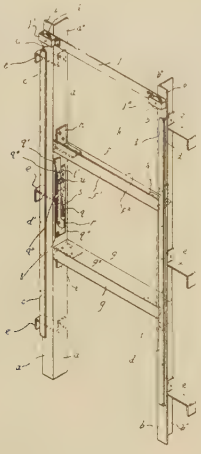
1. In a device of the type described, the combination with a weir box having V-notch, of means for delivering a liquid to be weighed to said weir box, a liquid container, a rotatable member mounted above said weir box, and flexible means adapted to be wound around said rotatable member for suspending said weir box above the liquid container, and for turning said rotatable member when the weight of the liquid in the weir box causes the latter to descend against the resistance of the rotatable member.

1,414,386. CYLINDER-GRINDING MACHINE. GEORGE R. WARD, Toronto, Ontario, Canada. Filed Apr. 8, 1921. Serial No. 459,649. 5 Claims. (Cl. 51—43.)



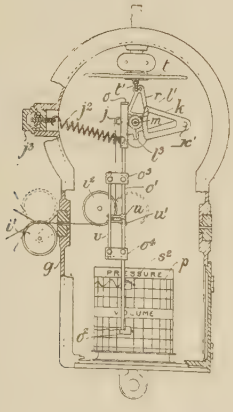
1. In a cylinder grinding machine, the combination of a supporting bracket; a head vertically slidable thereon; a sleeve rotatably mounted in said head; a bearing sleeve rotatably adjustable in the said sleeve; a spindle journalled eccentrically in said bearing sleeve; a pulley secured to the upper end of said spindle; a frame secured to the head; two pulleys horizontally journalled on said frame; a pulley on a line shaft above the said two pulleys; a weighted idler pulley located below said two pulleys and mounted to move vertically; and a belt passing around the spindle pulley between and around the two pulleys aforesaid and around the line shaft pulley and the idler.

1,414,387. DUMB-WAITER DOOR. BENJAMIN WEXLER, Brooklyn, N. Y., assignor to The Peelle Company, Brooklyn, N. Y., a Corporation of New York. Filed May 6, 1920. Serial No. 379,345. 9 Claims. (Cl. 189—46.)



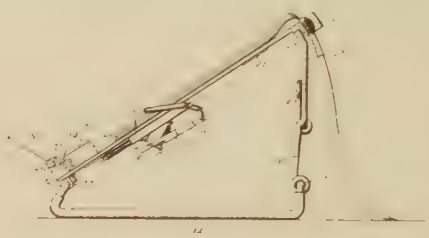
1. A dumbwaiter door embodying therein metal side bars, guides or tracks carried by said bars respectively, cross braces carried by said bars, said braces being spaced apart a distance equaling the height of a shaft opening, vertically movable door structure mounted upon said guides or tracks and adapted to close the space within said side bars and said cross braces, pulleys above the upper of said cross braces, and a suspension cable co-operating with said door structure and said pulleys.

1,414,388. APPARATUS FOR MEASURING, INDICATING, AND RECORDING THE FLOW OF FLUID. PERCY HUTCHINSON WILSON, Nottingham, England. Filed Sept. 2, 1921. Serial No. 498,037. 2 Claims. (Cl. 234—20.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



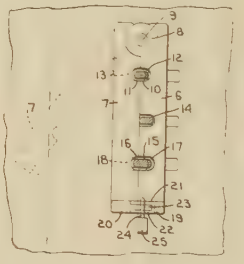
1. Apparatus for measuring the volume of air or other fluid passing through a pipe or chamber comprising a casing on the pipe or chamber, a lever pivoted in the casing and projecting into the pipe or chamber, a partial obstruction to the flow of fluid in the pipe or chamber disposed on the lever, a second casing separate from the casing on the pipe or chamber, a spring controlled toothed quadrant pivoted in the second casing, means for transmitting movement of the lever to the spring controlled quadrant, a pinion engaged by the spring controlled quadrant, a pointer adapted to be deflected over a dial by movement of the pinion engaged by the spring controlled quadrant to indicate the volume of fluid passing and a pen adapted to record in graph form the volume of fluid passing on a moving chart, means being provided whereby the pen is actuated by movement of the pinion engaged by the spring controlled quadrant.

1,414,389. COPY-HOLDING DEVICE. ALBERT N. WOODRUFF, New York, N. Y. Filed Oct. 9, 1920. Serial No. 415,712. 4 Claims. (Cl. 120—34.)



3. In a device of the character described, a base, a writing bed carried by the base and foldable with respect thereto, a carriage mounted for sliding movement on the writing bed, means for reciprocating said carriage in one direction and preventing reciprocating movement thereof in the opposite direction, a line indicator pivotally mounted on the carriage, and means associated with and operated upon pivotal movement of the line indicator for disconnecting the carriage-reciprocating means to permit of a free movement of the carriage in either direction.

1,414,390. PEDAL LOCK FOR AUTOMOBILES. FRANK WOOLLARD, Billerica, Mass., assignor of one-half to Guy L. Woollard, Boston, Mass. Filed Aug. 9, 1918. Serial No. 249,049. 1 Claim. (Cl. 70—126.)

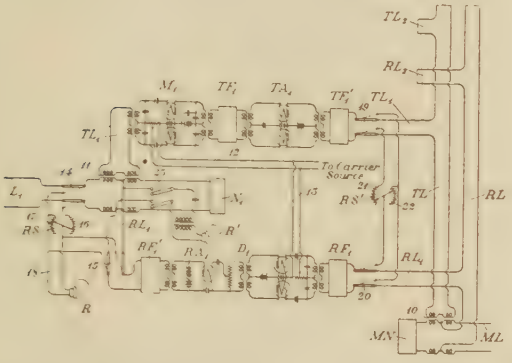


A pedal lever lock for automobiles compressing a plate formed in two sections having abutting edges and at one end overlapping circular portions secured together by a countersunk pivotal connection and at the opposite end having upwardly extending flanges provided respectively with a mortise and a complementary tenon adapted to be interengaged when the adjacent edges of the sections are juxtaposed, recesses in said sections extending from the abutting edges thereof adapted to receive the pedal levers of the automobile and hold them in substantial alinement and means for locking the flanges together including alined apertures in the walls of the mortise and the tenon adapted to receive the hasp of a padlock.

1,414,391. MEANS FOR AND METHOD OF TESTING UNBALANCE. HERMAN A. AFFEL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 23, 1919. Serial No. 325,750. 6 Claims. (Cl. 179—175.)

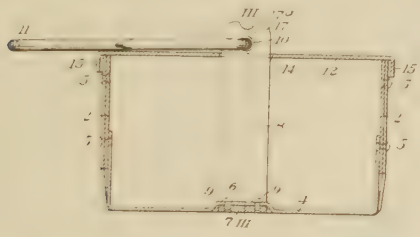
1. The method of determining the unbalance between oppositely directed channels of a multiplex carrier system

in which each pair of oppositely directed channels is associated with a common transmission circuit and with an individual low frequency signalling circuit in such a manner that the channels will be conjugate with respect to each other, which consists in disconnecting a pair of oppositely directed channels from one of said circuits while maintaining the connection with the other circuit intact,



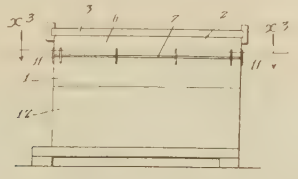
interconnecting the disconnected ends of the channels through a variable transmission element and then adjusting the transmission of said element until singing in the circuit begins or ceases, the adjustment of said transmission thereby indicating the degree of unbalance between the oppositely directed channels with respect to the connection which was not disturbed.

1,414,392. PORTABLE CONTAINER. WILLIAM L. AFFELDER, Crafton, Pa. Filed Nov. 1, 1919. Serial No. 335,101. 6 Claims. (Cl. 220—56.)



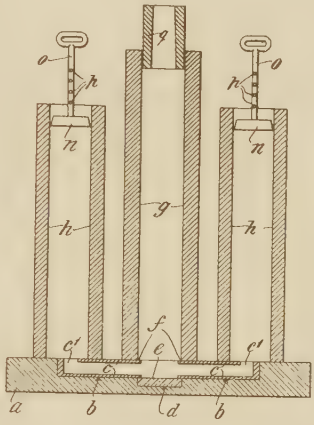
1. In a portable container, a post secured to the bottom thereof and projecting upwardly therefrom above the top of the container, a cover having an opening adapted to pass over said post, and a carrying member for said container cooperating with said post and preventing the removal of said cover, said carrying member having a restricted throat portion preventing accidental disengagement thereof from said post, substantially as described.

1,414,393. BEEHIVE. LESTER BAMBERGER, Riverside, Calif. Filed July 19, 1920. Serial No. 397,259. 1 Claim. (Cl. 6—1.)



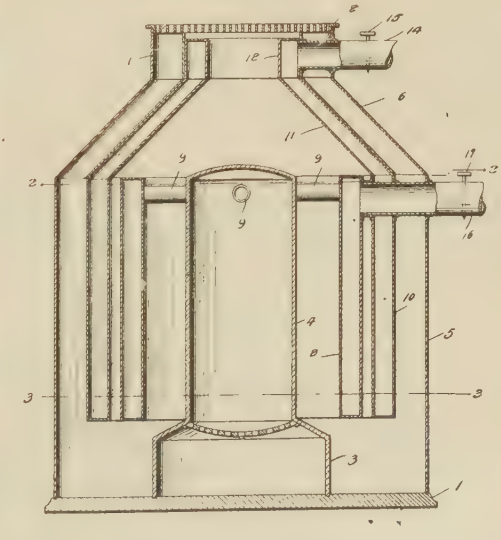
A bee hive comprising a lower member, a super mounted on the lower member, a screen having deeper and shallower frame members and having a foraminous member between said frame members, the screen frame being of the same length and width as the super and removably mounted on the upper edge of the super, and a cover removably positioned on the upper edge of the screen and adapted to fit upon the upper edge of the super when the screen is removed, there being means detachably engaging the super and screen to prevent lateral shifting of the screen.

1,414,394. APPARATUS FOR CASTING INGOTS. GEORGE BATTY, York, England. Filed May 11, 1920. Serial No. 380,624. 2 Claims. (Cl. 22—142.)



1. An apparatus for casting metal ingots comprising a base plate having a central recess, channelled runner bricks radiating from said recess, a central mould disposed above said recess and outer moulds disposed above and communicating from below with the outer ends of each of said runner bricks whereby the number of ingots produced is in accordance with the number of outer moulds plus that in the central mould, and metal stoppers adapted for insertion into the outer moulds at predetermined distances and to substantially fill the cross sectional area of said moulds, said stoppers each comprising a metal frame and a plurality of sections of bricks carried thereby, said brick sections being of refractory material and recessed on their under surfaces, the recesses when the sections are assembled in the frame forming a substantially hemispherical lower surface.

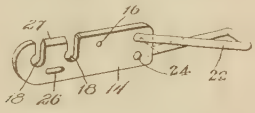
1,414,395. HOT-AIR FURNACE. CHARLES A. BEGGS, Rice Lake, Wis. Filed Sept. 1, 1921. Serial No. 497,595. 2 Claims. (Cl. 126—99.)



1. A hot air furnace comprising a body including a fire pot and combustion chamber, a hollow casing surrounding

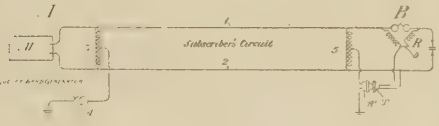
said body, short pipes radiating from the upper portion of the body and connecting the same with the upper portion of the hollow casing, a second hollow casing surrounding the primary hollow casing, short radiating pipes connecting the lower portions of the primary and secondary hollow casings, a smoke pipe connected with the upper portion of the primary casing and provided in its length with a close fitting damper and a second smoke pipe connected with the upper portion of the second hollow casing and having a damper in its lengtth.

1,414,396. TIRE GRIP CHAIN. ROBERT E. BENSON, Lodi, Ohio. Filed Jan. 3, 1919. Serial No. 269,496. 1 Claim. (Cl. 24—230.5.)



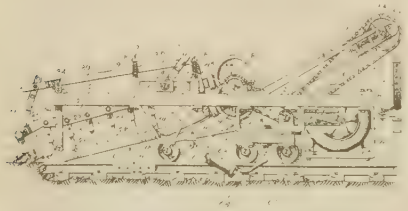
In a chain link coupling device, an elongated plate employed as a connector and having a pair of openings at one end disposed one near each longitudinal edge of the plate, a link open at one end and having its side portions deflected, the ends of said side portions being turned inwardly and engaged one in each of said openings in the said plate.

1,414,397. TESTING APPARATUS. FRED H. BEST, Westfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 14, 1920. Serial No. 381,462. 11 Claims. (Cl. 179—175.)



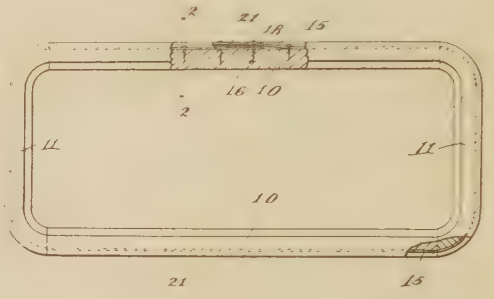
10. The method of determining the efficiency of transmission of a line consisting of two parallel conductors, which consists in sending energy one way over the line, translating this energy at the receiving end of the line and sending it back the opposite way over the line, and determining the amount of energy received at the initial sending end of the line, the transmission in one of the two ways being over the two conductors of the line in parallel and the other of the two ways being over the same two conductors in series.

1,414,398. SHOVELING MACHINE. HOWARD B. DENNIS, Grass Valley, Calif., assignor of one-fourth to Frederick W. Nobs and one-fourth to George W. Starr, Grass Valley, Calif. Filed May 1, 1919. Serial No. 295,202. 30 Claims. (Cl. 198—10.)



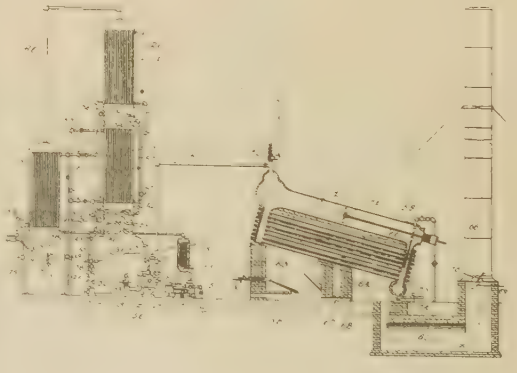
1. In apparatus of the character set forth, the combination with a digging member, of means for giving said member a back and forth movement, a scraping member operating over the digging member, and means for causing the scraper member to move simultaneously in an opposite direction to the digging member and towards and from said digging member.

1,414,399. VEHICLE WINDOW FRAME. CHARLES M. DWYER, Los Angeles, Calif. Filed Aug. 30, 1921. Serial No. 496,842. 5 Claims. (Cl. 296—145.)



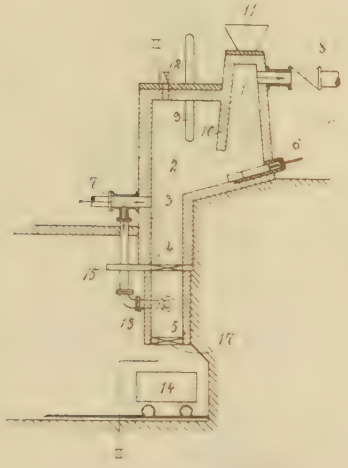
2. In a vehicle curtain window frame, a series of rails assembled to form a frame, beads formed on the edges of the outer edge of said frame, and a metal band arranged between said beads, the ends of which band are secured to each other and to said frame.

1,414,400. PROCESS FOR THE CONVERSION OF HYDROCARBON OILS. VICTOR LEE EMERSON, Philadelphia, Pa. Filed May 10, 1920. Serial No. 380,171. 6 Claims. (Cl. 196—25.)



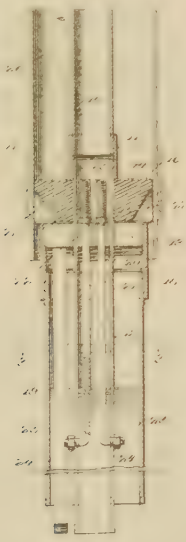
1. The process of converting heavy hydrocarbon oils into lighter hydrocarbon oils which consists in distilling a mass of heavy hydrocarbon oils under pressure, progressively separating the gaseous products of distillation by condensation in a series of zones of successively lower temperature, subjecting a portion of the condensates to a heat interchange with the freshly formed gaseous products of distillation by intimate contact with said condensates, mixing a fresh mass of oil with said condensates, and returning the resultant mixture into the material undergoing distillation under pressure, and drawing off such condensates as are desirable as a final product.

1,414,401. PROCESS FOR THE DESTRUCTIVE DISTILLATION OF COAL AND OTHER MATERIAL. PEDER FARUP, Slemdal, near Christiania, Norway. Filed Nov. 4, 1920. Serial No. 421,746. 8 Claims. (Cl. 204—64.)



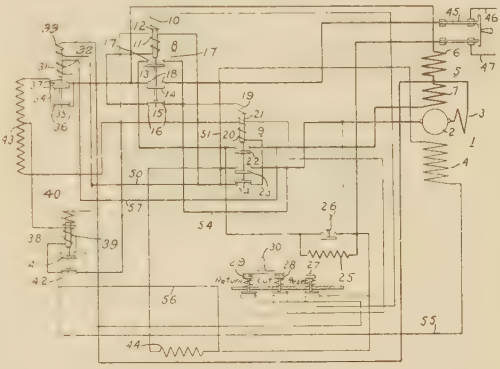
1. Process for the destructive distillation of coal and other materials, which comprises partially destructively distilling said material by indirect radiated electrical heating and continuing the destructive distillation of said material by direct heating.

1,414,402. FLOWING DEVICE FOR WELLS. LOUES FRIEDMAN, Muncie, Ind., and DAVID WALLACE, Tulsa, Okla. Filed Mar. 27, 1922. Serial No. 546,948. 8 Claims. (Cl. 166—3.)



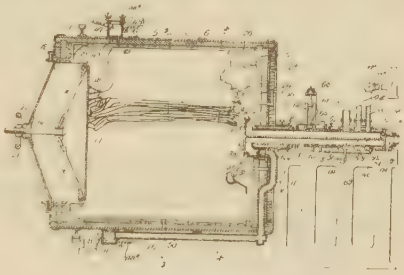
1. A flowing device for oil wells including a cylindrical shell open at its lower end to receive oil and gas therein, and closed at its upper end, an outflow tube having connection with the upper end of the cylindrical shell and by means of which the latter may be lowered into a well casing, a tube supporting barrel within and spaced from the shell, and one or more pressure tubes within the barrel, the lower ends of which open through the barrel and into the shell, and the upper ends of which open into the said outflow tube.

1,414,403. SYSTEM OF CONTROL. ADOLPH A. GAZDA, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 8, 1917. Serial No. 206,140. 7 Claims. (Cl. 172—240.)



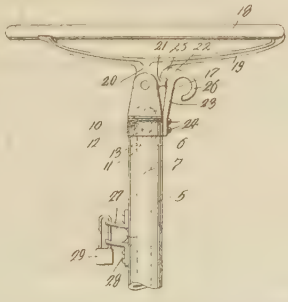
1. In a system of control, a motor having an armature and a divided series field winding having two portions, a resistor adapted to be connected in circuit with either of said portions, and means for completing a circuit through the armature, the resistor and one of said portions to effect dynamic braking, and means for varying the effective portion of said resistor in case of failure of power.

1,414,404. PROCESS OF TREATING HIDES AND HIDE-TREATING APPARATUS. CHARLES JOHN GLASEL, New York, N. Y., assignor, by mesne assignments, to Luise Hagen Glasel, New York, N. Y. Filed Apr. 12, 1917. Serial No. 161,449. 51 Claims. (Cl. 149—11.)



1. The process of treating hides and skins secured within a receptacle, comprising moving the hides and skins therein working them from points other than their suspension and circulating a tanning medium within the container without stopping the motion of the containers.

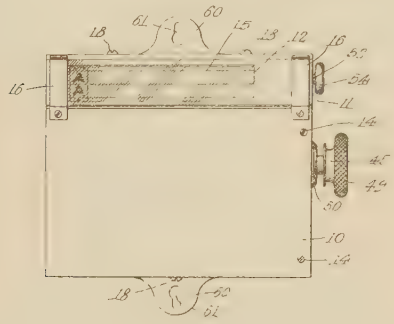
1,414,405. STEERING WHEEL AND LOCK THEREFOR. DONALD C. GOSSETT and ELDON F. GOSSETT, Detroit, Mich. Filed May 9, 1919. Serial No. 295,911. 3 Claims. (Cl. 74—33.)



1. The combination with a steering post and a steering wheel pivoted thereto, of a pair of spaced arms secured

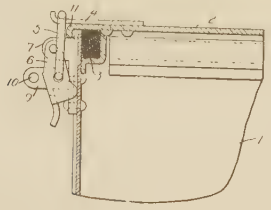
to the post to receive therebetween a portion of said wheel, and means for connecting the free ends of the arms to prevent said portion of the wheel from becoming disengaged from between said arms.

1,414,406. RECORDING AND EXHIBITING DEVICE. WILLIAM F. HARTHUN, Newport, Ky. Filed July 27, 1921. Serial No. 487,968. 3 Claims. (Cl. 40—93.)



1. In a device of the character described, a frame, rolls pivotally mounted within the frame in spaced relation and adapted to carry a flexible strip or sheet, gears secured to the ends of said rolls, a casing enclosing the frame and having an opening through which the strip or sheet is visible, said casing being provided in one end with a slot having lateral extensions, a slide mounted upon one side of the frame to move longitudinally thereof, an operating gear carried by the slide and arranged between said gears, a shifting arm connected with the slide and arranged between the frame and side of the casing, a lateral extension carried by the shifting arm and operating within said slot, and extending to the exterior of the casing and adapted to be shifted into the lateral extensions of said slot to be locked therein, and separate means to turn the operating gear.

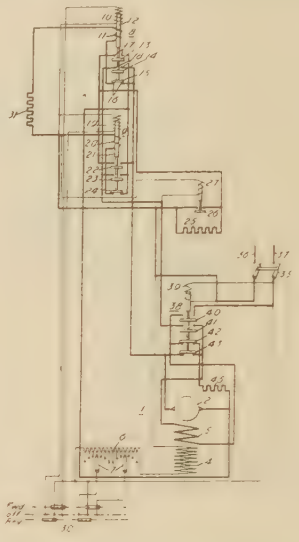
1,414,407. CLAMPING DEVICE. ALBERT L. HARVEY, Braddock Townsbip, Allegheny County, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1918. Serial No. 254,311. 4 Claims. (Cl. 70—3.)



3. The combination with a member having a hook, of a relatively movable member having a projection, a finger piece pivotally mounted upon said relatively movable member and having a recess, and a link pivotally mounted upon said finger piece and adapted to engage said hook to clamp said members together, said projection being adapted to lie in said recess to prevent relative movement of said link and said hook.

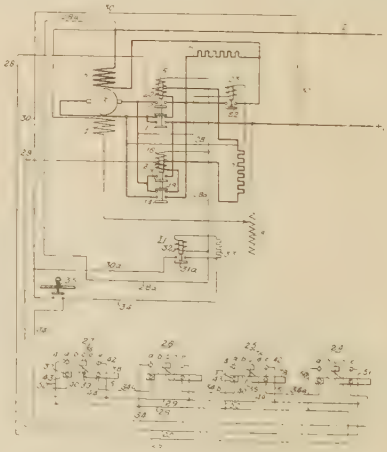
1,414,408. MOTOR-CONTROL SYSTEM. ALBERT L. HARVEY, Braddock Township, Allegheny County, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 4, 1918. Serial No. 260,953. 5 Claims. (Cl. 172—240.)

1. The combination with an electric motor having an armature, a series field-magnet winding, a shunt field-magnet winding, and a dynamic-braking resistor, of means for connecting said armature in circuit with said resistor to effect dynamic braking when said shunt field-magnet wind-



ing is energized, and means for connecting said armature and said series field-magnet winding in a local circuit to effect dynamic-braking when said shunt field-magnet winding is not energized.

1,414,409. MOTOR-CONTROL SYSTEM. ALBERT L. HARVEY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 7, 1920. Serial No. 394,438. 11 Claims. (Cl. 172—179.)

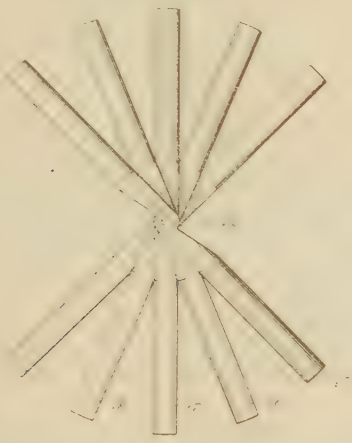


1. The combination with a dynamo-electric machine, and means for effecting two different types of operation thereof, of a plurality of controlling devices in predetermined electrical arrangement and each having a plurality of positions adapted for remote control of said machine, and means associated with each of said controlling devices whereby any subsequent device is operative only during the period that a prior device occupies a predetermined position.

1,414,410. HELICOPTER. WENZEL HAUPT, New York, N. Y. Filed Mar. 23, 1920. Serial No. 368,204. 15 Claims. (Cl. 170—165.)

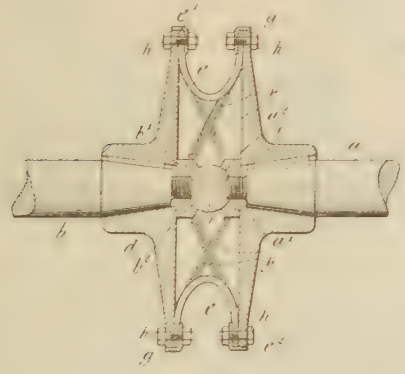
1. In a propeller, the combination of five parabolically arranged blade units placed on top of and connected with

each other and having a common central axis, each unit comprising a pair of symmetrical blades of equal pitch, said units being disposed at an angular distance of 22½ degrees from each other, thus providing two free angular distances of 90 degrees between the top and bottom units,



the pitch of these blade units varying by arithmetical progression from the first term of 9 degrees to the last term of 45 degrees, said blades being so disposed that the upper or cutting edge of one blade lies in the same plane with the lower or delivery edge of the adjacent blade.

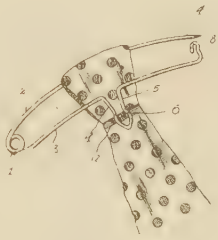
1,414,411. UNIVERSAL JOINT. ALEXANDER GRISWOLD HERRESHOFF and AUGUST H. LEIPERT, New York, N. Y. Filed Dec. 23, 1919. Serial No. 346,916. 4 Claims. (Cl. 64—96.)



1. A universal joint including driving and driven disks, straight flexible non-metallic transmission elements secured fixedly at one end to one of said disks and at the other end to the other of said disks and independent straight flexible non-metallic transmission elements secured fixedly at one end to the first named disk and secured fixedly at the other end to the second named disk, the second named transmission elements extending in the opposite direction of rotation of the disks from the first named transmission elements and crossing the first named transmission elements, respectively, at points between the disks, all of said transmission elements extending along straight lines between the disks to apply the lines of driving force along straight lines.

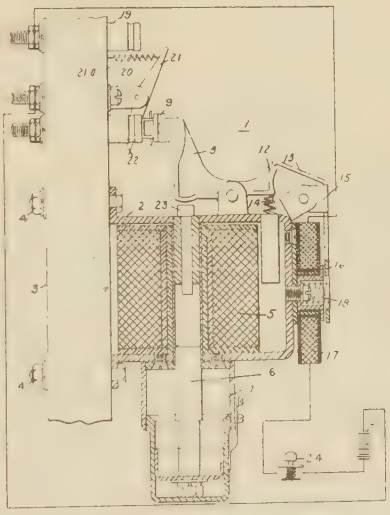
1,414,412. COMBINATION NECKTIE HOLDER AND COLLAR BUTTON. HARRY LIONEL HILL, Bellamy, Ontario, Canada. Filed Nov. 3, 1920. Serial No. 421,591. 2 Claims. (Cl. 2—84.)

1. A necktie holder comprising in a single integral element a resilient member bent at substantially its medial point to form a coil with substantially parallel extensions therefrom, the upper extension being bent in arc form with its free end terminating in a substantially sharp point, the lower extension being extended in substantially the same arc form and at its medial point bent downwardly at right



angles to the extension and thence bent at substantially right angles thereto to form a spear-shaped portion, the free end of the lower extension being bent upwardly to form a catch for co-operation with said sharp point, and means cooperating with said necktie holder for securing the same to a collar or neckband.

1,414,413. ELECTRICAL SWITCH. CHARLES H. HODGKINS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 16, 1917. Serial No. 202,344. 8 Claims. (Cl. 175—294.)

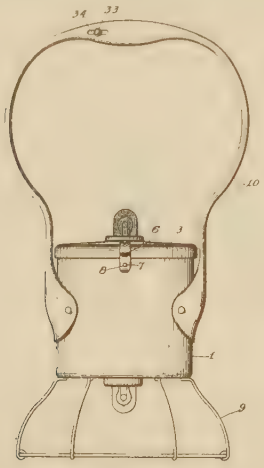


1. A switch mechanism comprising a pivoted contact-controlling member having a circuit closing and a circuit opening position, and a latch member yieldingly engaging the pivoted member in one position of the pivoted member and restraining said member in its other position when said pivoted member is actuated thereto.

1,414,414. LANTERN. GUSTAVE HUMBER, Denver, Colo. Filed June 26, 1919. Serial No. 306,771. 2 Claims. (Cl. 240—8.5.)

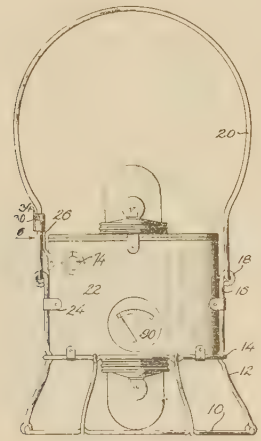
1. A signal lantern comprising a body, a handle, a pair of signal lamps arranged upon the top and bottom of said

body portion, respectively, displaying different colors, a battery within said body, an open frame base for said body,



and means for selectively connecting said lamps to said battery, substantially as described.

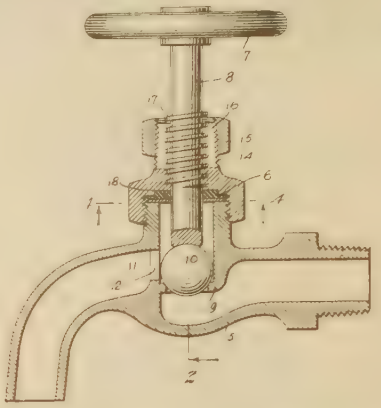
1,414,415. ELECTRIC LANTERN. GUSTAVE HUMBER, Denver, Colo. Filed Dec. 2, 1919. Serial No. 341,878. 6 Claims. (Cl. 240—8.5.)



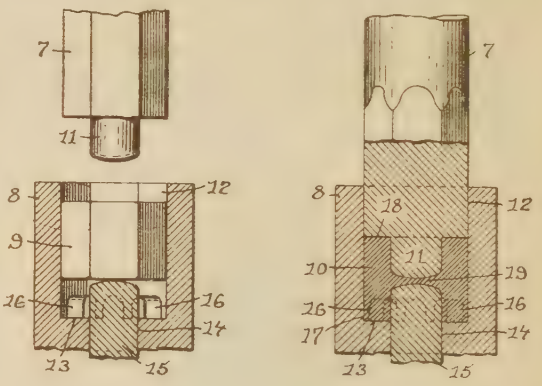
5. An electric lantern comprising a frame, a casing thereon, a battery within the casing, retaining members on the inner sides of the casing, means engaged with said members and passing over said battery to retain the same in position, and a lamp on the casing having connections with the battery for lighting the same, each retaining member having an inwardly disposed depending part engaging the sides of the battery to prevent lateral movement thereof.

1,414,416. VALVE. PATRICK J. HUSSEY, New York, N. Y. Filed Mar. 24, 1921. Serial No. 455,083. 2 Claims. (Cl. 251—49.)

2. A valve, including a housing, a cap secured to said housing, gaskets interposed between said cap and housing, an extended portion forming a part of said cap, said extended portion being formed of a plurality of sections, and being tapered throughout its entire length, a valve stem extending through a bore in said cap, the extended portion of said cap being formed with screw threads and a nut adapted to encircle said extended portion and to be mounted upon said screw threads so as to cause said extended portion to firmly embrace said stem.

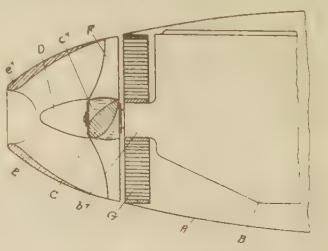


1,414,417. MEANS FOR MAKING CASTELLATED NUTS. FERNANDO OSCAR JAQUES, Jr., Providence, R. I., assignor of one-half to Harold Caldwell Peckham, Cranston, R. I. Original application filed Feb. 28, 1919, Serial No. 279,742. Divided and this application filed July 28, 1919. Serial No. 313,800. 1 Claim. (Cl. 10—76.)



Means for making castellated nuts comprising a member having a cavity the shape and size of the nut to be castellated, projecting members in said cavity adapted to form castellations on the nut, and a member having a sliding fit in said cavity, whereby on forcing the last mentioned member into said cavity, castellations are formed on the nut by compressing the metal of the nut.

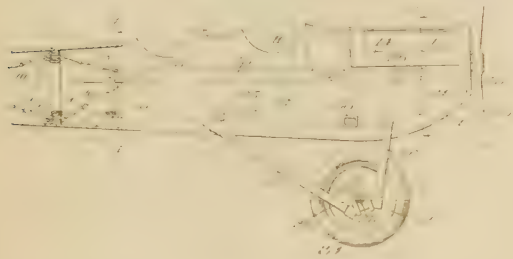
1,414,418. COOLING DEVICE FOR AERIAL VEHICLES. PAUL JARAY, Friedrichshafen, Germany, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschrankter Haftung, Friedrichshafen, Germany, a German Corporation. Filed June 28, 1920. Serial No. 392,567. 1 Claim. (Cl. 244—31.)



In a device of the kind described in combination, a propeller, a motor disposed behind said propeller, a ra-

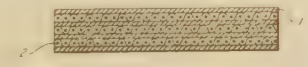
diator between said propeller and said motor, a closed inner hood on the hub of said propeller and an open outer hood surrounding said inner hood at a distance therefrom.

1,414,419. STRUCTURAL ELEMENT. ROBERT KEMP and FREDERICK H. JOHNSON, Buffalo, N. Y., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 30, 1916. Serial No. 106,886. 14 Claims. (Cl. 244—31.)



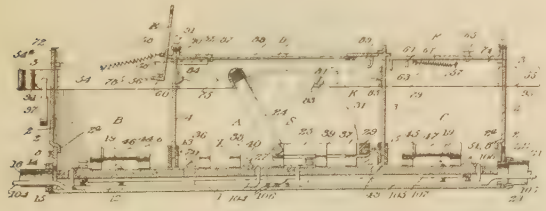
1. A structural aircraft body formed of a plurality of tubular sections having inwardly extending flanges, and means connecting said flanges, said sections being composed essentially of fibrous material compounded with phenolic condensation products acting as a binder.

1,414,420. COMPOSITE LAMINATED BODY. WILLARD H. KEMPTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 17, 1918. Serial No. 240,307. 7 Claims. (Cl. 154—46.)



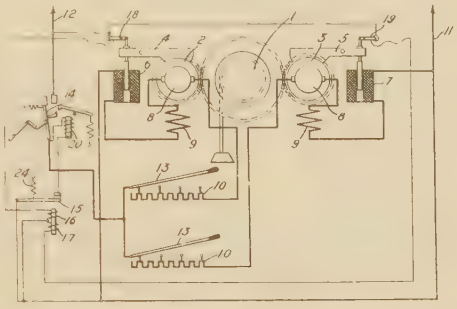
1. A composite laminated body comprising alternate sheets of woven material and of matted material, all impregnated with a hardened binder.

1,414,421. DOUBLE-THROW SWITCH. LAWRENCE F. KRIES, Baltimore, Md., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 17, 1917. Serial No. 186,703. 15 Claims. (Cl. 200—50.)



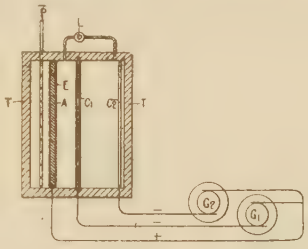
15. The combination with a casing having a switch compartment and two fuse compartments, a fuse in each fuse compartment, a double-throw switch in the switch compartment for alternatively connecting the fuses thereto and a door for each fuse compartment, of means for so interlocking the doors with the switch that, when the switch is connected to one of the fuses, the door for its respective compartment is held in closed position.

1,414,422. MOTOR-CONTROL SYSTEM. EDWIN S. LAMMERS, Jr., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1919. Serial No. 271,473. 11 Claims. (Cl. 172—179.)



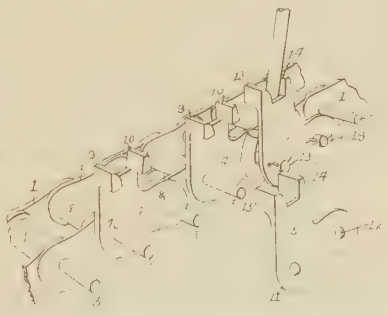
8. The combination with a plurality of electric motors operatively connected to the same mechanical load, of means for independently controlling the circuits of the several motors and means controlled by said controlling means for controlling the circuits of said motors simultaneously.

1,414,423. ELECTROLYTIC SEPARATION OF METALS. CARL LANGER, Woolhampton, England. Filed Apr. 11, 1921. Serial No. 460,323. 7 Claims. (Cl. 204—5.)



1. In a pervious cathode adapted for use in the deposition of metals by electrolysis, said cathode consisting of a metal plate with openings through the same, metal in the form of loose pieces packed in the apertures of said plate in such manner as to leave interstices for the percolation of an electrolyte therethrough, and means for retaining the said loose pieces of metal in the openings of said plate, said means being such as to be pervious to an electrolyte.

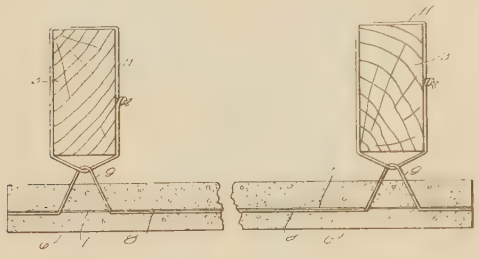
1,414,424. CONVEYER CHAIN. CLARENCE J. LAWSON, Yonkers, N. Y. Filed June 20, 1921. Serial No. 478,941. 2 Claims. (Cl. 198—134.)



1. A conveyer chain for drying ovens comprising a chain, side plates thereon provided with spaced clips ex-

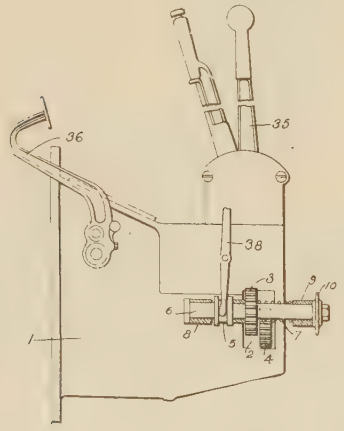
tending beyond the chain, hooks swingingly secured to the chain and free to swing toward and away from said clips.

1,414,425. WALL CONSTRUCTION. JOHN H. LEWIS, Cicero, Ill. Filed Jan. 21, 1921. Serial No. 438,947. 3 Claims. (Cl. 72—20.)



1. In a wall construction, a slab made of a hardened plastic material, said slab having a reenforcing and binding screen disposed between the faces thereof, and a reenforcing wire disposed adjacent to and on one side of said screen, said wire terminating at the sides of said slab and being provided with a laterally extending loop midway between its ends, said loop being adapted to project outwardly from said slab.

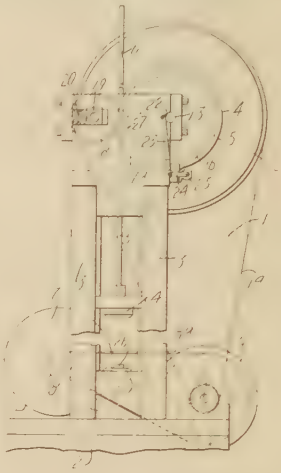
1,414,426. DUMP HOIST. CYRENIUS LOSCH, Schuylkill Haven, Pa. Filed Sept. 13, 1920. Serial No. 409,954. 1 Claim. (Cl. 298—21.)



The combination with a truck including a transmission, a hinged body, and an upwardly extending derrick mounted to swing toward and from the body, of a drum supported beyond one side of the truck body, a flexible connection between the drum and one end of the body, an internal gear revoluble with the drum, a gear meshing therewith, a spring restrained shiftable gear, means for transmitting motion from said shiftable gear to the gear engaging the internal gear, and means under the control of the driver for moving the shiftable gear into mesh with a gear of the transmission.

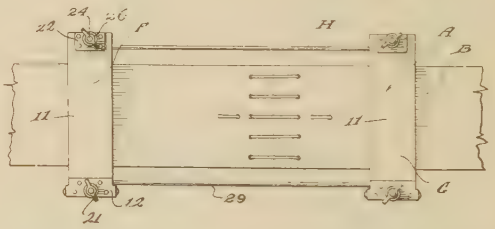
1,414,427. TESTING DEVICE. TILLMAN D. LYNCH, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 26, 1913. Serial No. 808,712. 5 Claims. (Cl. 265—13.)

1. A testing device including an anvil, an impact member movable into and out of engagement with the anvil, a bar operatively connected to the impact member, friction rollers engaging against opposite sides of the bar, means for rotating one of the rollers, resilient means



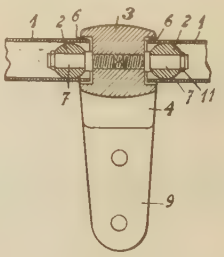
holding the other roller in yielding engagement with the bar and means for intermittently moving such roller out of engagement with the bar.

1,414,428. HEAVY-DUTY BELT ADJUSTER. NEWTON J. MCCAY, Coalinga, Calif. Filed Feb. 17, 1921. Serial No. 445,804. 8 Claims. (Cl. 164—79.)



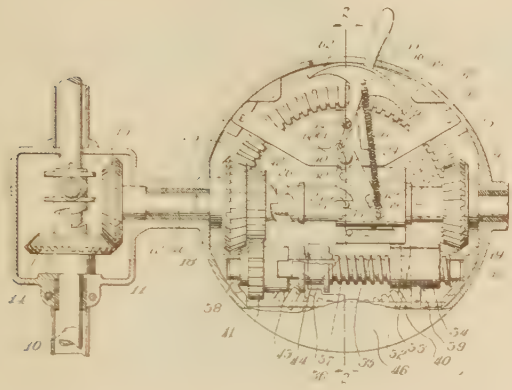
1. A tool for facilitating repairs to transmission and drive belts comprising a pair of spaced clamps including adjustable jaws, means for adjusting the clamps toward and away from each other, and a frame slidably associated with the device for holding various belt tools.

1,414,429. FISHING BOAT. ALBERT MADÖRIN, Quarten, Switzerland. Filed June 22, 1921. Serial No. 479,555. 1 Claim. (Cl. 193—55.)



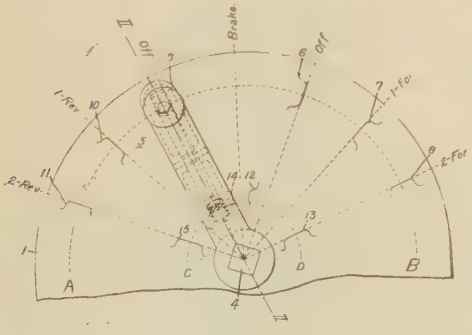
In combination, a member having a recess in one side and also having means whereby said member may be attached to a gunwale, a tubular roller arranged with one end in said recess, a bearing ball in said end of the roller and a supporting member for said bearing ball and on which the same rotates, said supporting member being attached to and projecting from the first-named member.

1,414,430. DRIVING MECHANISM FOR WASHING MACHINES. LAWRENCE W. MAMMEN, Chicago, Ill. Filed June 18, 1920. Serial No. 389,801. 10 Claims. (Cl. 74—50.)



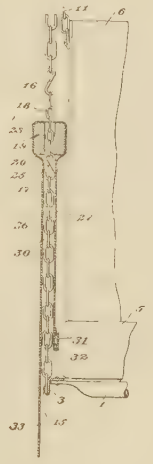
1. In driving mechanism of the class described, a gear adapted to transmit motion to the device to be operated, a shaft disposed transversely of the gear, a pair of gears loosely mounted on said shaft and arranged in mesh with the first mentioned gear at diametrically opposite points, a double clutch member slidably keyed to the shaft intermediate of the loosely mounted gears and adapted to alternately have clutching engagement with said gears, a member slidable on said clutch member and adapted to control the latter, means adapted to travel in directions lengthwise of said shaft and in controllable relation with said last mentioned member, intermeshing gears intermediate of said means and one of the loosely mounted gears, a pair of pivotally mounted levers having operative relation with each other at points intermediate of their pivotal points, one of said levers being adapted to be manually controlled, while the other lever has operative relation with the second mentioned member, and tension-applying means intermediate of the two levers whereby a positive movement of said levers to opposite sides of their pivotal points will be induced.

1,414,431. CONTROL APPARATUS. PAUL L. MARDIS, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 7, 1919. Serial No. 281,129. 9 Claims. (Cl. 74—88.)



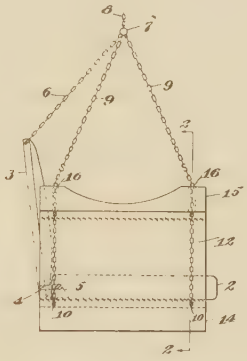
1. The combination with a movable handle embodying a rocking member, of independent sets of stationary means for engaging opposite ends of said member to effect positive stops of said member in a series of positions.

1,414,432. COUCH HAMMOCK. HARRY MINTZ, Boston, Mass. Filed Apr. 23, 1921. Serial No. 463,897. 11 Claims. (Cl. 5—61.)



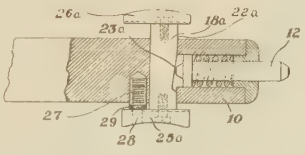
1. A hammock comprising a seat frame, spaced flexible supports therefor, and an arm rest having elements slidably and frictionally engaging the respective supports whereby said arm rest may be adjusted along said supports relatively to the seat frame.

1,414,433. HAMMOCK. HARRY MINTZ, Boston, Mass. Filed July 19, 1921. Serial No. 485,860. 9 Claims. (Cl. 5—61.)



1. A hammock comprising a seat frame, flexible supports engaging and directly supporting said frame, a vertically adjustable arm rest having openings adjacent to its ends, said supports passing freely through said openings and means independent of said arm rest for supporting a strip of fabric constituting a wind shield.

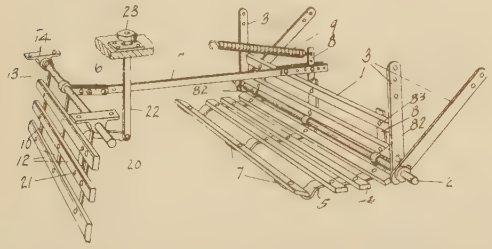
1,414,434. ADJUSTABLE LIMIT GAUGE. LAWRENCE E. OLSEN, Troy, N. Y., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed July 26, 1920. Serial No. 398,901. 22 Claims. (Cl. 33—143.)



1. A gauge for determining internal dimensions comprising in combination, a frame, an outward projecting contact pin at one end of the frame, an outward projecting contact pin at the other end of the frame and

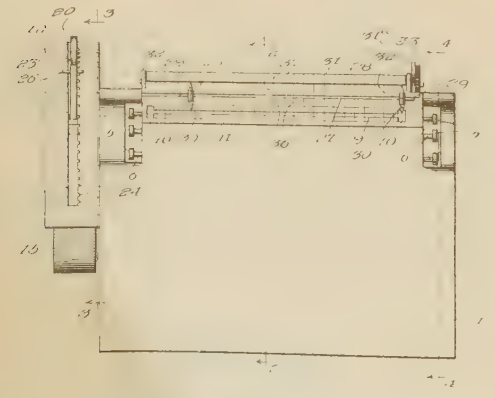
movable inward or outward with respect thereto, the said frame extending directly along straight lines from one pin to the other, and mechanism for moving the movable pin through a definite predetermined distance, the said mechanism having a cam surface engaging the pin and having two separate limit stops held in fixed relation to each other and with their active faces adjacent.

1,414,435. LIFE GUARD FOR STREET CARS OR SIMILAR VEHICLES. FRED N. ROOT, Kalamazoo, Mich. Filed Oct. 18, 1921. Serial No. 508,421. 6 Claims. (Cl. 293—35.)



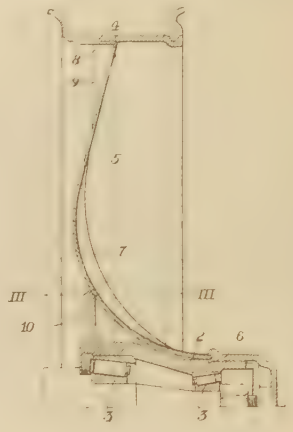
1. In a lifeguard, the combination of a cradle adapted to be disposed beneath the car, the said cradle comprising angled cross bars of spring metal, a supporting rock shaft therefor secured to the said cradle by suitable cross bars with their lower ends turned into engaging eyes and their upper parts secured to said angled cross bars, an upwardly projecting arm on the said cradle, a suspended pivoted gate with brackets for supporting it under the front portion of the platform of a car, a rearwardly projecting arm on said gate, a pivoted link connecting the rear end of said arm and the upwardly projecting arm on the said cradle with a beveled joint between the said arm and link for limiting its downward movement, and a tension spring adapted to connect the upper end of the arm of the cradle to the under side of the car, and resetting means comprising a rearwardly extending lever arm secured to the said gate with an upwardly disposed treadle piece adapted to extend above the floor of a car, all coacting as specified.

1,414,436. COMPUTING MACHINE. WILLIAM EDWIN ROYSTER, Jr., and KENNETH BETHEL ROYSTER, Henderson, Ky. Filed Sept. 3, 1920. Serial No. 407,864. 11 Claims. (Cl. 235—87.)



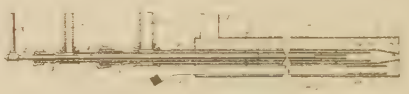
1. A computing machine comprising movable roller supporting members, a plurality of series of chart rollers carried thereby, a pinion connected to one of said roller supporting members, a disk having an arcuate rack operatively connected with said pinion whereby the movement of said disk operates said roller supporting members, and an operating lever for said disk.

1,414,437. VEHICLE WHEEL. EDWIN E. SLICK, Pittsburgh, Pa. Filed Feb. 25, 1920. Serial No. 361,113. 14 Claims. (Cl. 301—64.)



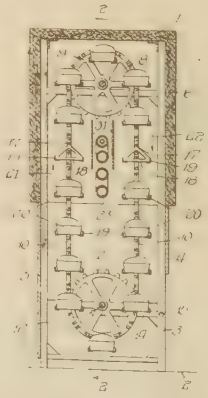
1. A vehicle wheel, comprising a continuous one-piece disk having a central portion extending outwardly substantially parallel to the axis of rotation of the wheel, a peripheral portion extending substantially normal to said axis of rotation, and an imperforate intermediate portion connecting said portions and curved gradually from the central portion to the peripheral portion, substantially as described.

1,414,438. FUEL BURNER. ALBERT W. SMITH and GEORGE A. COLLINS, Youngstown, Ohio. Filed Apr. 3, 1920. Serial No. 371,028. 10 Claims. (Cl. 158—73.)



5. In a fuel burner, an exterior cooling chamber having connections for circulating a cooling medium therethrough, and also having a longitudinal seat therein, in combination with a fuel supply device mounted on said seat and movable longitudinally, vertically or horizontally of said chamber, substantially as described.

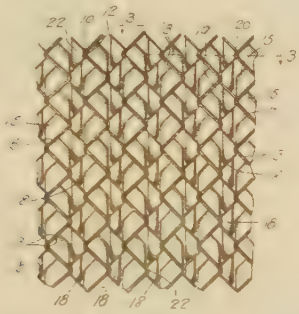
1,414,439. PROCESS OF BAKING. FREDERICK T. SNYDER, Oak Park, Ill., assignor to S. D. Flood, Chicago, Ill. Filed July 30, 1919. Serial No. 314,254. 10 Claims. (Cl. 107—54.)



1. The process of baking consisting in confining a body of air; bringing the upper portion of the body of air to baking heat and the lower portion to proofing temperature;

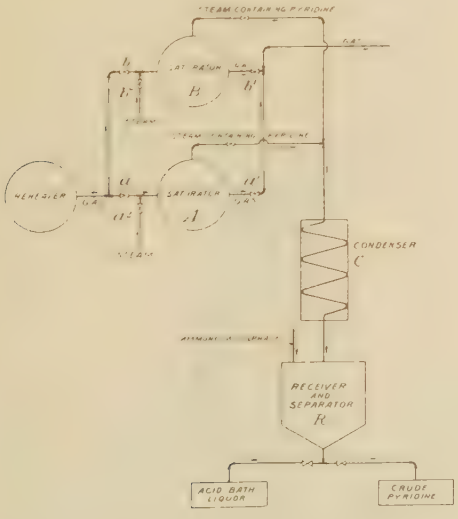
and passing dough upwardly through the proofing and baking portions of said body of air, the rate of progress being so proportioned that the lumps of dough are completely proofed and ready for immediate baking as they pass from one portion to another.

1,414,440. RADIATOR CORE. JOHN SORENSEN, Ottawa, Ill. Filed Oct. 4, 1920. Serial No. 414,499. 4 Claims. (Cl. 257—130.)



1. In a radiator core a plurality of spaced water container members providing air passages therebetween, each of said water container members comprising a pair of sheet metal members provided with curved corrugations, and sheet metal partitions in said air passages provided with corrugations curved in a direction opposite to those of the water container members.

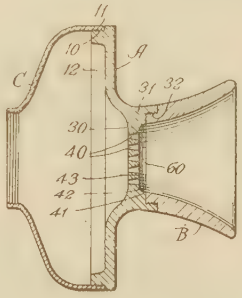
1,414,441. RECOVERY OF PYRIDINE FROM AMMONIUM SULPHATE SOLUTIONS. FREDERICK W. SPERR, Jr., and RALPH L. BROWN, Pittsburgh, Pa., assignors to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 5, 1920. Serial No. 414,758. 16 Claims. (Cl. 23—24.)



1. That step in the herein described process of recovering pyridine from acid solutions containing pyridine which consists in distilling off the pyrdine from the acid solution, substantially as described.

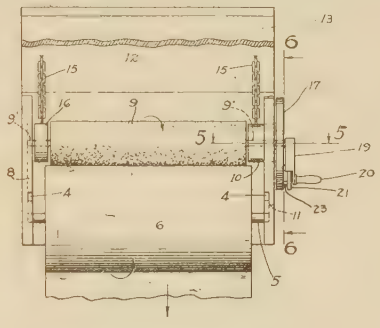
1,414,442. TELEPHONE TRANSMITTER. LOUIS STEINBERGER, Brooklyn, N. Y. Filed June 26, 1919. Serial No. 306,791. 5 Claims. (Cl. 179—179.)

4. A telephone transmitter comprising a mouthpiece of insulating material in the form of a hollow flared shell, and an integral metallic transmitter cap having a substantially smooth, unobstructed perforated portion oppo-



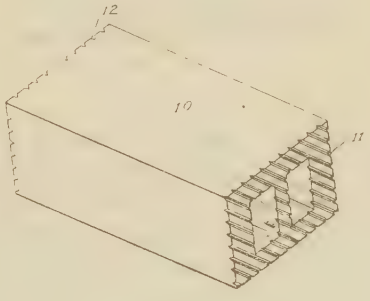
site the orifice of said mouthpiece, said transmitter cap and said mouthpiece being provided with coacting screw-threads for securing them together.

1,414,443. TOWEL CABINET. GEORGE A. STEINER, Salt Lake City, Utah, assignor to American Linen Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Feb. 3, 1921. Serial No. 442,127. 12 Claims. (Cl. 43—32.)



1. The combination, with a towel roll, of a measuring device mounted to automatically check unwinding of the towel when a predetermined length has been delivered, said device becoming automatically set when pull upon the towel ceases to allow the unwinding operation to be repeated.

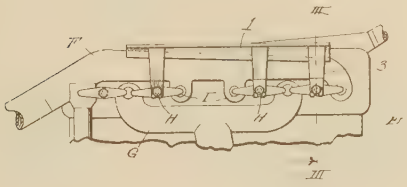
1,414,444. BUILDING TILE. HALVER R. STRAIGHT, Adel, Iowa. Filed June 10, 1920. Serial No. 388,018. 2 Claims. (Cl. 72—41.)



2. An improved hollow tile building block formed with grooves in the face of each end, those at one end being ar-

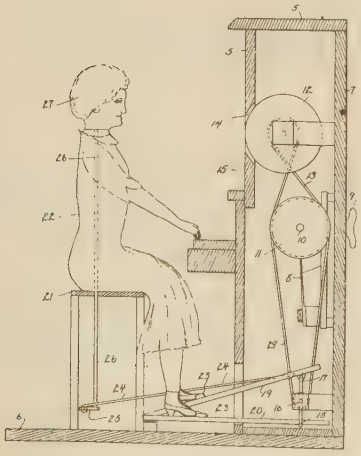
ranged in angles divergent from the plane of the face of the block, and those at the other end being arranged at angles divergent from those on the first mentioned end, for the purposes stated.

1,414,445. VULCANIZING ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. JOHN M. STUCKER and WILLIAM J. KAMERER, Rosedale, Kans. Filed Sept. 6, 1921. Serial No. 498,760. 4 Claims. (Cl. 18—18.)



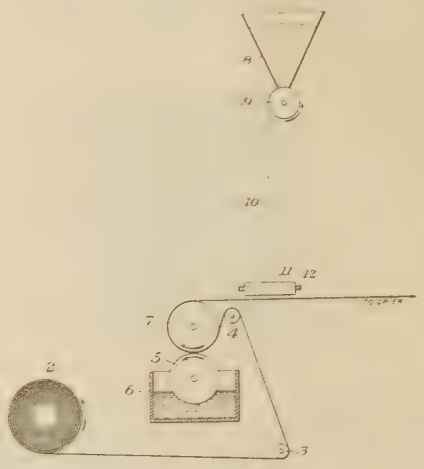
1. The combination with the exhaust manifold of an internal combustion engine, of a flat plate superposed with respect to the manifold and heated thereby through conduction and radiation, and a casing vulcanizing plate having a channelled upper face, in superposed relation to the first-named plate.

1,414,446. MUSICAL TOY. GIUSEPPE E. TERRANOVA, New Haven, Conn. Filed June 2, 1921. Serial No. 474,384. 2 Claims. (Cl. 46—40.)



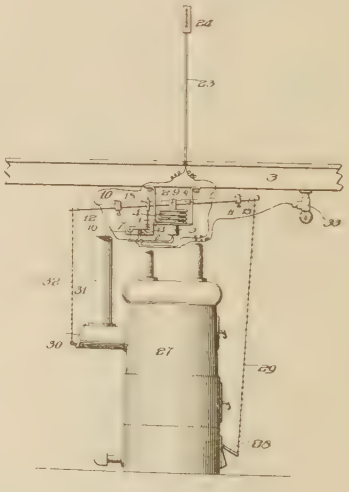
1. A musical toy, comprising a casing, formed in its front face with an opening and provided with a back, a spring-operated music-producing device mounted in the said casing, said music-producing device including a shaft, a drum representing a perforated music-roll supported in the casing in line with the opening in the front thereof, cranks mounted near the bottom of the casing, pedals resting on said cranks and adapted to be raised and lowered thereby, connections between said shaft, drum and cranks whereby they are moved with the said shaft, and a doll mounted in front of the casing and having feet resting upon said pedals and adapted to move therewith.

1,414,447. ABRASIVE COATED SHEET AND METHOD OF MAKING THE SAME. FRANK J. TONE, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed May 20, 1920. Serial No. 382,804. 8 Claims. (Cl. 91—68.)



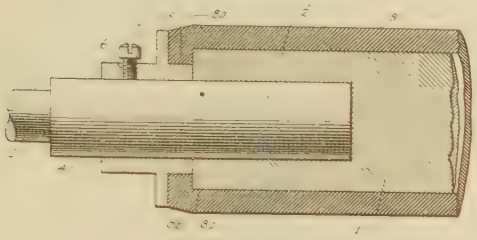
1. The method of making abrasive sheets which consists in securing abrasive grains to selected or separated portions of the face of the sheets leaving other portions uncoated.

1,414,448. ELECTRIC DRAFT CONTROLLER. FRANK D. WINDELL, Philadelphia, Pa. Filed Nov. 27, 1920. Serial No. 426,883. 7 Claims. (Cl. 236—68.)



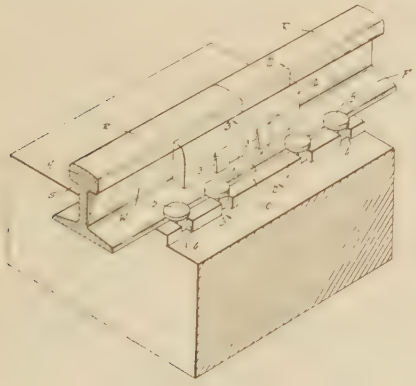
2. The combination with a heater having an air inlet damper and a check damper, of an electrically operated draft controller comprising the following instrumentalities:—an expansible and contractible liquid containing member, a lever connected with said member and actuated thereby, an electric heater controlling the temperature of the liquid, switch mechanism having a fixed contact and a movable lever in circuit with said heater, a thermostat in circuit with said heater and said switch mechanism, said switch mechanism including an apertured block through which said first lever extends and in which it has limited movement, and connections from said first lever to said air inlet damper and to said check damper.

1,414,449. ROLL. JOHN WITZIG, Astoria, N. Y. Filed July 22, 1920. Serial No. 398,160. 3 Claims. (Cl. 91—67.8.)



1. An improved roll embodying a core, a spindle projecting beyond each end thereof, a collar fitted over each spindle and secured in place thereon, each collar being of lesser diameter than the diameter of the core, and provided intermediate its ends with an integral flange of lesser diameter than the finished roll, and a facing of tubular form encircling the core and provided at its opposite ends with inturned flanges which extend over the opposite ends of the core, and abut the inner faces of the flanges of the collars, the opposite ends of said facing being tapered beyond the ends of the core to conform with the flanges.

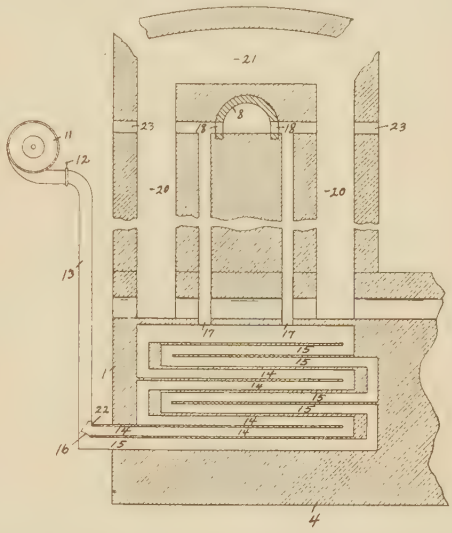
1,414,450. RAIL JOINT. JOHN J. ZNAK, Broughton, Pa. Filed Feb. 4, 1922. Serial No. 534,075. 1 Claim. (Cl. 238—216.)



In a rail joint, the combination with adjoining ends of rails having openings formed through the base flanges thereof in spaced relation to the rail web, of fish plates abutting the side faces of the web of adoining ends of the rails and provided in their outer faces with notches coinciding with the openings of the base flanges of the rail, and a plate arranged beneath the rails and embodying integral lugs extending through the openings of the base flanges and engaging in said notches, said plate being of greater width than the rail base and being provided with openings through which retaining elements may be extended for engagement with a tie.

1,414,451. OPEN-HEARTH-FURNACE DEVICE. ALEXANDER ARTHUR, Youngstown, Ohio. Filed Feb. 7, 1921. Serial No. 443,001. 2 Claims. (Cl. 263—15.)

1. In a device of the class described, a partition wall separating a gas slag pocket and an air slag pocket, said partition wall provided with a plurality of tortuous paths, an air passage lead from said tortuous paths to an



opening on each side of a gas port, means for alternating said tortuous paths, substantially as described.

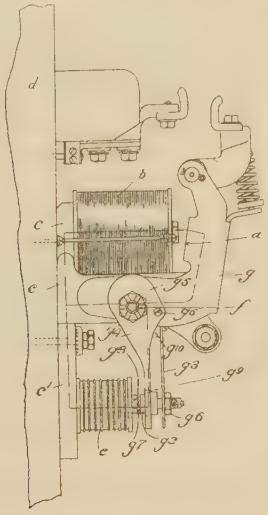
1,414,452. TABLETTE FOR CHAIRS. BERTHOLD W. BLAUERT, Marysville, Calif. Filed July 30, 1921. Serial No. 488,602. 6 Claims. (Cl. 155—127.)

1. As an article of manufacture, a tablette adapted to engage from one arm rest to another of a chair, a stationary support secured on the under surface of the tablette near one end, a second support mounted for longitudinal adjustment on the under surface of the tablette, and means carried by said supports for engaging with the upper and lower faces of the arm rests of a chair, thereby supporting the tablette in position thereon, a slide for carrying the adjustable support, and means cooperating with the adjustable support to insure rigidity between the support and the tablette.

1,414,453. ELECTROMAGNETIC LOCKOUT SWITCH. ROBERT PEEL BOSSOM, Brighton, England. Filed July 23, 1918. Serial No. 246,404. 1 Claim. (Cl. 200—94.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

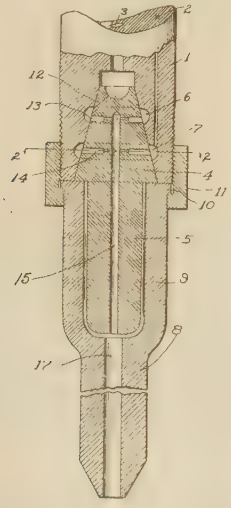
An electromagnetic lockout switch comprising a magnet frame, a pivoted armature lever, having a rigid extension on one end, mounted on said frame, a shunt holding or closing coil, a series lockout coil, armatures for said coils, a spring mounted on said rigid extension and carrying the armature for the lockout coil thereon, the other armature being mounted upon the opposite end of the pivoted armature lever which consists essentially of a rigid structure

adapted to rock on a pivot, cores for said coils mounted on the magnet frame and in the magnetic flux path, the magnetic system being such that a portion of the magnetic flux generated by the closing coil passes to the magnetic circuit of the locking out coil and acts cumulatively with



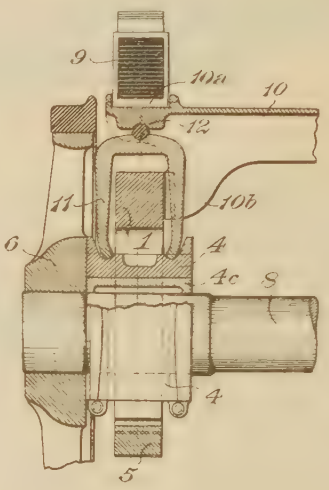
the magnetic flux generated by the locking out coil whereby fluctuations in the pull upon the pivoted armature lever exerted by the closing coil due to voltage variations are accompanied by corresponding fluctuations of the locking out pull.

1,414,454. MIXER FOR WELDING TORCHES. WILLIAM P. BROWN and GEORGE MCALPINE BRITTAIN, San Francisco, Calif. Filed June 10, 1920. Serial No. 387,851. 1 Claim. (Cl. 158—27.4.)



A burner tip for welding torches comprising a tube having two gas passages therethrough and having a frusto-conical seat with peripheral grooves at its end, a gas mixer having a frusto-conical head and a central opening extending longitudinally thereof from one end toward the other end, said head having a plurality of transverse openings in two series to lead the gas from the peripheral grooves of the frusto-conical seat to the longitudinal opening in the mixer tube, said frusto-conical head having other openings extending at an inclination to its axis to deliver gas from the central portion of the supply tube to one of its peripheral grooves surrounding its frusto-conical seat, a nozzle having a chamber to loosely receive the mixer and having an opening therethrough from said chamber to its other end larger than the opening extending longitudinally into the mixer, and means to connect the nozzle and mixing tube to the supply tube.

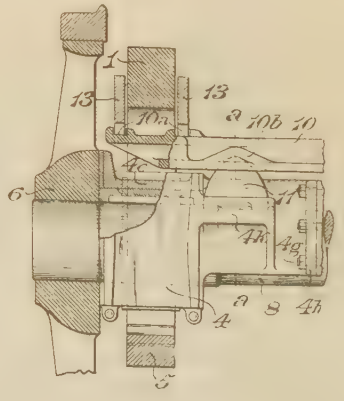
1,414,455. LATERAL-MOTION APPLIANCE FOR LOCOMOTIVE DRIVING BOXES. ALFRED W. BRUCE, New York, N. Y. Filed Aug. 18, 1921. Serial No. 493,299. 5 Claims. (Cl. 105—80.)



1. In a locomotive engine, the combination of a side frame; a driving box, fitted with the capacity of relative movement therein; a spring supporting beam, which is vertically movable relatively to the driving box; and vibratable means, interposed between the supporing beam and the driving box, for transmitting resistance from one to the other of said members, in planes on the opposite side of the frame.

2. In a locomotive engine, the combination of a side frame; a driving box, fitted, with capacity of relative movement therein; a spring supporting beam, which is vertically movable relatively to the driving box; and a rocker, extending, on opposite sides of the frame, between the supporting beam and the driving box, and bearing at two points on one of said members, and at one point on the other member.

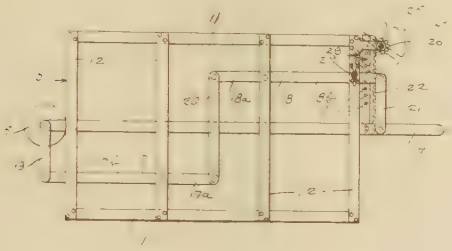
1,414,456. LATERAL-MOTION APPLIANCE FOR LOCOMOTIVE DRIVING BOXES. ALFRED W. BRUCE, New York, N. Y. Filed Aug. 18, 1921. Serial No. 493,300. 3 Claims. (Cl. 105—80.)



1. In a locomotive engine, the combination of two side frames; a continuous driving box structure, fitted, with

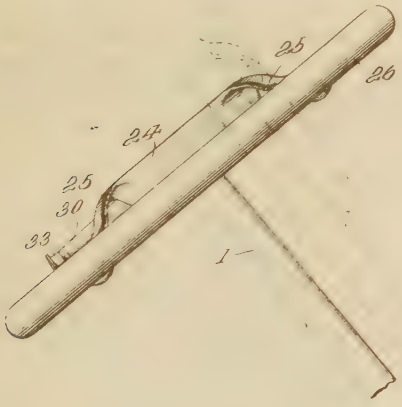
the capacity of relative transverse movement, therein; a superposed vertically movable spring and equalizer supporting beam, which extends into the spaces between the jaws of opposite pedestals of the side frames; and vibratable rockers, interposed between, and bearing on, the driving box structure and the supporting beam.

1,414,457. TRACTOR DRAWBAR. HARRY J. CASE, Potosi, Wis. Filed June 20, 1921. Serial No. 478,956. 7 Claims. (Cl. 213—67.)



1. In a tractor, a rigid supporting frame, a drawbar transversely shiftable with relation to the frame, and means connecting the frame and drawbar whereby shifting of one end of the drawbar causes shifting of the opposite end thereof in the same direction but through a different distance.

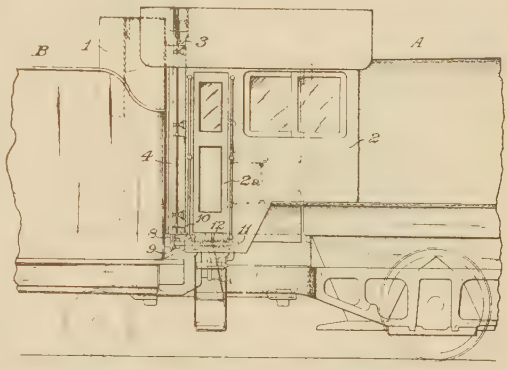
1,414,458. COMBINED TILTING AND SLIDING STEERING WHEEL. GEORGE H. COCKS, Adrian, Mich. Filed Oct. 17, 1921. Serial No. 508,173. 8 Claims. (Cl. 74—33.)



4. In steering mechanism for automobiles and the like having two members, one slidable with respect to the other, means on one of the members provided with guides, pivots carried by the other member, and blocks on said pivots over which the guides slide.

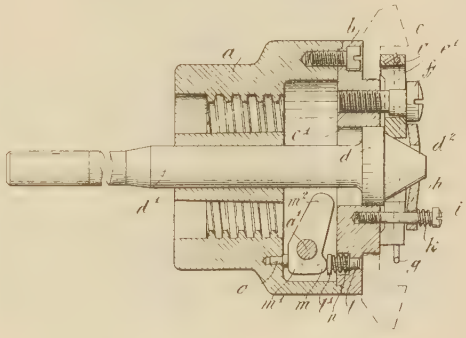
1,414,459. VESTIBULE FOR LOCOMOTIVES AND TENDERS. FRANCIS J. COLE, Schenectady, N. Y. Filed Dec. 21, 1921. Serial No. 523,882. 6 Claims. (Cl. 105—9.)

1. The combination, with a locomotive and a tender, of a cab, at the rear end of the locomotive; side doors, closing openings for access to said cab; a cab, at the front of the tender; a forward extension, secured to the tender cab and forming an enclosure for a passage way between the locomotive and tender cabs; and automatically operable means, connected to the locomotive cab, for maintaining closure of the space between said locomotive cab and said tender cab extension.



6. In a locomotive and cab vestibule structure, the combination of a plate, fixed on one of the vehicles; a plate, guided on the other vehicle to slide at an angle to the first specified plate; and a spring hinged arm, coupled to said last specified plate, and exerting pressure thereon in direction to maintain it in bearing on said first specified plate.

1,414,460. AIR-OPERATED ADAPTER. WALTER L. DIXON, New Brunswick, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 2, 1920. Serial No. 421,404. 6 Claims. (Cl. 279—2.)

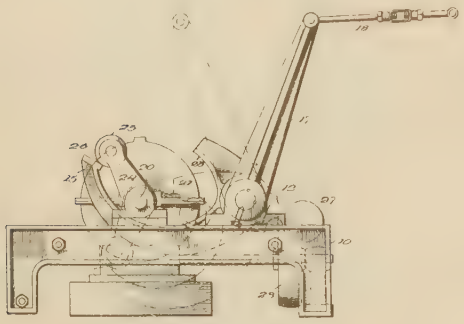


1. In combination with a supporting arbor for work, an air operated plunger reciprocable with relation to the arbor, clamping elements supported slidably on the face of the arbor and spaced from a part thereof and movable longitudinally over the face of the work which lies between the elements and the face of the arbor under the influence of said plunger, and means independent of the plunger to retract the clamping elements upon retraction of the plunger.

1,414,461. MECHANICAL MOVEMENT. HULDREICH EGLI, Baltimore, Md. Filed May 25, 1921. Serial No. 472,337. 3 Claims. (Cl. 74—14.)

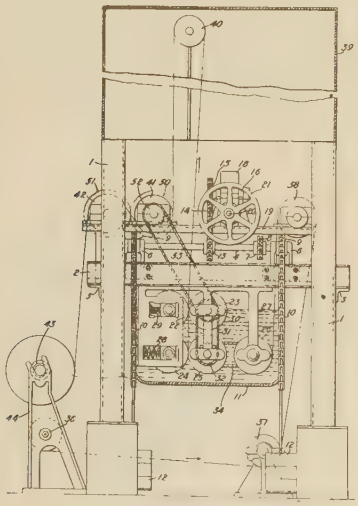
1. In a mechanical movement, the combination of an actuator, a rocker shaft, a rocker lever mounted on the shaft, a cam mounted on the shaft provided with a pair of arms projecting in the path of the actuator and

adapted to be alternately engaged by said actuator, one of said arms being of greater length than the other,



whereby the rocker lever will be moved in opposite directions at different rates of speed.

1,414,462. METHOD OF AND APPARATUS FOR IMPREGNATING MATERIAL. LOUIS T. FREDERICK, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 6, 1919. Serial No. 295,192. 7 Claims. (Cl. 91—31.)

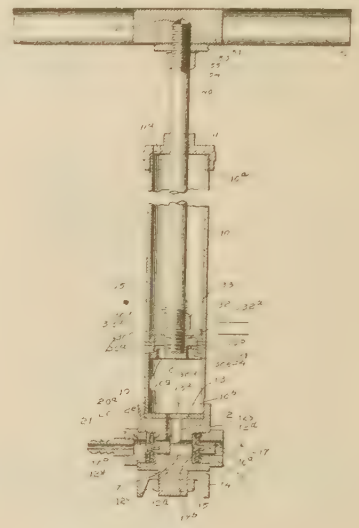


1. In an apparatus for impregnating fibrous material, means for drawing the material through a liquid impregnating agent, means for forcing the liquid into the material and means for removing excess liquid at the surface thereof.

7. A method of impregnating sheet material that comprises passing the sheet material through a bath of impregnating liquid, applying pressure to the material while it is immersed, applying additional pressure at the surface of the bath, drying the material and winding it about a receiving mandrel.

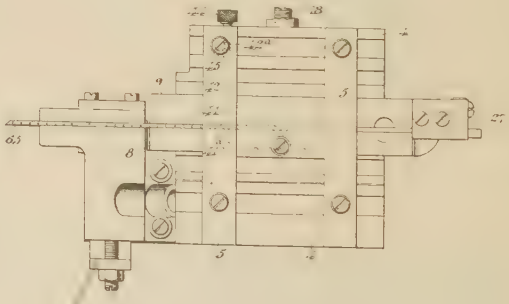
1,414,463. FLUID PUMP. PATRICK M. GRANT, Chicago, Ill. Filed Sept. 25, 1920. Serial No. 412,760. 10 Claims. (Cl. 230—27.)

1. In a pump, the combination with a pump barrel of a piston therein, a base member to which the said barrel is attached, there being a passageway in the base member communicating with the pump barrel and valve mechanism in the said passageway comprising a valve seat, a valve stem in cross section adapted to be guided



in said passageway adjacent the valve seat, a valve plate secured to the said stem, a resilient member carried by the valve plate, and means for locking the said valve plate and stem together.

1,414,464. PRINTER'S STRIP-MATERIAL MOLD. ROBERT GRAY, Glasgow, Scotland, assignor to Lanston Monotype Machine Company, Philadelphia, Pa., a Corporation of Virginia. Filed July 19, 1919. Serial No. 311,933. 9 Claims. (Cl. 199—1.)

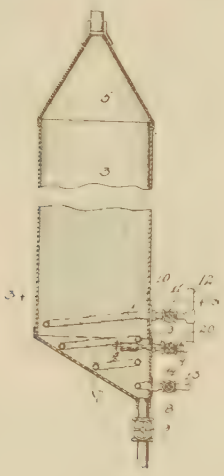


9. In the art of casting a bar of type metal, the method of casting a bar having a design upon one edge thereof and subsequently passing the bar in contact with the roller having a design on the periphery thereof for changing the design on the edge of the bar of type metal.

1,414,465. DISTILLATION PROCESS. HENRY A. HILLS, Grand Rapids, Mich. Filed May 7, 1917. Serial No. 167,017. 4 Claims. (Cl. 196—27.)

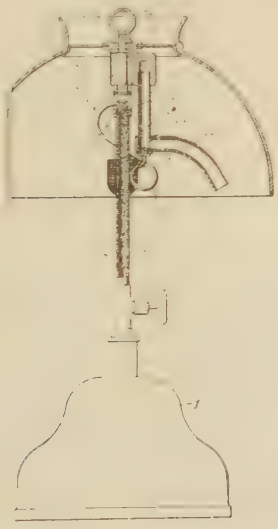
1. A distillation process including heating liquid in a still having an inclined bottom and simultaneously

propelling a part of the liquid horizontally against the inclined bottom to produce a circulation of the liquid in



a vertical plane and thereby aid in the vaporization of the latter and inhibit foaming.

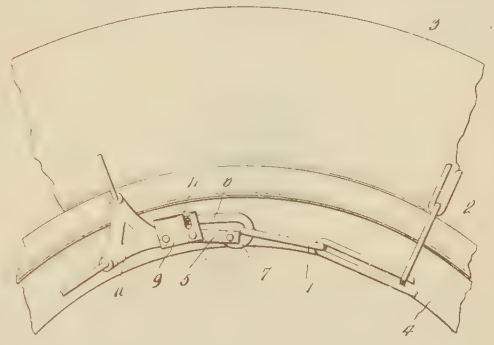
1,414,466. VAPOR LAMP. CHESTER A. HOFF and JAY C. STEESE, Akron, Ohio, assignors to The Die Sinking and Machine Company, Akron, Ohio, a Corporation of Ohio. Filed July 21, 1919. Serial No. 312,186. 5 Claims. (Cl. 67—50.)



1. In a vapor lamp, a main generator tube and an auxiliary generator tube which communicates directly with the main generator tube, a Bunsen tube with which the auxiliary generator tube communicates, a pair of burner tubes with which the Bunsen tube communicates, the said main generator tube and the auxiliary generator tube lying between the said burner tubes.

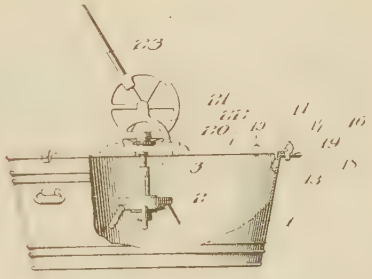
1,414,467. TIRE-CHAIN FASTENER. EDGAR S. HOGSHEAD, Mount Solon, and RODNEY C. HOGSHEAD, Gordonsville, Va. Filed Feb. 11, 1922. Serial No. 535,793. 5 Claims. (Cl. 24—241.)

1. A fastener of the character described, comprising a base, a handle pivoted to one end of said base, and a guard pivoted to the opposite end of said base and adapted to be moved over said handle to retain same



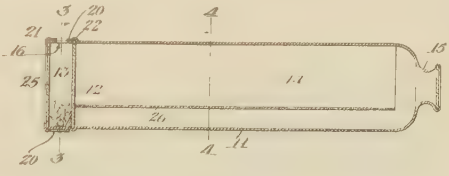
in locked position, and cooperating locking means on said handle and guard.

1,414,468. WASHING MACHINE. CHARLES W. HOTTMANN, Jr., Sandusky, Ohio, assignor to The Brown Clutch Co., Sandusky, Ohio, a Corporation of Ohio. Filed Feb. 18, 1922. Serial No. 537,430. 5 Claims. (Cl. 259—101.)



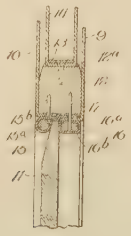
1. In a washing machine, a dolly support comprising a body portion, a gear loosely mounted thereon, a plurality of arms pivotally carried by said body portion and intergeared with said gear, and fastening devices to secure said arms with respect to a tub.

1,414,469. KALEIDOSCOPE. HERBERT E. HOUSE, Pasadena, Calif., assignor to Clarence S. Potter and Warren T. Potter, Los Angeles, Calif., partners. Filed Mar. 24, 1919. Serial No. 284,841. 1 Claim. (Cl. 88—15.)



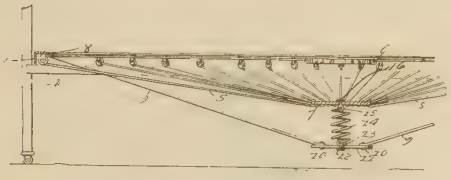
In a kaleidoscope, a tube, a translucent member closing one end of said tube and forming one wall of an object chamber, a transparent partition forming another wall of said chamber, two annular ridges on the exterior of said tube on either side of an aperture opening into said object chamber, said ridges formed by forcing the material of the tube outwardly producing grooves on the inner surface of the tube to receive the peripheries of said translucent member and partition, and a ring fitting over said tube between said ridges, said ring having an opening registering with said aperture when said ring is turned to the proper position.

1,414,470. CURTAIN-WINDOW CONSTRUCTION. BURTT J. HUBBARD, Kokomo, Ind. Filed Jan. 14, 1921. Serial No. 437,257. 6 Claims. (Cl. 296—145.)



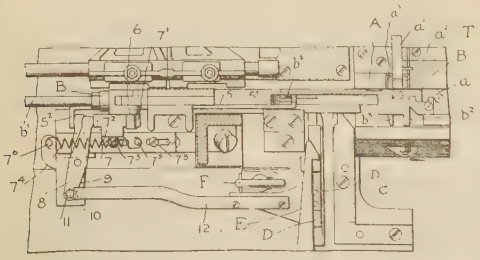
6. In combination with a curtain or the like comprising covering and lining members, a frame supported between said members adjacent an opening therein, said curtain members being inturned with respect to said frame, a welt overlying the inturned portion of one of said curtain members, the inturned portion of said other curtain member overlying a portion of said welt, a second welt overlying the inturned portion of said last mentioned curtain member, and a light element carried between said welts.

1,414,471. BEDSPRING. HARRY W. HUNTRESS, Turlock, Calif. Filed Sept. 21, 1921. Serial No. 502,155. 2 Claims. (Cl. 5—40.)



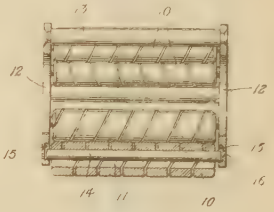
2. In a bed spring, a main bed spring frame, an auxiliary frame depending centrally therefrom, a support disposed centrally of the bed spring frame, bed spring wires connecting with and radiating from the support and being movably connected with the sides and ends of the main frame, a member connecting the other ends of the wires at a point below said support, and yieldable means connecting the center of the auxiliary frame and said member, and adapted to yield when pressure is applied upon the support and the wires connected thereto.

1,414,472. DELIVERING MECHANISM FOR TYPE-CASTING MACHINES. MAURITZ C. INDAHL, Philadelphia, Pa., assignor to Lanston Monotype Machine Company, Philadelphia, Pa., a Corporation of Virginia. Filed Nov. 9, 1920. Serial No. 422,766. 5 Claims. (Cl. 199—95.)



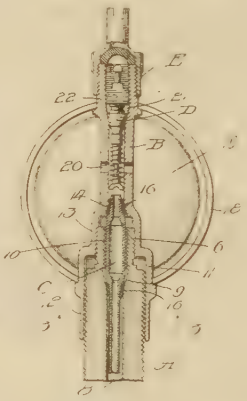
1. Type delivery mechanism comprising a supporting frame, a type carrier movable relatively to said frame, said carrier being provided with a clamping jaw movable relatively to the carrier and a lever operatively connected with said jaw, a stop for engaging with said lever to cause movement of the jaw, a slide mounted on the frame and having a projection, an abutment carried by the carrier to engage with said slide, said stop being adjustable with respect to said slide and movable in unison therewith.

1,414,473. ROLLER BEARING. ALLAN H. JONES, Belleville, and MARK G. ANTON, Newark, N. J., assignors to Circle Stamping and Mfg. Co., Belleville, N. J., a Corporation of New Jersey. Filed May 7, 1921. Serial No. 467,683. 6 Claims. (Cl. 64—62.)



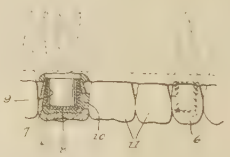
1. The herein described roller bearing comprising a cage and a series of rollers mounted loosely therein, said cage including a pair of end rings having pairs of pits formed in the opposing inner surfaces thereof, one pair for each roller, and roller-retaining means projecting loosely into and terminating in said pits.

1,414,474. PRESSURE INDICATOR. CHARLES R. KEERAN, Chicago, Ill. Filed Aug. 17, 1918. Serial No. 250,355. 9 Claims. (Cl. 116—34.)



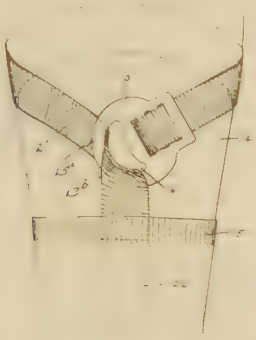
1. In combination with a fluid container having an opening from which projects a stem, a pressure indicator comprising a member fitted to the stem and maintaining communication with the interior of the container, the member being formed with walls adapted to be moved to the accompaniment of a report under the direct influence of a change in pressure within the container of predetermined amount without permitting escape of the fluid to the atmosphere, and a valve fitted to the member for preventing the escape of fluid within the container, substantially as described.

1,414,475. ARTIFICIAL TOOTH. EDWARD J. KOCHMIT, Cleveland, Ohio. Filed Nov. 2, 1921. Serial No. 512,210. 3 Claims. (Cl. 32—9.)



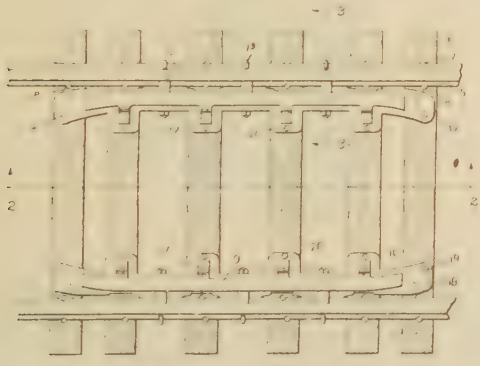
1. An artificial comprising a hollow vitreous crown, and telescoping tubes fitting within the same, one of the tubes being attached to the crown and the other to a natural tooth.

1,414,476. GARMENT SUPPORTER. HARRY W. LAKIN, Boston, Mass. Filed Jan. 28, 1921. Serial No. 440,646. 1 Claim. (Cl. 241—6.)



A hose supporter composed of a thin flexible plate, having a plurality of strip-engaging slots, a strip-guiding orifice, one end portion of the plate constituting a transverse bar having a reentrant inner edge forming the outer edge of said orifice; an elongated elastic strip threaded at one end portion through said slots and thus adjustably secured to the plate; and a hose leg-engaging device secured to the opposite end portion of the strip, and adapted to be threaded therewith through said orifice, and to depend from the outer edge thereof and engage a hose leg, the said transverse bar being joined at both end portions to the body of the plate, and thereby supported against distortion by pressure of the strip on the inner edge of the said bar when the supporter is in use, the reentrant form of said inner edge preventing the strip from slipping on the plate when the supporter is in use.

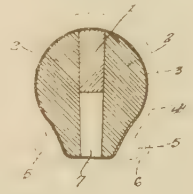
1,414,477. RAILROAD GUARD RAIL. FRANK LINDSAY, Detroit, Mich. Filed May 21, 1921. Serial No. 471,477. 4 Claims. (Cl. 238—19.)



1. A railroad guard rail integrally formed with end thrust brackets, spacing cleats, reinforcing webs in staggered relation to the spacing cleats, main rail supports, and locking bolts passing through the guard rail below the spacing cleats.

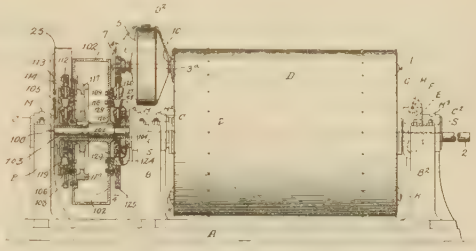
1,414,478. TIRE-CASING FILLER. WILLARD M. McEWEN, Chicago, Ill. Filed Nov. 5, 1920. Serial No. 421,838. 4 Claims. (Cl. 152—5.)

4. A tire casing filler comprising a body portion composed of three vertically arranged strips, a center strip and two side strips, all of resilient rubber and vulcanized together, the center strip having a resiliency less than the side strips and serving to support the normal load on the tire, portions of said strips along the inner edges thereof being removed, before securing the strips together and bending into annular form, by cutting a plurality of transverse notches into said strips from the inner edges thereof, to avoid compressing the material of the strips along said inner edges when bending the



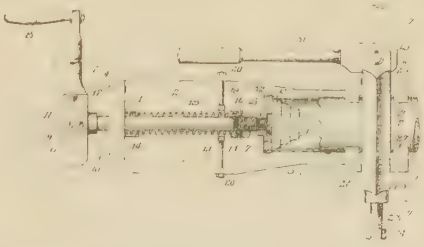
body portion into annular form, the notches in one strip being staggered with respect to the notches in the adjacent strip, and the contacting faces of the notches being vulcanized together after the body portion is in annular form.

1,414,479. POWER-TRANSMISSION MECHANISM. JAMES L. MAYS, Dallas, Tex. Filed Jan. 31, 1921. Serial No. 441,359. 16 Claims. (Cl. 74—34.)



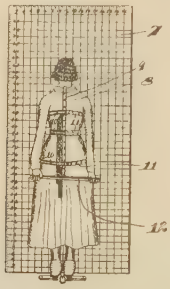
1. The combination of supports having alined bearings, a cylindrical frame having hubs, concentric therewith journaled in said bearings, power transmission mechanism within said frame, said power transmission mechanism including a prime shaft remote from an parallel with the axis of said hubs, said prime shaft projecting from the frame at one end and carrying a pinion, an initial driving mechanism journaled on an axis in line with the axis of said frame, said initial driving mechanism comprising a gear concentric with said axis and meshing with the pinion on the prime shaft; and means whereby said frame may be angularly adjusted.

1,414,480. REAMER AND BURRER. EPHRAIM A. MIDGLEY, Salt Lake City, Utah. Filed Feb. 18, 1921. Serial No. 445,996. 4 Claims. (Cl. 77—73.)



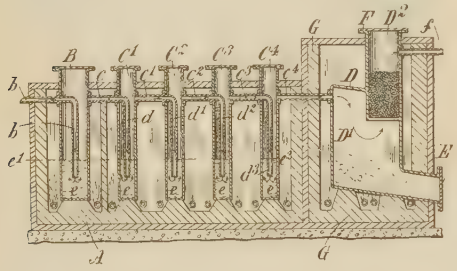
1. An instrument of the class described comprising, in combination, a frame having resilient legs carrying clamping members, a spindle rotatably and slidably mounted in said frame, a tool carried by said spindle and means carried by said resilient legs for compressing said clamping members.

1,414,481. METHOD OF TAKING PHOTOGRAPHIC MEASUREMENTS. GERHARD MOE, Eau Claire, Wis. Filed Aug. 28, 1919. Serial No. 320,507. 1 Claim. (Cl. 33—2.)



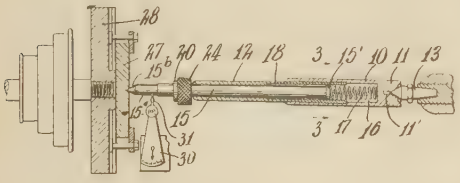
In taking photographic measurements, the method of determining the distance of the object measured from the measuring chart by positioning a measure of known length on the object measured and regulating the distance of said object relatively to the chart until said measure subtends at the point of vision its true length on said chart, substantially as described.

1,414,482. MANUFACTURE OF CARBON FOR PIGMENTAL AND OTHER PURPOSES. JOHN NELSON, Glasgow, Scotland. Filed May 7, 1921. Serial No. 467,670. 5 Claims. (Cl. 134—60.)



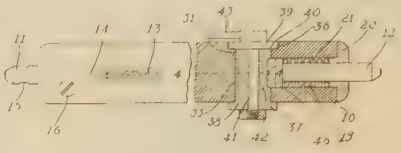
5. The process for the manufacture of refined lampblack which comprises cracking in the absence of air at a temperature between 500–700° C. a hydrocarbon which gives rise under such conditions to objectionable volatile decomposition products and collecting the finely-divided liberated carbon outside the sphere of decomposition at a temperature of about 400° C. and passing a current of innocuous gas over the hot carbon.

1,414,483. CENTERING GAUGE FOR LATHES. EMIL NOVITZKY, Detroit, Mich. Filed Apr. 16, 1921. Serial No. 461,939. 3 Claims. (Cl. 33—172.)



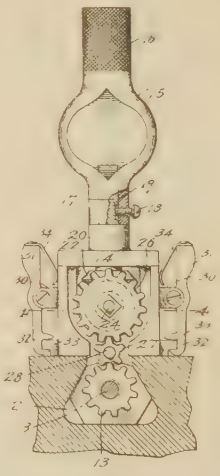
1. A centering gauge for lathes comprising a casing, a pin slidable in said casing and having a pointed end projecting therefrom, and a spring in said casing bearing against the inner end of said pin, and a collar adjustable along said pin adapted to permit free outward movement thereof but to limit the inward movement thereof and means for clamping said collar upon said pin.

1,414,484. ADJUSTABLE LIMIT GAUGE. LAWRENCE E. OLSEN, Troy, N. Y., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed July 26, 1920. Serial No. 398,902. 10 Claims. (Cl. 33—143.)



1. A gauge for determining dimensions comprising in combination, a frame, a contact pin at one end of the frame, a contact pin at the other end of the frame and movable inward or outward with respect thereto, means for moving the movable pin comprising an element rotatable about an axis perpendicular to the said pin and having an eccentric cam surface engaging the pin, and means associated with the said moving means for limiting the said movement of the pin.

1,414,485. PLATE-CLAMP-OPERATING TOOL. OSCAR ROESEN and ISIDOR TORNBERG, New York, N. Y., assignors to R. Hoe and Co., New York, N. Y., a Corporation of New York. Original application filed Nov. 10, 1915, Serial No. 60,652. Divided and this application filed Feb. 11, 1918. Serial No. 216,473. 4 Claims. (Cl. 81—56.)

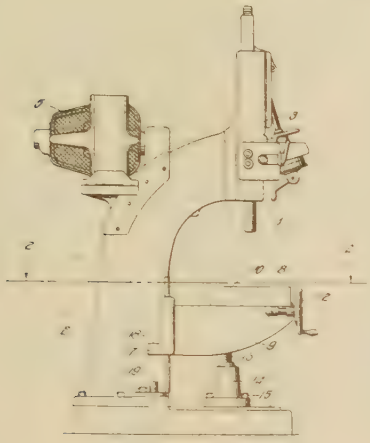


1. In a plate clamp operating tool, the combination with an enclosed casing having a beveled side, of a driver mounted in the casing, a shaft therefor, a handle for operating the shaft, driven gears mounted in the casing and operated from the driver, one of said gears co-operating with the adjusting mechanism of a plate clamp, and a positioning device projecting from the beveled side of the casing for positioning the casing with respect to a clamp.

1,414,486. DRILLING MACHINE. WILLARD T. SEARS, Montclair, and GEORGE W. JAGER, Bloomfield, N. J., assignors to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed June 19, 1919. Serial No. 305,302. 14 Claims. (Cl. 77—63.)

1. The combination in a drilling machine, of a frame comprising a bed and a column, vertical guide means on the frame, a work-support having a guideway directly engaging and vertically adjustable along the guide means and guided thereby, means for adjusting the work support vertically, and means for pivoting the entire work-support, including its guideway away from the column in such a way

as to enable the work to be supported on the bed instead of on the support, the work-support being guided and supported by the guide means and the adjusting means only when in direct engagement with the guide means.

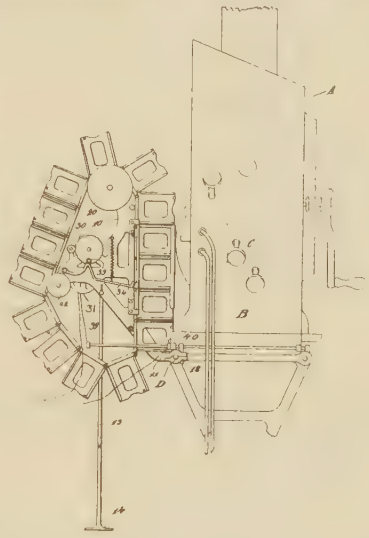


1,414,487. DRILL-TABLE MECHANISM. WILLARD T. SEARS, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed July 28, 1919. Serial No. 313,905. 17 Claims. (Cl. 77—63.)

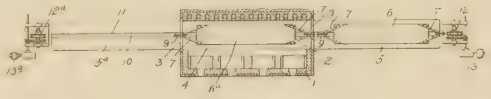
1. In a drilling machine, a work-support comprising a table, means for adjusting the table in a plurality of relatively angular directions horizontally, and a device for locking the table against horizontal adjustment, in any of the said directions, the adjusting means and the locking device being located at the front of the machine within easy reach of the operator.

1,414,488. STEREOPTICON-SLIDE CARRIER. LEWIS G. SHRYOCK, Clarendon, Ark. Filed Oct. 19, 1920. Serial No. 417,985. 4 Claims. (Cl. 88—27.)

1. A motion picture machine attachment comprising a frame, guide rods carried by the motion picture machine and slidably supporting said frame, guide rollers on said frame, a plurality of slide carriers connected in endless chain formation and trained about said rollers, electric motor operating means for driving said chain step by step, a contact element carried by said guide rod, a second contact member carried by the frame, said contact being interposed in circuit with a source of current and with said electric motor, whereby when said frame is shifted to bring the slide carriers in registration with the condenser lens of the motion picture machine the engagement of said contact will cause completion of the circuit for energizing the motor.

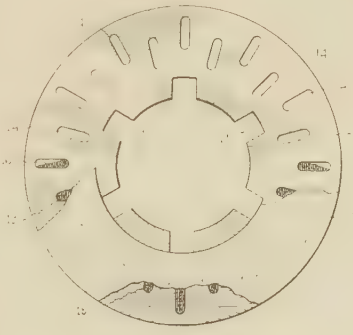


1,414,489. ANNEALING AND OTHER FURNACE. RALPH C. STIEFEL, Ellwood City, Pa. Filed Mar. 26, 1919. Serial No. 285,285. 3 Claims. (Cl. 214—18.)



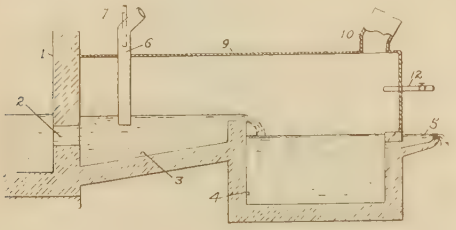
1. In combination with a heating furnace provided with openings in opposite ends thereof, of a table immediately adjacent each end of the furnace on a level with the bottom thereof, a pair of connected work carriers movable on said tables and on the furnace bottom, and mechanism for drawing said work carriers simultaneously and alternately in opposite directions, said work carriers being spaced apart, and each having a total length less than the length of the furnace whereby when either thereof is in the furnace the other one is entirely outside the furnace on one of the tables for loading and unloading.

1,414,490. FRICTION-CLUTCH MEMBER. GUY D. TRESSLAR, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 3, 1918. Serial No. 226,356. 12 Claims. (Cl. 192—107.)



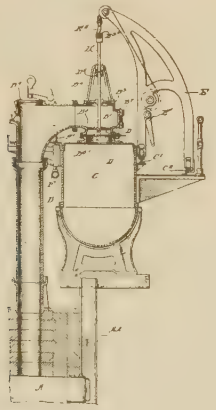
12. A friction surface member comprising a metal core piece perforated at intervals and friction facing molded thereto and vulcanized.

1,414,491. METHOD FOR THE RECOVERY OF METALLIC VALUES FROM SLAG. HARRY V. WELCH, Los Angeles, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Sept. 7, 1920. Serial No. 408,636. 10 Claims. (Cl. 75—17.)



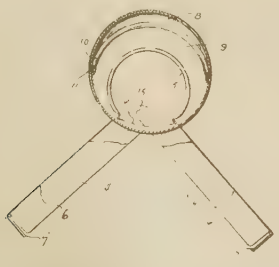
1. The process which consists in bringing a molten metallurgical slag in contact with a halidizing agent at sufficiently high temperature in the presence of an oxidizing atmosphere to cause volatilization of metallic values of the slag in the form of halide compounds, and collecting the compounds so volatilized.

1,414,492. STANDPIPE CONNECTION. LOUIS WILPUTTE, New Rochelle, N. Y., assignor of two-thirds to Alice A. Wilputte, New Rochelle, N. Y. Filed Jan. 19, 1920. Serial No. 352,529. 8 Claims. (Cl. 48—172.)



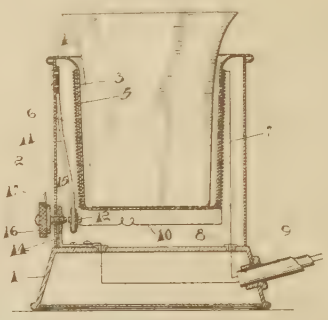
1. The combination with a collecting main having an inlet port of a valve movable through said port and substantially closing the port when in the latter and a mounting for said valve permitting its movement between an open position in which the valve is located within the main and a closed position in which the valve is located in said port.

1,414,493. RIDGE-ROLL FINIAL. MICHAEL ALBERT, Milwaukee, Wis., assignor to Milwaukee Corrugating Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 16, 1920. Serial No. 410,715. 3 Claims. (Cl. 108—24.)



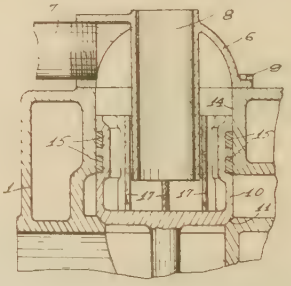
3. A device of the class described comprising a head member provided with a substantially circular opening a portion of the edge of which is cut away to form a recess, the remaining portions of said edge being inturned to form a bead; and a roll portion having an end engaging said opening and flared outwardly to intimately contact with said bead, said roll portion being also provided with a plurality of tongues adapted to enter said recess and engage the sides thereof to lock the parts together against relative rotary movement.

1,414,494. ELECTRIC WATER HEATER. FREDERICK SAMUEL ARNTFIELD, Toronto, Ontario, Canada. Filed May 17, 1921. Serial No. 470,820. 7 Claims. (Cl. 219—38.)



1. An electric liquid heater comprising a base; an external casing supported on the base; a metal shell forming a receptacle open at its upper end and supported on the casing; an insulating sleeve surrounding the outer surface of the receptacle; and a resistance wire wound on said sleeve.

1,414,495. POPPET VALVE. CHESTER T. BANGS, Chicago, Ill. Filed Mar. 8, 1920. Serial No. 364,088. 5 Claims. (Cl. 123—177.)

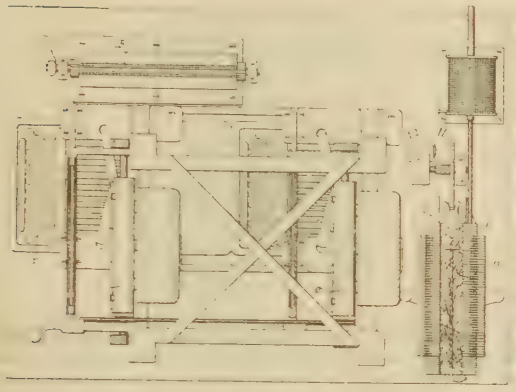


1. In an internal combustion engine, a poppet valve, a hollow cylinder integral therewith, an engine block having a cylindrical way in which said cylinder slides, a tube mounted on the engine block, open to the atmosphere, extending into the interior of said hollow cylinder and concentric therewith, and longitudinal fins on the interior surface of said cylinder extending radially nearly to said tube.

1,414,496. CRYPTOGRAPHIC TYPEWRITER. PETER GEORG GROVE BEYER, Challattenlund, Denmark. Filed Aug. 12, 1920. Serial No. 403,123. 5 Claims. (Cl. 197—4.)

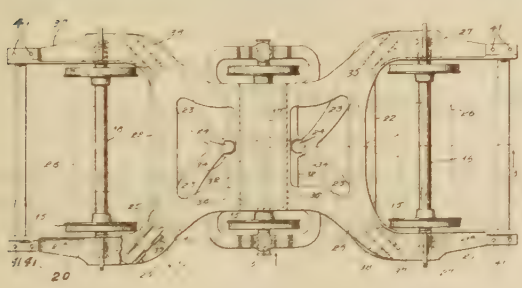
1. A cryptographic apparatus, comprising, in combination, a primary typewriter and a secondary typewriter, said typewriters being adapted for synchronous operation, the primary typewriter being adapted to be manually operated, electrically operated means between said typewriters, and operable on the operation of said primary

typewriter for operating the secondary typewriter, and means operated by said primary typewriter for irregu-



larly and arbitrarily selecting the typebar of the secondary typewriter to be operated on the operation of the primary typewriter.

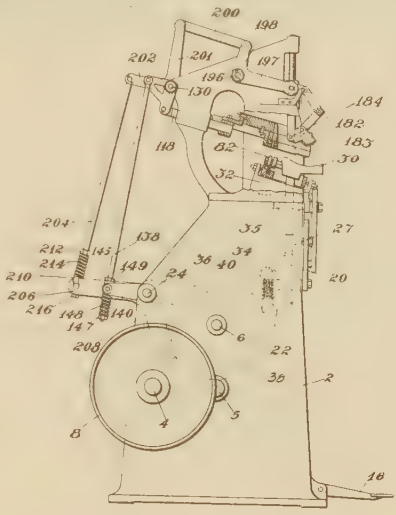
1,414,497. RAILWAY CAR TRUCK. GEORGE A. BOYDEN, Jr., and JOHN C. BOYDEN, Baltimore, Md. Filed June 23, 1920. Serial No. 391,169. 11 Claims. (Cl. 105—166.)



1. In a six wheel truck, the combination with a bolster for each axle, a pivotal connection between the central bolster and each of the pilot and trailer bolsters, a coordinating plate having a transverse sliding connection with the central bolster and a longitudinal sliding connection with each of the pilot and trailer bolsters and a car body bolted to said coordinating plate.

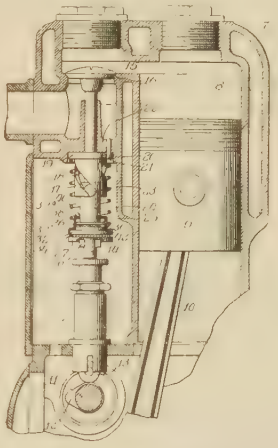
1,414,498. UPPER-SHAPING MACHINE. MATTHIAS BROCK, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 4, 1918. Serial No. 232,525. 74 Claims. (Cl. 12—97.)

1. A machine of the class described having, in combination, means for confining the margin of the forepart of a shoe upper, a former projecting above the confining means and arranged for movement to engage the unconfined portion of the upper to stretch it, and means movable relatively to the former prior to movement of the former for holding the upper at the end of the toe and causing it to be brought down over the end of the former without drawing back or foreshortening prior to



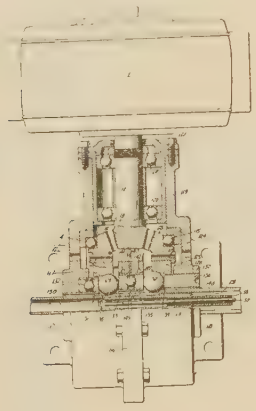
its being engaged by the confining means so as to cause the upper to be humped over the former.

1,414,499. VALVE-ROTATING DEVICE. WILMER G. BUCK, Fremont, Nebr., assignor to Continental Engineering Corporation, Omaha, Nebr., a Corporation of Nebraska. Filed June 5, 1918. Serial No. 238,275. 7 Claims. (Cl. 123—90.)



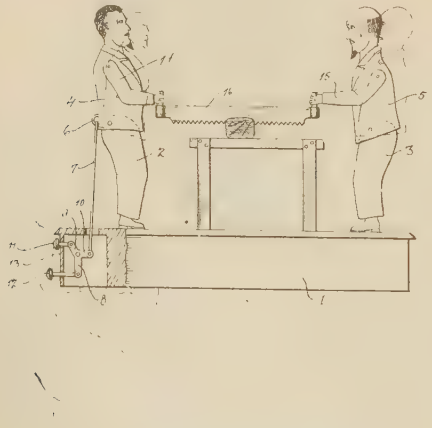
1. In a device of the class described, the combination of a reciprocating valve stem having a valve member thereon, a sleeve loosely mounted on the stem, a collar connected to the stem, co-operating clutch surfaces on the adjoining ends of the collar and sleeve, means carried by the collar and engaging said sleeve, said means permitting of a slight separating movement between the aforesaid clutch surfaces, means for imparting an oscillating rotative movement to said sleeve as it is moved up and down, said clutch surfaces engaging upon upward movement of the parts, whereby rotative movement is transmitted from said sleeve through said collar and to the valve stem, a spring exerting a pressure on said collar to separate said clutch surfaces when the valve is moved downward, whereby no rotative movement is imparted to the valve stem on its downward movement, and said means carried by said collar engaging said sleeve to move it downward after said clutch connection is broken, substantially as described.

1,414,500. METAL-DRAWING APPARATUS. LOUIS H. BRINKMAN, Glen Ridge, N. J., assignor, by mesne assignments, to General Seamless Tube Company, Bloomfield, N. J., a Corporation of Delaware. Filed Nov. 16, 1916. Serial No. 131,631. 2 Claims. (Cl. 80—12.)



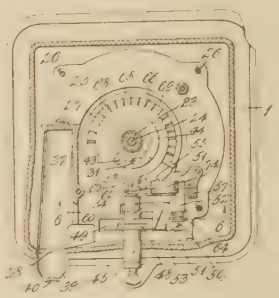
2. In a metal drawing apparatus, the combination with a die having a casing, a plurality of series of balls mounted therein, means for supporting said series comprising rotatable rings, gearing for rotating said rings in opposite directions, passages in the casing for receiving cooling fluid and having openings for introducing the fluid to the balls, there being passages through which the fluid is forced outwardly from the balls to the casing by centrifugal action without coming in contact with the metal being drawn, and means for drawing the metal through the die.

1,414,501. FIGURE TOY. WILLIAM BUORNAT, Utica, N. Y. Filed June 18, 1921. Serial No. 478,508. 1 Claim. (Cl. 46—40.)



A device of the class described comprising a base, a compartment near the edge of said base, a figure of a person on said base having the body thereof pivotally attached to the leg, said leg being rigid with said base, an eyelet in said body, a rod pivotally attached to said eyelet, said rod extending into said compartment, a three-armed crank pivotally mounted in said compartment, buttons slidably mounted in the outer wall of said compartment and having pivotal engagement with two of the arms of said crank, said rod being pivotally connected with the third of said arms.

1,414,502. COIN-CONTROLLED VENDING MACHINE. FRANCIS M. CASE, Cleveland, Ohio, assignor to The Shelby Supply and Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 13, 1917. Serial No. 201,739. 22 Claims. (Cl. 194—63.)

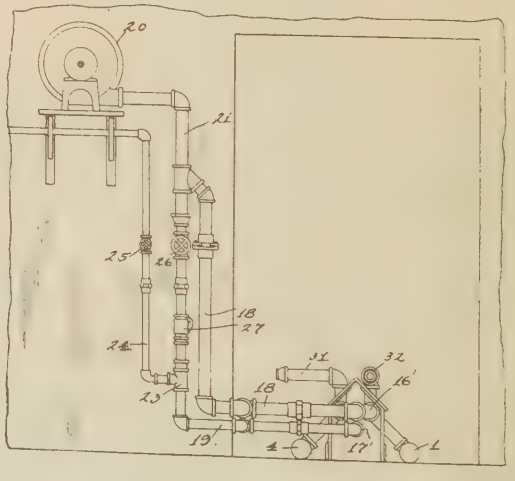


1. Apparatus of the class described, comprising a load moving device oscillatable about a center and provided with a series of pockets nonsymmetrically disposed about said center, and actuating means therefor controllable by coins of different denominations and adapted when operated to produce varying movement of said device in one direction from a definite normal position to thereby advance to the delivery point a number of loads corresponding to the value of the coin.

5. Apparatus of the class described, comprising a load transferring member oscillatable about a center and provided with a plurality of load receiving pockets nonsymmetrically disposed about said center, rack devices including a pawl for normally preventing rotation of said member in one direction, a series of stops cooperating with said pawl and adapted to limit movement of said member in the ejecting direction, and coin controlled means for actuating said member and adapted to vary the setting of said pawl according to the value of the operating coin to thereby cause said pawl to engage the proper one of said stop devices.

1,414,503. [WITHDRAWN.]

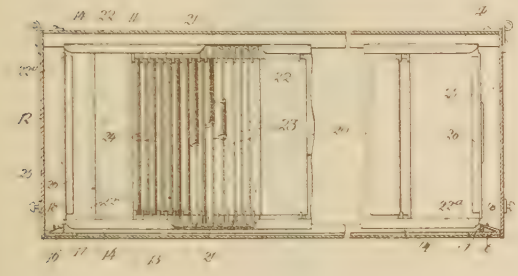
1,414,504. APPARATUS FOR SMOKING AND CURING MEAT. THEODORE G. CRANE, Chicago, Ill., assignor to Airoblast Corporation, a Corporation of New York. Filed Dec. 17, 1920. Serial No. 431,418. 8 Claims. (Cl. 99—2.)



3. A meat smoking apparatus comprising a perforated ignition pipe adapted to be buried in a mass of smoke producing material, a heat conducting and air

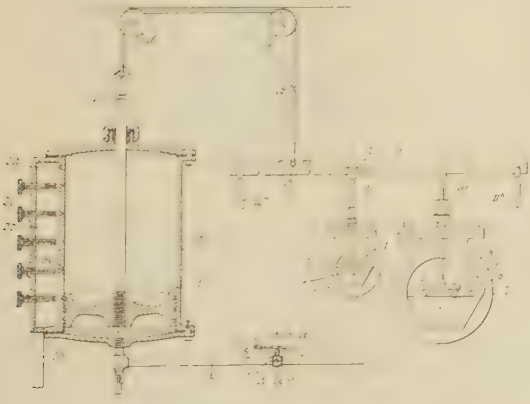
supplying pipe coupled thereto, a gas jet pipe for heating said heat and air supplying pipe, and means for supplying gas to said jet pipe and air to said heat and air supplying pipe for the purpose described.

1,414,505. DOUBLE-ENDED FILING CABINET. ALLSWORTH ST. CLAIR-EDE, Dubuque, Iowa. Filed May 16, 1921. Serial No. 470,048. 4 Claims. (Cl. 45—2.)



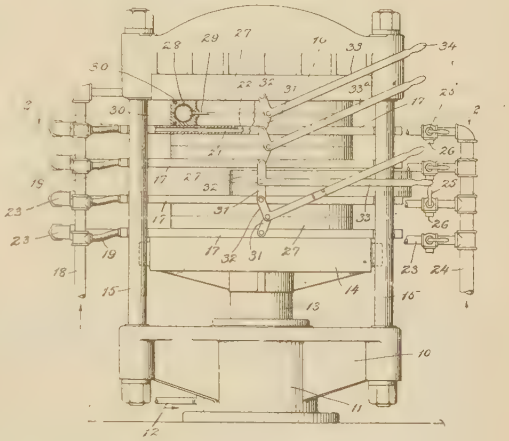
2. In filing cabinets, the combination of a cabinet, an upper and a lower guide rail within the cabinet in spaced relation with one another, a double faced filing case slidable between the guide rails and provided in each edge with a channel embracing the proximate guide rail, the case being formed of two sections of sheet metal secured together back to back, and each having sides extending at an angle to the back, and having the marginal edges of the sides outwardly and reversely turned to furnish card holder guides, the combined formation furnishing along each edge of the case the channel which embraces the adjacent guide rail, and card holders slidably mounted within the card holder channels, substantially as described.

1,414,506. STEAM-PRESSURE-REGULATING MECHANISM. WILLIAM B. FULTON, Middletown, Ohio. Filed May 21, 1921. Serial No. 471,362. 2 Claims. (Cl. 236—17.)



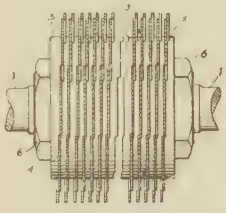
1. In an apparatus of the class described, the combination, with a steam inlet valve, a steam outlet valve, and a lever to which they are connected, of a cylinder, a piston therein, its piston rod, a connection between the rod and said lever, a steam pipe connected with said cylinder beneath said piston through which steam may enter to actuate the piston and one or more valve ports and stems in the cylinder wall adapted to permit the escape of steam at points on the pressure side of the piston.

1,414,507. VULCANIZING APPARATUS. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Jan. 30, 1922. Serial No. 532,598. 17 Claims. (Cl. 18—17.)



1. In a press, the combination of a pair of press members, means for yieldingly forcing said members together, and positive means acting counter to the pressure of said forcing means for separating said members.

1,414,508. FIBER-SEPARATING DEVICE. JAMES C. GARNER, Houston, Tex., assignor, by mesne assignments, to The Garner Gin Company, Inc., Houston, Tex., a Corporation of Texas. Filed Feb. 3, 1920. Serial No. 355,929. 14 Claims. (Cl. 19—97.)

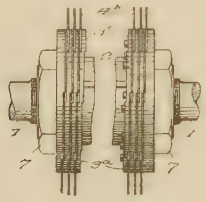


1. A toothed drum of the class described having an axially arranged series of sets of saw sections, each set extending continuously around the axis, and comprising a section rotatable in a central transverse plane, a plurality of supplemental sections rotatable respectively in planes at one side of said central plane, and a plurality of supplemental sections rotatable respectively in transverse planes at the other side of the said central plane all of said parts being held in fixed relation to each other.

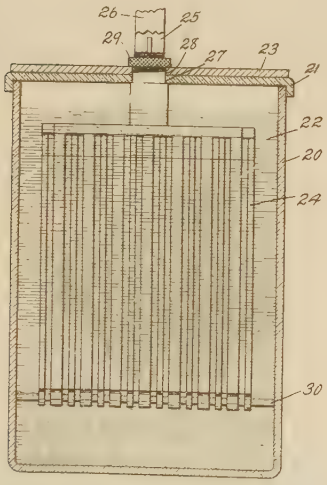
1,414,509. FIBER-SEPARATING DEVICE. JAMES C. GARNER, Houston, Tex., assignor, by mesne assignments, to The Garner Gin Company, Inc., Houston, Tex., a Corporation of Texas. Filed Feb. 3, 1920, Serial No. 355,935. Renewed Jan. 18, 1922. Serial No. 530,231. 1 Claim. (Cl. 19—97.)

A toothed drum of the class described, having a central rotary holder, an axial series of axially movable ring-like spacing devices each having on each of its faces a circular series of radially positioned flat faced seats in

axially stepped relation to each other, a circular series of lugs respectively projecting axially from the faces of said seats and a circular series of sockets on the opposite faces of the said spacer rings and respectively opposite to the said lugs, and a series of sets of peripherally short saw sections each provided with perforations to receive lugs such as aforesaid, and said sections being positioned in axially stepped relation to each other and independently held by said lugs against radial displacement.



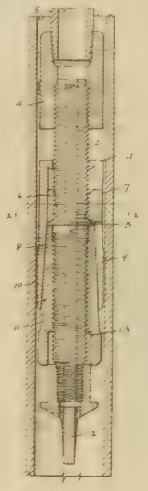
1,414,510. STORAGE BATTERY. RALPH H. GRANT, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Sept. 9, 1918. Serial No. 253,134. 5 Claims. (Cl. 204—29.)



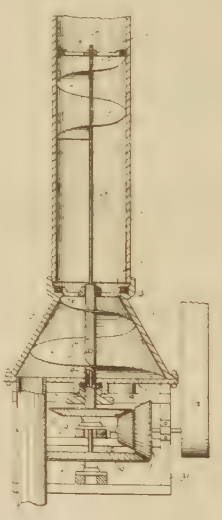
1. In a battery, the combination with a container for electrolyte; of a cover for the container; a support removably mounted on said cover; and a set of battery plates mounted on the support.

1,414,511. SPEAR. ELLSWORTH GRAY, Humble, Tex. Filed Apr. 14, 1921. Serial No. 461,363. 6 Claims. (Cl. 294—102.)

1. A spear including an actuating shaft, a string to the lower end of which said shaft is attached, the upper and lower sections of said shaft being reversely threaded, a nut threaded onto the upper threaded section, an expansible jaw fitted over said shaft and nut and whose upper end has an inwardly extending shoulder, means for preventing the relative rotation of said nut and jaw, a tapering sleeve threaded onto the lower threaded section of said shaft and adapted to wedge between said shaft and jaw to expand the latter, and a head carried by the lower end of the shaft.



1,414,512. ROTARY PUMP. EDGAR B. HOOVER, Pasco, Wash. Filed Feb. 5, 1921. Serial No. 442,608. 3 Claims. (Cl. 253—178.)

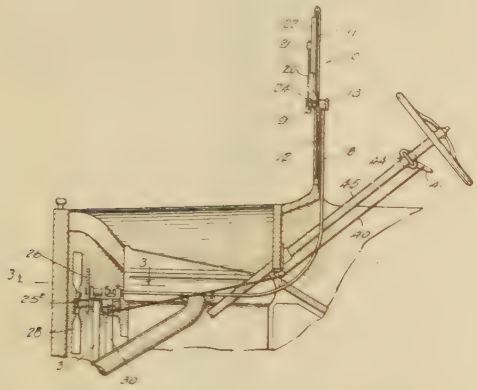


1. In a rotary pump, the combination of a conical shaped cylinder, a conical shaped conveyor within said cylinder, a discharge pipe in prolongation of and attached to said cylinder, a conveyor within said discharge pipe, a means for rotating said conveyors in opposite directions on a hollow and solid shaft respectively, a means for forming an airtight journal in said hollow shaft to prevent the ingress of air to said cylinder, a means for journalling said conveyors against the side walls of said cylinder and discharge pipe, and foot bearings supporting said shafts.

1,414,513. ATTACHMENT FOR MOTOR VEHICLES. HENRY HUEBER, Seattle, Wash., assignor of one-half to Casper J. Cassutt, Seattle, Wash. Filed Feb. 24, 1921. Serial No. 447,571. 2 Claims. (Cl. 74—26.)

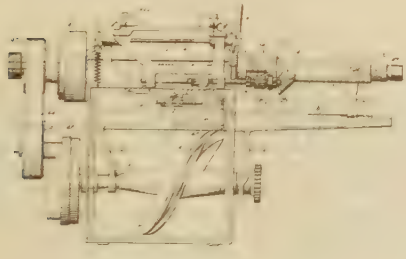
1. In apparatus of the character described, the combination with the hub of an automobile air-fan, means to

rotate the same, of a wheel, a spring yieldingly retaining said wheel in frictional engagement with the hub of said air-fan, means operable from the driver's seat in the



automobile for disengaging said wheel from said hub, a flexible shaft connected at one of its ends to said wheel and means operated by the other end of the flexible shaft.

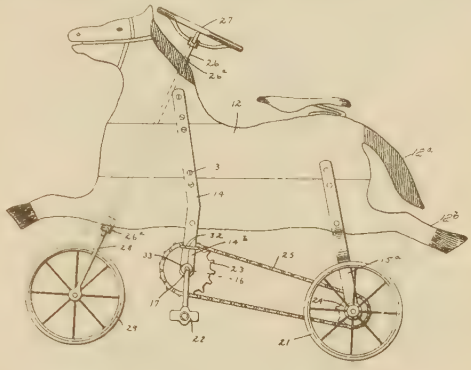
1,414,514. UNIVERSAL WINDER HEAD. HENRY G. JOHNSON, East Hampton, Conn., assignor to Summit Thread Company, East Hampton, Conn., a Corporation of Maine. Filed Mar. 3, 1921. Serial No. 449,579. 9 Claims. (Cl. 242—43.)



1. In a winding machine of the character described, a rotary spool having a single head, a traversing thread-guide, and means controlled by the distance of the guide from the axis of the spool for automatically effecting a gradual shifting of the relative positions of the spool and thread-guide in the direction of the axis of the spool to wind the layers successively away from the headless end of the spool.

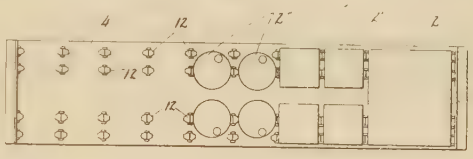
1,414,515. CHILD'S VEHICLE. JACKSON F. JOHNSTONE, Boston, and DAVID A. JOHNSTON, Melrose, Mass. Filed June 15, 1921. Serial No. 477,674. 1 Claim. (Cl. 208—42.)

In a child's vehicle of the character stated, a frame comprising a flat-sided body, composed of a plurality of sections, the meeting edges of which extend lengthwise of the body, a pair of forward reinforcing bars, and a pair of rear reinforcing bars, said bars including shank portions seated on the flat sides of the body, extending across the said meeting edges, and attached to the sections, at opposite sides of the meeting edges, and downwardly pro-



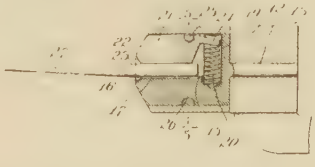
jecting end portions, provided with crank-shaft and rear-axle bearings.

1,414,516. SYSTEM OF TRANSPORTATION. HENRY W. KIRCHNER, St. Louis, Mo. Filed Dec. 15, 1920. Serial No. 430,902. 5 Claims. (Cl. 105—366.)



5. The combination of a carrier, fastening devices, and containers in the form of units and a multiple thereof designed to be supported by said carrier and to interchangeably co-operate with said fastening devices.

1,414,517. NEEDLE HOLDER FOR SOUND-REPRODUCING MACHINES. ERNEST C. KUEHL, Chicago, Ill., assignor of one-half to Herbert C. Lust, Chicago, Ill. Filed Jan. 10, 1921. Serial No. 436,130. 3 Claims. (Cl. 279—78.)

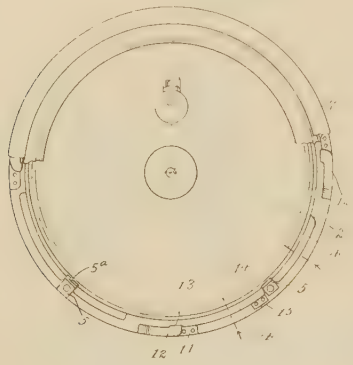


1. A needle-holder for sound reproducing machines comprising a cylindrical body and tubular sleeve forming a permanent casing, the body having an axial bore and kerf, a cross-bore at the base of the kerf, and an opposite pair of seats at the sides of the kerf, a spring in the cross-bore, a lever in the kerf having a pintle held in the seats by the sleeve, the opposite portions of the lever being arranged at an obtuse angle forming a jaw to engage the needle and a finger compressing the spring.

1,414,518. LAMP. NEIL MACNEALE, Cincinnati, Ohio, assignor to The Corcoran Victor Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 19, 1919. Serial No. 305,242. 4 Claims. (Cl. 240—41.)

1. In a lamp, the combination with a flanged lamp body and a rim, of tongues on the rim and body to engage

each other upon twisting of the rim, the body tongues mounted on the flange and extending outwardly from the same, said tongues having a conformation to bring the rim firmly down upon the body upon said twisting en-



gagement, and said tongues being positioned to extend in and engage on a line radial to the axis of the lamp and outwardly from the flange of the lamp body, for the purpose described.

1,414,519. SUCKER-ROD ELEVATOR. CHILTON M. MARSHALL, Oakdale, La., assignor of one-half to R. E. Powell, Elton, La. Filed Sept. 2, 1920. Serial No. 407,725. 2 Claims. (Cl. 294—91.)

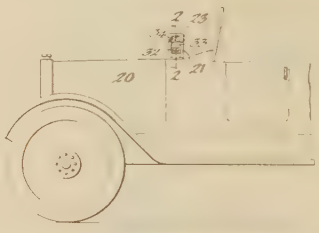
1. An elevator including a suspending fork, formed with prongs at one end, a link having a swivelling connection with the other end of the fork, an arcuate jaw secured between said prongs, one arm of which has a bearing, a lock pin slidable through said bearing, a lever secured to one arm of said fork normally holding the pin projected across said jaw to lock the same in engagement with a rod, said lever being manually operable to withdraw the pin to permit the disengagement of the jaw from said rod.

1,414,520. LATHE TURNING TOOL. TREVILLIE OWEN MARTIN, Jackson, Tenn. Filed June 5, 1920. Serial No. 386,856. 1 Claim. (Cl. 29—95.)

A turning tool comprising a shank having two diametrically opposite grooves formed spirally therein and providing intervening lands, one of the lands at one end of the shank being formed with a flat face inclined downwardly from the extremity of the shank toward the axis thereof, the shank at its said end being rounded transversely at the opposite sides and front of the flattened

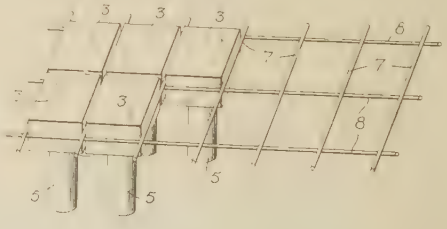
surface, and the ends of the grooves extending into the rounded sides and terminating short of the rounded front.

1,414,521. THEFT DETECTOR FOR AUTOMOBILES. JOSEPH J. MICHALSKI, Buffalo, N. Y. Filed Aug. 8, 1921. Serial No. 490,786. 14 Claims. (Cl. 40—65.)



3. A theft detector for automobiles and the like, comprising a characteristic ground, and indicating means movable into and out of operative position relatively to said ground, a portion of said indicating means being of the same characteristic nature as said ground and indicating the owner's absence from the automobile, and the other portion of said indicating means being of a different characteristic nature from said ground, and indicating the owner's presence in the automobile.

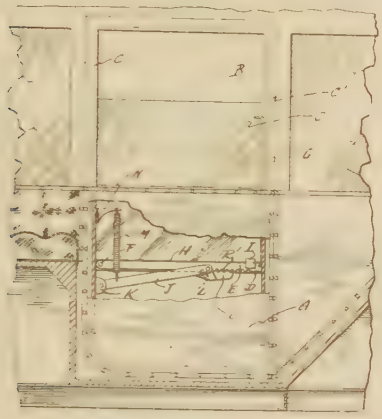
1,414,522. MAGNETIC CHUCK AND METHOD OF MAKING THE SAME. RALPH L. MORGAN, Worcester, Mass., assignor, by mesne assignments, to Greenfield Tap and Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed May 15, 1918. Serial No. 234,738. 9 Claims. (Cl. 175—367.)



1. The herein described method of making a magnetic chuck face which consists in employing an open-work of

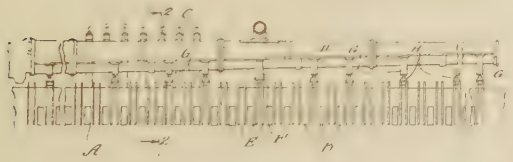
non-magnetic material, inserting pole pieces in the spaces provided in said open-work, and filling the spaces remaining between said pole pieces with molten non-magnetic material.

1,414,523. VEHICLE WINDOW-CONTROL MECHANISM. STANLEY W. NICHOLSON, Toledo, Ohio, assignor to Dura Mechanical Hardware Company, Toledo, Ohio, a Corporation of Delaware. Filed July 17, 1920. Serial No. 397,009. 18 Claims. (Cl. 292—195.)



1. In a window control mechanism, the combination with a sliding window, of a rack bar carried by said window extending transversely of the direction in which the window is slidable, a detent for engaging said rack bar, means for shifting said detent longitudinally of the bar upon sliding movement of the window, and means automatically releasing the detent from the rack bar upon actuation of the window.

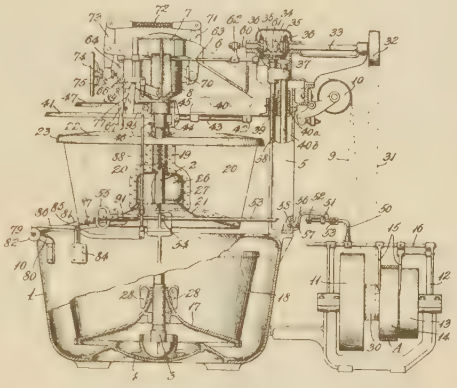
1,414,524. COLLECTING MAIN FOR BY-PRODUCT COKE OVENS. WILLIAM H. PAVITT, Jr., Brooklyn, N. Y., assignor of one-third to Louis Wilputte and two-thirds to Alice A. Wilputte, New Rochelle, N. Y. Filed Jan. 19, 1920. Serial No. 352,478. 3 Claims. (Cl. 202—9.)



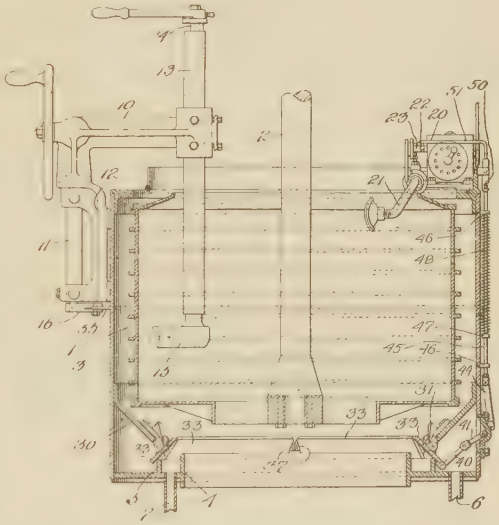
1. In a by-product coke oven battery, the combination with the oven structure of a collecting main anchored adjacent its center to said structure, and supports for the end portions of the main, comprising provisions adapted to yield to accommodate the elongation and contraction in the length of the main, and twisting movements of the main, resulting from the temperature changes to which the main is subjected.

1,414,525. CENTRIFUGAL EXTRACTOR. SYDNEY PRESTWICH, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Oct. 16, 1917. Serial No. 196,825. 25 Claims. (Cl. 210—74.)

1. An extractor, comprising a rotatable basket having a vertically movable load dividing cage member, and means governed by the rotation of said basket for preventing upward movement of said cage member when the basket is rotating.



1,414,526. CENTRIFUGAL APPARATUS. EUGENE ROBERTS, Salt Lake City, Utah, assignor to The Western States Machine Company, Salt Lake City, Utah, a Corporation of Utah. Filed Nov. 19, 1920. Serial No. 425,232. 14 Claims. Cl. 210—67.)

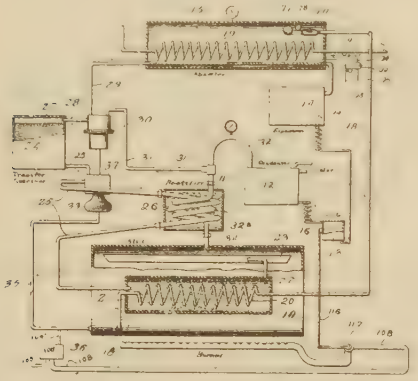


1. In a centrifugal machine embracing a perforated centrifugal basket and an encircling casing having an annular bottom for receiving the centrifugally expelled liquid, the combination with a partition dividing the annular bottom of the casing into inner and outer collecting troughs, a series of liquid-deflector members pivotally mounted between said partition and the bottom of the basket, and means for shifting said deflecting members angularly to direct the expelled liquid from the basket to one or the other of said troughs, substantially as described.

1,414,527. AUTOMATIC CONTINUOUS REFRIGERATOR. RALPH E. SCHURTZ, Alamogordo, N. Mex. Filed May 16, 1916. Serial No. 97,927. 18 Claims. (Cl. 62—5.)

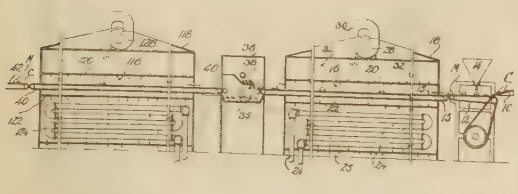
8. In a system of the character described, a still, an absorber, a connecting conduit including an interme-

diate receiver, a valve device in the conduit including a pressure operated element having a reciprocable part, a thermostatic device in the still operatively associated with the pressure operated element, for movement of the reciprocating part in one direction under effect of high temperature in the still, yielding means to oppose movement of the reciprocating part, an outlet connection from the absorber to the receiver, two valves on the reciprocating member, a valve seat in said conduit be-



tween the absorber and receiver positioned to be engaged by one valve under operation of the thermostatic device, a connection between the gas circuit of the system and the said conduit having a terminal port formed with a seat facing to be engaged by the other of said valves alternately with engagement of the first named valve and seat, and a check in the conduit between the valve device and the still.

1,414,528. PROCESS AND APPARATUS FOR CONFECTION MAKING. RAYMOND S. SCOTT, Denver, Colo. Filed Jan. 31, 1921. Serial No. 441,178. 23 Claims. (Cl. 107—54.)

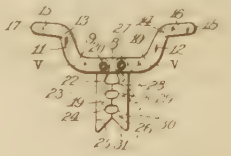


1. A process for handling biscuits having a deposit of marshmallow or like substance, which comprises rapidly drying the surface of the deposit whereby a "skin" is formed.

19. A process for making fancy coated biscuits comprising making a deposit of soft substance such as marshmallow and subjecting the same to a temperature capable of quickly setting the surface of the deposit, thereby forming a "skin" capable of receiving a coating of a heated substance without appreciable change in the form of the deposit, then coating said deposit with said heated substance, and then chilling the coated deposit to set the coat.

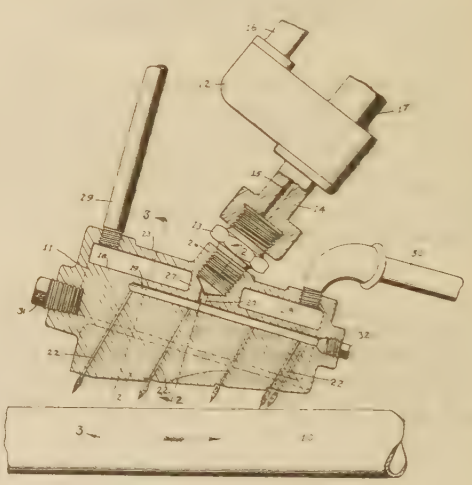
1,414,529. NECKTIE FORMER AND HOLDER. BURR R. SKINNER, Aberdeen, S. Dak., assignor of one-half to Robert Liebrich, Indianapolis, Ind. Filed Oct. 30, 1920. Serial No. 420,699. 2 Claims. (Cl. 2—84.)

1. A neck-tie former and holder comprising a head-bar having a lock-bar fixed thereon and a lock-bar pivoted thereto, the lock-bars normally extending from the lower edge of the head-bar at right angles thereto and having each a plurality of notches in the inner or adjacent edges



thereof, and two curved arms on opposite ends respectively of the head-bar extending upwardly beyond the upper edge thereof and outwardly each away from the other.

1,414,530. WELDING APPARATUS. FRANK L. SLIFE, Cleveland, Ohio, assignor to The Elyria Iron & Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 22, 1919. Serial No. 284,407. 10 Claims. (Cl. 158—27.4.)



1. In apparatus of the class described, the combination with a supporting member having a gas mixing chamber, a plurality of gas supply connections and an outlet from the mixing chamber, of a jacketed tip detachably connected with said member and receiving gas from said outlet, and means, independent of said member, for conducting a cooling medium to and from the jacket of said tip.

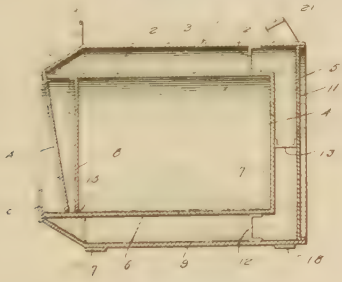
1,414,531. TOOL. CHARLES S. STRAIGHT, Ranger, Tex. Filed Apr. 8, 1920. Serial No. 372,227. 1 Claim. (Cl. 294—93.)

A device of the character described including a cylinder split longitudinally to provide a number of pipe grips each threaded exteriorly at the upper end and having its lower end rounded and provided with external teeth, a tapering bore being formed in said cylinder, a tapering shank arranged for co-action with said bore, having an extending wrench hold with corrugations, an enlarged head formed at the upper end of said shank terminating in an anvil

portion from which extends a threaded stud and a threaded collar held to said cylinder whereby said cyl-

inder may be brought into engagement with a suitable pipe, all substantially as and for the purposes set forth.

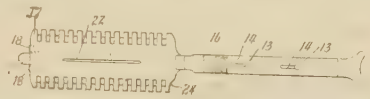
1,414,532. WATERING TROUGH. FRANK TURK, Pipestone, Minn. Filed May 13, 1919. Serial No. 296,847. 1 Claim. (Cl. 119—73.)



A watering trough comprising an inner cylindrical casing, an outer cylindrical casing spaced around said inner casing, a flat rear wall for said inner casing, a flat rear wall for said outer casing, said flat walls being spaced from each other, a flat front wall for said inner casing set inwardly from the front thereof and spaced at its lower edge from the cylindrical wall of the inner casing to provide a water passage, a flat front wall for said outer casing extending downwardly and inclined inwardly from the top thereof so that the lower edge of said inclined wall is adjacent the lower edge of said inner casing front wall and is similarly spaced from the cylindrical wall of the inner casing, and a ledge extending up from the lower side of said inner casing at the front thereof whereby a drinking space is provided between said ledge and said inclined wall.

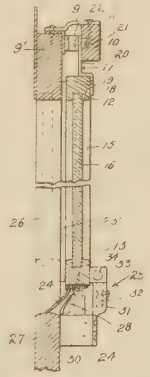
1,414,533. SAFETY RAZOR. JOHN H. VANCE, Pittsburgh, Pa., assignor, by direct and mesne assignments, to Tru-Way Razor Company, Pittsburgh, Pa., a Corporation of Delaware. Filed May 19, 1920. Serial No. 382,577. 2 Claims. (Cl. 30—12.)

1. A safety razor comprising mutually fixed handle and blade holding members, a locking bar arranged to engage on said blade holding member and secure a blade thereto and having notches on the under surface of its forward end, a lip on the locking bar adjacent the rear end thereof, and an independently removable guard mem-



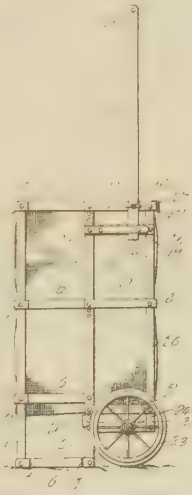
ber having hooks arranged to engage in the notches in said locking bar and a tongue arranged to engage under said lip.

1,414,534. ADJUSTABLE WIND AND STORM SHIELD FOR VEHICLES. DAVID E. VANDERVEER, Los Angeles, Calif., assignor of one-half to Charles W. Link, Los Angeles, Calif. Filed Apr. 14, 1919. Serial No. 289,863. 2 Claims. (Cl. 296—47.)



1. In combination with a vehicle provided with a permanent top, of a grooved suspension rail secured to said top, a sliding glass frame, suspension hangers secured to said frame, and a sliding block pivotally secured to each of said hangers, said blocks adapted to slidably engage the groove in said suspension rail, and means secured to said hangers and acting against said vehicle top to prevent vibration of said glass frame when the vehicle is in motion.

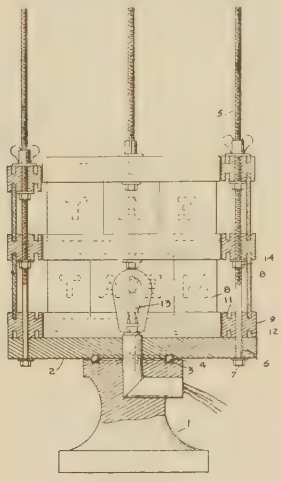
1,414,535. COLLAPSIBLE CARRIER. RANDALL T. VAN VALKENBURG, Washington, D. C. Filed Mar. 25, 1921. Serial No. 455,388. 7 Claims. (Cl. 280—40.)



1. In a carrier, a frame having a rigid section having a bottom, end walls and a rear side wall and open at its front, depending means carried by the bottom for engaging

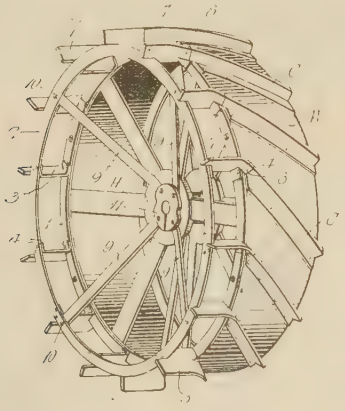
the ground to retain the rigid section in an upright position, and a foldable section pivotally connected with the end walls of the rigid section whereby the foldable section may be folded towards the rigid section to a collapsed position.

1,414,536. ADVERTISING DEVICE. LAURA F. WEBSTER and RAY J. CHRISTIANSON, St. Helena, Calif. Filed Dec. 12, 1921. Serial No. 521,574. 6 Claims. (Cl. 40—77.)



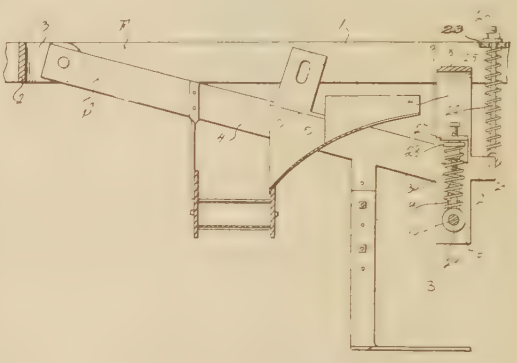
1. An advertising device of the character described comprising a base member, a plurality of upright rods carried by said member, a plurality of bars having grooves in opposed faces thereof rotatably and vertically adjustably mounted upon said rods and a plurality of letter bearing plates removably and slidably mounted between said bars in the grooves thereof.

1,414,537. DETACHABLE EXTENSION RIM FOR TRACTOR WHEELS. FRED W. WILLIG, Gervais, Oreg. Filed Dec. 22, 1921. Serial No. 524,171. 5 Claims. (Cl. 301—52.)



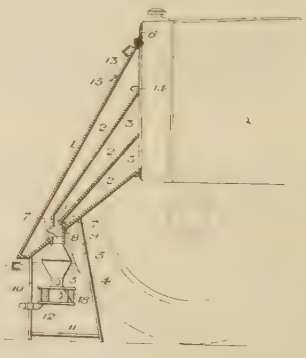
5. A wheel attachment comprising spaced side rings, cleats between the side rings secured against the inner side faces thereof and extending outwardly beyond the rings and having their outer end portions extending in overlapped relation to the side rings and at one side bent to extend for end to end contact with cleat strips extending diagonally across the rim of a tractor wheel, spokes connected with the outer side ring, and a hub-engaging disk connected with the inner ends of said spokes.

1,414,538. BEET AND POTATO DIGGER AND ELEVATOR. SAMUEL J. WILSON, Roberts, Idaho, assignor of one-half to Perry Basinger, Clyde, Idaho. Original application filed Jan. 11, 1919, Serial No. 270,691. Divided and this application filed Mar. 10, 1920. Serial No. 364,802. 2 Claims. (Cl. 55—107.)



2. A machine of the character described comprising a main frame, a supplemental frame pivoted at one end to the main frame and adapted to be disposed in an inclined position, vertically disposed rods pivoted to the opposite end of the supplemental frame and slidably engaged with the main frame, springs carried by the rods for urging the supplemental frame away from the main frame, a member supported by the supplemental frame for movement relative to the supplemental frame, and springs carried by said supplemental frame for urging said member toward the ground.

1,414,539. HEATER FOR AUTOMOBILE RADIATORS AND ENGINES. WILLIAM E. WILSON, Evansville, Ind. Filed May 13, 1920. Serial No. 380,973. 3 Claims. (Cl. 126—350.)

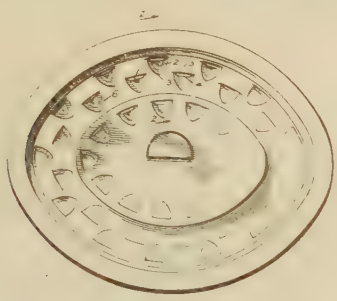


2. A heater comprising a funnel shaped shell or casing which is adapted to be applied to the front of an automobile radiator provided with a plurality of heat conveying compartments extending lengthwise thereof and open at their ends which face the radiator and respectively arranged to deliver heat into different horizontal sections of the radiator from the lowest to the highest part thereof, and means for supplying heat to the compartments at the smaller end of the shell or casing.

1,414,540. POT COVER. AMOS P. YOUNG and CLARENCE R. YOUNG, Leesburg, Ind. Filed June 10, 1920. Serial No. 388,079. 3 Claims. (Cl. 53—8.)

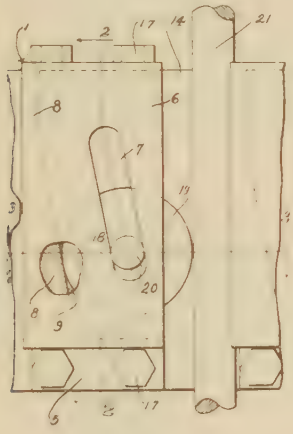
1. A pot cover provided with an elevated rim forming an annular depression inwardly adjacent thereto, said

annular depression provided with a series of slits extending parallel with the rim, the inner edges of said slits



being vertically depressed forming vertically extending perforations opening toward the center of the cover.

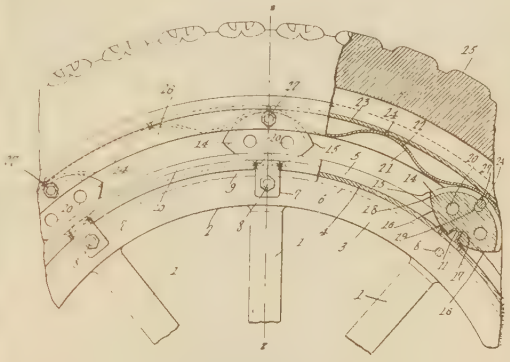
1,414,541. SUCKER-ROD HANGER. SAMUEL EDWARD ABEY and JAY J. HERN, Fellows, and MERLE STANLEY MCFADDEN, Taft, Calif. Filed Aug. 6, 1920. Serial No. 401,755. 1 Claim. (Cl. 24—244.)



A rod clamp comprising a support; a box-like rectangular casing open at the back and at one side, the support constituting a closure for the open back of the casing, the casing including a side wall provided with a downwardly slanting inner surface, the side wall having an external longitudinal rib, a top prolonged beyond the side wall to form a flange overhanging the support, a bottom having a depending flange resting against the support, and a front having a diagonal slot disposed parallel to the downwardly slanting inner surface of the side wall; securing elements connecting the flanges with the support; a roller projecting out of the open side of the casing and operating to bind a rod against the side wall of a like adjoining casing and behind the longitudinal rib thereof, the roller traversing the slanting inner surface of the side wall, one end of the roller being provided with a projecting axle movable in the diagonal slot, the other end of the roller being plane and being in engagement with the support, to hold the axle in the slot.

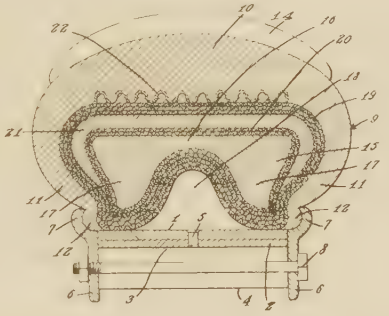
1,414,542. RESILIENT WHEEL. FRANK E. BESSLER, Akron, Ohio. Filed Sept. 27, 1919. Serial No. 326,755. 3 Claims. (Cl. 152—8.)

2. In a device of the class described, a wheel body; resilient blocks mounted to tilt circumferentially of the wheel body and having inclined inner faces spaced from the wheel body but adapted to contact therewith under excessive strains; a sinuous band having curved portions, certain of which cooperate with the blocks; a



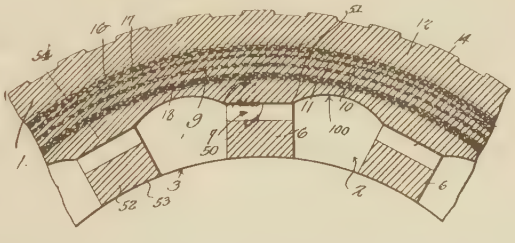
circumferential strip connected to others of the curved portions of the band; and a tire assembled with the strip.

1,414,543. TIRE. FRANK E. BESSLER, Akron, Ohio. Filed Sept. 27, 1919. Serial No. 326,756. 1 Claim. (Cl. 152—1.)



A tire comprising a casing including a tread and side wings; a core in the casing and comprising a tread and side wings, the side wings of the core defining a circumferential cavity in the core; a lining in the casing, and a lining on the core, the linings being spaced along the treads and the wings, and being brought together adjacent to the longitudinal edges of the wings, the linings being extended transversely of the cavity, in conformity to the shape of the cavity, to form a reinforcement the thickness of which is equal to the combined thicknesses of both linings; a cushion between the spaced portions of the linings.

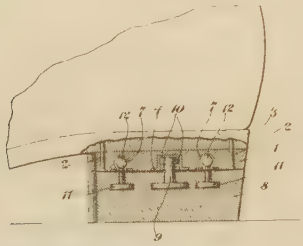
1,414,544. TIRE. FRANK E. BESSLER, Akron, Ohio, assignor of one-half to A. J. Dellenberger. Filed Feb. 6, 1920. Serial No. 356,604. 3 Claims. (Cl. 152—1.)



2. A tire comprising a body provided with spaced partitions defining cells opening through the inner surface of the body, the partitions being joined at their sides and at

their outer ends to the body, the body having circumferential arched surfaces located between the partitions, the partitions having circumferential openings which are independent of the body, the outer portions of the openings being disposed at the inner ends of the arched surfaces of the body, the partitions being solid between the openings and the inner surfaces thereof, and the body being solid between said arched surfaces.

1,414,545. SHOE HEEL. HARRY E. BOSWELL, St. Louis, Mo. Filed Oct. 25, 1920. Serial No. 419,211. 2 Claims. (Cl. 36—36.)



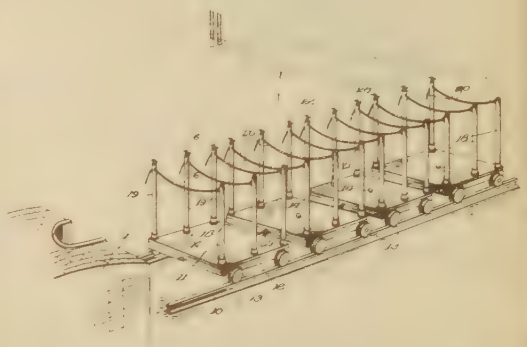
1. In a heel, the combination of an upper section rigidly secured to the under side of the shoe sole and having a flat lower wall, a socket embedded centrally in said upper section below the sole and having a slot through the lower wall thereof, cam-like surfaces in said socket on opposite sides of said slot, a lower heel section having a concavity in its upper end and having its side walls in continuation of the side walls of the upper section when the upper end of the lower section is spread, a stud secured centrally to the upper portion of the lower section within said concavity and arranged to extend into said socket, lugs on said stud arranged to engage the cam-like surfaces in said socket to spread the upper end of said lower section, and a number of releasable holding elements on said heel sections respectively between said stud and the sides of the heel to prevent said lower section from turning and to hold the lower section in connection with the upper section, the elements on the lower section being within said concavity.

1,414,546. AUTOMATIC STOP FOR KNITTING MACHINES. JAHAN G. CARLSON, Rockford, Ill., assignor to Burson Knitting Company, Rockford, Ill., a Corporation of Illinois. Filed Apr. 23, 1920. Serial No. 376,071. 3 Claims. (Cl. 66—7.)

1. An automatic stop mechanism including a pivoted yarn actuable member having a portion depending from its pivot and shaped to provide a narrow elongated opening terminating at its lower end in an eye, said opening being so restricted as to prevent the passage of a knot or other obstruction, whereby the latter will actuate said member for initiating the stop action, and said eye permitting free passage of said obstruction without displacing the yarn from said member.

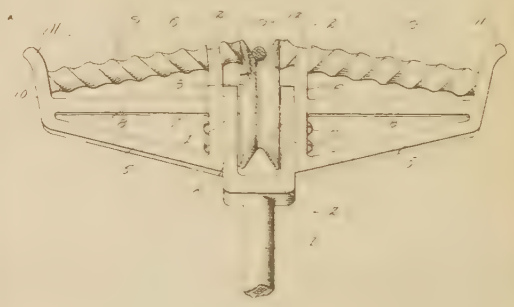
1,414,547. GLASS-HANDLING APPARATUS. EARL G. CHASE, Smethport, Pa. Filed Dec. 12, 1919. Serial No. 344,381. 12 Claims. (Cl. 49—14.)

4. A glass horse comprising a supporting base, series of uprights mounted at opposite sides of the base, saddles comprising flexible members suspended between corresponding uprights of the two series, the saddles being normally slack, and means whereby the slack of the saddles may be independently adjusted.



8. A glass horse comprising a plurality of wheeled sections, means separably coupling the sections together, and a saddle rotatably mounted upon each section.

1,414,548. DEVICE FOR RESTORING TROLLEY WHEELS TO TROLLEY WIRES. DONALD L. CHESTNUT, Seattle, Wash. Filed Sept. 17, 1921. Serial No. 501,266. 2 Claims. (Cl. 191—75.)

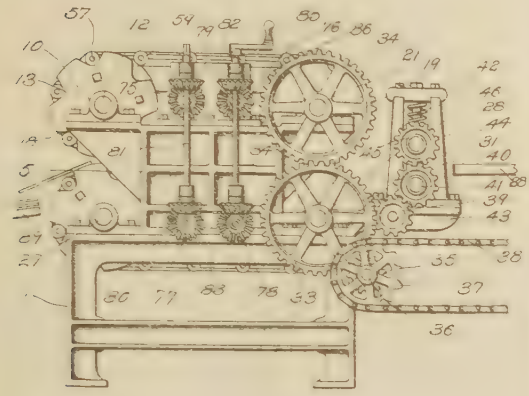


2. A trolley replacer, comprising a pole formed with a harp at the upper end, a trolley wheel rotatable in said harp, a pair of brackets having vertical portions, the brackets having their vertical portions secured to the harp on opposite sides of the wheel and extending therefrom in opposite directions, the upper end of the vertical portion of each bracket being formed into a bearing and the outer end portions of the brackets being formed with bearings and guard extensions above the bearings, and spiral members mounted to rotate in the bearings of each bracket and having one end extending in close proximity to the upper periphery of the trolley wheel, said spirals being adapted to engage a trolley wire and feed it into the trolley wheel.

1,414,549. BOX-BLANK-SCORING MACHINE. JAMES F. CLEARY, Kansas City, Kans. Filed May 12, 1919. Serial No. 296,412. 3 Claims. (Cl. 93—58.)

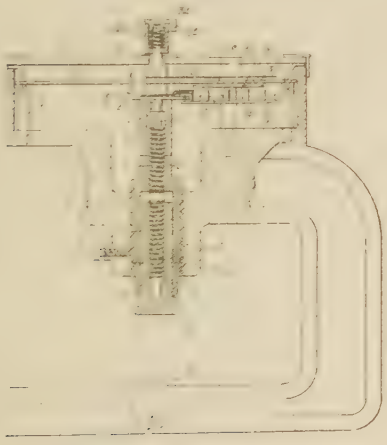
1. In a machine for scoring fiber box blanks, a base frame, oppositely disposed channel members supported by the base frame and spaced one from the other, the flanges of the channel members having heads on the free edges thereof, belt shifters slidable on the heads of the channel

members, sprockets mounted in the frame, belts engaging the sprockets, die members carried by the belts, means on



the shifters for engaging the sprockets to shift them laterally, and means for imparting lateral movement to said shifters.

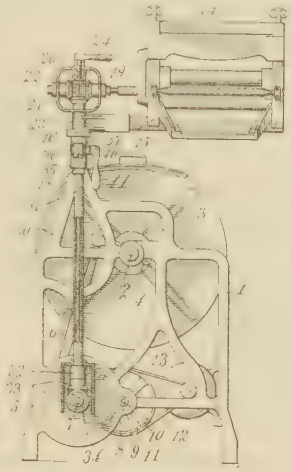
1,414,550. MICROMETER CALIPER. JOHN P. CLULEY, Chicago, Ill. Filed June 21, 1921. Serial No. 479,310. 3 Claims. (Cl. 33—167.)



1. In a micrometer caliper, a base having a bushing, a plunger held against rotation in the lower end of the bushing, the bushing and plunger being oppositely threaded at their upper ends, a screw-bolt having oppositely directed screws to engage the threads of the bushing and plunger, a shaft having a thumb-piece, connections between the shaft and screw-bolt to rotate the latter, and indicating mechanism operated by the shaft.

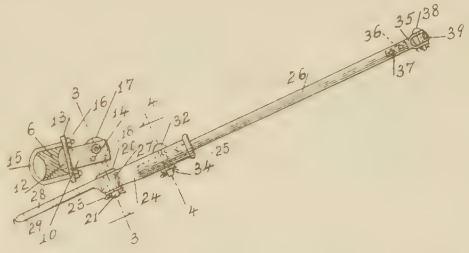
1,414,551. WRINGER-SUPPORTING MECHANISM FOR WASHING MACHINES. JAMES L. COFFIELD, Dayton, Ohio. Filed Dec. 13, 1920. Serial No. 430,218. 4 Claims. (Cl. 68—32.)

1. In a mechanism of the character described, a bearing having a guideway extending transversely to the axis thereof, a part rotatably mounted in said bearing, a pair of clamping members mounted in said guideway and arranged to engage the part which is journaled in said bear-



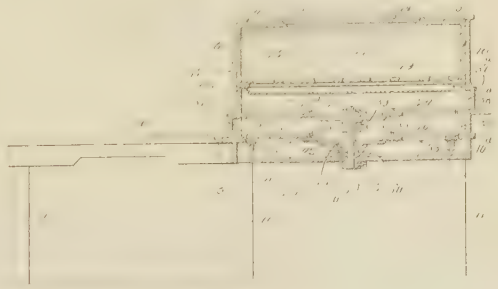
ing, and means for moving said clamping members into clamping engagement with said part.

1,414,552. AUTO TOWING AND STEERING APPLIANCE. CLAUDE W. DAVIS, Springfield, Ill. Filed Mar. 1, 1921. Serial No. 448,833. 1 Claim. (Cl. 280—33.5.)



A towing and steering appliance comprising a basal structure having a longitudinal bore, transverse slots opening into said bore, a vertical hole through said body structure and an extended perforated arm; a tongue rotative in the bore of the body structure and having a transverse hole; a bolt extending through the transverse slots of the body structure and through the transverse hole in the tongue and engaging the end walls of said slots to limit rotation of the tongue in the bore of the body structure; a hinge member swiveled in the transverse hole of the basal structure and a connecting block on which said hinge member is pivoted.

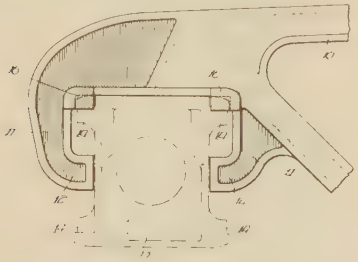
1,414,553. CHOCOLATE-CANDY COOLER. SENTERLOW DEMPSEY, Chicago, Ill. Filed June 27, 1921. Serial No. 480,516. 1 Claim. (Cl. 62—49.)



A candy cooler comprising a cabinet, having an ice compartment and a cooling chamber therebelow, and a

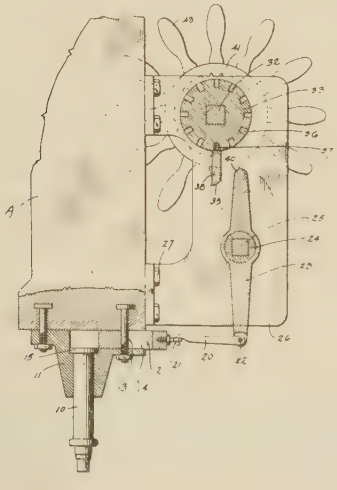
plurality of tray receiving shelves rotatively mounted, one above the other, in said chamber, and independently movable therein, there being openings in the wall of said chamber for access to individual shelves, and disposed at different levels around the chamber in front of said shelves.

1,414,554. PEDESTAL TRUCK SIDE FRAME. HARRY E. DOERR, St. Louis, Mo., assignor to Scullin Steel Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 25, 1920. Serial No. 368,639. 2 Claims. (Cl. 105—220.)



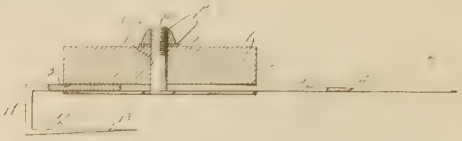
1. A pedestal truck side frame including pedestal jaws having portions which embrace bolt lugs of Master Car Builders' journal boxes normally to prevent relative lateral movement between the side frame and journal box, said pedestal jaws having portions which extend inwardly toward each other and embrace the sides of the journal box between the bolt lugs thereof for assisting in maintaining the operative position of said side frame and said journal box, said last mentioned jaw portions being of such dimensions as to provide relatively large bearing engagement with the sides of said journal box and whereby they must be applied to the side frame in a manner other than between the inner journal box lugs and the dust guard.

1,414,555. GAG-OPERATING ATTACHMENT FOR METAL-PUNCHING MACHINES. FLOYD S. DONLEY and JAMES WELSH, Pottstown, Pa. Filed Sept. 19, 1919. Serial No. 324,978. 13 Claims. (Cl. 164—111.)



1. In a gag operating attachment for punching machines, the combination with a plurality of gags, of operating levers therefor, a shaft, selecting means carried by said shaft for manual operation of said levers, means for returning said levers to their normal positions, and means to prevent accidental movement of said selective lever operating means.

1,414,556. SHINGLER'S STRAIGHTEDGE. CHARLES JOSEPH DRESEN, Spring Green, Wis. Filed June 10, 1921. Serial No. 476,441. 2 Claims. (Cl. 33—188.)



2. A device of the character described comprising a body portion formed with one edge thereof a true straight edge and with a plurality of spaced apart parallel slots extending transversely across one face of the body portion at right angles to the straight edge, a measuring bar slidably disposed in each slot and projecting laterally of the body portion at opposite sides of the latter, each of said bars being provided with an attaching member at its end remote from the straight edge, said attaching member consisting of a portion integral with the bar and extending at right angles thereto and a tapering end portion extending parallel with and in the same direction as the bar, and means for detachably securing the body portion to the bars.

1,414,557. CEREAL AND FRUIT BEVERAGE. CARLETON ELLIS, Montclair, N. J. Filed June 2, 1919. Serial No. 301,268. 3 Claims. (Cl. 99—11.)

2. A process of preparing a cereal coffee substitute which comprises roasting cereal material at a temperature only slightly below that necessary to burn the same, such roasting being sufficient to substantially darken the said material; roasting fruit material of the general character of raisins, figs, dates and prunes at a temperature lower than that employed in the first-mentioned step, such temperature being insufficient to substantially caramelize the sugar content of such fruit; and mixing said roasted products together.

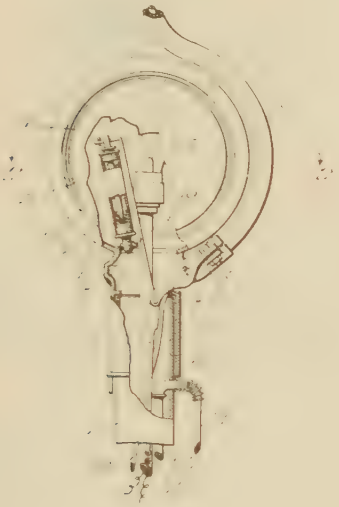
1,414,558. HEADWEAR. LOUIS H. ENSTEN, Cleveland, Ohio. Filed Feb. 15, 1921. Serial No. 445,145. 3 Claims. (Cl. 2—107.)

1. An article of headwear comprising a crown part and a tippet secured thereto around its rearward edge, the remainder of the crown part having a free selvage edge, both ends of said tippet having buttonholes and the length of the tippet being such that its ends overlap both when brought around the crown and when brought around the neck, a pair of buttons carried by the side of said tippet which is exposed when the tippet is lowered adapted to receive said buttonholes and means carried by the front of the crown part for securing such tippet when raised with its edge even with such selvage edge.

1,414,559. TIRE-INFLATING DEVICE. ARNO A. EWALD, Oakfield, Wis. Original application filed Oct. 21, 1920, Serial No. 418,497. Divided and this application filed Sept. 22, 1921. Serial No. 502,414. 3 Claims. (Cl. 299—77.)

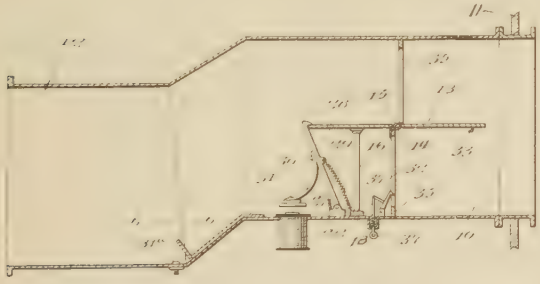
1. A tire inflating device comprising a hollow standard, a head swivelled on the upper end of said standard

and carrying a globe, one side of said head having an opening, a hose-carrying arm extending into the head through said opening and pivoted to the head, means



for normally raising said arm, and means confined in said globe and connected with the inner end of said arm, for cushioning the return movement of the latter to vertical position.

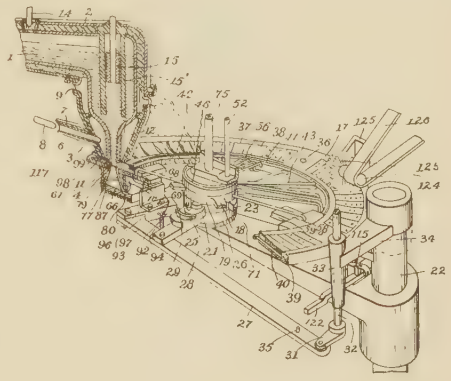
1,414,560. WATER-TIGHT VENTILATOR FOR SHIPS. JOSEPH K. CHUN FAT, aboard the U. S. S. Beaver. Filed Oct. 24, 1921. Serial No. 510,126. 3 Claims. (Cl. 114—212.)



1. In an automatic ventilator valve, the combination with a ventilator pipe having a downwardly offset portion, a pivoted disk for closing the passage through the pipe, means for holding the valve in open position, an electro-magnetic means for releasing the holding means, and an electric circuit for energizing the electro-magnetic means arranged to be closed by water entering the ventilator pipe through the offset portion.

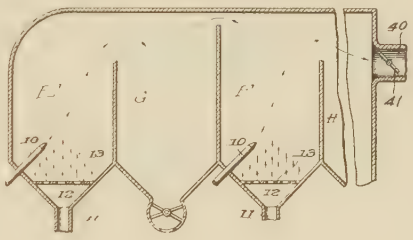
1,414,561. APPARATUS FOR FEEDING GLASS TO MOLDS. ENOCH T. FERNGREN, Washington, D. C., assignor to Hartford-Fairmont Company, a Corporation of New York. Filed Sept. 5, 1918. Serial No. 252,760. 7 Claims. (Cl. 49—55.)

1. In an apparatus for separating molten glass into mold charges, the combination of a container for the glass provided with a submerged discharge outlet, a hollow member having its lower end submerged in the glass opposite the outlet and spaced therefrom, and



rigid means for creating a flow of the glass in said member toward and from the outlet.

1,414,562. PROCESS FOR RECOVERING SOLID OR LIQUID MATTER FROM A SOLUTION OR SEMI-SOLUTION CONTAINING SAME. ADOLPH D. FEST, Chicago, Ill. Filed June 9, 1919. Serial No. 302,823. 2 Claims. (Cl. 127—9.)



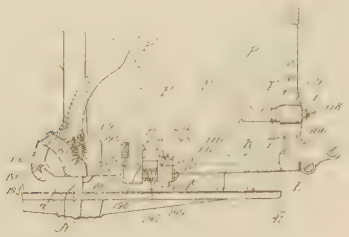
1. The method of recovering solid or liquid matter from solutions or semi-solutions containing same which consists in spraying the solution or semi-solution into a mixing chamber, admitting as a continuous process into the mixing chamber substantially such a quantity of air or gas capable of absorbing the moisture of the spray as to produce after desiccation an air or gas saturated or substantially saturated with water vapors at a given drying temperature, conducting the mixture thus formed into a collecting chamber, conducting the air or gas and such spray as may be contained therein into a second mixing chamber, admitting spray from the liquid or semi-liquid and also a proportionate amount of air or gas into the second mixing chamber as a continuous process, conducting the air or gas and spray into a second collecting chamber and finally exhausting the air or gas containing moisture from the last mentioned chamber.

1,414,563. AUTOMATIC TALKING MACHINE. JOHN GABEL, Chicago, Ill. Filed Jan. 4, 1916. Serial No. 70,131. 50 Claims. (Cl. 274—10.)

49. In an attachment for talking machines, the stylus of a talking-machine, and automatic means to determine the starting point of said stylus for playing a record of a given diameter, and automatic means to determine the starting point of said stylus for playing a record of a larger diameter.

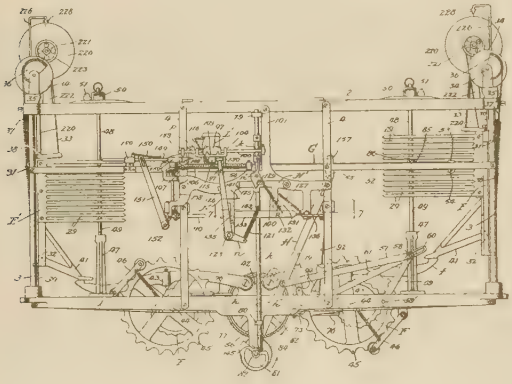
50. In a talking machine, the combination with record rotating means, and a co-operating reproducer, of a spring-actuated lifter for disengaging the reproducer from

the record, latching means for holding said lifter inactive, operated by said record rotating means and controlled by the stopping of the reproducer at the end of the record



groove for releasing the said lifter, and shifter mechanism for resetting said lifter and for returning the reproducer to starting position.

1,414,564. AUTOMATIC TALKING MACHINE. JOHN GABEL, Chicago, Ill. Filed Mar. 15, 1917. Serial No. 154,950. 61 Claims. (Cl. 274—10.)

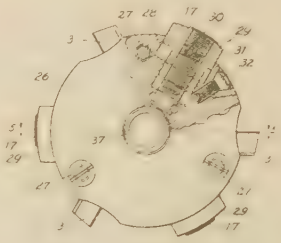


19. In a multiple record talking machine, the combination with means for rotating records in playing position and a cooperating reproducer, of shifter mechanism for moving records into and out of playing position and for moving the reproducer to starting position in engagement with the record in playing position, automatically actuated controlling devices for alternately throwing said record rotating means and said shifter mechanism into and out of operation, said controlling devices being arranged to start said record rotating means before the reproducer is moved by said shifter mechanism into engagement with the record in playing position.

24. In a multiple record talking machine, the combination with means for rotating records in playing position and a cooperating reproducer, of shifter mechanism for moving records out of and into playing position and for adjusting said reproducer, a motor, two pairs of friction disks for connecting said motor to said record rotating means and to said shifter mechanism, and means for alternately engaging and disengaging said pairs of friction disks.

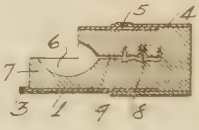
42. In a multiple record talking machine, the combination with means for rotating records in playing position and a co-operating reproducer, of a record magazine movable to select the records, a shifter mechanism for moving selected records into playing position, means manually operable during the reproduction of a record for selecting the next record to be placed in playing position, and two movable indicating devices associated with said magazine for respectively designating and distinguishing between the record in playing position and the next record to be placed therein.

1,414,565. ADJUSTABLE REAMER. DAVID R. GALLAGHER, Troy, N. Y. Filed Mar. 2, 1920. Serial No. 362,832. 6 Claims. (Cl. 77—75.)



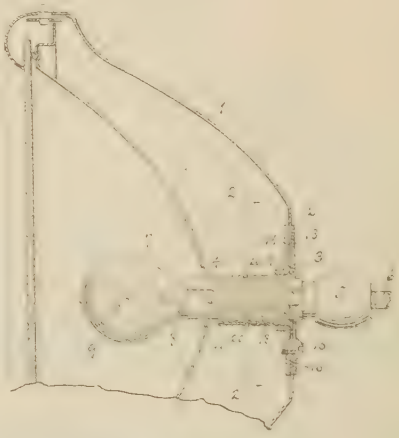
1. In a device of the class described and in combination, a head; a cutter mounted upon the head with provision for adjustment toward and from the axis of the head, said head being provided in its end with a centrally located bearing adapted to receive a gage whereby the projection of the cutter can be accurately determined; and a gage having a member rotatably seatable in said bearing.

1,414,566. DENTAL FLASK. JOSEPH A. GARDNER and DAVID S. GARDNER, Memphis, Tenn. Filed Mar. 24, 1921. Serial No. 455,085. 6 Claims. (Cl. 22—97.)



1. A casting appliance comprising an open top crucible holder, an enclosed flask with open ends integral therewith, an extension for the said flask open at both ends and means of clamping the said extension.

1,414,567. HEADLIGHT FOCUSING DEVICE. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Dec. 15, 1920. Serial No. 430,957. 6 Claims. (Cl. 240—44.)

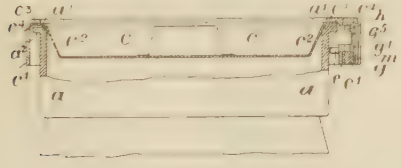


2. In a headlight, the combination of a body having an aperture, a connector sleeve extending into the body through said aperture, a pair of plates, one on each side of the body at said aperture, a coil spring attached to one of said plates and surrounding said sleeve, said sleeve having a pin extending between the coils of the spring, and means to frictionally secure the plates to the body.

1,414,568. BANKER'S PROTECTING STAND. DAVID GUDEMAN, Francesville, Ind. Filed Apr. 22, 1921. Serial No. 463,622. 1 Claim. (Cl. 89—36.)

In a bank teller's protecting device, a house for refuge of the teller, said house having a wall formed with inner and outer portions with openings therethrough, the walls of said openings being transversely concave, transparent disks having their peripheral edges transversely convex and fitting into the concave walls of the openings, and transversely apertured fire-arm receiving spheres mounted in certain other of the openings.

1,414,569. CLOSURE FOR RECEPTACLES. ALFRED GEORGE HUBBLE, London, England, assignor, by direct and mesne assignments, to The National Safety Churn Company Limited, London, England. Filed July 1, 1919. Serial No. 308,007. 8 Claims. (Cl. 220—55.)



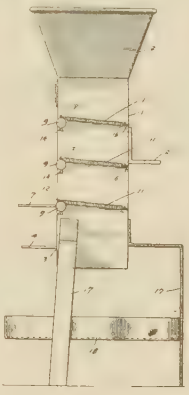
1. A closure for receptacles comprising a lid having an overhanging skirt portion surrounding the top portion of the receptacle, a plurality of co-operative tightening members on the said top portion of the receptacle and on the skirt, said members comprising an inclined rib on the said top portion, a locking member on the skirt adjacent to one of said tightening members, and peripheral means on said rib adapted for engaging said locking member.

1,414,570. CRAYON. EDWARD T. HURLEY, Cincinnati, Ohio. Filed Mar. 17, 1920. Serial No. 366,487. 3 Claims. (Cl. 106—5.)

1. A crayon consisting of animal fat, paraffin, turpentine and pigment.

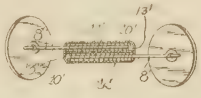
1,414,571. MEASURING DEVICE. FRANK WERTLEY HUTCHINS, Miami, Ariz. Filed Feb. 7, 1921. Serial No. 443,185. 5 Claims. (Cl. 221—111.)

1. In a measuring box, a wall having a horizontal slot and means operatively associated therewith, rotatably mounted in the wall so as to normally close the slot but



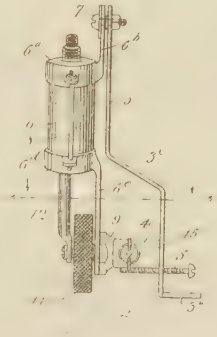
adapted to yield to the pressure of a slide inserted through the slot so as to allow the same to pass.

1,414,572. CUFF LINK. IRVING S. KAUFMAN, Chicago, Ill. Filed Mar. 31, 1921. Serial No. 457,432. 5 Claims. (Cl. 24—102.)



5. A cuff link comprising button members having overlapping studs movable outwardly along one another, means for opposing outward movement of said studs, said means permitting separation of said button members.

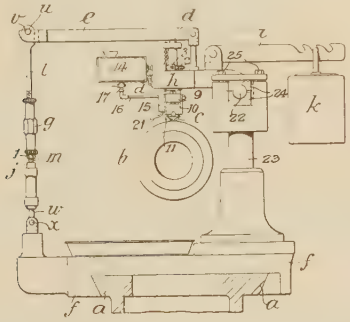
1,414,573. AIR PUMP. ALBERT KREHLIK, Cleveland, Ohio. Filed Nov. 10, 1920. Serial No. 423,153. 2 Claims. (Cl. 230—27.)



1. An air pump, comprising a pump cylinder, a valved cylinder head provided with a supporting arm extending at a plane at one side of said pump cylinder, a cylinder ring head on the opposite end of said pump cylinder and provided with an arm extending in an opposite direction and in a plane with said supporting arm and provided with a laterally extending shaft bearing, a shaft in the latter provided with a friction wheel on the opposite side of said last mentioned arm, a connecting rod on

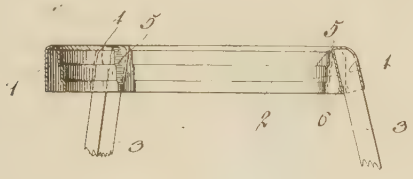
said friction wheel extending through said cylinder ring head, a piston in said pump cylinder connected to said connecting rod, and connecting bolts on the outside of said cylinder detachably connecting said valved cylinder head and cylinder ring head to each other and on said pump cylinder.

1,414,574. MACHINE FOR PRESSING LINES OR DESIGNS INTO ROLLERS. ROBERT LAING, Middleton, England. Filed May 29, 1920. Serial No. 385,381. 9 Claims. (Cl. 80—5.1.)



9. A machine for pressing lines or designs into rollers used for imparting a lustre or silky appearance to cotton fabrics, comprising a knurling mill head, a frame fulcrumed thereto, a knurling mill holder carried by said frame having bearing for the knurling mill and means for continuously lubricating said bearings and the periphery of the roller to be operated upon, said means consisting of an oil feed vessel for each knurling mill holder head having near the bottom two pipes entering holes in the knurling mill holder head, a pipe leading to the periphery of said roller and a joint oil supply vessel, a pipe leading from the said supply vessel to feed vessel furnished with a tap for the control of the lubricant from the former to the latter vessel, for the purpose specified.

1,414,575. BAG HOLDER. THOMAS MCCART, Spokane, Wash. Filed Jan. 27, 1921. Serial No. 440,360. 1 Claim. (Cl. 83—26.)

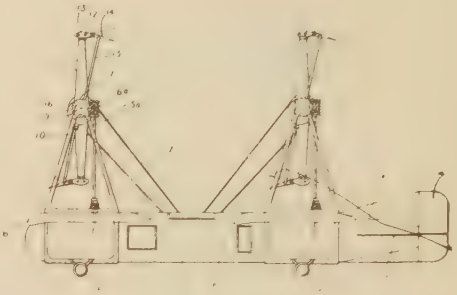


The combination with a supporting ring of inverted U-shape in cross section having an inner conical wall and a series of sockets each comprising a pocket fashioned in the outer wall of the ring and closed at its inner side by an outwardly off-set portion of the inner wall, of a funnel of inverted frusto-conical shape having an outwardly flaring upper portion and adapted to be seated and retain a bag in the inner wall of said ring as described, and legs in said sockets.

1,414,576. FOOD PRODUCT. HUGO MOCK, New York, N. Y. Filed Dec. 21, 1920. Serial No. 432,319. 8 Claims. (Cl. 99—10.)

2. A stable dry water soluble extract of oats in solid form.

1,414,577. MACHINE FOR NAVIGATING THE AIR. STEPHEN PAUL NEMETH, Dayton, Ohio. Filed May 1, 1920. Serial No. 378,264. 7 Claims. (Cl. 244—13.)



1. In a machine for navigating the air, a pair of air foils centrally mounted on a common power shaft each air foil comprising a double cambered portion, and an adjustable trailing portion tapered to an edge, means for moving the air foils about the common power shaft, and means to adjust the position of the trailing edges relative to the power shaft.

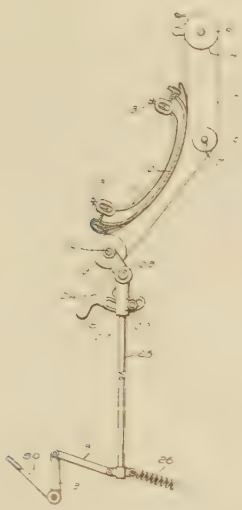
1,414,578. WINDSHIELD CLEANER. DAVID C. OATMAN, Buffalo, and FRANK G. CURVIN, Medina, N. Y., assignors, by direct and mesne assignments, to Frederick F. Church, Rochester, N. Y. Filed Apr. 16, 1920. Serial No. 374,296. 6 Claims. (Cl. 15—59.)

1. A window cleaner comprising a bearing portion, a wiper and an operating handle attached to and movable into alinement with the bearing portion for insertion or removal of the cleaner from a support.

1,414,579. TENSIONING DEVICE. CHARLES F. PEASE, Chicago, Ill., assignor to The C. F. Pease Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 7, 1921. Serial No. 443,042. 4 Claims. (Cl. 64—52.)

1. The combination with an endless band, of a pair of rolls, one of said rolls being adjustable, and tensioning means therefor, said means comprising bearing brackets receiving said adjustable roll, a pivotally mount-

ed lever arranged adjacent one of said brackets, means for securing said lever and said bracket to each other, said

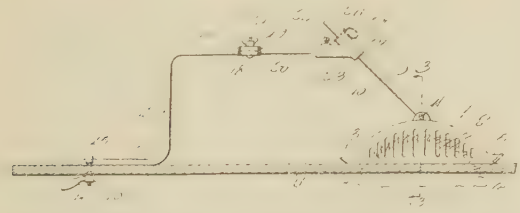


means being capable of adjustment, and a spring secured to the free end of said lever.

1,414,580. SEEDER ATTACHMENT FOR CULTIVATORS. WALTER L. PETERSON, Lyons, Nebr. Filed Apr. 5, 1921. Serial No. 458,662. 1 Claim. (Cl. 275—15.)

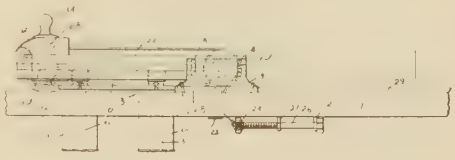
The combination with a seeder hopper, of a scatterer carried by a vertical shaft and disposed below and in engagement with the lower side of the hopper, said scatterer comprising a star shaped member having a plurality of points, radially disposed vertical ribs on said member emerging from the center and terminating at the apices of the angles between the points, recesses between said ribs and extending into said points, a rib extending from the end of said first named ribs to the points of the star shaped member respectively, whereby the recesses form pockets, bounded on one side by said last mentioned ribs and open on the other side, and whereby during the rotation of the star shaped member in one direction seed will be scattered, and upon rotation of the star shaped member in the other direction the seed will be prevented from being scattered.

1,414,581. SAW GUARD. ANTHONY C. PRABST and NORDAHL E. HOLTE, Antigo, Wis. Filed Dec. 29, 1921. Serial No. 525,670. 3 Claims. (Cl. 143—159.)



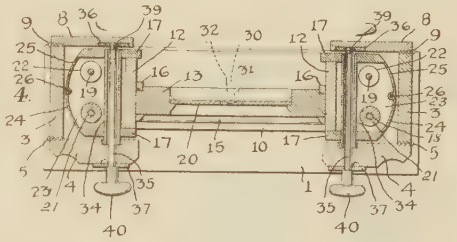
1. In a saw guard, a cage for resting upon a table and enclosing a portion of a saw extending upwardly through the table, a bracket including a portion mounted for horizontal swinging movement and having at its free end a sleeve downwardly and outwardly inclined, a stem connected with said cage and slidably passing through said sleeve and means for limiting downward sliding movement of said stem.

1,414,582. PHOTOGRAPHIC-PRINTING MACHINE. JOHN J. ROTH, Dayton, Ohio. Filed Jan. 7, 1920. Serial No. 349,969. 7 Claims. (Cl. 95—73.)



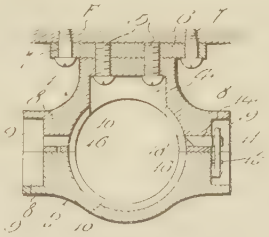
1. In a photographic printing machine, the combination with a top having a printing opening, of a transparent negative and paper-supporting medium in said opening, a carriage movable back and forth over said top, and a self-laying track whose free ends are secured to said top behind said printing opening therein adapted to be rolled by the carriage over the transparent medium to insure contact during the exposure of the printing paper.

1,414,583. WINDOW CONSTRUCTION FOR BUILDINGS. BERNARD L. ROTHSTEIN, Brooklyn, N. Y. Filed Jan. 4, 1921. Serial No. 434,899. 4 Claims. (Cl. 20—51.)



1. In building construction, a window frame having front and back hinged members, in combination with a sash frame inclosed by the window frame; and means passing through the front and back hinged members and the sash frame for rigidly locking the two frames together in operative relation.

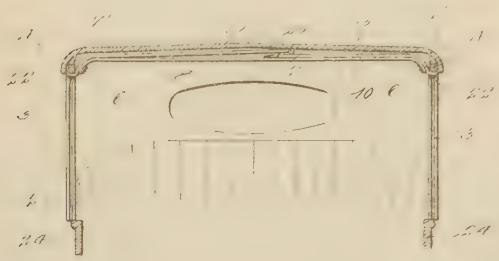
1,414,584. SANITARY MILK-BOTTLE LOCK. JEROME J. RUEDIGER, Baltimore, Md. Filed Nov. 3, 1921. Serial No. 512,531. 9 Claims. (Cl. 232—41.)



1. A milk bottle locking device comprising a body for attachment to a door or window frame to dispose one end thereof in abutting relation with the door or window,

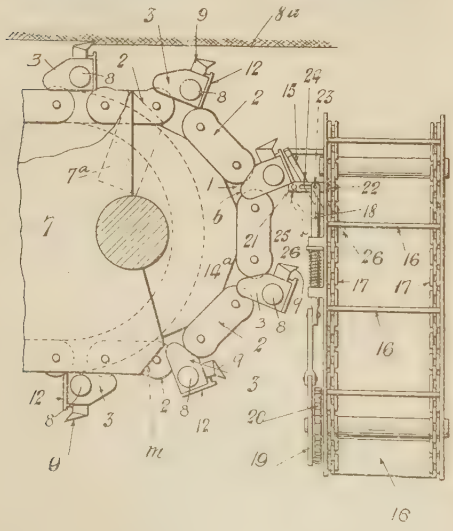
said body including stationary and movable members designed to engage the neck of a bottle, said body having a lock enclosure to be closed by the door or window, and co-acting locking means carried by said members and arranged in said enclosure, being accessible only when the door is opened.

1,414,585. DOOR CLOSURE FOR THE TOP PORTIONS OF AUTOMOBILES. RAYMOND C. RUPP, Kendallville, Ind. Filed Mar. 17, 1921. Serial No. 452,914. 5 Claims. (Cl. 296—140.)



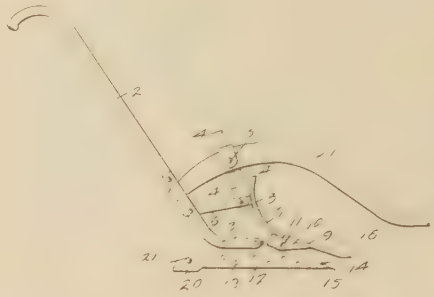
2. The combination with a vehicle body including a top having a roof and side walls having openings therein in opposed relation, of closures for the openings slidably mounted for movement from an operative position to an inoperative position beneath the roof, the closures when in an inoperative position having their inner end portions extending in overlapping relation, and a cam element carried by the inner end portion of one closure for engaging the second closure and guiding the closures into overlapping relation.

1,414,586. COAL-CUTTING MACHINE. ARTHUR RUSSELL, Hucknall, England. Filed Apr. 16, 1920. Serial No. 374,357. 6 Claims. (Cl. 262—28.)



1. In coal cutting machines rotatable tool carriers adapted to bear against stops after leaving the cutting face, said stops rotating the carriers, said carriers depositing the slack or dirt carried from the cutting face upon rotating stops adapted to bear on the carriers to rotate same into the cutting position after depositing the slack or dirt, and means for holding the tools carried by the carriers up to the coal when traversing the cutting face.

1,414,587. ADJUSTABLE SOLE PLATE FOR PLOWS. MARIANO J. SALAS, Molo, Iloilo, Philippine Islands. Filed May 3, 1921. Serial No. 466,400. 1 Claim. (Cl. 97—26.)



In combination, a plow beam, plow handles, a post having its upper end curved over on itself and embracing the plow beam, the lower end of the handles attached to the post, a brace interposed between the mid-portions of the post and the handles, a plow attached to the post, a soleplate adjustably attached to the plow and to the post and handles so as to have its forward end situated adjacent the plow point for bracing same.

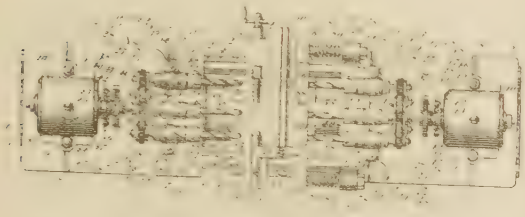
1,414,588. PATCH POSTER. CORA L. SCOVIL, Washington, Pa. Filed June 4, 1920. Serial No. 386,633. 5 Claims. (Cl. 35—17.)

1. A flexible display device comprising a fabric base member, human-feature and human-limb-simulating fabric means secured thereon, and fabric garment-simulating means secured to said base member and partially covering said first-named means to portray a clad human figure.

1,414,589. METHOD AND APPARATUS FOR PERFORATING METAL SHAPES. ELMER S. SEAVEY, Johnstown, Pa. Filed Nov. 6, 1918. Serial No. 261,346. 42 Claims. (Cl. 77—32.)

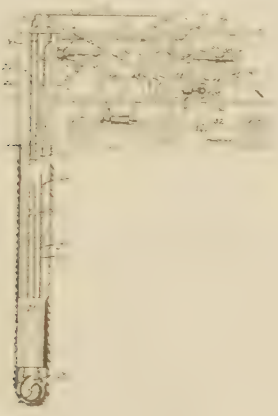
1. In a machine for perforating metal shapes, comprising a frame, slide-ways thereon, a carriage mounted on

the slide-ways, drill-actuating spindles mounted upon the carriage, means for rapidly rotating the drill-actuating



spindles and fluid-pressure means for reciprocating the carriage.

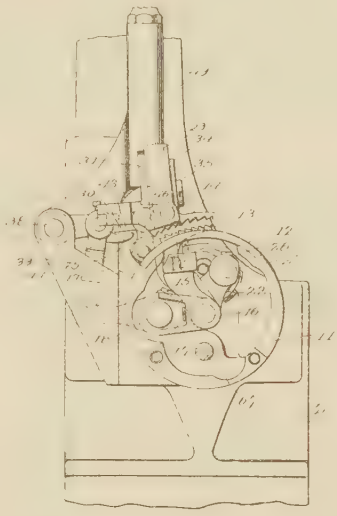
1,414,590. WELL-DIGGING MACHINE. WILLIAM V. SEIFERT, Thurman, Colo. Filed Nov. 28, 1919. Serial No. 341,110. 18 Claims. (Cl. 255—21.)



1. A digging machine, comprising a truck, an endless excavating carrier mounted to travel on the truck and to depend into a hole, a bodily movable pulley mounted on the truck and over which the carrier travels, means to control the bodily movement of said pulley, and a weighted member also adapted to depend into the hole and around which said carrier travels, and flexible means by which solely said weighted member is supported.

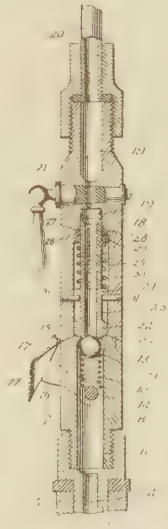
1,414,591. FEEDING MECHANISM FOR SEWING MACHINES. DUDLEY S. SEYMOUR, Oak Park, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed May 4, 1918. Serial No. 232,523. 19 Claims. (Cl. 112—207.)

8. A sewing machine including in combination a work supporting cylinder, a horizontally disposed feed rocker therein, a vertically disposed bracket pivoted to the feed rocker, a lower feed dog carried by the bracket, said bracket having a vertical member extending above the work supporting cylinder, a cross head slidably mounted on said member, a feed dog carried by said cross head, an arm extending rearwardly from said rocker, a bracket attached to said work supporting cylinder, an arm pivoted to the bracket and connected to the arm on the feed rocker, a finger carried by said arm on the bracket, a link connected to the cross head and adapted to be engaged by the finger, a spring for forcing the cross head downwardly, said finger being disposed so as to positively raise the link and lift the cross head when the bracket is lowered to move the lower feed dog out of engagement with the material and so as to permit the lower feed dog to raise the material and the upper feed



dog against the action of the spring during the feeding movement of the material.

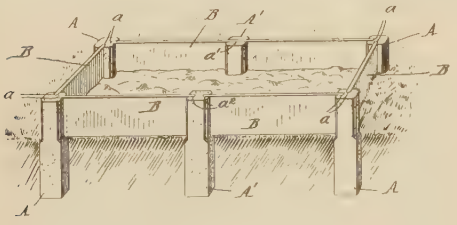
1,414,592. LUBRICATING SYSTEM. BERNARD H. SKELLY, Bridgeport, Conn. Filed June 8, 1920. Serial No. 387,322. 12 Claims. (Cl. 284—18.)



11. In combination with a ported member having one end curved upon the arc of a circle and through which end the port opens; a pair of studs extending laterally from said member; a dust cap hinged upon said studs and having a contour to fit the curved face aforesaid; a supply nozzle having a curved outer end complemental in form to the curvature of the ported member; a hollow spring actuated lock plunger mounted in the nozzle, the head of said plunger normally protruding beyond the curved face of the nozzle; and a pair of hooked shaped arms extending from the nozzle adapted to engage the studs, said arms being of such length that when the arms are in engagement with the studs, and the nozzle is swung laterally, the end of the nozzle will first contact the dust cap and, through continued movement, remove the dust cap from the ported member and finally come

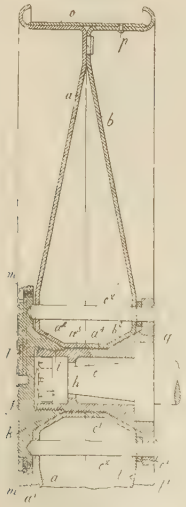
into operative relation with the ported member, with the head of the plunger in locking relation with the end of the port in the ported member.

1,414,593. BORDER FOR HOTBEDS AND THE LIKE. FREDERICK F. SKLENKA, Long Island City, N. Y. Filed Aug. 9, 1919. Serial No. 316,509. 1 Claim. (Cl. 47—27.)



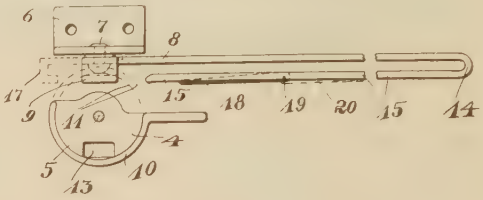
A border for hotbeds and the like embodying a plurality of spaced corner posts cast from concrete and of substantially uniform cross sectional area throughout their lengths, said posts being embedded in the ground for a portion of their length, each post being integrally cast and that portion of each post which projects above the ground being provided with vertical slots cast in the posts and adapted to receive the end of boards, the slots extending from the tops of the posts downwardly substantially to the surface of the ground, and provided with parallel side faces, so that boards may be positioned in or removed from the slots while the posts are in position, in combination with intermediate posts of substantially uniform cross sectional area throughout their lengths, said posts being cast from concrete and embedded for a portion of their length in the ground, said intermediate posts being bifurcated for that portion thereof which projects above the ground so as to straddle the boards intermediate their ends and support them against sagging outwardly under the pressure of the dirt adapted to be contained in the bed.

1,414,594. WHEEL FOR MOTOR ROAD AND OTHER VEHICLES. CHARLES STEWART HASTINGS SNOW, South Hampstead, London, England. Filed Nov. 2, 1920. Serial No. 421,323. 3 Claims. (Cl. 301—63.)



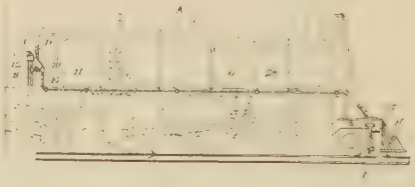
1. A detachable wheel having complementary disks, a series of pins passing through said discs for securing the discs together adjacent the hub of the wheel, means for interlocking said disks at their outer edges, said disks beyond said interlocking means being projected laterally and curved to form a tire receiving rim section.

1,414,595. WINDOW-SASH FASTENER. WILLIAM A. SNYDER, Los Angeles, Calif. Filed Apr. 12, 1921. Serial No. 460,728. 2 Claims. (Cl. 292—278.)



1. In a window lock, a locking member having a pivot support to allow a swinging on a normally horizontal plane and having an aperture sidewise of the pivot support through the locking member, and a second locking member having a pivot support to allow a swinging on a normally vertical plane, the second-named locking member having means to engage with the first-named locking member for a normally closing position of the window lock and having also means for slidingly engaging with the first-named locking member allowing a limited movement, the second-named locking member having furthermore means to lock the first-named locking member in partly open position so as to prevent a closing.

1,414,596. TRAIN STOP AND TRAIN CONTROL. HENRY BUSH SPENCER, Ottawa, Ontario, Canada. Filed Dec. 27, 1921. Serial No. 524,992. 1 Claim. (Cl. 246—199.)



A train stopping device comprising, in combination, an engineer's brake valve, a brake line pipe, a T-coupling connected to the brake line pipe, a connecting conduit connected to the T-coupling, a valve in the connecting conduit, a second T-coupling connected on the opposite side of the valve to the first-mentioned T-coupling, an air gauge connected to one side of the second T-coupling, a conduit connected to the opposite side of the second T-coupling, a frangible signalling device connected to said last-mentioned conduit and located in close proximity to the rail and adapted to be broken by the exploding of a torpedo, all as substantially herein set forth and described.

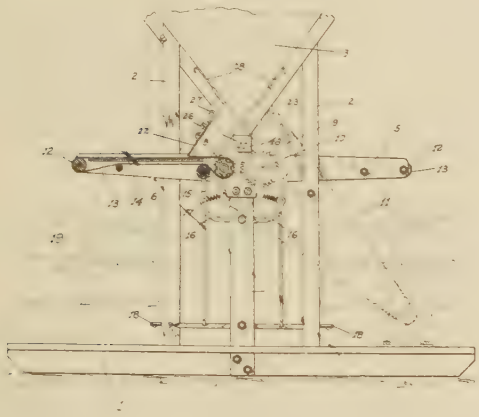
1,414,597. PAINT COMPOSITION. JOHN F. STEENMEYER, Hull, Iowa, assignor of four-tenths to Theodore Steensma, Hull, Iowa. Filed Aug. 15, 1921. Serial No. 492,595. 5 Claims. (Cl. 134—39.)

5. A paint composition comprising a pigment suitably colored 100 parts, linseed oil 47 parts, petroleum 45 parts and drier 5 parts.

1,414,598. HAND-PICKING TABLE. ARCHIBALD R. STEPHEN, Lodi, Calif. Filed Apr. 4, 1921. Serial No. 458,399. 4 Claims. (Cl. 130—32.)

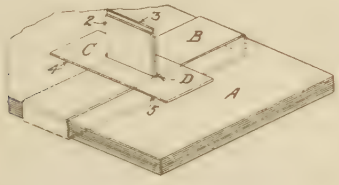
1. In combination with a driven belt, a chute positioned thereabove and terminating thereat, and opening

provided in the front end of the chute and extending upwardly a certain distance from the lower edge, flexible



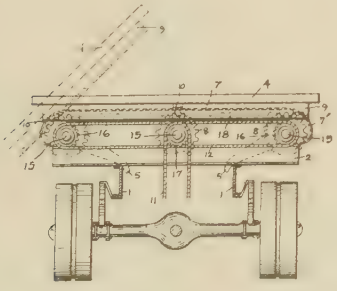
fingers covering said opening, and means for altering the operative length of said fingers.

1,414,599. PACKAGE TIE. CARL O. STOCKMAN, Albany, N. Y. Filed Sept. 19, 1921. Serial No. 501,560. 2 Claims. (Cl. 24—16.)



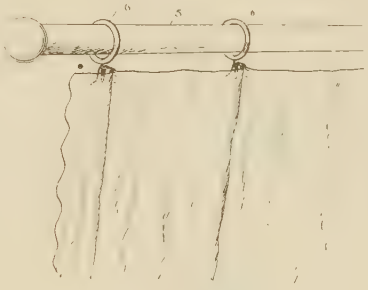
1. A package tie comprising a band member of flexible fibrous material having a width many times as great as its thickness; and a fastener member of similar material having a length greater than the width of said band, and a slot longitudinally thereof adapted to pass the ends of said band member.

1,414,600. UNLOADING APPARATUS FOR VEHICLES. HUGO V. STUTH, Tacoma, Wash. Filed Jan. 24, 1921. Serial No. 439,612. 4 Claims. (Cl. 298—13.)



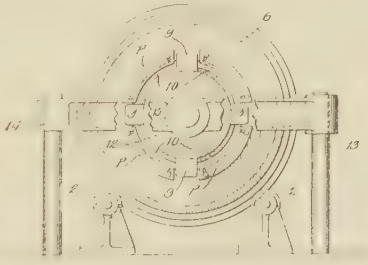
1. Unloading apparatus of the class described including a supporting frame, shafts journaled on said supporting frame, gear wheels on said shafts, a load carrying body, gear racks rigid with said load carrying body and arranged to run on said gear wheels, means for selectively rotating said gear wheels in either direction to move said body into an overhanging position with respect to said frame, slotted trackways rigid with said supporting frame and arranged parallel with said gear racks, said trackways being curved downwardly at the ends and devices movable in said slotted track ways and connected with said load carrying body for holding said gear racks in mesh with said gear wheels.

1,414,601. PIN. CLARENCE TAYLOR, Newport, R. I. Filed Nov. 2, 1921. Serial No. 512,234. 2 Claims. (Cl. 156—21.)



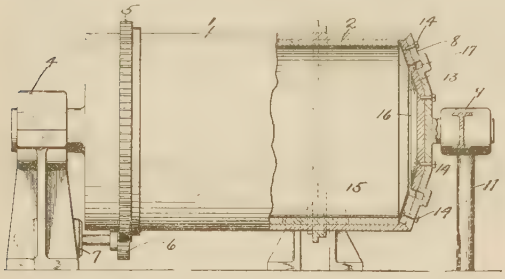
2. A curtain pin comprising a pair of U-shaped jaws having converging arms terminating in eyelets, a pivot pin extending through said eyelets and having bends defining a hook, one side of said hook being extended beyond the pin and bent outwardly to define an attaching member, and a gradually restricted entrance opening to the hook, and a coiled spring mounted on said pivot pin and having its terminal portion engaged with said jaws, and elongated pieces of metal having rolled portions extending about said jaws are provided along their longitudinal edge portions with overlapping teeth, one set of teeth being engaged with one of the rolled portions.

1,414,602. MILL. HARRY P. TAYLOR, Los Angeles, Calif. Filed June 29, 1920. Serial No. 392,807. 15 Claims. (Cl. 83—9.)



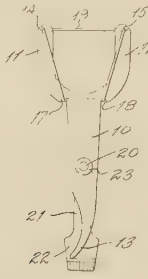
1. In a mill of the character described, a drum having an annular flange at one end thereof defining the boundaries of a central opening, said flange extending transversely of the drum and being provided with a continuous uninterrupted opening in the working face thereof whereby material is continuously discharged from the mill through the flange.

1,414,603. MILL. HARRY P. TAYLOR, Los Angeles, Calif. Original application filed June 29, 1920, Serial No. 392,807. Divided and this application filed Sept. 26, 1921. Serial No. 503,424. 9 Claims. (Cl. 83—9.)



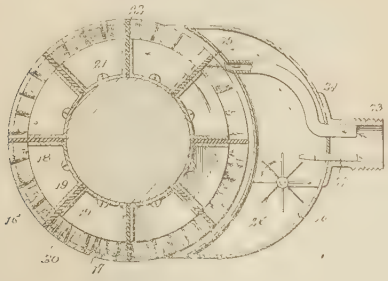
1. In a mill of the character described, the combination of a drum and a door at one end of the drum provided with a continuous slot through which material is discharged from the mill.

1,414,604. SANITARY TOOTH CLEANER. RUDOLF THUM, Baldwin, N. Y. Filed Dec. 28, 1920. Serial No. 433,616. 4 Claims. (Cl. 132—91.)



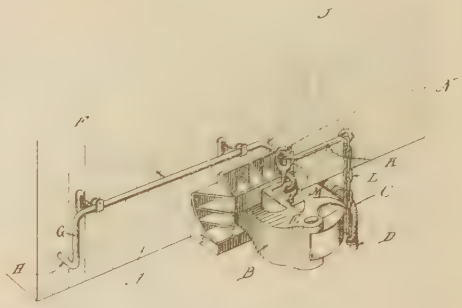
4. A device of the class described comprising a shank, a pair of parallel arms extending longitudinally from one end of said shank, said arms being provided with notches adjacent their outer ends and having similar notches adjacent their ends adoining the shank, a flexible member adapted to lie in the notches in such position as to bridge the space between the ends of the arms, a pick at the opposite end of the shank and a gum massaging member pivoted to the shank in such a position that when parallel therewith it will form a guard for the pick.

1,414,605. ROTARY WASHER. RICHARD TOLOOKJIAN, Paterson, N. J. Filed June 1, 1921. Serial No. 474,160. 2 Claims. (Cl. 15—24.)



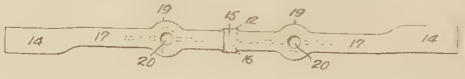
1. A rotary washer including a hollow casing, a brush mounted thereon for rotation, a plurality of radial vanes carried by the brush, said casing having a series of openings in one wall, a jet extending through the casing and directed against the vanes, and a coupling to supply water to the jet and casing.

1,414,606. RELEASE RIGGING FOR COUPLINGS. HECTOR ALEXANDER VARE, Decatur, Ill. Filed July 26, 1920. Serial No. 399,169. 1 Claim. (Cl. 213—59.)



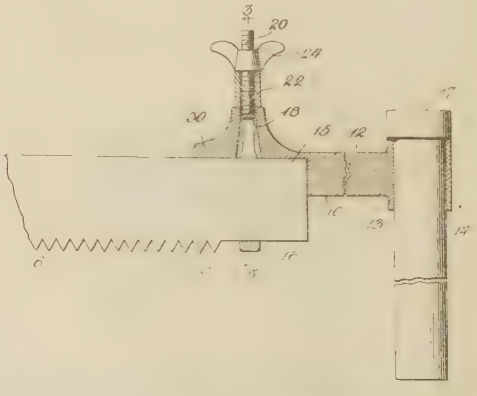
In a release rigging for couplings, the combination with a car, its coupler-head and locking pin, and an air hose and its coupler-head, of a member on the car comprising a shaft portion including an arm at one end forming a limiting stop for the shaft in one direction of its rotation, and also including an arm extending to and overhanging the first named coupler-head, said arm being extended laterally beyond the latter substantially parallel to the shaft portion and offset from the axis thereof, means flexibly attached to the second named arm and connected to the locking pin, and a second flexible member attached to the extended portion of the said second named arm and connected to the coupler-head of said air hose.

1,414,607. METHOD OF MAKING BRAKE-BEAM FULCRUMS. ERNEST R. VIBERG, Montreal, Quebec, Canada, assignor to Canadian Car and Foundry Company Limited, Montreal, Quebec, Canada, a Corporation. Filed May 31, 1919. Serial No. 301,073. 9 Claims. (Cl. 29—164.)



1. A process of making forged brake beam fulcrums, which comprises rough forging a straight bar to leave greater amounts of metal at the centre than at other points of the bar, and subsequently forming the U-bend and tension member socket of the fulcrum from the increased amount of metal at the centre of the bar.

1,414,608. SAW HANDLE. BAZEL R. WATSON, Everett, Wash. Filed June 12, 1920. Serial No. 388,416. 1 Claim. (Cl. 145—111.)



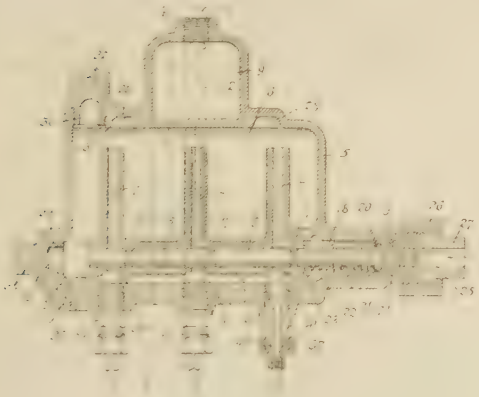
A device of the character described including a shank provided at one end with a sleeve to receive a handle and

at its opposite end with a tubular head projecting above and below the shank and formed at its lower end portion with a diametric saw blade receiving slot extending axially of the shank in the rear of the head, the line of the shank at the lower side thereof sloping to the lower end of the head to define a pair of bearing lips bracing the projecting lower end of the head and providing a continuation of the walls of said slot to contact a saw blade in the rear of the head, ears projecting from the forward side of the head bracing the projecting upper end of the head and integrally joined at their upper ends to provide a saddle to bear over the upper edge of the saw blade, the forward edges of said ears sloping to the lower end of the head to provide a second pair of bearing lips bracing the projecting lower end of the head and forming a continuation of the walls of said slot to contact the saw blade at the forward side of the head, and a loop adjustable through the head for clamping the saw blade in said slot.

1,414,609. METHOD AND COMPOSITION FOR RENDERING MATERIALS FIREPROOF. FRANK C. WHEELER, Montreal, Quebec, Canada. Filed Sept. 18, 1917. Serial No. 192,003. 2 Claims. (Cl. 23—5.)

2. A method of fireproofing, which comprises immersing the material to be fireproofed in a composition resulting from the mixing of water, borax and alum, and boiling for approximately one hour.

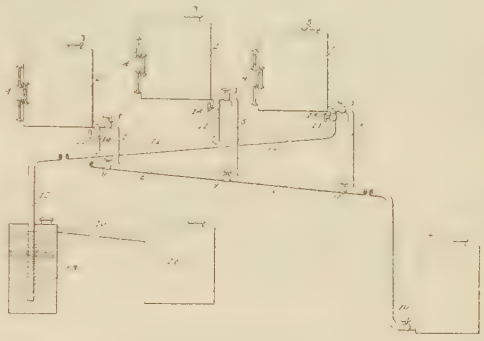
1,414,610. LUBRICATING APPARATUS. ROBERT WOOD, Brooklyn, N. Y. Filed Jan. 28, 1920. Serial No. 354,629. 23 Claims. (Cl. 184—29.)



7. A lubricating device having a lubricant supply chamber with an outlet therefrom, a combined valve and plunger in the casing controlling said outlet, a piston associated with said combined valve and plunger, connections by which fluid under pressure can be admitted against said piston whereby as pressure is applied against said piston the plunger will be shifted to open the outlet and substantially simultaneously the pressure in the lubricant chamber will be increased by the plunger.

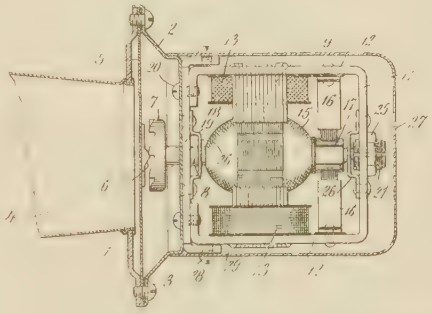
1,414,611. OIL-SALVAGING MEANS. DANIEL ASPINALL, Vancouver, British Columbia, Canada. Filed Mar. 31, 1921. Serial No. 457,389. 3 Claims. (Cl. 220—88.)

1. A means for salvaging oil or the like from any one of a series of storage tanks when the same is threatened by fire, said means comprising a salvaging tank remote from the storage tanks, means for delivering the contents of any storage tank into the salvaging tank, a second salvaging tank located remote from the storage tanks, and means for delivering the residue from any storage



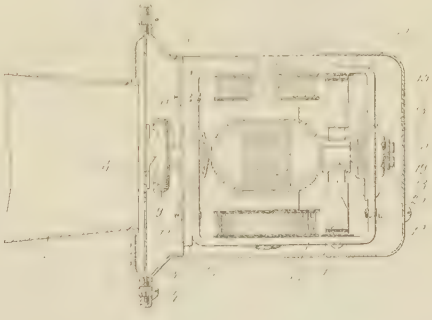
tank through a cooling medium into the second salvaging tank.

1,414,612. SIGNAL FOR MOTOR VEHICLES. EMANUEL AUFIERO, Brooklyn, N. Y., assignor to E. A. Laboratories, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Feb. 26, 1921. Serial No. 448,088. 3 Claims. (Cl. 177—7.)



1. In a signal, the combination with the diaphragm chamber, and the diaphragm therein, of an electrically controlled motor for vibrating the same, and a support for the motor, said support comprising a bar for connection with the chamber wall and having an opening for the shaft, a substantially rectangular bracket comprising a body having an opening for the motor shaft and arms connected with the bar, the bar having lateral lugs at its ends, and a cover for the motor fitting outside the lugs, and detachably connected thereto.

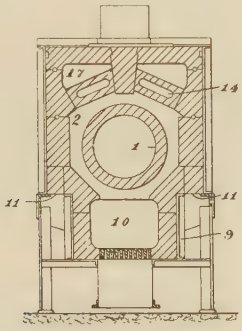
1,414,613. SIGNAL FOR MOTOR VEHICLES. EMANUEL AUFIERO, Brooklyn, N. Y., assignor to E. A. Laboratories, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Feb. 26, 1921. Serial No 448,089. 6 Claims. (Cl. 177—7.)



6. In a signal of the class described, the combination with the diaphragm of means for vibrating the diaphragm

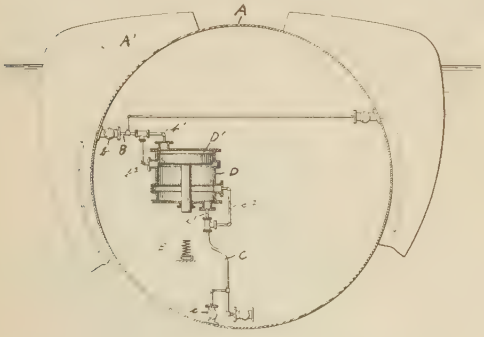
comprising an electric motor, said motor having a frame consisting of a single piece of drawn sheet metal of rectangular cross section and with a web or bottom piece integral with the four sides, a motor shaft bearing in one of said four sides, the opposite side having a hole of larger diameter than the motor shaft and an extra piece carrying the other motor shaft bearing attached to said last mentioned side with the bearing in line with the hole, whereby the motor may be taken down by detaching the said piece from the frame.

1,414,614. MUFFLE FURNACE. JOHANNES ROBERT CARL AUGUST, Halifax, England. Filed May 8, 1920, Serial No. 379,994. Renewed Jan. 24, 1922. Serial No. 531,511. 6 Claims. (Cl. 263—34.)



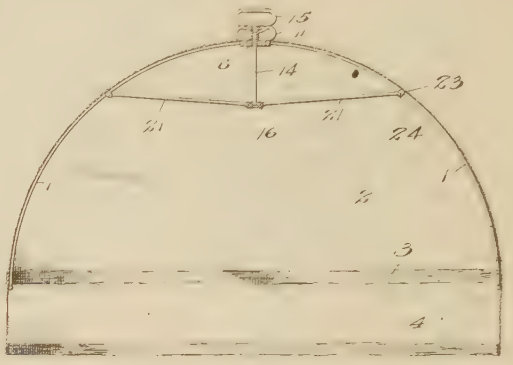
1. A rotary furnace of the rotary barrel type, formed by the combination of a rotary heating chamber closed at one end, and having a central aperture at the other, and a removable muffle or barrel inserted closed end first, through the said aperture while the open end which is closed by a detachable cover is left projecting, the space between the rotary heating chamber and the barrel being subdivided by longitudinal bearers into a plurality of longitudinal flues for the hot gases to pass through, the bearers forming throughout their lengths supports for the muffle which rotates with the heating chamber.

1,414,615. APPARATUS FOR PREVENTING ESCAPE OF OIL FROM SUBMARINE TANKS. GUSTAV BAUER, Hamburg, and FRITZ KRAMER, Blankenese-Dockenhuden, near Hamburg, Germany. Filed Aug. 31, 1921. Serial No. 497,242. 12 Claims. (Cl. 114—6.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



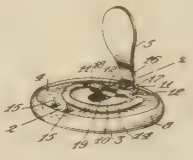
1. Means for use on submarines for preventing the escape of oil from the oil tanks which are situated otside the submarine and are not built to resist pressure, comprising a device which automatically operates to maintain in the interior of the tanks a pressure which is less than the pressure of the water surrounding the tanks.

1,414,616. CANOPY. WILLIAM HENRY BEEHLER, Baltimore, Md. Filed Dec. 7, 1920. Serial No. 428,983. 2 Claims. (Cl. 5—14.)



1. The combination in a canopy with four supporting ribs and complementary distending ribs pivoted thereto, of a center rod having an end loop and a head at the opposite end of the rod, pivotal connections between the distending ribs and said head, a runner on said rod having a base pivotally connected with the supporting ribs, and duplex reinforcing loops forming finger holds and connecting said runner and base, said head being located below the plane of the pivotal connections between the supporting and distending ribs when the canopy is open.

1,414,617. COLLAR BUTTON. SAMUEL BLACHER, Providence, R. I., assignor to Joseph E. Miller, Incorporated, Providence, R. I., a Corporation of Rhode Island. Filed Sept. 6, 1921. Serial No. 498,770. 1 Claim. (Cl. 24—97.)

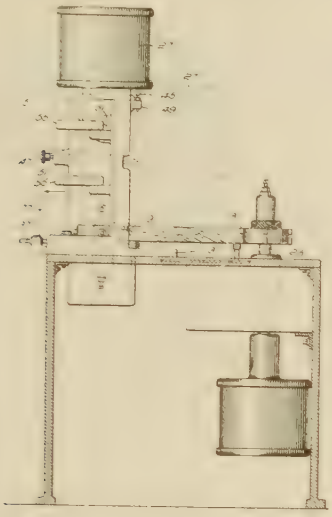


An article of the type specified comprising a back-plate, a hinge-plate secured thereto and formed with a central opening having upstanding socketed ears on its sides and raised abutments extending rearwardly from said ears toward the edge of the plate to provide opposite parallel shoulders on the upper face of the plate, and an L-shaped lever having a rest-portion provided with trunnions pivoted in the ears on the hinge-plate, said lever adapted to be closed against the hinge-plate and to be tilted into upright position in relation thereto, the rest on said lever being arranged to sit flat against the top of the hinge-plate with its sides confined between the opposite shoulders of the abutments thereon.

1,414,618. SIDE HEAD CONSTRUCTION FOR MATCHERS AND THE LIKE. CHARLES W. H. BLOOD, Winthrop, and CARL G. OSTEMAN, Boston, Mass., assignors to S. A. Woods Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed July 7, 1920. Serial No. 394,451. 5 Claims. (Cl. 144—90.)

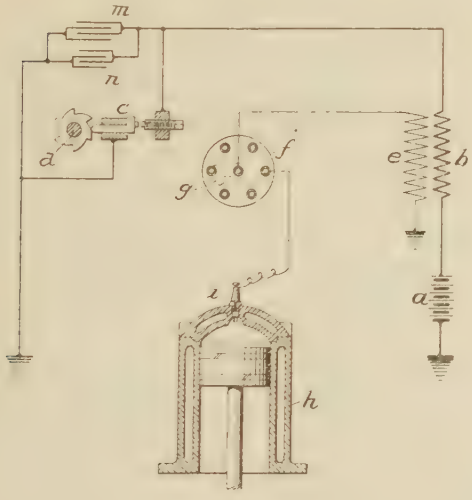
1. A matcher or like machine comprising the usual horizontal bed, opposed rotary tools operating substantially in the plane of said bed and rotary motors directly coupled thereto and disposed respectively above and below the plane, the former having a pivotal mounting on a substantially horizontal axis remote from and above

the tool providing an inward position in which the tool is adapted to operate on work passing over the bed and



adapted to be swung through a wide arc to a substantially horizontal position wherein the tool is distant from the bed of the machine and of convenient access.

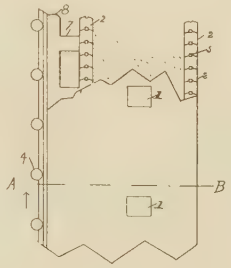
1,414,619. MEANS FOR INCREASING THE DIELECTRIC STRENGTH OF CONDENSERS. WILLIAM C. BRINTON, Jr., Kennett Square, Pa., assignor, by mesne assignments, to Philbrin Corporation, Kennett Square, Pa., a Corporation of Delaware. Filed Oct. 17, 1918. Serial No. 258,582. 3 Claims. (Cl. 123—148.)



1 The combination of a primary and a secondary circuit having an induction coil connected thereto, a make and break device, and a plurality of condensers of different capacities connected in multiple to each other in the primary circuit.

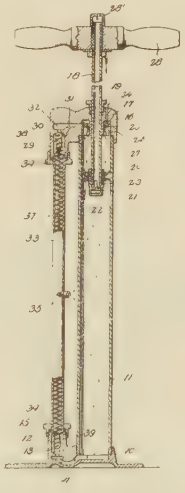
1,414,620. REINFORCED CONCRETE CONSTRUCTION FOR PIERS, BULKHEADS, SEA WALLS, AND DRY DOCKS. ALEXANDER BROWNLEE, San Diego, Calif. Filed Aug. 3, 1917. Serial No. 184,292. 1 Claim. (Cl. 94—51.)

A bulkhead, sea wall, dry-dock, and the like, comprising parallel impervious walls formed of concrete sheet piles jetted and driven into the bottom of a body of water, forming a hollow channel between said walls, a hollow, monolithic, reenforced concrete cover of substantial depth and formed with a comparatively large enclosed chamber and comparatively small filling holes through its upper floor and lower floor, cast about the upper ends of the piles



forming said walls and forming integral enclosing walls therewith, and a filling of plastic dredging detritus injected through the filling holes into the hollow channel formed between said walls and into the enclosed chamber in said cover, the whole forming a rigid and massive structure.

1,414,621. AIR PUMP. ALLEN BURNAM, San Antonio, Tex., assignor of one-half to C. M. Hocker, San Antonio, Tex. Filed Nov. 19, 1920. Serial No. 425,179. 1 Claim. (Cl. 230—27.)

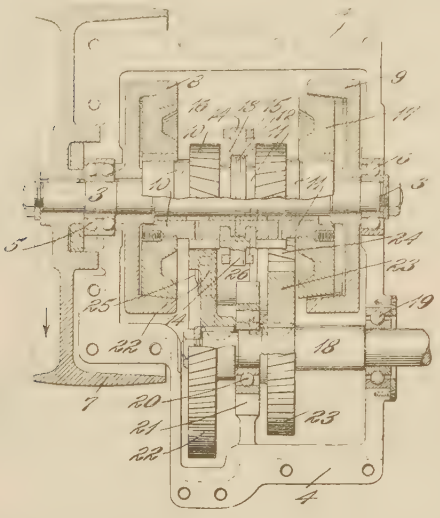


An air pump including a cylinder, a piston reciprocable therein, means controlling admission of air at opposite sides of the piston, a discharge pipe in communication with opposite end portions of the cylinder, discharge valves associated with said pipe controlling flow in opposite directions therethrough and provided with peripheral grooves, and a spring extending between said valves and at its end portions encircling the valves engaging in said grooves, the spring normally holding the valves closed.

1,414,622. POWER-TRANSMISSION MECHANISM. LIONEL A. CARTER, St. Louis, Mo. Filed Dec. 3, 1920. Serial No. 428,055. 8 Claims. (Cl. 74—59.)

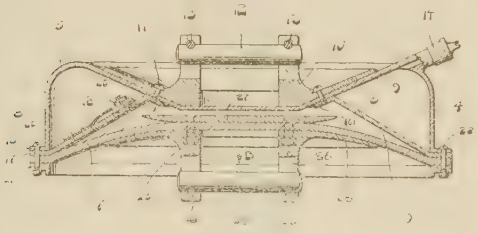
4. A power transmission mechanism comprising a drive shaft, a driven shaft, a drive wheel slidably mounted on said drive shaft, a driven wheel fixed to said driven shaft and cooperating with said drive wheel, cooperating clutch elements fixed to said drive shaft and to said drive wheel respectively, means for actuating said drive wheel to cause the clutch element thereof to engage the clutch element of

said drive shaft, said drive wheel having portions formed thereon adapted to cause an end thrust on said driving



gear sufficient to maintain the clutch element of said driving gear in operative engagement with the clutch element of said drive shaft.

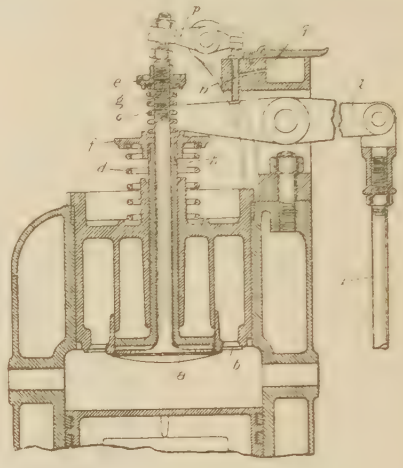
1,414,623. AIR SPRING. FRANK S. CHURCH, Cincinnati, Ohio, assignor of one-half to The Thos. J. Corcoran Lamp Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 6, 1921. Serial No. 458,984. 6 Claims. (Cl. 267—65.)



4. An air spring comprising a body having a closed top, a diaphragm closing the bottom and relatively movable with relation to the body, and a plate having a reversely curved surface in engagement with the diaphragm, adapted to present a surface of increasing area to the diaphragm as the plate is moved to flex the diaphragm toward the body, and means in the body dividing the space between the top and the diaphragm into two chambers, and adapted to permit easy passage of air from the chamber below the means to the chamber above the means and restricted passage of air from the chamber above the means to the chamber below the means.

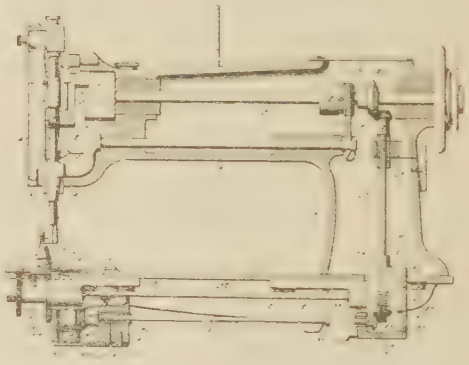
1,414,624. VALVE-CONTROLLING MECHANISM. GAETANO CORBELLA and GUALTIERO LONGONI, Milan, Italy. Filed Dec. 24, 1917. Serial No. 209,428. 3 Claims. (Cl. 123—90.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a valve controlling mechanism, the combination with two valves, of a stationary support and means for alternately operating said valves, said means comprising two valve controlling levers pivoted in said support, an actuating member adapted to move in opposite directions and so operate one of said levers, and a member interposed between said levers and movable relatively thereto



for transmitting the movements of the last mentioned lever to the other lever and reversing the direction of said movements.

1,414,625. FEEDING MECHANISM FOR SEWING MACHINES. HERBERT CORRALL, Helensburgh, and BERTRAM A. STEVENS, Clydebank, Scotland, assignors to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Oct. 27, 1919. Serial No. 333,697. 12 Claims. (Cl. 112—214.)

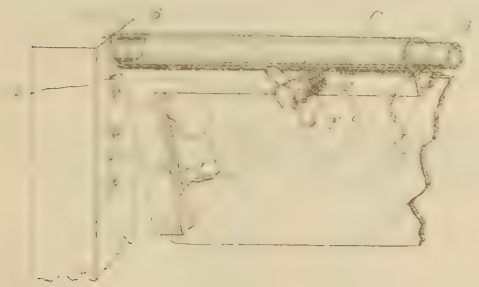


1. In a sewing machine, the combination with a cloth-plate, an overhanging arm, a needle carrying bar journaled upon said overhanging arm above said cloth-plate, means for imparting work penetrating movements to said needle, and means for imparting positive lateral movements to the needle substantially in the line of feed of the work, of continuously feeding work feeding means including a feed-wheel journaled beneath the cloth-plate upon a substantially horizontal axis and acting upon the work substantially at the point of penetration thereof by the needle, and a thread-mass carrying loop-taker journaled for rotary movement beneath the cloth-plate upon a substantially vertical axis and coacting with the needle in the formation of lock stitches.

1,414,626. AUTOMOBILE WINDSHIELD FITTING. HERBERT STANLEY COX, London, England, assignor to William J. McCrudden, Leeds, N. Y. Filed Aug. 5, 1920. Serial No. 401,551. 1 Claim. (Cl. 296—92.)

In a pivoted windshield the combination of a fixed rod B, the slotted cylindrical sleeve C, the closing screw F

serving to close the slot in the cylindrical portion thereby simultaneously clamping the cylinder C upon the rod B

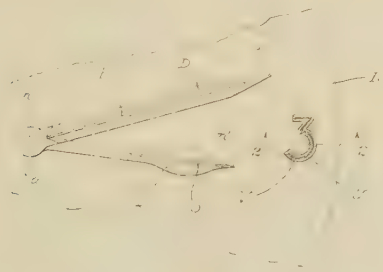


and clamping the glass firmly in position substantially as described.

1,414,627. SUSPENSION DEVICE FOR GLOBES AND REFLECTORS FOR INDIRECT AND CONCENTRATED LIGHTING. OTTO PAUL CRAMER, Geneva, Switzerland. Filed July 5, 1921. Serial No. 482,512. 4 Claims. (Cl. 240—115.)

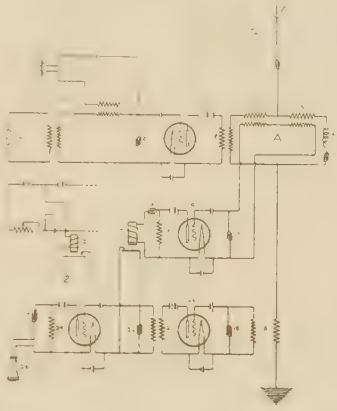
1. A suspension device for globes and reflectors for indirect and concentrated lighting, comprising portions of a circular support formed of sheet steel and bent in such a manner as to constitute spring clamps fitting tightly upon the globe, a double hook of fork shape forming part of the said clamps, cords provided with beads adapted to engage the double hooks of the said clamps, and upper hooks for suspending the globes and reflectors from the shade holder of the upper reflector.

1,414,628. DIAL AND MARKING FOR WATCHES AND LIKE ARTICLES. HERMANN F. CUNTZ, Hartford, Conn., assignor to American Radium Company, New York, N. Y., a Corporation of New York. Original application filed July 2, 1921, Serial No. 482,095. Divided and this application filed Oct. 8, 1921. Serial No. 506,312. 10 Claims. (Cl. 58—50.)



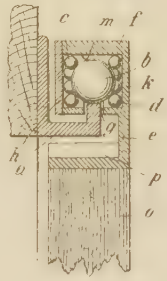
1. A reading part for a timepiece or like article comprising a base, a ridge projecting from said base forming a figure or graduation device, permanently self-luminous compound imbedded on either side of said ridge in the recess formed between the wall of the ridge and the adjacent surface of the base.

1,414,629. WIRELESS DUPLEX SIGNALING SYSTEM. MIHRAN M. DOLMAGE, Washington, D. C. Filed July 15, 1918. Serial No. 245,101. 8 Claims. (Cl. 250—6.)



6. In a system for the transmission and reception of wireless signals, the combination of an antenna, transmitting apparatus normally connected to the antenna, receiving apparatus normally connected to the antenna, connections to a wire telephone system, with circuit changing means controlled directly by electric currents predominatingly of audio frequency character and arranged to render inoperative the receiving apparatus when said system is used for transmission.

1,414,630. ROLLER FOR SLIDING DOORS AND THE LIKE. ADOLF DOWALD, Bremen, Germany. Filed Sept. 2, 1919. Serial No. 321,268. 3 Claims. (Cl. 16—88.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

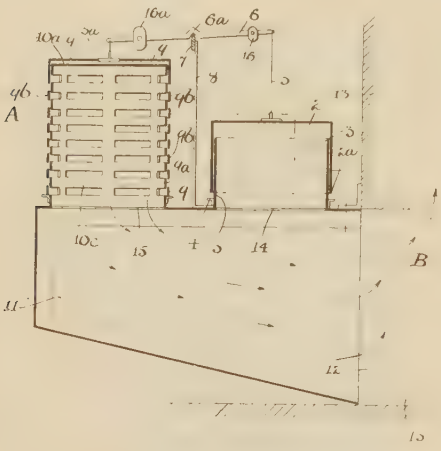


3. In a roller device for a sliding door, or the like, comprising a track, a housing for the roller bearing comprising a single block, a cylindrical chamber within the block, said chamber opening at one end of the block for admitting the bearing rollers, a lid for closing the open end of said chamber, and a lateral slot in the wall of said chamber for admitting the track into contact with said rollers.

1,414,631. APPARATUS FOR CONTROLLING THE DRAFT ON FURNACES. JONAS WILFRID DRAKE, Halifax, England. Filed Mar. 10, 1917. Serial No. 154,063. 3 Claims. (Cl. 236—45.)

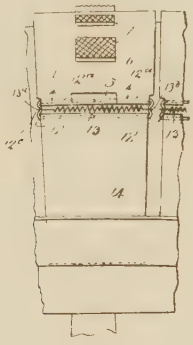
2. In an apparatus for the purpose described, the combination of a chimney having two openings to the outer air formed therein, a valve supported to close one of said

openings, means controlling the admission of air to the other opening comprising a stationary slotted member



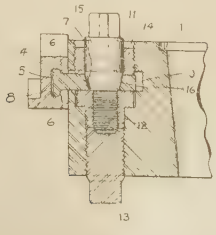
and a movable slotted member, and arms extending from the valve and supporting said movable slotted member.

1,414,632. TIRE PROTECTOR. PAUL ECHTER, New York, N. Y. Filed Jan. 2, 1919. Serial No. 269,291. 6 Claims. (Cl. 152—16.)



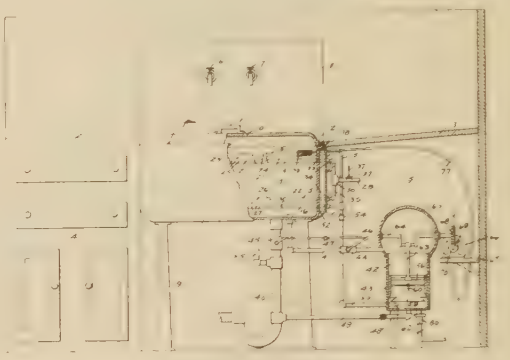
5. An anti-skid device for tires comprising spaced outer and inner curved plate like members having eyes at their ends to register, the outer member having holes, studs removably retained in said holes and retainers having substantially parallel spaced arms, arms of two retainers at the ends of said members being located in said eyes, and other arms of said retainers being spaced from said members to receive straps.

1,414,633. CUTTER-HEAD MECHANISM. JOEL B. ETTINGER, deceased. Portland, Oreg., by Grace A. Ettinger, administratrix. Portland, Oreg. Filed June 1, 1921. Serial No. 474,191. 8 Claims. (Cl. 144—218.)



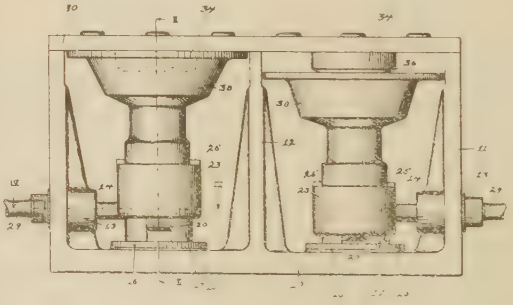
1. The combination with a cutter-head, of a tool, a tool clamping member adjustably engaging the tool, adjustable positioning devices arranged in the head on opposite sides of the tool clamping member, the latter having a transverse tapered opening therein, and a locking bolt passing through one of said positioning devices and having threaded engagement with the other of said positioning devices, the locking bolt having a tapered locking portion engaging the aforesaid tapered opening.

1,414,634. DISHWASHING MACHINE. JULIUS FASSIO, San Francisco, Calif. Filed Oct. 13, 1919. Serial No. 330,243. 6 Claims. (Cl. 141—9.)



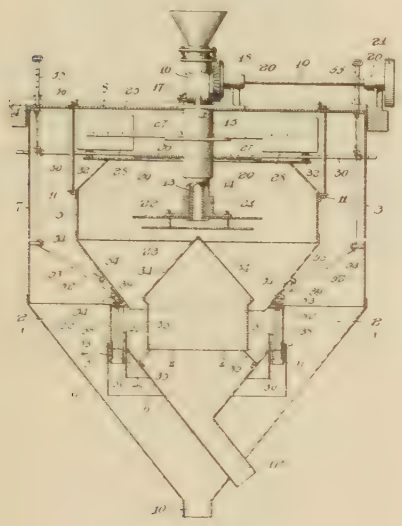
3. A dish washing receptacle having sets of channels formed in opposed sides thereof, certain channels on each side being disposed adjacent the upper edge and certain adjacent the lower edge of the side, plates closing the channels and having openings therein registering with the channels, a clear rinsing water supply line connected with certain upper and lower channels on each side of the receptacle, a pump, means to supply water to the pump and circulating pipes leading from the pump to the other of the upper and lower channels on each side of the receptacle to wash objects in the receptacle.

1,414,635. DRILL JIG. LEWIS FINE, Philadelphia, Pa., assignor, by mesne assignments, to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 7, 1918. Serial No. 238,696. 7 Claims. (Cl. 77—62.)



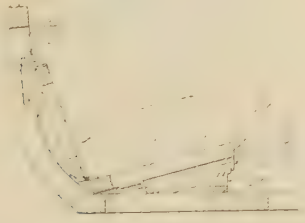
1. In a device of the class described, the combination of a base; spaced pedestals on said base; a plate mounted on said pedestals and provided with spaced openings adapted for receiving the drill; spaced upright members intermediate of said pedestals; a shaft journaled in one of said pedestals and the said intermediate spaced members; a sleeve about said intermediate members and adapted for seating a hub; and co-acting means on said sleeve and shaft whereby the sleeve is raised when the shaft is rotated.

1,414,636. AIR SEPARATOR. RUBERT M. GAY, Hanover Township, Morris County, N. J., assignor to Emerick Mill Co., Easton, Pa., a Corporation of Pennsylvania. Filed Feb. 7, 1920. Serial No. 356,989. 16 Claims. (Cl. 83—40.)



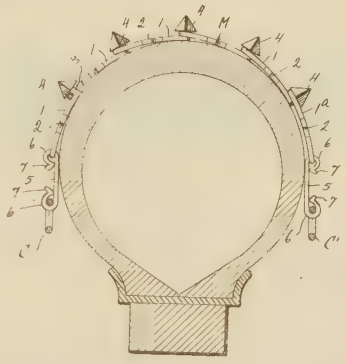
1. In an air separator, the combination of an outer casing, a vertically extending receptacle supported within the casing in spaced relation thereto, said receptacle having an air outlet opening in the top wall thereof and having an air inlet opening in the lower portion thereof, a circular series of damper plates having outwardly diverging side edges and adjustable radially to vary the size of the outlet opening, means operative to cause air to circulate up through the receptacle and down through the casing exteriorly of the receptacle, and means to feed material to the receptacle.

1,414,637. RECLINING ADJUSTABLE CHAIR AND SEAT. ALBERT EDWIN GELL, Sydney, New South Wales, Australia. Filed Jan. 5, 1922. Serial No. 527,260. 2 Claims. (Cl. 155—116.)



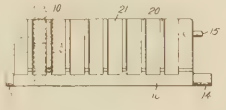
1. A seat comprising a fixed back frame, a false back frame capable of being moved forwardly and rearwardly at its lower end whereby its reclining angle may be varied, a bottom frame, a bottom cushion supported upon the bottom frame, and a back cushion fastened at its top edge to and flexibly suspended from the fixed back frame and loosely disposed to slide relative to the false back frame, the point of attachment of the back cushion to the fixed back frame constituting a flexible joint permitting said back cushion to be raised bodily with respect to the false back and said back cushion being disposed with its lower portion overlying the top of the bottom cushion for movement thereover.

1,414,638. TREAD MEMBER FOR ANTISKIDDING DEVICES. WALTER H. GROVE, Tyrone, Pa. Filed Feb. 25, 1922. Serial No. 539,178. 4 Claims. (Cl. 152—14.)



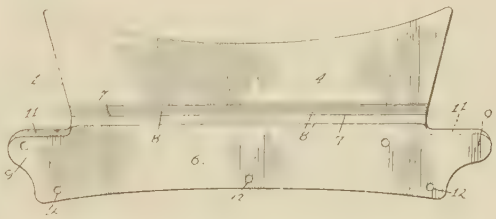
1. A tread member for non-skidding devices comprising a plurality of inseparable sections, each of said sections being in the form of an elongated loop, the side member of each of the sections substantially midway of the length thereof being spaced apart a distance greater than the space between the remaining portions of the arms, the end portion of one of the sections being provided with a shank insertable through a second section and a head carried by the outer end of said shank, said head being insertable through the increased space between the center portion of the side members of a second section, the major diameter being greater than the width between the remaining portions of the side members.

1,414,639. CALCULATING MACHINE. FREDERICK A. HART, New Britain, Conn., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed June 30, 1921. Serial No. 481,595. 5 Claims. (Cl. 235—59.)



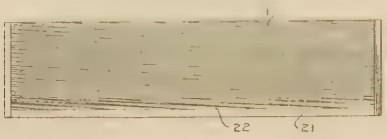
1. In a calculating machine, a feeler piece consisting of an integral bar of metal with grooves milled in it so as to leave a back wall with integral feeler fingers projecting forward from said wall, said wall extending lengthwise of said fingers.

1,414,640. RUBBER COLLAR. TAKEBE HASE, San Francisco, Calif. Filed Aug. 18, 1920. Serial No. 404,312. 4 Claims. (Cl. 2—67.)



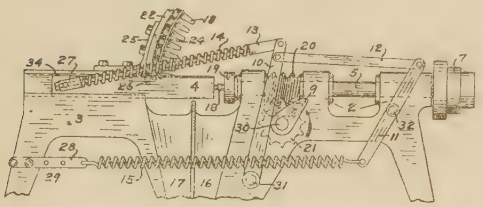
1. A fold down rubber collar comprising an outer ply; an inner ply secured thereto and formed in portions constituting a neck band and a turn down portion, said portions arranged to meet along the line of fold; and beveled edges formed upon the inner ply portion adjacent the line of fold to reduce the thickness of the collar when folded thereon.

1,414,641. THREAD-ROLLING DIE. RICHARD M. HEAMES, Detroit, Mich., assignor to The Vixson Company, Detroit, Mich., a Corporation of Michigan. Filed June 28, 1920. Serial No. 392,397. 9 Claims. (Cl. 80—9.)



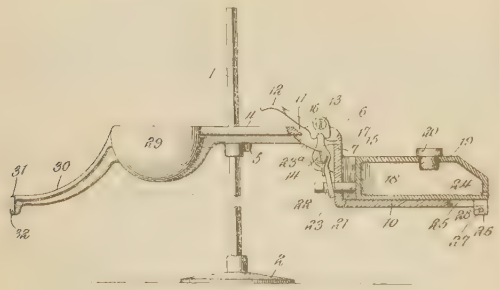
1. As an article of manufacture, a thread rolling die comprising an elongated block having longitudinal serrations the ends of which are chamfered at one of the longitudinal edges of said block.

1,414,642. AUTOMATIC BLANK-DRESSING MACHINE. RICHARD M. HEAMES, Detroit, Mich., assignor to The Vixson Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 7, 1920. Serial No. 415,388. 15 Claims. (Cl. 10—9.)



15. In combination, a carrier having a pair of transversely movable jaws provided with inclined grooves for guiding a blank toward the axis of said carrier, means for feeding blanks in succession to the portion of said grooves remote from the carrier axis, and means for reciprocating said carrier to advance the successive blanks along said grooves and toward said axis.

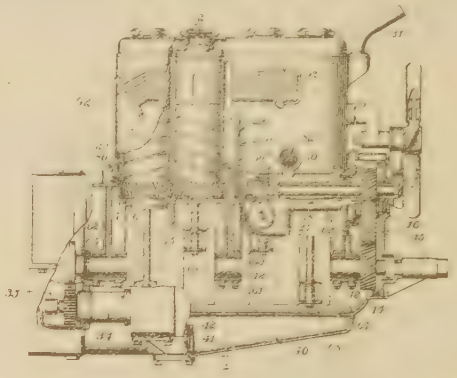
1,414,643. GARMENT MARKER. ADOLPH HEBD, Youngstown, Ohio. Filed Oct. 21, 1920. Serial No. 418,453. 6 Claims. (Cl. 33—9.)



1. In a garment marker, in combination with a support and a guide-way carried thereby, a marking device comprising a powder carrying case slidably mounted in said guide-way and provided at its forward end with one or more jet orifices, and manually operated mechanism for imparting to said case a reciprocal motion in said guide-way.

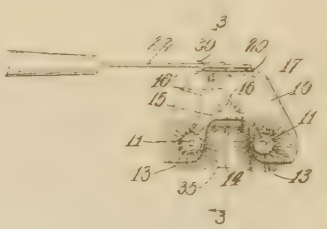
1,414,644. LUBRICATION OF INTERNAL-COMBUSTION ENGINES. CLARENCE P. HOLLISTER, New York, N. Y. Filed Feb. 28, 1918. Serial No. 219,623. 3 Claims. (Cl. 123—196.)

1. The method of lubricating those portions of rotary sleeve valves of internal combustion engines exposed to the impact of the inlet gases which comprises preheating the air supplied to the carbureter, and impregnating said preheated air with an oil spray or oily mist, conducting



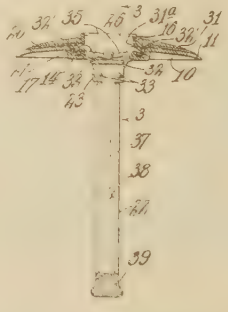
the mixture through a channel having a water-jacketed wall to prevent over-heating, and introducing the resulting homogenous mixture into the carbureter.

1,414,645. TOOTHBRUSH. PHILLIP IROFF, Brooklyn, N. Y. Filed May 10, 1921. Serial No. 468,392. 6 Claims. (Cl. 15—22.)



1. A toothbrush having a pair of opposed rotary brushes, and means for rotating said brushes, and a fixed brush disposed at a point intermediate said rotary brushes.

1,414,646. SAFETY RAZOR. PHILLIP IROFF, Brooklyn, N. Y. Filed June 27, 1921. Serial No. 480,532. 7 Claims. (Cl. 30—12.)



3. In a safety razor, a holder plate, a handle fixed thereto, a cover plate, and locking means for said plate having an operating element extending rearwardly through said handle, said locking means comprising a pair of pivoted latches, and toggle links connected to said latches and said operating element.

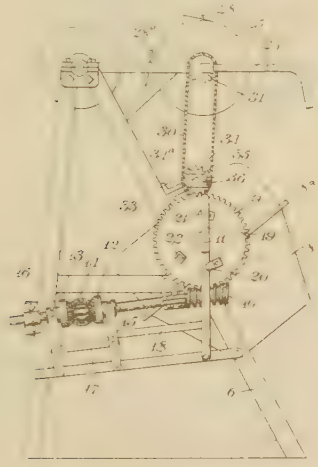
1,414,647. TOOTH CERVICAL CLAMP. JAMES W. IVORY, Philadelphia, Pa. Filed Dec. 23, 1921. Serial No. 524,367. 3 Claims. (Cl. 32—19.)

3. In a tooth cervical clamp, a frame, one member of which is provided with a depending limb, tooth clamping

jaws one of which is sustained on said limb, and the other jaw is adjustably supported on and secured to an

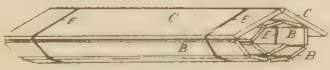
opposite member of the frame, and a screw fitted to said limb adapted to engage the adjacent jaw.

1,414,648. CONCRETE-MIXING MACHINE. GEBHARD JAEGER, Columbus, Ohio. Filed Sept. 25, 1920. Serial No. 412,837. 5 Claims. (Cl. 83—73.)



1. In a mixing machine, the combination with a mixing drum having an opening for the reception of the materials to be mixed and means for oscillating the same from discharging position to charging position, a water vessel mounted on a fixed axis to swing above the path of the opening of the drum and intermediate the said charging and discharging positions of the opening of the drum and driven means for automatically turning said water vessel to discharge water into the mixing drum when the latter is moving from discharging to charging position.

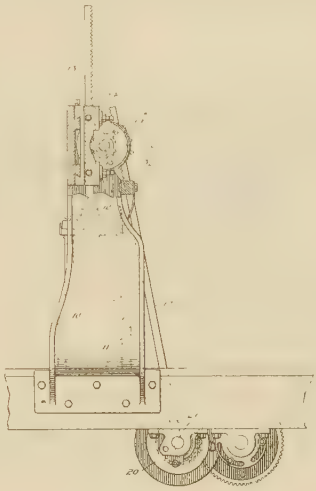
1,414,649. FRUIT-DRYING TRAY. WILLIAM H. JONES, Sanger, Calif. Filed Nov. 30, 1921. Serial No. 518,798. 1 Claim. (Cl. 34—17.)



A drying tray composed of a plurality of small slats and two wider boards hinged together, the wider boards adapted to form a roof over the balance of the tray when rolled, substantially as described.

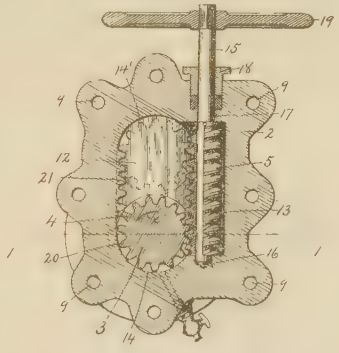
1,414,650. PLUNGER LIFTER. FRANK M. JOSLIN, Amsterdam, N. Y., assignor to Inman Manufacturing Company, Inc., Amsterdam, N. Y., a Corporation of New York. Filed Mar. 29, 1920. Serial No. 369,489. 4 Claims. (Cl. 74—27.)

1. In a device of the kind described a shaft, means for rotating the same in opposite directions, a reciprocating plunger, means for causing reciprocation of said plunger as said shaft is rotated in opposite directions, a sleeve nonrotatably secured to said shaft, a coiled spring surrounding said shaft and secured at one end to said sleeve, a second sleeve to which the other end of said spring is



secured, said second sleeve being rotatably mounted on said shaft, whereby the tension of said spring may be altered, and means for holding said second sleeve in fixed position as said shaft is rotated in opposite directions.

1,414,651. BLOW-OFF VALVE. WILLARD A. KITTS, Jr., Paterson, N. J. Filed Jan. 27, 1920. Serial No. 354,413. 1 Claim. (Cl. 251—54.)

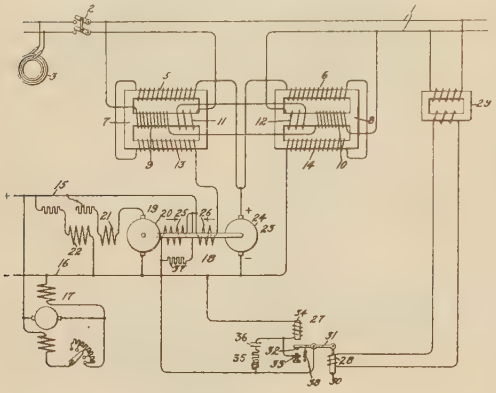


A blow-off valve of the character described, comprising a valve case having a passage therethrough, a valve disc movable to and from a position across said passage and provided with peripheral gear teeth, a rotary worm in direct engagement with the gear teeth at one side of the disc, means for rotating the worm, and a toothed rack for engaging the teeth at the opposite side of the disc and causing said disc to move with a rotary motion to and from a position across the passage as the worm is rotated in reverse directions, the relation of the gear teeth of the disc and rack permitting the gear teeth of the disc to be moved out of engagement with the rack when adjusted to one of its extreme positions to allow said disc to be rotated in one direction without engaging the teeth of the rack.

1,414,652. REGULATING SYSTEM FOR ALTERNATING-CURRENT CIRCUITS. WALLACE B. KIRKE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 10, 1920. Serial No. 388,041. 4 Claims. (Cl. 171—242.)

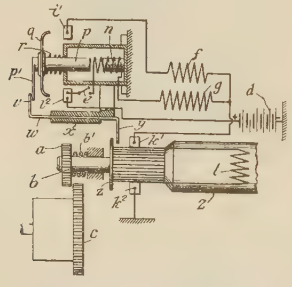
1. The combination with an alternating current circuit of means for regulating an electrical condition thereof com-

prising a plurality of magnetic cores, windings thereon connected to modify said electrical condition, magnetizing windings on said cores, and means for supplying said magnetizing windings with different values of direct current, said means comprising a source of direct current



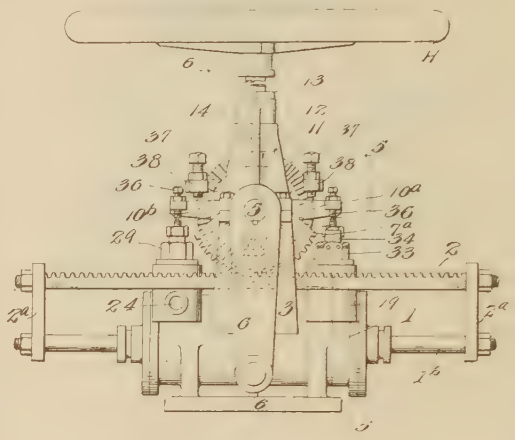
connected in series with said magnetizing windings, a second source of direct current connected to the terminals of one of said magnetizing windings, and means responsive to an electrical condition of said alternating current circuit for varying the voltage of said second source.

1,414,653. ELECTRIC-MOTOR-STARTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. FRANZ KRATZ, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany, a Firm. Filed Aug. 20, 1919. Serial No. 318,808. 4 Claims. (Cl. 290—38.)



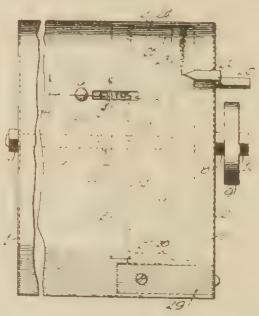
1. In a starting device for internal combustion engines, the combination of a driving member for the engine, a movable coupling member adapted to engage said driving member, an electric motor for rotating and shifting said member, and means for first obtaining a period of slow rotation of said coupling member and, after the beginning of engagement between said coupling member and said driving member, a period of more rapid rotation, said means comprising a field winding on said motor subdivided into a portion of higher resistance and a portion of lower resistance, and suitable connections therefor, said connections including an electro-magnet and a switch connected in series with said portion of the field winding of higher resistance, and a contacting device, actuated by said movable member and held in closed position by said electro-magnet, and effecting the connection of said portion of the field winding of lower resistance in parallel with said series circuit, for producing said period of more rapid rotation.

1,414,654. CONTROLLING MECHANISM. LINCOLN A. LANG, Chicago, Ill., assignor to The Northern Trust Company, trustee, Chicago, Ill., a Corporation of Illinois. Filed June 28, 1916. Serial No. 106,496. 3 Claims. (Cl. 121—41.)



1. In a servo-motor, the combination of a hand-controlling member, a member controlled thereby and movable by power, fluid pressure mechanism for moving said controlled member to and fro, and valve mechanism for delivering and discharging fluid to and from said fluid-operating mechanism, said valve mechanism being mechanically connected to both of said members and arranged to be actuated by movement of either of said members relative to the other, and including a pair of inlet popet valves adapted to open alternately upon actuation of said valve mechanism in opposite directions, at least one of said valves always being open, and a pair of poppet exhaust valves also alternately operable by opposite movements of said valve-actuating mechanism, and adapted to remain in closed contemporaneously during a substantial movement of said controlled member.

1,414,655. TOY ADDING MACHINE. ARTHUR EDWARD LARSON, Chicago, Ill. Filed Feb. 7, 1921. Serial No. 443,129. 1 Claim. (Cl. 235—66.)



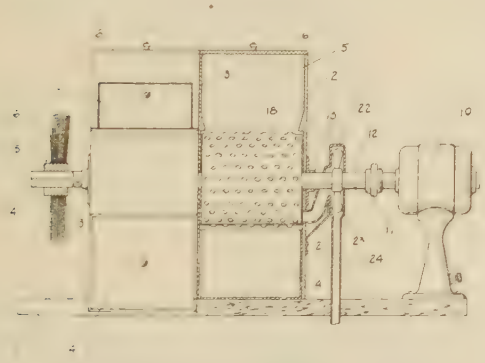
A toy adding machine comprising a casing having a cylindrical-shaped top, and having an arcuate slot in one side thereof, a shaft carried by said casing, a disc carried by said shaft, a second disc rotatably carried by said casing, said second named disc being disposed adjacent to said first named disc, and having numbers thereon, said casing having an elongated opening adapted to show only one number on each of said discs at a given time, a wheel secured to said shaft, said wheel when oscillated being adapted to rotate said first named disc, an arm carried by said wheel and projecting through the arcuate slot, a series of numbers on the outer cylindrical surface of said

casing, said last named numbers being spaced the same distance apart as the numbers on said first named disc, and a pointer carried by said handle and being disposed over the numbers on said casing.

1,414,656. MOUNTING FOR PORTRAITS AND PHOTOGRAPHS. JOAQUIN MARCELINO Y DIAZ, Habana, Cuba. Filed Mar. 12, 1921. Serial No. 451,895. 1 Claim. (Cl. 40—158.)

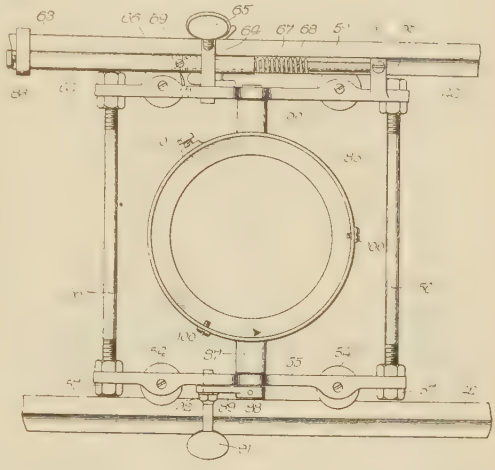
A backing or mount for photographs, pictures or the like, made of pieces of wood veneer arranged back to back and cemented to one another so as to form a block, on one face of which the picture is attached, said block being cut away to conform precisely to the contour of the object photographed, and having its marginal edge beveled inwardly continuously.

1,414,657. GRATER. BOYD F. MERTZ and GEORGE P. MERTZ, Northumberland, Pa. Filed May 18, 1920. Serial No. 382,216. 1 Claim. (Cl. 146—9.)



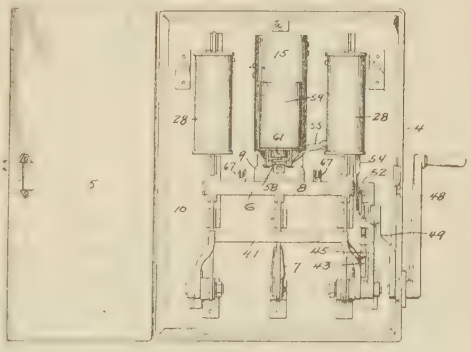
An apparatus for grinding horseradish and like products having a casing provided with a motor driven grinding cylinder and fitted with a movable drawer in receiving relation with the cylinder and adapted to be opened from time to time to permit of the removal of the ground product, and a suction fan actuable by the cylinder driving motor and having a suction spout communicating with the interior of the cylinder casing at a point adjacent to the periphery of the drum and above the upper edge of the front end of the drawer for producing an inward current of air when the drawer is opened, said fan being provided with a discarge pipe having its outlet at a point remote from the casing.

1,414,658. X-RAY STAND. WILLIAM MEYER, Chicago, Ill. Filed Feb. 18, 1918. Serial No. 217,738. 11 Claims. (Cl. 250—34.)



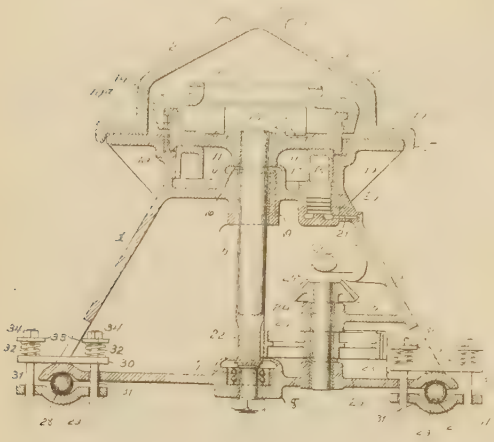
2. In combination, a supporting standard, a member movable along said standard, a stud projecting from said member, a frame member pivoted on said stud, a split clamping member encircling said stud, and a screw carried by said frame member adapted to engage said clamping member to clamp the same about said stud.

1,414,659. CIRCUIT BREAKER. BENJAMIN M. MOOERS, San Francisco, and LAWRENCE E. WARNER, Berkeley, Calif., assignors to Motor Protector Manufacturing Company, San Francisco, Calif., a Corporation of California. Filed Sept. 19, 1917. Serial No. 192,199. 9 Claims. (Cl. 175—294.)



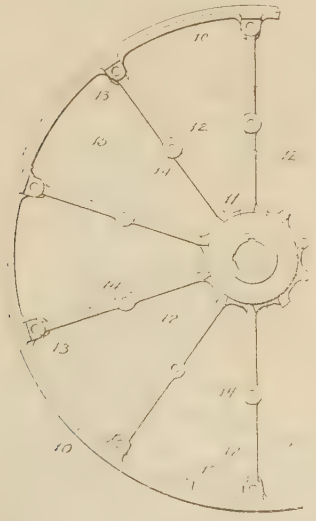
1. A protective device for an electric circuit containing electrical apparatus, comprising a switch, means operative by an increase in temperature of the apparatus for releasing the switch, a handle for closing the switch and means operative by the temperature controlled means for releasing the handle from the switch.

1,414,660. METHOD AND APPARATUS FOR SHAPING HOT-METAL BLANKS. WILLIAM HENRY MORGAN, Alliance, Ohio. Filed June 13, 1919. Serial No. 303,874. 6 Claims. (Cl. 29—1.)



1. The method herein described of shaping metal parts consisting in forming a blank, heating it to a high temperature, placing the heated blank in a shaping device centrally with relation to the axis of said shaping device and rapidly rotating the latter and the blank.

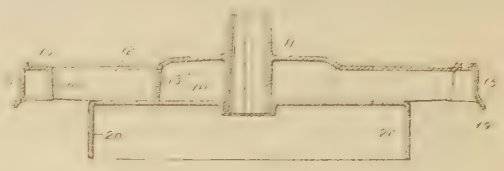
1,414,661. CAST METAL WHEEL. WILLIAM HENRY MORGAN, Alliance, Ohio. Filed May 25, 1921. Serial No. 472,369. 7 Claims. (Cl. 301—65.)



1. As a new article of manufacture, a wheel comprising a hub, spokes, and full width felly all cast integral, the spokes being elongated transversely in cross section and located approximately central with relation to the full width felly and enlarged bosses at the juncture of the spokes and felly having openings therethrough for the passage of the rim securing bolts.

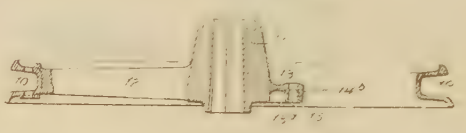
1,414,662. CAST METAL WHEEL. WILLIAM HENRY MORGAN, Alliance, Ohio. Filed June 22, 1921. Serial No. 479,616. 6 Claims. (Cl. 301—65.)

1. As a new article of manufacture, a metal wheel comprising a hub, hollow web having a marginal flange, spokes and a hollow felly all cast integral, the web merging into the spokes and provided with reinforcing



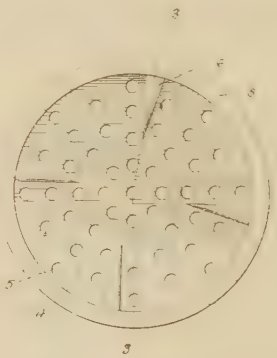
ribs located in planes intermediate the spokes and extending from the marginal flange of the web to the hub.

1,414,663. CAST METAL WHEEL. WILLIAM HENRY MORGAN, Alliance, Ohio. Filed June 29, 1921. Serial No. 481,279. 8 Claims. (Cl. 301—65.)



1. As a new article of manufacture, a wheel comprising a hub, spokes and felly all cast integral, the spokes being elongated transversely and the felly U-shaped in cross section with its opening at the periphery and provided with marginal flanges at the sides of the opening which form the seat for a demountable rim.

1,414,664. GAS-HEAT RETAINER AND FLAME CLEANSER. ELMER GRAYBILL NEUSCHWANGER, Kansas City, Kans. Filed Dec. 27, 1920. Serial No. 433,541. 3 Claims. (Cl. 158—113.)

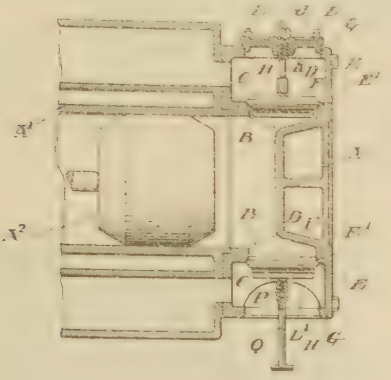


1. In a gas retainer and flame cleanser for gas stoves composed of asbestos throughout of varying density, of hollow cylindrical form having one end open, the other end partially closed, the partially closed end having unmerous cylindrical apertures.

1,414,665. VALVE-SEAT RETAINER. FREDERICK W. PARSONS, Elmira, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 19, 1922. Serial No. 530,350. 2 Claims. (Cl. 103—53.)

1. In a compressor, a compressor head having a valve seat opening in its inner wall adapted to receive a valve seat carrying a valve, the outer wall of the head having a corresponding opening adapted to be closed by a cover carrying an adjustable valve securing device, and a valve retainer in the form of a bow shaped spring clip carried

by the valve structure and adapted to engage the outer wall of the compressor head and remain in the head for

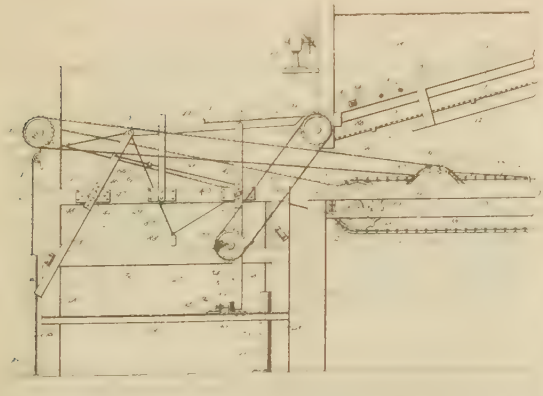


retaining the valve seat in position in the valve seat opening until the cover and valve securing device are adjusted.

1,414,666. THEFT PREVENTER. JOSEPH POLIVKA, Brooklyn, N. Y. Filed July 20, 1921. Serial No. 486,034. 6 Claims. (Cl. 40—132.)

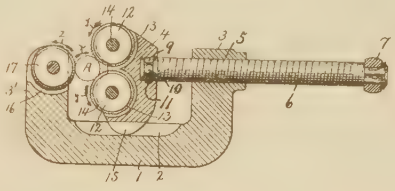
6. A device of the character described comprising a stationary member and a removable member both bearing similar designs, means for illuminating said members, a supplemental illuminating means adjacent thereto and means for obliterating said supplemental illuminating means when said design bearing members are exposed and means for securing said obliterating means over said design bearing members.

1,414,667. MECHANISM FOR TRANSFERRING PANS OR OTHER OBJECTS FROM ONE CONVEYER TO AND OPPOSITELY-MOVING CONVEYER. PETER RASMUSSEN, Denver, Colo., assignor of one-half to Stephen Knight, Denver, Colo. Filed Aug. 30, 1920. Serial No. 406,927. 8 Claims. (Cl. 198—84.)



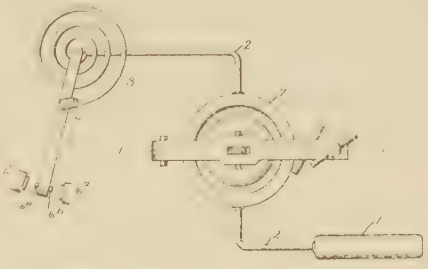
1. In a machine of the character described, the combination with oppositely moving, pan-forwarding conveyers, arranged one above the other, of a frame in line with the lower conveyer, a shaft on said frame, a shaft supported above the adjacent end portion of the lower conveyer, sprocket wheels on said shafts and chains connecting said wheels; the shaft on said frame being driven from said conveyer and in the same direction, arms pivoted to said frame between said chains for receiving pans from the top conveyer, cams for swinging said arms out of receiving position and below the level of said chains, whereby the pans are deposited upon the chains, which deliver them to the lower conveyer, said pans being of greater length than the space between the chains; weights for swinging said arms back into pan-receiving position, and means operated by the upper conveyer for actuating said cams.

1,414,668. KNURLING TOOL. FRED A. REED, Syracuse, N. Y. Filed Apr. 16, 1921. Serial No. 462,008. 6 Claims. (Cl. 80—5.1.)



6. A knurling tool comprising a —U— shaped frame having a lengthwise guide-way along its base, a carriage movable along said guide-way between the arms of the frame, a screw spindle engaged in a threaded aperture in one of said arms for adjusting the carriage along the guide-way, a pair of knurling wheels mounted on the carriage to revolve about axes at opposite sides of and at right angles to the axis of the screw spindle, and an additional knurling wheel mounted upon the other arm of the frame to revolve in a plane at an angle to the plane of rotation of the first named wheels for automatically feeding the tool along the work during the knurling operation.

1,414,669. TEMPERATURE-REGULATING DEVICE. LUDWIG REICHOLD, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 6, 1919. Serial No. 315,782. 4 Claims. (Cl. 297—3.)

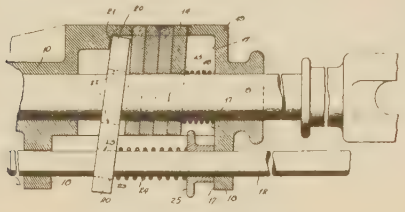


1. A temperature regulating device comprising a closed vacuum system containing an incompressible thermometric material, a pressure coil, and diaphragmatic expansion chamber having unyielding means cooperating with the sides thereof whereby said coil is controlled by varying the vacuum of said system to the equivalent volume of the thermometric material at the temperature at which said coil is to operate.

1,414,670. WATERPROOFING MATERIAL. JACOB R. ROETHER, Brooklyn, N. Y. Filed Nov. 5, 1920. Serial No. 421,851. 12 Claims. (Cl. 134—15.)

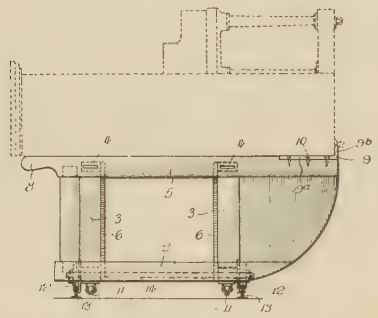
12. The water-proofing material which comprises a neutral soap formed from an animal fat and a vegetable oil, paraffin, cumarone resin and linseed oil.

1,414,671. SLACK ADJUSTER. WILLIAM H. SAUVAGE, Flushing, N. Y., assignor, by mesne assignments, to Gould Coupler Company, New York, N. Y. Filed Feb. 6, 1920. Serial No. 356,751. 11 Claims. (Cl. 188—199.)



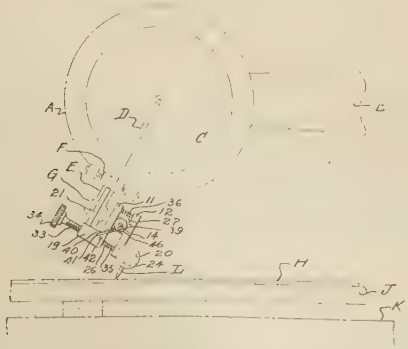
5. In a slack adjuster, in combination, a two part telescopic push rod including a rod and a tubular member connected therewith, a housing associated with the tubular member having two fulcrums, two sets of dogs within said housing coacting with said rod and an adjusting rod associated therewith with which the other set of dogs coact.

1,414,672. TRUCK. OTTO SCHULZ, Chicago, Ill. Filed Feb. 9, 1921. Serial No. 443,506. 7 Claims. (Cl. 105—215.)



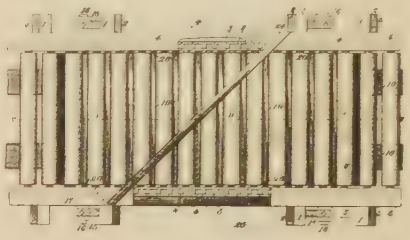
1. A truck having floor rollers, track wheels and an upper supporting frame extending transversely to the direction of movement of the truck and overhanging one side thereof, and a device on the overhanging end of said frame adapted to engage an angular shaped body when the truck is tilted transversely about the rollers and wheels as pivots.

1,414,673. SOUND MODULATOR FOR PHONOGRAPHS. NILS SEAHOLM, Mount Vernon, N. Y. Filed Dec. 24, 1920. Serial No. 432,994. 14 Claims. (Cl. 274—37.)



1. In a sound modulator for phonographs, the combination with the sound box and vibrating lever of the latter, of an attachment comprising a member carried by said lever, another member yieldably connected thereto adapted to receive a stylus, and means for varying the interrelative rigidity between said members.

1,414,674. CONVEYING APPARATUS. BRONSON C. SKINNER, Dunedin, Fla., assignor to Skinner Machinery Company, Dunedin, Fla., a Corporation of Florida. Filed Mar. 19, 1921. Serial No. 453,599. 7 Claims. (Cl. 198—183.)

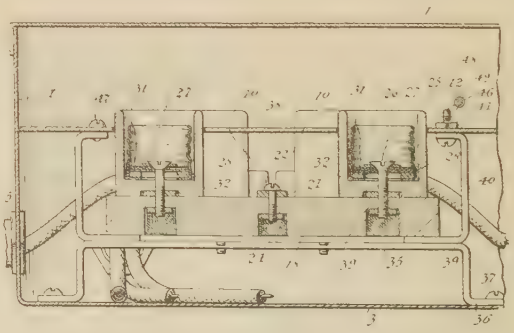


1. An endless conveyer consisting of a flexible propelling member, a plurality of parallel spaced roller conveyers carried thereby, a guide therefor, a plurality of parallel spaced filler members for projecting upwardly between said rollers during a portion of their travel, endless members for mounting and uniting said filler members, an inclined supporting track for causing the gradual movement of said members into and from operative position between said rollers, and a member disposed transversely of the roller conveyer at the point of co-operation therewith of said filler members for moving the material conveyed thereby transversely thereof.

1,414,675. FOOD PRODUCT. JOEL STARRELS, Niagara Falls, N. Y. Filed Nov. 24, 1919. Serial No. 340,217. 1 Claim. (Cl. 99—13.)

A food product simulating butter for cooking purposes consisting of a mixture of a hydrogenated fat and a fluid oil, one of said materials having a natural color characteristic capable of giving said mixture an inherent color simulating butter, said materials being in proportion to give said mixture the color and consistency of butter.

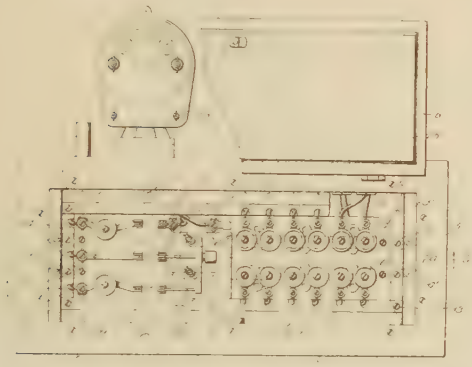
1,414,676. PANEL BOARD AND PANEL-BOARD CONSTRUCTION. HENRY F. STARRETT, Chicago, Ill., assignor to Starrett Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1918. Serial No. 234,587. 11 Claims. (Cl. 247—10.)



1. A panel-board construction comprising, in combination, a panel-box enclosure, a panel-board unit, circuit-controlling apparatus carried thereby, a cover-plate for said panel-board unit, a bracket for mounting said unit in said enclosure and a second bracket interposed between

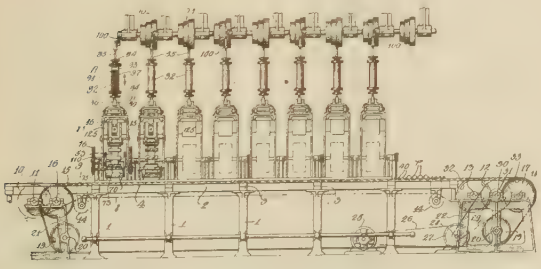
said unit and said first bracket, said second bracket serving for mounting said cover-plate, the said cover-plate being positioned inside the said panel box enclosure and covering all the wiring and terminal connections associated with the panel-board, said brackets and panel-board unit being assembled as a physical entity, and means whereby said entity can be quickly and easily mounted in and removed from said panel-box enclosure.

1,414,677. PANEL BOARD AND PANEL-BOARD CONSTRUCTION. HENRY F. STARRETT, Chicago, Ill., assignor to Starrett Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1918. Serial No. 234,588. 14 Claims. (Cl. 247—10.)



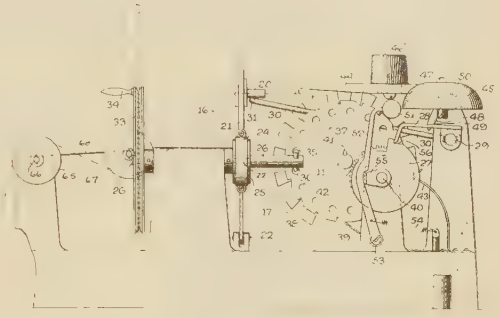
1. A panel board and panel-box construction comprising a panel-box and a panel-board mounted therein and spaced apart from the sides and ends of the box forming a wiring gutter, a gutter-covering frame surrounding and snugly fitting around said panel-board and covering said wiring gutter, the said frame having notches cut therein which permit the passage of wires therethrough, whereby said frame serves as a cover-plate for said gutter and as a barrier through which said wires are fed to the panel-board.

1,414,678. PACKAGE-HANDLING AND LABEL-PREPARING MECHANISM. JAMES C. THOM, Chicago, Ill., assignor to Combination Machine Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 28, 1921. Serial No. 448,491. 26 Claims. (Cl. 216—9.)



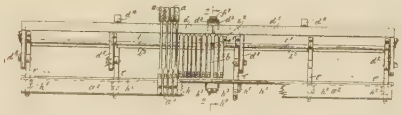
1. In package handling mechanism, a row of label preparing mechanisms and parallel package conveyors common to all of said mechanisms and moving at one side of said row and in juxtaposition thereto.

1,414,679. COIL-WINDING MACHINE. EUGENE T. TURNEY, Holmes, N. Y., assignor to Eugene T. Turney Laboratories, Inc., Newark, N. J., a Corporation of New York. Filed Mar. 22, 1921. Serial No. 454,558. 19 Claims. (Cl. 242—25.)



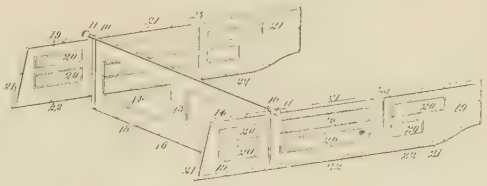
1. In a machine of the character disclosed, means for rotating a slotted core, a wire guide, means for traversing said wire guide to the opposite sides of the central plane of the slotted core to thereby lay the wire in the slots in the rotation of the core and means for gradually lowering said guide with respect to the axis of the core as the wire builds up in the slots.

1,414,680. PIANISSIMO DEVICE FOR PLAYER PIANOS. FERNANDO A. WESSELL, Red Bank, N. J. Filed May 19, 1921. Serial No. 470,991. 6 Claims. (Cl. 84—35.)



1. In a piano action, the combination with the hammers and their actuating devices, of a divided rest rail, a divided lost motion preventive rod and co-operating devices, operative connections whereby each section of the lost motion preventive rod is actuated with the corresponding section of the rest rail and means to move the sections of the divided rest rail to short stroke position independently or together.

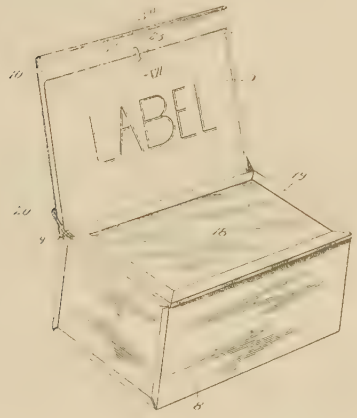
1,414,681. VEHICLE CURTAIN CONSTRUCTION AND MOUNTING. ALLEN W. WIDENHAM, Oakland, Calif. Filed Mar. 7, 1921. Serial No. 450,226. 3 Claims. (Cl. 296—141.)



1. In combination with a vehicle and its associated top, of side curtains for positioning to close the spaces at opposite sides of the vehicle between the vehicle side wall

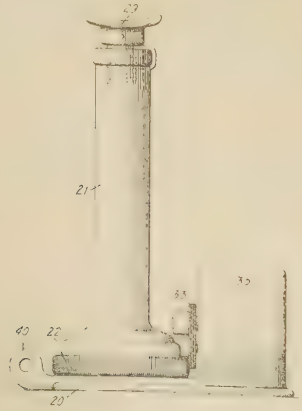
edge and top edge, said curtains at opposite sides of the vehicle consisting of united sections foldable one upon the other, a supporting rod extending transversely of the vehicle top and secured at its ends thereto approximately midway of the length of said top, a curtain mounting rod fulcrumed to each end of said supporting rod to swing about the same, said mounting rods extending transversely across said curtains and providing a support for the edge thereof when said curtains are folded and said rods are swung upwardly about said supporting rod.

1,414,682. RETAIL BOX CONTAINER. ALBERT R. ZAUTNER, Cleveland, Ohio. Filed Mar. 19, 1921. Serial No. 453,649. 16 Claims. (Cl. 217—58.)



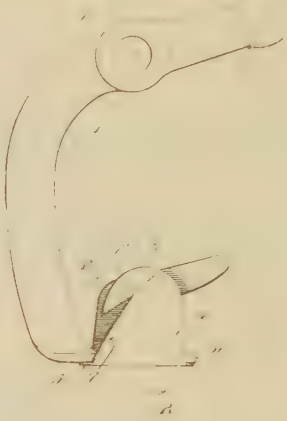
1. In combination a fibre box and a metal box enclosing the first, each of said boxes being provided with a cover, and means for attaching one cover to the other.

1,414,683. ELECTRIC LIFTING JACK. JOSEPH A. ANGLADA, Jenkintown, Pa., assignor of one-half to Charles S. Ackley, New York, N. Y. Filed July 14, 1919. Serial No. 310,652. 8 Claims. (Cl. 254—103.)



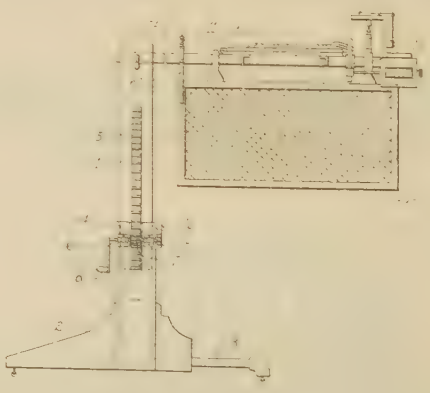
1. A lifting jack comprising a pair of relatively movable members, an electric motor connected to impart such relative movement thereto, circuits for the motor and a positioning handle connected with one of said members and arranged to control the motor circuits.

1,414,684. KNIFE FOR SELF-BINDER KNOTTERS. MAXIMILLION M. ARNDT, Manitowoc, Wis. Filed Oct. 11, 1920. Serial No. 416,232. 2 Claims. (Cl. 289—15.)



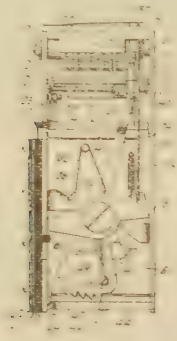
1. In a self-binder knotter mechanism having a pivoted blade carrying arm, and a twine cutting blade therefor, the same being disposed radially with respect to the axis of the arm, and having its cutting edge inclined substantially tangentially with respect to the arm axis, the cutting edge being terminated with a toothed end.

1,414,685. COUNTING MECHANISM. CREIGHTON F. BALDWIN, St. Louis, Mo. Filed Nov. 22, 1920. Serial No. 425,886. 4 Claims. (Cl. 235—98.)



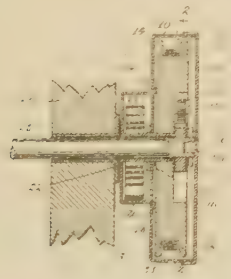
1. In a counting mechanism embodying a swinging gate and gate support, an angular stop mounted on the support to prevent the excessive back movement of the gate, same comprising two arms rigidly joined at right angles, a slot cut through each arm, a headed pin inserted through each slot and set in the support at right angles to each other, and a coil spring mounted over each said pin and braced between its head and the said support.

1,414,686. CALL INDICATOR FOR AUTOMATIC TELEPHONE SYSTEMS. JOHN G. BLESSING, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed July 10, 1916, Serial No. 108,324. Renewed July 28, 1919. Serial No. 313,825. 17 Claims. (Cl. 177—338.)



1. In an indicating device a plurality of number wheels rotatably mounted on a shaft, a reciprocating carriage disposed parallel to said shaft, an operating pawl slidably mounted thereon, and means for shifting said pawl sidewise along said carriage into successive positions corresponding each to a different number wheel.

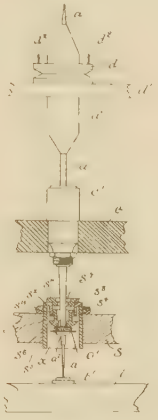
1,414,687. PHONOGRAPH ATTACHMENT. DAVID C. A. BOSWORTH, Brooklyn, N. Y. Filed May 4, 1920. Serial No. 378,931. 2 Claims. (Cl. 74—55.)



1. A phonograph rewinding attachment comprising a shaft adapted to engage a phonograph motor, a casing engaging said shaft and solely supported thereby and adapted to turn with respect to said shaft and with respect to said phonograph, a flexible member, and means housed within said casing engaging said shaft and said casing and engaged by said flexible member and adapted to rotate said shaft as said flexible member is pulled outwardly for the rewinding of said phonograph motor, and to cause the free retraction of said flexible member, said means and the mounting of said casing adapted to allow the casing to turn with respect to the phonograph and to accommodate itself to the direction of pull upon the flexible member.

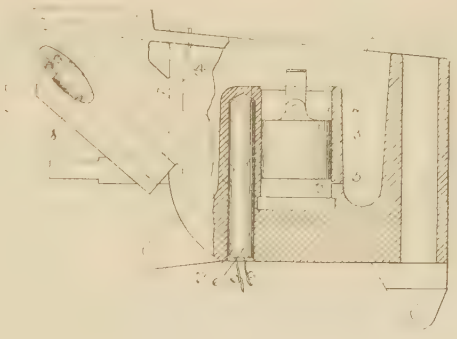
1,414,688. DRAG DEVICE FOR SPINNING MACHINES. FREDERICK WILLIAM CONSTANTINE, St. Annes-on-Sea, and THOMAS GEORGE KAY, Bolton, England. Filed June 4, 1920. Serial No. 386,512. 7 Claims. (Cl. 118—34.)

1. In spinning, doubling, twisting and like machines, a spindle, a disc fixed upon said spindle, rolling devices mounted on said disc, means for controlling the movement



of said rolling devices and a member resting upon said rolling devices.

1,414,689. ELECTRICALLY-HEATED MELTING POT FOR TYPOGRAPH MACHINES. GEORGE O. CROMWELL, Chicago, Ill., assignor, by mesne assignments, to Ludlow Typograph Company, Chicago, Ill., a Corporation of Illinois. Filed July 8, 1916. Serial No. 108,138. 15 Claims. (Cl. 22—71.)

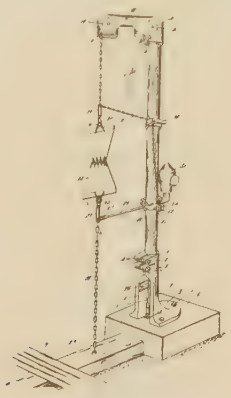


3. The combination with a melting pot for typograph machines and the like, having a chamber provided with a plurality of pockets; of resistance elements independently removably mounted in such pockets.

1,414,690. RAILWAY MAIL CRANE. WILLIAM S. DAVIDSON, deceased, by Anna L. Neal, administratrix, Philadelphia, Tenn. Filed June 10, 1919. Serial No. 303,231. 4 Claims. (Cl. 258—23.)

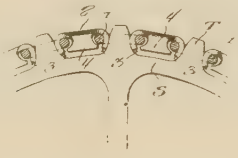
1. The combination, in a device for delivering articles to a moving train, of a hollow mast carrying an overhung arm and sheaves at its upper end and having a hollow base, means to clamp the mast to the base which will permit the mast under abnormal thrust strains on the arm to turn about a vertical axis in said base, a flexible member which extends upwardly through said mast and over said sheaves with its free end suspended from said arm, means

to anchor the end of the flexible member that is disposed within the mast, means on the free end of said



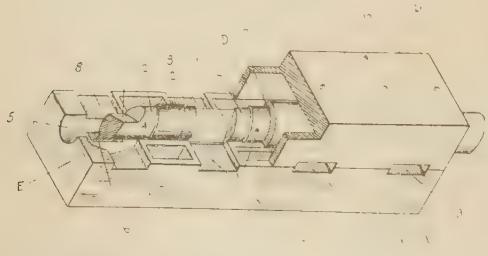
flexible member adapted to releasably support the articles to be delivered, and a releasable bottom fastening means for said article.

1,414,691. CHAIN BELT. CHARLES G. DEAN, Milwaukee, Wis. Filed May 11, 1920. Serial No. 380,622. 11 Claims. (Cl. 74—44.)



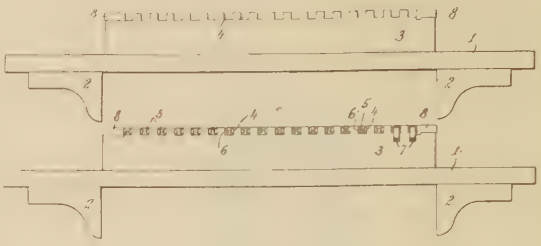
1. A belt comprising a series of links, certain of said links each consisting of a plate having its opposite side edge portions bent laterally to provide bearing ears for engagement with the faces of teeth.

1,414,692. ROTARY VALVE. ARTHUR DICKERSON, Salt Lake City, Utah, assignor to Dickerson Engine Company, Salt Lake City, Utah, a Corporation. Filed Feb. 15, 1921. Serial No. 445,219. 2 Claims. (Cl. 123—190.)



1. A rotary valve comprising a valve stem having segments cut therefrom to form ports; other portions of said valve stem adjacent said ports having less diameter than the main portions of said stem; cylindrically shaped bearing sleeves secured on said stem with an interior bore fitting the main portions of said stem and spaced from the portions of said stem having less diameter; with segmental ports cut in said sleeve bearing in alinement with the ports of said valve stem.

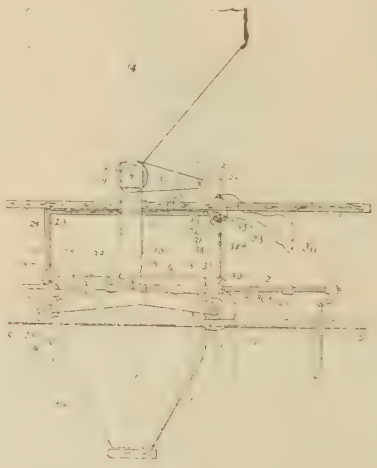
1,414,693. PRESS MAT FOR OIL PRESSES. CHARLES HIRAM FULSON, Trenton, Tenn., assignor to The American Cotton Oil Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 23, 1921. Serial No. 463,926. 4 Claims. (Cl. 100—54.)



1. A press mat for oil presses made up of a base member with longitudinal grooves and bars in said grooves having their upper surfaces even with the upper surfaces of the base member, said bars being spaced away from the sides of the grooves to provide longitudinal slots and channels for the escape of the oil.

4. A press mat for oil presses comprising a base member having longitudinal grooves therein, bars in said grooves having longitudinal recesses in their sides forming longitudinal oil passages, said bars being narrower than the grooves at their upper edges to provide slots communicating with the oil passages, and said bars being provided with projections at their ends by means of which the bars may be raised for clearing the oil channels from obstructions and by means of which the bars may be longitudinally positioned in the slots.

1,414,694. TRAVELING WEIGHING MACHINE. EUGENE GASE, Saginaw, Mich., assignor to Baker-Perkins Manufacturing Corporation, Saginaw, Mich. Filed Apr. 21, 1921. Serial No. 463,287. 4 Claims. (Cl. 249—45.)



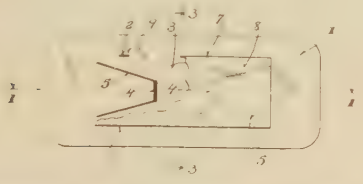
1. In a machine of the kind described, the combination with a balance of a wheeled truck supporting the said balance, of rails on which the said truck is moved, of a conveyer supplying the materials to be weighed by means of the said balance, of an electromotor driving the said conveyer, of a chute directly transferring the materials to be weighed coming from the said conveyer into the weighing hopper of the said balance, of a stop block fixed to the said rails at such a point, that, when the said truck is placed against the same, the weighing hopper of the said balance is situated underneath the said chute in the right position for being charged, of a

starter for the said motor, arranged at a stationary support near the said stop block, and of a device mounted on the said truck at such a point and so adapted as to actuate the said starter as soon as the said truck touches the said stop block.

1,414,695. METHOD OF PRODUCING LUBRICATING OILS. GUY D. HARPER, Franklin, Pa. Filed May 11, 1918. Serial No. 233,849. 8 Claims. (Cl. 196—25.)

1. The method of producing a lubricating oil ready for commercial use as such which consists in selecting a crude petroleum of the grade of Franklin heavy oil and having a so-called naphthene base, concentrating the same by distillation to approximately 70% of its original volume and then filtering the residual product to produce such lubricating oil.

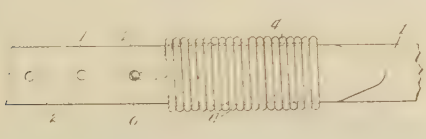
1,414,696. 4-WAY BEE ESCAPE. KENNITH HAWKINS, Watertown, Wis., assignor to G. B. Lewis Company, Watertown, Wis. Filed May 23, 1921. Serial No. 471,802. 3 Claims. (Cl. 6—4.)



1. A 4-way bee escape comprising a centrally apertured base plate, looped clips constituting part of the base plate and extending from the edge walls of the aperture, a V-shaped spring having a flat apex stretch engageable with the looped clips, whereby the springs are rigidly held, an open ended runway having side flanges attached to the base plate, the side walls of the runway in connection with the free ends of the spring forming choked entrance passages.

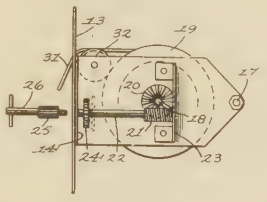
3. A 4-way escape consisting of a base plate made of one thickness of metal having a central aperture, a pair of metallic strips adjacent said aperture integral with said base plate and directed at right angles thereto then bent and extending back substantially at right angles to the base plate and forming a pair of loops, a pair of V-shaped springs, each having a flat apex strip engaged in said loops whereby the springs are rigidly held, an open ended run-way having elongated straight side flanges attached to said base plate, the side flanges of the runway in connection with the four free ends of the springs forming four choked passages.

1,414,697. BELT OR OTHER BUCKLE. PETER A. HORRAS, Chicago, Ill. Filed Feb. 12, 1921. Serial No. 444,344. 4 Claims. (Cl. 267—74.)



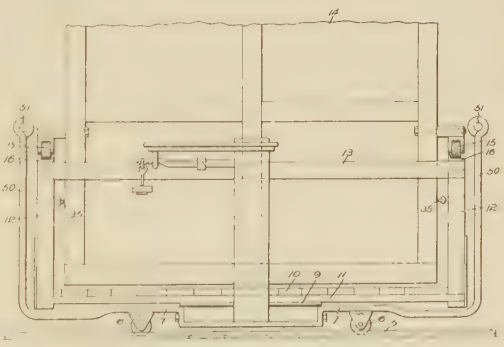
1. A belt of nonelastic material, and resilient means adapted to stretch and yieldingly buckle the two front end portions of the belt together, forming a front buckle for the belt, so that the belt as a whole can stretch only at the front thereof on the wearer, and whereby the belt is tightened by contraction of said buckle, said buckle comprising a substantially flat coil spring having the convolutions thereof tight together, attached to one end portion of the belt, and having means to detachably engage the usual holes in the other end portion, when the latter is inserted through the flattened spiral, so that the convolutions thereof form a spring buckle connection between said end portions of the belt, and whereby expansion of the belt around the waist of the wearer serves to lengthen the spring, while by contraction of the spring the belt is automatically tightened.

1,414,698. SASH LIFTER. WALTER KARASIEWICZ, Detroit, Mich. Filed Feb. 19, 1921. Serial No. 446,349. 1 Claim. (Cl. 16—197.)



In a device of the character described a chamber to each side of a window, a casing in each of said chambers, a hub journaled between the side plates of one casing, a worm wheel on the outer end of said hub, a horizontal shaft, a worm on one end of said shaft in engagement with said worm wheel, a gear on the opposite end of said shaft, a spring within said drum, a sash weight rope wound around said spring, said gear adapted to be engaged by a similar gear at the end of a key adapted to be introduced into the chamber for tensioning the spring to any desired degree for compensating the weight of the window sash and the sash weights, and means for guiding sash cable.

1,414,699. TRANSFER MECHANISM. WILLIAM S. KINSLEY, Reading, Mass., assignor to The Russell Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 5, 1920. Serial No. 349,510. 4 Claims. (Cl. 214—2.)

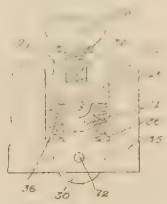


1. Transfer apparatus including a truck, a floor carried by said truck, a bottomless box adapted to be positioned on said truck above said floor and means including a support independent of said truck for receiving said bottomless box when shifted from said truck, said support sustaining said bottomless box with the bottom thereof open to permit gravity-actuated discharge of the contents thereof.

1,414,700. RAILROAD STATION INDICATOR. ANTONI LUCYSHYN, Toronto, Ontario, Canada. Filed Oct. 29, 1919. Serial No. 334,288. 1 Claim. (Cl. 40—41.)

In a street car indicator of the character described, including two guide rollers and a tape guided between both rollers, means for regulating the pressure between the tape guiding rollers, said means comprising recessed blocks in which the shaft of one of said rollers is journaled, upper bearings slidably arranged within the

recess of said block in which the shaft of the other of said rollers is journaled, pairs of springs on which said

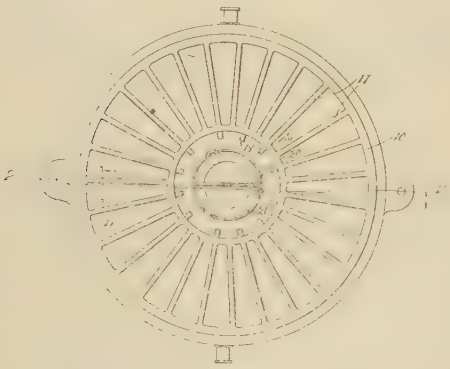


bearings rest and screws provided with operating heads for pressing said bearings downwardly, substantially as described and for the purpose set forth.

1,414,701. METAL TIP FOR SHOE LACES. RAY MCKINLEY MIKESELL, Percy, Iowa. Filed July 16, 1921. Serial No. 485,202. 1 Claim. (Cl. 24—143.)

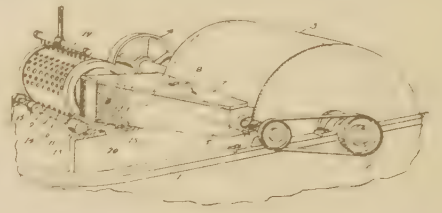
A metal top for shoe laces consisting of a blank of material of greater length than width adapted to extend around a shoe lace, the material adjacent to the side edges of said blank being bent so as to be received and concealed in the material of said shoe lace and to form a pair of parallel walls adapted to rest against each other, said walls terminating short of the outer end of said metal tip, whereby the adjacent edges of said last portion may be made to abut against each other for forming a continuous covering around the end of the lace, the lower edges of said walls being provided with teeth adapted to extend into the shoe lace material for preventing the pulling off of the tip from the laces for the purposes stated.

1,414,702. METHOD OF MOLDING AND FLASK PART THEREFOR. DANIEL C. MULVIHILL, Hannibal, Mo. Filed June 23, 1919. Serial No. 306,049. 5 Claims. (Cl. 22—111.)



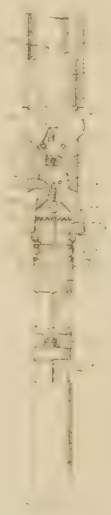
1. A flask part for molding car wheels, comprising bars dividing the sand space of the cope into compartments whose depth is substantially greater than the greatest distance between the bars measured in a plane perpendicular to a radius bisecting one of said compartments.

1,414,703. CONTINUOUS EXTRACTOR. LLOYD T. MURPHY, St. Marys, Ohio. Filed July 6, 1920. Serial No. 394,113. 7 Claims. (Cl. 92—23.)



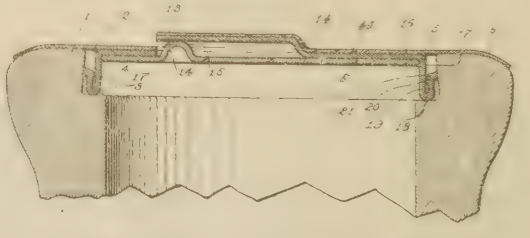
1. In combination with a beater and a tub, a box for catching the material thrown by contrifugal force from the beater, and a revolving cylinder into which the box empties, said cylinder having a foraminated body, for the purpose described.

1,414,704. UNDERREAMER. EDGAR H. NEWKIRK, Tulsa, Okla. Filed May 26, 1921. Serial No. 472,635. 7 Claims. (Cl. 255—76.)



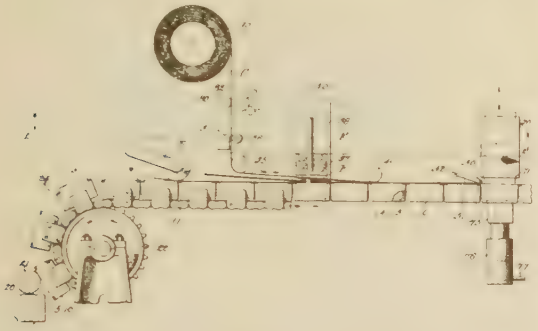
1. The combination with a drill stem and bit of an under-reamer, comprising a reamer body provided at both ends with a joint, recesses in said reamer body, a set of lugs swiveled in said recesses and means for locking and unlocking said lugs.

1,414,705. BOTTLE CAP. CHARLES C. PARKER, Baltimore, Md., assignor to The Hygienic Bottle Cap Company, Baltimore, Md., a Corporation of Maryland. Filed Jan. 23, 1920. Serial No. 353,566. 6 Claims. (Cl. 215—51.)



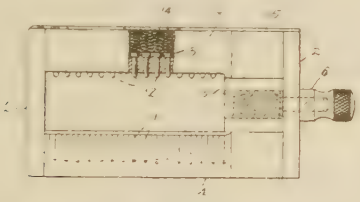
2. A bottle cap of sheet material having a U shaped cut forming a lifting tab with cuts curved about the ends of the cut to prevent tearing.

1,414,706. METHOD OF PACKAGING. JONATHAN PETERSON, Brooklyn, N. Y., assignor to Combination Machine Company, N. Y., a Corporation of Delaware. Filed Jan. 28, 1921. Serial No. 440,588. 31 Claims. (Cl. 226—80.)



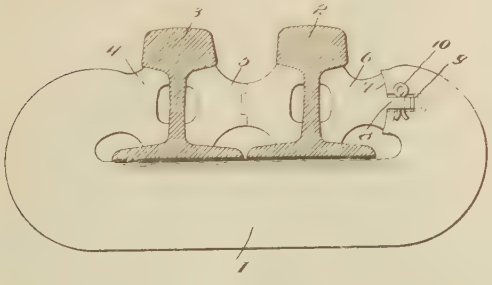
1. A method of packaging comprising applying adhesive to marginal portions of a container body, applying a cover piece to the open side of the body and securing the cover piece adhesively to said body margins, and turning down the combined cover and body marginal portions and securing the adhesively coated faces of the body margins to adjacent sides and ends of the body.

1,414,707. TYPOGRAPH MECHANISM. HARRY G. POTTLE, Chicago, Ill., assignor, by mesne assignments, to The Ludlow Typograph Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 23, 1919. Serial No. 319,397. 7 Claims. (Cl. 199—49.)



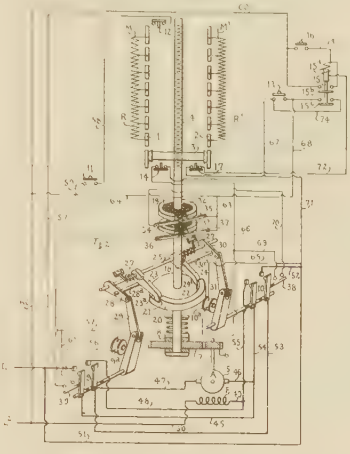
1. In typograph mechanism, the combination with detached matrix bars each having an edge adapted to co operate with a mold; of a member formed with an elongated opening adapted to receive a number of said bars and support the same in selected relation with their mold-cooperative edges exposed, said bars being movable in said holder in the direction of such edges; and means adapted to vary the position of said bars in such direction.

1,414,708. SELF-ADJUSTING GUARD-RAIL CLAMP. CHARLES A. PSILANDER, Easton, Pa., assignor to William Wharton, Jr. & Company, Incorporated, Easton, Pa., a Corporation of Pennsylvania. Filed Apr. 7, 1920. Serial No. 371,819. 9 Claims. (Cl. 238—21.)



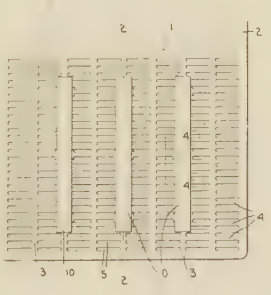
7. The combination of a running rail, a guard rail, a filling, and self-adjusting clamping means capable of bodily movement in response to tilting of the rails to preserve the straight line bearing positions of the parts.

1,414,709. RHEOSTAT. GUSTAV B. REISBACH, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 2, 1921. Serial No. 457,980. 18 Claims. (Cl. 171—229.)



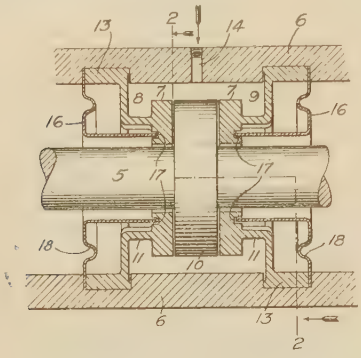
1. In a device of the character set forth, in combination, a power operated member having different positions of rest, control means for effecting operation of said member in opposite directions, means associated with said former means insuring against stopping of said member in positions other than the aforesaid positions said latter means including means for positively locking said member in a selected position.

1,414,710. BATTERY PLATE. WILLIAM ROBERTS, Akron, Ohio, assignor of two-thirds to Frank T. Lahey, Akron, Ohio. Filed Mar. 17, 1921. Serial No. 453,123. 11 Claims. (Cl. 204—29.)



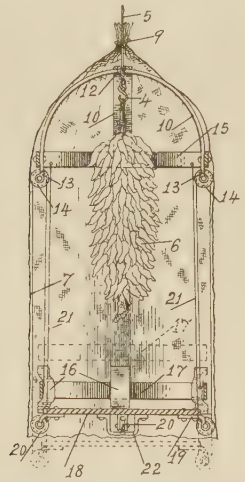
1. A battery element comprising two plates separated from each other, a plurality of horizontal and vertical ribs in said plates, the ribs intersecting to form elongated rectangular openings and a plurality of isolated abutments on said plates said abutments extending above the plane of the ribs and forming spacing members between the plates and means for securing the plates together with the abutments in contact.

1,414,711. THRUST BEARING. HENRY F. SCHMIDT, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Apr. 29, 1918. Serial No. 231,373. 8 Claims. (Cl. 64—25.)



1. A thrust block for a thrust bearing comprising a rigid mounting ring having a plurality of integral flexible arms extending from the mounting ring toward the center thereof and terminating in bearing shoes capable of independent displacement.

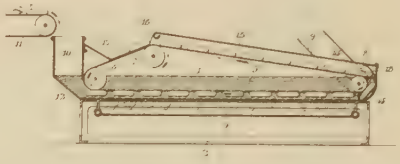
1,414,712. BANANA RACK AND COVER. LOUIS C. SCHMIDT, Springfield, Ill. Filed Sept. 1, 1921. Serial No. 497,722. 1 Claim. (Cl. 211—14.)



In a banana rack and cover, a supporting frame comprising crossed arches provided with sheaves and a hoop uniting said arches, in combination with a slip supported on said frame; a hoop attached inside said slip; a bottom plate inside the slip; sheaves on said bottom plate in vertical line with the respective sheaves on said frame; and a number of cords equal to the number of sheaves on said frame, each cord having one end attached to said frame, running downwardly around a sheave on the bottom plate, upwardly around the corresponding sheave on the frame and having its other end attached to the hoop which is attached inside the slip.

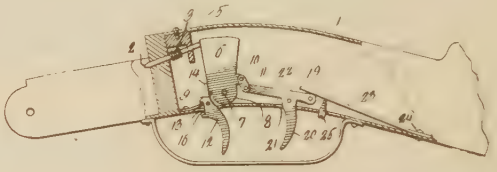
1,414,713. COOKING APPARATUS. CECIL H. SHERMAN and FRANK ELLIS MORRIS, Philadelphia, Pa.; said Sherman assignor, by mesne assignments, of his entire right to John C. Bergner, Philadelphia, Pa. Filed June 7, 1919. Serial No. 302,386. 19 Claims. (Cl. 53—7.)

1. In apparatus for cooking articles by contact with hot cooking fluid, the combination of means for introducing articles into the fluid; conveyor belt means for progressing the articles through the fluid completely submerged therein throughout the cooking period; and means for directing



the articles in the fluid beneath said belt, so as to engage its under surface by virtue of their buoyancy and be carried along through the fluid.

1,414,714. GUN. FRANKLIN B. SUTLIFF, Jamison City, Pa. Filed Aug. 8, 1921. Serial No. 490,606. 2 Claims. (Cl. 42—69.)

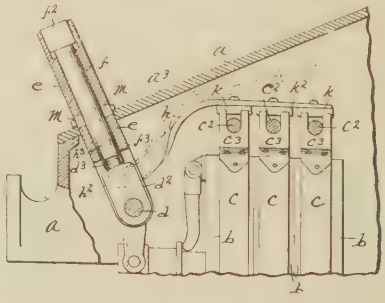


1. In combination, a cocking mechanism comprising a firing pin, a hammer associated therewith, means for holding the hammer in a cocked position, a cocking trigger of substantial T-shape having one end thereof attached to the hammer, a spring engaging the other end of the cocking trigger for forcing the same to a position that will actuate the hammer against the firing pin.

1,414,715. GLASS. WILLIAM CHITTENDEN TAYLOR, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Dec. 15, 1920. Serial No. 431,009. 3 Claims. (Cl. 106—36.1.)

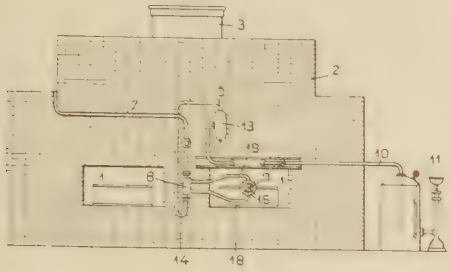
1. A flesh colored glass of high ultra-violet absorption and good visible transmission containing between 3 and 6 per cent cerium dioxide, and containing manganese dioxide.

1,414,716. GEAR LOCK FOR AUTOMOBILES. CHARLES G. TROSIEN, Pontiac, Mich. Filed Dec. 12, 1919. Serial No. 344,279. 14 Claims. (Cl. 70—90.)



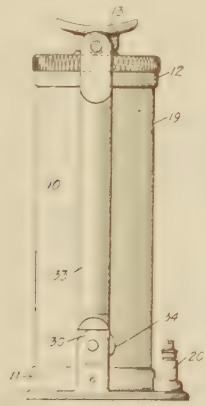
1. In a change-speed gearing having a brake-band, as one of its operative elements, a stop adapted to be interposed in the line of movement of one end of said band and means for interposing said stop in the line of travel of the end of said band and removing it therefrom at will.

1,414,717. BAKER'S OVEN. WILHELM ZIEMSEN, Brunswick, Germany. Filed July 1, 1920. Serial No. 393,477. 6 Claims. (Cl. 107—55.)



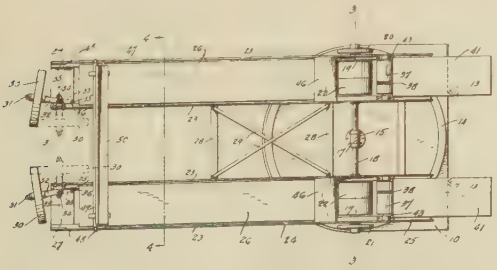
1. In a baker's oven in combination, two baking chambers, a swinging pipe joint between said chambers, a burner adapted to be oscillated about said joint so as to alternatively heat one or the other chamber, and means for supplying said burner with liquid fuel and spraying means through said joint, whenever the burner is in operative position.

1,414,718. PNEUMATIC LIFTING JACK. JOSEPH A. ANGLADA, Jenkintown, Pa., assignor of one-half to Charles S. Akley, New York, N. Y. Filed July 14, 1919, Serial No. 310,653. Renewed Oct. 21, 1921. Serial No. 509,390. 7 Claims. (Cl. 138—9.)



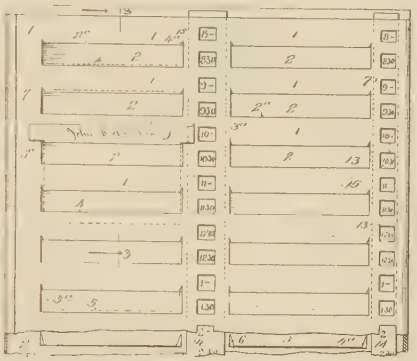
1. A lifting jack comprising a load receiving support, fluid actuated means for raising the support a control valve and a positioning handle movably connected with the jack and arranged to control the valve.

1,414,719. TRUCK TURNTABLE. FRANKLIN E. ARNDT, Galion, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed Feb. 20, 1922. Serial No. 538,058. 17 Claims. (Cl. 104—41.)



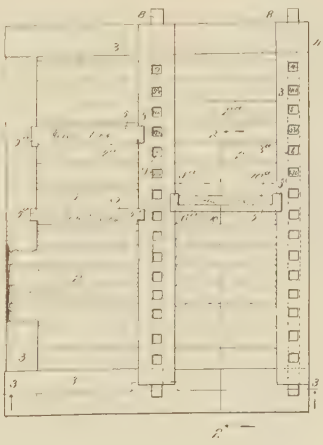
1. A turntable comprising a frame rotatable around a vertical axis, the axis intersecting the frame adjacent one end of the frame, and means for supporting an automotive vehicle on the frame with the rear wheels thereof between said axis and the adjacent end of the frame to thereby cause the weight of the vehicle to tend to urge the opposite end of the frame upward.

1,414,720. APPOINTMENT RACK OR CARD. ZEMACH AUERBACH, New York, N. Y. Filed Dec. 14, 1921. Serial No. 522,333. 6 Claims. (Cl. 40—124.)



5. An appointment rack comprising adjacent sheets provided with spaced slots and having tongues, the tongues of one sheet extending through the slots of the adjacent sheet and depending below the slots thereof providing guideways for cards between the sheets, side portions of the sheets being attached together, and cards adapted to enter said slots, said cards having lateral projections at their upper and lower edges to retain the cards in the slots, said cards having slots in their side edges adapted to receive the material of the front sheet adjacent to the sides of its slots to permit the passage of the lower projections of the cards through said slots.

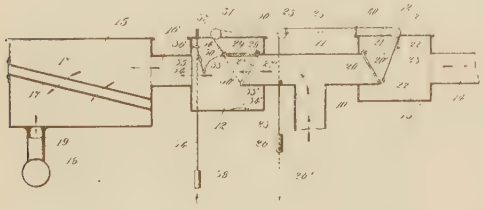
1,414,721. APPOINTMENT FILE OR RACK. ZEMACH AUERBACH, New York, N. Y. Filed Dec. 21, 1921. Serial No. 523,844. 5 Claims. (Cl. 40—124.)



2. A rack of the class described comprising a body and a strip wound in overlapping relation providing passage-ways therebetween for cards, and bindings at opposite sides of the body secured over the adjacent portions of the strip, one or more of said bindings having a mid-portion providing a space unsecured to the strip and provided with openings registering with the runs of

the strip and a card having time indications thereon adapted to be inserted in the space behind the binding to show its time indications through said openings.

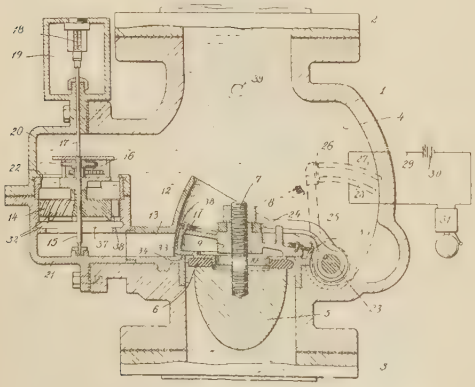
1,414,722. FUME CONTROL DEVICE. VERN K. BOYNTON, New York, N. Y., assignor to Perry & Webster, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 14, 1920. Serial No. 417,044. 26 Claims. (Cl. 137—92.)



6. In a fume control device, in combination, a fume conduit having a normal exit and an abnormal exit, a closure capable of closing the normal exit of the conduit, a closure capable of closing the abnormal exit of the conduit, fusible means for maintaining the normal exit in an open condition and means whereby the fusing of the fusible means will close the normal exit and open the abnormal exit.

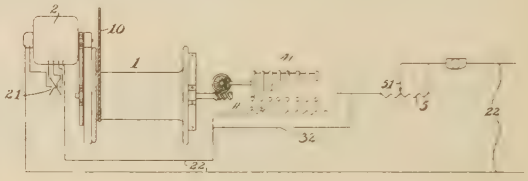
15. In a fume control device, in combination a conduit, a normal exit of the conduit connected with a chamber, a chamber, a closure within the chamber capable of closing the normal exit, an abnormal exit of the conduit connected with a second chamber, a second chamber, a closure within the second chamber capable of closing the abnormal exit and means whereby a rise of temperature in the first chamber will close the normal exit and open the abnormal exit diverting fumes from the conduit into the second chamber.

1,414,723. METER ALARM VALVE. JOHN H. BRUMBAUGH, Wilmette, Ill., assignor to Automatic Sprinkler Company of America, New York, N. Y., a Corporation of New York. Filed Nov. 17, 1917. Serial No. 202,463. 10 Claims. (Cl. 169—23.)



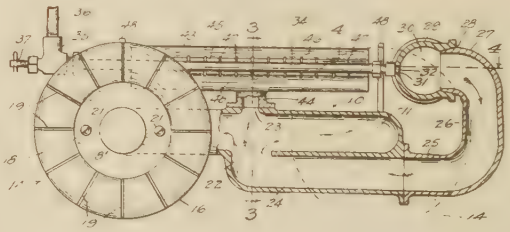
1. In meter alarm valves for automatic sprinkler systems, a valve casing adapted to be connected to a sprinkler distributing system and to a municipal water supply system, an alarm valve mounted in said casing, a connected valve arm and valve stem to guide said alarm valve in its opening movement, an electric alarm device comprising an alarm signal and an alarm switch connected to said valve stem to actuate said alarm signal when said alarm valve opens, a valve seat with which said alarm valve cooperates and a throttling valve collar formed integral with said valve seat to form a valve throat through which said alarm valve moves during its opening movement, a throat washer mounted on said alarm valve to make substantially tight joint between said alarm valve and throat during the first opening movement of said alarm valve, a meter passage communicating with said throat adjacent said valve seat, a turbine meter device mounted in a sectional meter casing secured to said valve casing to receive the fluid flowing from said meter passage into said distributing system when said alarm valve first opens, an indicator mounted outside of said valve casing and connected to said meter device, said alarm valve having emergency opening movement out of said valve throat to allow direct flow of liquid through said throat and into said distributing system without passing through said meter device.

1,414,724. TOWING MACHINE AND METHOD OF TOWING. ALLAN CUNNINGHAM, Seattle, Wash. Filed Nov. 22, 1920. Serial No. 425,657. 10 Claims. (Cl. 254—172.)



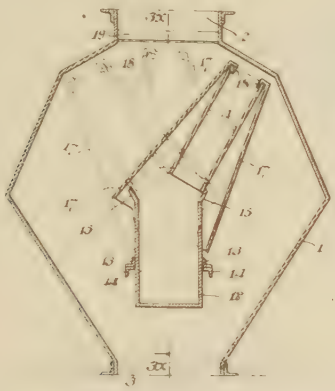
1. In a towing machine, in combination, a drum, an electric motor for producing a torque upon said drum, a source of current to said motor normally supplying sufficient power to maintain the motor torque in equilibrium with and opposite in effect to the towing torque, and a rheostat mechanically operated by said drum and electrically connected in the circuit to said motor, and operable to vary the power delivered to the motor proportionally to the variation from normal of the torque upon the drum, and opposite in effect.

1,414,725. OIL BURNER. WILLIAM H. DAVIDSON, Seattle, Wash. Filed Apr. 9, 1920. Serial No. 372,469. 1 Claim. (Cl. 158—61.)



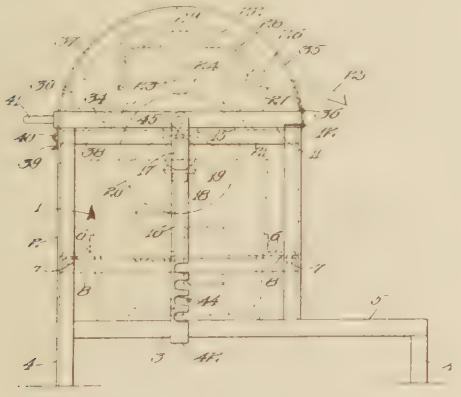
In an oil-burner, the combination of a manifold having a reservoir, burner heads communicating with the opposite ends of said reservoir, a supplementary burner head disposed at one side of said manifold and communicatively connected with the reservoir at the mid-length thereof, a passage at the side of the manifold and having communicative connection with the reservoir opposite to the connection of the same with the said supplementary head, an air receiving member disposed adjacent to one end of the latter, a substantially U-shaped pipe connecting said member with said passage, a retort-tube provided above said supplementary head, an oil supply pipe connected to one end of the retort-tube, a discharge nozzle for the other end of the retort-tube and extending into said member, and a valve in said nozzle for regulating the discharge of gas from the retort-tube into the air receiving member.

1,414,726. MINERAL SAMPLER. GEORGE R. DELAMATER, Steelton, Pa. Filed Oct. 22, 1919. Serial No. 332,545. 6 Claims. (Cl. 73—21.)



1. In mechanism of the character described, the combination with a case having an inlet in its top and an outlet in its bottom, of a throat having an inlet of substantially the width of said inlet first named, means for oscillating said throat in said case to cause its inlet to sweep across said inlet first named, means for discharging minerals from said throat through said case, and diverging wings carried by said throat, said wings adapted at the limits of their movements to extend across said inlet first named and intersect alternately the stream of materials flowing therethrough.

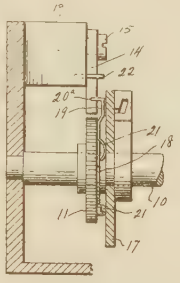
1,414,727. ICE-CREAM FREEZER. WALTER S. EDMANDS, Boston, Mass. Filed Apr. 2, 1921. Serial No. 457,880. 5 Claims. (Cl. 192—116.)



1. In combination with a rotary work shaft, a mount for said work shaft, a hinged lid above said shaft, an electric motor mounted on said lid, means whereby when said lid is closed said motor makes driving connection with said work shaft, an electric circuit for energizing said motor, and contact mechanism which is broken by the opening of said lid and closed by the closing of said lid.

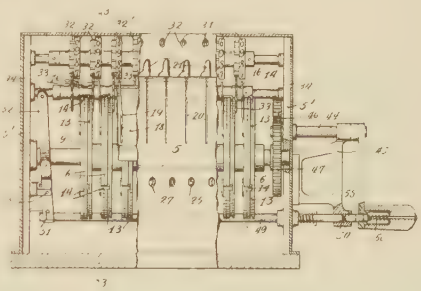
1,414,728. FRICTIONALLY-OPERATED FULL-STROKE MECHANISM. HUGO ENDERS, Belleville, N. J., assignor to The Lehigh Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 9, 1921. Serial No. 460,107. 12 Claims. (Cl. 235—129.)

1. Means for preventing reverse movement of a movable member including a shiftable element, a normally freely swinging oscillatory locking member, stops limiting the movement of the oscillatory locking member in opposite direction, and means for bringing said locking member into engagement with said element upon a reverse



movement of said element including means carried by and having frictional engagement with said shiftable element and having positive rocking engagement with the oscillatory locking member.

1,414,729. CALCULATING MACHINE. HUGO ENDERS, Belleville N. J., assignor, by mesne assignments, to The Lehigh Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 29, 1919. Serial No. 334,113. Renewed Mar. 25, 1922. Serial No. 546,890. 25 Claims. (Cl. 235—73.)

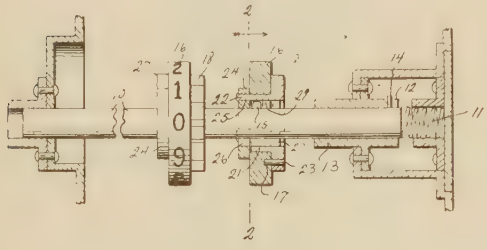


2. In a calculating machine, the combination with a plurality of calculating disks, each having a series of radially movable teeth, and a tooth adjusting member for each disk, of a manually operable handle for each adjusting member separate therefrom, and means in one position locking the adjusting member to the disk for rotation as a unit therewith, said locking means being shiftable to a position to release the tooth adjusting member from its engagement with the disk and connect the tooth adjusting member to said handle for movement with the handle independently of the disk.

12. In a calculating machine, the combination with a series of calculating disks each having a plurality of radially movable teeth and a series of adjusting members for the teeth of each calculating disk, a crank handle for the calculating disks, and means for locking the same against movement of means carried by each adjusting member to engage the same with the corresponding disk, a common actuator for said engaging means, mechanism operatively connecting said actuator with the crank locking means whereby when the crank is locked, said engaging means are moved to release the adjusting members for movement relative to the calculating disks, and when the handle is released, said actuator is moved to engage the adjusting members with the disks, a series of manually operable elements, each one engaged by one of the engaging means when moved to its released position whereby the adjusting members may be independently actuated to adjust the teeth of the calculating disks, a series of numeral wheels, mechanism operatively connecting said manually operable elements to the respective

numeral wheels, a master key for resetting all of the numeral wheels to zero position, and additional keys for individually resetting said numeral wheels to zero position.

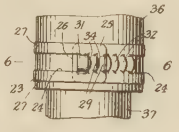
1,414,730. DIGIT WHEEL FOR CALCULATING MACHINES. HUGO ENDERS, Belleville, N. J., assignor to The Lehigh Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 18, 1920, Serial No. 431,751. Renewed Mar. 25, 1922. Serial No. 546,891. 6 Claims. (Cl. 235—58.)



1. A digit wheel and associated pinion for calculating machines comprising an annular digit wheel body, a pinion having a sleeve-like hub inserted through the central aperture of the body, the pinion and body being formed for unitary rotation when in engagement with each other, and a disk upon the opposite face of the body from the pinion with which the sleeve-like hub has operative engagement.

6. A pinion for calculating machines having an annular hub, the hub projecting laterally from the pinion and said hub adjacent one face of the pinion being formed with an inwardly projecting, relatively thin flange, the flange being formed at one point with a keyway and at another point being pressed inward to form an axially projecting tooth.

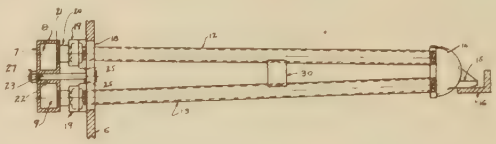
1,414,731. ADJUSTABLE BAND. KNUT E. ENGLUND, Brooklyn, N. Y., assignor to Robert H. Gay, New York, N. Y. Filed Jan. 18, 1921. Serial No. 438,195. 2 Claims. (Cl. 24—20.)



1. An adjustable band of the class described, the end portions of which are provided with a plurality of transverse projecting members fashioned from the material of said band and forming corresponding transverse apertures therein, and the front edges of the projecting members on one end portion of said band being arc-shaped in form and adapted to engage the rear edges of the projecting members on the other end portion of said band when said end portions are brought together and overlapped to securely hold said end portions together in different positions of adjustment.

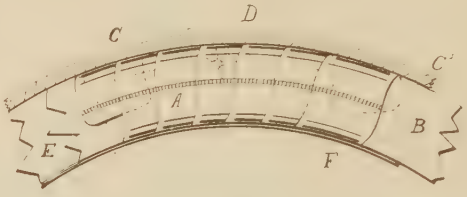
1,414,732. BOILER AND FURNACE GRATE. MOSES L. FOOTE and WILLIAM M. KINGSBURY, Cleveland, Ohio. Filed Apr. 9, 1920. Serial No. 372,544. 2 Claims. (Cl. 122—374.)

1. The combination with a transverse header having passages therein, of a fire box having a front opening, and a plurality of grate bars each having upper and lower tubes communicating with said passages, a draw plate between the outer ends of the tubes and fitting



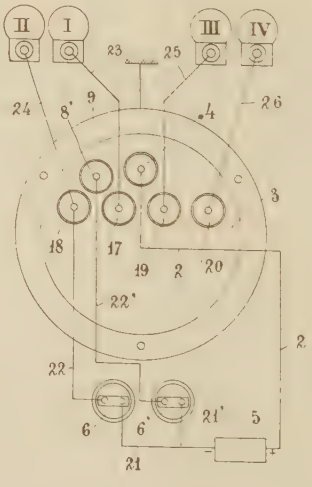
the opening in the fire box, and a bolt between the draw plate and header.

1,414,733. REPAIR PATCH. ELBRIDGE J. FORBES, Revere, Mass. Filed Oct. 13, 1920. Serial No. 416,619. 3 Claims. (Cl. 152—24.)



1. A single piece repair patch or blow out bridge for pneumatic vehicle tires which, when in use, is coiled spirally around the inner tube and inside the casing with the several coils overlapping each other sufficiently to sustain the internal air pressure locally by means of the friction of the overlapping portions at each coil under the blow out or defect when, as the tire is inflated, the expansion of the inner tube clamps the end coils between its outer surface and the inner surface of the uninjured parts of the casing adjacent to the blow out or defect, thus avoiding an additional or excessive strain on any part of the casing.

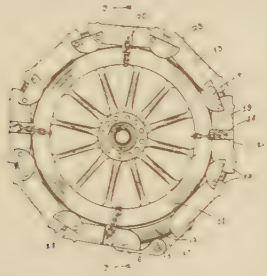
1,414,734. SWITCH FOR CONTROLLING IGNITION AND STARTING CIRCUITS IN EXPLOSION ENGINES. GUGLIELMO GIOVANNONI, Turin, Italy, assignor to Ottorino Pomilio, New York, N. Y. Filed Dec. 19, 1918. Serial No. 267,452. 5 Claims. (Cl. 123—148.)



1. A system for controlling ignition and starting circuits in explosive engines comprising, a plurality of magnetos, a starting circuit including a main vibrator and an auxiliary vibrator, the latter adapted to be used when required by the power of the engine, a storage battery in the said starting circuit, a switch having a num-

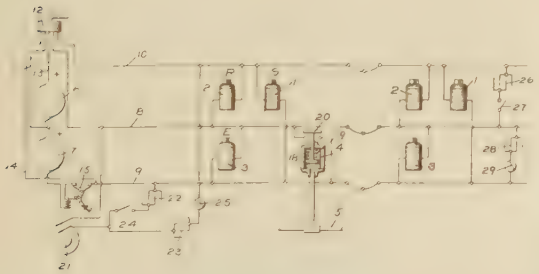
ber of contacting parts arranged in a plurality of sets, means for connecting the contacting parts of each set with one of the magnetos, means for short-circuiting any required set to put the magnetos connected therewith out of operation, means for connecting a magneto for each vibrator used with one terminal of the starting circuit, means for closing the current through a connection with the other terminal of the starting current circuit, when said sets of contacts will be excluded from the circuit.

1,414,735. AUTO WHEEL ATTACHMENT. WILLIE GREENSLADE, Ottawa, Ontario, Canada. Filed Mar. 25, 1921. Serial No. 455,479. 2 Claims. (Cl. 152—16.)



2. An automobile accessory of the character described, comprising a plurality of channel-shaped shoe members adapted to circumferentially embrace a tire, segmental links pivotally connecting said members upon their inner portions, hinge members attached to adjacent shoe members upon their outer faces and pivotally connected together, brackets mounted on alternate shoe members and having V-shaped inner ends and chains engaged in said brackets, the acting faces of said shoe members having transverse gripping ridges.

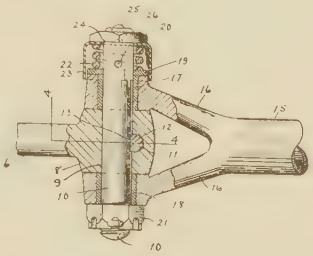
1,414,736. ELECTROPNEUMATIC BRAKE AND SIGNAL SYSTEM. JOHN B. GROSSWEGE, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 22, 1919. Serial No. 298,975. 11 Claims. (Cl. 303—20.)



1. In an electrically controlled brake, the combination with a release magnet, a service application magnet, and an emergency application magnet, of three train wires having the release magnet connected across the first and second train wires, the emergency magnet across the second and third train wires, and the service magnet across the first and third and means for supplying current at one voltage across the first and third train wires and at a less voltage across the first and second and the second and third train wires.

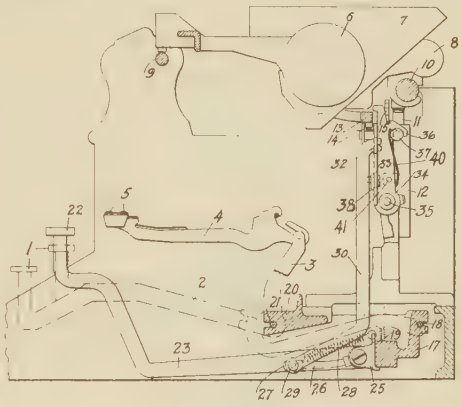
4. In an electro-pneumatic brake, the combination with electrically controlled means operated upon deenergization to effect an application of the brakes, of a normally energized train wire connected to said means, a normally open switch in circuit with said train wire, means operated upon applying the brakes for closing said switch, and means operated upon closing said switch for deenergizing said train wire.

1,414,737. ANTIRATTLER FOR STEERING KNUCKLES. EDWARD J. GULICK, Elkhart, Ind. Filed June 11, 1919. Serial No. 303,355. 5 Claims. (Cl. 287—100.)



1. In a steering knuckle for a motor vehicle, an arm; a pin transversely mounted on said arm; adjustable means for preventing axial movement of said pin in its mount, said means being mounted upon said arm; a forked cross-rod element having its fork pivotally carried on said pin; and resilient means carried by said pin for pressing said cross-rod fork into engagement with said arm.

1,414,738. TYPEWRITING MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 19, 1919. Serial No. 305,255. 7 Claims. (Cl. 197—91.)

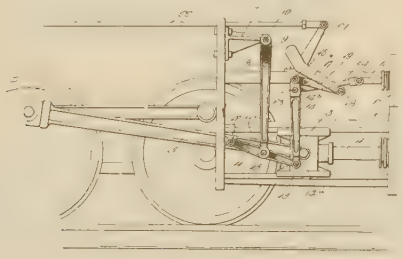


1. In a typewriting machine, the combination with a traveling carriage and an escapement mechanism therefor including a rack connected to the carriage to travel therewith, of a pawl-carrier mounted for movement transversely to the letter-spacing movement of the rack, a back-spacing pawl mounted on the pawl-carrier to have letter-spacing movement thereon, means for limiting the letter-spacing movement of the pawl on the pawl-carrier, a pawl-carrier engaging spring for continually urging the pawl-carrier towards the rack for moving the pawl carried thereby into engagement with the rack, and manually-controlled operating means for normally holding the pawl-carrier away from the rack and with the pawl disengaged therefrom against the tension of the pawl-engaging spring, but said operating means being operable to permit the pawl-engaging spring to move the pawl-carrier towards the rack to engage the pawl therewith, and then said operating means by continued movement acting to move the pawl on the pawl-carrier to move the rack to back-space the carriage.

1,414,739. ENGINE VALVE GEAR. JOHN D. HOOD, Philadelphia, Pa. Filed Oct. 6, 1919. Serial No. 328,693. 1 Claim. (Cl. 121—163.)

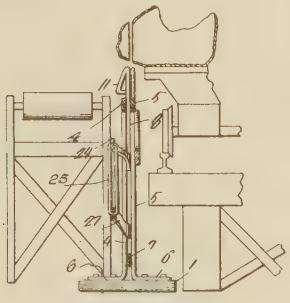
In a steam engine valve gear, the combination with a slide valve rod, a piston rod below said valve rod, a

pitman pivoted to said piston rod, and a relatively fixed frame structure; of a vertical link pivoted at its upper end to said frame structure in a plane above said valve rod, the lower end of said link being in substantially the same plane as said pitman and spaced outwardly from the latter, a substantially horizontal lever fulcrumed between its ends to the lower end of said link, the rear end of said lever being offset inwardly and pivoted directly to said pitman while the front end of said lever is



offset outwardly, a substantially vertical lever parallel with and spaced forwardly from said vertical link, a pivot connecting the lower end of said vertical lever with the front end of said horizontal lever, a substantially horizontal link pivoted at its rear end to the upper end of said vertical lever and forming a fulcrum therefor, means pivotally mounting the front end of said horizontal link on said frame structure, and a connecting rod pivoted to said vertical lever and to said valve rod.

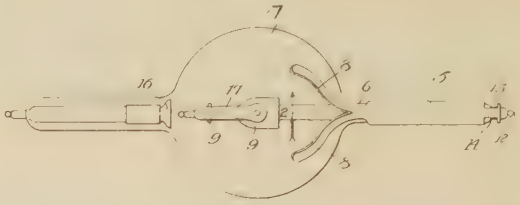
1,414,740. SAWMILL ATTACHMENT. JOEL S. JUNKIN, Kennedy, Ala. Filed Oct. 29, 1919. Serial No. 334,155. 6 Claims. (Cl. 143—157.)



1. A slab tripping mechanism comprising a support, an actuating lever fulcrumed on said support, a horizontal bar guided for vertical movement on said support, a plurality of trips mounted upon said horizontal bar to extend upwardly therefrom, levers fulcrumed intermediately of their ends on said support, standards rising from said bar to which said levers are pivoted at their outer ends, and links connecting the inner ends of said levers with said actuating lever in advance of its fulcrum.

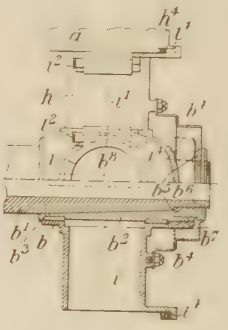
1,414,741. ELECTRICAL VACUUM DISCHARGE DEVICE. EDWIN W. KELLY, Oak Park, Ill., assignor, by mesne assignments, to Victor X-Ray Corporation, Chicago, Ill., a Corporation of New York. Filed Oct. 6, 1919. Serial No. 328,628. 6 Claims. (Cl. 250—35.)

1. An electrical vacuum discharge device comprising, in combination, its insulating enclosing shell, containing a cathode and an anode, the latter extending through a tubular extension on said shell, and means supported on said extension and located wholly exterior of said shell and approximating the anode for charging the exterior of said shell with the same polarity, and unchanging, as



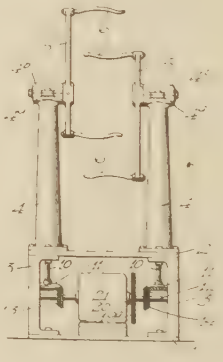
that of the anode, said means being located at such distance from the cathode as to have no major influence on the radiation from said cathode.

1,414,742. SCREW PROPELLER. HENRY LEITNER, London, England. Filed Nov. 4, 1920. Serial No. 421,753. 12 Claims. (Cl. 170—159.)



1. A screw propeller comprising blades built up of metal laminæ and provided with stems, a hub provided with sockets to receive said stems, means for adjusting said stems in said sockets for varying the pitch, said blade stems being made integral with one or more of said laminæ.

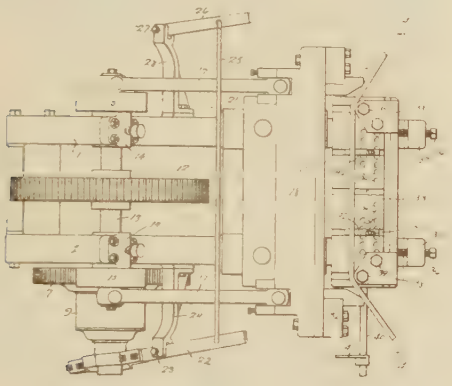
1,414,743. CANDY-PULLING MACHINE. RAYMOND LOPEZ, San Diego, Calif., assignor of one-half to Alfred Butts, San Diego, Calif. Filed May 10, 1920. Serial No. 380,079. 1 Claim. (Cl. 107—30.)



A candy machine, including a supporting casing, a single drive shaft revolubly mounted in said casing across the middle thereof, bevel gears secured to said shaft near each end, arms supported on said casing extending upwardly at an angle in opposite directions from each other and in alinement with said drive shaft, a shaft longitudinally journaled in each of said arms in angular position to said drive shaft, bevel gears on their lower ends engaging the bevel gears on said drive shaft, housings on the upper

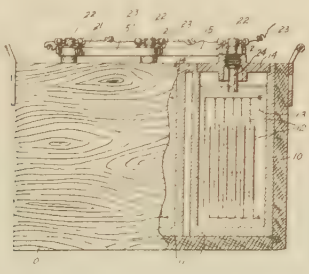
ends of said arms, a shaft revolubly mounted in horizontal position in each of said housings, bevel gears connecting said angular positioned shaft with said horizontal shaft and a double crank arm secured to the inner ends of each of said horizontal shafts, the one extending only one-half the distance as the other and positioned opposite to each other and candy pulling arms secured to both extended ends of said arms so positioned and timed that one of the arms on one of said revoluble arms passes intermediate the other two arms with their revolution.

1,414,744. POWER MACHINE FOR BENDING METAL BARS OR RODS. MICHAEL H. MCKENNA, Cleveland, Ohio. Filed Dec. 5, 1921. Serial No. 519,951. 2 Claims. (Cl. 153—21.)



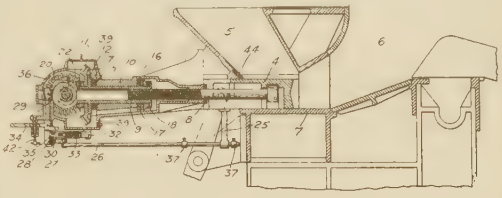
1. In a bending machine, the combination of a reciprocating cross head, a face plate secured to the front thereof and having rows of holes extending across the same, dies provided with attaching devices engaging in said holes, and adjustable laterally to vary their position on the face plate, a bed plate having rows of holes extending across the same, and also having a plurality of slots therein, dies mounted on top of the bed plate and having attaching devices engaged in the holes therein and adjustable laterally to vary their position on the bed plate, and work holders mounted in the slots, between the dies.

1,414,745. ELECTROLYTE INDICATOR FOR STORAGE BATTERIES. REGINALD W. MILLARD, Meriden, Conn., and MAURICE A. MICHAELS, Cambridge, Mass., assignors to Foster, Merriam & Company, a Corporation of Connecticut. Filed June 17, 1919. Serial No. 304,837. 2 Claims. (Cl. 177—339.)



1. A liquid level indicator for multiple cell electrolytic apparatus comprising electrolyte engaging contact members associated with each cell, an electric circuit including as portions thereof said members and portions of the electrolyte above a predetermined level in the several cells, said contact members being connected in series, and said circuit also including electrically operated indicating means.

1,414,746. FUEL-FEEDING MECHANISM. CHARLES F. MILLER, Morton, and ROBERT M. ALLEN, Swissvale, Pa., assignors to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Sept. 8, 1917. Serial No. 190,385. 4 Claims. (Cl. 74—14.)

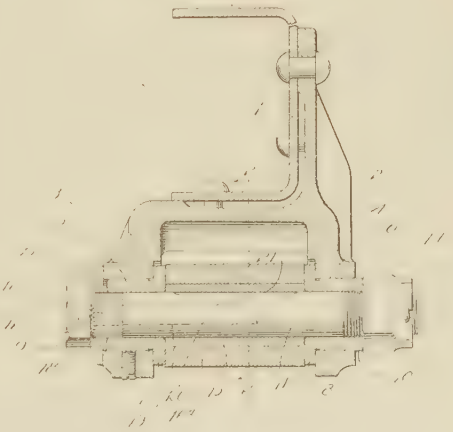


1. Gearing comprising in combination, a gear case adapted to contain a lubricant, a rotatable sleeve fitting closely within a corresponding portion of the casing and opening into the same, gear means within the case for alternately rotating the sleeve in opposite directions, a screw cooperating with one end of the sleeve and adapted to be moved longitudinally when the sleeve is rotated and a member carried by the screw adapted to be reciprocated thereby.

1,414,747. PISTON OR COMPRESSION RING. FREDERICK MUELLER, Irvington, N. J. Filed Mar. 20, 1919. Serial No. 283,847. 2 Claims. (Cl. 74—109.)

1. A piston-ring comprising a single split annulus having a true outer cylindrical and smooth contacting surface and straight sides, the inner annular surface-portion being provided with a series of annular ribs of convex cross-section and an intermediate annular depression throughout of greater density than said contacting surface.

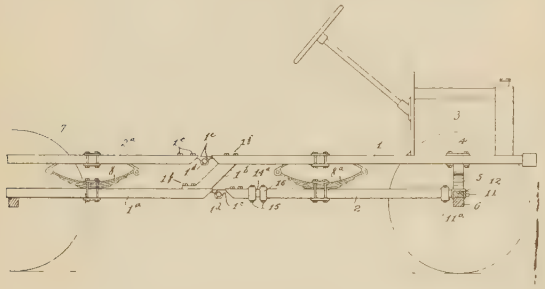
1,414,748. SPRING HANGER. HERMAN D. PALMER, Hartford, Wis., assignor to Kissel Motor Car Company, a Corporation of Wisconsin. Filed Dec. 29, 1920. Serial No. 433,954. 8 Claims. (Cl. 267—54.)



6. In a spring connection, in combination with a leaf spring having its end forming an eye, a bearing sleeve supported in the eye, a bolt passing through said sleeve and having a head on one end and a nut on the other, a pair of bushings mounted on said bolt having radial flanges in bearing contact with opposite ends of said spring eye and sleeve, longitudinal serrations formed on said bolt adapted

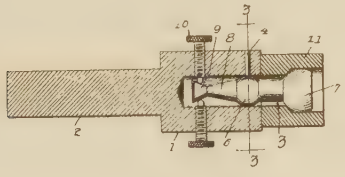
to engage one of said bushings in non-rotatable relation, a support having a bearing carrying one of said bushings, said bearing being of greater length than said bushing, and a second support having a bearing carrying the other of said bushings, the outer end of said latter bushing extending a substantial distance outwardly from its said bearing.

1,414,749. VEHICLE CHASSIS. CHARLES F. PENN, Spokane, Wash., assignor of one-half to Raymond O. Scambler, Spokane, Wash. Filed Apr. 6, 1921. Serial No. 459,029. 10 Claims. (Cl. 280—106.5.)



1. A vehicle chassis, comprising a main chassis frame embodying vertically off-set chassis frame sections, and spring resisted oscillatory chassis frame sections carried below the latter.

1,414,750. TOOL. DAVID ROBERTS, Wilkinsburg, Pa., assignor of one-half to Lester Headrick, Wilkinsburg, Pa. Filed Sept. 17, 1920. Serial No. 410,970. 5 Claims. (Cl. 33—169.)



1. A device of the character specified, comprising a socket piece having at one end means for engagement by a chuck or the like, a lever mounted in the bore of the socket piece and having intermediate its ends a ball or spherical portion, and having a keyway at said portion, the socket piece having a key engaging the keyway for permitting the lever to move longitudinally and for restraining it from rotation, said lever extending beyond the socket piece, and means engaging the inner end of the lever for moving it longitudinally and for swinging it laterally on the ball as a fulcrum, said means comprising set screws threaded through the socket piece, the lever having a tapering portion for engagement by the set screws, said lever having a head at its outer end, and a button provided with a bore abutting the end of the socket piece in which the spherical portion or ball is seated the bore of the button being reamed to receive the lever head.

1,414,751. HOT-WATER MOTOR APPLIANCE. CHARLES C. RUMERY and FRANK G. SPATES, Eastport, Me. Filed Nov. 11, 1920. Serial No. 423,469. 3 Claims. (Cl. 257—243.)

2. In an apparatus of the class described, the combination of an outer casing, an inner casing within the outer casing, and an intermediate casing between the inner casing and the outer casing, an exhaust pipe extending into the inner casing, means carried by the inner casing and connected to the exhaust pipe to form a water chamber between the inner casing and exhaust pipe, chambers formed between the inner, intermediate and outer casings, said inner and intermediate casings provided with outlet ports or openings whereby gases may pass from the discharge pipe into the chambers between the inner,

intermediate and outer casings, means carried by the casings for permitting gases to be discharged to the outer atmosphere, and pipes in communication with the water chamber formed between the exhaust pipe and the inner casing.

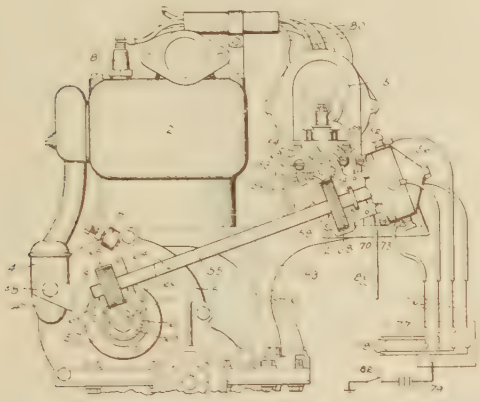
1,414,752. HARD-RUBBER PENCIL. JAMES SALZ, New York, N. Y., assignor, by mesne assignments, to Pencil Products Corporation, New York, N. Y., a Corporation of Virginia. Filed Nov. 27, 1920. Serial No. 426,692. 4 Claims. (Cl. 120—18.)

4. A pencil having a molded composition body having molded therein a plurality of spaced reserve lead compartments.

1,414,753. DRIVING ATTACHMENT FOR IGNITION APPARATUS. WOLFGANG E. SCHWARZMANN, Long Meadow, and CLAYTON H. ALVORD, West Springfield, Mass., assignors to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed Jan. 9, 1920. Serial No. 350,328. 24 Claims. (Cl. 123—149.)

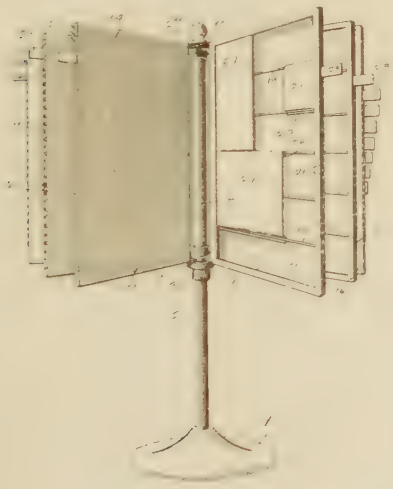
1. The combination with an internal combustion engine, and a magneto for supplying ignition current thereto, of a driving attachment arranged across the front of the engine for driving the magneto from the engine and comprising a gear on a shaft of the engine, a gear on the shaft of the magneto, a rotatable drive shaft carrying cooperative gears meshed with the respective gears on

said shafts, a housing enclosing the meshed gears at the shaft of the engine, and another housing enclosing the



meshed gears at the shaft of the magneto, both of said housings providing bearings for the drive shaft.

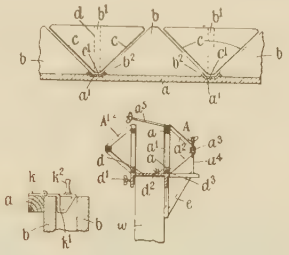
1,414,754. ROTARY INDEX. ERNEST R. SMITH, San Francisco, Calif. Filed June 30, 1920. Serial No. 393,444. 4 Claims. (Cl. 40—102.)



1. A rotary index comprising a suitable standard; an apertured element rotatably mounted upon the standard; a plurality of leaves having lugs formed integral with the upper and lower inner corners to rotatably engage the apertures in the rotatable element and likewise horizontal members; and a plurality of variously sized units adapted to detachably engage and be suspended from said horizontal members, and arranged to display subject matter of said index.

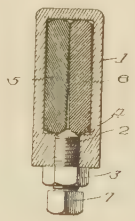
1,414,755. GUIDING MEANS TO AID IN LAYING WALLS OF BLOCKS. WILLIAM H. SMITH, Thames Ditton, England. Filed May 9, 1921. Serial No. 468,044. 9 Claims. (Cl. 33—85.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A guide for facilitating the erection of block walls, comprising saddles adapted to fit on the top of a course of blocks previously laid, a former supported by the saddles adapted to guide the blocks of a course being laid into position, spacing elements mounted on the former adapted to engage the ends of the blocks and provide space for pointing, and means for bracing and adjusting said former on the saddles.



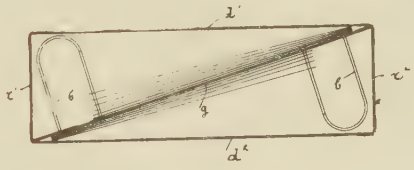
9. A guide for facilitating the erection of block walls, comprising saddles adapted to fit on the top of a course of blocks previously laid, a former supported by the saddles adapted to guide the blocks of a course being laid into position, brace members extending from the former, brackets carried by the saddles, and adjusting means engaging the brackets and brace members for adjusting the former.

1,414,756. CLAMP. WILLIAM A. STARCK, Milwaukee, Wis., assignor to Badger Manufacturing Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 23, 1921. Serial No. 494,702. 8 Claims. (Cl. 293—55.)



2. A clamp comprising a collar for embracing two members which are to be clamped and held in fixed relation, and means carried by the collar and adapted to engage adjacent edges of the two members thereby to wedge the same within the collar.

1,414,757. LETTER FILE OR REGISTRATOR. OTTO STAVENHAGEN, Charlottenburg, near Berlin, Germany. Filed Mar. 24, 1917. Serial No. 157,272. 5 Claims. (Cl. 129—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

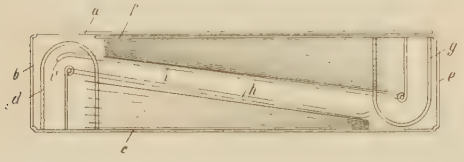


1. The combination with a letter file or portfolio having the form of a book cover and containing inside a device for filing or assembling the papers to be stored in the letter file, of a second filing device attached to the one side part of the first letter file and opening in the opposite direction to the latter.

5. A portfolio comprising an inner supporting member, a filing bow on one side of said member adjacent one end thereof, a back portion connected to the supporting member near said bow, a cover connected to the back

portion and extending over the loop and supporting member, and a loop, back, and cover connected to the support at the opposite end and side thereof.

1,414,758. LETTER FILE OR REGISTER. OTTO STAVENHAGEN, Charlottenburg, near Berlin, Germany. Filed May 7, 1917. Serial No. 166,913. 6 Claims. (Cl. 129—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

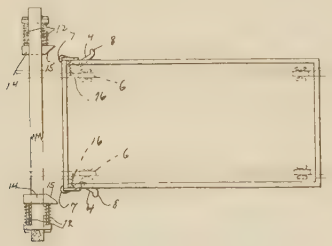


4. A letter file comprising a cover, a filing device mounted thereon near one end thereof, a carrier in hinged connection with the other end of said cover and adapted to be folded over the latter, a filing device on the carrier adjacent said hinged connection and adapted to be contained between the cover and carrier and a cover for the carrier connected to the first named cover.

1,414,759. MOTOR FUEL. ELBRIDGE W. STEVENS, Baltimore, Md., assignor to Chemical Fuel Company of America, Inc., Louisville, Ky., a Corporation of Delaware. Filed Mar. 9, 1920. Serial No. 364,386. 1 Claim. (Cl. 44—9.)

A motor fuel of the same general character as gasoline consisting of a petroleum distillate, alcohol, a hydrocarbon blending agent and a small amount of a readily volatile formic acid ester.

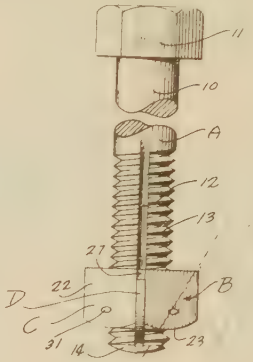
1,414,760. AUTOMATIC MINE-CAR-DOOR OPENER. FASTEN SZEMANSKE, Parsons, Pa. Filed Dec. 1, 1920. Serial No. 427,465. 2 Claims. (Cl. 214—58.)



1. In combination with a mine car having a door pivotally attached thereto, members pivotally mounted on the underside of said car, means on one end of each of said members for gripping said door, a cam-like head on the other end of said member, springs normally urging said gripping means against the edges of said door, and means mounted adjacent the path of said car adapted to contact with said heads to trip said members so as to release said door from said gripping means.

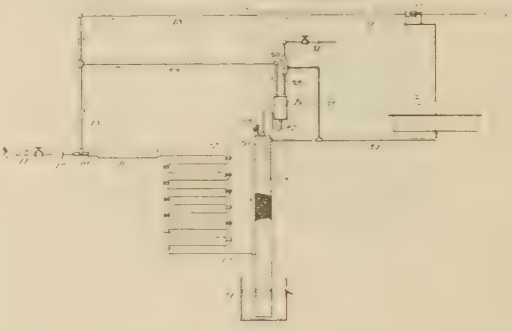
1,414,761. LOCK BOLT AND NUT. GEORGE HENRY THAMANN, Covington, Ky. Filed Mar. 10, 1921. Serial No. 451,886. 2 Claims. (Cl. 151—6.)

1. A lock nut of hexagonal formation having a screw threaded aperture centrally therein and provided with a slotted opening diagonally therein extending from the juncture point of adjacent sides and toward the center of said nut, a pawl pivoted in said slot, and spring means in said slot for normally forcing one end of said pawl toward the screw threaded opening in said nut, said spring forcing the other end of said pawl to project from the juncture point of the adjacent sides in which said slot is formed, in such manner that a wrench may be used on said nut for engaging the spring forced end of said pawl



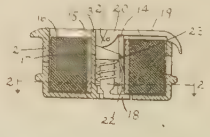
projecting from the juncture point of said nut and to rock the other end of said pawl outwardly and away from the screw threaded opening in said nut for disconnecting the nut from a bolt.

1,414,762. METHOD OF MAKING HYDROCHLORIC ACID. CLINTON PAUL TOWNSEND, Washington, D. C., assignor to Hooker Electrochemical Company, New York, N. Y., a Corporation of New York. Filed Mar. 1, 1920. Serial No. 362,257. 3 Claims. (Cl. 23—1.)



1. Method of producing hydrochloric acid comprising confining a body of hydrogen in a substantially closed system; supplying chlorin to the system at substantially constant rate and effecting its combination with a portion of the hydrogen; withdrawing the resulting hydrochloric acid from the system; and maintaining the desired pressure within the system by the regulated supply of hydrogen thereto.

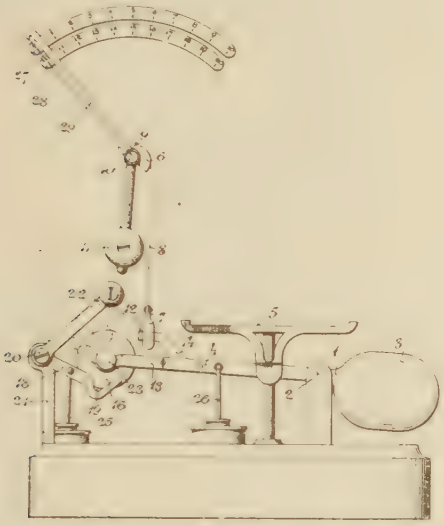
1,414,763. SEWING-MACHINE BOBBIN CASE. LUCIUS E. WEAVER, East Hampton, Conn., assignor to Summit Thread Company, East Hampton, Conn., a Corporation of Maine. Filed Feb. 28, 1921. Serial No. 448,686. 1 Claim. (Cl. 112—233.)



In a sewing-machine bobbin case having a tubular post, constituting a bearing on which a universally wound bobbin is rotatable, and provided with a longitudinal slot, and bobbin-confining and ejecting means associated with

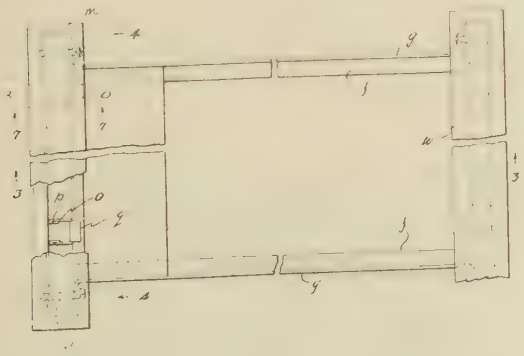
said post, said means including a plunger within the post, having a bobbin-ejecting tongue; a resilient bobbin-controlling tongue attached to said plunger at a point out of the bobbin-containing space, and within the post, and normally projecting through the post slot and into the bobbin-containing space, said tongue being adapted to be pressed inward from its normal position by the core of a bobbin applied to the post, and to yieldingly retard the rotation of the bobbin.

1,414,764. PENDULUM SCALE. SÖREN WISTOFT, Copenhagen, Denmark. Filed Oct. 7, 1921. Serial No. 506,126. 1 Claim. (Cl. 265—61.)



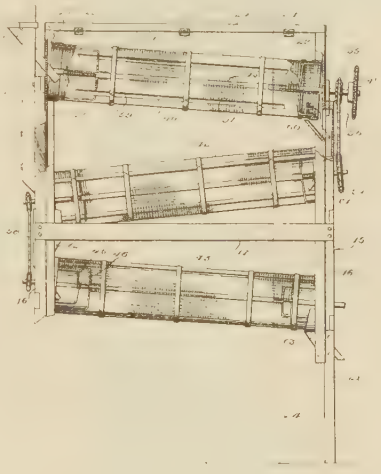
In a pendulum scale, in combination with the balance beam having the usual counterpoise on its shorter arm, a throw-over weight fitted to an extension of the longer arm of said balance beam, means for lifting said throw-over weight off said extension into an inoperative position, the weight of said throw-over weight and of the said counterpoise being so determined that, if the scale is made to normally weigh up to a maximum weight of V kg. (when the said throw-over weight is hung on the said extension), weighings from V kg. to 2V kg. may be performed, when the said throw-over weight is lifted into inoperative position.

1,414,765. SHEET-METAL BED. FRANK P. WILLIAMS, Detroit, Mich. Filed Apr. 27, 1921. Serial No. 464,920. 12 Claims. (Cl. 5—4.)



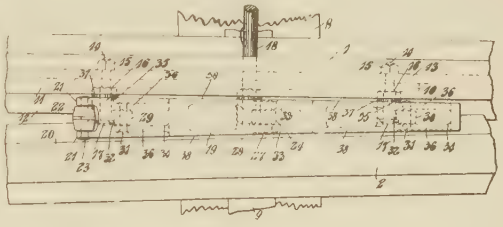
1. In sheet metal furniture, a member for use as a head, foot-board or similar relation, comprising a pair of parallel plates with turned-out lock-seam folds turned back to parallel the plates and each other and a pair of post strips comprising channels having turned-in lock-seam folds paralleling the side walls of the channel adapted to engage the lock-seam folds of the plates to lock the plates together and form the composite member.

1,414,766. ROTARY DRIER. LAWRENCE OTTO WITHUN, Capac, Mich. Filed Sept. 24, 1921. Serial No. 502,841. 10 Claims. (Cl. 34—6.)



4. In a drum for a rotary drier, a central shaft, a skeleton rigidly secured on said shaft, and a cylinder, having open ends, attached to said skeleton, said skeleton comprising a pair of end rings, a plurality of braces connecting said rings to said shaft, longitudinal ribs secured to said rings, and intermediary hoops secured to said ribs, said cylinder having sides of wire mesh and reinforced ends.

1,414,767. SWITCH-RAIL GUARD. FRANK C. ANDERSON, Cincinnati, Ohio. Filed Nov. 12, 1921. Serial No. 514,773. 20 Claims. (Cl. 238—380.)

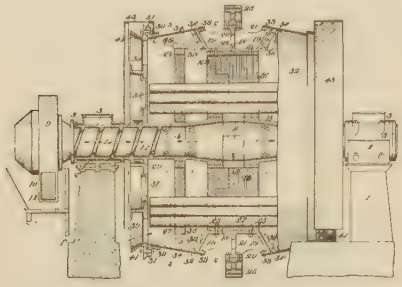


1. A guard element, means for mounting said guard element between diverging rails of a switch, and a roller at one end of said guard element.

1,414,768. ROD MILL. FREDERICK J. BEHNEMAN, San Francisco, and HAROLD S. REXWORTHY, Sunnyvale, Calif. Filed Nov. 7, 1921. Serial No. 513,470. 11 Claims. (Cl. 83—9.)

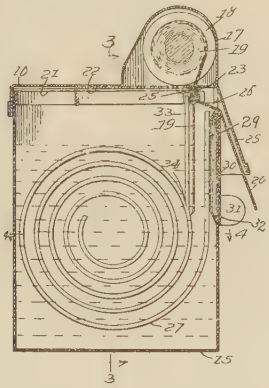
1. An axially rotating crushing apparatus comprising feed means adapted to supply material to the center of said apparatus, a plurality of groups of crushing members arranged annularly about the same and fixed with respect one to the other, means for rotating said groups in unison

about the axis of rotation of the apparatus, a shell enclosing said groups, means for introducing material to be



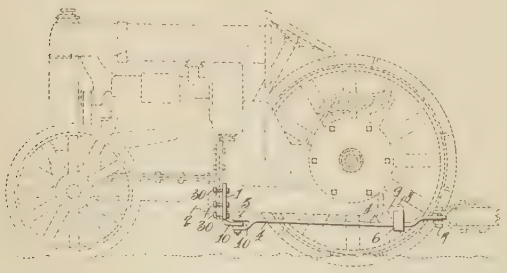
crushed to said groups midway of their length, and a series of outlets for the crushed material at the opposite ends of said shell.

1,414,769. METHOD OF AND APPARATUS FOR DEVELOPING FILMS. GEORGE C. BEIDLER, Rochester, N. Y. Filed Mar. 31, 1917. Serial No. 158,816. 9 Claims. (Cl. 95—90.5.)



1. A device relating to photography and comprising a receptacle, movable supporting means carried therein, and a film holder comprising a coil whose convolutions are of increasing diameter mounted within the receptacle upon said supporting means with the axis of the coil parallel to th direction of motion of said supporting means.

1,414,770. DRAWBAR HITCH FOR TRACTORS. FLOYD M. BLAIN, Central Point, Oreg. Filed June 21, 1921. Serial No. 479,337. 1 Claim. (Cl. 213—67.)

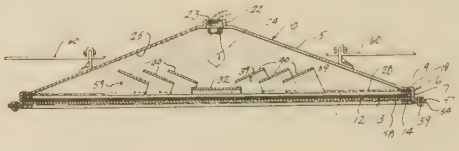


A draw bar hitch for tractors, comprising a semi-circular member having bolt holes to match up with the bolt holes of the crank case of an engine and adapted to be secured thereto by the bolts which connect the crank case parts together, said semi-circular member having a loop projecting in a direction substantially at right angles to the plane of the semi-circular member, a draw bar having a bifurcated end, and a bolt for flexibly connecting said draw bar with said loop, a horizontally disposed guide loop adapted to be secured to the rear end of the tractor frame through which said draw bar projects, said guide loop having a series of pin holes, and stop pins held in said pin holes for the purposes specified.

1,414,771. DEVICE FOR SUPPORTING COOKING UTENSILS. FRANK WILTON CANTLEBERRY, Sisquoc, Calif. Filed Oct. 24, 1918. Serial No. 259,565. 1 Claim. (Cl. 126—30.)

In a device of the class described, a standard, a closed collar slidably and rotatably fitted upon the standard and adapted to be supported at positions of vertical adjustment thereon through the binding engagement of its wall against the surface of the standard, the collar having a shank portion projecting outwardly therefrom and terminating in a downwardly extending portion having a shoulder, spaced members projecting from the opposite sides of the said portion and pivoted thereon, and a supporting arm mounted between the spaced members and having a downwardly projecting portion located adjacent to and providing a shoulder for abutment against the first mentioned shoulder whereby to limit the downward swinging movement of the arm upon its pivot, the arm being movable in an upward direction upon its pivot to extend beside the standard in folded position.

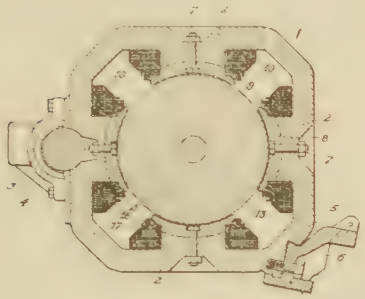
1,414,772. ILLUMINATED LICENSE-PLATE HOLDER AND REFLECTOR. CECIL CLEMENTS, JAMES W. SWART, and CHARLES E. NUTBROWN, Rochester, N. Y. Filed Oct. 3, 1921. Serial No. 504,991. 9 Claims. (Cl. 40—133.)



1. As an article of manufacture, a deflector device comprising a substantially rectangular frame having a central

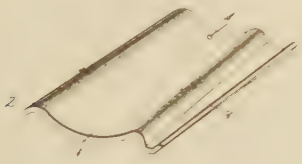
deflecting plate transversely thereof and flat deflecting plates on each side of said central deflecting plate inclined toward said central deflecting plate.

1,414,773. COIL RETAINER. FREDERICK C. COSEO, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 17, 1917. Serial No. 162,726. 1 Claim. (Cl. 171—252.)



In a coil retainer of the class described, the combination with a dynamo electric machine comprising a field frame having inwardly projecting poles with laterally projecting pole tips and field coils upon the poles, of pairs of non-magnetic pole-encircling members interposed between said pole tips and said coils, and a plurality of independent and separately removable springs arranged to force said members apart thereby exerting outward pressure upon said coils.

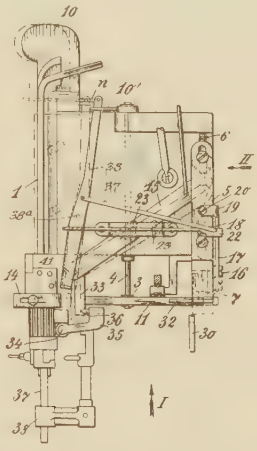
1,414,774. ROOFING TILE. ANGELO DE JULIAN, West Palm Beach, Fla. Filed Sept. 16, 1920. Serial No. 410,806. 2 Claims. (Cl. 108—10.)



1. A tile of plastic material having a body portion curved transversely and adapted to be laid with its concaved face upwardly, each tile having at one side edge a downwardly curved portion extending the full length of the side edge and having at the other side edge a longitudinally extending trough extending the full length of the said side edge, the tile having a transversely extending rib on its lower face and near its lower end for engaging the top of the adjacent tile in the preceding course.

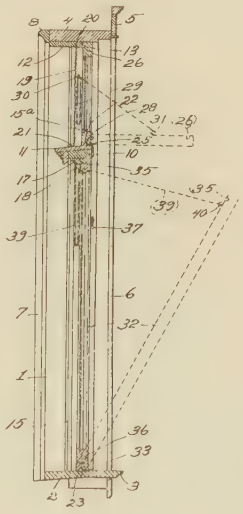
1,414,775. TYPOGRAPH MATRIX-SETTING AND LINE-CASTING MACHINE. JULIUS DÖRNETH, Berlin, Germany, assignor to Typograph G. m. b. H., Berlin, Germany, a Corporation of Germany. Filed Oct. 27, 1914. Serial No. 868,858. 7 Claims. (Cl. 199—4.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a matrix setting and line casting machine, the combination with the matrix bars each having a plurality of type matrices formed thereon, and guiding members for assembling and distributing the matrix bars, of a shiftable strip providing a support for the matrix bars for holding the same in set position when setting special type, a slide movable in a direction substantially perpendicular to the shiftable strip, a link connecting said strip



and slide and disposed at an angle to the direction of the movement of the slide, and operating means for the slide.

1,414,776. WINDOW CONSTRUCTION. JOHN ELNIFF, Kansas City, Mo. Filed July 25, 1921. Serial No. 487,220. 2 Claims. (Cl. 20—53.)

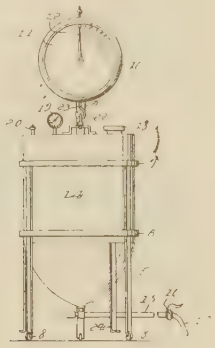


1. In a window construction, a frame having top and side stops provided respectively with horizontal and vertical inwardly-projecting tongues occupying the same vertical plane, and a sill having a horizontal upwardly-projecting tongue, the tongue of the sill having flat faces and the outer face sloping upwardly and inwardly, in combination with a sash fitting snugly within the frame and against the inner edges of the top and side stops, and provided with horizontal and vertical grooves receiving the horizontal and vertical tongues, respectively, the said sash having a horizontal hinge connection with the said sill approximately concentric with respect to the sloping face of the tongue of the sill, and at an intermediate point of its lower edge, having a groove conforming in cross section to and snugly receiving the last-named tongue and contacting therewith in a plurality of planes disposed angularly with respect to each other.

1,414,777. DISPENSING APPARATUS. WALTER J. ELSE, Grand Island, Nebr. Filed Aug. 8, 1921. Serial No. 490,558. 1 Claim. (Cl. 265—27.)

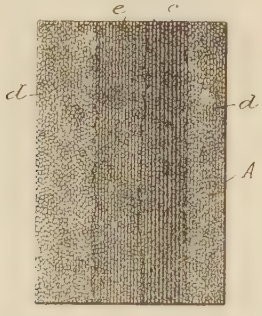
In a commodity dispensing apparatus, a frame comprising upright elements and bands in spaced relation

to each other attached to the upright elements, anti-friction members on the lower ends of the upright elements to permit the frame to be moved and a receptacle movable vertically in the frame, means for suspending



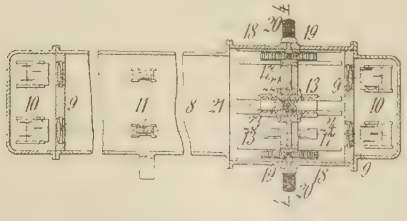
the receptacle including a weighing device and legs on the receptacle adapted to support the said receptacle free of the frame when released from the weighing device, means for supplying air to the interior of the receptacle, and means for discharging the contents of the receptacle.

1,414,778. ROOFING MATERIAL. MORRIS H. ELVIDGE, New York, N. Y. Filed Jan. 3, 1922. Serial No. 526,674. 2 Claims. (Cl. 91—68.)



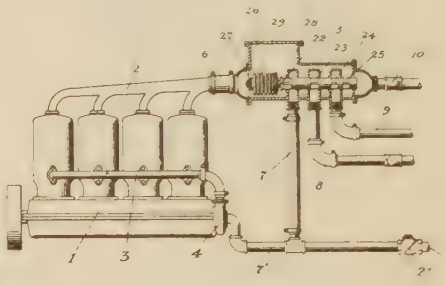
1. A roofing material having a granular material weather surface characterized by distinct parallel areas of contrasting colors and distinct areas of composite color into which the other areas shade, the areas being greater in extent in longitudinal than in transverse direction.

1,414,779. TELEMETER SYSTEM. OTTO EPPENSTEIN, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Apr. 17, 1914. Serial No. 832,628. 5 Claims. (Cl. 88—2.7.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



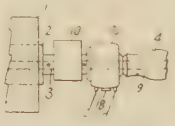
1. In a telemeter system a plurality of telemeters, a setting device for measuring purposes contained in each telemeter and an indicating device common to the said telemeters and consisting of a scale and an index, at least one of which two parts being movable, and means for coupling the said setting devices and the said indicating device and for causing a relative movement of the two parts of the said indicating device, which movement corresponds to a mean value of the values given by the single telemeters.

1,414,780. COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed Aug. 19, 1916. Serial No. 115,866. 31 Claims. (Cl. 123—174.)



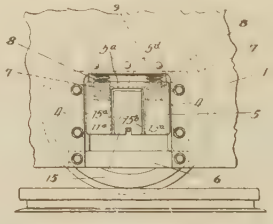
1. In combination with an internal combustion engine a cooling system therefor comprising a plurality of radiator sections, and unitary means for consecutively connecting and disconnecting a plurality of said sections into and from said cooling system.

1,414,781. ROTARY BRUSH. SIDNEY HUFF, New York, N. Y. Filed July 17, 1919. Serial No. 311,645. 1 Claim. (Cl. 15—23.)



In a device of the class described, a brush, a brush shaft and end plates provided with screws for attaching the brush to said shaft, handles on opposite sides of the brush, and longitudinally aligned means for operating said shaft and brush, and detachable means adapted to be placed intermediate said brush shaft and said operating means, whereby said brush shaft may be directly or indirectly connected to said operating means.

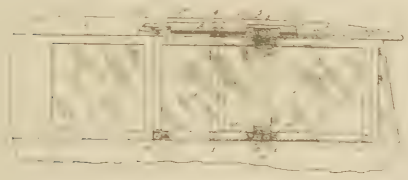
1,414,782. AXLE JOURNAL BOX. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed July 28, 1914. Serial No. 853,770. 4 Claims. (Cl. 105—224.)



1. In a mechanism for mounting and holding a car axle, having a journal part and a wheel inside of said

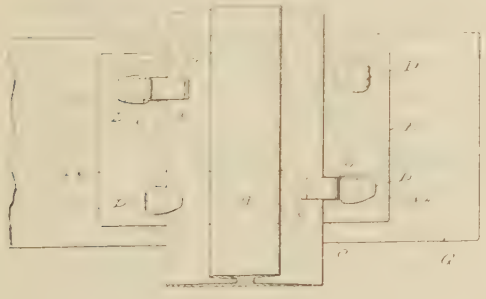
journal part, the combination of a journal box engaging with the journal part of the axle, a thrust element removably connected to the axle, an oppositely situated second thrust element, said thrust elements being arranged to bear against each other at points which are proximate to the axis of the axle, and a carrier for the second thrust element adapted to hold it stationary axially of the axle and to be moved bodily therewith independently of the box and of the axle.

1,414,783. SLIDING SIDE LIGHT FOR MOTOR VEHICLES. EDWARD J. LIENIZ, San Francisco, Calif., Lillian Lieniz being administratrix of said Edward J. Lieniz, deceased. Filed May 6, 1920. Serial No. 380,010. 8 Claims. (Cl. 296—47.)



1. A sliding side light device for motor vehicles comprising a plurality of guide plates having upwardly turned edges upon the lower side thereof, said plates being adapted for attachment to the top of a motor vehicle in longitudinally spaced pairs; a plurality of retaining guide plates having downwardly turned edges upon the upper side thereof mounted in pairs to span the spaces between said supporting tracks; side lights slidably mounted upon said guide tracks; and means for retaining said side lights in an open or closed position.

1,414,784. RAIL FASTENER. EMERY M. MCVICKER, Milwaukee, Wis. Filed Dec. 8, 1920. Serial No. 429,092. 17 Claims. (Cl. 238—304.)



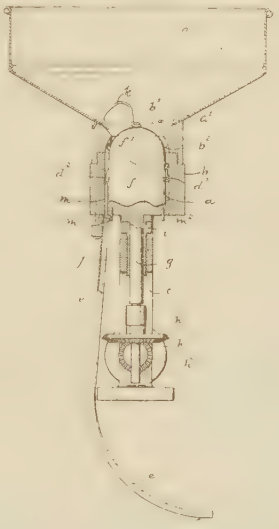
3. A fastener for railway rails, including a tie plate having a pair of upwardly inclined shoulders, a rail clip embracing an edge of the rail flange and engaging between said shoulders to limit the upward movement of the rail from said tie plate, and means for retaining said clip in rail securing position.

1,414,785. ROCKING TOY. CHARLES E. MORRIS, Leavenworth, Kans., assignor to Charles W. Parker, Leavenworth, Kans. Filed June 7, 1920. Serial No. 387,060. 2 Claims. (Cl. 46—22.)

1. A rocking toy having a body adapted to support a person, means for rockingly supporting the body, the body having a portion simulating an animal's head, the head having a pivoted jaw arranged to swing to an open

and shut position when the body is rocked, substantially as set forth.

1,414,786. ATTACHMENT FOR FEEDING CUPPED ARTICLES. BERTHOLD NAGY and STEPHEN NAGY, Brooklyn, N. Y. Filed Apr. 21, 1921. Serial No. 463,291. 12 Claims. (Cl. 79—17.)

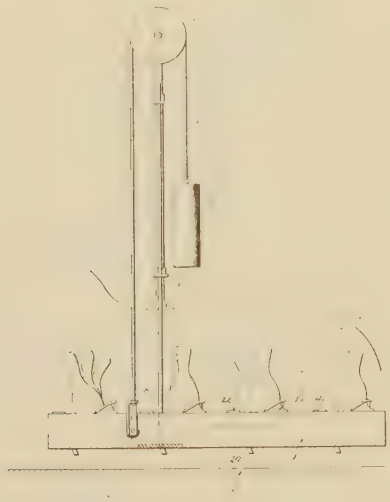


1. An attachment for feeding cupped articles consisting of a hopper adapted to receive cupped articles in bulk, having an inclined bottom leading to an outlet opening therein, a chute through which said articles are adapted to descend by gravity, a delivery head opening into said hopper outlet and having therein a runway inclining towards and terminating adjacent the inlet of said chute, a positioning device cooperating with said delivery head comprising a rotatable member having a cylindrical portion concentric with and within said runway and a rounded portion presented towards said hopper, and extending adjacent and within the open top of said delivery head, whereby said articles are permitted to pass between said positioning device at any point thereof and the wall of said delivery head only when the cupped side thereof is presented toward said rounded surface, an agitator within said hopper adjacent said delivery head, and means whereby said positioning device and said agitator are actuated.

1,414,787. PIN-SETTING MECHANISM. ALFRED N. OLSEN, Rock Rapids, Iowa, assignor to Victor Pin-Setter Company, Rock Rapids, Iowa. Filed Feb. 28, 1921. Serial No. 448,402. 6 Claims. (Cl. 46—54.)

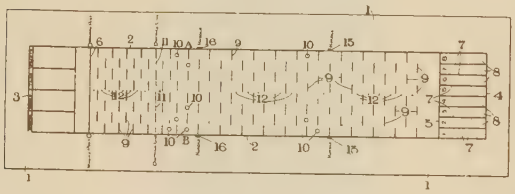
2. In pin setting mechanism, a pin-receiving unit comprising spaced walls, an upright abutment member upon one of said walls, the other wall having an inclined surface, the upper and lower portions of which are relatively offset, and a bolstering member mounted within

the unit and having means riding in engagement with the inclined surface of the last-mentioned wall, the



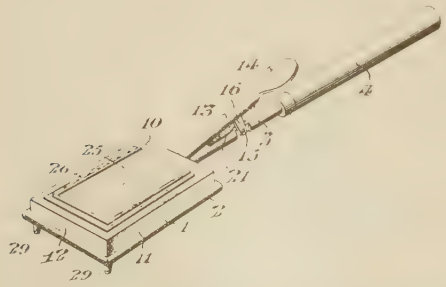
bolstering member having a floor-engaging part to influence upward movement of the member when the unit is lowered.

1,414,788. APPLIANCE FOR PLAYING RACE GAMES. WILLIAM JAMES PARSONS, London, England. Filed Feb. 1, 1922. Serial No. 533,457. 3 Claims. (Cl. 46—63.)



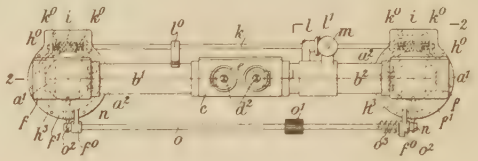
1. In an apparatus for playing race games, including playing pieces representing horses, a chart marked in the form of a race course upon which said horses are moved in the playing of the game, and a pack of cards bearing indications for the moves of the horses upon said chart, said cards including sets of cards limited to each particular horse and sets of cards limited to certain pairs of horses, whereby a single card may control the movement of a single horse or a pair of horses.

1,414,789. ANNEALING DEVICE. CLARENCE E. PYLE, Philadelphia, Pa., assignor to The S. S. White Dental Manufacturing Company, a Corporation of Pennsylvania. Filed June 23, 1920. Serial No. 391,151. 5 Claims. (Cl. 263—49.)



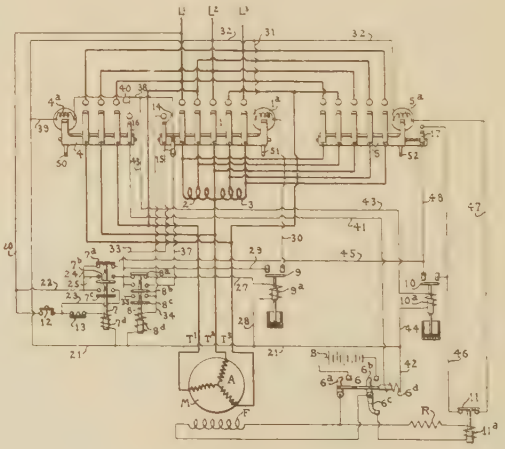
1. A device of the class described, comprising a tray having a movable cover forming a closed chamber, and a removable transparent window in said cover.

1,414,790. HORIZONTAL TELEMETER. FRANZ RIEDINGER, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Feb. 5, 1915. Serial No. 6,312. 2 Claims. (Cl. 88—2.7.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a horizontal telemeter containing the base-line within the instrument, a measuring device, an ocular system, an ocular reflecting system, at either side of the said ocular reflecting system, an objective lens and a deflecting device, the said deflecting devices being adapted to displace in the direction of the base-line the images formed from the ray pencil systems entering the instrument at either end of the base-line, actuating means for effecting a joint displacement of the two images in the same direction by a joint alteration of the setting of the said deflecting devices, means for yieldingly coupling the said actuating means and the said deflecting devices and two locking devices independent from the said actuating means, each locking device being adapted to cooperate with one of the said deflecting devices.

1,414,791. CONTROLLER FOR SYNCHRONOUS MOTORS. EDWIN W. SEEGER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 12, 1921. Serial No. 444,399. 6 Claims. (Cl. 172—289.)



3. The combination with a synchronous motor of means for establishing starting and running connections for said motor and means subjected to control by certain electrical conditions in the field circuit of the motor for establishing plugging connections for said motor upon interruption of the running connections therefor.

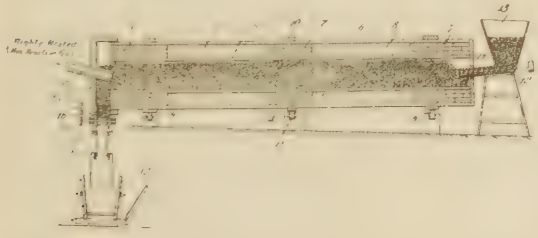
1,414,792. BATHTUB INSTALLATION. EUGENE L. SEITHER, Cleveland, Ohio. Filed Mar. 7, 1921. Serial No. 450,238. 12 Claims. (Cl. 4—24.)

1. A bath tub attachment, comprising a wall mount-

ing for a bath tub fitting and means associated therewith adapted to clamp said mounting in a supporting position

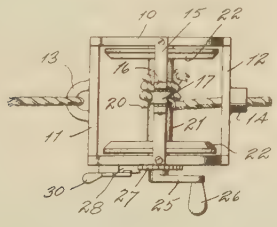
on the tub independently of the wall and adjustably in respect to the face of the wall.

1,414,793. MANUFACTURE OF LITHOPONE. JAMES A. SINGMASTER and FRANK G. BREYER, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 8, 1922. Serial No. 535,078. 7 Claims. (Cl. 134—78.)



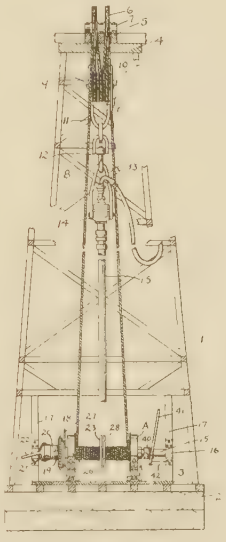
4. The method of calcining lithopone, which comprises heating the lithopone, in large part at least, by passing therethrough and in contact therewith a non-reactive gas and thereby establishing and maintaining a non-reactive environment about the lithopone, said non-reactive gas being introduced into the lithopone at a temperature approximating the temperature at which it is desired to calcine the lithopone.

1,414,794. CLOTHESLINE ATTACHMENT. STANISLAW STAPIENSKI and JAN STAPIENSKI, Jersey City, N. J. Filed Apr. 23, 1921. Serial No. 463,756. 1 Claim. (Cl. 68—3.)



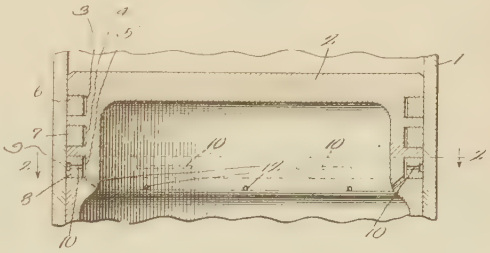
A tension device comprising a frame, an eye at one side of said frame, a winding drum mounted in the frame, a crank arm to rotate said drum, said drum having an opening therethrough, a pawl and ratchet mechanism to hold said drum against unwinding movement, a pulley for supporting the device from the upper run of a pulley line, and a manually operable lever extending outward of said frame whereby the pawl may be disengaged from the ratchet.

1,414,795. HOISTING DRUM. JOHN R. SUMAN, Houston, and ADRIAN R. GAMBLE, Velasco, Tex. Filed Oct. 25, 1920. Serial No. 419,305. 5 Claims. (Cl. 254—145.)



1. In a device of the character described, a compound hoisting drum, comprising a shaft, a power operated wheel thereon, a clutch to throw said shaft in and out of gear with said wheel, a main drum secured to said shaft, a second drum on said shaft and normally idling thereon, hand operated means to connect said second drum to said shaft, a load-sustaining cable having operative connection with both of said drums and means to control the speed of said drums.

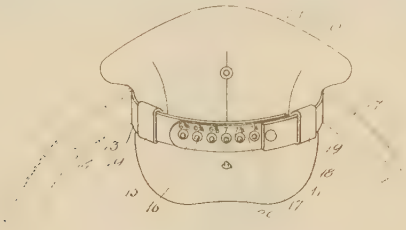
1,414,796. ENGINE. CHARLES N. TEETOR, Hagerstown, Ind. Filed Oct. 22, 1921. Serial No. 509,636. 4 Claims. (Cl. 74—109.)



1. In an engine, the combination with the cylinder thereof; of a hollow piston having a circumferential groove therein; and a packing ring within the groove, said packing ring being formed with an exterior annular channel in a zone between the flat faces of the ring, and elongated outwardly diverging slots in the zone of the channel and opening upon the inner cylindrical surface of the ring, the elongated slots establishing communication between

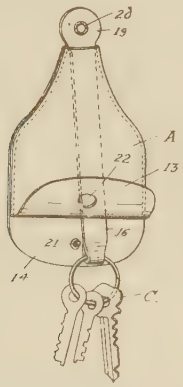
said annular channel and the interior of the ring and being narrower than the channel, said piston having holes establishing communication between its interior and its aforesaid circumferential groove.

1,414,797. CAP. ISIDOR K. TRAU, Louisville, Ky. Filed Jan. 18, 1922. Serial No. 530,121. 2 Claims. (Cl. 2—106.)



1. A cap of the character described, having a body provided with slits extending upward from its bottom edge, straps extending from the rear edges of the slits and overlapping in front of the body, a strip secured to the face of one of the straps and provided with spaced snap button members mounted thereon at predetermined size intervals, said strip having size indicia impressed on the strip adjacent the respective snap button members and a cooperating snap button member on the other strap.

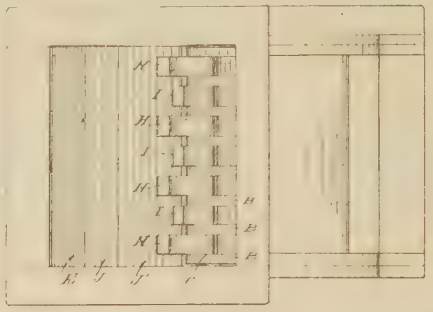
1,414,798. POCKET CASE. PAUL H. WELCKER, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed June 24, 1921. Serial No. 480,079. 2 Claims. (Cl. 150—40.)



1. A pocket case comprising, side walls, a connecting member slidably secured between said side walls, an opening for admitting articles secured to one end of said connecting member to be drawn between the sides of said case and means secured to the other end of said connecting member adapted to lock the receiving opening of said case closed.

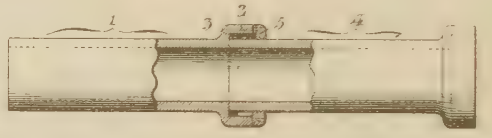
1,414,799. CRUSHER. ARTHUR F. WILLIAMS, St. Louis, Mo., assignor to Williams Patent Crusher and Pulverizer Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 17, 1922. Serial No. 537,226. 2 Claims. (Cl. 83—11.)

1. A crusher comprising a casing, a breaker plate, and a rotor having eccentrically pivoted hammers arranged in rows substantially parallel to the axis,—the hammers in each row being alternately of long and short pivotal length relatively to each other, and the short hammers having a relatively larger head to compensate for their



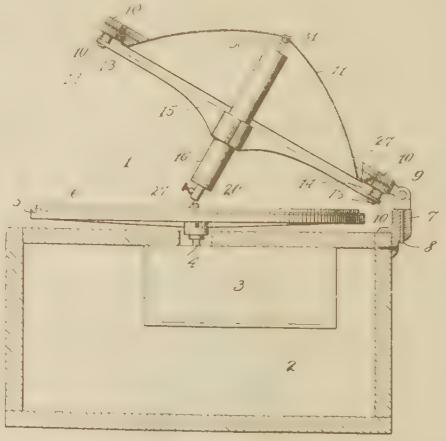
shorter length and to equalize their striking effect compared to the long hammers.

1,414,800. PIPE JOINT AND METHOD OF PRODUCING IT. CHARLES STEWART BABB, Chicago, Ill., assignor to The Barber Asphalt Paving Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Jan. 22, 1921. Serial No. 439,283. 4 Claims. (Cl. 285—118.)



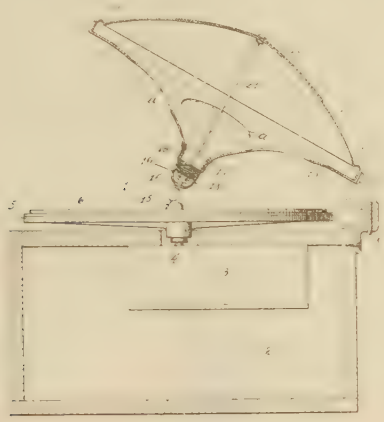
4. The method of forming a pipe joint, which consists in placing within the shoulder of the bell of a pipe section a calking ring of blown hydrocarbon having rubbery and plastic consistency, forcing a spigot of another pipe section within said calking ring whereby the two pipe sections are centered and the joint between them sealed, pouring into the remaining space between the spigot and bell a melted bituminous cement with resulting fusion of the surface of the calking ring and amalgamation of the two materials, and permitting the two to cool and solidify, whereby the resulting pipe joint is strong, and rigid and wholly indestructible by disintegrating influences.

1,414,801. ACOUSTIC DEVICE. GEORGE B. BURCH, New York, N. Y., assignor to Leslie Stevens, Glen Ridge, N. J. Filed Sept. 15, 1919. Serial No. 323,688. 9 Claims. (Cl. 181—32.)



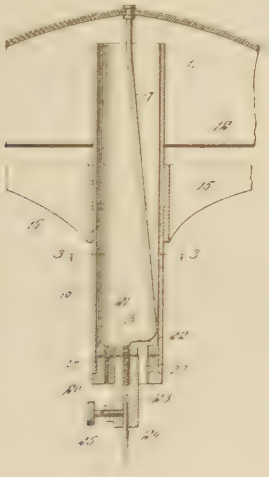
1. An acoustic device, comprising a large, direct, acting, vibratory diaphragm of conoidal form and continuously curved from its axial center outward in all radial directions.

1,414,802. PHONOGRAPH. GEORGE B. BURCH, New York, N. Y., assignor to Leslie Stevens, Glen Ridge, N. J. Filed Sept. 15, 1919. Serial No. 323,687. 10 Claims. (Cl. 274—25.)



1. A device of the class described, comprising two diaphragms with connected flanges, a stylus-holder pivotally mounted in one diaphragm, and a transmission rod connected to the stylus-holder and to the other diaphragm.

1,414,803. PHONOGRAPH REPRODUCER. GEORGE B. BURCH, New York, N. Y., assignor to Leslie Stevens, Glen Ridge, N. J. Filed Apr. 3, 1918, Serial No. 226,382. Renewed Aug. 2, 1921. Serial No. 489,199. 2 Claims. (Cl. 274—25.)



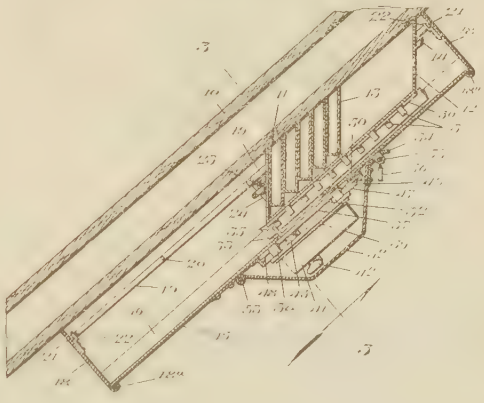
2. In a phonograph reproducer, the combination with a diaphragm, and supporting means therefor, of a stylus holder mounted axially of the diaphragm and at a distance therefrom, the stylus holder being carried by a perforated thin disk peripherally supported from said supporting means in a plane transverse to the axis of the diaphragm and having a horseshoe opening extending about its central supported portion, and a transmission connection extending from the stylus holder to the diaphragm.

1,414,804. PHONOGRAPH. GEORGE B. BURCH, New York, N. Y., assignor to Leslie Stevens, Glen Ridge, N. J. Filed June 12, 1918, Serial No. 239,536. Renewed Aug. 2, 1921. Serial No. 489,200. 3 Claims. (Cl. 274—25.)

1. Phonograph apparatus comprising in combination with an outwardly bulging, large, direct-acting diaphragm, supporting means providing an edge support for the diaphragm and supporting axially of the diaphragm a stylus holder, a sylus holder mounted in said supporting means to be capable of vibratory oscillation, and a flexible trans-

mission rod connected to the stylus holder and to the diaphragm, said rod extending substantially straight from the diaphragm to a point adjacent but laterally offset from the axis of oscillation of the stylus holder.

1,414,805. AUTOMATIC SAMPLER. SEWARD E. COGSWELL, Central City, Nebr. Filed Apr. 30, 1920. Serial No. 378,005. 10 Claims. (Cl. 226—19.)

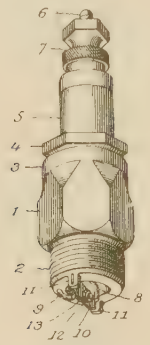


2. A device of the kind described embodying a casing having doors at opposite ends for the insertion and removal of a tray, latch levers mounted within the casing, said levers and doors having portions to interengage for holding the doors closed, operating bars connected to said levers and extending through the bottom of the casing for operating said levers, and a hood for enclosing the outer terminals of said bars and having means for locking it to the casing.

1,414,806. SPARK PLUG. JAMES G. DICKSON, Chicago, Ill., assignor of one-third to Walter F. Wolf, Chicago, Ill. Filed July 3, 1919. Serial No. 308,589. 2 Claims. (Cl. 123—169.)

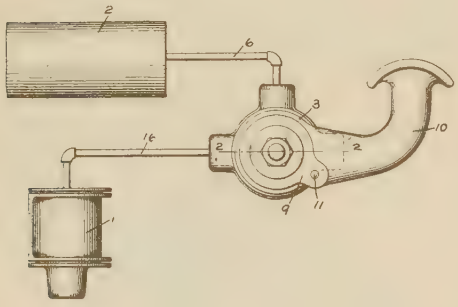
1. In a spark plug having supply and return terminals at its lower end, the combination of a transversely extend-

ing bridge plate of insulating material secured to the lower end of the spark plug by a pair of depending and



diametrically opposed saddle posts, and a conducting block carried by such bridge plate in spaced relation to the aforesaid supply and return terminals.

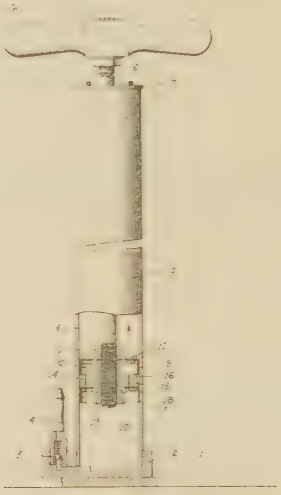
1,414,807. BRAKE-VALVE DEVICE. SAMUEL W. DUDLEY, Edgewood, Pa., assignor to Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 13, 1919. Serial No. 296,861. 1 Claim. (Cl. 303—50.)



In a fluid pressure brake for motor vehicles, the combination with a brake cylinder and a source of fluid under pressure, of a valve having positions for supplying and releasing fluid to and from the brake cylinder, and an intermediate lap position, a foot operated lever for operating said valve, a spring tending to return said valve and lever to release position, and means for defining the lap position.

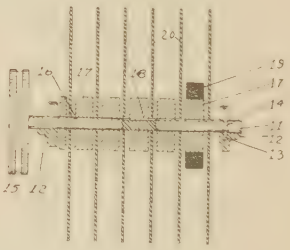
1,414,808. TIRE PUMP. JESSE T. FIESE, Fresno, Calif. Filed Oct. 27, 1919. Serial No. 333,656. 3 Claims. (Cl. 103—63.)

1. A piston mechanism for pumps including an expansible cup fixed on the piston rod and normally spaced slightly from the walls of the pump-barrel, a disc below the cup and adapted to expand the same, the disc being arranged for limited sliding movement of a predetermined extent on the rod, another cup fixed to the disc and bearing constantly against the walls of the barrel, said latter cup and the disc being orificed, whereby when the rod is moved upwardly on the suction stroke the expansible cup is drawn away from the disc and air may pass therearound and through the orifices, but when the rod is pushed down on its pressure stroke the expansible cup



will be forced against the walls of the barrel and the air passageways are stopped up.

1,414,809. REWIND DEVICE FOR MULTIPLE-PROCESS PRINTING PRESSES. RICHARD T. HOSKING, Saginaw, Mich. Filed Apr. 28, 1921. Serial No. 465,169. 3 Claims. (Cl. 242—55.)

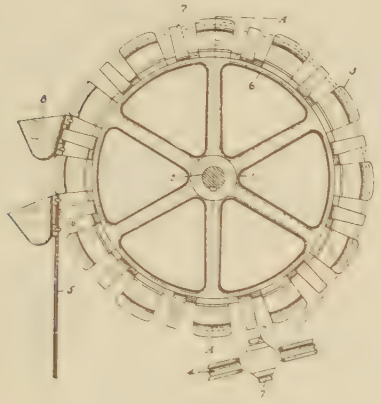


2. In a re-wind device of the class described, the combination of a shaft having removable spools thereon and disks loosely received thereon at the sides of said spools, a pulley fixed to said shaft, and a continuously driven belt so engaging said pulley as to produce a limited and predetermined amount of driving effort, for the purposes set forth.

1,414,810. BUCKET ELEVATOR. WILLIAM WALTER HUDSON, Toronto, Ontario, Canada. Filed Nov. 4, 1919, Serial No. 335,570. Renewed Feb. 23, 1922. Serial No. 538,774. 4 Claims. (Cl. 198—140.)

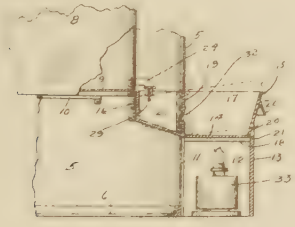
1. The combination with a head wheel having shives circumferentially arranged on the rim thereof, a cable operating over said shives and a bucket carried by said cable, of brackets disposed substantially midway between said shives and projecting outwardly from opposite side

edges of said rim, said brackets being shorter than said shives and with said shives forming cradles, one of which



is adapted to support said bucket during its upward progress around said wheel.

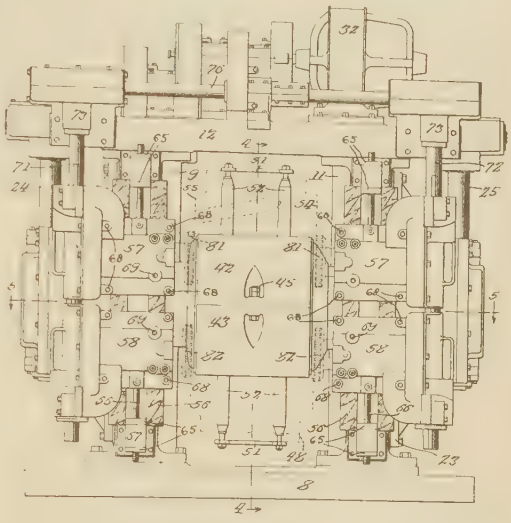
1,414,811. STOCK WATERER. HILDAR E. INGVOLDSTAD, Sioux City, Iowa, assignor to Wm. Warnock Co., Sioux City, Iowa, a Corporation of Iowa. Filed July 29, 1918. Serial No. 247,237. 2 Claims. (Cl. 119—73.)



1. In a stock-waterer, a jacket, a water tank within and spaced from the jacket, the jacket having a side opening extending a distance above the bottom of the tank, a heating compartment including a walled enclosure outside of the jacket and having internal supporting parts, and a trough including side walls, an inner end wall, a bottom and a transverse perforate partition dividing the trough into inner and outer compartments, the trough being positioned with the bottom of its outer compartment within the heating compartment and removably resting on said parts, and its inner compartment extended through said opening to abut and receive water from the tank.

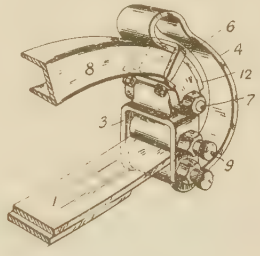
1,414,812. DRUM-TYPE CONTINUOUS-MILLING MACHINE. JOHN R. JOHNSON, Rockford, Ill., assignor to The Ingersoll Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Aug. 30, 1920. Serial No. 406,924. 25 Claims. (Cl. 90—20.)

1. In a milling machine, the combination of a bed plate, laterally spaced upright housings thereon, means for rigidly connecting the upper ends of the housings, a work table revolubly mounted between and upon the housings and constructed for carrying the work-pieces in circumferentially spaced relation, and a pair of spindle heads mounted on each housing, one equipped with a roughing and the other with a finishing surface milling cutter, the cutters being so arranged in opposed relation



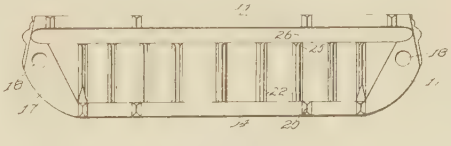
as to successively mill end surfaces of the work-pieces passed between the cutters by rotation of the table.

1,414,813. SPRING FOR MOTOR ROAD VEHICLES. FREDRICK WILLIAM JOHNSTONE, Murrumburrah, New South Wales, Australia. Filed June 29, 1921. Serial No. 481,175. 3 Claims. (Cl. 293—55.)



1. In bearing springs for motor road vehicles, a semi-elliptic laminated metal leaf spring carried at its ends by shackles pivotally secured to the vehicle frame and a bent metal leaf spring associated with one of said shackles adapted when secured at one portion to the front of the vehicle frame and at another portion to said latter shackle to act as a bumper guard to absorb shocks at the forward portion of the vehicle and also as a buffer to said semi-elliptic leaf spring.

1,414,814. RAILROAD APPLIANCE. JAKE JONES, St. Louis, Mo. Filed Feb. 25, 1921. Serial No. 447,694. 1 Claim. (Cl. 104—265.)



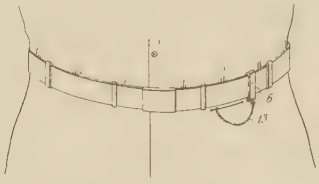
A railroad appliance comprising two castings, one to be placed on the outside of one rail and the other on the inside of the other rail, each casting consisting of a body member having a semi-circular periphery, the surface thereof tapered from a low wall to a high wall, a flange

formed on the peripheral surface of the high wall, transverse ribs located in the body connecting the low and high walls of the inside casting and extending from the low wall to the groove in the outside casting, both of said bodies to be used simultaneously in conjunction with replacing a de-railed truck on to the rails, substantially as specified.

1,414,815. MEDICINAL COMPOUND FOR EXTERNAL USE AS A PLASTER OR OINTMENT. ELIZABETH PARKER KELLEY, Philadelphia, Pa. Filed Feb. 25, 1919. Serial No. 279,169. 3 Claims. (Cl. 167—9.)

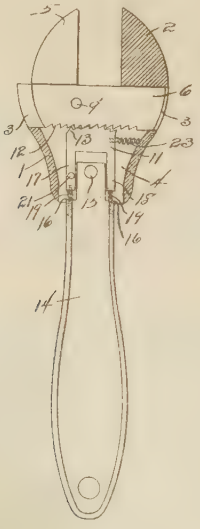
1. A medicinal plaster, ointment, or poultice for external use, embodying ichthyol, belladonna, and benzoinated lard.

1,414,816. BELT CLASP. JOHN F. KILLION, Attleboro, Mass., assignor to Whiting Chain Company, a Corporation of Massachusetts. Filed Feb. 7, 1922. Serial No. 534,660. 3 Claims. (Cl. 24—3.)



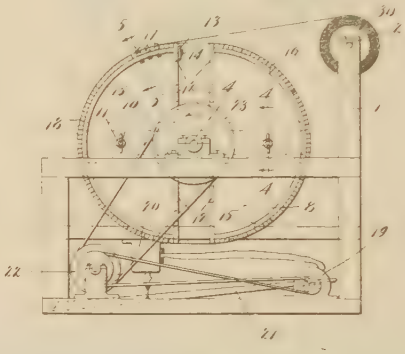
1. A belt clasp consisting of a strip bent upon itself to encircle a belt and made of resilient metal which normally assumes a position with the ends of the strips spaced apart to an open position permitting entrance of the belt within the strip, a catch mounted upon one end of the strip for movement thereon to latching and unlatching positions and a chain suspended from the strip, the catch being adapted, when in latching position, to engage the opposite end of the strip when the ends of the strips are brought together to hold said ends together against the spring tension of the strip and when in unlatching position to release the opposite end of the strip to permit the spring tension of the strip to separate the ends thereof.

1,414,817. WRENCH. OTEY R. KIRKPATRICK, Fort Worth, Tex., assignor of one-third to C. A. Puckett and one-third to C. M. Mitchell, Fort Worth, Tex. Filed Aug. 23, 1921. Serial No. 494,622. 3 Claims. (Cl. 81—126.)



1. A wrench having a body provided with transverse and longitudinal slots therethrough and a jaw integral therewith, a movable jaw having an integral shank at right angles thereto and movable in said transverse slot and ratchet teeth formed on said shank, a handle projected into said longitudinal slot and pivotally connected to said body, a spring actuated dog movable longitudinally on and with said handle and provided with teeth for engaging the teeth of said shank for locking said shank in fixed positions, and a stud rigid with said dog for moving said dog longitudinally on said handle.

1,414,818. MACHINE FOR INSPECTING AND CUTTING FABRICS. SAMUEL KISLEVITZ, New York, N. Y., assignor to Kaumagraph Company, New York, N. Y., a Corporation of New York. Filed Apr. 28, 1920. Serial No. 377,293. 7 Claims. (Cl. 242—110.)



3. In a machine for inspecting and cutting fabrics, the combination of an expansible winding drum, a peripheral series of adjustable bars mounted on said drum some of said bars being made circumferentially adjustable thereon, means for gripping one end of the fabric, means for temporarily holding the layers of fabric in position for the cutting operation, and driving mechanism for rotating the drum at different speeds, substantially as described.

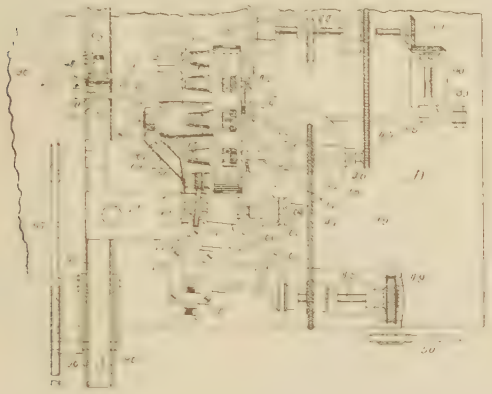
1,414,819. VALVE-REPAIR TOOL. HENRY PHILLIP KRAFT, Ridgewood, N. J. Original application filed Feb. 20, 1918, Serial No. 218,301. Divided and this application filed Mar. 11, 1920. Serial No. 364,994. 3 Claims. (Cl. 7—1.)

2. A tire valve repair tool comprising a rod portion and a screwdriver swiveled upon said rod portion, said screwdriver comprising a projecting screwdriver proper and an annular operating portion connected to and surrounding the screwdriver in spaced relationship, whereby the valve casing may be located between the screwdriver proper and the operating portion.

1,414,820. THIMBLE-DECORATING DEVICE. FRANK J. KRISTOFEK, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Dec. 8, 1919. Serial No. 343,238. 10 Claims. (Cl. 91—51.)

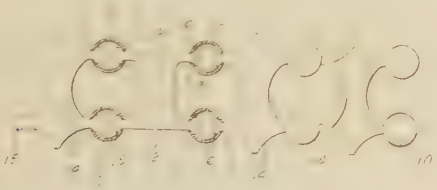
1. A device for enameling an article, means for applying the enamel evenly in a band to the surface of the article,

means for automatically grasping the article and removing it from the applying means said grasping means being adapted to automatically deposit the article on an endless carrier.



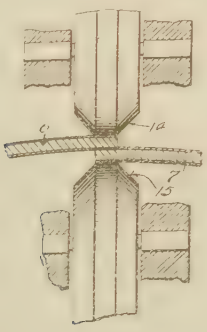
9. A decorating device having means for receiving a series of thimbles, means for automatically applying a decorating band to each thimble, means for automatically depositing each thimble after it is decorated, and means for baking the decoration on the thimbles.

1,414,821. BEAD CHAIN. CHARLES P. KUEHNER, North Providence, R. I. Filed Aug. 11, 1921. Serial No. 491,563. 4 Claims. (Cl. 59—80.)



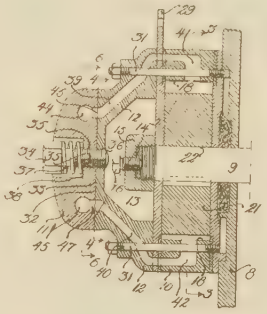
1. A bead fabric comprising in combination a plurality of spaced apart rows of hollow beads the beads in each row being spaced apart, and links having heads inclosed in said beads connecting together said rows and the beads in each row.

1,414,822. METHOD OF ELECTRICALLY WELDING GALVANIZED METAL SHEETS OR PARTS. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 28, 1919. Serial No. 273,576. 12 Claims. (Cl. 219—10.)



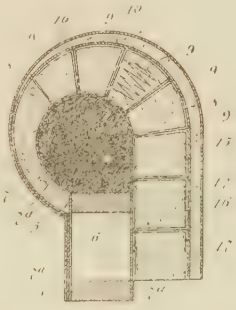
1. The method of electrically joining together galvanized sheets or parts, which consists in first exposing a portion of the body of the parts to be joined, through the galvanizing or other coating thereof, and then applying an electric current through the parts in the region of the exposed portions of the body.

1,414,823. COMBINED SPARK TIMER AND OIL PUMP. JOHN MCCLELLAND, Philadelphia, Pa. Filed July 7, 1920. Serial No. 394,457. 5 Claims. (Cl. 200—26.)



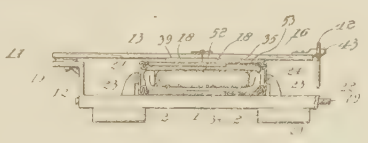
2. A device of the character described including a drum having inlet and outlet ports communicating with the interior thereof; contacting members spaced apart within said drum; means within said drum adapted to electrically contact and complete a circuit through said members and also operative to draw fluid through one of said ports into the drum and force said fluid out of the drum through the other of said ports; and means for moving said drum so that the drum will oscillate relatively to said means whereby electric contact with said members may be advanced or retarded; substantially as described.

1,414,824. UPHOLSTERED CURVED ARM, BACK, SEAT, ETC. CHARLES C. MEUTSCH, Chicago, Ill. Filed Oct. 17, 1918. Serial No. 258,534. 3 Claims. (Cl. 155—184.)



1. The herein described upholstered devices, comprising in combination a curved supporting structure, tapering coiled springs seated thereon at their smaller end and projecting outwardly therefrom, a fabric pocket for each of said springs the opposing adjacent sides of which are in parallel planes, and an enclosing cover therefor.

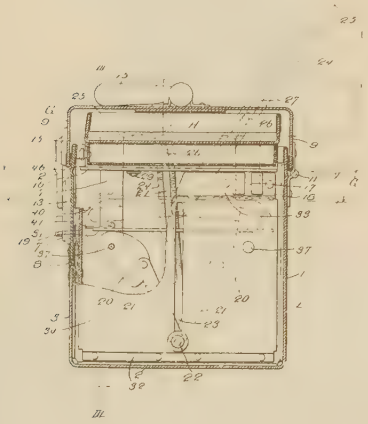
1,414,825. CUSHION-MAKING MACHINE. CHARLES C. MEUTSCH, Chicago, Ill. Filed Feb. 14, 1919. Serial No. 276,966. 11 Claims. (Cl. 226—44.)



1. A machine of the type described comprising a portable pan having transversely extensible top and bottom

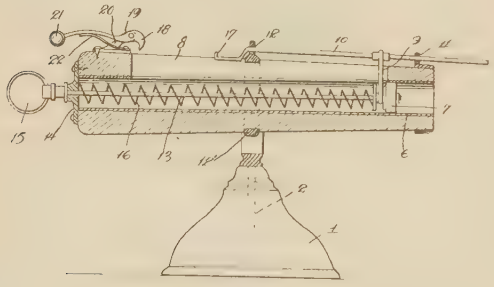
members, slidable sides and means for interlocking the same with said members, means for forcing said top member downwardly into interlocking position with said sides, and means for forcing said sides toward each other, whereby a padded frame contained within said pan will be compressed vertically and horizontally.

1,414,826. TOOL BOX. MAX MEYERSON, New York, N. Y. Filed Feb. 11, 1918. Serial No. 216,663. 13 Claims. (Cl. 190—30.)



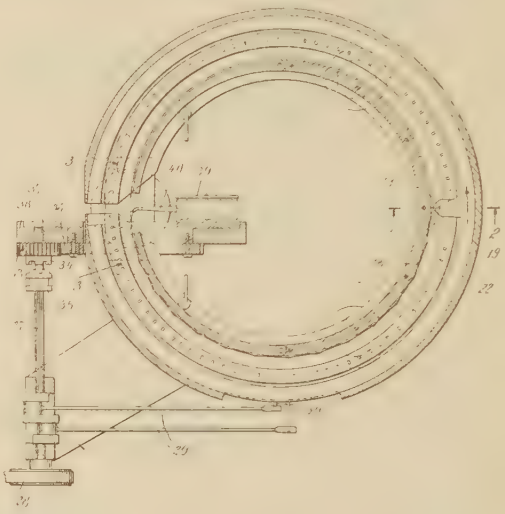
8. A tool box comprising a body portion, a displaceable cover therefor, a displaceable member within the box, a cam operable to displace said member, and connections between the cover and the cam whereby displacement of the cover will move the cam from one position to another to cause the cam to lift and support the weight of the displaceable member.

1,414,827. TOY CANNON. PETER PETERSON, Minneapolis, Minn. Filed Jan. 6, 1921. Serial No. 435,390. 2 Claims. (Cl. 124—12.)



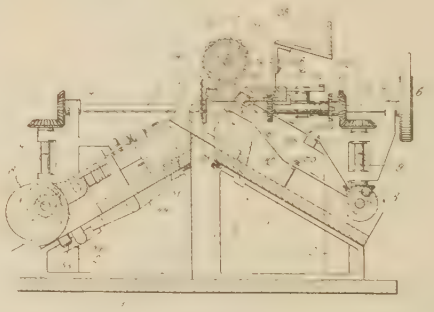
1. A toy cannon comprising a pivotally mounted barrel having a central bore, a sleeve lining within the bore, the said barrel also having a longitudinal slot communicating with the said bore, a plunger element having a guide arm attached thereto and extending upwardly through the slot, a guide rod above the said barrel and connected with the said guide arm, the said guide rod being mounted for longitudinal sliding movement, a plunger rod connected to the said plunger within the bore and extending longitudinally through the same, a collar at one end of the barrel having the said plunger rod slidably extended therethrough, a coil spring interposed between the plunger and the said collar to normally force the said plunger outwardly, a trigger member pivotally mounted in one end of the barrel and having a hook end adapted to engage one end of the said guide rod when the said spring is withdrawn whereby the spring may forcibly eject the plunger through the bore when the said guide rod is released by operation of the said trigger.

1,414,828. APPARATUS FOR MAKING GROMMETS. ALPHONSO COMSTOCK PRATT, Erie, Pa. Filed Feb. 14, 1920. Serial No. 358,790. 11 Claims. (Cl. 117—5.)



5. A machine for making grommets, comprising a circular frame to support the grommet and having a gap therein, a rotating shuttle carrying a wire reel adjacent said gap, a traveler on said frame to which the end of the wire is secured, means for advancing said traveler about said frame and across said gap and means for rotating said shuttle to lay the wire spirally upon a core which is formed therefrom during the first revolution of said traveler.

1,414,829. MACHINE FOR MAKING LINK MESH. ALPHONSO COMSTOCK PRATT, Deep River, Conn., assignor to Whiting & Davis Company, a Corporation of Massachusetts. Filed Dec. 27, 1920. Serial No. 433,184. 8 Claims. (Cl. 140—3.)

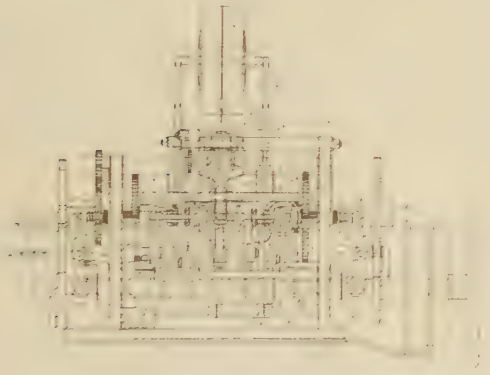


1. In a machine for making link mesh, the combination of a device for supporting a piece of link mesh fabric with its links in a plane, forming tools on one side of the fabric for forming links intermeshing with the links at the edge of the fabric, forming tools on the opposite side of the fabric for forming links intermeshing with those formed by the tools first mentioned, said forming tools cooperating to produce concurrently a plurality of consecutive rows of intermeshing links transversely of the fabric and means for shifting said supporting device and said forming tools relatively one to the other to present different portions of the fabric to the tools to receive links.

1,414,830. LABEL. THOMAS A. REILLY, Central Falls, R. I., assignor to J. & P. Coates (R. I.) Inc., a Corporation of Rhode Island. Filed Jan. 3, 1921. Serial No. 434,752. 1 Claim. (Cl. 40—2.)

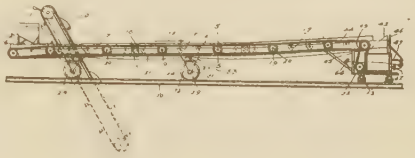
A closure member for the open ends of tubes comprising a paper body shaped to fit the tube end and provided with gummed peripheral tabs adapted to be bent up at an angle to the plane of its body to be attached to the side walls of a tube.

1,414,831. MACHINE OR APPARATUS FOR WRAPPING CAKES OR BLOCKS, SUCH AS CARAMELS, OR OTHER SWEETMEATS, AND THE LIKE. HENRY ROSE, deceased, Gainsborough, England, by William Henry Rose, administrator, Gainsborough, England. Filed Jan. 6, 1921. Serial No. 435,549. 5 Claims. (Cl. 93—5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



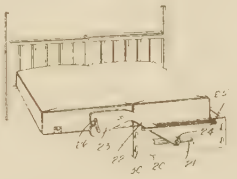
1. In a wrapping machine, the combination with an intermittently partially rotatable mould-wheel, means for feeding wrappers into proximity thereto, means for conveying the articles to be wrapped to a position in line with the recesses in the mould wheel, and means for forcing the articles and wrappers into the recesses in the mould-wheel whereby the wrappers are folded around three sides of the articles, of means for folding the two outstanding portions of the wrappers around the outer, or fourth, side of the articles, the said means comprising a stationary folder which causes one outstanding portion of the wrapper to be first partially bent over the outer, or fourth, side of the article, and a movable folder which folds the other outstanding portion of the said wrapper in a double fold under the aforesaid partially bent portion, the said stationary folder thereafter acting to press and retain both of the aforesaid portions onto the outer, or fourth, side of the article, rotatable and longitudinally movable grippers, for twisting the projecting open ends of the wrappers, for completing the wrapping, the said grippers operating to follow up the shortening of the ends due to the said twisting, means for removing the wrapped articles from the recesses in the mould-wheel, and means for operating the several parts at the proper relative times, all substantially as hereinbefore explained.

1,414,832. EXCAVATING MACHINE. DOMNICK A. ROSSI and FORREST REYNOLDS, Cleveland, Ohio. Filed Sept. 25, 1920. Serial No. 412,695. 4 Claims. (Cl. 37—24.)



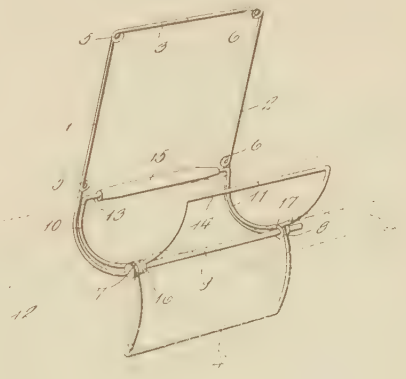
1. In combination with a digging machine; of a receiving hopper therefor, an endless conveyor, means connecting said conveyor to the machine for permitting a limited vertical and side movement of the machine without influencing the conveyor, and means operated by the machine for imparting motion to the conveyor.

1,414,833. FOLDING BED. LOUIS ROTHFELD, New York, N. Y. Filed June 2, 1921. Serial No. 474,451. 2 Claims. (Cl. 5—47.)



1. A convertible article of furniture including a member presenting a base, a seat, a back, said seat being normally affixed with respect to said base member, arms pivotally secured to said base member, said arms being formed with T shaped slots adjacent their outer ends and pins secured to said back and adapted to ride in said slot.

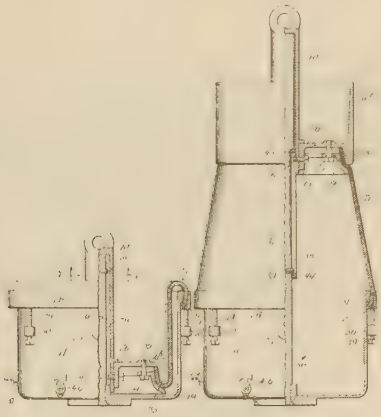
1,414,834. HOSE HOLDER. DRACOS SOUTER, Baton Rouge, La. Filed July 11, 1921. Serial No. 483,843. 2 Claims. (Cl. 248—20.)



2. An improved hose holder comprising a bracket made of a single length of wire bent into substantially rectangular shape with loops made therein to receive fastening means for connecting the bracket to a support, the lower portion of the bracket being curved away from the support and provided with convolutions, a pivot pin held in said convolutions, and a hose holder made also of a single length of wire bent into substantially rectangular

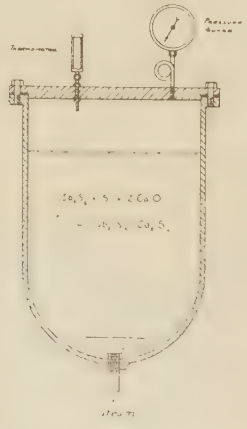
shape and curved to conform with the hose, said holder having convolutions made at substantially central part to rotatably fit about said pivot pin, said holder being also weighted to an upright position, substantially as described.

1,414,835. VEHICLE DUMPING AND JACKING MEANS. GREGORY J. SPOHRER, East Orange, N. J. Filed Aug. 24, 1920. Serial No. 405,622. 25 Claims. (Cl. 138—9.)



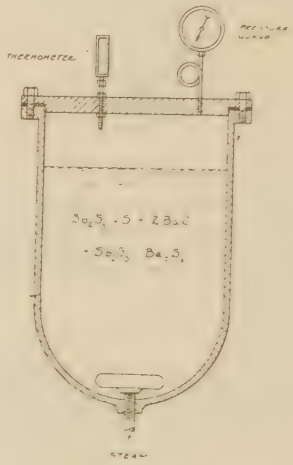
1. A fluid operated extensible and collapsible unit including a cylinder, a head adapted to be actuated by the fluid pressure in the cylinder to move into and out of the same, and flexible fluid-tight connecting means between said cylinder and said head and subject to the fluid pressure to unfold into extended form beyond the cylinder, or to collapse into the cylinder, with the movements of said head.

1,414,836. METHOD OF MAKING PRECIPITATED ANTIMONY SULPHIDE. ARTHUR L. STARK, Elyria, Ohio, assignor to The Stibium Products Company, Elyria, Ohio, a Corporation of Ohio. Filed Nov. 12, 1919. Serial No. 337,408. 6 Claims. (Cl. 34—58.)



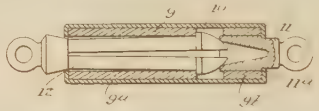
6. In a method of making precipitated antimony sulphide, the steps which consist in mixing finely ground stibnite, sulphur and quick-lime with sufficient water to form a paste, adding the resulting mixture to a body of water, heating under pressure at an elevated temperature, whereby a water-soluble double sulphide of antimony and calcium is obtained, and then adding a suitable acid, whereby antimony pentasulphide is precipitated.

1,414,837. METHOD OF MAKING PRECIPITATED ANTIMONY SULPHIDE. ARTHUR L. STARK, Elyria, Ohio, assignor to The Stibium Products Company, Elyria, Ohio, a Corporation of Ohio. Filed June 1, 1920. Serial No. 385,641. 8 Claims. (Cl. 134—58.)



4. In a method of making precipitated antimony sulphide, the steps which consist in mixing finely ground stibnite, sulphur and a compound capable of forming a water-soluble double salt with antimony together with sufficient water to form a paste, adding the resulting mixture to a body of water in an autoclave, and then injecting steam into such autoclave so as to agitate and heat the mixture and water to a temperature of approximately 145° to 155° C. under a pressure of approximately sixty to eighty pounds, whereby a water-soluble double-sulphide is obtained.

1,414,838. SNAP CATCH. FRED STREET, Philadelphia, Pa. Filed Jan. 7, 1920. Serial No. 349,918. 9 Claims. (Cl. 24—230.)



1. A snap catch comprising a casing, an anchor member adapted to be inserted in the casing and having a shoulder extending laterally from the side thereof, means in the casing adapted to be engaged by the shoulder to retain the member in the casing, resilient means associated with the anchor member for maintaining engagement between the shoulder and said retaining means, and means carried by the casing for disengaging the shoulder to permit withdrawal of the anchor member from the casing.

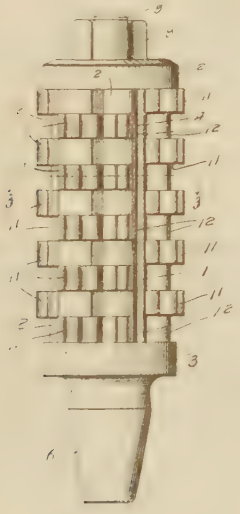
1,414,839. WRENCH. ARTHUR STUARTS, Pleasantville, N. Y. Filed Sept. 26, 1919. Serial No. 326,506. 1 Claim. (Cl. 81—171.)

A wrench having a shank with a handle on one end and a fixed jaw on its other end, a movable jaw arranged on said shank, and an adjusting screw operable to move said movable jaw, and in combination, a nut having recesses therein in the same plane secured to said screw, a locking pin having a portion engageable in any of the recesses in said nut, a shoulder on said pin, a bore in said shank, an apertured wall at one end of said bore,

the said pin extending through and being movable therein, a spring interposed between said shoulder and said wall,

a head on said pin, a recess in said shank, and a projection on said head engageable in the recess in the shank.

1,414,840. FLUE CLEANER. ALBERT W. TERRELL, Newport News, Va. Filed Nov. 18, 1921. Serial No. 516,101. 3 Claims. (Cl. 15—104.15.)



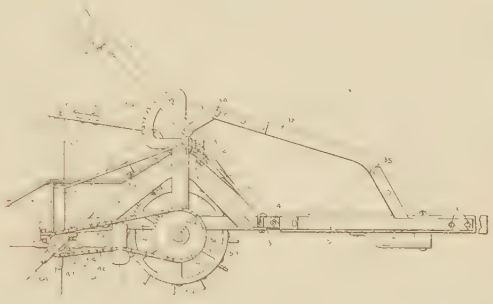
2. A flue cleaner comprising an elongated body, pins grouped about the sides of the body, and a plurality of cutting elements pivotally mounted upon each of the pins in spaced relation, each of the cutting elements comprising a segment portion toothed at its outer edge and a laterally extending hub, the hubs of the cutting elements mounted on each of the pins facing in the same direction and the hubs of intermediate and alternate rows of cutting elements facing in opposite directions whereby to give the cutting elements a staggered arrangement.

1,414,841. HINGE JOINT FOR FACEPLATE DOORS AND THE LIKE. GEORGE B. THOMAS, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 27, 1921. Serial No. 524,971. 3 Claims. (Cl. 16—128.)

2. A hinge joint of the type described, comprising a plate having a door opening with lateral recesses extended from opposite sides thereof, a door for said opening having studs adapted to enter said recesses, and

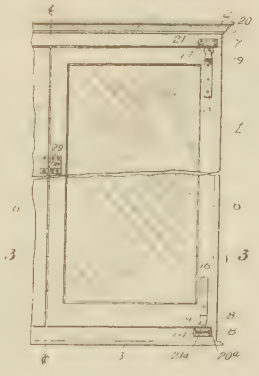
straps apertured to receive said studs and having their ends angled over opposite faces of the plate to secure said parts together.

1,414,842. PACKER AND CIRCULAR HARROW. OTTO VOELKER, Palmer, Kans. Filed Nov. 26, 1920. Serial No. 426,509. 7 Claims. (Cl. 55—85.)



1. An agricultural implement comprising a main frame, a packer mechanism rotatably mounted in said main frame, an upstanding frame member mounted on said frame, a guard plate mounted on said upstanding frame member, a harrow mechanism mounted in said main frame rearwardly of said packer mechanism, a draft tongue connected with said main frame, and adjusting mechanism mounted on said main frame and connected with said draft tongue.

1,414,843. DOOR STRUCTURE FOR DISPLAY CABINETS. JOHN VOSS, Evansville, Ind. Filed Mar. 4, 1920, Serial No. 363,218. Renewed Dec. 14, 1921. Serial No. 522,443. 9 Claims. (Cl. 20—16.)

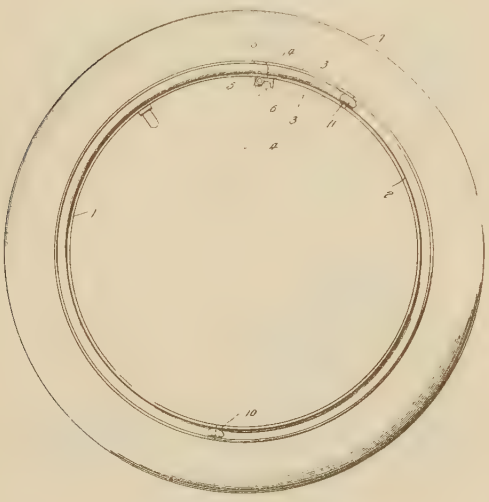


1. In a door structure for display cabinets or the like, the combination with a door or closure for the cabinet, of upper and lower hinge members in the form of balls and mounted on the door, and tracks for the balls extending into the cabinet toward the rear thereof, the balls each provided with a pivotal axis diametrically of the ball.

1,414,844. DEMOUNTABLE RIM. CHARLES A. VRATIL, Pawnee Rock, Kans. Filed Apr. 12, 1921. Serial No. 460,744. 2 Claims. (Cl. 301—33.)

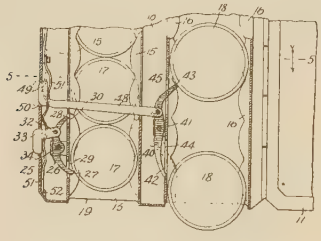
1. A sectional demountable rim, contiguous ends of adjacent sections having terminal projections to overlap

the joint to insure alinement and prevent displacement of the sections, and an operating lever mounted on an end of one of the sections and having a projection adja-



cent its pivotal end to extend between the joint of said section and the adjacent section to positively break the joint inwardly and to engage the end of the swinging section and move the same outwardly.

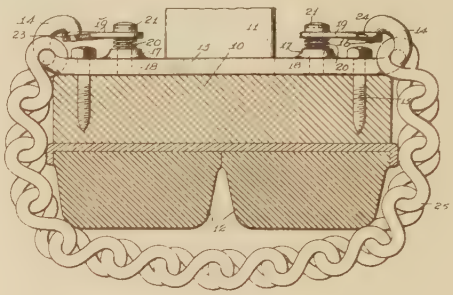
1,414,845. COIN HOLDER. RALPH WALLENSTEIN, Providence, R. I. Filed Apr. 26, 1921. Serial No. 464,646. 2 Claims. (Cl. 133—5.)



2. A coin holder comprising a casing having provided at its lower end a plurality of unobstructed coin discharge openings, guideways in alinement with said coin discharge openings, retaining and releasing levers fulcrumed in the casing and associated with the guideways to control the discharge of the coins from the casing, links pivotally connected to said levers and projecting beyond the casing to serve as an operating means for the levers, and a continuous spring so suspended from the casing and cooperating with the links as to hold the levers in their coin retaining positions and allowing operation of each lever independently.

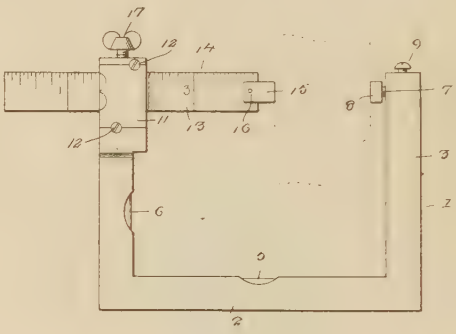
1,414,846. ANTISKID CHAIN ANCHOR. CONRAD S. WEIMAR, Elizabeth, N. J. Filed Feb. 23, 1921. Serial No. 447,043. 2 Claims. (Cl. 152—2.)

1. An anti-skid chain anchor, including a plate adapted to be attached to a wheel felly, a hook integral with one end of the plate providing a point of attachment for an end link of an anti-skid chain, a pivoted spring held



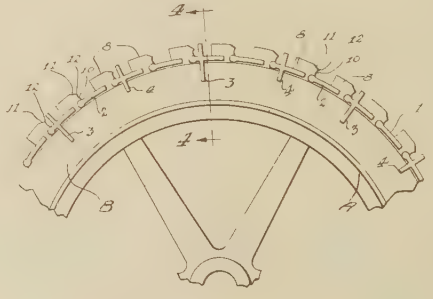
arm associated with the plate and having a perforation in its free end, and a reduced extremity at the nose of the hook engageable in the perforation.

1,414,847. TOOL. ELBIE WELLS, Hamilton, Ohio. Filed Nov. 16, 1920. Serial No. 424,392. 1 Claim. (Cl. 33—143.)



A tool comprising a straight base having a level bulb embedded therein below the inner surface thereof, right angular straight arms extending from the ends of the base in the same direction, a block removably secured to the inner face at the outer end of one of the arms, the second arm being of a greater length than the first mentioned arm and having the outer portion thereof thickened, a scale blade slidable through the said thickened portion having a head on the inner end thereof arranged opposite the first mentioned head, means for adjustably binding the scale in the thickened portion of the said arm, and a level bulb below the inner edge of one of the arms.

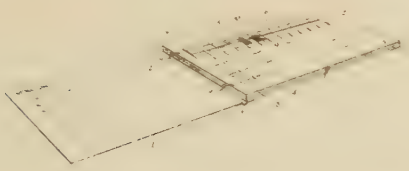
1,414,848. TIRE CHAIN. MICHAEL WENZOWITZ, Chicago, Ill. Filed Oct. 17, 1921. Serial No. 508,116. 5 Claims. (Cl. 152—16.)



1. In an antiskid chain, a plurality of connecting links, a plurality of armored links having lugs formed

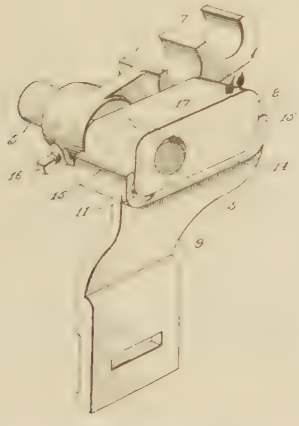
thereon and extending transversely to the links, said links having their outer edges concavely curved and beveled providing sharp edges intermediate the outer and inner edges of the lugs.

1,414,849. EDUCATIONAL GAME. JOHN R. WILLIAMS, Walnutport, Pa. Filed May 23, 1921. Serial No. 471,628. 8 Claims. (Cl. 35—2.)



1. An educational device, comprising a group of leaves having matching slots, a back and a cover, with the back formed with an elongated recess, a row of unit members normally held end to end in the recess and projecting through matching slots in the several leaves to be accessible to the user irrespective of whether or not all the leaves be closed at one time, and each leaf having located on the margin of the slot an imprint for aiding the pupil in properly placing the blocks in the proper order in the slot.

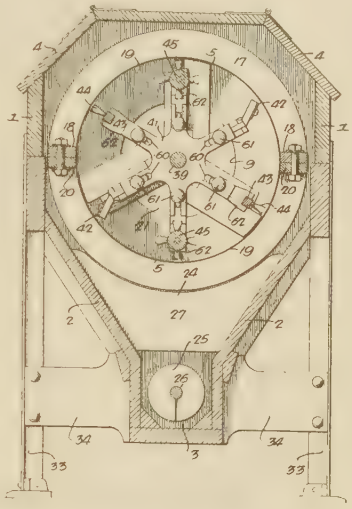
1,414,850. WHIP ROLL FOR LOOMS. WILLIAM B. WILLIAMS, Greenville, S. C. Filed Feb. 9, 1921. Serial No. 443,555. 4 Claims. (Cl. 64—24.)



1. In a whip-roll structure for looms, a rock-shaft carrying the whip-roll-arms, a stationary journal-bracket adapted for attachment to the frame of the loom, and an oil-impregnated wood journal-block mounted on the same having a bearing for said rock-shaft.

1,414,851. BOLTING MACHINE. AUGUSTUS WOLF, Chambersburg, Pa. Filed May 22, 1920. Serial No. 383,452. 8 Claims. (Cl. 83—51.)

1. The combination in a bolting machine of a rotary reel; a cleaning member within the same including a shaft extending eccentrically through the ends of the reel; and means for adjustably supporting said cleaning member in position to cause it to operate mainly upon

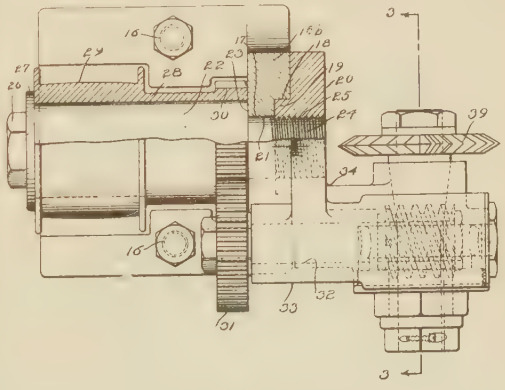


the upper inside portions of said reel while also permitting it to operat upon the remainder thereof.

1,414,852. METHOD OF PRODUCING CHEMICAL COMPOUNDS FROM ACETYLENE AND HYDROHALOGENIC ACIDS. WALTER BAUER, Darmstadt, Germany, assignor to The Firm Röhm & Haas Aktiengesellschaft, Darmstadt (Free State of Hessia), Germany. Filed Sept. 1, 1921. Serial No. 497,671. 3 Claims. (Cl. 260—166.)

1. A method of producing hydrohalogenic acid addition products of acetylene consisting in exposing a mixture of acetylene and a hydrohalogenic acid to the action of light.

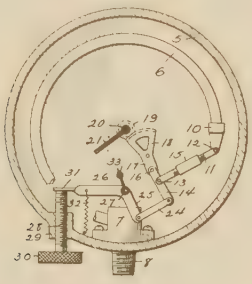
1,414,853. THREAD-MILLING ATTACHMENT FOR LATHES. JOHN R. BECKETT, Somerville, Mass. Filed Oct. 14, 1918. Serial No. 257,967. 6 Claims. (Cl. 10—154.)



1. A milling attachment for lathes, bodily attachable to and detachable from the lathe carriage as a separate unit, comprising a base having journaled therein a driving member bearing a spur pinion and having provision for clamping to the tool post block of a lathe, a tool holding bracket mounted for angular adjustment about an axis concentric with said driving member, a shaft journaled in said bracket having fixed therein a gear

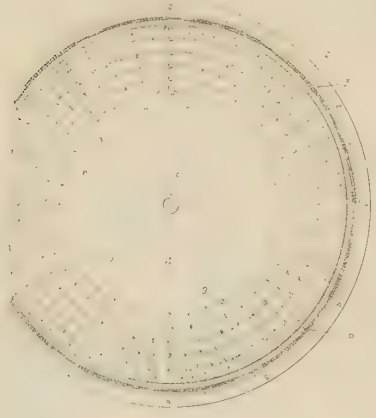
meshing with said pinion throughout the range of angular adjustment of said bracket, a worm also fixed on said shaft, and a milling cutter mounted on said bracket having rigid therewith a worm wheel meshing with said worm, said milling cutter mounted so that the axis of adjustment of said bracket extends diametrically and transversely central thereof.

1,414,854. ABSOLUTE-PRESSURE GAUGE. CHARLES HAROLD BERRY, Detroit, Mich. Original application filed May 12, 1920, Serial No. 380,879. Divided and this application filed Dec. 10, 1920. Serial No. 429,734. 5 Claims. (Cl. 73—109.)



1. A gauge comprising a dial, a pressure actuated element, a pointer operable over the dial, connections between the pressure actuated element and the pointer for moving the pointer in accordance with the movements of said pressure actuated element and manually operable settable means for modifying the action of the first named connections upon the pointer to compensate for variations in atmospheric pressure.

1,414,855. TIME METER. RALPH E. BISHOP, Indianapolis, Ind. Filed Mar. 18, 1921. Serial No. 453,196. 1 Claim. (Cl. 235—78.)

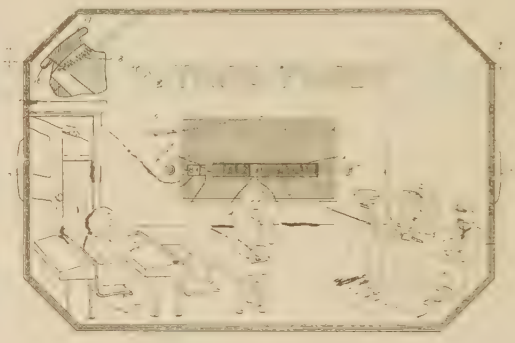


Means for determining the time required for running a designated number of picture film of a prescribed length, comprising a member having hour and minute graduations thereon, a rotatable member for cooperation with the first member having a plurality of circumferential and radial divisional graduations thereon, said circumferential and radial graduations having designating numerals for co-operation with the hour and minute graduations for successively determining the time required for running a prescribed number of films.

1,414,856. DECALCOMANIA AND DRYING MACHINE FOR POTTERY. HERMANN BOGATY, Philadelphia, and JOSEPH L. BUCKLEY, Pittsburgh, Pa., assignors to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 18, 1921. Serial No. 485,715. 3 Claims. (Cl. 41—1.)

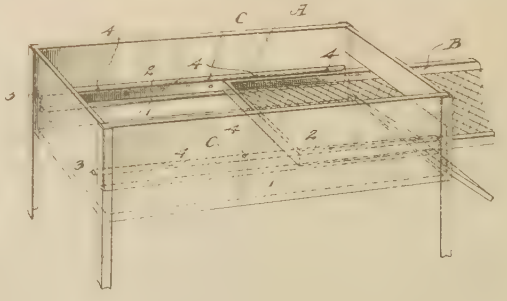
1. The combination in apparatus for applying decalcomanias to pottery, of a frame; an endless belt conveyer; a series of trays on the conveyer to carry the pottery; and two drying chambers spaced apart, one chamber being arranged to dry the adhesive which is first applied to the pottery, the other chamber being arranged to dry the decalcomanias after they have been secured to the pottery by the adhesive.

1,414,857. EDUCATIONAL TOY. JACOB M. BRANDVEIN, New York, N. Y. Filed Apr. 29, 1921. Serial No. 465,476. 4 Claims. (Cl. 35—2.)



1. A toy of the character described, including a casing, having a pair of openings therein, discs mounted to rotate in the casing and having numerals and arithmetical signs thereon adapted to register with the openings upon rotation of the discs, means whereby rotation of the discs to expose the problem in one opening automatically moves the numeral representing the answer to the problem into registration with the other opening, and a spring held shutter normally concealing said answer.

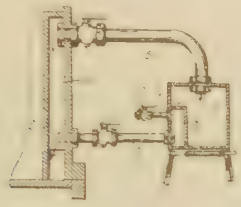
1,414,858. INCUBATOR. LUCIUS A. BROWN, Clay Center, Nebr., assignor to The M. M. Johnson Company, Clay Center, Nebr., a Corporation of Nebraska. Filed Aug. 9, 1921. Serial No. 490,993. 14 Claims. (Cl. 119—35.)



1. In an incubator, the combination with a housing, of a tray supporting member constituting a unitary at-

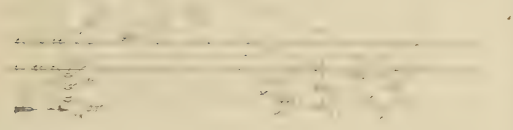
tachment applicable to the wall of the housing, said supporting member having means for conveying air into the egg compartment of said incubator.

1,414,859. APPARATUS FOR THE PRESERVATION OF MEAT AND OTHER ALIMENTARY SUBSTANCES. LOUIS FREDERICK BULLÔT, Sydney, New South Wales, Australia. Filed May 14, 1920. Serial No. 381,367. 3 Claims. (Cl. 99—2.)



3. In an apparatus for the preservation of meat and other alimentary substances, the combination of a treatment chamber having a V-shaped passage therein communicating with the bottom thereof, combustion chambers disposed exteriorly of the treatment chamber, and pipes connecting the upper and lower portions of the combustion chambers with the treatment chamber for respectively admitting fumes into the treatment chamber and discharging air from the latter chamber into the combustion chambers, the fume pipes discharging into the V-shaped passage of the treatment chamber.

1,414,860. TRAIN CONTROL. ISRAEL BUTLER, Buffalo, N. Y., assignor of one-half to James I. Brunson and Griffin A. Saunders. Filed Feb. 14, 1921, Serial No. 444,808. Renewed Mar. 8, 1922. Serial No. 542,167. 5 Claims. (Cl. 246—184.)



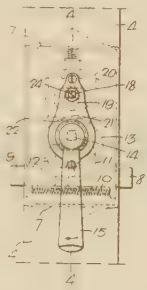
1. The combination with a railway electric block signal system, of a motor for cutting off the power of the train, a motor for applying the brakes, a motor for releasing the brakes, means controlled by the signal for successively operating the motors and means whereby the brake applying motor will be again operated to stop the train after the operation of the brake releasing motor.

1,414,861. CONTAINER. HERBERT L. CARPENTER, Brooklyn, N. Y. Filed Apr. 8, 1921. Serial No. 459,616. 23 Claims. (Cl. 217—91.)

1. A container comprising a hollow body portion, a head portion for an end of said body portion, said head portion being inserted into the end of the body portion, a flange portion extending outwardly from the upper end of said head portion and adapted to engage and seal the edge of the body portion, a flanged rim engaging the top of

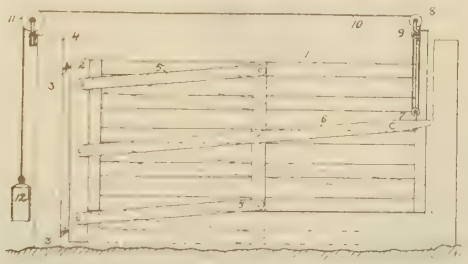
the head and the side of the body portion, and means engaging with the rim, body, and head portion to fasten the rim, the body and the head portion together.

1,414,862. DOOR LOCK. SAMUEL SALVATORE COLAVITA, Philadelphia, Pa. Filed May 11, 1921. Serial No. 468,597. 4 Claims. (Cl. 70—29.)



2. The combination of two doors; a parting strip between the two doors; a lock casing mounted in the parting strip; a spindle having a rocker; two sliding bolts independently mounted in the casing and arranged to be withdrawn by the rocker; a spring for projecting the bolts; a handle on each end of the spindle; a locking mechanism engaging the bolt-operating mechanism when projected; and means for actuating the locking mechanism consisting of a spindle having a knob at one end and a key engaging means at the opposite end.

1,414,863. FARM GATE. AARON H. CRISSEY, Lansing, Mich. Filed Jan. 20, 1921. Serial No. 438,720. 1 Claim. (Cl. 39—81.)

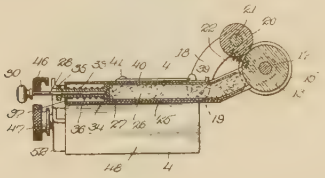


In a farm gate, a gate post, a swinging post having hinged connection with the gate post; a gate proper; a pair of parallel bars each of which has pivotal connection at one end with the swinging post, and at the opposite end with the gate at a point in line with the vertical center thereof; a lever having pivotal connection with the swinging post at one end, and at its middle with the gate at a point in line with the vertical center thereof; and a tackle rig in connection with the gate and lever for counterbalancing the gate.

1,414,864. FUSE PLUG. HENRY N. DAVIS, Independence, Mo. Filed July 8, 1920. Serial No. 394,687. 4 Claims. (Cl. 200—130.)

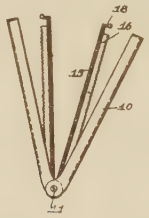
1. As a new article of manufacture, a fuse plug consisting of two members, one of said members comprising a solid body portion of insulating material having a passageway therein, the other of said members comprising a fuse extending from end to end of the passageway.

1,414,865. RIBBON-INKING ATTACHMENT FOR TYPEWRITERS. HECTOR E. DELBARE, Chicago, Ill. Filed Mar. 30, 1921. Serial No. 457,107. 3 Claims. (Cl. 197—171.)



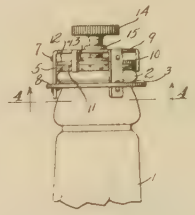
1. An automatic ribbon inking attachment for typewriters comprising an ink distributing roller; a spring-pressed pressure roller for yieldingly holding the ribbon in contact with the distributing roller to rotate the latter as the ribbon is intermittently moved; an axially movable tube containing an ink absorbing element yieldingly held in contact with the distributing roller and a spring to hold said element in contact with said distributing roller for distributing ink on the ribbon.

1,414,866. HAND BAG. JOSEPH OTTO DOERSCHING, West Hoboken, N. J. Filed Sept. 11, 1920. Serial No. 409,567. 1 Claim. (Cl. 150—29.)



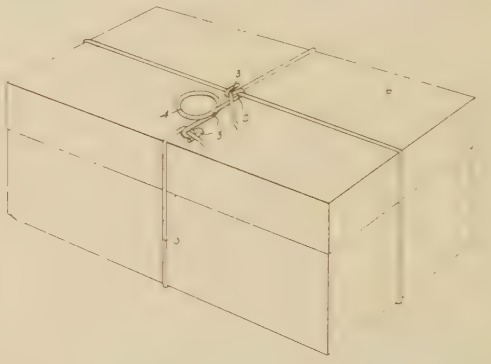
A receptacle including a main and a supplemental body, a flange extending at a right angle from said main body, a serrated flange extending also at a right angle from said supplemental body, whereby when both of said flanges and the inner faces of said main and supplemental bodies are combined, these parts will present a substantially closed groove, a bag, a bead forming a part of said bag and adapted to extend into said groove, and means adapted to hold these parts together when in their normal position, said means comprising a plurality of grooved portions indented on the main flange of said supplemental body, a plurality of slots aligned with said grooves of said supplemental body, and located on the flange of said main body, and a plurality of catches riveted in each of said grooves, each having a tongue portion adapted to snap into said slots thereby holding the two bodies locked.

1,414,867. BOTTLE CLOSURE. JOHN W. DUDLEY, Brooklyn, N. Y. Filed Oct. 25, 1921. Serial No. 510,238. 1 Claim. (Cl. 215—88.)



A closure for bottles, comprising a clamping plate having a rough central portion, a packing member carried by said clamping plate on one surface thereof, an outer plate having a threaded aperture, a screw threaded into said threaded aperture and bearing against said raised portion for pressing the clamping plate and packing downwardly, said outer plate being provided with a plurality of long fingers and a plurality of short fingers spaced between the longer fingers, said short fingers acting to center said clamping plate, said long fingers having an outwardly pressed projection for each end and an inwardly extending projection near the outer end adapted to interlock with a bottle, and a ring surrounding said long fingers and movable parallel to the axis of the clamping screw for causing the inwardly extending projection on said long fingers to interlock with the bottle when the ring is in one position and to permit said projection to move away from the bottle when the ring is in another position.

1,414,868. PACKAGE TIE. WILLIAM HECTOR DUVARNEY, Derry, N. H. Filed Apr. 13, 1921. Serial No. 460,890. 1 Claim. (Cl. 24—18.)

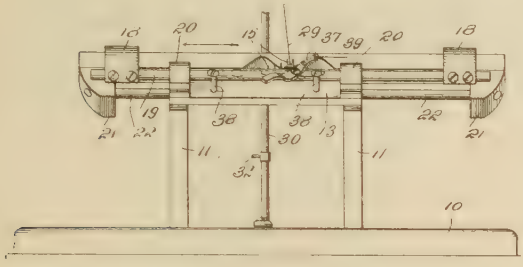


A package tie consisting of a single length of wire coiled intermediate its ends and having its extremities bent into compound curvature providing a pair of angular or V-shaped recesses at both ends for the reception of a flexible connecting device, said extremities being located at opposite sides of the wire but in the same plane and at right angles to the plane of the coiled intermediate portion.

1,414,869. TOY KNITTING MACHINE. LUIS GEORGE EGGER, New York, N. Y. Filed Apr. 30, 1920. Serial No. 377,877. 1 Claim. (Cl. 66—28.)

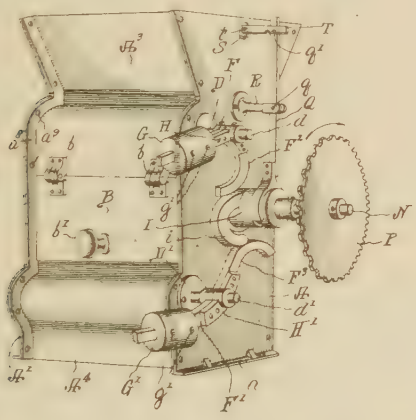
A knitting machine comprising a base, standards rising therefrom and formed with openings, a needle bed supported on the standards and having transverse parallel grooves, needles sliding in the grooves and each including a pivoted latch, a cam bar slidable across said bed and formed with a cam projection engageable with the needles whereby to open the latches thereof in successive order, a rod terminally connected with said bar and slidable

through the openings in said standards, a member connecting the standards and formed with spaced apertured



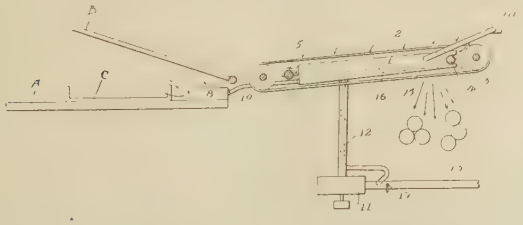
lugs, a second rod connected with said bar and slidable through said lugs, and a thread holder mounted on said base.

1,414,870. HOPPER FOR USE IN FEEDING FINELY-DIVIDED FUEL. JAMES FISHER, New Orleans, La. Filed Apr. 14, 1921. Serial No. 461,357. 6 Claims. (Cl. 221—112.)



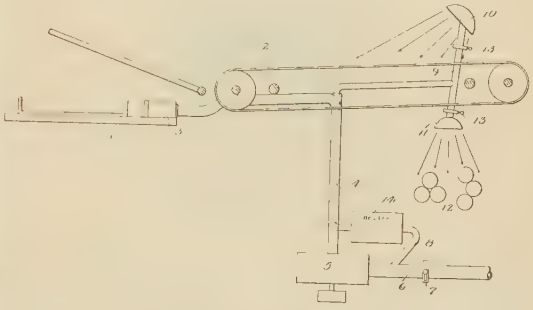
1. A hopper for use in feeding finely divided fuel to furnaces, comprising a casing open at the top and bottom, a pair of doors hinged transversely of said casing and mounted one above the other but spaced apart, seats for said doors provided on the interior of said casing above said doors, respectively, said seats holding said doors in a position slightly inclined from the horizontal, counterweights normally holding said doors in the closed position against said seats, and a cam arrangement, with means for operating same, for alternately tripping said doors against the action of said counterweight.

1,414,871. ATTACHMENT FOR PRINTING PRESSES. JACOB FRANKLIN FREDERICK, Chicago, Ill. Filed Apr. 3, 1920. Serial No. 371,073. 8 Claims. (Cl. 101—335.)



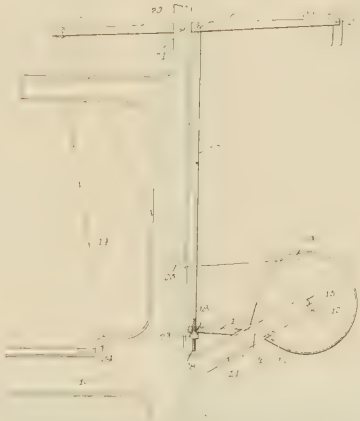
1. In combination with a printing press embodying a jogger board and a plurality of traveling tapes, of a casing shaped and constructed to be arranged between the moving tapes and provided with a plurality of air intake holes, means tending to create a vacuum in the casing, and a plurality of nozzles arranged around the jogger board and communicating with said casing.

1,414,872. ATTACHMENT FOR PRINTING PRESSES. JACOB FRANKLIN FREDERICK, Chicago, Ill. Filed Aug. 13, 1920. Serial No. 403,259. 11 Claims. (Cl. 101—416.)



1. An attachment for printing press embodying a jogger-board and ink rolls comprising a suction fan for directing air from the jogger board, an upper nozzle for discharging air currents upon the traveling sheets, a lower nozzle for discharging air upon the ink rolls, and a conduit receiving air from said fan.

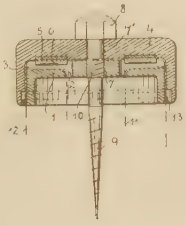
1,414,873. LET-OFF MECHANISM FOR LOOMS. RUDOLPH GLASER, Haledon, N. J. Filed Sept. 3, 1920. Serial No. 407,879. 3 Claims. (Cl. 139—58.)



3. In an automatic let-off mechanism for looms, the combination with the warp beam, of a weight arm pivoted at one extremity to the warp beam support and provided with an aperture in its opposite extremity, a friction brake band encircling the warp beam and having connection at its opposite ends with the support and the weight arm adjacent its pivot whereby the weight of the arm when free to move will serve to effect contraction of the brake band about the beam to retard the rotation thereof, a rock lever pivoted to the loom frame and having a thread guide at one extremity over which the threads leading from the beam are trained, a weight supported by the opposite extremity of the rock lever, a lift rod connected to the weight arm of the rock lever adjacent its pivot, the lower end of said lift rod adapted to be freely received through the aperture in the weight arm,

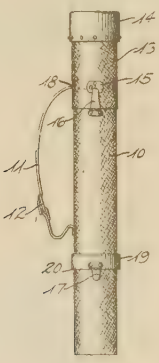
and an adjustable stop carried by the lower end thereof and adapted to coact with the free extremity of the weight arm when excessive tension of the warp threads actuate the rock lever whereby the weight arm is rendered inactive.

1,414,874. JUNCTION BOX FOR ELECTRIC SUPPLY MAINS. ALEXANDER GRAF, Berlin-Hermsdorf, Germany. Filed Nov. 28, 1919. Serial No. 341,226. 2 Claims. (Cl. 173—324.)



1. A junction box for electric supply mains and branch wires comprising a base with holes passing from the bottom to the top and grooves joining on the holes at the top, the holes and grooves being adapted to receive the mains and wires, a ring of insulating material fitting round the lower edge of the said base and adapted to hold the mains and wires in the said grooves, a cap with metal strips having ribs fitting into the said grooves, and means for holding the cap and base together.

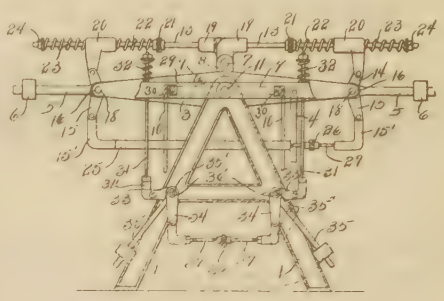
1,414,875. GOLF BAG. ROY F. HANAFORD, Brooklyn, N. Y. Filed July 25, 1917. Serial No. 182,607. 5 Claims. (Cl. 150—1.5.)



1. In combination, a golf bag, a cover member engageable over the open end of the bag as a cover therefor and engageable over the bottom of the bag as a reinforcement and protector for the same, means for securing said cover member on the bag in either of said positions, said cover member having a keeper passage through one of its side walls, and a handle on the bag adapted to be passed through said keeper passage in one position of the cover member on the bag.

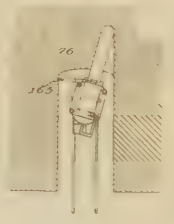
1,414,876. POWER JACK. FRED. D. HOFFMAN, Fort Worth, Tex., assignor to P. E. Miller, Fort Worth, Tex. Filed Nov. 26, 1921. Serial No. 517,893. 8 Claims. (Cl. 74—14.)

1. A power jack comprising a frame and pivot shaft therein, an oscillating walking beam mounted on said shaft and provided with pendulums, one at each end, pivotally connected thereto at equally distant points from said pivot shaft, bell crank levers laterally and adjustably connected to said pendulums, a Y-lever rigid with said



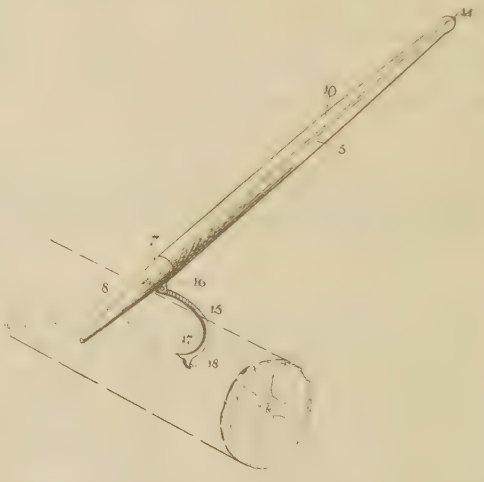
pivot shaft for operating said shaft, yieldable means connecting said Y-lever to said levers, and means for actuating said oscillating walking beam.

1,414,877. MINING APPARATUS. EDWARD L. HOPKINS, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 11, 1912, Serial No. 725,276. Renewed July 30, 1920. Serial No. 400,213. 109 Claims. (Cl. 262—30.)



74. The combination of a wheeled truck, a cutting mechanism on the truck arranged to operate while thereon and being vertically adjustable from one kerf cutting position to another, truck driving devices, devices for vertically adjusting the cutting mechanism, a motor operatively connected to the last said adjusting devices, and means adapted to operatively connect the motor to the truck driving devices when the motor is in a predetermined position.

1,414,878. PEAVY. DAVID R. HOWE, Ashland, Me. Filed June 3, 1921. Serial No. 474,643. 3 Claims. (Cl. 294—17.)



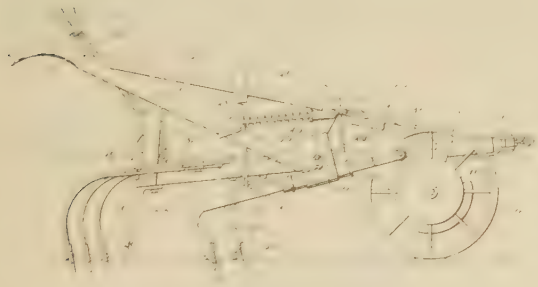
1. A peavy comprising a handle, a head of cone-shaped formation having its rear portion formed with a socket

receiving the forward portion of the handle, a reinforcing rod extending longitudinally through said handle and threaded into said head, and a hook pivotally connected to said head.

1,414,879. TOOL FOR HANDLING DEMOUNTABLE RIMS. ROBERT D. HUGHES, Lynchburg, Va. Filed Feb. 28, 1920. Serial No. 361,925. 3 Claims. (Cl. 157—1.)

1. A rim handling tool comprising an elongated housing having rim-engaging means at one end, an elongated bar projecting from the other end of the housing and adapted to slide therein, said bar having rim-engaging means at its outer end and rack teeth along its upper edge, and an actuating lever pivotally mounted on the housing means and having a toothed head engaging with the teeth of the bar, whereby when the lever is rocked, the housing and bar are reciprocated to move their rim-engaging means nearer to or farther away from each other.

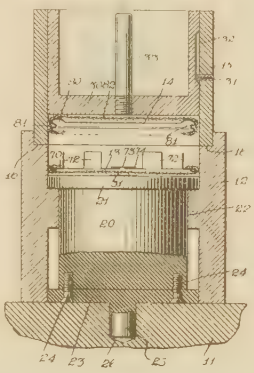
1,414,880. CULTIVATOR. THOMAS M. HUGHES, Carlisle, Miss. Filed Aug. 25, 1920. Serial No. 405,795. 10 Claims. (Cl. 92—45.)



1. A cultivator embodying a wheel supported machine, a hoe located upon opposite sides of the longitudinal center of the machine, automatically operated means for raising and lowering the hoes longitudinally of the machine at spaced intervals during the travel of the machine and means for moving the hoes laterally during their raising and lowering operation.

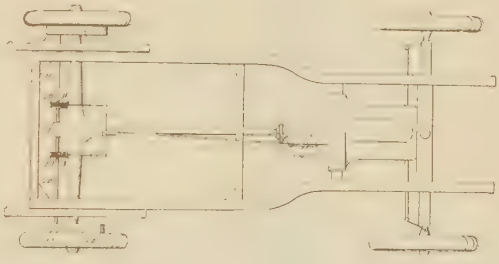
1,414,881. PRESS. WILLIAM G. KENDALL, Newark, N. J., assignor to Henri Rigaud, New York, N. Y. Filed Nov. 4, 1920. Serial No. 421,766. 5 Claims. (Cl. 113—1.)

1. In a press for uniting the sections of an article, comprising a lower die having a plunger adapted to support one of the sections of an article, the plunger being adapted to be moved by the operator to eject the finished article, an upper die having its axis coinciding with that of the lower die and normally removably seated on the said lower die, the said upper die being adapted to contain the other section of the article, a plunger movable upward by the operator in the upper die to permit of



placing the other section of the article therein, and pressing means adapted to engage the said plunger in the upper die to move it downward to force the section in the upper die into engagement with the section in the lower die to unite the sections with each other.

1,414,882. VEHICLE BRAKE. CHARLES KOKESH, Cainesville, Mo. Filed Aug. 5, 1921. Serial No. 490,121. 6 Claims. (Cl. 188—31.)

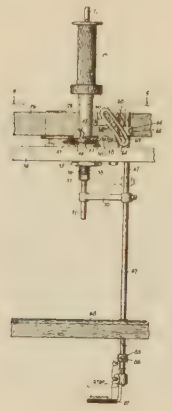


1. An auxiliary brake mechanism for motor driven vehicles and the like provided with ratchets having geared connections with the driving wheels of the car, a pawl carrying spindle having pawls arranged in operative relation respectively with the ratchets, the latter being movable during the forward rotation of the drive wheels without tending to communicate motion to the spindle, and means for holding the spindle against rotary movement.

1,414,883. STOP MOTION FOR SPINNING MACHINES. NATHAN L. LAWTON, Dover, N. J. Filed Apr. 26, 1921. Serial No. 464,544. 7 Claims. (Cl. 118—7.)

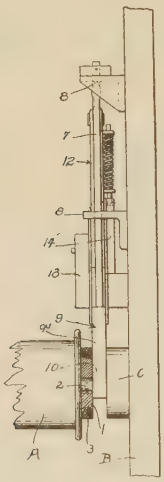
1. In a spinning machine, a driven belt, a spindle, a spindle support having a pivot parallel to the axis of the spindle to allow the spindle support to swing bodily to move the spindle into and out of engagement with the said belt, a spring pressing the said spindle support to hold the spindle in contact with the said belt, a member mounted to turn on an axis parallel to the axis of the spindle, a connection connecting the said member with

the said spindle support, a cam controlling the said member, and means controlled by the yarn to be wound



on a spool held on the spindle and controlling the said cam to move the spindle out of engagement with the said belt on the breaking of the yarn.

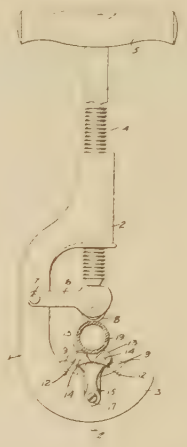
1,414,884. CLUTCH LOCK. SAMUEL B. LIVINGSTON, Wilson, Pa. Filed Mar. 13, 1920. Serial No. 365,506. 1 Claim. (Cl. 192—114.)



In combination with a shaft, a drum mounted thereon, a bearing member for the shaft, and a clutch member slidable on the shaft into and out of engagement with the drum; a ring connected to said clutch member for shifting the same, a yoke adjustable toward and away from the shaft, and blocks mounted on the arms of the yoke and adapted to fit snugly between said ring and the bearing member when the clutch member is in and the yoke is moved into operative position toward said shaft.

1,414,885. ATTACHMENT FOR PIPE CUTTERS. HENRY WILLIAM LOOSE, Brooklyn, N. Y. Filed Sept. 14, 1921. Serial No. 500,615. 2 Claims. (Cl. 81—206.)

1. The combination with a pipe cutter, including a main frame, a pair of rollers journaled therein and spread apart and having a recess therein accommodating the rollers, of an attachment including a boxlike frame fitting the recess between the rollers, other rollers carried by said last mentioned frame and supported on said

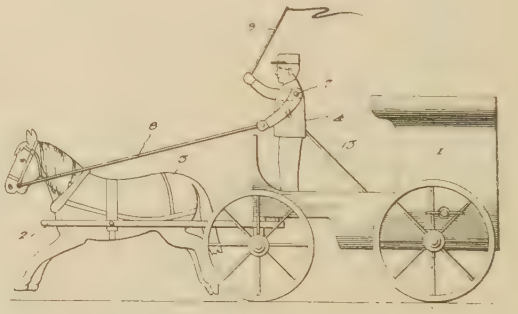


first-mentioned rollers, and means integral with the last mentioned frame adapted to be rigidly locked to the outside of the first mentioned frame.

1,414,886. TOOTHBRUSH. HARRY MATSUNAGA, San Francisco, Calif. Filed June 13, 1921. Serial No. 477,245. 1 Claim. (Cl. 15—176.)

A tooth brush comprising a handle formed at one end with an elongated substantially rectangular socket having one extremity formed with an overhanging flange, and provided at its side edges with overhanging flanges, and a brush head including a back carrying bristles and detachably engaged within said socket beneath said flanges, the sides of the socket being resilient whereby to permit outward and inward springing thereof.

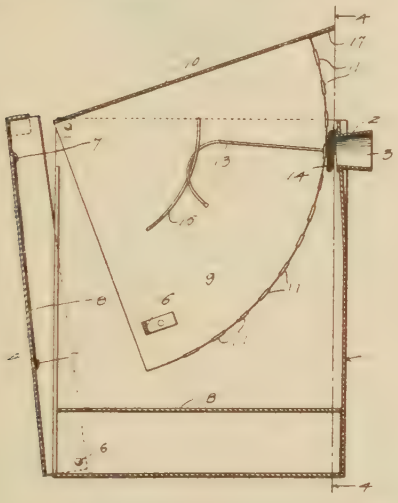
1,414,887. FIGURE WHEELED TOY. JOE MAZUR, Monessen, Pa. Filed Apr. 30, 1921. Serial No. 465,637. 1 Claim. (Cl. 46—45.)



Shafts journalled in a vehicle, a horse pivotally mounted between said shafts, a driver mounted within said vehicle at the front thereof, a crank rod having its ends passing through holes formed in said shafts for pivotally mounting the horse between the shafts and having the center part thereof looped to engage the horse, said driver having his arms secured to the ends of one of said shafts and having one arm extending downwardly and the other

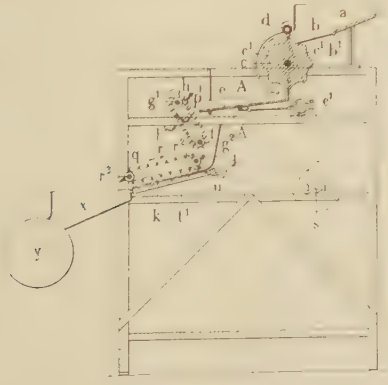
raised, a rein adapted to connect a downwardly extending arm with the head of the horse and a whip carried by the remaining arm, a spring motor supported in said vehicle body and geared to the rear axle thereof, a crank provided on said motor and links connecting said crank with the raised arm of the driver, and the front axle of the vehicle placed at an incline to permit the toy to travel in a wide circle.

1,414,888. EYE TESTER. HENRY E. MYERS, Bowman, N. Dak. Filed Jan. 6, 1921. Serial No. 435,452. 1 Claim. (Cl. 88—22.)



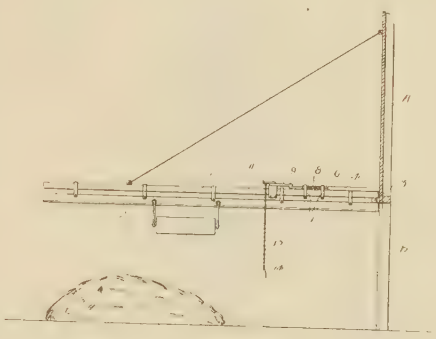
An eye tester comprising a support including side, front and bottom walls, said front wall having sight openings adjacent its upper end and a depression between said openings to receive the nose of a person, a top wall pivoted to the side walls, a rear wall pivoted to the side walls adjacent their lower edge and carrying a chart, flanges formed on the rear walls and adapted to have frictional contact with the side walls to hold said rear walls in adjusted positions, segmental shaped plates secured to the top wall and movable within the side walls, and means supporting eye glasses on the curved edges of said plates.

1,414,889. MACHINE FOR REMOVING THE STALKS FROM FRUITS. PLACIDE ÓSCAR NAVARRE, Paris, France. Filed July 16, 1921. Serial No. 485,285. 13 Claims. (Cl. 146—5.)



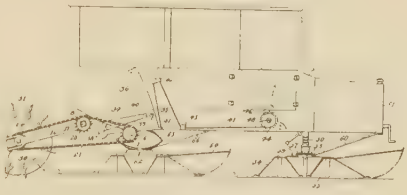
2. In a machine for removing the stalks from fruit, a feeding hopper, fixed inclined troughs having slots in their bottoms, means for pulling off the stalks extending through the slots, and endless chains of brushes, one for each trough.

1,414,890. BOOM ADJUSTER. BERT O. NELSON, Scandinavia, Wis. Filed Mar. 8, 1921. Serial No. 450,549. 2 Claims. (Cl. 104—92.)



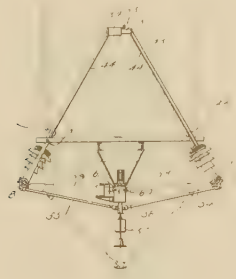
1. In a device as set forth, the combination, with a pivoted boom, of a quadrant, a slidable locking dog carried by said boom and adapted to engage said quadrant locking the boom in adjusted positions, a bell crank carried by said boom, a link connecting said bell crank and dog, and flexible means connected to said bell crank for locking it.

1,414,891. MOTOR SLEIGH. KAZIMNIERZ A. OBACH, Winnipeg, Manitoba, Canada, assignor of one-half to Joseph Weliszek, Winnipeg, Canada. Filed June 14, 1921. Serial No. 477,461. 1 Claim. (Cl. 180—6.)



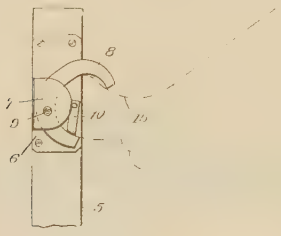
In a motor sleigh, the combination with a runner provided vehicle body having a rear driven axle, a pair of arms disposed at the sides of said body and extending rearwardly beyond the latter, means to pivotally mount said arms for vertical swinging movements to the rear portion of said body, rotatable spur carrying drums journaled between the rear ends of said arms, means for transmitting rotary motion from the rear axle to said drums, housings or casings attached to the sides of the body into which the forward ends of said arms project and are vertically movable, springs within said housings beneath the forward ends of said arms for normally yieldingly holding said arms in a tilted position with the spurs of the traction drums yieldingly engaging the ground, manually operable means associated with the forward ends of said arms for forcibly tilting the latter to increase the tractive effort of the spur carrying drums, said last named means embodying a resilient spring element of looped form arranged beneath the forward end of each arm and pivoted upon a horizontal axis with the arms of said spring element extending forwardly and with the upper arm of the element engaging the under side of the adjacent traction drum carrying arm, said spring elements each embodying normally separated resiliently connected arms, and means for exerting an upward pull upon the lower arm of each spring element.

1,414,892. PENDULUM HIGH-VOLTAGE AIR-BREAK SWITCH. JOHN K. OSTRANDER, New York, N. Y. Filed Dec. 31, 1919. Serial No. 348,514. 20 Claims. (Cl. 200—48.)



1. A high potential air-break switch including a support, a supporting arm pivotally connected to said support, a switch member carrier bar connected to said arm and extending transversely thereof at a point spaced from the point of pivotal support, a contact arm connected to said carrier bar at a point offset from said arm.

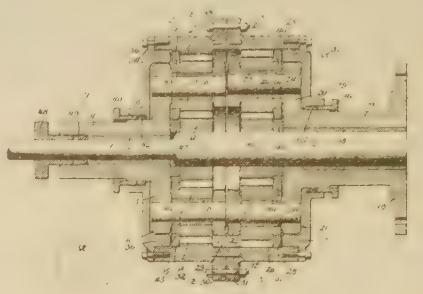
1,414,893. LADDER ATTACHMENT. CHARLES MELLEM PERRIER, Brockton, Mass. Filed Oct. 19, 1920. Serial No. 417,910. 3 Claims. (Cl. 228—51.)



1. The combination with a ladder leg and a guard secured thereto for automatically gripping a fixed part of a building, said guard comprising a plate, a hook-like member pivoted to the plate having inturned ends with one end normally projecting beyond the ladder leg, whereby as the ladder is applied to a building said projecting end is moved inwardly while the opposite end is forced outwardly, automatically gripping a fixed part of the building, and a catch engageable with said member and locking the same against retraction.

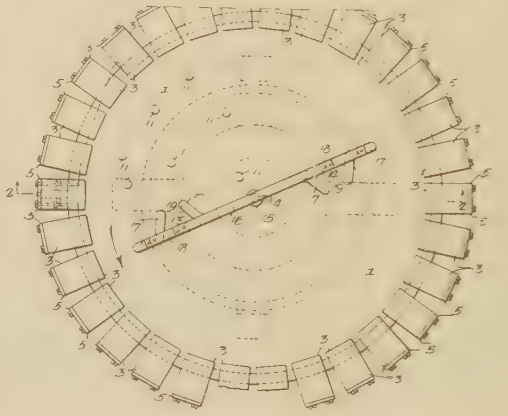
1,414,894. SPEED-REDUCING POWER-TRANSMITTING MECHANISM. BYRON B. PHILLIPS, Hudson, N. Y. Filed June 14, 1918. Serial No. 240,026. 2 Claims. (Cl. 74—34.)

1. Speed changing gearing, comprising a shaft, neighboring gears fast thereon, gear cages each carrying a circular series of pinions meshing with and individual to a respective one of the first named gears with each cage traversed by the shaft, one of the gear cages having means whereby it may be held against rotation and the other gear cage having means for connecting it to a part to be driven, internal gears surrounding and individual to the gear cages and meshing with the gears therein, said internal gears being fixedly connected together for common rotation, and rings carried by the circular series of gears and constituting antifriction members for rotating parts of the speed changing gearing, the gear cages being



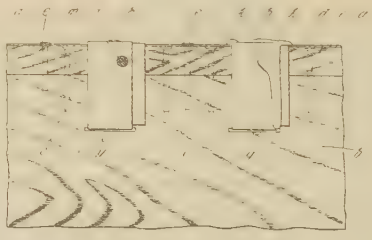
located in close relation and provided with a thrust ring between them.

1,414,895. METHOD AND APPARATUS FOR CONVERTING MOTION. HAVILAND H. PLATT, New York, N. Y. Filed Apr. 24, 1920. Serial No. 376,215. 9 Claims. (Cl. 74—14.)



1. The combination of a series of relatively small bodies freely movable in a single plane; means for maintaining said bodies in random motion; and means for converting the random motion of said bodies into directed motion.

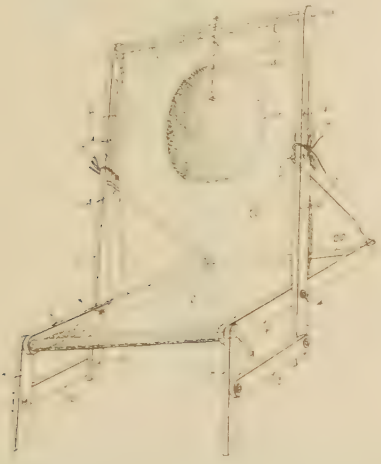
1,414,896. PACKING CASE. HENRY HAROLD READ, London, England. Filed Nov. 12, 1921. Serial No. 514,748. 2 Claims. (Cl. 217—56.)



1. A packing case having the contiguous portions of its adjacent sides secured together by means of strips of hoop iron or the like passing through slots in the marginal portions and around the edge of said sides, the

overlapping portions of said strips being nailed or similarly fastened to said sides and secured together by means of solder or the like which covers the head of the nail or the like.

1,414,897. INFANT'S BATH CHAIR. FRANCIS J. REILLY, New York, N. Y. Filed May 14, 1921. Serial No. 469,433. 2 Claims. (Cl. 155—54.)



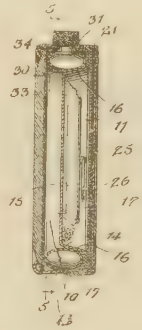
2. In a bath chair for infants, a flexible cloth body forming a seat and back structure, said back structure having a concave portion merging into the body for receiving part of the head of the infant when the device is in use.

1,414,898. GRAPHOPHONE. LEOPOLDO ROBERTO, Philadelphia, Pa. Filed Oct. 28, 1920. Serial No. 420,147. 1 Claim. (Cl. 274—24.)

A tone arm for graphophones having a pair of relatively small and a pair of relatively large notches within the inner end of the tone arm and perforated at points diametrically opposite the small notches of the tone arm, an elbow section received in the inner end of the tone arm and having an integral lateral lug engaging in one of said relatively large recesses to prevent rotary movement of the elbow in the tone arm, a transverse screw carried by the elbow, the portion of the screw between the elbow and its head being received in one of the small recesses of the said tone arm and the opposite end of said screw passing through the elbow and into one of the perforations of the tone arm to retain the elbow therein, and a sound box carried by the other end of the elbow.

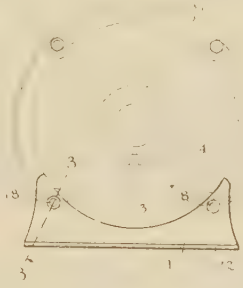
1,414,899. VANITY BOX. MICHELE MARIO SABATELLI, Leominster, Mass. Filed June 30, 1921. Serial No. 481,521. 20 Claims. (Cl. 132—83.)

13. A vanity box comprising a body portion having a side wall and a centrally dished portion having a bottom and a side wall spaced from the side wall of said body portion to form a powder compartment, a removable top for said powder compartment having means for maintaining therein a panel member so as to be visible from the exterior of said compartment, said body portion having a second compartment between said side walls surrounding said first mentioned compartment adapted to hold perfume and accessible without removing said top, a panel in said body portion beneath the bottom of said powder com-



partment, and an inturned flange on the side wall of the body portion to maintain said last mentioned mirror in position, one of said panels being a mirror.

1,414,900. GENERATOR AND MOTOR SUPPORT. AMATO N. SAMMARONE, Akron, Ohio. Filed May 29, 1920. Serial No. 385,377. 6 Claims. (Cl. 172—36.)



4. A section-built generator or the like, including closure caps, a stamped metal base foot for each end, with a portion shaped to form a cradle in which the caps recline, and with flanges resting on the floor; and common fastening means securing the base, caps and other parts of the generator together.

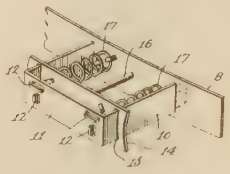
1,414,901. DOLL'S HEAD WITH MOVABLE EYES. MABEL H. SLATER, New York, N. Y. Filed Feb. 28, 1921. Serial No. 448,329. 2 Claims. (Cl. 46—40.)

1. A doll's head having, in combination, a nose, a pair of eyes located on opposite sides of said nose, said head having elongated grooves terminating at their opposite ends in pockets, in which grooves said eyes are located and along which they are adapted to roll from one of said pockets to the other, whereby they may assume different positions.

1,414,902. NECKTIE-DISPLAY STAND. RUFUS C. SMITH, Huntington, W. Va. Filed Oct. 18, 1921. Serial No. 508,447. 1 Claim. (Cl. 211—24.)

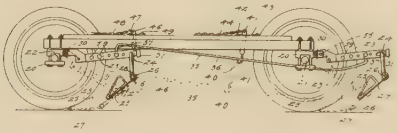
In a necktie display-stand, a rotary wheel carrying on the outer face of its rim a series of necktie-clamps each embodying a rigid U-shaped frame projecting from the face of the wheel, a clamp-plate provided with a hole at each

end through which the side-bars of said U-shaped frame pass, spring-means for pressing said slidable clamp-plate toward the outer cross-bar of the U-shaped frame, and a



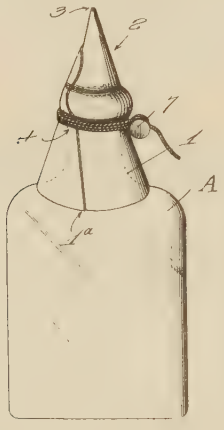
guide-rod connected to said slidable clamp-plate and extending inwardly through a hole in the wheel, for the purpose set forth.

1,414,903. AUTOMOBILE COMBINATION JACK. JAMES H. THOMAS, Los Angeles, Calif. Filed Feb. 8, 1921. Serial No. 443,356. 10 Claims. (Cl. 254—86.)



1. A vehicle jack having bracket arms mounted to swing parallel with the planes of the wheels, crank arms journaled on said bracket arms, shoes pivoted to the crank arms for arrangement in the paths of the wheels disposed beyond a vertical line passing through the wheel axis when the wheel is raised, and means to normally maintain the bracket arms in an elevated position.

1,414,904. NIPPLE FOR NURSING BOTTLES. ANNA CHARLOTTE THORBJORNSON, Nadeau, Mich. Filed Apr. 4, 1921. Serial No. 458,404. 3 Claims. (Cl. 128—252.)



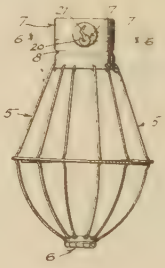
1. A nursing nipple formed from a flat sheet of washable material rolled upon itself to provide a cone to fit over the mouth of a bottle, and means to retain it on the bottle.

1,414,905. SPINDLE. HOMER A. TIFFANY, Paterson, N. J., assignor to Benjamin Buckley's Son, Inc., Paterson, N. J., a Corporation of Delaware. Filed Mar. 19, 1921. Serial No. 453,650. 1 Claim. (Cl. 64—56.)

In a spinning or the like spindle, the combination of a bolster having an upright bore closed at its lower end and an interior lubricant groove extending downwardly and open to the bore, a sleeve fitting the bore and forming interiorly thereof a bearing and covering the groove for a part of the length thereof while leaving the lower part of said groove uncovered, and a spindle proper fitting and

rotative in said bearing, the bolster forming an upper lubricant receiver around the spindle proper and also having a lower lubricant receiver and said receivers having the sleeve intervening between them and communicating with each other for passage of lubricant via said groove and between the bearing and spindle proper.

1,414,906. LAMP-LOCK GUARD. CHARLES W. TRULOCK, Los Angeles, Calif. Filed Apr. 23, 1921. Serial No. 464,004. 3 Claims. (Cl. 240—102.)

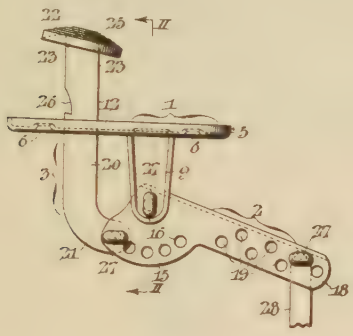


1. The combination with a lamp and socket, of a guard comprising sections having half collars co-operating to form a collar received around the socket, said half-collars having overlapping ends and lug and recess connections between the same, one of said half collars having a bearing opening, a barrel therein having a radial slot, the said half collar having a key slot extending beyond said barrel and adapted to aline with the radial slot, and a key having a laterally extending operating end, said slots being arranged to receive said key, the parts being arranged for engagement by said key end of one of said overlapping ends of the half collars in order to pry the same apart and thereby disconnect the lug and recess connection.

1,414,907. FOOT-CONTROL PEDAL. CLARENCE VOGT, Wenonah, N. J., assignor to Vogt Bros. & Squier Company, Philadelphia, Pa., a Corporation of Delaware. Filed Feb. 11, 1921. Serial No. 444,104. 4 Claims. (Cl. 74—81.)

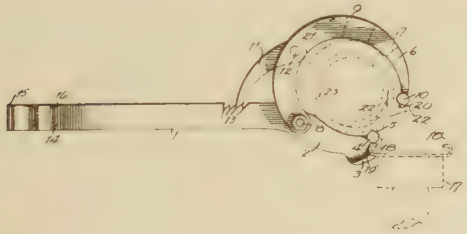
1. A pedal structure of the character described comprising in combination a mounting bracket; and a bell

crank lever fulcrumed to said bracket, said lever being formed of a single piece of sheet metal bent about an axis of symmetry with provision for an interspace between the



two coincident sides thus produced, so as to be capable of receiving at its extremities between said sides, the ends, respectively, of a treadle element, and a connecting link coordinated with the device which is to be operated.

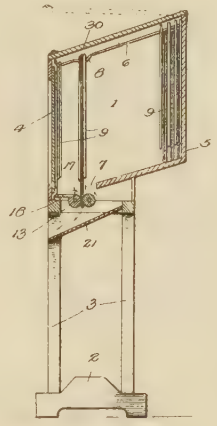
1,414,908. CLINCHER-TIRE REMOVER AND REPLACER. FRANCAIS E. WAFER, Chicago, Ill. Filed Aug. 20, 1920. Serial No. 404,886. 2 Claims. (Cl. 157—6.)



1. A tool of the character described comprising a handle having a plurality of teeth fashioned therein and having one end formed into a curved tong member, said tong member being provided at its end with a jaw piece disposed at right angles thereto, and with a projecting head extending laterally therefrom, the outer side of said head being curved inwardly, a second tong member curved to conform with the contour of a tire and pivoted at one end to the handle in position to cooperate with said first named tong member, said second named tong member being formed with a jaw piece disposed at right angles thereto and arranged to face said first named jaw piece, and means for preventing an opening movement of said second named tong member about its pivot, said means comprising a pawl carried by said second tong member and being adapted to engage with the teeth of said handle.

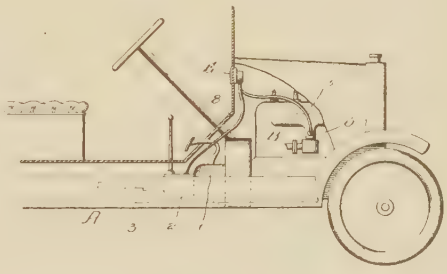
1,414,909. VENDING MACHINE. WILLIAM W. WASSON, Yakima, Wash., assignor of one-half to George I. Clithero, Yakima, Wash. Filed May 17, 1920, Serial No. 381,886. Renewed Mar. 2, 1922. Serial No. 540,612. 2 Claims. (Cl. 211—8.)

1. A vending machine including a casing, spacers between which the articles are to be placed, means for slidingly supporting the spacers for gravital movement to a discharge position, and means for temporarily arresting such gravital movement in such discharge position, and intergeared rolls to be operated to withdraw the articles from between the spacers for discharge, means to compel an initial separation of the rolls for a portion of their



revolution to provide a space for the entrance of the articles, and springs for normally holding the roll surfaces in contact.

1,414,910. MEANS FOR INDICATING STOPPING, IDLING, AND WORKING TIMES OF AUTOMOBILE ENGINES. ROBERT WATSON, Silver Spring, Md. Filed Dec. 20, 1921. Serial No. 523,727. 5 Claims. (Cl. 161—15.)

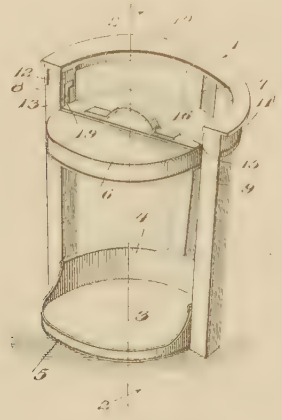


1. The combination with a motor vehicle having an internal combustion motor, of three time indicators, means for operating one of said indicators while the motor and vehicle are stopped, means for automatically stopping the latter indicator and starting a second one of said indicators when the motor starts, and means for automatically stopping said second indicator and starting the third of said indicators when the vehicle starts.

1,414,911. RECEPTACLE SUPPORT. THEODORE W. WATSON, Phoenix, Ariz. Filed Aug. 31, 1920. Serial No. 407,111. 3 Claims. (Cl. 220—1.)

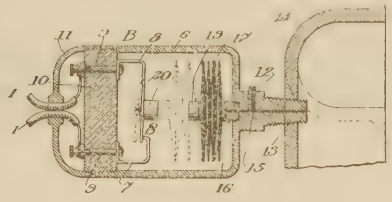
3. A receptacle support of the class described comprising a base, a plurality of hollow vertical supports attached to the base and having inverted L-shaped slots in the inner faces of the upper portions of certain of said supports, a cover having laterally extending plates with reduced necks connecting them to said cover and adapted to slide in said slots and the plates in said supports, said

necks being angular in cross section whereby said cover may be supported in horizontal position when the necks



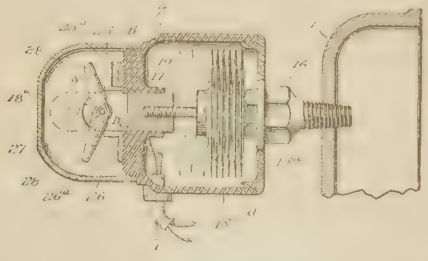
are in the vertical portion of said slots and held thereby against rotation.

1,414,912. IGNITION-CIRCUIT CONTROLLER. GEORGE H. WHITTINGHAM, Baltimore, Md. Filed Jan. 14, 1919. Serial No. 271,135. 2 Claims. (Cl. 200—81.)



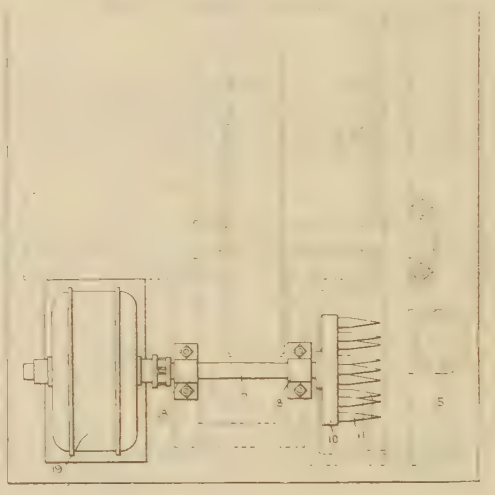
1. A vacuum controlled switch adapted for operation by the suction of an internal combustion engine comprising a normally expanded bellows adapted to collapse in response to reduction in internal pressure, said bellows having a relatively small inlet opening adapted to restrict the flow of fluid into the bellows and retard the movement of its walls, a normally open switch adapted to be closed by said bellows during the initial part of its contracting movement and to be opened thereby during the final part of its expanding movement, said bellows having a relatively long range of movement after the closure of the switch and also prior to the opening of the switch.

1,414,913. IGNITION-CIRCUIT CONTROLLER. GEORGE H. WHITTINGHAM, Baltimore, Md. Filed Aug. 7, 1919. Serial No. 315,874. 5 Claims. (Cl. 200—81.)



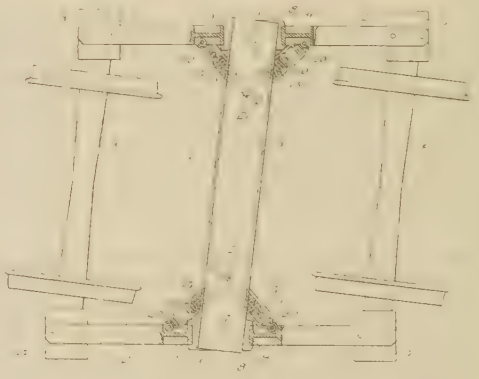
1. A vacuum-controlled switch adapted for operation by the suction of an internal combustion engine, comprising an expansible and contractible air chamber having a wall normally in expanded position and movable in response to reduction in internal air pressure to its contracted position, said chamber having a relatively small inlet opening adapted to retard the flow of air into the chamber and cause slow movement of the wall, two contact members adapted to engage at the commencement of the contracting movement of the chamber and to separate at the end of the expanding movement, one of said contact members being yieldingly connected to said movable wall, said chamber having a relatively long contracting movement after the closure of the switch and a relatively long expanding movement prior to the opening of the switch.

1,414,914. PULP-WOOD BREAKER. ALBERT D. WOOD, LAWSON TRANTHAM, and EDWARD T. SELF, Canton, N. C. Filed Sept. 17, 1920. Serial No. 410,966. 6 Claims. (Cl. 83—75.)



1. The combination with a chipper head of a pronged breaker head having chip impaling means disposed in the path of chips projected from the former.

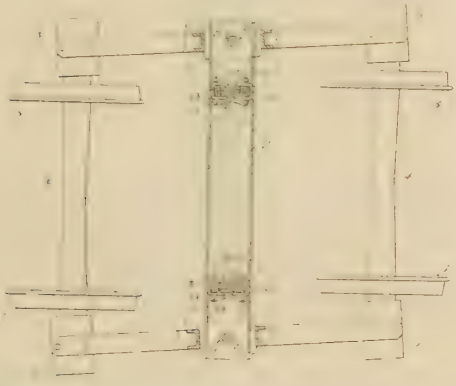
1,414,915. CAR TRUCK. GUSTAF ARVID ANDERSON, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 13, 1921. Serial No. 437,060. 37 Claims. (Cl. 105—179.)



1. In a car truck, the combination with transversely spaced side frame members which are relatively movable longitudinally of the truck, of means movably connecting said side frame members intermediate the ends thereof

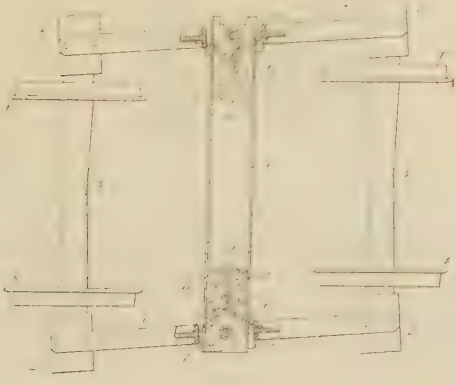
and adapted to be turned angularly with respect thereto upon a relative longitudinal displacement of said side frame members, and resilient means affording yielding resistance to longitudinal separation of said side frame members, said resilient means being adapted to be energized by said connecting means upon a longitudinal separating movement of said side frame members.

1,414,916. CAR TRUCK. GUSTAF ARVID ANDERSON, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 17, 1921. Serial No. 437,974. 16 Claims. (Cl. 105—179.)



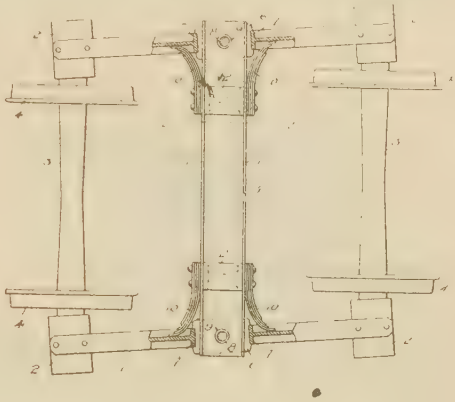
1. In a car truck, the combination with side frame members which are relatively movable longitudinally of the truck of means for connecting said side frame members, a spring device mounted on said connecting means between said side frame members, and means rigidly secured to one of said side frame members for energizing said spring device by a longitudinal displacement of said frame member from normal position.

1,414,917. CAR TRUCK. GUSTAF ARVID ANDERSON, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 19, 1921. Serial No. 438,476. 16 Claims. (Cl. 105—179.)



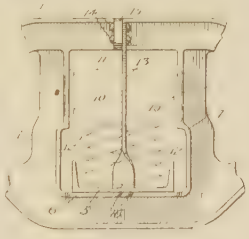
1. In a car truck the combination with side frame members which are relatively movable longitudinally of the truck, of means for movably connecting said side frame members, and a leaf spring operatively interposed between said connecting means and one of said side frames for yieldingly resisting relative longitudinal displacement of said side frames from normal position.

1,414,918. CAR TRUCK. GUSTAF ARVID ANDERSON, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 19, 1921. Serial No. 438,477. 10 Claims. (Cl. 105—179.)



1. In a car truck, the combination with side frame members which are relatively movable longitudinally of the truck, of means for movably connecting said side frame members, and means located intermediate the ends of said side frame members and having a changing rate of resistance for yieldingly opposing relative longitudinal displacement of said side frame members from normal position.

1,414,919. CAR TRUCK. GUSTAF ARVID ANDERSON, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 20, 1921. Serial No. 438,652. 12 Claims. (Cl. 105—179.)

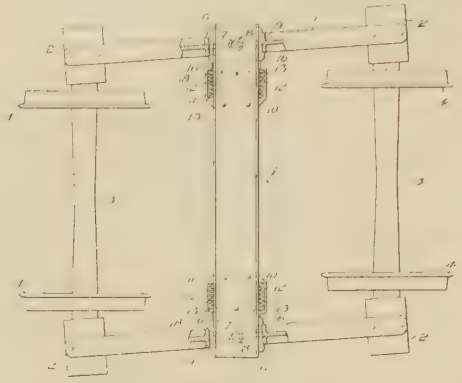


1. In a car truck, the combination with side frame members which are relatively movable longitudinally of the truck, of means for movably connecting said side frame members, and torsion spring means for resisting relative longitudinal displacement of said side frame members from normal position.

1,414,920. CAR TRUCK. GUSTAF ARVID ANDERSON, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 22, 1921. Serial No. 439,096. 12 Claims. (Cl. 105—179.)

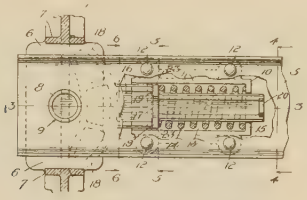
1. In a car truck, the combination with side frame members which are relatively movable longitudinally of the truck, of means for movably connecting said side

frame members, and means for yieldingly resisting relative longitudinal displacement of said side frame members



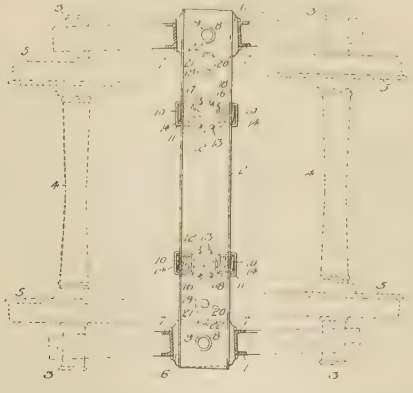
from normal position throughout a portion only of said displacement from normal.

1,414,921. CAR TRUCK. GUSTAF ARVID ANDERSON, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 25, 1921. Serial No. 439,811. 13 Claims. (Cl. 105—179.)



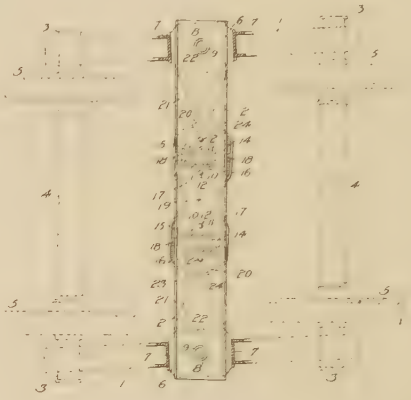
1. In a car truck, the combination with transversely spaced side frame members which are relatively movable longitudinally of the truck, of means for movably connecting said side frame members across the truck, and means for yieldingly resisting relative longitudinal displacement of said side frame members, said last named means involving a spring and unitary means cooperating with an adjacent one of said side frame members for energizing said spring upon displacement of said adjacent frame member longitudinally in either direction from its normal position.

1,414,922. CAR TRUCK. GUSTAF A. ANDERSON, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 23, 1922. Serial No. 531,245. 14 Claims. (Cl. 105—179.)



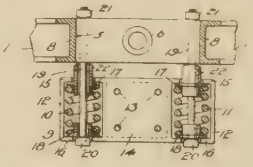
1. In a car truck, the combination with side frame members which are relatively movable longitudinally of the truck, of means connecting said side frame members, and yieldable means interposed between said side frame members and connecting means, said yieldable means including a lever arranged between one of said side frame members and said yielding means for energizing the latter.

1,414,923. CAR TRUCK. GUSTAF A. ANDERSON, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 23, 1922. Serial No. 531,246. 18 Claims. (Cl. 105—179.)



1. In a car truck, the combination with side frame members which are relatively movable longitudinally of the truck, of means connecting said side frame members, and yieldable means interposed between said side frame members and connecting means, said yieldable means including a lever floatingly supported between said connecting means and said side frame members for energizing and transmitting displacement movements to said yieldable means, said lever also serving to impart restoring movement to the side frame members from said yielding means.

1,414,924. CAR TRUCK. GUSTAF A. ANDERSON, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 1, 1922. Serial No. 533,373. 20 Claims. (Cl. 105—179.)

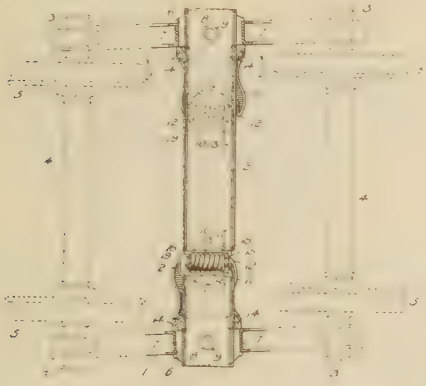


1. In a car truck, the combination with movable side frame members, of means connecting said side frame members, and oppositely disposed yieldable means for resisting displacement movement of the side frame members from normal position, said yieldable means including spaced spring devices interposed between the side frame members and said connecting means and adapted to be simultaneously energized when resisting displacement movement.

1,414,925. CAR TRUCK. GUSTAF ARVID ANDERSON, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 30, 1921, Serial No. 456,851. Renewed Mar. 17, 1922. Serial No. 544,692. 9 Claims. (Cl. 105—179.)

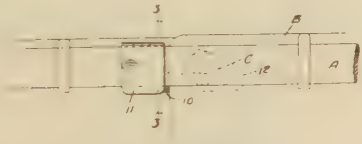
1. In a car truck, the combination with side frame members which are relatively movable longitudinally of

the truck, of means for pivotally connecting said side frame members, a spring carried by said connecting means, and means rigid with one of said side frame mem-



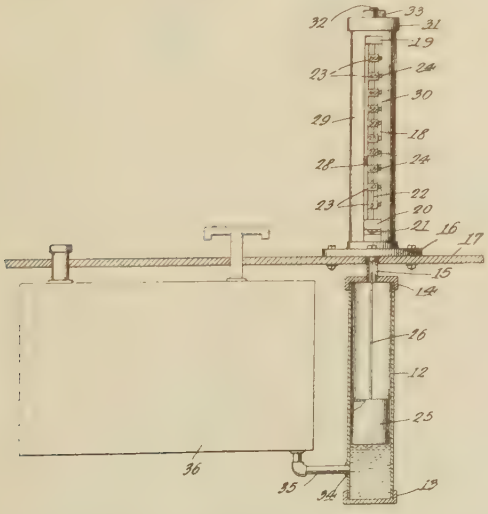
bers for energizing said spring upon a longitudinal displacement of said side frame member in either direction from normal position.

1,414,926. TROUSERS CLIP. ERNEST A. AROLAN, Jersey City, N. J. Filed Aug. 10, 1921. Serial No. 491,215. 2 Claims. (Cl. 24—84.)



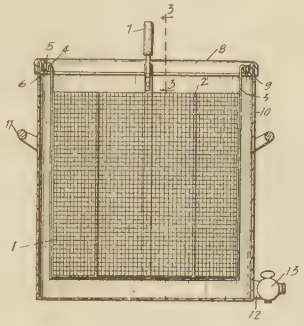
1. A device of the class described having a spring clip and having a hook formation distant from said clip, and in the plane of the latter the bill of the hook being disposed at an angle in the general direction of the clip.

1,414,927. FLOAT GAUGE. OTIS H. AVERS, Cattaraugus, N. Y. Filed Dec. 18, 1920. Serial No. 431,610. 5 Claims. (Cl. 73—82.)



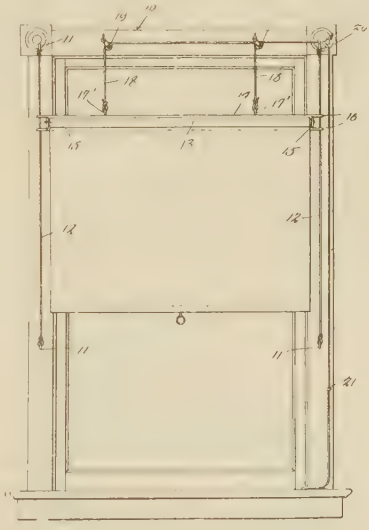
2. A measuring and indicating gauge comprising the combination with a vessel adapted for the admission thereto of liquid, of a float loosely mounted in said vessel, a rod attached to said float and extending upward from said vessel, an index connected with the upper part of said rod, a scale rod, and a series of graduation members adjustably attached to said scale rod and with which the said index co-operates.

1,414,928. DISH WASHER. GEORGE W. BACKUS, Los Angeles, Calif. Filed Nov. 27, 1920. Serial No. 426,835. 2 Claims. (Cl. 141—9.)



2. A washing device comprising a tank, a track having a reversely bent supporting portion sustained on the upper edge of the tank and a track portion extending inwardly from the tank, a receptacle within the tank, hangers secured to the receptacle and having reversely bent upper ends, and rollers rotatably sustained on the upper ends of the hangers and movable over the said track portion.

1,414,929. WINDOW-SHADE HOLDER. GEORGE H. BAKER, San Diego, Calif. Filed Nov. 20, 1920. Serial No. 425,422. 1 Claim. (Cl. 156—27.)

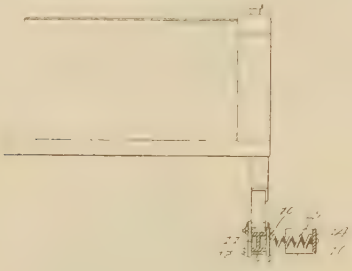


The combination with guide rods of a shade holder comprising a web having upper and lower flanges extending rearwardly therefrom, the web being slit in the direction of its length and bent to form forwardly extended brackets, the flanges being provided with openings for receiving the guide rods and the brackets having means for holding a shade roller.

1,414,930. AUTOMOBILE FENDER. CHARLES L. BATCHELOR, Portland, Oreg. Filed Feb. 26, 1920. Serial No. 361,486. 1 Claim. (Cl. 293—55.)

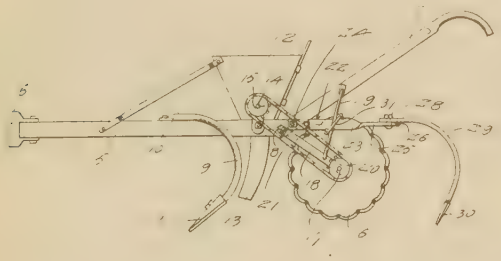
A fender for motor vehicles consisting of an attaching plate and means for securing the same to a vehicle axle, a fender bar disposed in substantial parallelism with said

attaching plate and provided with rearwardly deflected terminals, and a plurality of uniformly spaced compression springs substantially perpendicular to the fender bar



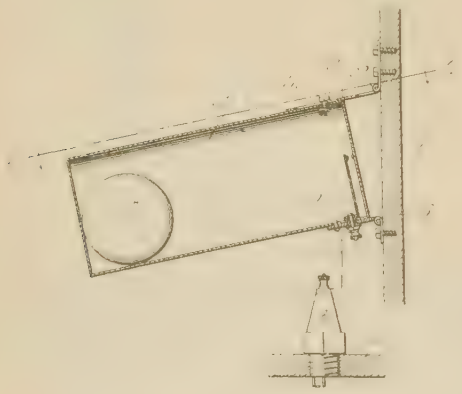
and extending between and terminally attached respectively to said attaching plate and fender bar and serving to support the latter in operative relation with the former.

1,414,931. AGRICULTURAL IMPLEMENT. JAMES W. CARTER, Minden, La. Filed Aug. 6, 1919. Serial No. 315,726. 1 Claim. (Cl. 111—71.)



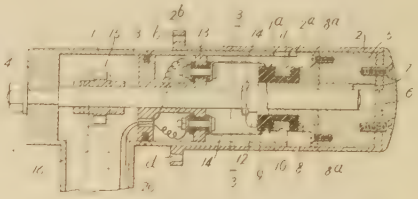
An implement of the class described comprising a frame, a handle bar, a bolt securing said handle bar to the frame, a roller, a support for said roller through which said bolt passes, a brace extending from said bar to said support, soil treating means extending from the frame and crossed by said brace, and a clamp bracket engaging said brace and said soil treating means.

1,414,932. AUTOMATIC GRAVITY IGNITION CUT-OUT FOR TRACTORS. CHARLES CHISMAN, Driggs, Idaho. Filed June 10, 1920. Serial No. 388,040. 2 Claims. (Cl. 200—52.)



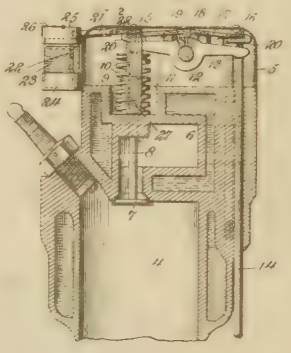
1. The combination with a gravity operated switch including an inclined runway and a switch operating weight movable along said runway; of hinge means for mounting said runway on a support, and means for holding said runway in the numerous inclined positions permitted by said hinge.

1,414,933. APPARATUS FOR THE CONTROL OF VARIABLE-SPEED GEARS. CHRIS TER COCK, Flevorama, Naarden, Netherlands. Filed Jan. 21, 1922. Serial No. 530,898. 2 Claims. (Cl. 200—52.)



1. A device as described comprising a tubular member, a selector shaft journaled therein and adapted to be connected to mechanism to be operated, contacts within the tubular member, a second tubular member rotatable and axially slidable upon the first tubular member and having connection to said shaft whereby to rotate the shaft therewith but permitting of the axial sliding of the second tubular member with respect to the shaft, a contact carried by the second tubular member and adapted to cooperate with the contacts within the first mentioned tubular member, said tubular members having means therebetween for permitting of the axial sliding of the second member when the latter member and selector shaft occupy a definite angular position, substantially as described.

1,414,934. LUBRICATOR FOR VALVE MECHANISMS. WALTER MARTIN COPELAND, Cambridge, Mass. Filed Oct. 19, 1920. Serial No. 417,925. 12 Claims. (Cl. 123—90.)

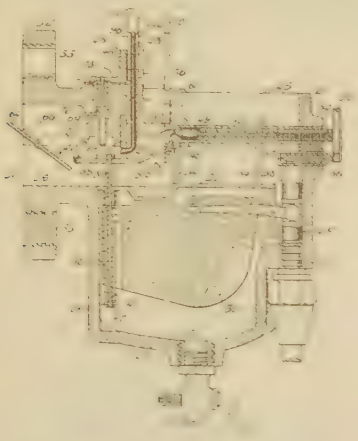


1. Lubricating means for valve mechanisms of internal combustion engines having rocker arms, comprising a strip or pad secured to the under side of the cover of said engine so as to be engageable by an end of each rocker arm, and means for feeding lubricant to said pad.

1,414,935. CARBURETOR. JOHN J. COX and RICHARD WENDELKEN, New York, N. Y., assignors to Julius Winter, New York, N. Y. Filed Jan. 3, 1919. Serial No. 269,437. 3 Claims. (Cl. 261—41.)

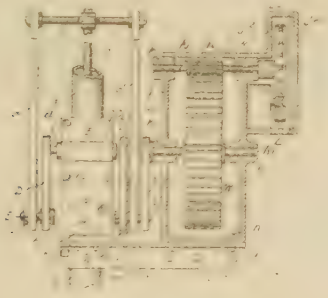
1. A carburetor for internal combustion engines comprising a fuel chamber, a mixing chamber, a valve for controlling the admission of air to the mixing chamber, a reciprocating fuel feeding member in said mixing chamber, a butterfly outlet valve for controlling the flow of combustible mixture to the engine, a plurality of capillary members connected to and movable with said fuel feeding member and extending into said fuel chamber, the area of which members exposed in said mixing chamber varies in accordance with the position of said fuel feed-

ing member, connections between said fuel feeding member and butterfly outlet valve and co-acting parts on



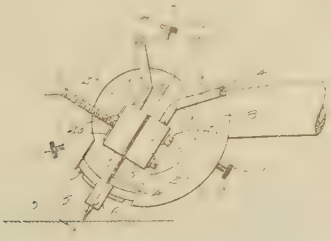
said fuel feeding member and air valve whereby said butterfly outlet valve and air valve may be operated by the fuel valve.

1,414,936. PUMP JACK. OTTO CULLMAN, Chicago, Ill. Filed Oct. 26, 1921. Serial No. 510,480. 4 Claims. (Cl. 74—14.)



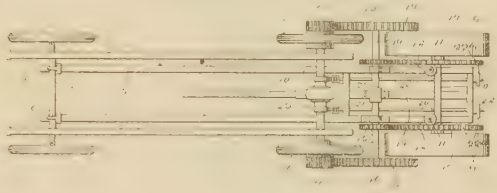
1. In a pump jack, a cross bar attached to a pump rod, a base, a gear box and a plate rigidly attached to said base, and bearings respectively mounted on said gear box and on said plate, in combination with a plurality of shafts rotatably mounted in said bearings in axial alignment, crank arms rigidly secured on said shafts, wrist pins to said crank arms arranged so that pins to adjacent crank arms are common to both thereof, and pitmen mounted on said wrist pins and on said cross bar.

1,414,937. SOUND-DEADENING DEVICE FOR PHONOGRAPH REPRODUCERS. ERNEST F. DAHLHEIM and WALTER S. HULET, Minot, N. Dak. Filed Dec. 13, 1920. Serial No. 430,355. 3 Claims. (Cl. 274—27.)



2. A sound deadening device for phonograph reproducers comprising an attaching member detachably secured to the sound box of a reproducer, parallel arms having diverging ends pivoted to the attaching member, blocks secured to the parallel portions of said arms and arranged on opposite sides of the vibratory transmitter bar of the reproducer and having recesses, pads located in said recesses and varying in length and bearing against the bar upon opposite sides, tension means urging the blocks in the direction of each other, and manual controlled means for moving the blocks away from each other.

1,414,938. TRACTOR ATTACHMENT FOR AUTOMOBILES. LEMI B. DENTON, Pocatello, Idaho. Filed July 26, 1920. Serial No. 398,887. 3 Claims. (Cl. 180—16.)

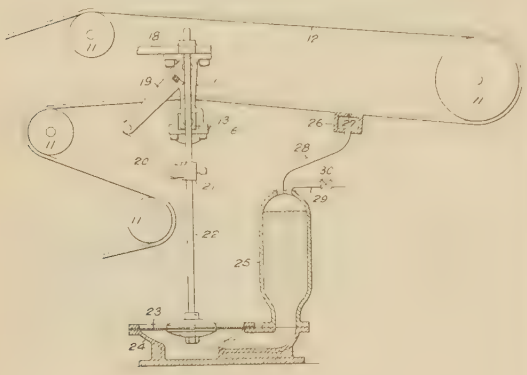


1. A tractor attachment for automobiles comprising spur gears, means to attach the same to the rear wheels of an automobile, and a unit made up of longitudinal bars adapted to extend rearwardly under the rear axle case of an automobile, hooks slidably engaged with said bars and disposed for connection to the front axle of the automobile, a rear axle equipped with traction wheels, means to adjust and adjustably fix the longitudinal bars with respect to said rear axle, counter shafts carried by the longitudinal bars and equipped with spur gears, two of which are intermeshed with the spur gears on the automobile wheels, spur gears revoluble with the traction wheels and intermeshed with the other gears of the counter shafts, and endwise movable rods adjustably connected with the rear portions of the longitudinal bars and having portions to engage the rear axle case of the automobile.

1,414,939. STAMPING MACHINE FOR SIGNAL-READING RIBBON. WILFRID DOUGALL, Montreal, Quebec, Canada. Filed Mar. 13, 1920. Serial No. 365,646. 4 Claims. (Cl. 164—113.)

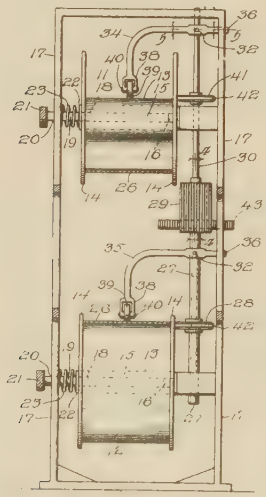
1. In a stamping machine, a frame, a punching mechanism supported thereby and suitably operated, a plurality of rolls of paper on the one side fed through said punching mechanism in several ply arrangement, a single roll taking the ribbons from the aforesaid rolls and returning them thereto, and means for driving the rolls to wind the paper from and to the plurality of rolls through said punching mechanism.

1,414,940. FELT GUIDE FOR PULP AND PAPER MACHINES AND THE LIKE. FRANCIS FORD, Brompton-ville, Quebec, Canada. Filed Mar. 8, 1920. Serial No. 364,051. 6 Claims. (Cl. 74—51.)



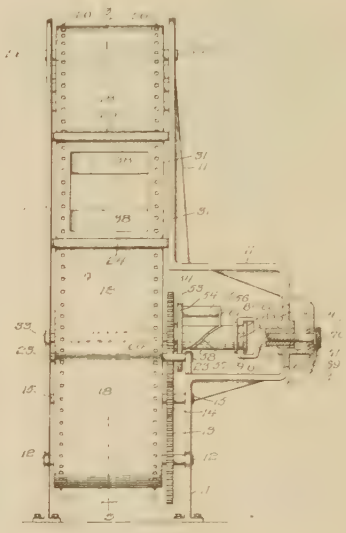
2. A felt strip mounted on rolls, an adjusting roll for maintaining said strip on said rolls, a hydraulic machine having a standing water column operatively connected to said adjusting roll and a vacuum member in operative engagement with said fluid pressure member and regulated by the felt strip in passage thereon.

1,414,941. MOTION-PICTURE TAPE-WINDING MECHANISM. CHARLES H. GILL, Chicago, Ill., assignor to Paul B. Malebranche, Chicago, Ill. Filed Dec. 29, 1920. Serial No. 435,929. 14 Claims. (Cl. 242—55.)



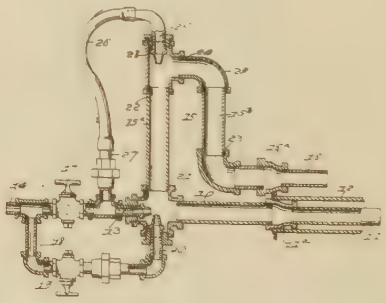
10. In tape winding mechanism, the combination of two spools adapted to have flexible material wound thereon, elements held in contact with the outermost convolution of flexible material upon each of said spools, a telescopic and rotatable shaft carrying two friction wheels fixed thereto, connections between said elements and said telescopic and rotatable shaft whereby said shaft is telescopically actuated by said elements, friction disks forming parts of each of said spools and adapted to be pressed into frictional engagement with said friction wheels, resilient means for pressing said friction disks against said friction wheels, and means for imparting rotary motion to said rotatable and telescopic shaft.

1,414,942. SHUTTER FOR MOTION-PICTURE APPARATUS. CHARLES H. GILL, Chicago, Ill., assignor to Paul B. Malebranche, Chicago, Ill. Filed Jan. 8, 1921. Serial No. 436,002. 4 Claims. (Cl. 88—19.3.)



1. In shutters for motion picture apparatus, the combination of an endless belt having windows spaced apart therein, means for regulating the degree of opening of said windows, and a normally stationary member movable to control the said means for regulating the degree of opening of said windows.

1,414,943. FLUE CLEANER. HERBERT D. GILL, Kane, Pa., assignor of one-half to Charles J. Brahler, Erie, Pa. Filed Dec. 3, 1920. Serial No. 428,063. 9 Claims. (Cl. 122—391.)

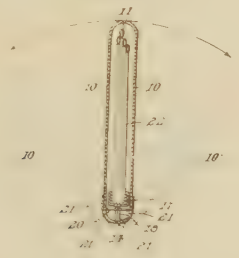


1. A flue cleaner having a duality of pipes in intercommunication, means for producing a forced blast in one of the pipes and a suction in the other, said pipes being provided with terminal nozzles for respective engagement with the ends of boiler tubes, one of said pipes being of looped form and provided with a plurality of swivel joints.

1,414,944. PACKET OR CARTON. ANDREW W. GRAHAM, Buffalo, N. Y., assignor to City Trust Co., branch of The Marine Trust Co. of Buffalo, trustee, Buffalo, N. Y. Filed Dec. 8, 1920. Serial No. 429,238. 4 Claims. (Cl. 206—29.)

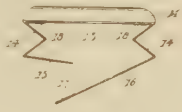
1. The herein described carton consisting of a sheet of foldable material having end portions and a central

portion, said end portions being pressed to form carton sides, said central portion being doubled upon itself to



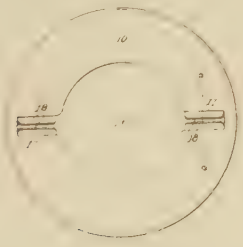
extend inwardly between the sides and thereby form an inwardly projecting rib for the attachment of articles to be packed in said carton.

1,414,945. MATCH PACKET FOR ADVERTISING PURPOSES. ANDREW W. GRAHAM, Buffalo, N. Y., assignor to The City Trust Co., branch of The Marine Trust Co., trustee, Buffalo, N. Y. Filed Jan. 6, 1921. Serial No. 435,443. 5 Claims. (Cl. 206—48.)



1. The combination with a match packet for advertising purposes; of a collapsible wrapper member secured to the back of said packet and adapted to enclose a package such as cigarettes or the like.

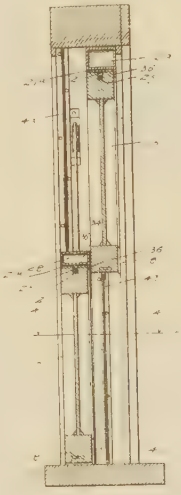
1,414,946. MATCH PACKET OR CARTON. ANDREW W. GRAHAM, Buffalo, N. Y., assignor to The City Trust Co., branch of The Marine Trust Co., as trustee, Buffalo, N. Y. Filed Feb. 2, 1921. Serial No. 441,934. 6 Claims. (Cl. 206—28.)



1. A match carton consisting of a receptacle having an opening in one portion to admit an operator's thumb and finger, said opening being of such size and position as to prevent the escape of a match therethrough, said receptacle also having a withdrawal slot extending from said opening and provided with spring lips forming a yieldable closure for the slot.

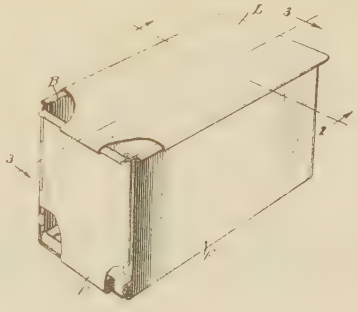
1,414,947. WINDOW. GEORGE GUARD, Atlantic City, N. J. Filed June 16, 1920. Serial No. 389,362. 2 Claims. (Cl. 20—49.)

1. The combination with a window casing having guides, of a pair of inner and outer slide frames engaging said guides and each formed of inverted U-shaped including side portions and an upper cross bar of hollow form and having flanges along the cross bar and the major portions of the sides, said slide frames having their inner walls provided with openings adjacent to the upper and lower ends of their side portions, and inner and outer sashes within the slide frames, each sash having lower laterally projecting pivot pins entering the lower apertures of its slide frame and upper spring controlled and manually releasable locking rods the outer



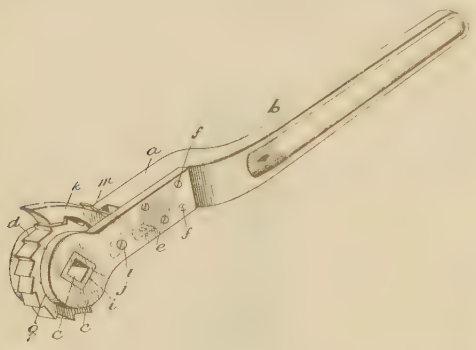
ends of which are engageable in the upper apertures of its slide frame, the outer sash being movable downwardly to a position wherein its upper edge is below the lower edge of the inner sash when the latter is shifted to the top of the casing.

1,414,948. COLLAPSIBLE METAL CRATE. JAMES ALTON HAZEN, Long Beach, Calif. Filed Nov. 8, 1919, Serial No. 336,616. Renewed Mar. 21, 1922. Serial No. 545,600. 1 Claim. (Cl. 220—6.)



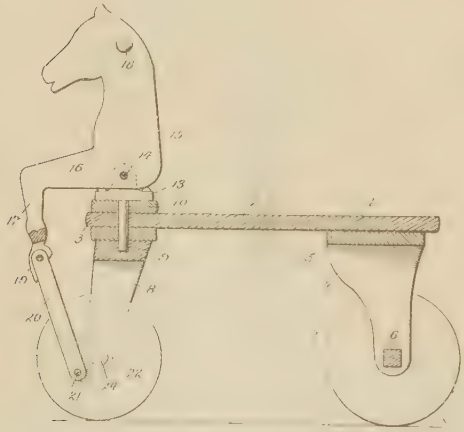
A collapsible crate comprising, a back section, end sections hingedly connected to the back section, an outwardly extending tongue formed on the outer edge of one of the end sections, a bottom section, downwardly and outwardly extending tongues formed on all of the edges of the bottom section and disposed above the plane of the body of said section, a front section, upwardly and inwardly extending tongues formed on the lower edges of the back and front sections, and engageable with the tongues of the bottom section for supporting the latter between the sections, a lid, inwardly extending tongues formed on the side edges and one of the end edges of said lid and spaced therefrom to provide grooves, outwardly extending tongues formed on the upper edges of the front, end and back sections and slidable in the grooves of said lid to engage the lid tongues for confining the lid upon the crate.

1,414,949. WRENCH. NELS HELLEM, Portland, Oreg. Filed Mar. 13, 1919. Serial No. 282,441. 1 Claim. (Cl. 81—60.)



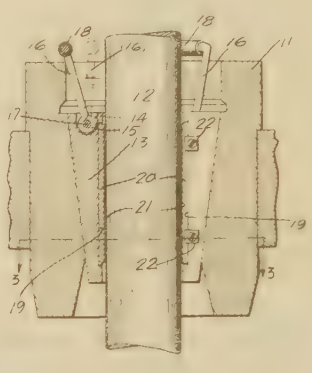
In a ratchet wrench of the character described, a shank provided with an integral offset portion constituting one side of the ratchet wheel housing, a plate firmly secured on said shank overlying and extending the full length of such offset portion, such plate constituting the other side of said housing, a ratchet wheel between the sides, the ratchet wheel being provided on each side face with an annular recess concentric with its axis of rotation, the interior faces of the housing sides being provided with perpendicular annular portions bearing in said recesses of the ratchet wheel and extending completely around the said recesses of the latter, and a curved spring controlled pawl engaging with that side of said ratchet wheel located approximately in that plane of its diameter which is normal to the longitudinal axis of the shank of the wrench.

1,414,950. TOY VEHICLE. WILLIAM LACY HOGE, Louisville, Ky. Filed Nov. 22, 1920. Serial No. 425,793. 3 Claims. (Cl. 208—33.)



1. In a toy vehicle, the combination of a body; wheels for supporting the rear portion thereof; a fork swiveled at the forward end of the body; a lever sustaining element secured to the fork and movable therewith; a lever fulcrumed upon said element; a pair of spaced wheels carried by the fork; a crank pin secured between the adjacent faces of the wheels; and a pitman extending from said crank pin and between the wheels to the lower end of the lever.

1,414,951. ROTARY DRILL-PIPE SLIP. CHESTER C. HOSMER and CARLETON H. WINES, Huntington Beach, Calif. Filed Aug. 3, 1921. Serial No. 489,477. 2 Claims. (Cl. 24—263.)



1. A pipe slip comprising a set of segments adapted to approximately fit a pipe and tapered on their outer faces to fit a bushing, there being recesses upon the inner faces of the segments, said recesses being dovetailed at their upper and lower ends and open at their sides, segmental slip members sliding sideways into said recesses, and plates secured to the sides of the segments and engaging the sides of the slip members.

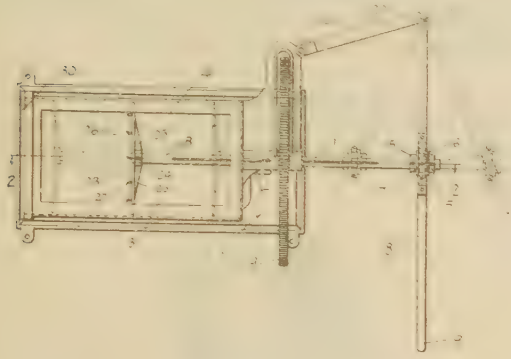
1,414,952. GASOLINE FEED SYSTEM. ERNEST R. HUNTLEY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Mar. 20, 1920. Serial No. 367,327. 10 Claims. (Cl. 158—36.)

1. In a liquid feed system, a main tank from which fuel is to be lifted, a secondary tank mounted below said main tank and in communication therewith, whereby fuel is supplied said secondary tank from the main tank through gravitational action, a fluid line extending upwardly from said secondary tank and means for conveying air under pressure to the top of said secondary tank.

1,414,953. FRUIT SNOWFLAKER. JOHN B. INGRAM, Los Angeles, Calif. Filed Apr. 11, 1921. Serial No. 460,212. 1 Claim. (Cl. 83—62.)

In a machine of the class described, a container, an elongated bearing formed on one end thereof, a horizontally disposed U-shaped bracket projecting laterally from said bearing, a shaft arranged for sliding movement through said bearing, a portion of which shaft projects into the container, a gear wheel arranged between the legs of said U-shaped bracket and having a slot-and-key connection with said shaft, means for driving said gear wheel, manually operated means for moving said shaft lengthwise

through said bearing, a disk carried by the end of the shaft within said container, and an inclined blade ad-

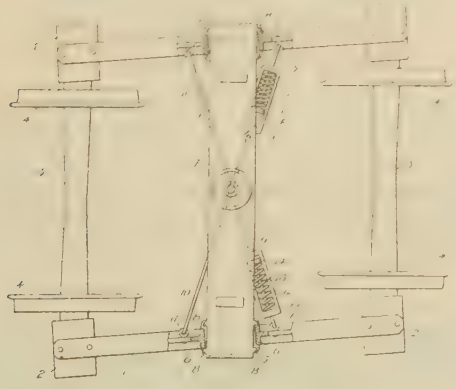


justably arranged in the end of the container opposite to the end that is provided with the bearing.

1,414,954. DUMP WAGON. HANS P. JENSEN-BEÄRLUNDD, Lisbon, Portugal. Filed July 2, 1919. Serial No. 308,255. 2 Claims. (Cl. 298—17.)

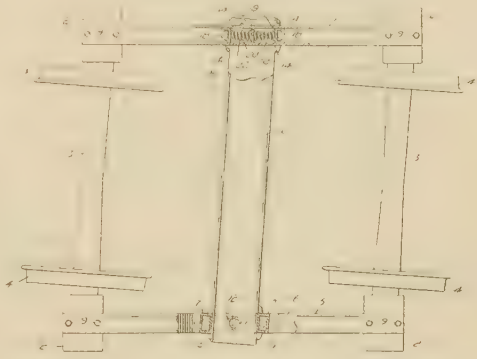
1. A vehicle of the class described comprising a forward frame carrying forward bearing wheels, a motor mounted on said forward frame, a rear frame swingingly coupled to the forward frame and including side members in parallel relation, supporting devices slidably bearing on the side members of said rear frame, a rear axle carrying rear bearing wheels, springs connected to said axle and respectively to said supporting devices, a transmission device carried by the rear axle, a drive shaft extending from said motor, and slidably engaging said transmission device, whereby when the hingedly united frames are broken upwardly the rear axle and its bearing wheels will be moved forwardly without cramping the parts.

1,414,955. CAR TRUCK. BYERS W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 25, 1921. Serial No. 439,795. 10 Claims. (Cl. 105—179.)



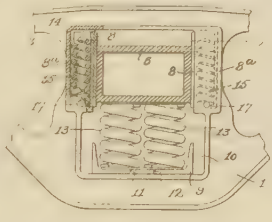
1. In a car truck, the combination with spaced side frame members which are relatively movable longitudinally of the truck, of a bolster, and yielding means connecting said side frames below said bolster and transversely of the truck.

1,414,956. CAR TRUCK. BYERS W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 28, 1921. Serial No. 440,592. 15 Claims. (Cl. 105—179.)



1. In a car truck, the combination with side frame members which are relatively movable longitudinally of the truck and each of which comprises a tension member, a compression member and interposed struts or bolster guide columns which are rotatable with respect to said tension and compression members, of means for movably connecting said side frames, and means acting upon said column guides for resisting longitudinal displacement of either side frame member from normal position.

1,414,957. CAR TRUCK. BYERS W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 28, 1921. Serial No. 440,593. 9 Claims. (Cl. 105—179.)

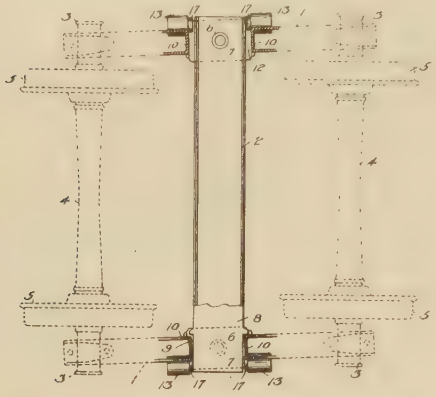


1. In a car truck, the combination with side frame members which are relatively movable longitudinally of the truck, of means for connecting said side frame members, said means being adapted to have a pivotal movement with reference to said side frame members, and vertically extending yielding means carried by said side frame members for resisting a longitudinal displacement of the latter from normal position.

1,414,958. CAR TRUCK. BYERS W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 23, 1922. Serial No. 531,236. 18 Claims. (Cl. 105—179.)

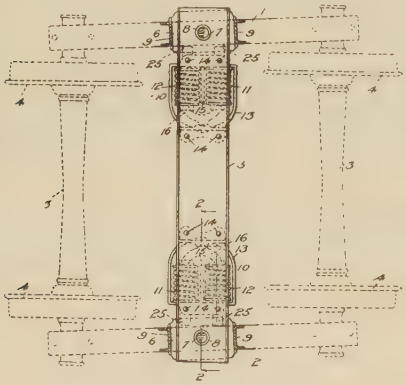
1. In a car truck, the combination with movable side frame members, of means including a spring plank connecting said side frame members, a bolster for said truck, and yieldable means adapted to bear against the ends of

said spring plank and bolster for resisting displacement movement of the side frame members from normal position,



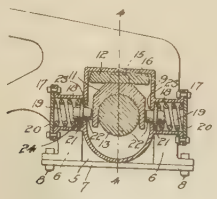
said means also serving to restore the side frame members to normal position upon cessation of said displacement movement.

1,414,959. CAR TRUCK. BYERS W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 1, 1922. Serial No. 533,367. 20 Claims. (Cl. 105—179.)



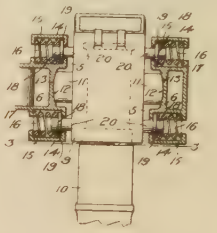
1. In a car truck, the combination with movable side frame members, of means connecting said side frame members, and yieldable means arranged to resist displacement movement of the side frame members from normal position, said yieldable means including a series of associated spring devices adapted to be successively energized for restoring the side frame members to normal position.

1,414,960. CAR TRUCK. BYERS W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 14, 1922. Serial No. 536,454. 19 Claims. (Cl. 105—179.)



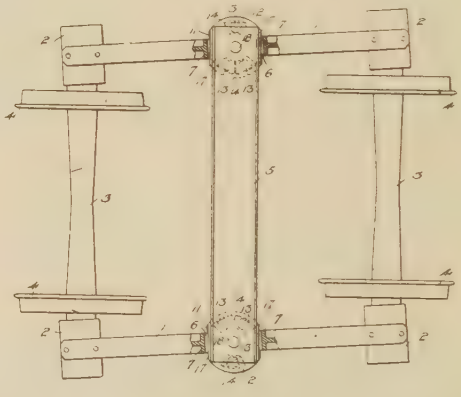
1. In a car truck, the combination with movable side frame members, of means connecting said side frame members adapted to permit relative longitudinal movement of the side frame members from normal position, car axles spanning said side frame members, journal boxes for said axles, each of said journal boxes including a bearing member engaging the respective ends of said axles, and yieldable means operable against each of said bearing members for resisting relative longitudinal displacement of said side frame members from normal position.

1,414,961. CAR TRUCK. BYERS W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 14, 1922. Serial No. 536,455. 22 Claims. (Cl. 105—179.)



1. In a car truck, the combination with movable side frame members, of means connecting said side frame members adapted to permit relative longitudinal movement of the side frame members from normal position, car axle provided with journal boxes supported in said side frame members and movable with said axles, and yieldable means interposed between each journal box and the adjacent side frame member for resisting longitudinal displacement of either side frame member from normal position.

1,414,962. CAR TRUCK. BYERS W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 22, 1921, Serial No. 439,097. Renewed Mar. 17, 1922. Serial No. 544,684. 18 Claims. (Cl. 105—179.)

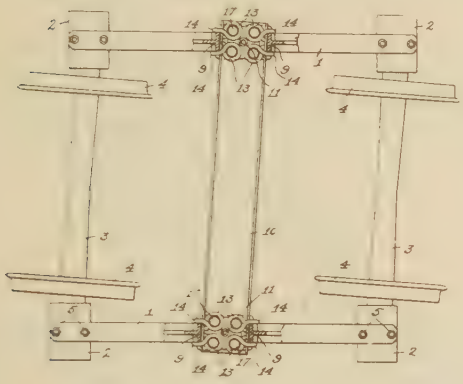


1. In a car truck, the combination with side frame members which are relatively movable longitudinally of the truck, of means for movably connecting said side frame members, and means whereby the load upon said truck operates to restore said side frame members to normal position after they have been displaced from such position by a relative movement longitudinally of the truck.

1,414,963. CAR TRUCK. BYERS W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 28, 1921, Serial No. 440,594. Renewed Mar. 17, 1922. Serial No. 544,685. 11 Claims. (Cl. 105—179.)

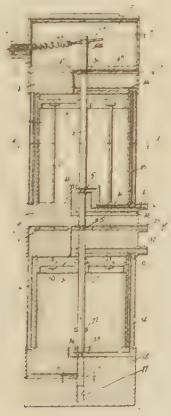
1. In a car truck, the combination with side frame members which are relatively movable longitudinally of

the truck, of a vertically movable bolster which is adapted to angle horizontally with respect to said side frame members, and spring means for vertically supporting said



bolster, said spring means being adapted to be energized by a relative longitudinal displacement of said frame members from normal position to thereby resist said displacement.

1,414,964. GASOLINE METER. RICHARD LOSSING, South Pasadena, Calif., assignor to Lossing Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 27, 1920. Serial No. 426,828. 7 Claims. (Cl. 235—94.)



1. The combination with a liquid supply of measuring means, registering mechanism, and a rotatable flexible connection between said measuring means and said registering mechanism.

1,414,965. COMPOUND-VALVE PUMP OR MOTOR. WALDEMAR F. MAYER, Philadelphia, Pa., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Nov. 12, 1919. Serial No. 337,425. 7 Claims. (Cl. 103—85.)

1. A pump having a two chamber casing, a pair of cylinders, opposite acting plungers in the cylinders, and a single rotary valve for connecting the respective

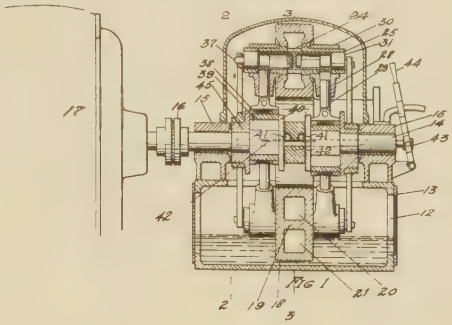


FIG 1

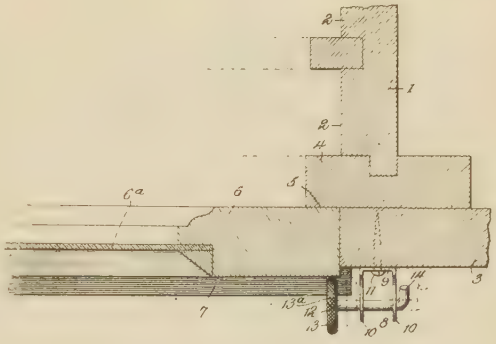
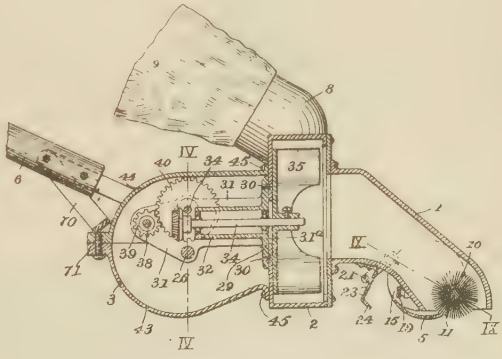
cylinders in succession with the respective chambers of the casing.

1,414,966. STORM SASH AND SCREEN FASTENER. JAMES B. MAYNARD, Superior, Wis. Filed Apr. 13, 1921. Serial No. 460,976. 4 Claims. (Cl. 292—241.)



1. In combination with a bracket provided with journals, a shaft rotatably and slidably mounted in said journals, said shaft being bent at one end in the shape of a spiral and in a plane at right angles to the shaft to form a cam.

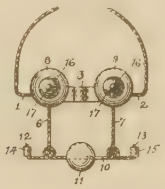
1,414,967. VACUUM CLEANER. JERRY J. MERITHEW, Akron, Ohio. Filed Feb. 24, 1919. Serial No. 278,951. 1 Claim. (Cl. 230—11.)



In a vacuum cleaner, the combination of a vertically disposed fan casing, a frame secured on the rear side of

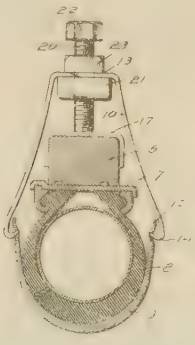
said casing and comprising a tubular portion projecting rearwardly from the fan casing and arms extending parallel with said tubular portion at opposite sides of the same, a fan shaft journaled in bearings at the front and rear ends of said tubular portion of the frame, a motor casing secured to and projecting rearwardly from the fan casing and enclosing said frame, a shaft extending transversely through said casing and the arms of said frame, driving and supporting wheels secured on the ends of said shaft laterally beyond the sides of the casing, and gearing within the casing and disposed between the arms of the frame to operatively connect said shaft with the fan shaft.

1,414,968. DOLL HEAD. WILLIAM H. MITCHELL, Richmond, Ind. Filed July 23, 1920. Serial No. 398,413. 1 Claim. (Cl. 46—40.)



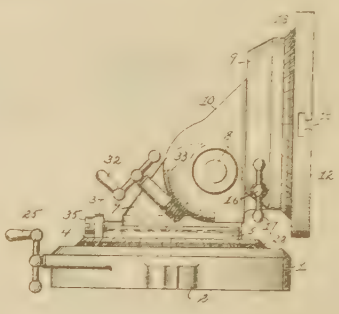
A shell formed as a doll head having eye-apertures therein, prongs projecting inward toward each other from the inside of the shell and terminating on each side of said eye apertures, a frame pivoted between said prongs, upper and lower leaves connected with the frame and having apertures therein, arms pivoted in said apertures of the frame, eye-balls each having a right-angular notch formed in the lower rear portion thereof with the end portions of said frame located in said notches, said arms each having a right-angular forward bend above the respective upper leaves of the frame with the forward ends of said arms rigidly secured in the respective eye-balls, rearward downward and angularly extending projections from said arms, a connecting-bar pivotedly connecting the lower ends of said extensions, and a weight secured to the said connecting bar, all substantially as shown and described.

1,414,969. TIRE-BOOT CLAMP. AARON T. MOORE, Oatman, Ariz. Filed June 16, 1921. Serial No. 478,059. 2 Claims. (Cl. 152—24.)



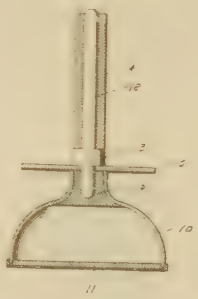
2. A boot holder of the class described comprising a resilient saddle having angularly directed arms on each side thereof, bridging the felly of a wheel, said arms having inwardly bent ends provided with gripping prongs for attachment to a boot, a screw threaded element and movable nut carried thereby adapted to bear against the bridging portion of the saddle, and a locking nut on said threaded element for retaining said saddle in its tensioned position when the boot is tightened on the tire.

1,414,970. ADJUSTABLE ANGLE PLATE. ALEXANDER W. NELSON, Newark, N. J., assignor to Nelson Tool & Machine Company, Incorporated, a Corporation of Virginia. Filed May 10, 1919. Serial No. 296,161. 3 Claims. (Cl. 90—59.)



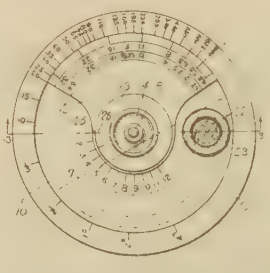
1. A device of the character described, comprising a support, provided with a recessed and beveled annular seat, a base provided with a correspondingly beveled portion rotatively mounted upon the annular seat of said support, a standard slidably secured to the base, a bracket adjustably and pivotally secured to the standard provided with a recessed and beveled annular seat, an angle plate provided with a correspondingly beveled portion rotatively mounted upon the said bracket and means for changing the angular position of said angle plate.

1,414,971. SPOOL HOLDER. FERDINAND H. AHL, Salem, N. J. Filed May 5, 1920. Serial No. 379,130. 2 Claims. (Cl. 242—134.)



1. A holder of the class described having a stem, a plate, a bearing on the stem, adjacent to the plate of greater diameter than the stem, said stem adapted to receive a spool to rest on the bearing as a base, and a filler sleeve of substantially the same diameter as said bearing applicable to the stem to rest on said bearing, whereby a spool of another size may be passed over the sleeve and bearing to rest on the plate.

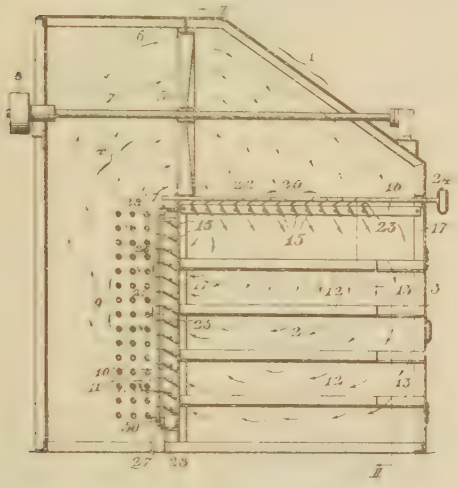
1,414,972. COMPUTING EXPOSURE METER. THOMAS MCG. AIKEN, Pittsburgh, Pa. Filed Aug. 14, 1920. Serial No. 403,478. 19 Claims. (Cl. 235—88.)



1. An exposure meter for use in photography comprising means operated in accordance with direct ob-

servation therethrough for measuring the light value of the subject to be photographed, indicating means operatively connected to the said light measuring means for indicating the correct exposure for the said subject, and means for preliminarily adjusting the said indicating means in accordance with local conditions of use.

1,414,973. DRYING MACHINE. THOMAS ALLSOP and WALTER W. SIBSON, Philadelphia, Pa., assignors to The Philadelphia Drying Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 14, 1920. Serial No. 403,479. 6 Claims. (Cl. 34—39.)

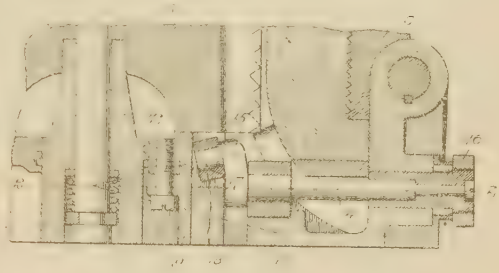


4. A drying machine comprising an enclosure with a compartment therein for the material to be dried, and a passage directly connecting the top of said compartment with a side thereof; means in said compartment for supporting material to be dried in horizontal tiers; means in the top and the side of said compartment connected therewith by the aforesaid passage for controlling and varying the direction of the entering air; a series of adjustable horizontal air-directing and controlling shutters across the top of said compartment and at the side connected therewith by the aforesaid passage; and a fan in the aforesaid passage adjacent the angle between the top and side of said compartment connected thereby for circulating the air through the compartment with return through the passage.

1,414,974. SINGLE-BLADE PLANE. HANS ANDERSON, Oakland, Calif. Filed Nov. 22, 1921. Serial No. 517,074. 2 Claims. (Cl. 145—14.)

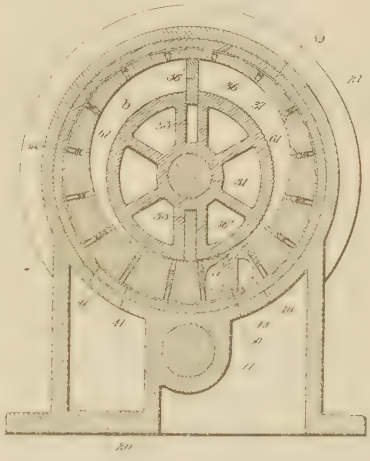
1. In a single blade plane, means for adjustably supporting the blade in an inclined position, comprising a block having a slanting blade engaging surface, a recess in the rear end of the block having a slanting bottom parallel to the block surface with a central hole, a guiding member operatively engaging the undersurface of the blade adapted to ride on the recess bottom having a downward projection extending through the hole, and means supported in the rear wall of the block threadedly engaging the downward projection for adjusting the position of the guiding member.

1,414,975. BREECH MECHANISM. DORSEY F. ASBURY, Washington, D. C. Filed July 13, 1920. Serial No. 395,868. 26 Claims. (Cl. 89—20.)



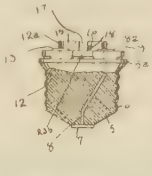
1. In a breech mechanism, a rotatable plug, a pivoted actuating arm, means for pivoting the arm, and plug operating means between the arm and plug including a member whose axis intersects the axis of the plug at all times.

1,414,976. ROTARY ENGINE. BENJAMIN FRANKLIN AUGUSTINE, Buffalo, N. Y. Filed May 6, 1915. Serial No. 26,314. 22 Claims. (Cl. 121—84.)



1. A rotary engine comprising a cylinder, a rotatable carrier in said cylinder, radial pistons mounted on said carrier, end plates fixed to said carrier, rigid yokes connecting the radial pistons, each end plate having a recess on its inner face adapted to house and guide one of said yokes, and fixed eccentrics for each yoke to move the same positively to move the pistons radially on the carrier.

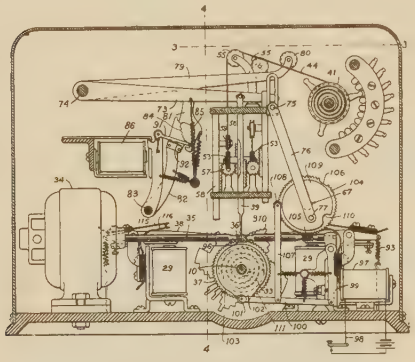
1,414,977. RENEWABLE FUSE. WILFRID A. BRUNELLE, South Hadley Falls, Mass. Filed Jan. 22, 1919. Serial No. 272,530. 1 Claim. (Cl. 200—130.)



A renewable fuse consisting of a body of insulating material having a metallic shell formed with screw threads, a wire extending through the center of the inner end of said body and providing a terminal contact at said inner end, the other end of the wire being extended outwardly of the outer end of said body, a wire

having metallic contact with said shell and extended outwardly of the outer end of said body, means for securing the terminals of a fuse wire to said wires, a partition of insulating material located between said terminals, the head of said body being formed with recesses in its sides, a cap having an annular flange adapted to overlie said head and having a wall provided with indentations adapted to lockingly engage the recesses, said head also being formed with notches, a member disposed across said cap and provided with terminal portions to engage the notches, and means for holding said member locked to said cap.

1,414,978. COMPUTING MACHINE. RALPH W. BUMSTEAD, Brookline, Mass. Filed Aug. 23, 1917. Serial No. 187,765. 21 Claims. (Cl. 235—97.)

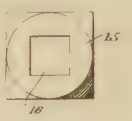


1. In a machine for computing the product of two plural digital factors, a plurality of keys adapted to receive the "set up" of the two factors, a plurality of product-representing members, a propelling mechanism common to all the product-representing members, an arresting device associated with each product-representing member, a plurality of selector units less in number than the product-representing members but adapted to control the latter simultaneously and independently through said arresting devices, a single distributor mechanism adapted in combination with the keys and the selector units to control said arresting devices thereby to arrest the movement of each product-representing member when the latter in passing successively through various product-representing positions reaches a setting position predetermined by the actuation of the keys, and means to indicate or record the sum of the individual products obtained as aforesaid.

2. In a machine for computing the product of two plural digital factors, a plurality of setting elements which may be set to represent the digits of said two factors, a plurality of product-representing members, each constructed to represent in different selected positions the products of any two digits, means whereby said product-representing members may be moved uninterruptedly from their initial to their set positions as selected by said setting elements, thereby causing said product-representing members to indicate simultaneously all the products obtained by multiplying each digit of one of said plural digital factors by all the digits of the other plural digital factor, and means to indicate by a single uninterrupted one-stage operation the total of said individual products.

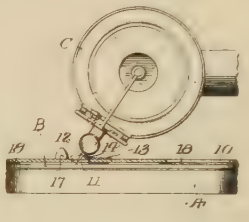
8. In a machine for computing the product of two factors, each of two or more digits, means to effect first a simultaneous and uninterrupted setting movement of a set of members adapted and sufficient to represent all the individual products of each digit of one factor multiplied by each digit of the other factor and then simultaneously to obtain the addition of all the individual products.

1,414,979. CONVERTIBLE BOLT. DOUGLAS GRAND CARTER, Picton, Ontario, Canada. Filed June 9, 1919. Serial No. 302,805. 1 Claim. (Cl. 85—1.)



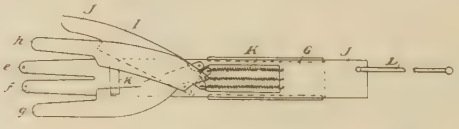
The combination of a carriage bolt having the usual means for preventing rotation thereof and a nut-shaped body having an aperture to fit over said means in interlocking relation thereto and adapted to assume structurally and functionally the position of the head of a machine bolt.

1,414,980. REPEATING ATTACHMENT FOR TALKING MACHINES. EVERETT G. CLEMENTS, Washington, D. C. Filed Feb. 20, 1915. Serial No. 9,753. 4 Claims. (Cl. 274—15.)



1. The combination with a talking machine having a transportable reproducer head, of a member adapted to rotate in a plane parallel to the plane of the record to restore said head to a position to repeat the playing of the record, vibration transmission means carried by said head, said vibration transmission means being so positioned as to extend into the path of travel of said member and adapted to prevent rotation thereof during the playing of the record.

1,414,981. AUTOMOBILE SIGNAL. WESLEY CLINE, Edmonton, Alberta, Canada. Filed Sept. 10, 1921. Serial No. 499,642. 1 Claim. (Cl. 116—50.)

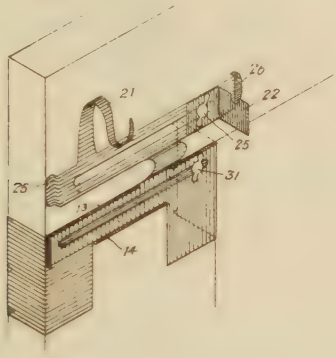


In a vehicle signal, a case and an expanding signal formed of an arm portion and a hand portion the former being formed of a strip of material terminating in two fingers of the hand and of other strips spaced to form finger slots and spring slots, fingers in said slots and springs holding said fingers to their expanded position and a crank operating mechanism adapted to retire said hand in said case and coincidently close in the fingers to their slots.

1,414,982. COMBINATION WINDOW-SHADE AND CURTAIN-HOLDING DEVICE. CLAYTON E. DURHAM and ANDREW J. ROHR, Terre Haute, Ind. Filed July 11, 1921. Serial No. 484,000. 2 Claims. (Cl. 156—24.)

1. A device of the character described comprising a member including a substantially horizontal portion provided with forwardly extending substantially horizontal flanges, said member having a transverse portion provided with an extension arranged at substantially a right angle to the transverse portion, said extension having prongs adapted to enter the material of the window casing, said member further comprising a substantially horizontal strip

arranged above the substantially horizontal portion, an approximately U-shaped member connecting the horizontal strip and horizontal portion, and being adapted to be bent for vertically adjusting the horizontal strip, and an arm extending from the horizontal strip and adapted to support a curtain pole; and a companion member comprising a substantially horizontal portion to be arranged upon

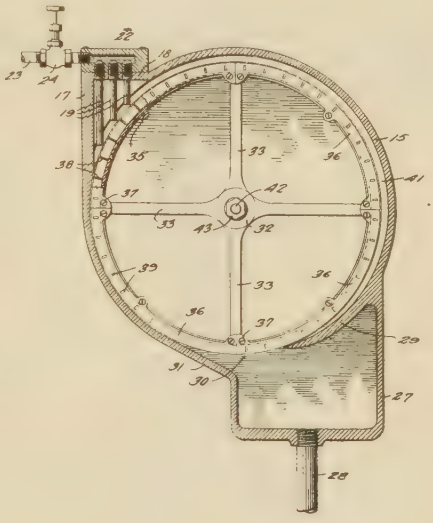


the first named horizontal portion between the flanges thereof, said companion member comprising a transverse portion provided with an extension arranged at substantially a right angle thereto, said extension carrying prongs adapted to enter the material of the window casing, and means to clamp the horizontal portions and the first and second named members together.

1,414,983. VALVE-GRINDING DEVICE. JOE M. HAMILTON, Mount Holly, N. C. Filed Mar. 25, 1921. Serial No. 455,502. 3 Claims. (Cl. 51—29.)

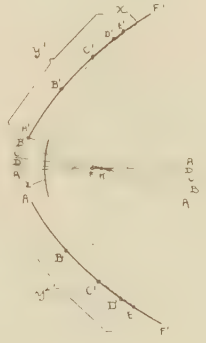
1. A valve grinding device comprising, a frame adapted to be arranged in proximity to the valve and to rest upon the engine, a substantially vertical spindle slidably mounted within the frame and adapted to be moved longitudinally with relation to the frame, a weight mounted upon the upper end of the spindle, a gear mounted upon the spindle within the frame, a substantially vertical operating shaft having a portion thereof rotatably mounted within the frame and extending substantially parallel with the spindle, said operating shaft projecting above the frame and having an operating groove, a gear mounted upon the operating shaft within the frame and being thicker than the first named gear, a handle having a swiveled connection with the upper end of the operating shaft, and a reciprocatory handle slidable upon the upper portion of the operating shaft and carrying an element to enter the operating groove.

1,414,984. TURBINE. HARRY ALFRED HOOD, Quincy, Mass. Filed Mar. 9, 1918. Serial No. 221,495. 14 Claims. (Cl. 253—140.)



1. In a turbine, the combination of a casing having inlet and exhaust chambers at diametrically opposed sides thereof, a detachable cartridge projecting into the inlet and provided with a relatively small perforation in its outer end for controlling the escape of fluid under pressure in a relatively fine stream against the rotor, a rotor mounted in the casing and having radially extending blades in its periphery, and an arcuate vacuum chamber extending between the said exhaust and intake chambers in the side of the casing opposite that which the fluid under pressure is adapted to travel with the rotor, said vacuum chamber communicating with the intake chamber, and the jet of fluid under pressure issuing from said cartridge being adapted to create suction in the intake and vacuum chambers for augmenting the force of impact against said blades in turning the rotor.

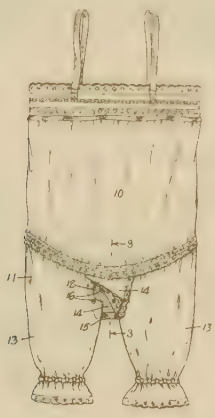
1,414,985. SEARCHLIGHT. GEORGES KLEEFELD, Brussels, Belgium. Filed Dec. 9, 1921. Serial No. 521,267. 3 Claims. (Cl. 240—41.)



1. A headlight for motor vehicles and the like, comprising a lighting source and a reflector having a main paraboloid of revolution and two secondary reflecting surfaces, arranged laterally on either side of the main paraboloid and extending on either side of the main horizontal symmetrical plane of the reflector, the secondary reflecting surfaces being composed of paraboloid sections the axes of which are disposed at angles to the axis of the main para-

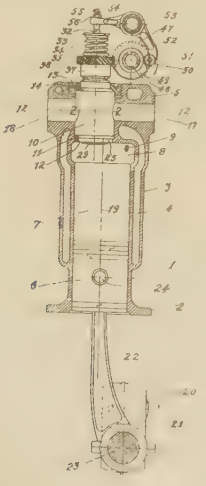
boloid, and at an angle to each other, the axis of the main paraboloid and the axes of the paraboloid sections being situated within the main symmetrical horizontal plane of the reflector.

1,414,986. UNDERGARMENT. NATHAN LIPPMAN, Brooklyn, N. Y. Filed May 26, 1921. Serial No. 472,753. 1 Claim. (Cl. 2—144.)



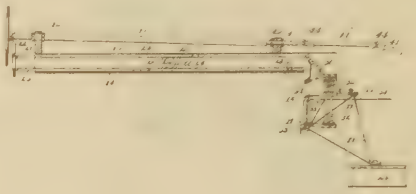
As a new article of manufacture, a woman's undergarment embodying in combination an envelope chemise including front and rear interengageable flaps, and bloomers having a crotch opening at the inner side edges of the leg members, and separable fastening elements provided respectively on the bloomers adjacent the crotch opening and the flaps of the envelope chemise whereby the said flaps constitute means for closing the crotch opening of the bloomers.

1,414,987. HYDROCARBON ENGINE. GEORGE LOEFFLER, New York, and MORRIS J. COHEN, Brooklyn, N. Y. Filed July 21, 1919. Serial No. 312,303. 21 Claims. (Cl. 123—79.)



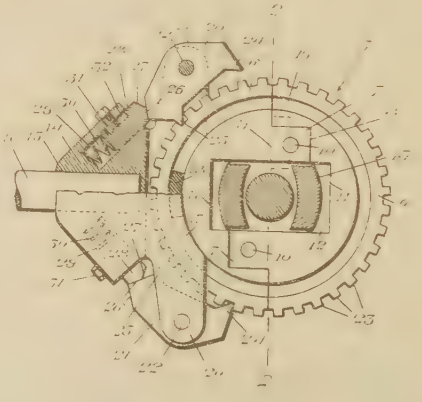
1. In a hydrocarbon engine, a plurality of independent castings arranged in alignment, each of said castings having a plurality of work-cylinders constituting a unit; a crank-shaft below the work-cylinders and common to all of them and extending in the direction of alignment of the cylinders, and the latter being arranged so that the cylinders of each unit will be alternately on opposite sides of the longitudinal axis of the shaft, and a vertical plane passing through said longitudinal axis will cut each cylinder of the aligned units eccentrically to its vertical axis, said shaft having a plurality of cranks; and piston rods connecting the cranks and pistons of the work-cylinders respectively, said rods having their ends coupled to the cranks by offset members, so that the thrust from the pistons to the cranks is in the longitudinal axis of the work-cylinders and eccentric to the longitudinal axis of the crank-shaft.

1,414,988. TRACTOR-CONTROLLING MEANS AND THE LIKE. OTTO L. OAKES, Boise, Idaho. Filed Feb. 28, 1919. Serial No. 279,817. 11 Claims. (Cl. 180—14.)



1. The combination with a machine and tractor for moving the same, of a rack bar attached to said machine; a gear operating on said rack bar; a rack bar attached to said tractor and operating on said gear; a shaft carried by said gear; a second gear on said shaft; a second pair of rack bars slidable longitudinally with respect to said first mentioned rack bars and meshing with opposite sides of said second gear, one of said second pair of rack bars leading to said machine and the other leading to said tractor; means on the machine for operating the said rack bar leading thereto; and controlling means on said tractor operatively connected with the said rack bar leading thereto, substantially as described.

1,414,989. TURNBUCKLE WRENCH. JOHN THORNTON MCCASKEY, Boone, Iowa. Filed Sept. 7, 1920. Serial No. 408,633. 7 Claims. (Cl. 81—60.)



1. A wrench comprising a rotatable annular head having a central opening, an oscillatory member overlapping said head and extending only partially around said head, said head having annular means surrounding said opening for the engagement of said head, and ratchet means between said member and head, said head having a section removable therefrom for placing the head around an object.

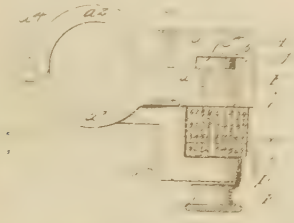
1,414,990. AUTOMATIC PUMP. CHARLIE M. MCFARLAND, Wichita Falls, Tex. Filed Apr. 13, 1920. Serial No. 373,655. 4 Claims. (Cl. 103—67.)

1. In a pump, a plunger, a throttle valve for compressed air to impart working movement to the plunger,

a movable member to control movement of the valve, and a valve to move said member through exhaust of the compressed air from the pump.

4. In a pump, an air chamber, a duct for admitting air under pressure thereto, a plurality of valves controlling the passage of air through said duct, a float operatively connected with one of the valves, an exhaust air duct connected with the air chamber, a plunger operated by the exhaust air and having operative connection with the valve last named, a valve controlling the passage of air from the air chamber to the exhaust duct, one of the valves last named being opened when the valve leading from the chamber to the exhaust duct is closed, a plunger in the air chamber, and operated when air is admitted under pressure through the inlet air duct, a pump cylinder and a plunger operating therein, means operatively connecting said plunger, and means operated by the plunger first named for controlling certain of the valves for cutting off the air supply to the air chamber and opening the exhaust duct.

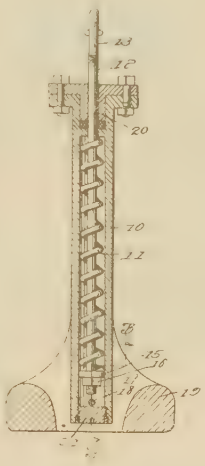
1,414,991. AUTOMOBILE LOCK. GUILLAUME REUSEUS MCKEAGE, Montrose, Pa. Filed July 1, 1919. Serial No. 307,895. 3 Claims. (Cl. 70—129.)



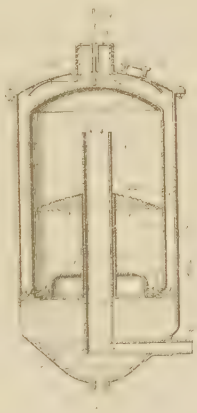
1. A lock for the steering wheel of an automobile comprising a clamp with means for securing it on the steering column, said clamp comprising opposed members between which said column is clamped, one of said members having an L-shaped apertured arm thereon, and also having an aperture therein in alinement with the aperture in said arm, a bolt slidably fitted in said apertures, a yoke slidably fitted between the opposed members of said clamp substantially at right angles to said sliding bolt, and means positioned between the L-shaped arm and the clamp for engaging the sliding bolt to lock the same in a retracted or extended position for locking or unlocking said yoke.

1,414,992. ANCHOR. ERIC J. MEIER, Dorchester, Mass. Filed Aug. 24, 1920. Serial No. 405,597. 1 Claim. (Cl. 114—208.)

An anchor having a tubular shank to which the head is pivotally connected, a cable or chain attaching rod extending axially through the bore of the shank, a coiled spring housed in the shank, said attaching rod being provided at its outer end with an eye for engagement by an anchor chain or cable and at its inner end with a nut for terminal contact with said spring, a stuffing box closing the upper end of the shank and forming a guide for the attaching rod, and a removable cap closing the inner end of the bore of the shank.



1,414,993. AIR FILTER FOR INTERNAL-COMBUSTION ENGINES. ALVIN MILBURN, Keensburg, Ill. Filed Mar. 18, 1921. Serial No. 453,289. 4 Claims. (Cl. 183—9.)

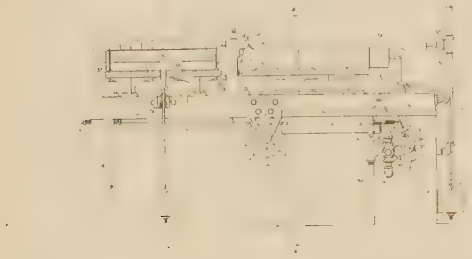


1. In a device of the character described, a stationary vertical casing including a top and a bottom, said top being provided with inlet openings, a stationary outlet pipe having one end projecting upwardly within said stationary casing, and its other end projecting without the casing, a vertically movable casing mounted within said stationary casing and spaced therefrom, said last named casing being provided with a closed top, a bottom wall formed on said movable casing, and a float carried by said bottom wall and spaced from the side walls of said movable casing, said bottom wall being provided with openings arranged between said float and the side walls of said movable casing.

1,414,994. BUTTER-CUTTING MACHINE. CHARLES F. MILLER, Omaha, Nebr. Filed Mar. 12, 1919. Serial No. 282,214. 9 Claims. (Cl. 31—65.)

1. A machine for cutting hard butter into rectangular prints from refrigerated slabs having a thickness sub-

stantially the same as one of the dimension of the prints to be formed and having a length and width substantially equal to multiples of the other dimensions of the prints, comprising a horizontal supporting platform for the slabs, vertical harps arranged at right angles to each other and to the face of the platform, a head movable to push a slab across the platform through one of the harps, a second head movable to push through the second harp the bars formed by the passage of the slab through the first harp, actuating means for moving said heads reciprocatingly, and controlling means for automatically alternating movements of the heads.



3. A machine for cutting hard butter into rectangular prints from slabs refrigerated to a solid condition and having a thickness substantially one of the dimensions of the prints to be formed, comprising a horizontal supporting platform for the slabs, vertical harps arranged at right angles to each other and to the face of the platform, the wires of said harps being secured to provide a cutting length substantially equal to the thickness of the slab, pressure means alternately actuated automatically to force the slab through said harps whereby prints are cut with sharp unbroken edges in condition for wrapping.

5. In a butter cutting machine having a pair of push-blocks movable respectively longitudinally and transversely of a support, a pair of hydraulic cylinders, pistons movable therein and connected operatively with the respective push-blocks, a water supply pipe, a drain pipe, a four-way cock connected with said pipes, a pipe extending directly from said cock to one cylinder, a pipe extending from said cock to the other cylinder, a two-way cock interposed in the latter pipe, means for moving the four-way cock to connect the cylinder-pipes alternately with the supply and drain pipes, and connecting means between said cocks, said connecting means including a lost-motion coupling to enable movement of the two-way cock from closed to open position without corresponding movement of the four-way cock.

6. In a structure as set forth in claim 5, means tending to turn the four-way cock, an escape-wheel connected fixedly with said cock, an oscillatory pallet limiting continued movement of said wheel to a quarter-turn, and means connected with said pallet and actuated by the pistons to release the escape-wheel at the termination of the piston-movements.

7. In a structure as set forth in claim 5, a rocking shaft, means actuated by movement of said shaft in one direction for turning the two-way cock from closed to open position, and means actuated by movement of said rocking-shaft in the other direction for turning the cock-connecting means to first move the four-way cock and take up the lost motion of the coupling device and then turn both cocks simultaneously to positions corresponding with the starting positions thereof.

1,414,995. MATCH-SCRATCHING ATTACHMENT FOR LAMPS. EDWARD A. MILLER, Downs, Kans. Filed July 29, 1921. Serial No. 488,367. 2 Claims. (Cl. 44—48.)

1. A match scratching attachment for lamps consisting of an annular collar adapted for engagement with the neck of a lamp body and having a depending curved

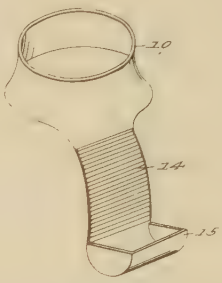


plate provided with a roughened surface to lie adjacent to the surface of the lamp body.

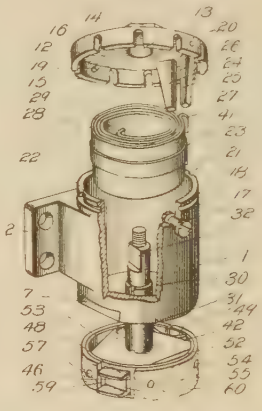
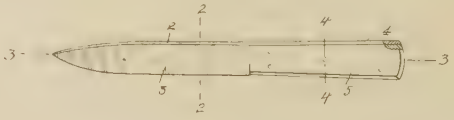
1,414,996. DOOR CHECK AND CLOSER. CHARLES W. PARKER, Kansas City, Mo., assignor to R. E. Kittredge, Edw. M. Lyons, and Mable E. Lyons, Chicago, Ill. Filed July 1, 1921. Serial No. 481,891. 7 Claims. (Cl. 16—65.)



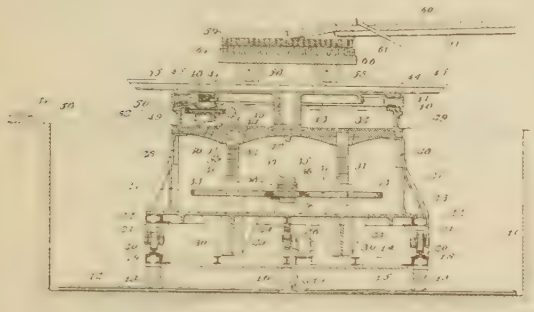
3. In a door check and closer, a cylindrical casing, a spring-actuated door closer in said casing, a split brake band carried thereby, a transversely located, longitudinally movable bolt, means actuated by the bolt for expanding the band, a head on the bolt having a cam groove, and a roller in the groove for imparting longitudinal movement to the bolt and head.

1,414,997. CUTLERY. HENRY JOHN ZINN, Kingston, Pa. Filed Sept. 9, 1920. Serial No. 409,139. 1 Claim. (Cl. 30—9.)



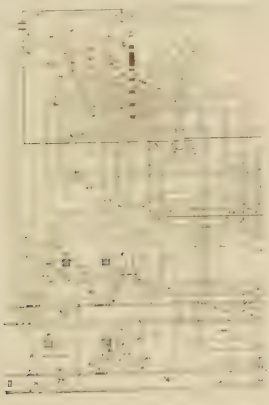
As a new article of manufacture, a cutting blade comprising a relatively thin intermediate portion, an integral strengthening web or bead at one edge of said relatively thin portion, said relatively thin portion having a shank extension at one end, said web extending along the edge of the shank, handle members on the shank below the web at the edge of the web, and side portions on the blade of softer metal than the intermediate portion, secured to the intermediate portion and to the web, said side portions flush with the outer edges of the web and tapering toward the edge of the blade.

1,414,998. BRICK-HACKING MACHINE. WILLIAM H. ALLEN, Momence, Ill., assignor to Raymond C. Penfield, New York, N. Y. Filed Mar. 15, 1921. Serial No. 452,572. 5 Claims. (Cl. 214—6.)



1. In a hacking device for bricks and the like, the combination of means for feeding a plurality of bricks in succession, a turntable, a transfer car carried thereby adjacent the delivery end of said brick feeding means, and means for moving said turntable parallel to the direction of movement of the bricks in said brick feeding means.

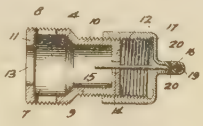
1,414,999. ELECTRIC CONTROL OF RAILWAY TRAINS OR VEHICLES. ARTHUR REGINALD ANGUS, Brighton, England. Filed Sept. 23, 1921. Serial No. 502,682. 22 Claims. (Cl. 246—134.)



1. Track apparatus for the electrical control of trains on joining track portions comprising a source or sources of electricity, traffic-controlling electro-responsive devices constituting a first set connected to rails of the track portions respectively and adapted to be energized by electricity from said source or one or more of said source and to be de-energized when disconnected from such energizing source or sources or when short-circuited therefrom, as by conductively connected wheels of a railway vehicle, an insulation located in each rail portion joining opposite sides of a track portion, and a traffic-controlling electro-responsive device of a second set bridging each said insulation and adapted to be de-energized on the failure of the corresponding insulation, substantially as described.

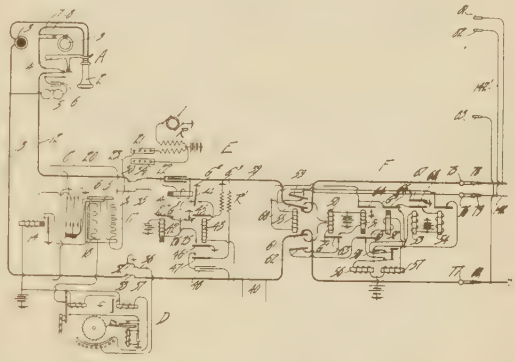
1,415,000. OILING DEVICE FOR REACH RODS. ALFRED B. BREEZE, Cincinnati, Ohio, assignor to The Cincinnati Ball Crank Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 5, 1919. Serial No. 321,946. 2 Claims. (Cl. 184—48.)

1. In a device of the class described, a tubular reducer plug having its reduced end provided with a rectangularly apertured closure wall, a cap screw threaded upon said reduced end of the plug, having a compressed head, and a U-shaped clip having its boss end centrally compressed



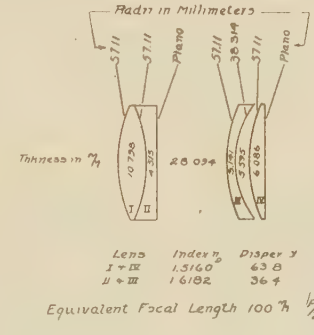
with the cap head and its limbs engaged through the apertures of said plug and closure wall.

1,415,001. SPECIAL SERVICE TRUNK FOR AUTOMATIC TELEPHONE SYSTEMS. TALBOT G. MARTIN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed July 9, 1917. Serial No. 179,310. 20 Claims. (Cl. 179—27.)



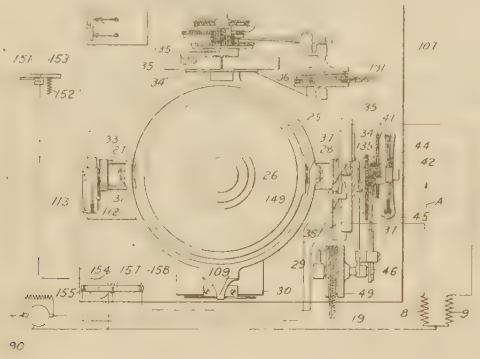
1. In a telephone system comprising a main exchange and a sub-exchange, the combination with subscribers' lines in the sub-exchange classified in accordance with the kind of service to which they are entitled, of an operator's position, means including an automatic switch in each exchange for extending a talking circuit from a calling line in the sub-exchange to the said operator's position, and automatic means controlled by the operator for connecting a distinctive tone to said talking circuit for informing the operator of the class to which the calling subscriber belongs.

1,415,002. PROJECTION LENS. WILLIAM H. REPP, Rochester, N. Y., assignor to Projection Optics Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Sept. 21, 1920. Serial No. 411,772. 2 Claims. (Cl. 88—57.)



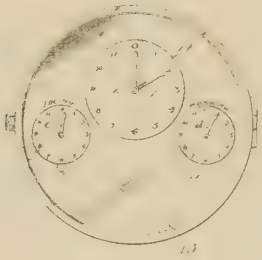
1. A projection lens, having four lenses therein, arranged from front to back as follows; a double convex lens, cemented to a concave plano lens, the two forming the front combination, a convex concavo lens, a short facing and a convex plano lens, the latter two forming the rear combination, the convex surfaces of the lenses all having the same curvature.

1,415,003. AUTOMATIC PILOT FOR AEROPLANES. LAWRENCE B. SPERRY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 29, 1916. Serial No. 87,434. 19 Claims. (Cl. 244—29.)



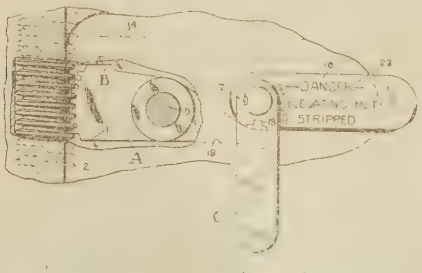
1. In an aeroplane, the combination with a direct manual control device, an automatic governor and a stabilizing plane, of a servo-motor adapted to be controlled from said governor, connections between said plane, said motor and said device, a controller for said motor associated with said device, and means whereby the governor may be rendered inoperative.

1,415,004. TIME INDICATOR FOR AUTOMOBILES. ROBERT WATSON, Silver Spring, Md. Filed Apr. 30, 1919, Serial No. 293,608. Renewed June 10, 1921. Serial No. 476,607. 7 Claims. (Cl. 161—15.5.)



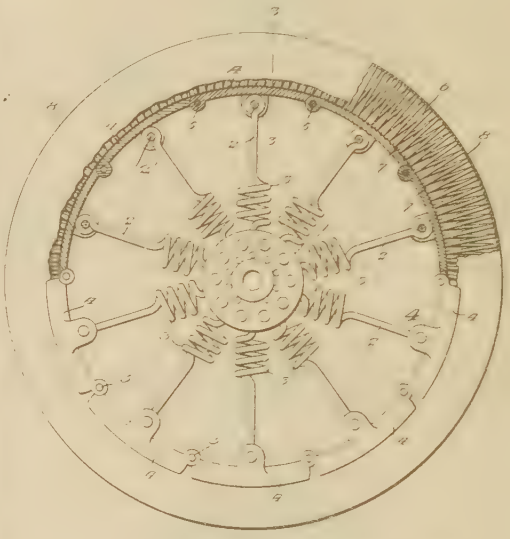
1. The combination with an automobile having an internal combustion driving motor, of means for indicating the idling time of the motor comprising time mechanism, a time indicator operable thereby but normally stopped, means for causing the operation of the indicator while the motor is running and the vehicle is stopped, and means for stopping the indicator when the vehicle starts.

1,415,005. GEAR-LIKE INDICATOR OF STRIPPED THREADS. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 23, 1921. Serial No. 487,067. 7 Claims. (Cl. 116—114.)



5. A safety-device of the nature disclosed combining a member adapted to be elevated; a lifting-screw threaded to said member; an element rotatably carried by said member and also in engagement with the threads of said screw; a stop provided by said member and spaced slightly from the abutment provided by said element; and a signal-giving means connected with said element and adapted to be actuated by a movement of said element insufficient to establish contact between said stop and said abutment.

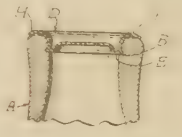
1,415,006. SPRING WHEEL. LUDWICK SNIEREK, Elizabeth, N. J. Filed June 28, 1920. Serial No. 392,168. 1 Claim. (Cl. 152—29.)



A spring wheel comprising a hub, single radial spokes carried thereby and having integral helically coiled portions to form springs closely adjacent said hubs, a rim comprising a plurality of articulated sections, pivotally secured to the outer ends of individual spokes, and an endless tread surrounding said rim.

REISSUES.

15,346. SANITARY CLOSURE FOR BOTTLES. CONRAD W. BORGNER, Lowville, N. Y. Filed Mar. 4, 1922. Serial No. 541,178. Original No. 1,343,760, dated June 15, 1920, Serial No. 279,697, filed Feb. 28, 1919. 5 Claims. (Cl. 215—51.)

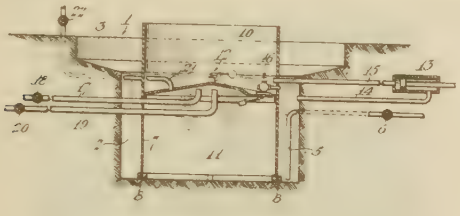


1. A closure for milk and other bottles, comprising a portion with a central annular opening with an upturned edge, which rests upon the seat within the neck of a bottle, an inverted cup section, the marginal edge of which interlocks with said upturned edge and holds the closure to its seat.

15,347. CONTAINER. ALLEN VAN RENSSELAER, Los Angeles, Calif. Filed Nov. 17, 1920. Serial No. 424,797. Original No. 1,285,383, dated Nov. 19, 1918, Serial No. 187,158, filed Aug. 20, 1917. 19 Claims. (Cl. 220—13.)

19. In a container, the combination of a partition dividing the container into an upper chamber and a lower

chamber, said lower chamber being subjected to a variable pressure in the normal operation of the container; a valve for regulating the volume of a liquid carried in said upper chamber to compensate for said changes in pressure in said lower chamber and thus maintain a substan-



tially constant difference in pressure between the two sides of said partition; a diaphragm member open on one side of the pressure in said lower chamber and on the other side to the pressure of said liquid; and means by which said member actuates said valve.

DESIGNS.

60,924. PEN FOUNTAIN. JOHN LESLIE ADAMS, Chicago, Ill. Filed Jan. 3, 1921. Serial No. 434,815. Term of patent 7 years.

TRADE-MARK REGISTRATIONS GRANTED

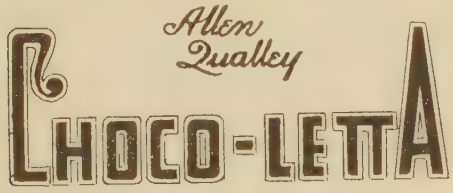
[ACT OF MARCH 19, 1920, SEC. 1 (b)].

MAY 2, 1922.

THESE REGISTRATIONS ARE NOT SUBJECT TO OPPOSITION.

154,768. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ALLEN-QUALLEY COMPANY, St. Paul, Minn. Filed Oct. 8, 1918. Serial No. 113,619.



Particular description of goods.—Candy.
Claims use since Aug. 22, 1918.

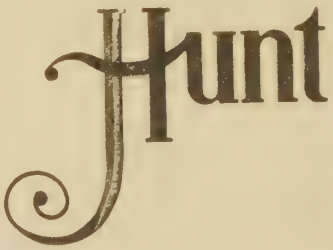
154,769. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CHARLES L. BRUSH, San Francisco, Calif. Filed Jan. 20, 1920. Serial No. 127,354.

Particular description of goods.—Candy Sandwiches.
Claims use since Dec. 11, 1919.

154,770. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DAIRY ASSOCIATION CO., INC., Lyndonville, Vt. Filed Dec. 13, 1921. Serial No. 156,621.

Particular description of goods.—A Preparation for the Treatment of Diseases of the Udder and Teats on Cows, Such as Caked Bag, Sore Teats, Bunches, Chapping, Cuts, Scratches, Swellings, and Inflammation. This Balm is Also Beneficial in the Treatment of Cuts, Sores, and Abrasions of Any Kind on Other Animals and May Also be Used for Human Beings.
Claims use since 1897.

154,771. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HUNT BROTHERS PACKING COMPANY, San Francisco, Calif. Filed Jan. 3, 1921. Serial No. 141,776.



Particular description of goods.—Canned Fruits, Canned Vegetables, Canned Tuna Fish, and Canned Preserves.
Claims use on canned fruits, canned vegetables, and canned preserves since August, 1909, and on canned tuna fish since 1913.

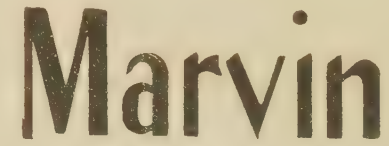
154,772. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HENRY MAILLARD INC., New York, N. Y. Filed Sept. 2, 1921. Serial No. 152,515.

Particular description of goods.—Confections—Namely, Chocolates.
Claims use since Dec. 3, 1913.

154,773. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CARL MANAS, New York, N. Y. Filed Oct. 1, 1921. Serial No. 153,612.

Particular description of goods.—Malted Milk.
Claims use since May, 1915.

154,774. (CLASS 39. CLOTHING.) MARVIN SHAW & CO., New York, N. Y. Filed Jan. 11, 1922. Serial No. 157,780.



Particular description of goods.—Children's and Misses' Dresses.
Claims use since November, 1918.

LABELS

REGISTERED MAY 2, 1922.

24,292.—*Title:* "CLEANBRIGHT WASHING TABLETS." (For Washing Tablets.) CHARLES F. BENDER, St. Louis, Mo. Filed February 20, 1922.

24,293.—*Title:* "KREMOLA." (For Face Creams.) DR. C. H. BERRY COMPANY, Chicago, Ill. Filed December 7, 1921.

24,294.—*Title:* "CRESCENT BRAND." (For Sardines.) F. E. BOOTH COMPANY, San Francisco, Calif. Filed July 20, 1921.

24,295.—*Title:* "FRIENDLY TIP." (For Cigars.) MAX E. BULKA, Chicago, Ill. Filed January 14, 1922.

24,296.—*Title:* "CUBAN SAMPLES." (For Cigars.) COLE LITHOGRAPHING AND PRINTING CO., Chicago, Ill. Filed March 11, 1922.

24,297.—*Title:* "MANNA BREAD." (For Bread.) CROUCH & PLASSMAN, Bridgeport, Conn. Filed January 26, 1922.

24,298.—*Title:* "ANZA THE CULTURE RIPENED COFFEE." (For Coffee.) CULTURED COFFEE COMPANY OF AMERICA, Detroit, Mich. Filed December 20, 1921.

24,299.—*Title:* "DAN-DOO." (For Containers for a Massage Cream for Treatment of Dandruff, Blackheads, Eczema, and Pimples of Skin and Scalp.) THE DAN-DOO CO., Kansas City, Mo. Filed January 30,1922.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

HERNANDEZ-MEJIA v. KELLEY.

No. 1429. Decided January 3, 1922.

1. PATENTS—INTERFERENCE—EFFECT OF FILING AFTER ISSUANCE OF PATENT TO SENIOR PARTY.

The rule that where a patent has issued to the senior party before the junior party files his application, the latter must prove beyond a reasonable doubt the facts necessary to overcome the patent, affirmed. (Following *Braun* v. *Wiegand*, 49 App. D. C., 193; 262 Feb., 647.)

2. SAME—SAME—BURDEN OF PROOF.

The testimony in an interference proceeding considered and found the junior party had failed to overcome the burden of proof resting upon him by showing either conception or reduction to practice prior to his opponent's filing date.

3. SAME—SAME—PATENTABILITY OF THE CLAIMS.

Where it is contended that the substance of the invention in interference is disclosed in a prior patent and no invention would be involved by bringing what is there disclosed into harmony with the claims in issue, *Held*, this raises the question of the patentability of the claims, which is not permissible in an interference proceeding. (Following *Wintroath* v. *Chapman*, 47 App. D. C., 428; 248 O. G., 1004; 1918 C. D., 154.)

4. SAME—SAME—LEAVE TO AMEND PRELIMINARY STATEMENT.

The rule that the granting or refusal of leave to amend a preliminary statement is within the discretion of the Commissioner and his decision will not be reviewed on appeal unless there is a palpable abuse of power, affirmed. (Following *Cross* v. *Phillips*, 14 App. D. C., 228; 87 O. G., 1399; 1899 C. D., 342, and *Fowler* v. *Boyce*, 27 App. D. C., 55; 122 O. G., 1726; 1906 C. D., 659.)

Mr. W. L. Edmonston and *Mr. Benj. Roman* for Hernandez-Mejia.

Mr. Melville Church and *Mr. J. S. Wooster* for Kelley.

SMYTH, *C. J.*:

This is an interference between an application and a patent. It relates to the art of making and coloring motion-picture films to reproduce the objects in their natural colors. Eighteen counts are involved. Counts 1 and 18 are typical.

Count 1. The method of producing a double-colored photographic transparency which consists in printing images in registry on opposite sides of a double-sensitized transparent base, developing and fixing said images, treating one of said images to render it capable of absorbing dye and transmitting light, dyeing said image, washing and drying the entire base, applying a protective coating to the dyed side, treating the other image to render it dye absorbent and capable of transmitting light, dyeing with a second color, and washing and drying to complete the transparency.

Count 18. A double-coated perforated photographic transparency having a record on each side, each of said records being registered horizontally with a certain perforation as a standard, and vertically with a certain other perforation as a standard, the records on said sides being colored in different colors.

A patent was issued to Kelley March 12, 1918, on an application filed July 26, 1917. Hernandez-Mejia's application was filed June 25, 1918. The Examiner of Interferences awarded all the claims to Hernandez-Mejia except four, which he gave to Kelley. The latter appealed, and the Board of Examiners-in-Chief held that he was entitled to all the claims. This action was affirmed by the Assistant Commissioner.

It is well established that where an interference is declared between a patent and an application filed after the issuance of the patent, the applicant can not succeed unless he proves beyond a reasonable doubt the facts necessary to overcome the patent. (*Braun* v. *Wiegand*, 49 App. D. C., 193; 262 Fed., 647, and decisions there cited.)

The Assistant Commissioner found that Hernandez-Mejia was undoubtedly working in the specific art to which the invention belongs before Kelley began, and that the latter, so far as the proofs go, had no conception of the invention in issue prior to his filing date; but Hernandez-Mejia, according to the Assistant Commissioner, had failed to show even *prima facie* that he had reduced the invention to practice, or that he had even conceived it, before that date. There are references, he said, in Hernandez-Mejia's proofs to some features embodied in the claims, but there is nothing disclosing the entire process required by them. The Assistant Commissioner's conclusion is based partly on his own analysis of the testimony and partly on that of the Board of Examiners. We fully agree with him. To set out here the steps by which we arrived at this opinion would be to restate in effect what he and

the Board have said, and this would be of no practical use to anyone. Hernandez-Mejia has failed to discharge the very heavy task which the law imposed upon him with regard to the burden of proof.

Hernandez-Mejia urges that the substance of the invention is disclosed by a patent issued to him in 1916, and that the details necessary to bring what is there disclosed into harmony with the claims in issue would not require invention, but would occur to anyone skilled in the art in carrying out the processes described in his patent. This raises the question of the patentability of the claims—something which can not be done in an interference proceeding. The interference is declared on the assumption that the claims are patentable, and this assumption is not open to attack. (*Wintroath* v. *Chapman*, 47 App. D. C., 428, and cases cited; *Cowles* v. *Rody*, 49 App. D. C., 135; 261 Fed., 1015.) The Assistant Commissioner, however, went into the question quite carefully and found that the appealed claims were distinguishable from the disclosure of the earlier patent, and that Hernandez-Mejia had no conception of the specific limitations which characterize them.

The assertion that Kelley derived the invention from Hernandez-Mejia can not be upheld in view of the finding just made that the latter did not have it at the time Kelley entered the field. Hernandez-Mejia's application for leave to amend his preliminary statement so as to show that his date of reduction to practice was not in 1916 but in 1911 or 1912 was denied. This was a matter addressed to the discretion of the Commissioner, and his action will not be reviewed unless there was a palpable abuse of his power. (*Cross* v. *Phillips*, 14 App. D. C., 228; *Fowler* v. *Boyce*, 27 App. D. C., 55.) There was no such abuse. A motion to strike out certain testimony received in behalf of Kelley was overruled. Even if the testimony was improperly admitted, there was no prejudicial error, for it had no tendency to injure Hernandez-Mejia's case.

The decision of the commissioner is affirmed.

Affirmed.

Mr. Justice HITZ, of the Supreme Court of the District of Columbia, sat in the place of Mr. Justice VAN ORSDEL in the hearing and determination of this appeal.

ADJUDICATED PATENTS.

(U. S. D. C. Pa.) The Johnson patents, No. 973,200, No. 1,281,019, and No. 1,298,346, for improvements in union garments, *Held* void for lack of invention. *Johnson* v. *Lit Bros.*, 278 Fed. Rep., 279.

(U. S. C. C. A. N. Y.) The Kennedy patent, No. 1,019,482, claims 1–4, 7, and 8, for method and means of charging storage batteries, not infringed. *Electro-Dynamic Co.* v. *U. S. Light & Heat Corporation*, 278 Fed. Rep., 80.

(U. S. D. C. N. Y.) The Schleit patent, No. 1,174,525, for draft regulator for water heaters, *Held* valid and infringed. *W. A. Schleit Mfg. Co.* v. *Syracuse Radiator Co.*, 278 Fed. Rep., 305.

(U. S. D. C. R. I.) The Nivois patent, No. 1,232,073, for cigarette case, *Held* valid and infringed. *Nivois* v. *Metal Products Co.*, 278 Fed. Rep., 385.

Breece; same, suit filed February 27, 1922, U. S. D C., S. D. Ohio (W. Div.), *Perkins Glue Co.* v. *The Globe Wernicke Co. & E. Z. Blagg.*

Re. 14,137, C. F. Gailor, Welded rail joints, suit filed February 20, 1922, U. S. D. C., Mid. D. Pa., Doc. 1390 (trespass), *Union Trust Co.* v. *Scranton Ry. Co.*

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 5, 1922.

Sweetser, Pembrook & Co., their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Ernest Simons Mfg. Co., of Port Chester, N. Y., for registration of a trade-mark and trade-mark registered June 27, 1899, No. 33,115, to Sweetser, Pembrook & Co., 376 Broadway, New York, N. Y., and a notice of such declaration sent by registered mail to said Sweetser, Pembrook & Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Sweetser, Pembrook & Co., their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 5, 1922.

The Smith Bros. Co., Ltd., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Atlas Specialty Company,

Inc., of Richmond, Va., for registration of a trade-mark and trade-mark registered July 30, 1901, No. 36,835, to The Smith Bros. Co., Ltd., 510, 512, 514, 516, and 518 Poydras and 517, 519, and 521 Lafayette Streets, New Orleans, La., and a notice of such declaration sent by registered mail to said The Smith Bros. Co., Ltd., at the said address having been returned by the post office undeliverable, notice is hereby given that unless said The Smith Bros. Co., Ltd., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 5, 1922.

Burnham & Co., their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Sunshine Cleansing Products Company, 2520 Market Street, Denver, Colo., for registration of a trade-mark and trade-mark registered December 24, 1895, No. 27,538, to Burnham & Co., 28 Warren Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Burnham & Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Burnham & Co. shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 12, 1922.

The Palmetto Chemical Co., Inc., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Alexander Kendrick Johnson, of 1524 Demonbaun Street, Nashville, Tenn., for registration of a trade-mark and trade-mark registered December 29, 1908, No. 72,051, to The Palmetto Chemical Co., Inc., of Aiken, S. C., and a notice of such interference sent by registered mail to The Palmetto Chemical Co., Inc., at the said address having been returned by the post office undeliverable, notice is hereby given that unless The Palmetto Chemical Co., Inc., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 12, 1922.

Henri L. Bates, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Manufacturing Company of America, of Twelfth and Hamilton Streets, Philadelphia, Pa., for registration of a trade-mark and trade-mark registered April 16, 1895, No. 26,416, to Henri L. Bates, of No. 21 Cabot Street, Portsmouth, N. H., and a notice of such interference sent by registered mail to Henri L. Bates at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Henri L. Bates, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 19, 1922.

Abraham Koppelberger, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Bloch Chemical Company, Inc., 67 Fifth Avenue, New York, N. Y., for registration of a trade-mark and trade-mark registered April 19, 1904, No. 42,444, to Abraham Koppelberger, 1123 Market Street, Sioux City, Iowa, and a notice of such declaration sent by registered mail to Abraham Koppelberger at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Abraham Koppelberger, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 25, 1922.

Clarence H. Henton, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Claude F. Osborne, 120 South Reeve Street, Hampton, Iowa, for registration of a trade-mark and trade-mark registered December 4, 1906, No. 58,077, to Clarence H. Henton, 3819 North Hermitage Avenue, Chicago, Ill., and a notice of such declaration sent by registered mail to Clarence H. Henton at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Clarence H. Henton, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 25, 1922.

J. Osiason, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of O. D. Baker Company, 525 West Forty-fifth Street, New York, N. Y., for registration of a trade-mark and trade-mark registered February 10, 1914, No. 95,341, to J. Osiason, 154 Broadway, Bristol, Mass., and a notice of such declaration sent by registered mail to J. Osiason at the said address having been returned by the post office undeliverable, notice is hereby given that unless said J. Osiason, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 25, 1922.

Crystal Spring Bottling Company, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Purity Crystal Rock Mineral Spring Water Co., 4611–15 North Western Avenue, Chicago, Ill., for registration of a trade-mark and trade-mark registered October 10, 1893, No. 23,699, to Crystal Spring Bottling Co., Barnet, Vt., and a notice of such declaration sent by registered mail to Crystal Spring Bottling Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Crystal Spring Bottling Co., their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 26, 1922.

Coast-Wide Chemical Company, Incorporated, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Frank P. Symonds, 16 Water Street, Salem, Mass., for registration of a trade-mark and trade-mark registered October 17, 1916, No. 113,491, to Coast-Wide Chemical Company, Incorporated, 74 Cortlandt Street, New York, N. Y., and a notice of such declaration sent by registered mail to Coast-Wide Chemical Company, Incorporated, at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Coast-Wide Chemical Company, Incorporated, its assigns or legal representatives shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 298—No. 2. TUESDAY, MAY 9, 1922. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

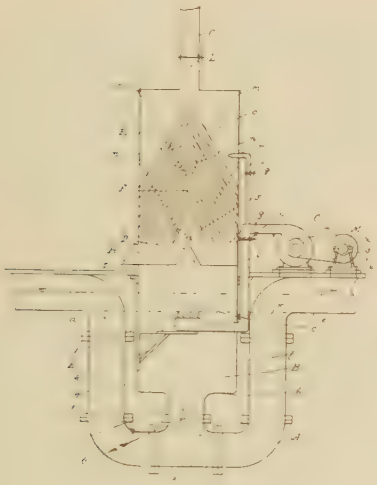
PATENTS

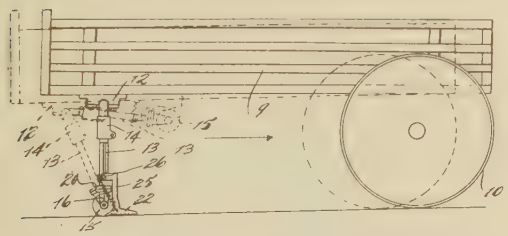
GRANTED MAY 9, 1922.

1,415,007. SEWAGE PURIFIER. JOHN P. BALL, Chicago, Ill. Filed Oct. 29, 1920, Serial No. 420,438. Renewed Mar. 8, 1922. Serial No. 542,199. 5 Claims. (Cl. 210—3.)



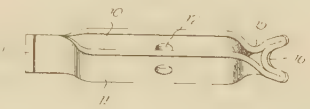
1. In sewage purifiers and similar devices, the combination with a casing having an upper condensing chamber and a lower sludge collecting chamber, said lower sludge collecting chamber being located in a pit below the surface of the sewage and containing a plurality of forced air passages, said condensing chamber containing a series of baffle screens, means for creating a sludge laden air current and means for condensing such sludge laden air current on said baffle screens.

1,415,008. TRAILER LEG SUPPORT. WILLIAM BARBER, Brooklyn, N. Y. Filed May 8, 1919. Serial No. 295,727. 6 Claims. (Cl. 280—33.1.)



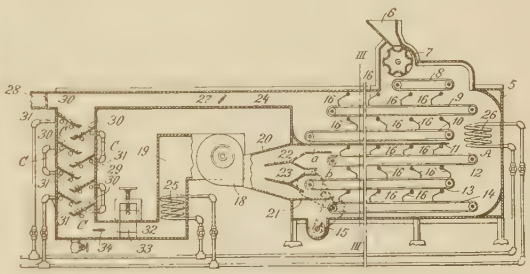
1. A combined wheel and shoe attachment for trailer leg supports, comprising a leg pivoted to the trailer body, a supporting wheel attached at the end of the leg, and a shoe pivotally mounted on the leg at a point above the wheel for movement into and out of working position.

1,415,009. BRAKE-BEAM FULCRUM AND METHOD OF MAKING THE SAME. CARL E. BAUER, Hammond, Ind. Filed Oct. 18, 1920. Serial No. 417,640. 5 Claims. (Cl. 29—164.)



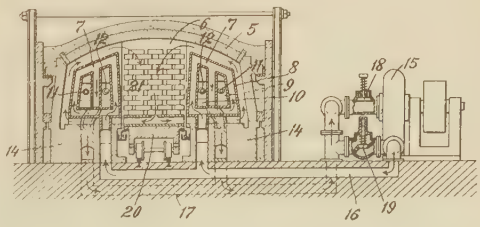
1. The method of forging fulcrums which consists in bending a flat bar into substantially U-shape and simultaneously forming a saddle in the doubled-up end thereof, then pressing the portions of metal contiguous to the saddle into engagement with the sides of the saddle.

1,415,010. APPARATUS FOR DRYING FRUITS, VEGETABLES, AND OTHER SUBSTANCES. GEORGE HILLARD BENJAMIN, New York, N. Y. Filed Feb. 10, 1917. Serial No. 147,778. 6 Claims. (Cl. 34—12.)



2. In an apparatus of the class described, the combination of an enclosing casing, a horizontal partition for dividing the apparatus into two sections, two series of belts longitudinally offset, one series in each section, means for driving said belts at progressively lower speeds the speeds decreasing approximately in proportion to the decrease of water in the material under treatment as the material passes from one belt to the next, together with means for driving heated air over said belts.

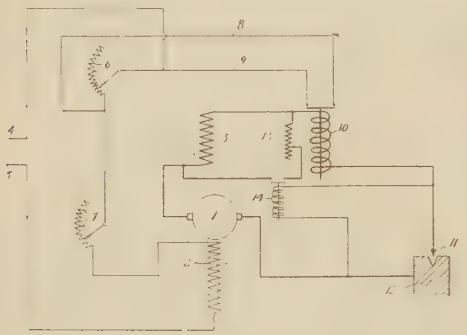
1,415,011. TUNNEL KILN. GEORGE HILLARD BENJAMIN, New York, N. Y. Filed May 17, 1921. Serial No. 470,233. 4 Claims. (Cl. 25—142.)



1. A tunnel oven comprising a main chamber through which goods to be heated can be caused to travel; a

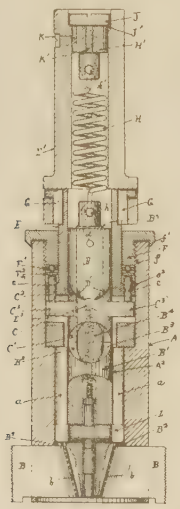
heating chamber on each side of the main chamber, but structurally independent of the walls thereof; each heating chamber consisting of an enclosing structure and two structurally independent combustion chambers located therein.

1,415,012. ARC-WELDING SYSTEM. ALAN M. BENNETT, WILLIAM B. ELLIOTT, and WILLIAM O'BLENIS, Westfield, N. J., assignors, by mesne assignments, to Burke Electric Company. Filed Mar. 14, 1918. Serial No. 222,295. 11 Claims. (Cl. 171—223.)



1. The combination of a variable resistance circuit, a generator supplying said circuit, said generator comprising a field winding and a series field winding opposed to the aforesaid field winding, and means responsive to increasing in working voltage for reducing the effect of the series field winding on the generator voltage.

1,415,013. COLLAPSIBLE TAP. RUDOLPH A. BOEHM, Erie, Pa., assignor to Rickert-Shafer Company, Erie, Pa., a Corporation of Pennsylvania. Filed Nov. 12, 1920. Serial No. 423,671. 7 Claims. (Cl. 10—145.)

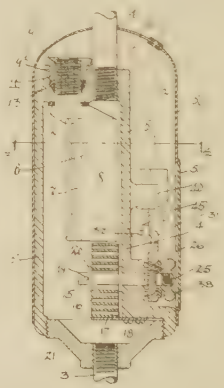


7. In a collapsible tap, a hollow body member, chasers radially slidable in one end thereof, an annular shoulder within said member, one or more driving studs secured in said shoulder, a spring pressed ratchet post mounted in said shoulder, a hollow shank rotatably and slidably mounted within the opposite end of said body member and having a transverse slot in the inner end thereof, a collar screwed into said body member around said shank adapted to be adjusted longitudinally therein, a ring secured on the lower end of said shank having radial notches in the lower annular surface thereof adapted to receive said driving studs, a central longitudinally movable member within said body member and said hollow shank, a block secured within said hollow shank adjacent to its upper end, a spring secured to said block and to said central member and adapted to move said central member in one direction therein, a sleeve rotatably mounted in said central member, co-acting cams on said central member and said sleeve adapted to move said central member against the action of said spring, arms on said sleeve extending into the transverse slot in said shank, and means on said arms to engage said screw collar whereby the longitudinal position of said sleeve and the central member with relation to said body and shank members may be adjusted by said screw collar.

1,415,014. SHOWER OR SPRAYING ATTACHMENT FOR BATHTUBS. WILLIAM C. BOOTH, Evanston, Ill. Filed Nov. 8, 1920. Serial No. 422,508. 2 Claims. (Cl. 4—26.)

1. The combination with a bath tub, of a spraying device therefor comprising a system of adjustable pipes fitting the inner upper edge of the tub, a plurality of spraying nozzles extending from said system of pipes and adapted for spraying water from the sides and ends of the tub in downwardly divergent sprays, the spraying device at the foot of the tub comprising a downwardly extending reservoir.

1,415,015. ELECTRIC WATER HEATER. CYRUS M. BOSWORTH, Cleveland, and ALOYSIUS G. BOESEL, Cleveland Heights, Ohio. Filed Aug. 6, 1919. Serial No. 315,586. 5 Claims. (Cl. 219—38.)

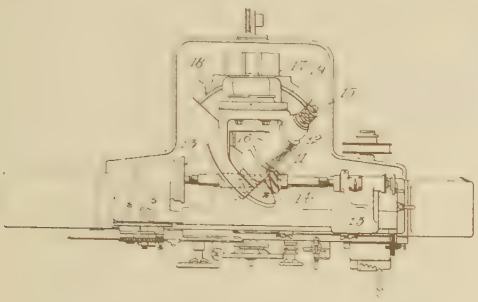


1. In an electrical heating device for water systems of the character described, the combination of a thermostat disposed within said device, and a regulator operatively connected to said thermostat, said regulator comprising a frusto-conical shaped portion, and a switch operating lever adjustably mounted on said frusto-conical shaped portion.

1,415,016. PROCESS OF FORMING GEARS BY GRINDING. PERCY BROWN and FRANCIS JOHN BOSTOCK, Huddersfield, England, assignors to Timken-Detroit Axle Company, a Corporation of Ohio. Filed Nov. 20, 1920. Serial No. 425,361. 8 Claims. (Cl. 51—278.)

1. The process of generating gears having helical teeth which comprises mounting a suitably formed gear blank for synchronous rotation and movement lengthwise of its

axis with reference to a rotating forming wheel having a straight side working face, and maintaining the wheel

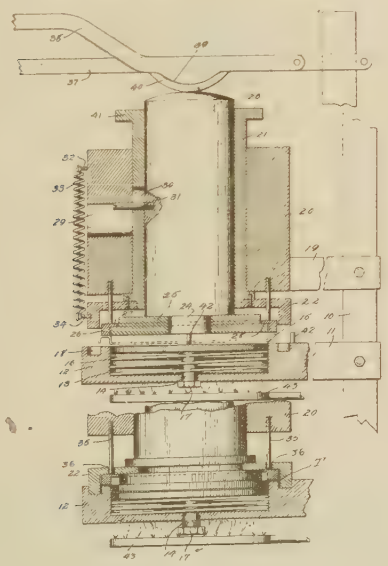


with said working face in contact with the face of a tooth along a non-radial line extending substantially from root to crown.

1,415,017. BUCKLE. JOHN F. CARPMILL and GEORGE W. TROOP, New Britain, Conn., assignors to The North & Judd Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed Dec. 6, 1921. Serial No. 520,300. 3 Claims. (Cl. 24—191.)

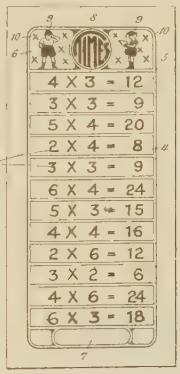
1. A buckle of the class described comprising a body member having parallel flanges along its opposite sides, a locker pivotally mounted between the side flanges and comprising a flat body portion having a depending flange at its forward end terminating in its lower end in a rearwardly extending lip, said body portion also having downwardly and rearwardly extending portions at angles to each other, said locker having a slot extending through its body portion and also through said downwardly and rearwardly extending portions, and a terminal member, for connection with a web, pivotally mounted in said slot.

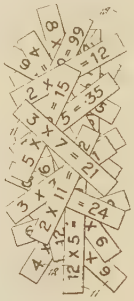
1,415,018. DIE PRESS. FREDERICK COATES, Cincinnati, Ohio, assignor to Federal Products Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 27, 1921. Serial No. 464,836. 3 Claims. (Cl. 18—19.)



1. In a device of the kind described, a hollow die support having longitudinal slot in one side, a die carrying plunger slidable in said support and having a pin projecting into said slot, dies on the support and plunger, yieldable means normally holding the support and plunger out of operation with the pin in the lower end of the slot, means to engage the plunger and move the same against the action of the yieldable means whereby said pin will cause similar movement of the hollow die support, and means to engage said support to continue movement thereof after the plunger ceases to move.

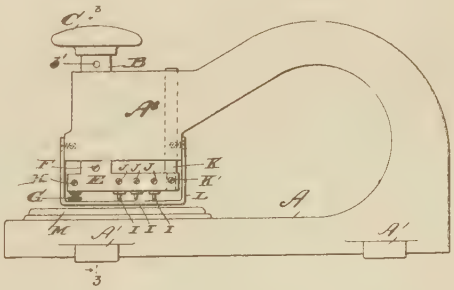
1,415,019. CARD GAME. LORENA CROSSLAND, Philadelphia, Pa. Filed Sept. 18, 1920. Serial No. 411,036. 4 Claims. (Cl. 35—2.)





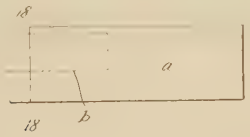
1. A card game for educational purposes comprising cards having an orderly arrangement of problems, each occupying a line on the card, and a number of mating slips or tags each corresponding in size to the space occupied by a problem on the card and having one of the problems thereon, with the slips separate from the cards and from each other, whereby each player may be provided with a card and the slips may be separately drawn to be placed upon and cover the corresponding problems on the card.

1,415,020. BALLOT PROTECTOR. LORENZO A. CROWLEY, Detroit, Mich. Filed Oct. 7, 1920. Serial No. 415,442. 3 Claims. (Cl. 164—93.)



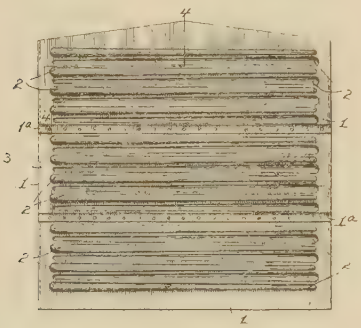
1. In a device of the character described, a frame having a portion overhanging its base, a vertical manually operated plunger sleeved in the overhanging portion, a removable die block secured to one end of the plunger having a plurality of dies thereon and means for removing each of said dies from the said block.

1,415,021. METHOD OF MAKING HIGH-SPEED CUTTING TOOLS. JEAN H. L. DE BATS, Whitman, Mass., assignor, by mesne assignments, to Anatmos Metals and Furnace Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 30, 1920. Serial No. 355,111. 2 Claims. (Cl. 76—101.)



2. The method of making high speed cutting tools, which consists in subjecting an iron or steel bar low in carbon and containing an alloy of metals which is relatively harder but of a lower melting point than said iron or steel bar, to a heat lower than the melting point of said iron or steel bar but sufficiently high to melt the said alloy and cause it to unite with the iron or steel, cooling the united metals and removing a portion of the iron or steel to expose the alloy.

1,415,022. SHEET-METAL CAR MEMBER. ETHAN I. DODDS, Pittsburgh, Pa. Filed Nov. 1, 1920. Serial No. 421,044. 2 Claims. (Cl. 105—410.)



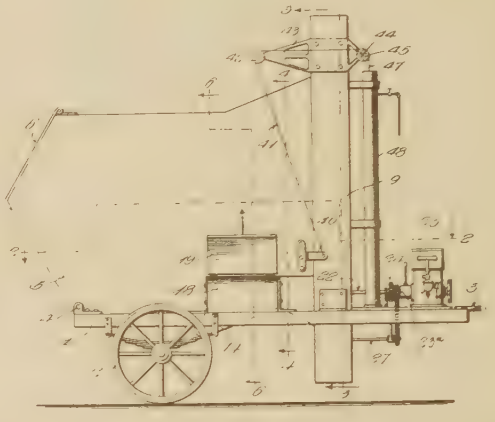
1. A sheet metal car member having corrugations all of which extend approximately from edge to edge of said member, each of said corrugations tapering gradually in width and depth from one end to the other, the large ends of alternate corrugations being located near one edge of the sheet and the smaller ends of the other corrugations alternating with said large ends near the same edge of the sheet.

1,415,023. PROCESS OF MAKING CELLULOSE ETHERS. JOHN M. DONOHUE, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 9, 1921. Serial No. 476,317. 8 Claims. (Cl. 260—10.)

7. In the process of making cellulose ethers, the steps of soaking cellulose in a caustic soda solution until mercerized, then mixing powdered caustic soda therewith, pressing out the excess of said caustic soda solution, and etherifying the cellulose in the resulting mixture.

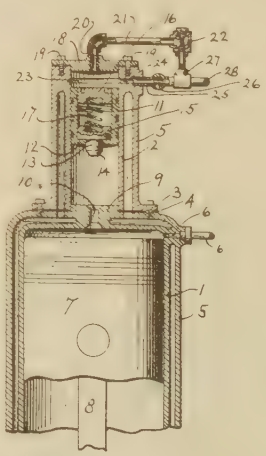
1,415,024. ASH COLLECTING AND DUMPING MACHINE. WILLIAM EIERMANN, Brooklyn, N. Y. Filed Nov. 1, 1920. Serial No. 421,077. 2 Claims. (Cl. 214—69.)

1. In a machine for collecting and dumping material, a truck including ground-wheels and a frame carried by the ground wheels and extending forward and rearward of the axis of the ground wheels, a conveyor mounted in the central portion of said frame forwardly of said axis and being operable to convey material forward, two chutes supported by said frame forwardly of said wheels and extending inwardly to a position for delivering material to said conveyor, an elevator casing mounted on and extending up from said truck forwardly of said conveyor and provided with an inlet and an outlet, an endless bucket-elevator including a supporting axle which extends forward and rearward or in the direction of travel of the truck, a chute between said conveyor and



elevator in position to receive material from the conveyor and having a laterally directed discharging end in position to deliver material to the ascending side of said bucket-elevator, a dumping receptacle hinged to said frame rearwardly of the axis of said ground-wheels and being normally in a position over said conveyor and in position to receive material from said elevator, a transmission member on said frame, and means driven by said transmission member for operating said conveyor and elevator.

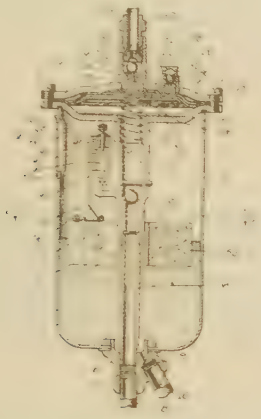
1,415,025. INTERNAL-COMBUSTION ENGINE AND METHOD FOR CONTROLLING COMBUSTION THEREIN. ROBERT H. FOLSOM, Buffalo, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Aug. 23, 1919. Serial No. 319,457. 14 Claims. (Cl. 123—78.)



1. In an internal combustion engine having a combustion chamber, and a reciprocating piston, an auxiliary cylinder, a wall between said cylinder and said chamber, a port in said wall through which the auxiliary cylinder is in communication with said combustion chamber said cylinder having a capacity sufficient to temporarily reserve only a part of the charge of air compressed by one stroke of the piston to be redelivered

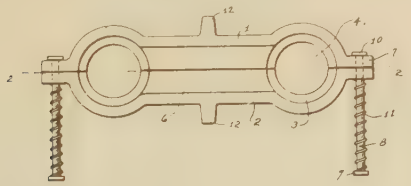
to said combustion chamber, through said port, during the next proceeding stroke of the piston, and means for introducing fuel into said combustion chamber prior to and independently of the redelivery of the reserve air.

1,415,026. FUEL-FEED APPARATUS. WILLIAM J. FRISBIE, Chicago, Ill., assignor to Justrite Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 13, 1920. Serial No. 410,056. 5 Claims. (Cl. 158—36.)



1. In a fuel feed mechanism of the class described, the combination of a reservoir, a fitting within said reservoir providing a fuel chamber, a conduit for leading fuel to said chamber from the exterior of the reservoir, an inlet check valve at the entrance to said chamber, said chamber having an outlet to the reservoir, a check valve controlling said outlet, means for alternately raising and lowering the pressure in said chamber, decreased pressure causing fuel to be drawn into said chamber past said inlet check valve and increasing pressure causing expulsion of fluid from said chamber past the outlet check valve into said reservoir, a float member surrounding said, fitting and hinged thereto to swing vertically, and a link connecting between said float member and said outlet check valve for holding said check valve off its seat when the float member is raised by the fuel in said reservoir.

1,415,027. MOLD FOR BATTERY CONNECTERS. ALFRED H. GEBHARDT, Milwaukee, Wis. Filed July 18, 1921. Serial No. 485,712. 2 Claims. (Cl. 22—116.)

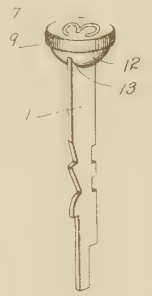


1. A mold for casting battery terminal connecters, comprising a pair of sections adapted to be positioned about said battery terminals and having pockets formed in the ends thereof about said battery terminals and spaced therefrom throughout their major portion and having a channel section connecting said pockets, and means for temporarily holding said sections together.

1,415,028. PROCESS FOR THE TREATMENT OF ORES OF VANADIUM. ALPHONSE GILDEMEISTER, Paris, France. Filed Dec. 22, 1921. Serial No. 524,286. 2 Claims. (Cl. 23—13.)

1. A process of producing vanadium compounds from ores, which comprises exposing such ores while containing V_2O_5 to the action of dry chlorine, in the continued presence of a reducing agent, while at substantially above the boiling point of vanadyl trichlorid, but not substantially above 400° C. whereby the vanadyl trichlorid distills alone, and subsequently collecting the latter.

1,415,029. KEY. BENJAMIN P. HAYES, Kansas City, Mo. Filed Apr. 13, 1921. Serial No. 461,132. 7 Claims. (Cl. 197—102.)



1. A key comprising a post, a pad fastened to the post and having a depending peripheral flange, a ferrule seated on the pad and having a flange of greater width than that of the pad flange and crimped under the pad flange.

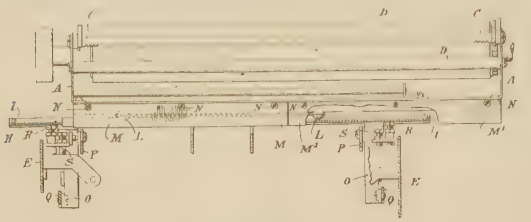
1,415,030. GARTER. ELIZABETH S. HERSPERGER, Washington, D. C. Filed Dec. 14, 1920. Serial No. 430,686. 2 Claims. (Cl. 241—1.)

1. A garter including major and secondary bands, the major band at least partly elastic, with its ends crossing and having free sliding connection with each other, its ends free and provided with means for attachment to some garment above for supporting the garter, the ends of the minor band secured to the ends of the major band, and a loop loosely connecting the major and minor bands together, said major band adapted to embrace the leg below, and the minor band above, the wearer's knee.

1,415,031. CARRIAGE FOR TYPEWRITING MACHINES. EDWARD BERNARD HESS and LEWIS CARY MYERS, Brooklyn, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y. Original application filed Jan. 13, 1921, Serial No. 436,924. Divided and this application filed May 27, 1921. Serial No. 473,163. 5 Claims. (Cl. 197—69.)

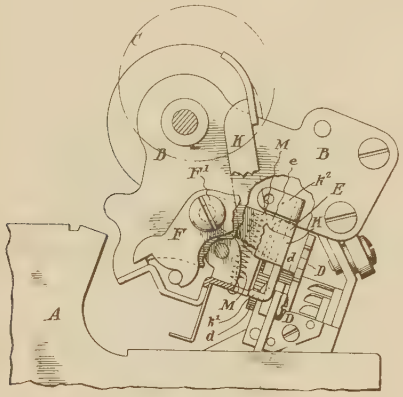
1. In a typewriting machine the combination with a carriage having upper and lower ball-race members, of

clamping plates continuous from one side of the carriage to the other for connecting the ball-race members and



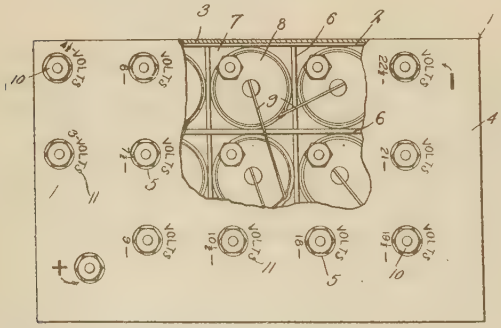
which have means for adjusting them relatively to each other and to the ball-race members.

1,415,032. CARRIAGE-RELEASE MECHANISM FOR TYPEWRITING MACHINES. EDWARD BERNARD HESS and LEWIS CARY MYERS, Brooklyn, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y. Original application filed Jan. 13, 1921, Serial No. 436,924. Divided and this application filed May 27, 1921. Serial No. 473,166. 4 Claims. (Cl. 197—96.)



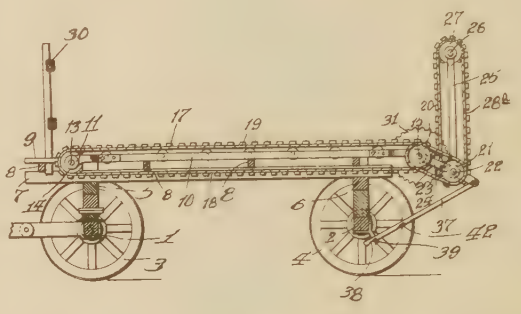
1. A rack bail for typewriting machines, comprising pivotally mounted side arms extending from the rack bar and a lever at each end of the bar formed integrally with a stop for limiting the movement of the bar and which is secured to the end thereof.

1,415,033. BATTERY. HARRY T. HIPWELL, Pittsburgh, Pa. Filed Sept. 29, 1921. Serial No. 504,033. 1 Claim. (Cl. 204—38.)



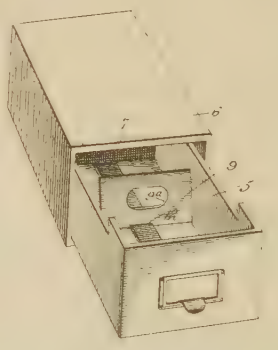
As an article of manufacture, a battery-package including a box-like receptacle comprising a body; battery cells in the body and provided with terminals; and a cover whereinto the body is telescoped, the side walls of the cover overlapping the side walls of the body to reinforce the receptacle in the retention of the cells, the cover comprising a top disposed above the upper edge of the body and provided with openings through which the terminals extend, the top having markings located closely adjacent to the openings and indicating the voltage available at each opening, the terminals projecting above all portions of the receptacle, to render them accessible, the body acting as a guide for the cover, whereby the terminals of the cells will be directed into the openings, when relative telescopic movement between the body and the cover takes place.

1,415,034. UNLOADING DEVICE RELATIVE TO UNLOADING FODDER. LOUIS E. HOELSCHER, St. Louis, Mo. Filed Jan. 20, 1919. Serial No. 272,083. 5 Claims. (Cl. 214—83.)



1. An unloading device comprised of a wogan bed, a conveyor arranged longitudinally thereof, the uppermost lap of which provides the central load sustaining portion of said wagon bed, and there being a horizontally extending member arranged on each side of said conveyor on a plane beneath the uppermost lap thereof.

1,415,035. FOLLOWER BLOCK FOR CARD-INDEX CASES. LOUIS HOFFMAN, New York, N. Y. Filed Oct. 16, 1920. Serial No. 417,406. 3 Claims. (Cl. 129—31.)



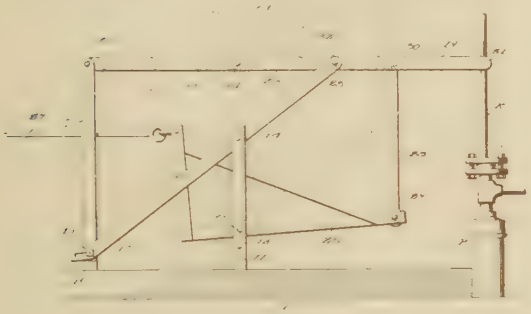
1. A device of the character described, comprising a channel bar of flattened shape with the flanges thereof facing downwardly so as to present a smooth flat face for the lower edges of the cards, and downturned end portions for securing the bar in place and serving to elevate the bar and its flanges above the surface to which it is applied, and a follower plate slotted to receive said bar and movable along the same.

1,415,036. CHARGE OR BLOCK FOR USE IN PRACTICING PROCESSES INVOLVING CHEMICAL REACTIONS, MORE PARTICULARLY REACTIONS BETWEEN SOLID AND GASEOUS BODIES, AND PROCESS OF MAKING THE SAME. WILLIAM HOOPES, Pittsburgh, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 19, 1919. Serial No. 324,767. 30 Claims. (Cl. 204—64.)

1. A charge or block of the class described consisting of a self-sustaining body formed of intercoherent but sub-

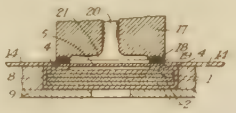
stantially uncompacted mixture of materials and characterized by its capability of retaining its self-sustaining qualities at relatively high temperatures and by a porosity which renders it readily permeable to gases.

1,415,037. PUMP JACK. WILLIAM G. JENSEN, Bartlesville, Okla. Filed Aug. 17, 1920. Serial No. 404,230. 1 Claim. (Cl. 74—5.)



A pump jack comprising a base, a stationary frame arranged upon said base and having an extension, a standard pivoted at its lower end to said base, an arm pivotally secured at one end to the upper end of said standard and adapted to be connected at its other end with the polish rod of the pump, a link having one end pivotally secured to the frame extension and the other end pivotally secured to the arm whereby the arm at its connection to the polish rod is constrained to rectilinear motion, and means for actuating said arm including a rocking frame carried by the stationary frame and a connecting rod transmitting motion from the rocking frame directly and immediately to the arm.

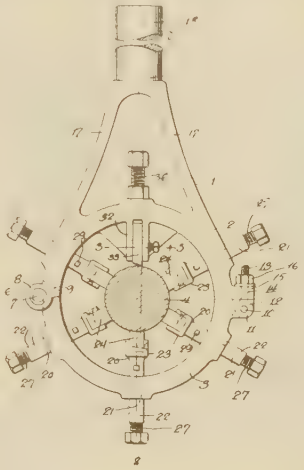
1,415,038. METHOD OF MAKING AND SEALING PACKAGES. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 22, 1921. Serial No. 454,522. 5 Claims. (Cl. 93—2.)



1. The method of wrapping an article comprising the following steps: placing the article in a flanged wrapper in a snugly fitting recess in a die member, bending the flanges over the article by means of cheeking dies, positioning said cheeking dies to leave a space of predetermined size, positioning in such space a sheet of material of corresponding size and coated with an adhesive material and submitting it to pressure.

1,415,039. HAND-SHAFT-TURNING DEVICE. JOSEPH KINDL, St. Louis, Mo. Filed July 26, 1920. Serial No. 399,021. 1 Claim. (Cl. 82—4.)

A hand operated turning tool for turning shafts, comprising a substantially circular frame having radial slots formed therein, the said slots being arranged in pairs, the frame also having a series of screw threaded openings one being arranged between the slots in each pair, a series of guide members each including a head having parallel guide arms extended through a pair of the said slots, a shaft engaging member carried by each head, and an

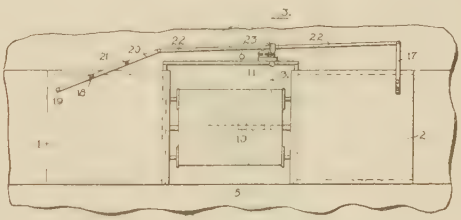


adjustable screw mounted in each of the said screw threaded openings and engaged with the said head whereby the said head may be adjusted radially.

1,415,040. PROCESS FOR THE PREPARATION AND PRESERVATION OF VISCOSE SOLUTIONS OF CELLULOSE FOR THE PRODUCTION OF FILMS, THREADS, AND FILAMENTS. WALDEMAR OSCAR MITSCHERLING, Wilmington, Del., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 9, 1922. Serial No. 535,370. 2 Claims. (Cl. 134—79.)

2. The herein described process of preserving viscose cellulose solutions from decomposition which consists of adding sodium-thiosulphate to such solutions in the proportion of one percent of sodium-thiosulphate to the amount of cellulose used in such solution.

1,415,041. LIGHTING DEVICE FOR PLAYER PIANOS. RICHARD C. MORENUS, Laporte, Ind. Filed Jan. 29, 1921. Serial No. 440,871. 5 Claims. (Cl. 240—4.)

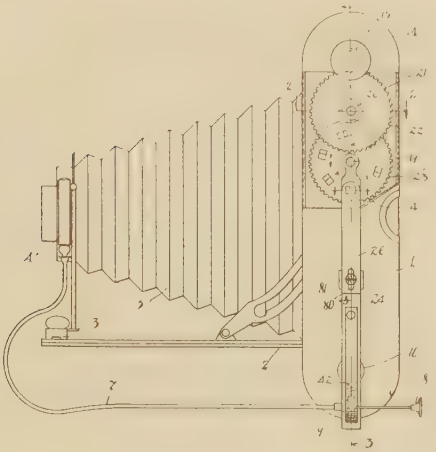


1. In a device of the class described, a music well, a lamp for lighting said well, a door for closing said well, a bar pivotally connected at one end with means on said door and pivotally connected at the other end with a rocking support, and means operated by said bar for controlling said lamp.

1,415,042. PHOTOGRAPHIC APPARATUS. ROBERT A. MOORE, Cleveland, Ohio. Filed July 5, 1919. Serial No. 308,799. 6 Claims. (Cl. 242—71.)

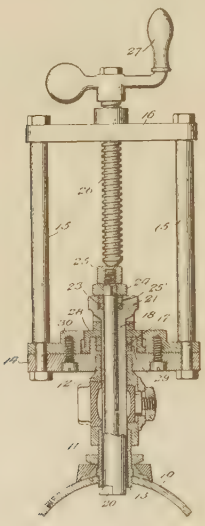
1. In a magazine photographic apparatus, the combination with a casing for receiving the photographic mechanism including two spaced film mandrels, of means for operating one of said mandrels including a support mov-

ably mounted on said casing, a train of reducing gears mounted on said support and adapted to be operatively engaged with one of said mandrels to rotate the same upon a predetermined movement of said support, one of said



gears being provided with a series of spaced engaging faces, and a handle adapted to be successively engaged with said faces to intermittently rotate said gear upon movement of said handle.

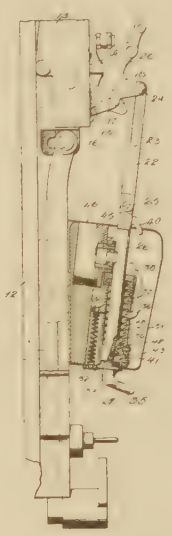
1,415,043. NIPPLE-EXPANDING MACHINE. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Nov. 12, 1919. Serial No. 337,491. 18 Claims. (Cl. 153—81.)



1. In a device of the class described, the combination of a supporting frame, an expanding tool mounted in said frame, means for rotating said tool, and independent, positively actuated rotatable means to effect automatically longitudinal movement of said tool when said tool is rotated.

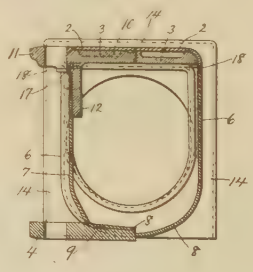
1,415,044. PERCUSSION FIRING MECHANISM. GEORGE W. NUSBAUM, Takoma Park, Md. Filed Mar. 18, 1920. Serial No. 367,004. 10 Claims. (Cl. 89—28.)

7. In a percussion firing lock including a cocking lever, a plunger connected with said cocking lever, a sleeve surrounding said plunger, a spring interposed between the plunger head and the sleeve wall adapted to be compressed on the manual cocking of the gun by relative movement of



the sleeve, a latch adapted to hold said sleeve in cocked position, a sear for retaining and releasing said plunger, means for releasing said sear and means actuated by the plunger for releasing said sleeve.

1,415,045. JOURNAL BOX. ALLEN E. OSTRANDER, Ridgewood, N. J., and HERBERT H. WILLIAMS, Brooklyn, N. Y., assignors of one-half to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey, and one-half to Metropolitan Engineering Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 23, 1921. Serial No. 454,764. 12 Claims. (Cl. 64—10.)

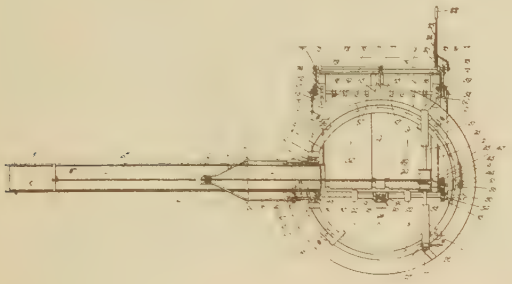


1. In a journal box, a pressed metal cellar, a pressed metal top and an inner reenforcing member for said top secured between said cellar and top and adapted to serve as a stop for the journal brass.

1,415,046. FEEDING APPARATUS FOR THRASHING MACHINES. THOMAS MCNICKLE PARK, Lake Bolac, Victoria, Australia. Filed Mar. 12, 1920. Serial No. 365,303. 11 Claims. (Cl. 198—75.)

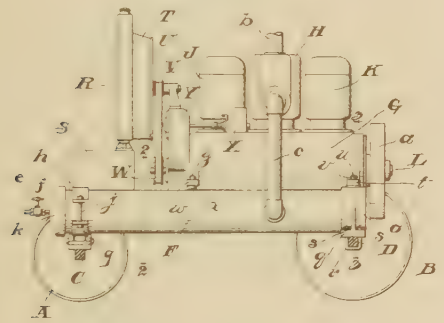
1. Feeding apparatus for thrashing machines, comprising a turntable; a conveyor carried by the turntable to move bodily therewith; a plurality of delivery belts ar-

ranged side by side beneath the turntable and movable in the same direction to receive the material from the



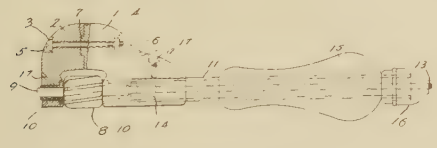
conveyor and discharge it at substantially the same point; and means for individually varying the speed of each belt.

1,415,047. PORTABLE COMPRESSOR UNIT. FREDERICK W. PARSONS, Elmira, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 31, 1921. Serial No. 457,383. 4 Claims. (Cl. 230—32.)



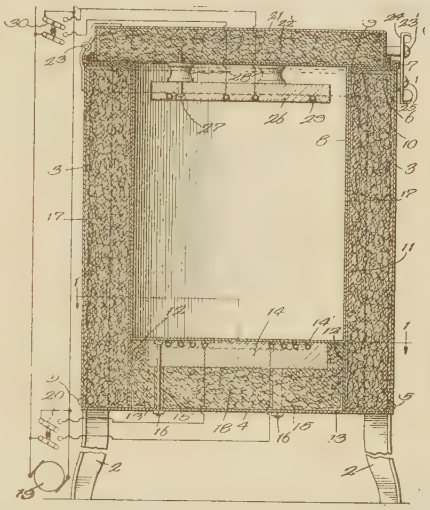
1. A portable compressor unit, comprising a main supporting frame in the form of a duplex receiver extending longitudinally of the unit, an engine frame forming a crank case adjustably supported upon said duplex receiver, and lying partially between and below the level of the tops of the receiver tanks and a vertical engine driven compressor mounted on said crank case.

1,415,048. BEARING SCRAPER. ARTHUR PATIGIAN, Modesto, Calif. Filed June 15, 1920, Serial No. 389,105. Renewed Mar. 16, 1922. Serial No. 544,368. 1 Claim. (Cl. 90—12.)



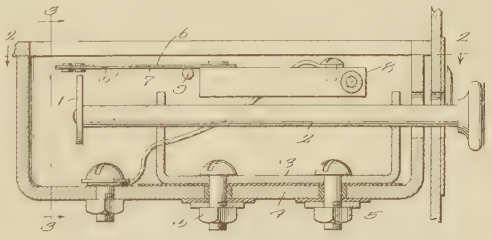
A device of the character specified, comprising a supporting frame having alined bearings, and a laterally opening recess between the bearings, a shaft journaled in the bearings and carrying a cutter, a driving shaft connected with the shaft, a tubular member connected with the supporting frame and enclosing said driving shaft and carrying a grip, said supporting frame being sectional between the bearings, and a bearing being provided in each section, and means for detachably holding the sections together.

1,415,049. FIRELESS COOKER. JAMES H. REICHART, Muncie, Ind., assignor to The Sterolectric Company, Muncie, Ind., a Corporation of Indiana. Filed Oct. 7, 1920. Serial No. 415,378. 9 Claims. (Cl. 126—39.)



1. A fireless cooker having an element shaped to form a well and located within the body portion of the cooker; a positioner for the well element assembled with the side portions of the cooker body; and a positioner for the aforesaid positioner assembled with the bottom of the cooker body which, together with the positioner assembled therewith, is separable from the balance of the structure.

1,415,050. THERMOSTATIC ELECTRIC SWITCH. JAMES H. REICHART, Muncie, Ind., assignor to The Sterolectric Company, Muncie, Ind., a Corporation of Indiana. Filed Oct. 7, 1920. Serial No. 415,379. 3 Claims. (Cl. 200—138.)

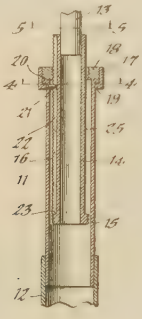


3. A thermostatic switch having two engageable contacts one of which is a thermostatic contact to make it movable toward and from the other; a movable weighted arm carrying the thermostatic contact; and a stop for supporting the arm and serving to hold the thermostatic contact out of engagement with the other contact when the temperature is below a predetermined point and permitting the thermostatic contact to engage the other upon sufficient increase in temperature while the stop is functioning and to move the arm from the supporting influence of said stop upon further increase in temperature and while said contacts are still engaged.

1,415,051. ATTACHMENT FOR ADJUSTING THE PITCH OF WIND MUSICAL INSTRUMENTS. RAFFAELE PINNAVAJA, Buffalo, N. Y. Filed Feb. 28, 1921. Serial No. 448,332. 2 Claims. (Cl. 84—386.)

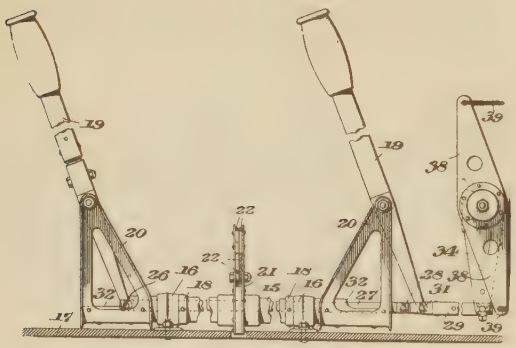
1. An attachment for adjusting the pitch of wind musical instruments comprising inner and outer tubular

telescopic members, the outer member being adapted for engagement with the stem of the instrument and provided at its front end with an external annular flange and the inner members being movable relatively to said outer member and having an external screw thread, a nut engaging with the front side of said flange and



having its thread engaging with the thread of said inner member, a tubular head engaging with the periphery of said nut and extending along the periphery of said external flange and provided with an internal flange at its rear end which engages with the rear side of said external flange.

1,415,052. AIRPLANE. WILLIAM KEITH RIDER, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed July 26, 1920. Serial No. 399,074. 5 Claims. (Cl. 244—29.)



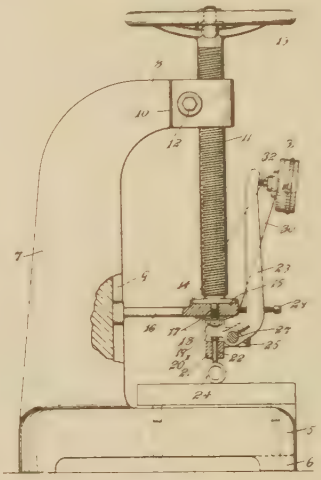
1. Control mechanism for airplanes comprising a rock shaft, a rod extending substantially coaxial with said rock shaft, connections from said shaft and rod to the ailerons and elevators of the airplane, a control stick pivoted to said shaft so that the stick may rock on its pivot longitudinally of the shaft and will rock the shaft when moved laterally, and a direct connection between said control stick and said rod so that the latter is moved endwise as the stick is rocked on its pivot.

1,415,053. SUCTION CLEANING APPARATUS. FRANK E. ROBERTSON, Cleveland, Ohio, assignor to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 7, 1915. Serial No. 44,283. 10 Claims. (Cl. 15—15.)

1. A suction cleaning appliance of the class described, having a substantially flat front face centrally open to the fan and a removable suction nozzle, of a flush connecting mechanism provided upon the front face ad-

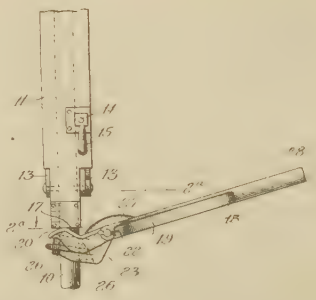
jacent to the opening and adapted separably to secure the nozzle in position, substantially as set forth.

1,415,054. GAUGE. HUGH M. ROCKWELL, Bristol, Conn., assignor, by mesne assignments, to Standard Steel and Bearings Incorporated, Wilmington, Del., a Corporation of Delaware. Filed Mar. 16, 1918. Serial No. 222,937. 5 Claims. (Cl. 33—147.)



1. In a measuring instrument, a member having a surface against which an object to be measured may be placed, an indicator supporting member mounted for adjustment toward or from said surface, a screw for adjustably moving said member, an indicator carried by said supporting member, an indicator actuating means carried by said supporting member and arranged to engage an object interposed between said actuating means and said surface to thereby cause the indicator to show a measurement of said object.

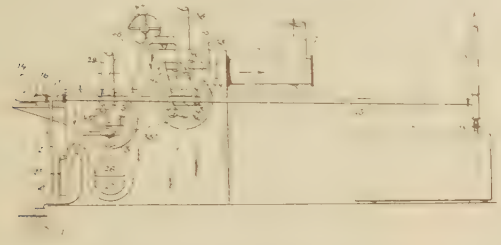
1,415,055. LIFTING IMPLEMENT. HENRY W. ROOS, Cincinnati, Ohio. Original application filed Mar. 14, 1919, Serial No. 282,602. Divided and this application filed Dec. 14, 1920. Serial No. 430,682. 8 Claims. (Cl. 254—131.)



1. A jacking instrument for the relatively movable parts of an extensible shore comprising a pair of mem-

bers pivotally connected with each other and each formed for detachable engagement with one of said shore parts to effect relative movement thereof, and a handle portion on one of said members.

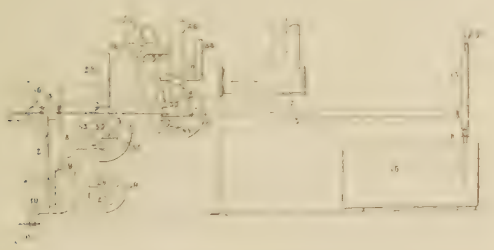
1,415,056. PLANT AND PROCESS FOR DISTILLING TAR. CHARLES SCHAER, Langenthal, Switzerland. Filed Apr. 23, 1917. Serial No. 163,985. 6 Claims. (Cl. 196—4.)



1. In a tar distillation plant, a heating compartment, a cylindrical still mounted therein, means for conveying tar to and from the still, and means for spreading the tar in a layer over the interior surface of the still, said means comprising a plurality of ladles, a rotary support within the still on which said ladles are mounted with their discharge ends in close proximity to the walls of the still, and means for rotating said support.

2. In a tar distillation plant, a heating compartment, a cylindrical still in said compartment, means for conveying tor to and from the still, means for successively spreading and removing a layer of tar over the interior surface of the still, said spreading and removing means consisting of a plurality of ladles, a rotary support on which said ladles are mounted and means for pressing the advancing edges of the ladles against the wall of the still to remove the layer deposited by the preceding ladle.

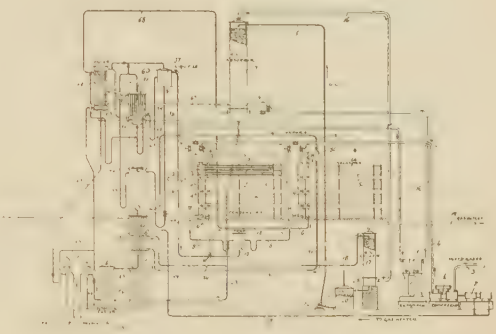
1,415,057. APPARATUS FOR DISTILLING TAR. CHARLES SCHAER, Langenthal, Switzerland. Filed May 27, 1920. Serial No. 384,701. 8 Claims. (Cl. 196—13.)



1. Apparatus for the distillation of tar comprising the combination of two stills, a single source of heat for said stills, means for controlling the heat to liberate medium and heavy oils in one of said stills and to liberate the lighter oils and ammonia in the other of said stills, a tar discharge conduit connecting the lighter oil still to the heavier oil still, a pitch discharge conduit from the heavier oil still, a condenser for the lighter oils and ammonia connected to the lighter oil still, a condenser for the medium and heavy oils connected to the heavier oil still, a vapor conduit from the pitch discharge, a condenser connected thereto, and means for continuously delivering tar to and through the system.

6. Apparatus for the distillation of tar comprising in combination a still for the liberation of the lighter oils and ammonia, a still for the liberation of the medium and heavier oils, a connection between said stills through which the tar flows from the first to the second still, a pitch discharge conduit from the second still, a pipe connected to said pitch conduit for leading vapors therefrom, a suction or exhaust means connected to said pipe, and means for colling said vapors.

1,415,058. PROCESS OF AND APPARATUS FOR EXTRACTING, LIQUEFYING, AND SEPARATING LIQUEFIABLE CONSTITUENTS OF GASES. EMIL SCHILL and FRANZ WOIDICH, New York, N. Y., assignors to Continental Gas Compressing Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 9, 1917. Serial No. 160,642. 11 Claims. (Cl. 196—25.)

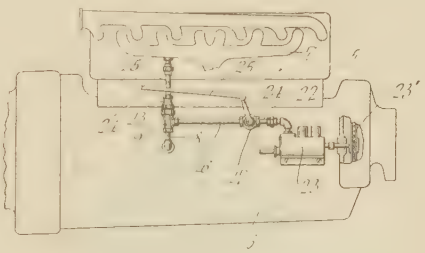


1. The process which consists in compressing a gas containing various liquefiable vapors and extracting liquefiable products therefrom by reducing the temperature of said compressed gas, expanding the devaporized gas in a cylinder, imparting the resulting reduced temperature to a circuating liquid and using the thus cooled liquid as the means for reducing the temperature of the compressed gas.

1,415,059. BASE FOR ANTISTATIC FILM AND COMPOSITION FOR MAKING THE SAME. PAUL C. SEEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Original application filed Dec. 31, 1920, Serial No. 434,354. Divided and this application filed Apr. 16, 1921. Serial No. 461,916. 14 Claims. (Cl. 106—37.)

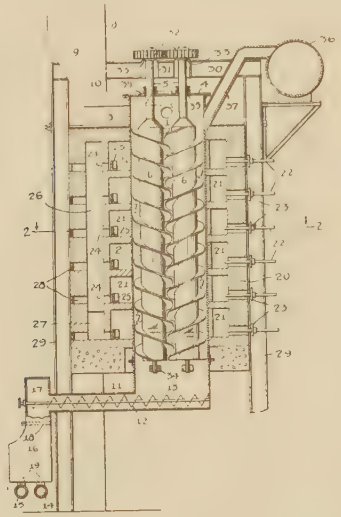
1. A flexible transparent nitrocellulose base or support adapted to receive sensitive photographic coatings which contains a sugar, an inert hygroscopic organic compound of low volatility and water.

1,415,060. INTERNAL-COMBUSTION-ENGINE ATTACHMENT. RALPH L. SKINNER, Sacramento, Calif. Filed Dec. 8, 1919. Serial No. 343,276. 4 Claims. (Cl. 123—119.)



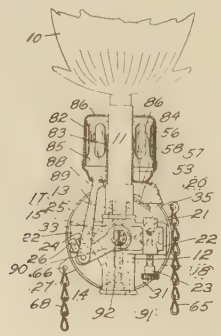
1. The combination with an internal combustion engine having an intake manifold and an air-tight crank-case, of a pipe connecting the intake manifold with the crank-case whereby excessive pressure within the crank-case is removed, a valve within said pipe to prevent the return of pressure to said crank-case from said manifold, and a pump cooperating with said pipe for further facilitating the removal of excessive pressure from said crank-case.

1,415,061. FURNACE-RETORT. CHARLES HOWARD SMITH, Short Hills, and EDWARD B. EDWARDS, East Orange, N. J., assignors to International Coal Products Corporation, Richmond, Va., a Corporation of Virginia. Filed May 31, 1919. Serial No. 300,963. 19 Claims. (Cl. 202—9.)



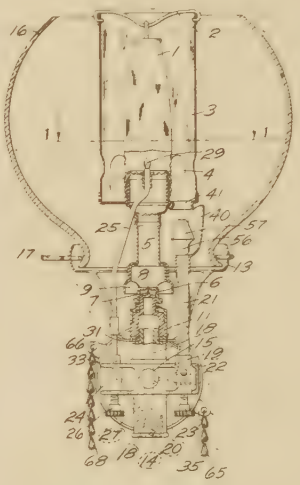
1. A furnace-retort the retort of which has an externally heated vertically extending retort shell with vertically extending shafts therein carrying outwardly extending members, the shafts being arranged so that the outwardly extending members on one shaft cooperate with the outwardly extending members on the other shaft, means for rotating the shafts, means for feeding coal to the interior of the upper portion of the retort shell, and means for conducting the coal when sufficiently carbonized from the lower portion of the retort shell, the outwardly extending members being constructed so as to cause the coal being treated to be gradually passed from the charging end of the retort shell to the discharging end thereof but so as to prevent the coal from passing through the retort at a faster rate than desired.

1,415,062. DELAYED CUT-OFF FOR GAS BURNERS. RAYMOND D. SMITH, Boston, Mass., assignor to Shawmut Machine Works, Inc., a Corporation of Maine. Filed July 24, 1916, Serial No. 110,951. Renewed Sept. 30, 1921. Serial No. 504,492. 3 Claims. (Cl. 67—87.)



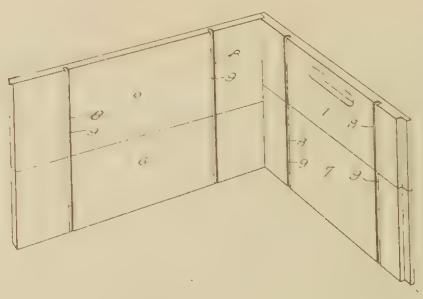
1. In combination; a main gas burner and valve structure embodying automatically acting mechanism for operating the valve and including a separate and auxiliary gas burner positioned to be automatically ignited from said main burner thereby to control the action of said mechanism, and a partial closure device movable to different positions relative to said main burner respectively to shield and to expose the flame thereof,—said movable device being arranged and adapted to direct the flow of gas from the auxiliary to the main burner, thereby to cause ignition of the former from the latter.

1,415,063. DELAYED CUT-OFF ARRANGEMENT FOR MANTLE GAS LAMPS. RAYMOND D. SMITH, Boston, Mass., assignor to Shawmut Machine Works, Inc., a Corporation of Maine. Filed Aug. 7, 1916, Serial No. 113,547. Renewed Sept. 30, 1921. Serial No. 504,493. 1 Claim. (Cl. 67—87.)



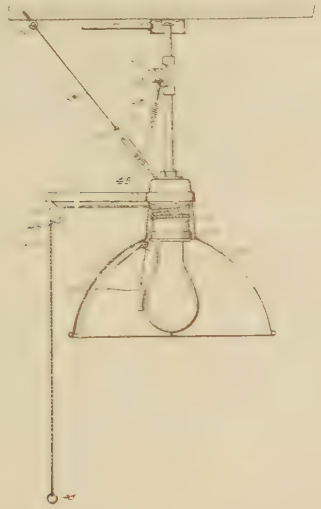
In a thermostatically-governable apparatus employing a gas burner for heating the thermostat thereof, in combination with said burner and a superposed source of ignition therefor; a heat-conductive member extending from said thermostat to a point above the mouth of said burner and thereat formed to permit gas issuing from said mouth to rise past said member toward the said source of ignition; and a shield for the flame of said burner formed and positioned only partially to surround the space between the burner mouth and said member, so that the rise of said gas to its source of ignition may be insured substantially in the presence of free air.

1,415,064. BOX AND CRATE. TIMOTHY V. THOMALL, Chicago, Ill., assignor to Milk Bottle Crate Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 11, 1921. Serial No. 460,223. 9 Claims. (Cl. 217—17.)



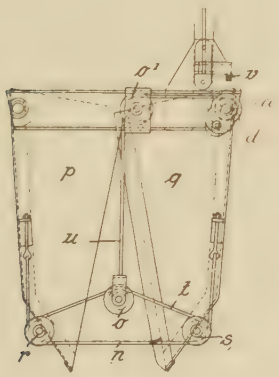
1. A box or crate side or end comprising a plurality of sections, and a clamping wire engaged at its ends with the top and bottom edges of the side or end, said wire being of a length which will permit the sections and wire to be assembled with the sections tilted relative to each other and their adjacent edges engaging, and said wire adapted to clamp and hold the sections rigid with their edges abutting when the sections are sprung into alignment.

1,415,065. LIGHTING-FIXTURE-CLEANING DEVICE. EDWIN D. TILLSON, Chicago, Ill., assignor to Associated Engineers Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 19, 1920. Serial No. 374,959. 18 Claims. (Cl. 240—1.)



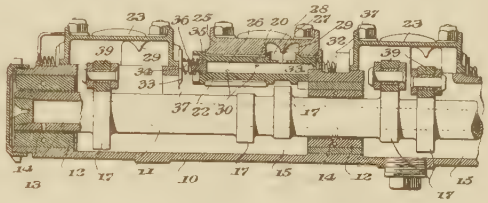
1. In a lighting fixture, wiping means for cleaning the active faces of said fixture, means for operating said wiping means to impart successive movements always in the same direction thereto upon successive operations of said operating means, and a cord for actuating said operating means.

1,415,066. MEANS FOR CLOSING AND OPENING SKIPS. FRANZ UHLIG, Berlin, Germany. Filed Sept. 14, 1920. Serial No. 410,315. 5 Claims. (Cl. 37—30.)



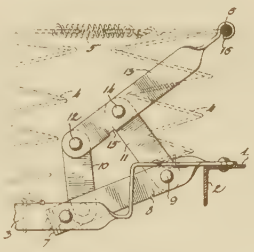
5. In a skip of the clam-shell type, a pulley mounted on each half near its lower end, a cable connecting the two pulleys, an intermediate pulley for tensioning the upper strand of the cable to close the halves, a cable connected to this intermediate pulley, and means for winding up and unwinding the cable mounted on one of the halves embodying a shaft, a ratchet-wheel affixed thereto, a rotatable member carrying a pawl normally engaging the ratchet-wheel and provided at its upper end with a notch, and a manually-operable stop adapted to engage into said notch to lock the member against rotation.

1,415,067. HYDROCARBON MOTOR. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 7, 1920. Serial No. 357,023. 13 Claims. (Cl. 64—24.)



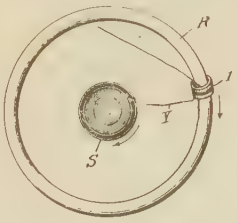
10. In a hydrocarbon motor, in combination, a casing, alined bearings therein, a pair of rock shafts mounted in said bearings, means for conducting oil to said bearings, and means cooperating with adjacent rock shafts and bearings for closing the ends of said bearings, thereby preventing the escape of oil therefrom.

1,415,068. SIDE THRUST SUPPORT FOR SPRING-BED BOTTOMS. SAMUEL WEISSMAN and RALPH WEISMAN, Detroit, Mich. Filed Feb. 13, 1922. Serial No. 536,119. 3 Claims. (Cl. 5—29.)



1. The combination with a spring bed bottom having an upper frame, a lower frame, supporting members carried by said lower frame, and springs on said supporting members, of side thrust supports at the sides of the spring bed bottom, each side thrust support comprising an inclined base piece carried by the lower frame, an inclined supporting piece connected to the upper frame, and linkage connecting the base and supporting pieces, said linkage causing the supporting piece to swing inwardly when the upper frame is subjected to pressure.

1,415,069. RING TRAVELER. PHILIP C. WENTWORTH, Providence, R. I. Filed Jan. 11, 1921. Serial No. 436,585. 12 Claims. (Cl. 118—61.)

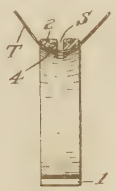


1. A ring traveler comprising a circle portion and terminal horns and having an opening through said circle portion.

1,415,070. RING TRAVELER. PHILIP C. WENTWORTH, Providence, R. I. Filed June 4, 1921. Serial No. 474,987. 4 Claims. (Cl. 118—61.)

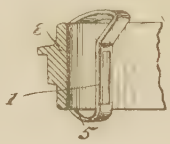
1. A ring traveler comprising an annular body provided with openings.

1,415,071. RING TRAVELER. PHILIP C. WENTWORTH, Providence, R. I. Filed Sept. 19, 1921. Serial No. 501,510. 3 Claims. (Cl. 118—61.)



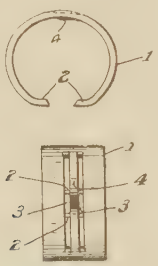
3. A ring traveler having a concavo-convex bow portion with the convexity disposed towards the ring and having an opening through said bow portion.

1,415,072. TWISTING TRAVELER. PHILIP C. WENTWORTH, Providence, R. I. Filed Sept. 19, 1921. Serial No. 501,511. 14 Claims. (Cl. 118—61.)



1. A twisting traveler for use on a vertical twisting ring and having a lubricant passage between its ends.

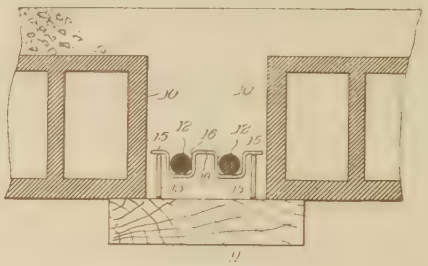
1,415,073. RING TRAVELER. PHILIP C. WENTWORTH, Providence, R. I. Original application filed Jan. 11, 1921, Serial No. 436,585. Divided and this application filed Nov. 5, 1921. Serial No. 513,119. 7 Claims. (Cl. 118—61.)



1. A ring traveler comprising a body provided with a plurality of rectangular shaped openings therethrough.

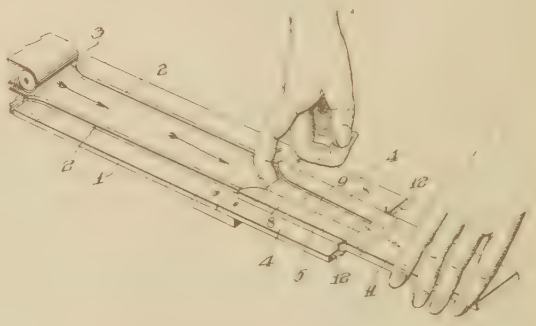
1,415,074. CONCRETE BEAM CHAIR. WILLIAM E. WHITE, Chicago, Ill. Filed Sept. 4, 1920, Serial No. 408,294. Renewed Mar. 2, 1922. Serial No. 540,569. 7 Claims. (Cl. 72—122.)

1. In a chair adapted to be located between adjacent tiles, the combination of a pair of inverted V-shaped supports and a connecting member welded to the apex of each support, said member being bent to provide a seat



for a reinforcing rod, the ends of the member serving to space the chair from the tiles, substantially as described.

1,415,075. DEVICE FOR FILLING CARTONS OR BOXES. BERTRAND K. WILBUR, Haverford, Pa., assignor to H. O. Wilbur & Sons, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 11, 1920. Serial No. 429,863. 2 Claims. (Cl 226—18.)



1. In a receptacle filling device, primary supply aprons, a table leading from the latter, longitudinally guiding bars on said table, a channelled chute having a longitudinally extending passage in its upper side, and a support for said chute longitudinally continuous of said table, the entrance end of said passage having its walls flaring outwardly.

1,415,076. INSULATING COMPOSITION. ROBERT R. WILLIAMS, Roselle, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 26, 1919. Serial No. 347,533. 7 Claims. (Cl. 106—13.)

1. A composition of matter comprising fused quartz and rubber.

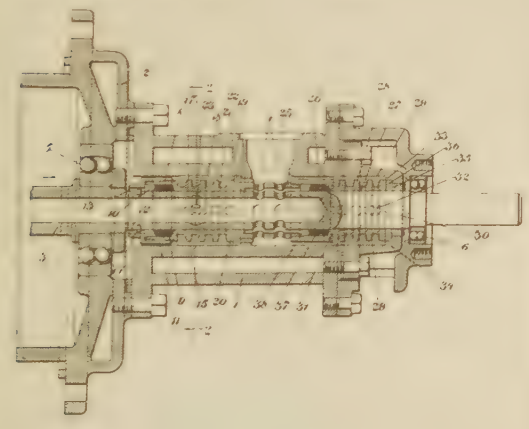
1,415,077. SAFETY RAZOR. JOHN A. WILLIAMSON, Denver, Colo. Filed Aug. 26, 1921. Serial No. 495,493. 8 Claims. (Cl. 30—12.)

1. A finger tip grasping safety razor, comprising a reversely curved finger tip grasping plate arranged to be held by the tips of the fingers in shaving position, said plate being provided with a support for interchangeable razor blades, provided with an aperture, means for releasably securing said razor blade in said support, and a movable safety guard for said razor blade, including a housing, for securing the razor blade against displacement therefrom; said support having a wall member, and means for releasably but positively clamping said razor blade against said wall member; said support consisting of a channeled member provided with a flat bottom member arranged to receive said razor blades against the inside

portion wall of its outer side, and a tilting and turning member secured in said channeled member, provided with free ends, one of which is arranged to clamp said razor

blades against said channeled members outer side wall and the other is arranged to form a safety guard for the cutting edge of said razor blades.

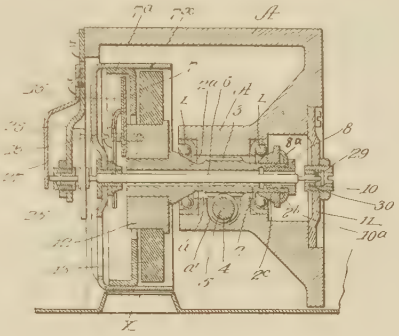
1,415,078. METALLIC PACKING. EDWARD WILSON, St. Louis, Mo., assignor to Wilson Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 12, 1920. Serial No. 365,167. 17 Claims. (Cl. 286—7.)



2. A packing, comprising a lining having a plurality of thrust bearing surfaces, in combination with a revoluble member journaled in the lining and engaging said surfaces, a circumferential shoulder on said member, means for conducting a lubricant to said bearing surfaces, and an abutment engaging the end of said lining and also engaging said shoulder.

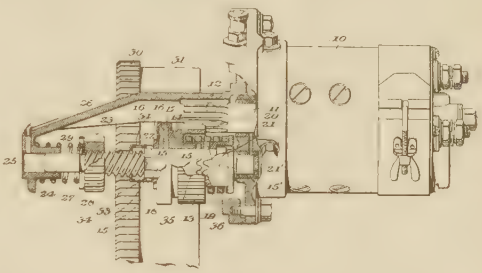
1,415,079. MAGNETIC SPEEDOMETER. ANDREW C. WOOD, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Oct. 16, 1920. Serial No. 417,448. 5 Claims. (Cl. 264—13.)

1. In a magnetic speedometer, in combination with a rotor, a magnet device mounted thereon for rotation in a plane containing all the magnet poles; a field-deflecting member carried by the rotor extending opposite the magnetic gap; a drag member pivoted for oscillation about the axis of the rotor, extending in the plane of its oscillation proximate to the magnet and to the field-deflecting member; a carrier for the drag member which extends from the pivot spindle of the latter radially past the outer margin of the field-deflecting member and thence transversely



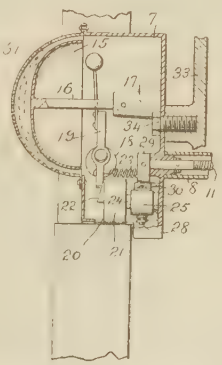
of the plane of rotation of said member outside the path of rotation thereof to reach the drag member for securement of the latter thereto.

1,415,080. HYDROCARBON MOTOR. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 7, 1920. Serial No. 357,033. 16 Claims. (Cl. 74—7.)



1. Starting mechanism comprising a drive shaft, a driven shaft, a source of power connected to said drive shaft, connecting means between said shafts adapted to build up the torque on the driven shaft, and means for positively connecting said shafts when the torque has been built up to a predetermined degree.

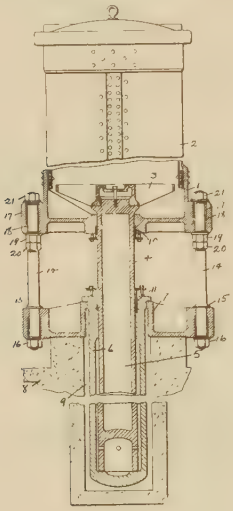
1,415,081. THIEF ALARM FOR AUTOMOBILES. CHARLES L. WRIGHT, Kansas City, Mo. Filed Aug. 13, 1919. Serial No. 317,362. 1 Claim. (Cl. 116—33.)



In an alarm of the kind described, the combination with a running part of an automobile, of a gong, a pivoted clapper arranged to strike the gong, a pivoted member, a wheel rotatable on the pivoted member and arranged to be moved thereby into and out of driving engagement with

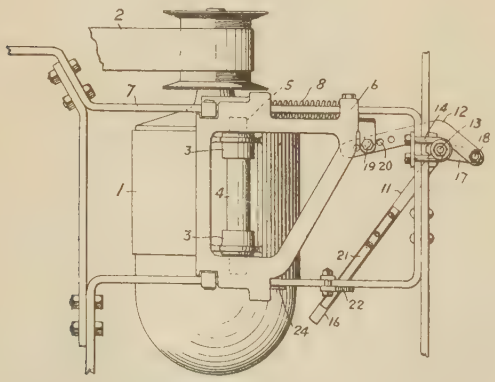
said running part, the wheel having a cam arranged to engage the clapper and to force the latter away from the gong, a spring for normally forcing the clapper into engagement with the gong, a spring for normally forcing the pivoted member to a position in which the wheel will be disengaged from the running part, a spring carried by the pivoted member, and a manually rotatable member movable to and from a position in which it will press against the spring carried by said pivoted member in a manner such that the pivoted member will press the wheel against said running part, substantially as set forth.

1,415,082. VULCANIZING PRESS. EDWARD E. ALLEN, Erie, Pa., assignor to Allen Machine Company, Erie, Pa., a Corporation of Pennsylvania. Filed Aug. 11, 1920. Serial No. 402,879. 4 Claims. (Cl. 18—17.)



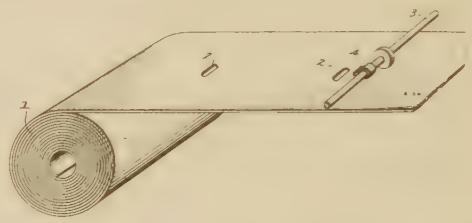
1. In a vulcanizing press, the combination of a vulcanizing chamber having a bottom head; a hydraulic chamber in alinement with the vulcanizing chamber; a base on which the hydraulic chamber and vulcanizing chamber are mounted; a ram in the vulcanizing chamber; a piston extending from the ram through the head and base; and a series of posts each detachably and separately secured to the head and base and supporting the vulcanizing chamber.

1,415,083. SUSPENSION FOR TRAIN-LIGHTING DYNAMOS. FRANK G. BEETEM, Philadelphia, Pa. Filed July 27, 1921, Serial No. 487,947. Renewed Mar. 17, 1922. Serial No. 544,688. 6 Claims. (Cl. 105—106.)



1. In a car lighting system the combination of a suspension carriage, a support for the carriage permitting longitudinal motion thereof with respect to the car, a dynamo pivotally supported from the carriage, means for driving the dynamo from the car axle, a lever fulcrumed from a point fixed with respect to the car, and a link connecting the lever with the carriage whereby the position of the latter may be adjusted with respect to the car.

1,415,084. PAPER ROLL FOR ROLLER COPYING MACHINES. RICHARD BERGER, Bonn-on-the-Rhine, Germany, assignor to Firm F. Soennecken, Bonn-on-the-Rhine, Germany. Filed Oct. 24, 1913. Serial No. 797,097. 1 Claim. (Cl. 100—67.)

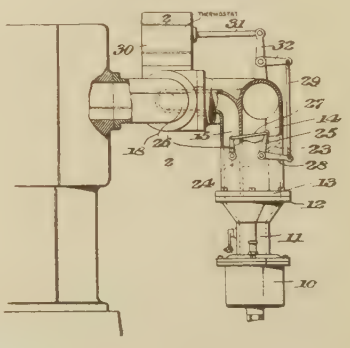


A device for automatically actuating the feeding and cutting mechanism of copying machines of the endless band type including a rock shaft which extends transversely of the endless band, said shaft being arranged for connection to the feeding mechanism, and a relatively wide gravity tongue on said shaft, said tongue being adapted to drop in slots located at intervals in the endless band.

1,415,085. HIGH SPEED TOOLS MATERIAL. ANTON BOERDER, Toledo, Ohio, assignor, by mesne assignments, to U. S. High Speed Steel & Tool Corporation, New York, N. Y., a Corporation of New York. Filed May 15, 1918. Serial No. 234,679. 9 Claims. (Cl. 75—1.)

1. An alloy high speed steel tool free from internal marks as a solid and of uniform internal structure.

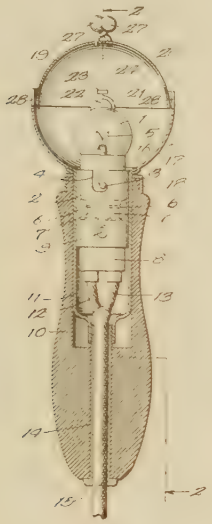
1,415,086. HYDROCARBON MOTOR. HAROLD D. CHURCH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed June 6, 1919. Serial No. 302,127. 4 Claims. (Cl. 123—122.)



3. In combination with the cylinders of an internal combustion engine, an exhaust manifold, an intake mani-

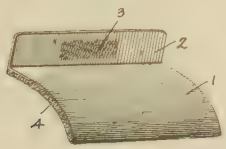
fold having a portion thereof adapted to be heated by the exhaust manifold, valve means for controlling the flow of the mixture through the inlet against said heating portion and a thermostat controlled in operation by the temperature of the motor for operating said valve means.

1,415,087. LAMP. HARRY A. DOUGLAS, Bronson, Mich. Filed Apr. 4, 1921. Serial No. 458,554. 8 Claims. (Cl. 240—54.)



1. The combination with a lighting element; of a casing therefor having a closure in the form of a cup that is divided substantially in halves, each half of the closure being adjustable from in front of the lighting element.

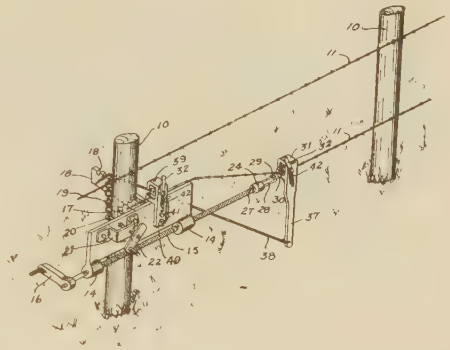
1,415,088. ERASING SHIELD. MILLARD EDMUNDSON, San Francisco, Calif. Filed May 6, 1921. Serial No. 467,396. 3 Claims. (Cl. 120—41.)



3. An erasing shield comprising a curved body portion, a finger grip extending angularly therefrom and having roughened faces thereon and a resilient composition fixed to the inner curved face of said body portion.

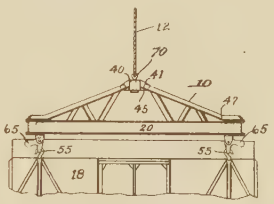
1,415,089. WIRE STRETCHING MACHINE. ELIAS J. ELIAS, Omaha, Nebr. Filed June 8, 1921. Serial No. 476,059. 4 Claims. (Cl. 254—82.)

1. In a wire fence strand stretcher, a body portion provided with an arm adapted to engage across a post, a chain carried by the body portion adapted to engage about the post, said arm having means for adjustably receiving an end of the chain therein, means connected to the other end of the chain for drawing the same taut about the post whereby to bind the body portion against the post, a movable member carried by the body portion and a clamp mounted in the movable member



adapted to engage a wire strand whereby upon operation of the movable member said strand may be drawn taut.

1,415,090. DEVICE FOR CONNECTING LOADS TO ELEVATING CABLES. BENJAMIN F. FITCH, Evanston, Ill. Filed June 26, 1920. Serial No. 392,002. 22 Claims. (Cl. 294—67.)



1. A cradle for connecting loads to hoisting cables, comprising a four sided frame having load engaging members carried thereby, said members being arranged to swing in parallel planes, means associated with said members for normally urging them into engagement with a load, and diagonal members extending above the plane of said load engaging members and meeting at a common point whereby the cradle may be raised by a single hoisting cable.

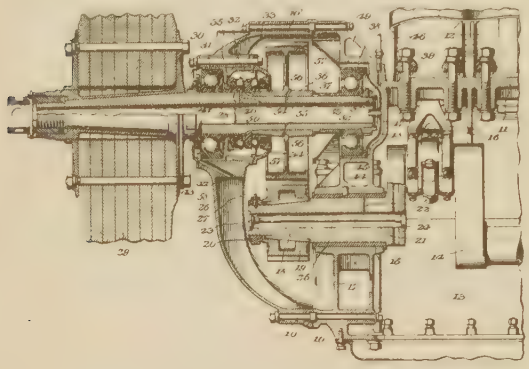
1,415,091. ROD AND METHOD OF MAKING SAME. ADELARD J. GAUTHIER, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 20, 1920. Serial No. 367,480. 10 Claims. (Cl. 29—152.)

1. A rod formed of tubular material having a slot portion at one end thereof, the portion of the rod adjacent to the slot portion being solid.

1,415,092. PROPELLER DRIVE FOR HYDROCARBON MOTORS. ORMOND E. HUNT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 27, 1918. Serial No. 231,236. 5 Claims. (Cl. 74—7.)

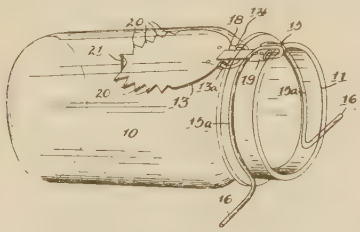
1. The combination with the base and crank shaft of a hydrocarbon motor, of a cover detachably secured to said base and with the base forming a compartment, a pro-

peller shaft extending through the cover, radial and thrust bearings for the propeller shaft in said cover,



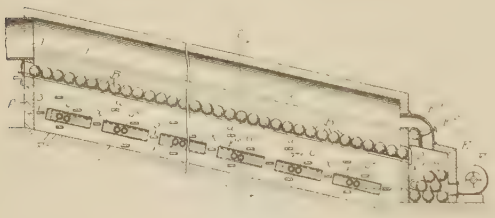
a radial bearing in said base for the inner end of said propeller shaft, and gearing between said shafts.

1,415,093. TRAP. JAMES HURLEY, St. Paul, Minn. Filed June 2, 1921. Serial No. 474,318. 4 Claims. (Cl. 43—61.)



1. In a trap, a horizontal jar having an opening in one end, a rod formed to engage the outer surface of said jar adjacent to said opening, an inwardly projecting loop formed in said rod, a door tiltably supported on said loop and arranged to close said opening, an internal shoulder in said jar forming an abutment for said door, a lug on said door adjacent to said loop and a spring arranged to engage said lug to resiliently hold said door in horizontal position.

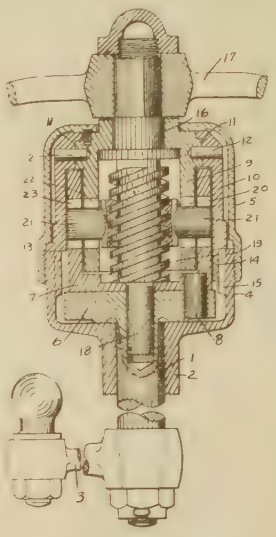
1,415,094. ORE BRIQUETTE. DAVID B. JONES, Chicago, Ill. Original application filed June 22, 1914, Serial No. 846,466. Divided and this application filed June 3, 1918. Serial No. 237,868. 4 Claims. (Cl. 75—65.)



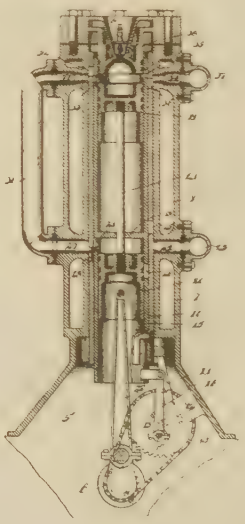
1. A briquette composed of zinc ore, a reducing agent and a binder of bauxite.

1,415,095. STEERING MECHANISM. CHARLES JOHNSON, Highland Park, and FRED G. MEYER, Detroit, Mich. Filed July 8, 1921. Serial No. 483,196. 5 Claims. (Cl. 74—79.)

1. In a steering mechanism, the combination with a steering shaft, of a screw-threaded actuating member for said shaft, a nut engaging the threads of said actuating member, a hollow member carried by said shaft and enclosing said screw, means compelling a limited rotation of said nut, as it is longitudinally shifted by rotation of said actuating member, and means rotatively driving said hollow member from the nut.



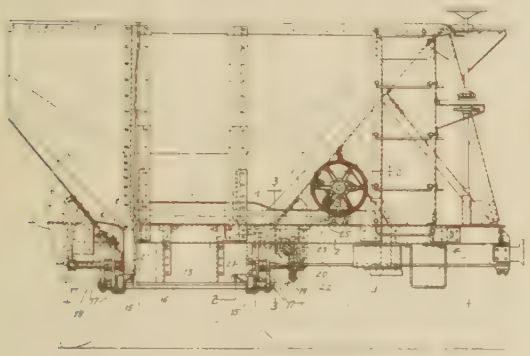
1,415,096. EXPLOSIVE ENGINE. OSCAR E. KALLWITZ, Chicago, Ill., assignor of one-half to Thomas A. Cameron, Chicago, Ill. Filed Mar. 5, 1919. Serial No. 280,725. 6 Claims. (Cl. 123—75.)



4. An explosive engine comprising a crank case; a crank shaft in said case; a valve shaft geared to said crank shaft; a cylinder casing projecting from said crank case, said cylinder being long enough to constitute two cylinders; a sleeve valve reciprocating within said cylinder and operatively connected with said valve shaft; another sleeve valve reciprocating within said first mentioned sleeve valve and having a central partition dividing the same into outer and inner cylinders; pistons operating in said outer and inner cylinders; a piston rod connecting said pistons and passing through said partition; a connecting rod connected with the inner piston and with said crank shaft; an intake pipe leading into the outer end of said inner cylinder, there being ports in said sleeve

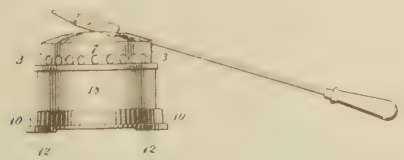
valves controlling the same; a by-pass leading from the outer end of said inner cylinder to the outer end of said outer cylinder, there being suitable ports in said sleeve valves controlling said by-pass; an exhaust pipe leading from the outer end of said outer cylinder, there being suitable ports in said sleeve valves controlling said exhaust pipe; and a spark plug in the outer end of said cylinder and arranged to explode charges in the outer end of said outer cylinder, substantially as described.

1,415,097. DUMPING CAR. ADOLPH KASSLER, New York, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 30, 1920. Serial No. 377,811. 19 Claims. (Cl. 105—250.)



1. In a dumping car, dumping doors, shafts on said doors, cranks on said shafts, stub shafts on said car and angularly disposed cranks on each of said stub shafts connected to said first mentioned cranks to operate said doors.

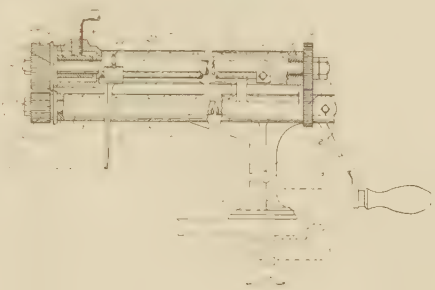
1,415,098. HEATER FOR SOLDERING COPPERS. CHARLES H. KLEIN, Jersey City, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 11, 1921. Serial No. 444,254. 5 Claims. (Cl. 126—236.)



3. A device for heating soldering coppers comprising a burner-member for fuel receptacles having a flame-emitting opening of such contour that the issuing flame therefrom will conform to the shape of said coppers, a groove in said burner-member at either end of said opening, means co-operating with each groove for providing separate seats for said coppers, and air-inlets comprising a series of apertures of varying dimensions disposed at either side of said opening.

1,415,099. TUBE-CUTTING MACHINE AND CRIMPER. PAUL J. KOHLER, Carrick, Pa. Filed Mar. 27, 1919. Serial No. 285,538. 1 Claim. (Cl. 164—60.)

In a tube-cutting machine, the combination with a standard, of a pair of laterally extending spaced hollow arms mounted upon said standard, shafts journaled in suitable bearings in said arms, one of said bearings being adjustable vertically, means for rotating said shafts simultaneously, cooperating annular cutting tools secured to said shafts adjacent to one end thereof, cooperating crimping tools secured to said shaft adjacent to said cutting tools, said crimping tools having a smaller diameter than



said cutting tools, one of said arms bearing suitable indicia, a shaft extending longitudinally of the other of said arms, and an adjustable arcuate-shaped stop carried by the last mentioned shaft engaging the arm provided with said indicia.

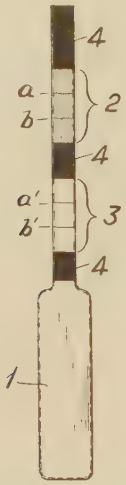
1,415,100. MANUFACTURE OF PAPER BOTTLES. JOHAN GUSTAF V. LANG, New York, N. Y. Filed May 1, 1916. Serial No. 94,587. 5 Claims. (Cl. 229—2.5.)

1. As an article of manufacture, a bottle comprising three essential parts designed for storage or transportation in unassembled form, consisting of a body member made of paper having a contracted upper portion forming the neck of the bottle and a body portion open at the bottom and slightly tapering from the bottom to the point where the body contracts to form the neck, whereby any number of such body members may be inserted into one another for nesting, a bottom member having a flange adapted for insertion into the bottom end of the bottle body and said flange being slightly conic, thereby permitting nesting of such bottom members, and a metal ring U-shaped in cross-section for overlapping and binding the lower end of the body and bottom flange when the parts are assembled.

1,415,101. DISCHARGE INDICATOR FOR STORAGE BATTERIES. HUGH LESLEY, Philadelphia, Pa. Filed Dec. 8, 1919. Serial No. 343,384. Renewed Mar. 17, 1922. Serial No. 544,689. 2 Claims. (Cl. 265—45.)

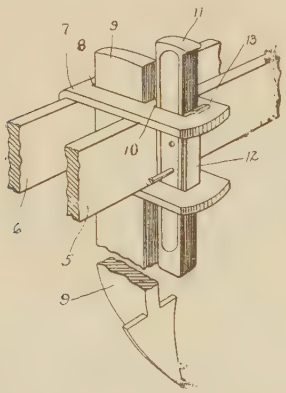
1. A discharge indicator for storage batteries comprising a hydrometer provided with two contrasting zones, one covering the range in specific gravity at complete charge and the other covering the range in specific gravity

at the limit of discharge in relation to specific gravity at completion of charge and each consisting of duplicate sets



of graduations of which one set affords means for selecting in the other set a graduation indicating the allowable or desired limit of discharge.

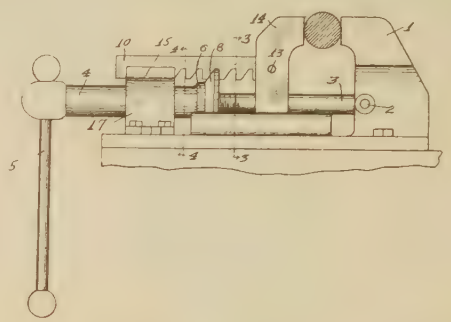
1,415,102. CULTIVATOR-TOOTH FASTENING. ELMER B. MCCARTNEY, Minneapolis, Minn., assignor to Tow Motor Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Aug. 21, 1920. Serial No. 405,117. 3 Claims. (Cl. 55—96.)



1. In a cultivator, the combination of parallel bars, a yoke embracing the bars, a tooth positioned between the bars and extending through the yoke, and means cooperable with one bar and the yoke to cause opposed bar portions to be forced toward each other whereby the tooth is clamped therebetween.

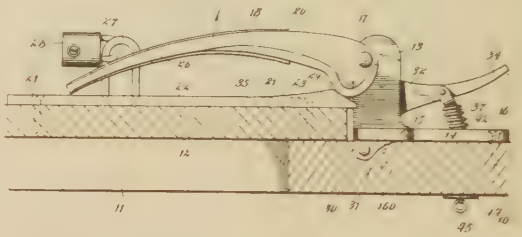
1,415,103. QUICK-ACTION DEVICE FOR VISES OR WRENCHES. FRANCIS W. MCQUEEN, Flint, Mich., assignor of one-half to Lewis M. Hengesbaugh, Flint, Mich. Filed May 12, 1921. Serial No. 468,923. 6 Claims. (Cl. 81—32.)

1. In a clamping device, a fixed jaw, a movable jaw, a threaded member, a connection between said member and the fixed jaw preventing longitudinal movement of the threaded member, a second threaded member rotatable relative to the first threaded member and thereby moved longitudinally of said first threaded member, a toothed member connected to the movable jaw, and means moved longitudinally of the first threaded member by the said longitudinal movement of the second threaded member and cooperating with the teeth of said toothed member to move said movable jaw when said toothed member is in



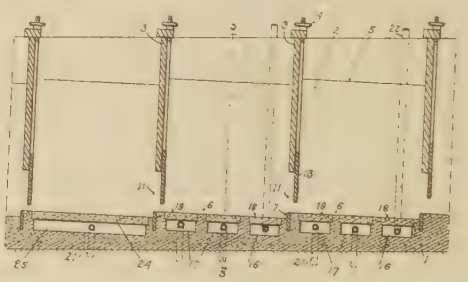
one position, motion of said toothed member about its pivot removing the cooperation between its teeth and said means.

1,415,104. COMBINED DOOR LOCK AND LATCH. FREDERICK MEYER, Buffalo, N. Y. Filed May 15, 1920. Serial No. 381,623. 7 Claims. (Cl. 292—11.)



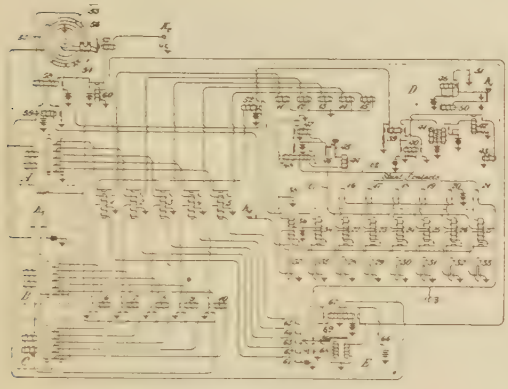
1. A combined door lock and latch comprising a catch, a wedging lever provided with a cam face which is adapted, in one position, to tightly jamb the door closed and in another position to operate the said catch.

1,415,105. ORE CONCENTRATION. DAVID D. MOFFAT, Hayden, Ariz. Filed Feb. 2, 1918. Serial No. 215,219. 2 Claims. (Cl. 83—85.)



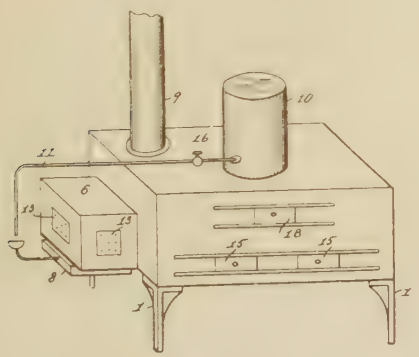
1. A flotation apparatus comprising a vessel adapted to contain ore pulp, means for introducing ore pulp at one end of said vessel and for discharging the same from the other end thereof, a series of partitions extending transversely of said vessel and dividing the same into a series of cells, the floor of said vessel being formed in a series of steps each forming the floor of one of said cells, said partitions terminating upwardly from the edges of said steps to provide openings extending transversely of said vessel to permit said pulp to flow over the edge of one step and downwardly therefrom on to the upper surface of the next step, said steps being provided with porous media through which a gas may be introduced into the pulp in said cells, and overflow lips along the lateral edges of said cells, and spaced at uniform heights above said steps.

1,415,106. CIPHERING DEVICE. LYMAN F. MOREHOUSE, Montclair, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 23, 1920. Serial No. 398,365. 5 Claims. (Cl. 178—22.)



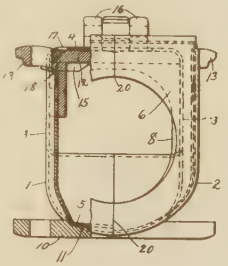
1. A plurality of selecting means upon which may be automatically set up code combinations representing message characters and "stunt" signals, a printer associated with said selecting means and adapted to give a printed indication of said message characters and a visual indication of said "stunt" signals, means operating whenever said printer gives a visual indication of said "stunt" signals for stopping the operation of said printer, and manually operable means associated with said printer for operating said printer.

1,415,107. FURNACE. PETER MURPHY, Newark, N. J. Filed Jan. 11, 1919. Serial No. 270,704. 3 Claims. (Cl. 263—36.)



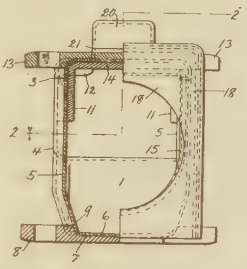
1. In a heating furnace the combination of a furnace casing having an upper and a lower compartment extending lengthwise thereof, connected by a contracted passageway, at one end of the casing, one compartment being provided with an opening for introducing articles to be heated, and the other compartment being provided with an opening for removing such articles, a retort at the other end of the casing having an opening communicating with the lower compartment of the furnace casing, and a flue in the top of the said furnace casing communicating with the upper compartment.

1,415,108. JOURNAL BOX. ALLEN E. OSTRANDER, Ridgewood, N. J., and HERBERT H. WILLIAMS, Brooklyn, N. Y., assignors of one-half to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey, and one-half to Metropolitan Engineering Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 23, 1921. Serial No. 454,762. 6 Claims. (Cl. 64—10.)



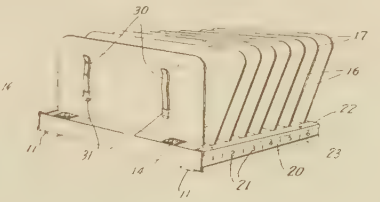
3. A journal box comprising a plurality of sections, a reenforcing member engaging said sections and held in position in said box upon securing said sections together.

1,415,109. JOURNAL BOX. ALLEN E. OSTRANDER, Ridgewood, N. J., and HERBERT H. WILLIAMS, Brooklyn, N. Y., assignors of one-half to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey, and one-half to Metropolitan Engineering Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 23, 1921. Serial No. 454,763. 8 Claims. (Cl. 64—10.)



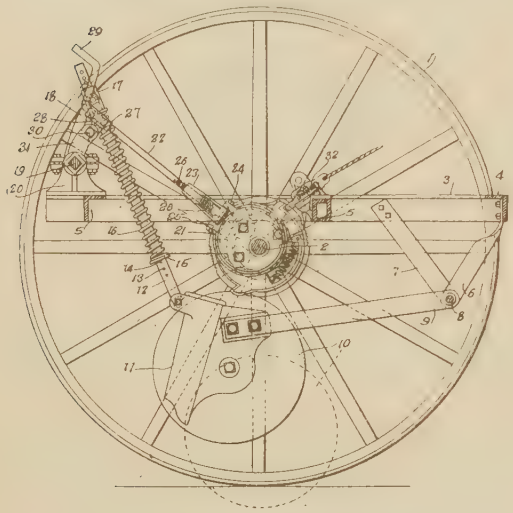
1. A journal box comprising top and cellar sections, inner and outer reenforcing members secured to said top section and a dust guard pocket secured to said box by uniting said top and cellar sections.

1,415,110. FILE RACK. EUGENE PEARL, New York, N. Y. Filed Mar. 14, 1921. Serial No. 452,192. 7 Claims. (Cl. 45—4.)



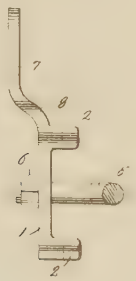
7. A file comprising a main base having a plurality of transverse grooves extending across its upper surface, partition plates freely engageable in the grooves said plates each having an angular edge, an auxiliary base also grooved for the reception of like partition plates, and a channel shaped connecting element engageable in the outer grooves of both bases whereby they are held as a unit and re-enforcing elements at the ends of said bases.

1,415,111. AGRICULTURAL IMPLEMENT. CHARLES H. PELTON, Springfield, Ohio, assignor to The Thomas Manufacturing Company, Springfield, Ohio, a Corporation of Ohio. Filed Jan. 3, 1921. Serial No. 434,510. 6 Claims. (Cl. 74—17.)



1. The combination with power transmitting mechanism, of a pitman secured thereto and adjustable in length, one member of the pitman comprising a rod having a crank by which it is operated to adjust the length of the pitman, a rock shaft, and connections between the rock shaft and rod, said connections permitting the turning of said crank without disconnecting the rod.

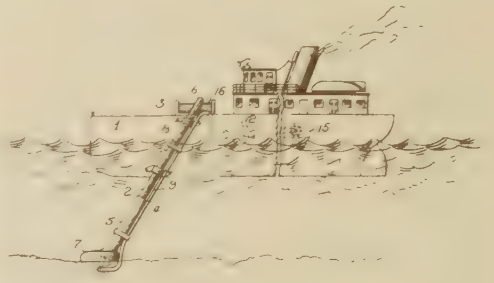
1,415,112. CABLE FASTENER. ALFRED W. PERLITZ, Youngstown, Ohio. Filed July 19, 1921. Serial No. 485,840. 2 Claims. (Cl. 24—135.)



1. A fastening element of the class described comprising a body portion provided with a pair of apertures situated intermediate its ends, a pair of spaced lugs projecting at right angles from the body portion and provided with channels in their ends, a U-bolt and nuts therefor adapted to be attached to the body portion by extending through the apertures provided therein.

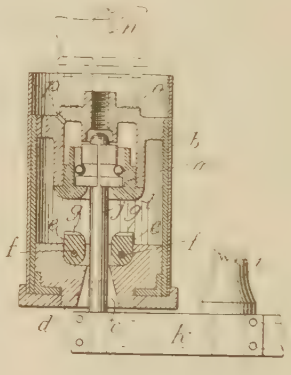
1,415,113. CLAM-DREDGING MACHINE. THOMAS H. PHILLIPS, Jr., Fort Myers, Fla. Filed Aug. 11, 1920. Serial No. 402,861. 7 Claims. (Cl. 37—45.)

1. A clam or mussel dredging apparatus comprising a pipe adapted to extend obliquely downwardly into the water and having a mouth at an angle to said pipe to rest substantially flatly on the bottom, a second pipe adjacent the first pipe and arranged to discharge air



or other gas so as to rise through the first pipe causing eruption of the bottom under said mouth and a rising current of air, water, and bottom, and means for forcing air through said second pipe.

1,415,114. OIL SWITCH. BERNARD PRICE, Johannesburg, South Africa, assignor to himself and The Victoria Falls and Transvaal Power Company, Limited, London, England. Filed Oct. 13, 1920. Serial No. 416,723. 7 Claims. (Cl. 200—150.)

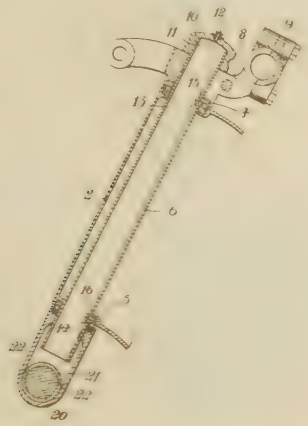


1. An electric oil switch of the type herein referred to, comprising an oil tank, an explosion pot having a stationary contact member therein and an aperture through which oil can pass from said pot to said tank, a movable contact member which, when in the closed position, extends through and practically closes the aperture through which it works and means under the control of said movable contact, adapted during the opening of the switch, automatically to constrict the cross sectional area of the arc and of the stream of oil issuing from said pot into said tank to an extent much less than that of the cross sectional area of said aperture, substantially as described for the purposes set forth.

1,415,115. LUBRICATING MEANS FOR BEARINGS EXTERNAL OF A HOLLOW MEMBER. CYRIL GEORGE PULLIN, Isleworth, England. Filed July 20, 1920. Serial No. 397,566. 3 Claims. (Cl. 64—56.)

1. In combination, on a velocipede, a ball head tube, a frame, a ball race for said ball head tube at the top

of the frame, a perforation in said ball head tube adjacent said ball race, and a projection within said ball head tube adjacent said perforation, a lower ball race towards the bottom of said frame, a perforation in said ball head tube adjacent said lower ball race, and a projection in said ball head tube adjacent said last mentioned perforation, an inlet for a lubricant at the head of said ball head tube and an outlet therefor at the bottom of said ball head tube, the said projections being so constructed as to divert a portion of the lubricant supplied through the inlet to its respective bearing through its adjacent perforation.

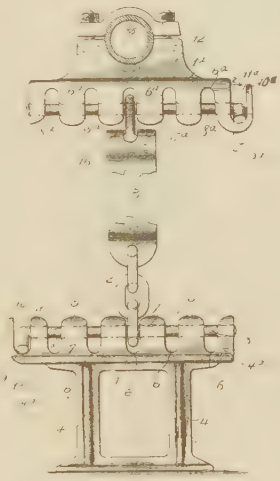


1,415,116. COMBINED AUTOMOBILE TAIL LIGHT AND STATE-LICENSE-PLATE HOLDER. LOUIS ARTHUR RAGAN, St. Louis, Mo. Filed Oct. 8, 1921. Serial No. 506,517. 1 Claim. (Cl. 40—132.)

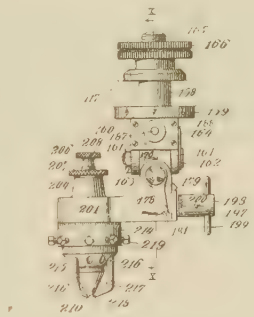
A license plate holder comprising a housing, means within said housing for supporting a license plate, a source of light within the housing, reflectors adjacent to said source of light, a reflector opposed to said first-mentioned reflectors beyond and adjacent to the license plate, said first-mentioned reflectors being disposed to reflect the light rays onto the last-mentioned reflector, and said last-mentioned reflector being disposed to reflect said light rays against the face of the license plate.

1,415,117. ALIGNING MEANS FOR STANCHIONS. HUGO C. RASSMANN, Beaver Dam, Wis., assignor to F. Rassmann Mfg. Co., Beaver Dam, Wis. Filed Jan. 14, 1922. Serial No. 529,256. 3 Claims. (Cl. 119—147.)

1. An aligning device for a stanchion, comprising a part provided with an aligning series of spaced members forming recesses and having aligning holes, a connecting pin movable through said holes, an arm on one end of said connecting pin, and means receiving said arm whereby accidental displacement of the connecting pin will be prevented.



1,415,118. DIAMOND GRINDER. FERDINAND RIES, New York, N. Y. Filed Apr. 18, 1918, Serial No. 229,218. Renewed Oct. 15, 1921. Serial No. 508,051. 2 Claims. (Cl. 51—229.)

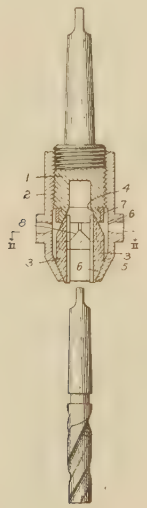


1. A unitary dop holder combining an intermediate block having two worms in transverse planes; a base piece having a micrometer screw engaging one of said worms; and a dop holder having a micrometer screw engaging the other worm, whereby a micrometer adjustment in two transverse planes is provided.

1,415,119. CHUCK FOR TOOL-OPERATING MACHINES. DANIEL C. ROBINSON, Monessen, Pa., assignor of one-half to William C. Johnson, Rices Landing, Pa. Filed July 13, 1921. Serial No. 484,291. 2 Claims. (Cl. 279—56.)

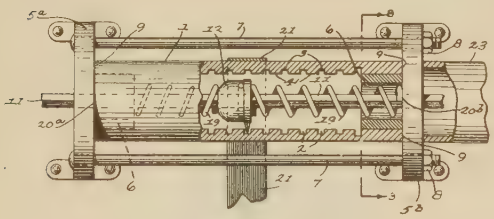
1. A clutch for a tool including a stock adapted to stand in vertical position and provided interiorly with an upwardly tapered seat for clamping jaws, said stock being further provided with a stirrup extending downwardly beyond the said seat, the lower ends of the stirrup being built out on their inner sides, and there provided with opposite pairs of inclined surfaces, a plurality of clamping jaws, consisting each of a narrowed body portion and a widened end portion, the end portion of the jaw adapted to be seated in the aforesaid seat in the stock and the jaw adapted to rest by shoulders formed where

its body and end portions meet upon a pair of the said opposite inclined surfaces of the stirrup, and a follower



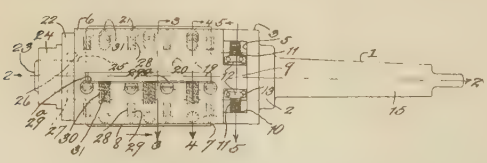
adjustable upon said stock and by adjustment adapted to effect clamping movement of a plurality of jaws assembled between stock and follower.

1,415,120. POWER-TRANSMISSION APPLIANCE. Patrick J. Rooney, New Rochelle, N. Y. Filed June 7, 1921. Serial No. 475,601. 15 Claims. (Cl. 74—14.)



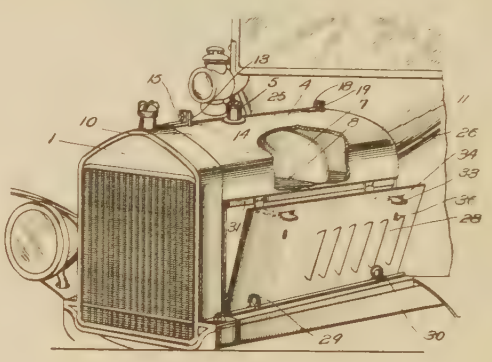
1. In a power transmission appliance in combination, a hollow cylinder with a plurality of turns of one right-handed thread and a plurality of turns of one left-handed thread in the inner surface of such cylinder, leaving diamond shaped elevations between the said threads, a ribbed follower adapted to seat in the said threads, a shaft to be reciprocated, means for connecting the said shaft to the said ribbed follower, means for preventing the rotation of the said ribbed follower and the said shaft to be reciprocated, means for changing the direction of slope of the said ribbed follower at the point of departure thereof from a thread of one direction and of entry into a thread of opposite direction, bearings for the said rotating cylinder and reciprocating shaft and lubricating means therefor, substantially as described.

1,415,121. REAMER. WALTHER C. RUHLANDT, Jackson, Mich. Filed Aug. 12, 1920. Serial No. 402,984. 7 Claims. (Cl. 77—75.)



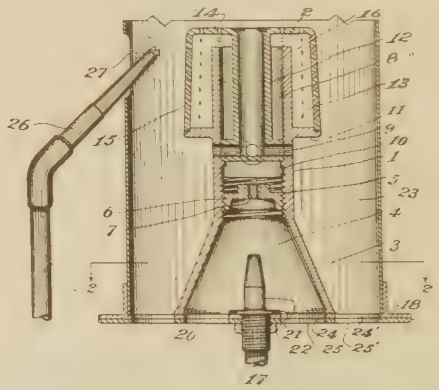
1. In a reamer, an arbor, a plurality of radial blades rockably carried by the arbor and extending radially therefrom, a shell rotatably adjustable on the arbor and through which the blades engage, and means carried by the arbor and operatively connecting with the shell for adjusting the same to retract or extend the blades.

1,415,122. COOLING DEVICE FOR MOTOR-DRIVEN VEHICLES. GEORGE L. SCHOFIELD, Frederick, Md. Filed Aug. 26, 1918. Serial No. 251,452. 3 Claims. (Cl. 123—174.)



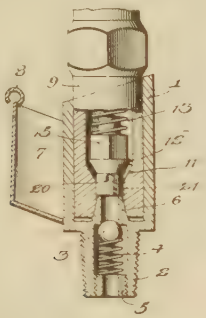
3. In combination with a radiator and a dash of a water cooled motor vehicle, of an auxiliary water reservoir constituting the top of the hood and connecting the dash and the radiator, said reservoir having an offset ledge constituting a louver stop, and hinged louvers cooperating therewith.

1,415,123. HYDROCARBON BURNER. FRED SCHULZ, Fruitvale, Calif. Filed July 20, 1921. Serial No. 486,285. 6 Claims. (Cl. 158—99.)



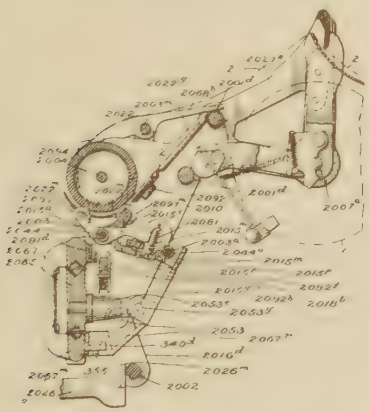
6. A gaseous fuel burner including a tubular body formed with a flared lower end affording a contracted throat and provided adjacent to its upper end with an annular flange, a head enclosing the upper end of said body and provided with a perforated top wall and a perforated skirt extending downwardly therefrom and resting on said flange affording a chamber surrounding the upper end of the head and into which the same discharges, a Venturi plate disposed transversely of the lower end of said throat dividing said body into upper and lower mixing chambers, a fuel supply nozzle discharging axially into said burner mixing chamber, a tubular shell surrounding said body and extending above said head, and a valve for simultaneously varying the air volume admitted into said mixing chamber and into the combustion space afforded between the body and shell.

1,415,124. OILING DEVICE. BERNARD H. SKELLY, Bridgeport, Conn. Filed Sept. 24, 1920. Serial No. 412,488. 5 Claims. (Cl. 184—105.)



5. An oiling appliance for an automobile chassis, comprising a cup member open throughout its length and adapted to be secured to the part to be oiled, an exteriorly beveled nipple upstanding from the bottom of the upper portion of said member and having an inlet whereby the upper and lower parts of said member are in communication, a spring actuated check valve for normally closing the lower end of said inlet, a nozzle connected with an oil supply under pressure, and a check valve within said nozzle for normally closing the latter and having an extension which contacts said nipple when the nozzle is inserted within the cup, whereby the pressure of the nozzle against the nipple will open the valve in the nozzle and effect the discharge of oil to the parts to be lubricated.

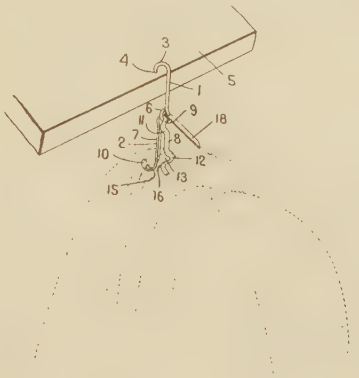
1,415,125. CALCULATING MACHINE. ANGUS N. SMITH, Forty Fort, Pa., assignor to Wales Adding Machine Company, Wilkes-Barre, Pa., a Corporation of Pennsylvania. Filed Nov. 13, 1919. Serial No. 337,665. 25 Claims. (Cl. 235—58.)



1. The combination with a printing mechanism, including types; a single platen shiftable relatively thereto, to present any of a number of separate pieces of paper to the types; independent pressure feed rolls releasably pressed against the platen to coact with the several separate pieces of paper; and means to turn the platen to line space the paper; of means to cast-off one or another of the pressure rolls as the platen is shifted axially to prevent the advance of one or another of the separate pieces of paper notwithstanding the rotation of the platen.

1,415,126. COMBINED COAT AND HAT HOLDER. CARL W. STAHLE, Everett, Mass. Filed May 24, 1919. Serial No. 299,426. 2 Claims. (Cl. 45—13.)

1. In a combined coat and hat hanger, the combination with two members pivotally connected together, one of said members being in the form of a supporting hook and the other constituting a coat and hat-holding member and comprising two resiliently-connected legs between which the brim of a hat may be frictionally held, one of said legs being shaped at its end to form a hook to support a coat or garment, the external curvature on said hook corresponding in size and shape to the internal

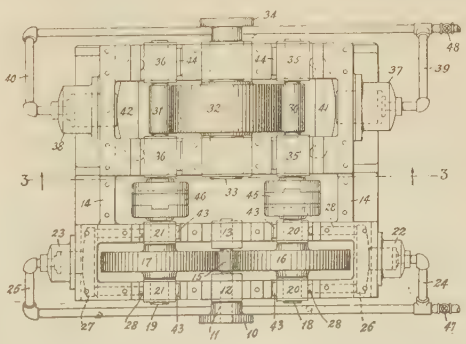


curvature of the supporting hook, and the pivotal connection between said members and the relative length thereof permitting the holding hook to be received within the supporting hook with the hooks facing in opposite directions when the members are folded together, whereby each hook acts to protect the point of the other hook when in folded position.

1,415,127. PRECIPITATED ANTIMONY SULPHIDE AND METHOD OF MAKING SAME. ARTHUR L. STARK, Elyria, Ohio, assignor to The Stibium Products Company, Elyria, Ohio, a Corporation of Ohio. Filed Sept. 17, 1921. Serial No. 501,360. 11 Claims. (Cl. 134—58.)

8. In a method of making precipitated antimony sulphide, the steps which consist in mixing finely ground stibnite, sulphur, barium sulphide and an oxygen compound of an alkali-metal together with water heating under pressure at an elevated temperature, whereby a water-soluble salt of antimony and barium is obtained, and then adding sulphuric acid whereby antimony-pentasulphide and barium sulphate are precipitated.

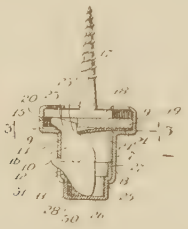
1,415,128. TRANSMISSION AND SPEED-CONVERSION MECHANISM. HENRY HARRISON SUPLEE, New York, N. Y. Filed Feb. 21, 1919. Serial No. 278,348. 2 Claims. (Cl. 74—26.)



1. In a rolling frictional transmission and speed conversion mechanism, a plurality of smooth, hard, metallic, cylindrical surfaces in rolling contact with each other, and means pressing said surfaces together, said means exert-

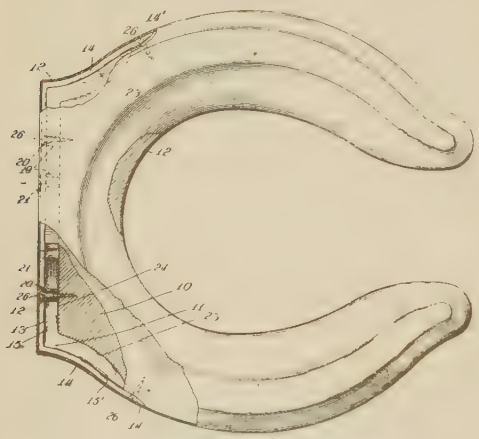
ing forces exceeding 1200 pounds per lineal inch width of face in contact and extending up to the limit of the crushing resistance of the material.

1,415,129. CURTAIN FASTENER. JOHN VODICKA, Chicago, Ill., assignor to Cinch Fastener Corporation, Chicago, Ill., a Corporation of Illinois. Filed July 12, 1919. Serial No. 310,403. 5 Claims. (Cl. 24—211.)



4. In a device of the class described, a cylindrical housing having a hollow base of large diameter, there being a shoulder formed between the main body of the housing and the hollow base of enlarged diameter, said housing being provided with a longitudinally extending slot, a latch fulcrumed on said shoulder and having a nose projecting through the slot, a hollow plunger sliding longitudinally of the housing and projecting beyond the end of the same, and engaging the nose of the latch to swing the latter about its pivot, a spring disc 21 having a spring tongue 24, the disc being inserted in the base of enlarged diameter and the tongue engaging the latch and normally projecting the same, and means for closing the end of the base.

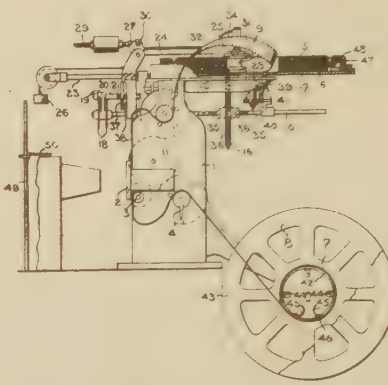
1,415,130. CLOSET SEAT. EARL G. WATROUS, Chicago, Ill. Filed Dec. 26, 1919. Serial No. 347,348. 3 Claims. (Cl. 4—18.)



1. A closet seat comprising a wood body having its rear edge, and rear portions of its side edges slotted substantially parallel with the body plane, a reinforcing structure having a rear piece and side pieces shaped to conform to the corresponding portions of the wood body and these pieces provided with an inwardly extending rib entering the groove of the wood body, and attaching devices securing the stated parts together.

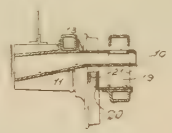
1,415,131. DELIVERING AND WINDING CINEMATOGRAPH FILM. EDWARD JOHN WAY, Johannesburg, Transvaal, South Africa. Filed Nov. 26, 1920. Serial No. 426,580. 13 Claims. (Cl. 88—18.7.)

1. In cinematograph apparatus, the combination with a frame, of a coil carrier mounted to rotate thereon about a substantially vertical axis and providing a friction disc, a driving shaft mounted radially on the frame, a friction wheel on the shaft engaging the friction disc and movable radially of the carrier, means adapted to engage



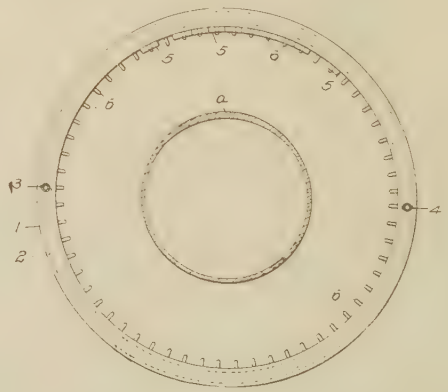
the interior of a film on the carrier and movable radially rigidly with the friction wheel as the film is unwound from the center of the coil, and driving mechanism for the shaft.

1,415,132. BRAKE-HANGER SUPPORT FOR TRUCKS. JOHN C. WHITRIDGE and JACOB C. LARSEN, Columbus, Ohio, assignors to The Buckeye Steel Castings Co., Columbus, Ohio. Filed Apr. 12, 1920. Serial No. 373,196. 3 Claims. (Cl. 188—46.)



2. In a railway truck, the combination of a side frame having a bolster opening and a combined spring seat and brake hanger support separate from and secured to said side frame at the bottom of the bolster opening, the brake hanger support projecting inwardly and upwardly from the seat.

1,415,133. APPARATUS FOR DRAWING GLASS. ALLAN P. WHITTEMORE, Charleston, W. Va. Filed Dec. 10, 1920. Serial No. 429,677. 4 Claims. (Cl. 49—17.1.)



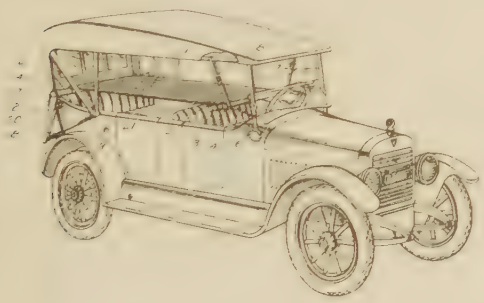
4. In apparatus for drawing glass cylinders, a cooling ring arranged to surround the cylinder adjacent to the

drawing point, and a sectional shield detachably secured adjacent to the inner face of said ring for locally retarding its cooling effect upon the article being drawn.

1,415,134. TREE PROTECTOR. DAVID WILLIAMS, New Orleans, La. Filed Mar. 21, 1921. Serial No. 454,107. 4 Claims. (Cl. 47—39.)

3. A tree protector of the character described comprising an approximately conoidal body of thin sheet metal adapted to be clamped around the tree trunk, a pad of fibrous material disposed at the small end of the body on the inside thereof, a clamping band disposed around the small end of the body on the exterior thereof whereby it may be held against the tree trunk, the lower margin of the body being upwardly and inwardly turned to form a trough disposed entirely beneath the body, an absorbent wicking disposed in the trough, and a container attached to the body and having a passage leading to the trough.

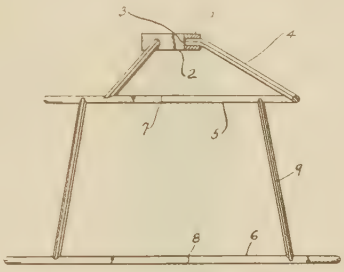
1,415,135. BED. JOSEPH H. WITTMANN, Kansas City, Mo. Filed Sept. 12, 1918. Serial No. 253,715. 4 Claims. (Cl. 5—72.)



1. In a motor vehicle bed, a sheet having means at one end for attachment to a motor vehicle, a winding bar, angular in cross section and located at the other end of the sheet, fulcrum levers having angular sockets into which the ends of the winding bar engages, a fulcrum member for each lever, and yielding connections for the free ends of each lever.

1,415,136. LAMP SHADE AND PROCESS OF MAKING. ADAM ZISKA, Jr., Milwaukee, Wis., assignor to George W. Ziska, Chicago, Ill. Filed July 15, 1921. Serial No. 485,076. 5 Claims. (Cl. 240—108.)

1. The method of making a lamp shade frame, which method comprises forming a central hub with a plurality of round openings, inserting a plurality of radially extending rods of polygonal cross section into said openings and forming concavities in the ends of said rods, forming a spring ring, and thereafter positioning said ring about

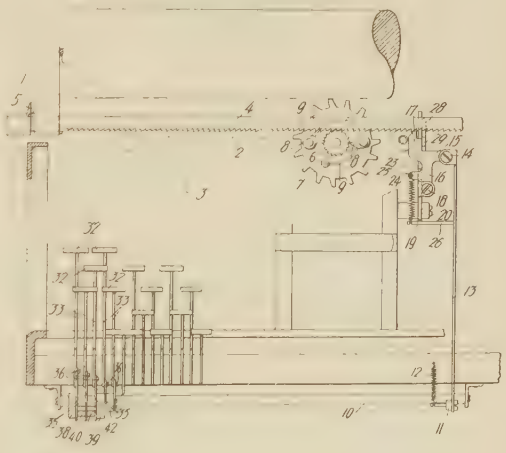


the extremities of said rod by springing said ring and allowing it to snap into the concavities of said rods.

1,415,137. PROCESS OF MAKING PREPARED FOOD. DUNCAN M. ANDERSON, Toronto, Ontario, Canada. Filed Apr. 9, 1918. Serial No. 227,475. 2 Claims. (Cl. 99—11.)

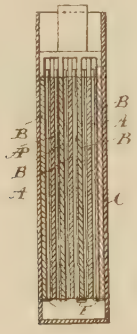
1. A process of making prepared food, consisting in first placing within a mixing machine a quantity of desiccated skim milk, then introducing a quantity of melted chocolate, then adding powdered sugar, and thoroughly mixing the ingredients which are in such proportions that the dry materials will thoroughly absorb the natural fats of the chocolate and the final product is in dry powder form.

1,415,138. TYPEWRITING MACHINE. HARRY BATES, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 19, 1919. Serial No. 312,074. 16 Claims. (Cl. 197—91.)



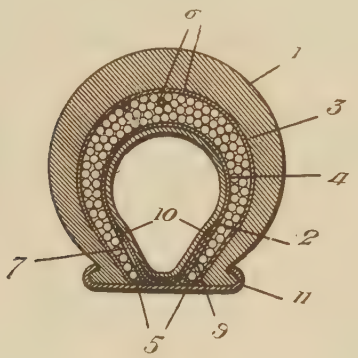
1. In a typewriting machine, the combination with a traveling carriage and means to effect letter-space movements thereof, of a series of back-space keys corresponding in number to the different line-spacing actions to be effected, key-levers actuable by said keys, a back-space device to back said carriage different amounts, and connections between said key-levers and said back-space device whereby uniform movements of said keys will drive said back-space device to effect movements of said carriage varying in extent in accordance with the keys actuated.

1,415,139. STORAGE BATTERY. GUSTAVE A. BAUMETZ, Cleveland, Ohio. Filed Dec. 8, 1919. Serial No. 343,366. 5 Claims. (Cl. 204—29.)



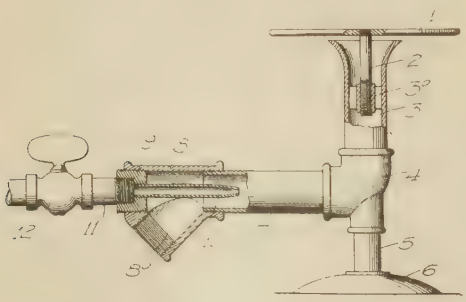
1. In a storage battery, in combination a casing, alternating positive and negative plates therein, insulating plates intermediate of said positive and negative plates, and lateral projections extended from the lower edges of said insulating plates engaging the adjacent plates.

1,415,140. PNEUMATIC TIRE. EDWARD M. BECKMAN, Gary, Ind. Filed May 17, 1920. Serial No. 381,915. 6 Claims. (Cl. 152—18.)



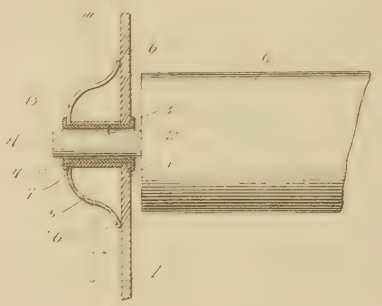
6. A tire protector and cushion comprising a filler to be disposed between the inner tube and the tread of the casing including individual relatively-movable resilient members.

1,415,141. GAS BURNER. PATRICK J. BOHAN, San Diego, Calif., assignor of one-half to J. E. Frazer, San Diego, Calif. Filed Mar. 8, 1920. Serial No. 364,000. 2 Claims. (Cl. 158—117.)



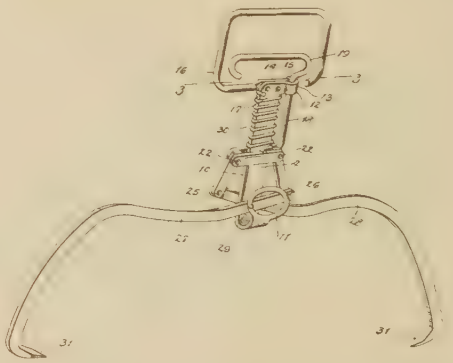
1. A gas burner, including a fuel conducting pipe in L-shape, a fuel distributing nozzle extending some distance into the inlet end of said fuel conducting pipe and an air inlet communicating with said conducting pipe from one side only and back of the end of the distributing nozzle and a flat baffle-plate adjustably mounted over the outlet end of said conducting pipe.

1,415,142. BEARING. WADE W. BOWMAN, Yonkers, N. Y., assignor to Continuous Cloth Towel Cabinet Co., Inc., New York, a Corporation of New York. Original application filed Feb. 15, 1917, Serial No. 148,714. Divided and this application filed July 21, 1921. Serial No. 486,465. 6 Claims. (Cl. 64—10.)



1. A bearing comprising a supporting member, a saucer-shaped member having its open end resting against one surface of the supporting member, and a sleeve extending through mating apertures in the saucer-shaped member and in the supporting member, the end portions of the sleeve being flanged over upon the adjacent portions of the saucer-shaped member and the support to retain all of said parts in fixed relation.

1,415,143. TONGS. CHARLES D. BRIDDELL, Crisfield, Md. Filed Nov. 24, 1920. Serial No. 426,241. 7 Claims. (Cl. 294—100.)



1. In a pair of tongs, a handle shank, a pair of grapple jaws crossed and pivotally associated with said handle shank and with each other at the point of crossing, a handle carried by said shank, a guide at the base of said handle, a supplemental handle within the main handle and working in said guide, and toggle means connecting the supplemental handle with the crossed ends of said jaws.

1,415,144. CRAMPING FORM FOR VIOLIN BOUTS. WILLIAM F. BUBLITZ, Elkhorn, Wis. Filed July 9, 1921. Serial No. 483,585. 2 Claims. (Cl. 144—259.)

1. In a gluing form for violin bouts, a base, a form secured to the base and having channels for the reception of the ends of the bouts to be joined, the mold being further provided with enlarged openings communicating

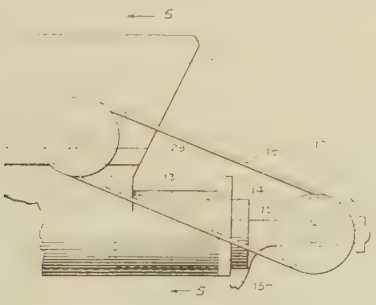
with the channels, a plurality of upright supporting blocks located on the base, screws threaded through the

blocks and provided at one end with handles and heads swiveled upon the other ends of the screws for cramping the ends of the bouts into the channels.

1,415,145. EXTENSIBLE POLE. Charles J. Carlson and Albert W. Larson, Seattle, Wash. Filed May 24, 1920. Serial No. 383,614. 1 Claim. (Cl. 248—3.)

In an extensible rod, the combination with a rod-member, a second rod-member connected thereto for relative longitudinal movement, of a band surrounding both of said members, said band being provided with a slot, a stud protruding from the first named member into said slot to limit the longitudinal movement of such member with respect to said band, a dog, a pin pivotally connecting the dog to said band in clamping relation with respect to the second named member, and a cam lever fulcrumed to said pin and engageable with the first named member or with said dogs, selectively, to respectively effect the extension of the rod or the disengagement of the dog from the second named member.

1,415,146. FEEDING ATTACHMENT FOR STOKERS AND THE LIKE. John Clifford Casler, Chicopee Falls, Mass. Filed Apr. 21, 1921. Serial No. 463,427. 9 Claims. (Cl. 259—39.)

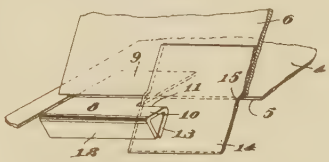


1. A feeding device for stokers of the plunger type, having pockets delivering into the plunger cylinder, and comprising rotating blades arranged in each pocket and arranged to move downward in the pocket in advance of the plunger.

1,415,147. DIRECTIONOMETER. Alonzo Wilson Coleman, Pittsburgh, Pa. Filed July 26, 1919. Serial No. 313,423. 1 Claim. (Cl. 33—222.)

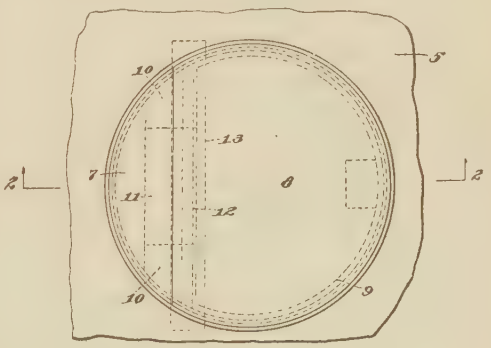
In a device of the character described, a thin flat casing adapted to be carried in the pocket, a disc of opaque material mounted in the casing, a magnetic needle mounted for free turning movement within the casing beneath the disc, said disc being provided with an observation opening, a compass-card secured on said needle to turn therewith, and a transparent closure member secured in the upper end of the casing and acting to secure said disc.

1,415,148. DETACHABLE-COVER CONSTRUCTION. Ernest L. Condon, Medway, Mass., assignor to United Soda Fountain Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 3, 1920. Serial No. 349,281. 9 Claims. (Cl. 220—31.)



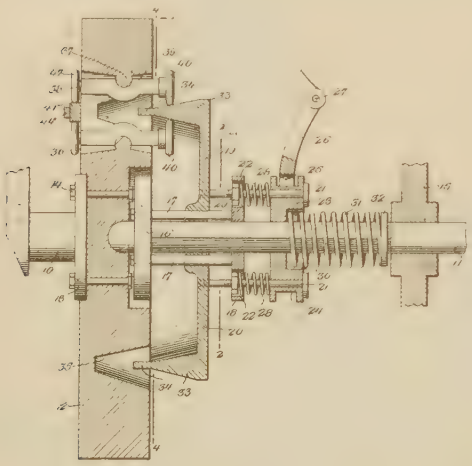
1. In combination, a receptacle top having an opening, and a separable cover for the opening adapted to swing on one edge resting on the receptacle top, such pivot edge registering with one edge of said opening, a tongue extending from the pivot edge of the cover through said opening, and a tongue engaging projection fixed to the receptacle and projecting into said opening whereby to provide an open ended slot for the reception of the edge of said cover.

1,415,149. DETACHABLE-COVER CONSTRUCTION. Ernest L. Condon, Medway, Mass., assignor to United Soda Fountain Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 5, 1920. Serial No. 349,460. 13 Claims. (Cl. 220—31.)



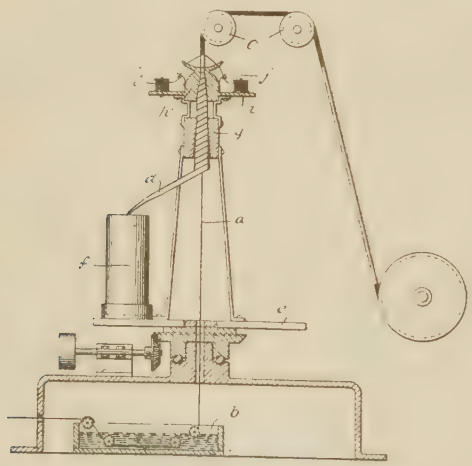
1. In combination, a receptacle top having an opening, a freely removable cover for the opening adapted to swing on one edge as a hinge, ledges adapted to engage and support the hinge edge of the cover throughout its swinging movement, and means to position the cover over the opening.

1,415,150. CLUTCH MECHANISM. LAWRENCE E. CONNER, Jackson, Mich. Filed June 4, 1918. Serial No. 238,211. 5 Claims. (Cl. 192—52.)



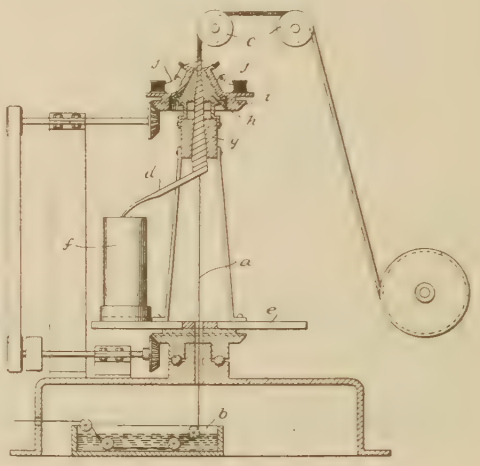
1. In a clutch, the combination of drive and driven members, a flywheel carried upon the drive member, a shiftable coupling member mounted on the driven member, said coupling member having an annular wedge extending toward the flywheel, a pair of arms mounted on the flywheel, spring means yieldingly urging the arms together at their inner ends, said annular wedge being adapted to engage the inner ends of the arms to spread the same apart for yieldingly and gradually connecting the coupling member to the flywheel, and said annular wedge provided with registering circumferential rows of cams upon the inner and outer faces of the wedge adapted to receive the inner ends of said arms thereagainst.

1,415,151. METHOD OR ART OF MAKING INSULATED WIRE. WILLIAM E. COOK, New York, N. Y., assignor, by mesne assignments, to The Peerless Insulated Wire and Cable Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 24, 1917. Serial No. 164,302. 6 Claims. (Cl. 117—40.)



1. The herein described method or art of making insulated wire consisting in winding a cotton sliver spirally about a conductor wire with the edges thereof overlapping, compacting said sliver upon the wire, winding a strand of flexible, absorbent material about and embedding successive convolutions thereof within said sliver while it is compacted, the convolutions of said strand being spaced apart to form ducts therebetween to facilitate the penetration of a viscous composition throughout the body of said sliver, and thereafter saturating or impregnating said sliver and said strand with a viscous composition, whereby its insulating property is increased, the completed wire is waterproofed and the fibers of said sliver and said strand are bonded together.

1,415,152. METHOD OR ART OF MAKING INSULATED WIRE. WILLIAM E. COOK, New York, N. Y., assignor, by mesne assignments, to The Peerless Insulated Wire and Cable Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 24, 1917. Serial No. 164,303. 6 Claims. (Cl. 117—40.)

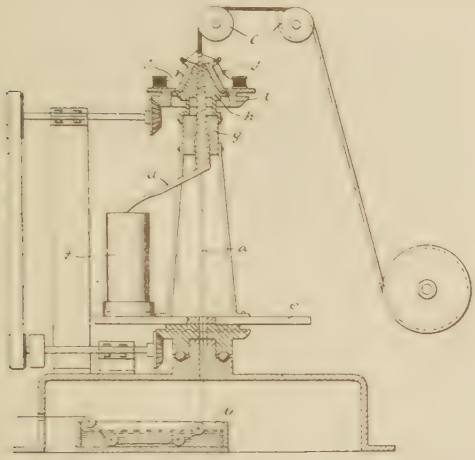


1. The herein described method or art of making insulated wire consisting in winding a cotton sliver spirally about a conductor wire with the edges thereof overlapping, compacting said sliver upon the wire, winding a strand of flexible, absorbent material spirally about and embedding successive convolutions thereof within said sliver while it is compacted, said strand being wound at a different pitch from that at which said sliver is wound, with succeeding convolutions thereof spaced apart whereby said strand will cross the lap between succeeding convolutions of said sliver, and ducts will be formed between succeeding convolutions of said strands to facilitate the penetration of a viscous composition throughout the entire body of said sliver, and thereafter saturating or impregnating said sliver and said strand with a viscous composition whereby the insulating property is increased, the completed wire is waterproofed, and the fibers of said sliver and said strands are bonded together.

1,415,153. METHOD OR ART OF MAKING INSULATED WIRE. WILLIAM E. COOK, New York, N. Y., assignor, by mesne assignments, to The Peerless Insulated Wire and Cable Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 24, 1917. Serial No. 164,304. 4 Claims. (Cl. 117—40.)

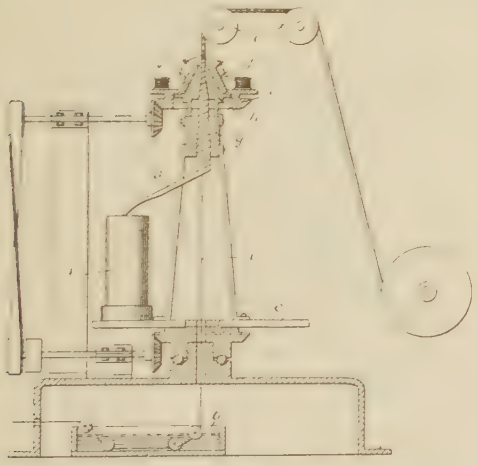
1. The herein described method or art of making insulated wire consisting in winding a cotton sliver spirally about a conductor wire with the edges thereof overlapping, compacting said sliver upon the wire, winding a strand of flexible, absorbent material about and embedding successive convolutions thereof within said sliver while it is compacted, said strand being wound at a higher pitch than said sliver is wound, with succeeding convolutions thereof spaced apart, whereby said strand will cross the lap between succeeding convolutions of said sliver and ducts will be formed between succeeding convolutions of said strands to facilitate the penetration

of a viscous composition throughout the entire body of said sliver, and thereafter saturating or impregnating said sliver and said strand with a viscous composition



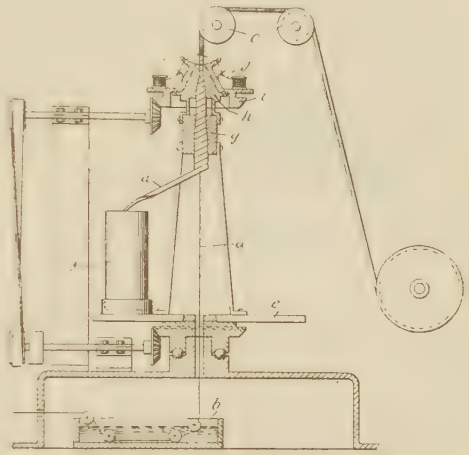
whereby the insulating property thereof is increased, and the completed wire is waterproofed and the fibers of said sliver and said strand are bonded together.

1,415,154. METHOD OR ART OF MAKING INSULATED WIRE. WILLIAM E. COOK, New York, N. Y., assignor, by mesne assignments, to The Peerless Insulated Wire and Cable Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 24, 1917. Serial No. 164,305. 5 Claims. (Cl. 117—40.)



1. The herein described method or art of making insulated wire consisting in winding a cotton sliver spirally about a conductor wire with the edges thereof overlapping, compacting said sliver upon the wire, winding a strand of flexible, absorbent material about and embedding successive convolutions thereof within said sliver while it is compacted, said strand being wound in a direction the reverse of that in which said sliver is wound, the convolutions of said strand being spaced apart to form ducts therebetween to facilitate the penetration of a viscous composition throughout the body of said sliver and thereafter saturating or impregnating said sliver and said strand with a viscous composition whereby the insulating property is increased, the completed wire is waterproofed and the fibers of said sliver and said strand are bonded together.

1,415,155. METHOD OR ART OF MAKING INSULATED WIRE. WILLIAM E. COOK, New York, N. Y., assignor, by mesne assignments, to The Peerless Insulated Wire and Cable Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 24, 1917. Serial No. 164,306. 6 Claims. (Cl. 117—40.)

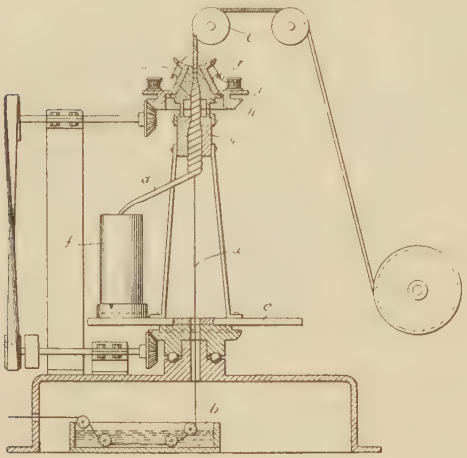


1. The herein described method or art of making insulated wire consisting in winding a cotton sliver spirally about a conductor wire with the edges thereof overlapping, compacting said sliver upon the wire, winding a strand of flexible, absorbent material spirally about and embedding successive convolutions thereof within said sliver while it is compacted, said strand being wound in a direction the reverse of that at which said sliver is wound, and at a different pitch, with succeeding convolutions thereof spaced apart, whereby said strand will cross the lap between succeeding convolutions of said sliver and ducts will be formed between succeeding convolutions of said strands to facilitate the penetration of a viscous composition throughout the entire body of said sliver and thereafter saturating or impregnating said sliver and said strand with a viscous composition whereby the insulating property is increased, the completed wire is waterproofed, and the fibers of said sliver and said strands are bonded together.

1,415,156. METHOD OR ART OF MAKING INSULATED WIRE. WILLIAM E. COOK, New York, N. Y., assignor, by mesne assignments, to The Peerless Insulated Wire and Cable Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 24, 1917. Serial No. 164,307. 3 Claims. (Cl. 117—40.)

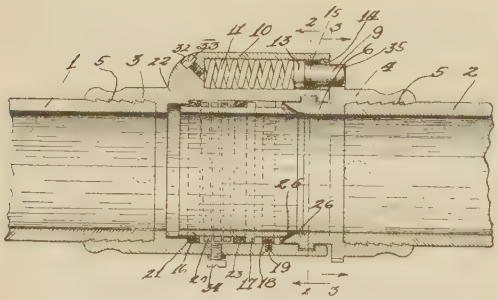
1. The herein described method or art of making insulated wire consisting in winding a cotton sliver spirally about a conductor wire with the edges thereof overlapping, compacting said sliver upon the wire, winding a strand of flexible, absorbent material spirally about and embedding successive convolutions thereof within said sliver while it is compacted, said strand being wound in a direction the reverse of that at which said sliver is wound, and at a higher pitch with succeeding convolutions thereof spaced apart, whereby said strand will cross the lap between succeeding convolutions of said sliver, and ducts will be formed between succeeding convolutions of said strands to facilitate the penetration of a viscous composition throughout the entire body of said sliver, and there-

after saturating or impregnating said sliver and said strand with a viscous composition whereby the insulating



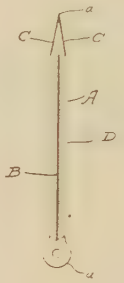
property in increased, the completed wire is waterproofed, and the fibers of said sliver and said strand are bonded together.

1,415,157. PIPE COUPLING. ALBERT B. COURCHENE, Chicago, Ill. Filed Jan. 30, 1920. Serial No. 355,110. 2 Claims. (Cl. 285—175.)



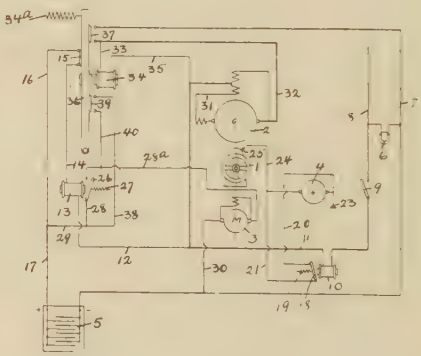
1. In a hose coupling, two cylindrical members, bayonet slots in one of said members, lugs on the other member located to cooperate with said bayonet slots to hold said members together, a casing on the exterior of one of said members, a spring housed in said casing, a plunger pressed by said spring and protruding from said housing toward the other member, a flange on the exterior of said other member located to contact with said plunger and press it toward the interior of said housing when the lugs are introduced into the bayonet slots, said flange having recesses located out of line with the longitudinal parts of said bayonet slots whereby, when the members are rotated relative to one another after the introduction of the lugs into the bayonet slots, the plunger will be brought opposite one of said recesses and the spring will cause it to protrude into said recess, thereby preventing disengagement of said members, a sleeve in the interior of one of said members, a spring between said sleeve and the interior surface of said member, a flange on the exterior of said sleeve bearing against said surface, a shoulder on said surface, the thrust of said spring being exerted against said shoulder and said flange and tending to move the sleeve toward the mouth of said member, packing between said spring and each of said thrust receiving parts, an interior collar secured to said member between said flange and said mouth and acting as a stop to the forward motion of said sleeve, a packing on the forward edge of said sleeve and a packing on the edge of the other member contacting with the packing on the sleeve when the members are united.

1,415,158. HAND AND INDICATOR FOR WATCHES AND LIKE ARTICLES. HERMANN F. CUNTZ, Hartford, Conn., assignor to American Radium Company, New York, N. Y., a Corporation of New York. Original application filed July 2, 1921, Serial No. 482,095. Divided and this application filed Oct. 12, 1921. Serial No. 507,240. 4 Claims. (Cl. 58—50.)



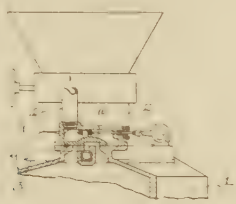
1. An article of the character described comprising a thin flat base, two converging ridges near the outer end and a single central medial ridge formed on the base from near the tip toward the hub.

1,415,159. LIGHTING SYSTEM. GEORGE W. DAGGETT, North Girard, Pa. Filed Dec. 22, 1915. Serial No. 68,292. 3 Claims. (Cl. 290—30.)



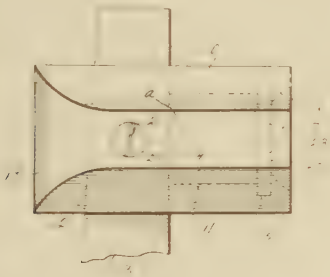
1. In an electric system of the character described, the combination of an engine, a starting motor and charging generator, a generator, mechanical driving connections from said engine to said starting motor and charging generator and said generator, a storage battery, leads normally connected to said battery when said engine is not running, means for connecting said battery to said starting motor and charging generator to start said engine when said battery delivers current to said leads, and means responsive to the engine speed for opening the circuit between said battery and said leads and closing the circuit between said generator and said leads and effecting connection between the starting motor and charging generator and the battery during the operation of the engine.

1,415,160. APPARATUS FOR DRYING MATERIALS. HERBERT H. DOW, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed May 7, 1919. Serial No. 295,393. 2 Claims. (Cl. 34—34.)



1. In drying apparatus, the combination of a chamber capable of being sealed, and having material supply and discharge openings, air-supply and vacuum lines connected with said chamber and unitary valve-means adapted to control said lines, respectively.

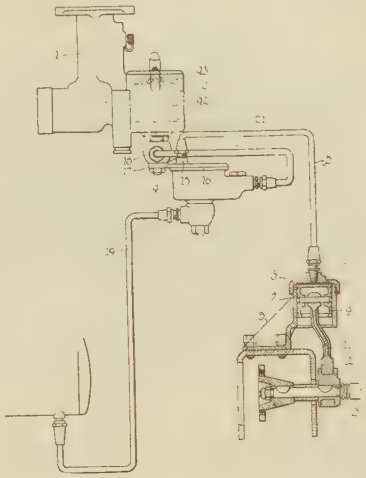
1,415,161. LOOM PICKER. WILLIE DUBOIS and ZOEI DUBOIS, Biddeford, Me. Filed Oct. 3, 1921. Serial No. 504,971. 1 Claim. (Cl. 139—21.)



A picker of the character described comprising a body formed with a longitudinally extending chamber opening at one end of the body and with a picker stick passage extending transversely through the rear end of the body and intersecting the rear end of the chamber, the chamber having a diameter greater than the width of the picker stick passage, the forward end of the chamber having an annular recess defined at its forward end by an inwardly projecting annular wall, the interior diameter of this wall being smaller than the interior diameter of the chamber and the outer face of this wall being outwardly and forwardly flared, a filler disposed within said chamber, and a holding rim, the peripheral portion of said rim seating within the annular recess, whereby said rim holds the filler in the chamber, the filler having an opening substantially centrally thereof, the opening defined by the rim being of greater diameter than the diameter of the opening in the filler, the side and inner end walls of the chamber being imperforate, the stick to which the picker is applied being comprised in the inner wall of the chamber.

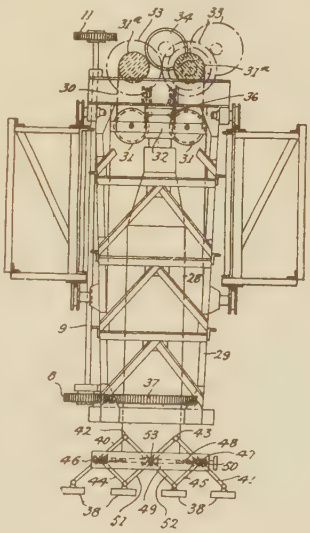
1,415,162. FUEL-FEED SYSTEM. FRANCIS EDWIN EDWARDS, Chicago, Ill., assignor to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1918. Serial No. 236,271. 9 Claims. (Cl. 103—8.)

1. In combination, a receiving chamber, a pumping chamber of constant size having an inlet valve and an outlet valve for liquid, an air chamber enclosing a body of air and communicating with said pumping chamber, one wall of said air chamber being movable to produce compressions and rarefactions of said body of air, and valve means controlled by the level of liquid in the receiving chamber, for controlling the effective application of said compressions and rarefactions to said pumping chamber, said valve means shutting off the flow of liquid from the pumping chamber to the receiving chamber to cause the



liquid to accumulate in the pumping chamber and thus cut down the effective volume of the air chamber.

1,415,163. OVERHEAD TRAVELING CRANE. LAWRENCE ENNIS, Linthorpe, England, and ALEXANDER JACK, Motherwell, Scotland. Filed July 23, 1918. Serial No. 246,388. 10 Claims. (Cl. 212—17.)

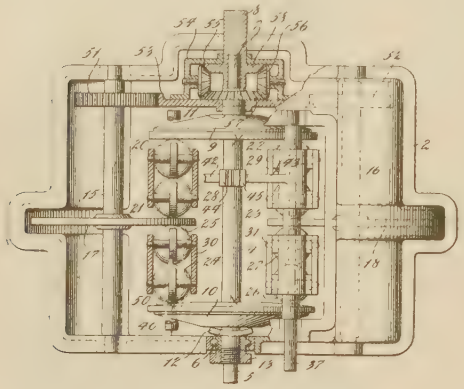


1. An overhead crane comprising an overhead trolley and a vertical frame secured to said trolley, a mast suspended from said trolley, a ring secured to said frame, means for rotating said mast and guiding it in said ring, a cross runway girder fixed to and rotating with said mast and symmetrically disposed on each side thereof, hoisting and gripping appliances carried by said cross runway girder on each side of said mast and means for displacing said appliances along the girder.

1,415,164. POWER TRANSMISSION. HANNIBAL C. FORD, New York, N. Y., assignor to Ford Instrument Company, Inc., a Corporation of New York. Filed Mar. 2, 1917. Serial No. 151,917. 25 Claims. (Cl. 24—34.)

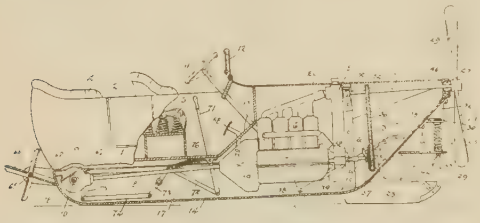
1. A variable speed power transmission comprising a plurality of rotatable elements, a speed varying power transmitting device interposed between one of said elements and each of the other said elements for transmit-

ting power from one element to the other, said power transmitting device being arranged to be in continuous



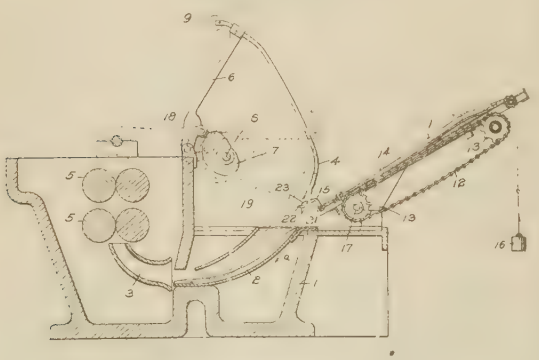
rolling contact with and to engage diametrically opposed points on said one element to thereby equalize the lateral thrust thereon.

1,415,165. AUTOMOBILE SLED. W. SIMON FRASER, Marieapolis, Manitoba, Canada. Filed Apr. 26, 1920. Serial No. 376,773. 11 Claims. (Cl. 180—3.)



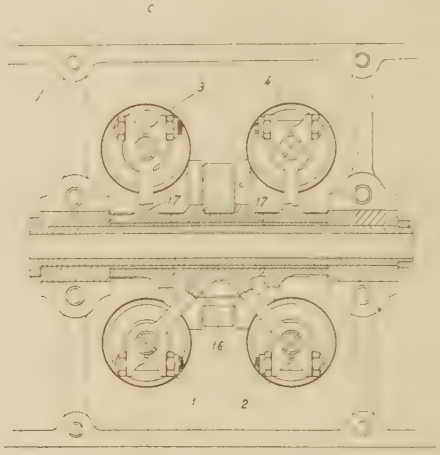
1. The combination with an automobile body having the wheels thereof dismounted, of a flat bottomed casing located beneath and supporting the automobile body and having the front end thereof extending upwardly in advance of the automobile, steering runners located at the front end of the casing and a front propeller driven by the automobile engine.

1,415,166. TIN POT. JOHN W. FREE, Woodlawn, Pa., assignor to Jones & Laughlin Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 22, 1921. Serial No. 463,520. 9 Claims. (Cl. 91—12.6.)



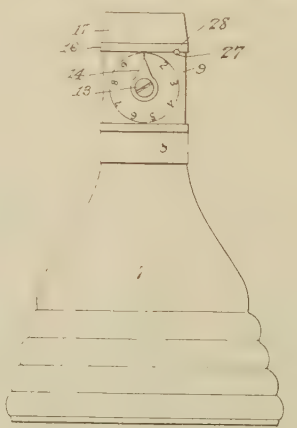
1. In combination with a tin pot of a pusher adapted to reciprocate vertically, means for periodically elevating said pusher against gravity and alternately allowing it to descend by gravity, the arrangement being such that the gravitally impelled descending pusher engaging a plate from behind may impel it through the tin pot.

1,415,167. VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. ERNEST FUCHS, Paris, France, assignor to Louis Renault, Billancourt, Seine, France. Filed Mar. 31, 1919. Serial No. 286,563. 1 Claim. (Cl. 123—90.)



An overhead valve operating mechanism for internal combustion engines, comprising a pair of tappet levers of U-shape adapted to control one pair of valves, a pair of tappet levers of inverted V-shape for controlling another pair of valves oppositely arranged to said first mentioned pair of valves, a common shaft for pivotally supporting said tappet levers, a cam shaft for operating said tappet levers, the open ends of the U-shape and V-shape levers comprising the valve-engaging ends extending to opposite sides of the supporting shaft, and the closed ends thereof being pivotally mounted on said supporting shaft, a portion of the closed end of each pair of said levers extending beyond said shaft, cam-engaging rollers carried by said extensions, and means for mounting said levers on their supporting shaft in such relation to each other that said rollers can be engaged by the same cam on the cam shaft, the tappet lever shaft and the cam lever shaft being positioned in a plane passing vertically through the axis of the engine cylinders.

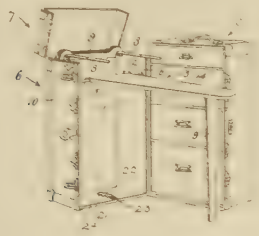
1,415,168. COIN-DEPOSIT RECEPTACLE. CHARLES GIBBS, New York, N. Y.; Anna G. Tobin being administratrix of said Charles Gibbs, deceased. Filed Aug. 13, 1919. Serial No. 317,152. 8 Claims. (Cl. 232—4.)



1. The combination with a receptacle having an opening, of disks having recessed flanges mounted in said

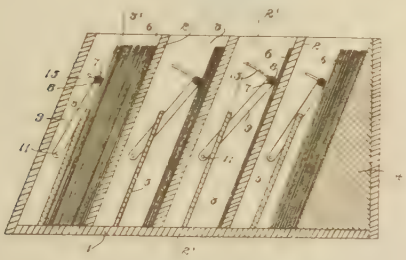
opening to rotate on axes transverse to said opening; and a tubular closure to engage said opening and having lateral projections to co-operate with the flanged disks to releasably secure the closure in the opening.

1,415,169. TRUNK APPLIANCE. TILMON I. GILBERT, Los Angeles, Calif. Filed May 9, 1921. Serial No. 468,073. 2 Claims. (Cl. 190—13.)



1. In a wardrobe trunk having a garment hanging compartment, a pair of oppositely disposed toothed rack bars secured in said compartment adjacent one end thereof, a combined garment follower and ironing board provided at one of its ends with a cross bar, the ends of said bar adapted to pivotally and detachably engage with the teeth of the rack bars, and a supporting leg hingedly secured to the free end of the combined follower and ironing board.

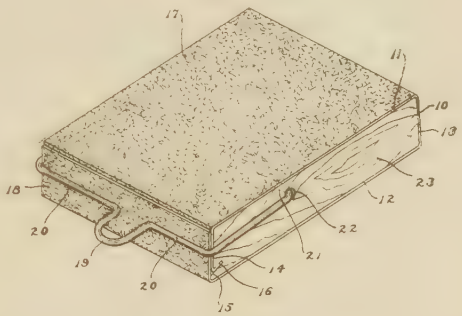
1,415,170. PAPER CABINET. HAROLD AUGUSTUS GURNEY, Winnipeg, Manitoba, Canada. Filed May 3, 1921. Serial No. 466,410. 1 Claim. (Cl. 211—8.)



A paper cabinet presenting a paper compartment in which sheets of paper are adapted to be stacked, a partition member within the compartment of less height than the latter and having the upper vertical edges thereof cut away to provide a pair of passages, a pair of arms mounted to swing in said passages and having their lower ends pivoted to the sides of the said compartment, at one side of the partition, a cross spindle carried between the upper ends of said arms and having the extremities thereof disposed in arcuate slots formed in the casing on the opposite side of the partition, whereby the roller will be prevented from moving to a position directly above the pivot point of the arms.

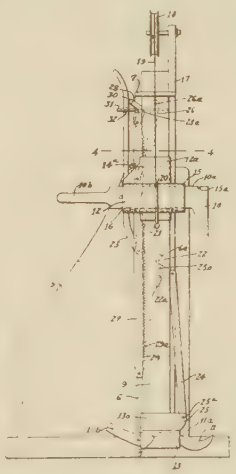
1,415,171. ABRADING DEVICE. CHARLES S. GUSTAFSON, Philadelphia, Pa. Filed July 15, 1921. Serial No. 485,068. 2 Claims. (Cl. 51—187.)

1. A device for holding a sheet of abrading material consisting of a rectangular block providing spaced parallel faces, an end at right angles thereto and an opposed transversely grooved end inclined with respect to both parallel faces, and a bail pivoted in the sides of said



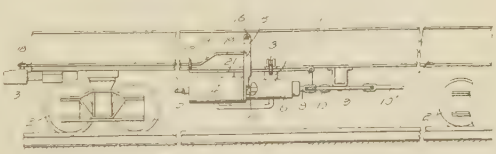
block by inturned ends, said bail having a manipulating finger and spaced portions adapted to clamp on the aforesaid inclined end.

1,415,172. SAWMILL DOG. ADOLPH L. HAASE, New London, Wis. Filed Feb. 18, 1920. Serial No. 359,708. 7 Claims. (Cl. 143—130.)



1. The combination of top and bottom saw-mill dogs, supports for said dogs, a reciprocatory ratchet bar on which the support of the top dog is slidably mounted, a pawl on said support for locking the top dog to the ratchet bar, means for moving the ratchet bar and the support of the bottom dog in opposite directions, and a pawl-tripping means actuated by the aforesaid means when operated to effect separation of the dogs.

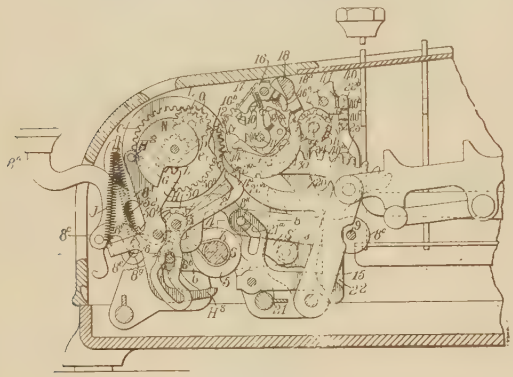
1,415,173. AUTOMATIC AIR-BRAKE-RELEASING MECHANISM. DENNIS C. HESSIAN, St. Louis, Mo. Filed Feb. 17, 1921. Serial No. 445,812. 4 Claims. (Cl. 303—68.)



1. An automatic air brake release mechanism comprising, in combination, with a draw-bar, a brake cylinder

having a piston movable therein and the piston rod, an air release pipe extending from the auxiliary air cylinder, a release valve mounted at the free end of said pipe, and means for opening the air release valve by a sudden movement of the draw-bar in either direction when the brakes are set, thereby discharging the air from the brake cylinder permitting the piston to return to its normal position releasing the brakes.

1,415,174. ADDING MACHINE. ALLEN A. HORTON, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 30, 1915. Serial No. 48,008. 34 Claims. (Cl. 235—144.)

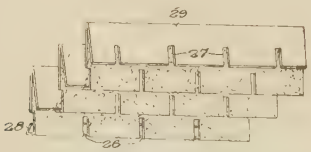


1. The combination of numeral wheels, reciprocating-key-driven actuators, one-way driving connections between the same and the respective wheels, carrying mechanism, and individual zeroizing means, a selected member of which disables the driving connections between an actuator and a wheel and resets such wheel to zero independently of other wheels by backward turning of the selected wheel.

10. The combination of numeral wheels, reciprocating key-driven actuators, one-way driving connections between the same and the respective wheels including transmitting gear wheels, pinions in mesh with said wheels, mutilated gear pinions compounded with said pinions respectively, notched discs reciprocated by the actuators and co-operating with said mutilated pinions respectively, and means for individually displacing a pinion and mutilated pinion, together with means for simultaneously displacing all of said pinions.

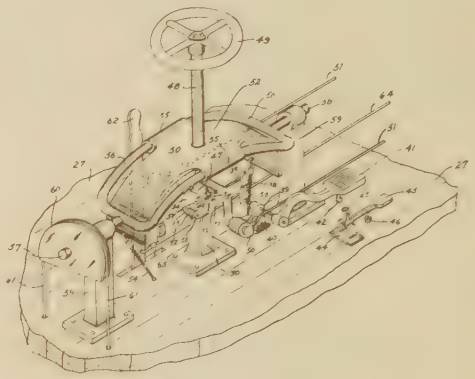
26. The combination with key-driven actuators, numeral wheels, and carrying mechanism; of means for utilizing the latter mechanism to turn the wheels backward to zero under positive actuation.

1,415,175. BUTT-END INTERLOCKING COMPOSITION SHINGLE. HENRY GOWER HOSE, Brooklyn, N. Y. Filed Dec. 23, 1919. Serial No. 346,840. 7 Claims. (Cl. 108—7.)



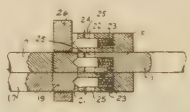
1. The combination of a plurality of self interlocking shingles respectively comprising bodies composed of composition roofing and having downward extensions forming intervening recesses and also having overfolded upper portions provided with slots registering with the slots or recesses of the downward extension of the superposed shingles.

1,415,176. AEROPLANE CONTROL. JOHN T. HUGHES, Casper, Wyo. Filed June 4, 1921. Serial No. 475,029. 5 Claims. (Cl. 244—29.)



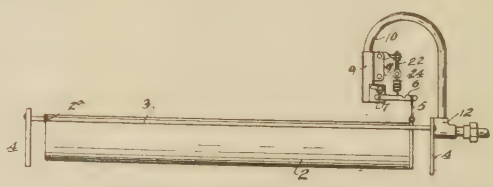
1. In an aeroplane, the combination with steering devices, a steering mast, a plate carried by the mast, a guiding frame slidably mounted on the plate, said plate, mast and frame being independently connected to said steering devices, and means for rotatably holding the frame for swinging in a transverse direction only and adapted to direct said plate and mast in their forward and rearward swinging movements.

1,415,177. LOOM NEEDLE MECHANISM. GEORGE F. HUTCHINS, Worcester, Mass., assignor to Crompton & Knowles Loom Works, a Corporation of Massachusetts. Filed Jan. 17, 1921. Serial No. 437,703. 9 Claims. (Cl. 139—20.)



4. In a loom, a plurality of transversely movable weft needles, a reciprocating needle rod, means to move said needles to operative and inoperative positions relative to said rod, and means to hold said needles yieldingly in either position.

1,415,178. AUTOMATIC VALVE FOR CHICKEN FOUNTAINS AND THE LIKE. JOHN IMSCHWEILER, Inglewood, Calif. Filed Mar. 4, 1920. Serial No. 363,303. 2 Claims. (Cl. 119—81.)



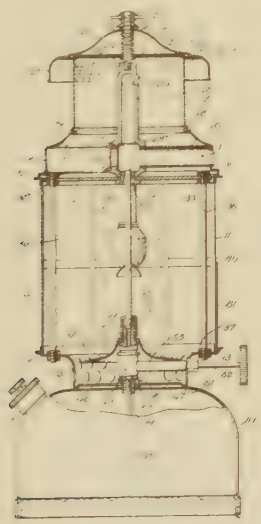
1. A water pipe extension having a downwardly extending open end with a valve seat at the open end, a valve for the valve seat, a valve casing having a split bearing portion slidingly mounted upon the pipe extension with the casing extending below the valve seat-clamping wings extending from the bearing portion, bolts for the clamping wings, a pivot extending through the valve casing, a lever having a fork fitting outside of the casing and fixed upon the ends of the pivot, a tappet fixed upon the pivot, said tappet being inside of the casing for operating the valve, a bracket extending from the

clamping wings, a temper screw and spring connecting the outer end of the lever to the bracket for adjusting the tension, and a receptacle connected to the outer end of the lever.

1,415,179. RADIOCONTROLLING DEVICE. EDWARD THOMAS JONES, New Orleans, La. Filed July 21, 1920. Serial No. 397,960½. 6 Claims. (Cl. 250—13.)

1. In a radio system the combination of a transmitting apparatus, an antenna system, a receiving apparatus, means connecting the antenna to said transmitting apparatus, means adapted to disconnect said connecting means, and establish connection between said antenna and said receiving apparatus, said first named means forming a protective gap across said receiving apparatus when said receiving apparatus is connected with said antenna.

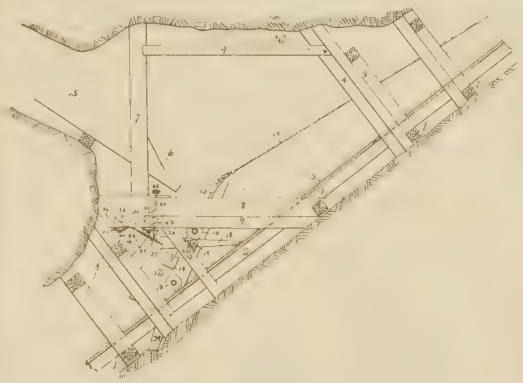
1,415,180. VAPOR BURNER. FRANK L. KOHLHASE, Chicago, Ill. Filed Sept. 22, 1920. Serial No. 411,939. 23 Claims. (Cl. 67—50.)



1. In a match lighter vapor burner, a burner structure, and a thin gauge vaporizer tube adapted to extend from a fuel supply source to said burner structure and provided between its ends with a heat conducting flame arrester which surrounds and is in contact with said tube.

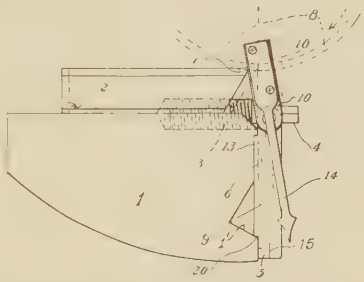
1,415,181. MINE-SKIP LOADER. CHARLES L. LAWTON, Hancock, Mich. Filed June 8, 1921. Serial No. 475,866. 7 Claims. (Cl. 214—103.)

1. In combination with the main rails of an inclined track for four wheeled skips, an operating arm adapted to swing into the path of a descending skip, a pair of auxiliary rails adapted to be positioned to extend at an angle to the main rails, and connections between the operating arm and the auxiliary rails to move them into



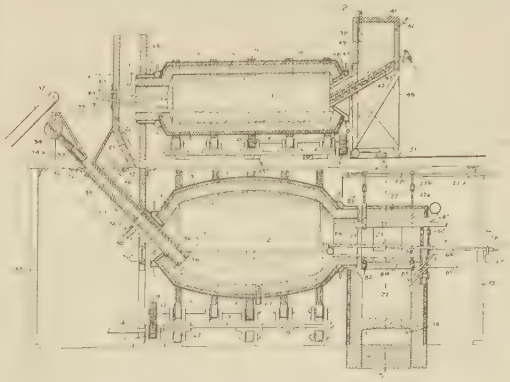
the paths of the upper wheels of the skip when the actuating arm is swung by a descending skip.

1,415,182. CHASER-ADJUSTING TOOL. THOMAS H. LLOYD, Springfield, Mass., assignor to Wyckoff & Lloyd Company, Springfield, Mass., a Corporation of Massachusetts. Filed June 7, 1921. Serial No. 475,626. 8 Claims. (Cl. 33—202.)



1. An implement for the purpose described, comprising a base-piece, a part movably connected thereto, a pointer or indicating member carried by the movable part, the base piece having a lip for positioning the base piece on a fixed reference surface, said base-piece being designed for engagement with the fixed reference surface and the movable part with a part that is to be adjusted into the same plane as the reference surface.

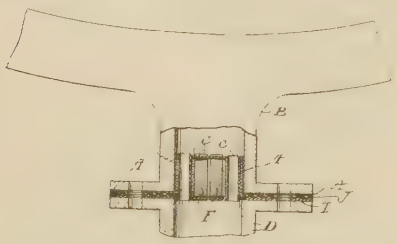
1,415,183. METALLURGICAL APPARATUS. JOEL LUND, San Francisco, Calif. Filed Aug. 8, 1918. Serial No. 248,854. 14 Claims. (Cl. 75—14.)



1. In a metallurgical apparatus, a main chamber, means for permanently maintaining a metallic bath in said

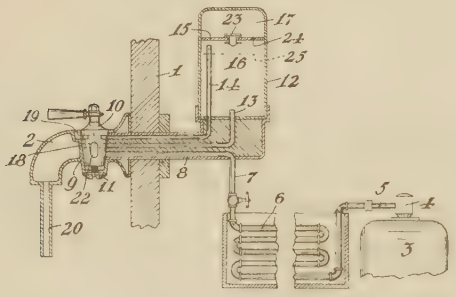
chamber, means for supplying, maintaining, and withdrawing a protective cover of molten slag on and from said bath, means for simultaneously feeding solid material and molten slag into said chamber, and means for applying heat from both above and below to the contents of the chamber.

1,415,184. DEVICE FOR PREHEATING THE EXPLOSIVE MIXTURE IN EXPLOSION ENGINES. GEORGE W. MCILRATH and JACK E. TAYLOR, Cleveland, Ohio. Filed Mar. 1, 1920. Serial No. 362,353. 3 Claims. (Cl. 219—38.)



1. The combination with the carburetor and intake passage of an explosion engine of a closure for said passage, said closure forming a hollow body formed in two portions, hollow metallic tubes connecting the ends of said closure, resistance coils encircling said tubes, insulating means between said portions of said closure, said coils passing between said insulating means.

1,415,185. METHOD AND MEANS FOR DISPENSING CARBONATED BEVERAGES. PATRICK J. MAGUIRE, Detroit, Mich. Filed June 23, 1919. Serial No. 306,204. 4 Claims. (Cl. 225—30.)

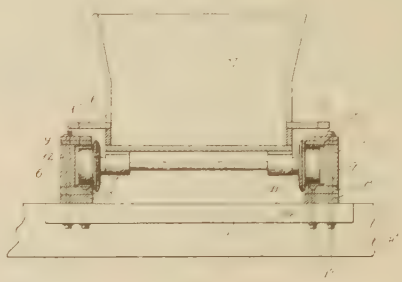


1. The method of dispensing carbonated beverages which consists in first discharging the beverage from a supply tank into a sealed receptacle under pressure equal to that of the supply tank, the sealed receptacle having an upper and a lower chamber and a passageway permitting a restricted flow of gas from the upper to the lower chamber, suddenly relieving the pressure on the lower chamber, and then discharging the liquid while under reduced pressure caused by the restricted flow of the gas from the upper chamber.

1,415,186. PROCESS OF ELIMINATING COLOR FROM CAUSTIC ALKALI. THOMAS C. MEADOWS and HERMAN D. RUHM, New York, N. Y., assignors to Eastern Potash Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 25, 1919. Serial No. 273,129. 1 Claim. (Cl. 204—58.)

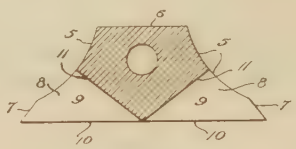
The mode herein described of eliminating color from fluid bodies of concentrated caustic alkali, said mode consisting in subjecting such bodies to the bleaching action of a current of electricity passed through the same.

1,415,187. PLEASURE-RAILWAY STRUCTURE. JOHN A. MILLER, Homewood, Ill. Filed Nov. 6, 1920. Serial No. 422,117. 3 Claims. (Cl. 104—246.)



1. In a railway structure of the class described, the combination of supporting framework, track rails of channel-shape cross section secured on said framework with their flanges extending toward each other, a vehicle having flanged wheels, said wheels extending into said channel rails to have trackage on the lower flanges thereof and said wheel flanges engaging with the inner ends of the rail flanges to take up lateral thrust of said vehicle wheels.

1,415,188. COMB. SIMON E. MONROE, Philadelphia, Pa. Filed June 26, 1920. Serial No. 391,964. 6 Claims. (Cl. 34—26.)



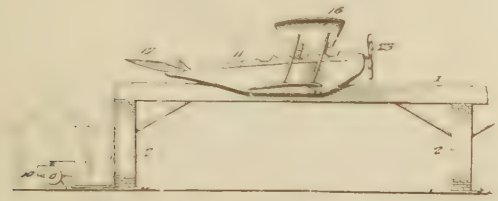
2. A comb of the character described including a head having slots extending inwardly from its opposite side faces, the top walls of said slots tapering downwardly in opposite directions toward the bottom of said head; substantially as described.

1,415,189. FILM CLIP. WALTER T. OXLEY, Fergus Falls, Minn. Filed Dec. 29, 1919. Serial No. 348,122. 3 Claims. (Cl. 24—259.)

1. A film clip including a spring and a tie-plate having a pair of longitudinally spaced slots through which the

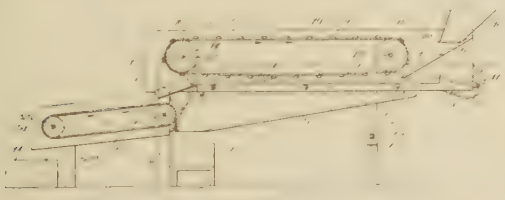
prongs of said spring project with freedom for movement toward and from each other, said prongs having notched interlocking engagement with the tie-plate, the ends of the tie-plate being extended into substantially parallel arrangement with said prongs for cooperation therewith to afford a pair of jaws adapted to receive and hold the ends of the film.

1,415,190. MONOTRACK TROLLEY PLANE. ELIAS HARRY PALMER, Charleston, S. C. Filed Feb. 14, 1921. Serial No. 444,930. 8 Claims. (Cl. 104—23.)



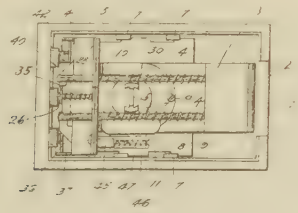
1. A mono-track trolley plane including with a track having an electric circuit arranged therewith, a car having supporting planes and adapted to travel upon and at an elevation above said track, a propeller, and an electric motor receiving current from the circuit wires of the track by which said propeller is turned.

1,415,191. MACHINE FOR PREPARING FARM PRODUCTS. FRANK M. PARKS, North Cohocton, and FRANK A. FINCH, Atlanta, N. Y., assignors to Hyatt C. Hatch, Atlanta, N. Y. Filed Mar. 22, 1919. Serial No. 284,384. 4 Claims. (Cl. 130—32.)



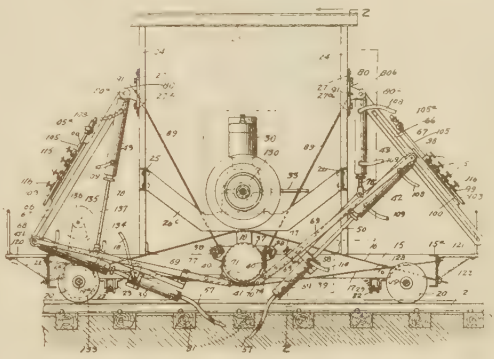
1. In a machine of the class described, a pair of spaced surfaces arranged to receive therebetween at one end the products to be treated and to maintain a pressure on the same from opposite sides, one of said surfaces being perforated for the discharge of refuse, actuating means effecting continuous movement of one of said surfaces and a relatively parallel reciprocating movement of the other to rub and clean the products and advance the same therealong, and a separator arranged to receive the products discharged from said surfaces.

1,415,192. LATCH. JOHN LOUIS POLLOCK, Freeport, Ill., assignor of one-third to Allan J. Head, Sterling, Ill., and one-third to Thomas G. Stewart, Highland Park, Mich. Filed Feb. 28, 1920. Serial No. 361,962. 6 Claims. (Cl. 70—29.)



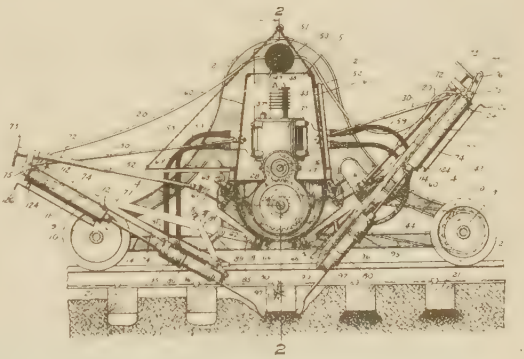
2. A device of the class described, comprising a casing; a latch slidable therein, and provided with means for holding the same normally in extended position; a knob member, rotatable in said casing, provided with a latch-operating cam, and having catch-engaging slots; a plate slidable in said casing and provided with a catch adapted for alternate engagement with said slots; a push-pin connected with said plate, and seated in an opening in the end of said casing; and a spring acting on said plate to compel the engagement of said catch and slot.

1,415,193. TIE-TAMPING MACHINE. DIGHTON A. ROBINSON, Seattle, Wash. Filed Feb. 21, 1921. Serial No. 446,871. 30 Claims. (Cl. 104—12.)



5. The combination, with a tie tamping bar and its operating gun, of a fluid pressure cylinder having a piston, a rod connected with said gun for projecting and retracting said bar and gun, and means for tilting said cylinder to oscillate said bar and gun on a horizontal axis adjacent the end of said bar.

1,415,194. TIE-TAMPING MACHINE. DIGHTON A. ROBINSON, Minneapolis, Minn. Filed Dec. 19, 1921. Serial No. 523,539. 30 Claims. (Cl. 104—12.)

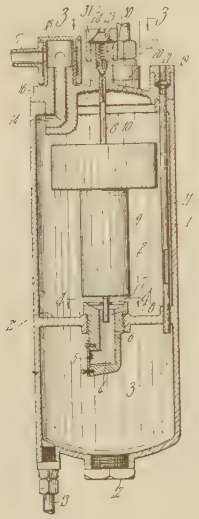


1. In a machine of the class described, the combination, with a suitable wheel-supported frame, and a transversely extending base member having its ends secured to said frame, of a transversely movable main carriage mounted upon said base member, a tool supporting carriage arranged in an inclined position, and suspended upon said main carriage, and capable of being adjusted in a vertical plane, and a tamping-tool and tool gun carried by said supporting carriage.

1,415,195. VACUUM FEEDING APPARATUS. EDWARD A. ROCKWELL, New Haven, Conn., assignor to E. A. Rockwell Company, Inc., New York, N. Y., a Corporation of New York. Filed July 16, 1918. Serial No. 245,216. 9 Claims. (Cl. 158—36.)

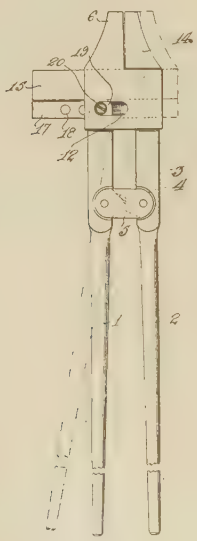
1. A vacuum feed apparatus having in combination, a tank or chamber designed to receive liquid under sub

normal pressure and discharge it under normal pressnre and pressure-controlling means for said chamber to alternately permit and then prevent subnormal pressure therein comprising a valve located in an opening from the chamber to normal pressure, a float of high buoyancy value in the liquid of the chamber, and means immovably carried by the float, and in early engagement with said



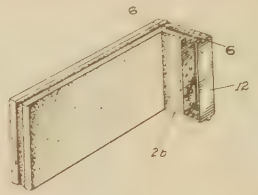
valve to directly and operatively connect the float and valve whereby the liquid in the chamber must rise to a level sufficient to immerse the float for a buoyancy value to open the valve against atmospheric pressure before said valve can open and fall to a level sufficient to immerse the float for a less buoyant value to fall with the liquid before said valve can close.

1,415,196. TONGS. MICHAEL ROSEHILL, Lobley, Alberta, Canada. Filed Mar. 11, 1921. Serial No. 451,614. 3 Claims. (Cl. 294—42.)



1. A pair of tongs comprising a pair of levers having a knife edge fulcrum, a jaw formed integral with one of the levers and having a guide opening therethrough, a movable jaw having a shank slidably engaging the said guide opening, a lever, means for connecting the lever to the movable jaw, and means for pivotally connecting the levers intermediate of their length.

1,415,197. CONCRETE-TILE CONSTRUCTION. SCOTT M. SAMPSON, Oakdale, Calif. Filed Apr. 18, 1921. Serial No. 462,080. 4 Claims. (Cl. 72—39.)



1. A building tile comprising a face member, an integral leg projecting therefrom, a metal member forming the outer end of the leg, and means whereby the metal member may be rigidly fixed to the integral leg without the use of additional members.

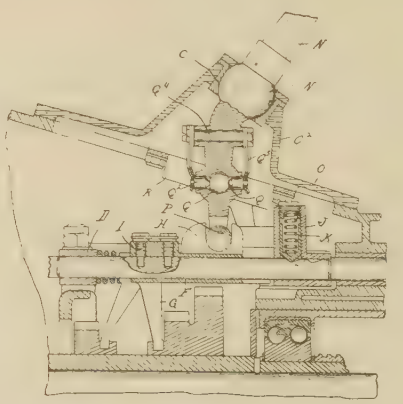
1,415,198. PROCESS OF BRIGHTENING AND HARDENING ELECTROLYTICALLY-TINNED ARTICLES. LOUIS SCHULTE, Chicago, Ill. Filed July 12, 1920. Serial No. 395,626. 7 Claims. (Cl. 148—15.)

1. The herein described process which comprises immersing electrolytically tinned articles in a molten chemical compound having a melting point above that of tin.

1,415,199. CHIMNEY-FLUE LINER. FRED SEIFERT, Boelus Nebr. Filed Apr. 11, 1921. Serial No. 460,409. 2 Claims. (Cl. 72—94.)

2. In a sectional nesting chimney liner, a pair of ends and a pair of sides adapted to be connected to said ends, each of said ends having a pair of inturned lateral flanges and the flanges of one end being arranged to interfit with the flanges of the other end to provide between the ends a relatively flat compartment, and said sides being adapted to fit in said compartment between the ends for nesting said chimney liner together.

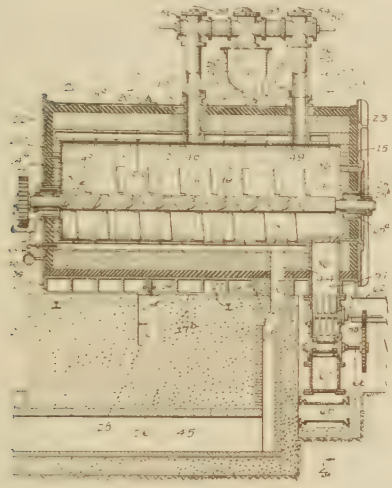
1,415,200. CONTROL MECHANISM. EARL H. SHERBONDY, Detroit, Mich., assignor to Sidney D. Waldon, Detroit, Mich. Filed Apr. 11, 1921. Serial No. 460,423. 6 Claims. (Cl. 74—39.)



1. A control mechanism comprising a universally pivoted lever, a series of more than two parallelly arranged

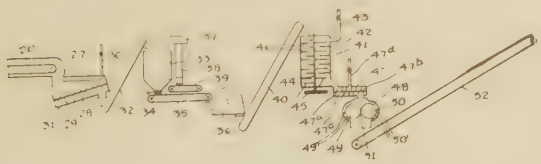
shifters with which said lever is alternately engageable by a lateral movement thereof, and means for indicating by feeding the registration of said lever with one or more of the shifters.

1,415,201. FURNACE-RETORT. CHARLES HOWARD SMITH, Short Hills, N. J., assignor to International Coal Products Corporation, Richmond, Va., a Corporation of Virginia. Filed Feb. 18, 1918. Serial No. 217,764. 39 Claims. (Cl. 202—9.)



10. A retort at least partially defined by hollow high-refractory brick arranged end on end so as to provide combustion flues about the retort, a layer of heat storing brick arranged about said hollow tile, a layer of heat insulating material about the heat storing brick, and a metallic shell or envelope about the heat insulating material.

1,415,202. PLANT FOR AND METHOD OF TREATING COAL. CHARLES HOWARD SMITH, Short Hills, N. J., assignor to International Coal Products Corporation, Richmond, Va., a Corporation of Virginia. Filed Apr. 3, 1918. Serial No. 226,407. 3 Claims. (Cl. 202—9.)



1. A process of making briquets, consisting in agitating the coal and conveying it through a retort, by means of rotary paddles which overlap and rotate in opposite directions, under progressive heating of the retort at temperatures of about 825 degrees F. to 1200 degrees F., until obtaining a partially distilled residue, having between five per cent (5%) to fourteen per cent (14%) hydrocarbon volatile matter therein and in which cells have been developed due to said treatment, in crushing the residue preferably after a cooling wherein water is applied directly to the residue and mixing and fluxing the crushed residue together with hydrocarbon binding material such as pitch in a fluxer provided with a mixing device and a steam supply in forming briquets of the fluxed mixture, which fluxed mixture is preferably made so as to contain from eleven per cent (11%) to seventeen per cent (17%) volatile matter, in heating said briquets in an inclined retort at temperatures to approximately 1850 degrees F. until they are carbonized, and finally in causing the discharge of the carbonized briquets from the retort and quenching the hot discharged carbonized briquets.

1,415,203. PROCESS FOR RECOVERING POTASH. EARL P. STEVENSON, Cambridge, Mass., assignor, by mesne assignments, to General Bond and Share Company, Boston, Mass., a Corporation of Delaware. Filed Aug. 7, 1919. Serial No. 315,875. 11 Claims. (Cl. 23—22.)

1. The process of extracting potash from Searles Lake brine which consists in chilling the brine sufficiently to precipitate a substantial part of the salts contained therein excepting sodium chloride and potassium chloride, and then separating the potassium chloride from the sodium chloride.

1,415,204. PROCESS OF EXTRACTING POTASH FROM SALINE DEPOSITS AND BRINES. EARL P. STEVENSON, Cambridge, Mass., assignor, by mesne assignments, to General Bond and Share Company, Boston, Mass., a Corporation of Delaware. Filed Aug. 7, 1919. Serial No. 315,876. 10 Claims. (Cl. 23—22.)

1. The process of extracting potash from Searles Lake brine which consists in chilling the brine to eliminate a substantial percentage of the waste salts contained therein, evaporating the remaining brine to dryness, mixing the dried salts so retained with a precipitant for waste constituents of the dried salts, and then extracting said mixture for its potash content.

1,415,205. PROCESS OF EXTRACTING BORAX FROM SALINE DEPOSITS AND BRINES. EARL P. STEVENSON, Cambridge, Mass., assignor, by mesne assignments, to General Bond and Share Company, Boston, Mass., a Corporation of Delaware. Filed Aug. 7, 1919. Serial No. 315,877. 17 Claims. (Cl. 23—22.)

1. The process of extracting borax from Searles Lake brine which consists in reducing the temperature of the brine to a point sufficiently below zero centigrade to crystallize out a substantial percentage of the borax contained therein together with other salts, separating the salts so crystallized from the remaining brine, and then treating the mixture of salts so obtained to separate its borax content.

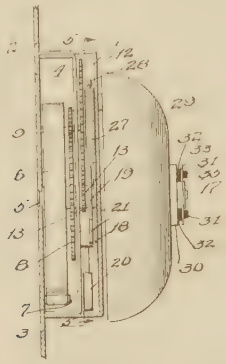
1,415,206. PROCESS OF RECOVERING VALUABLE CONSTITUENTS FROM ALKALINE BRINES AND DEPOSITS. EARL P. STEVENSON, Cambridge, Mass., assignor, by mesne assignments, to General Bond and Share Company, Boston, Mass., a Corporation of Delaware. Filed Oct. 8, 1919. Serial No. 329,381. 8 Claims. (Cl. 23—22.)

1. The process of recovering valuable constituents from alkaline brines containing the elements of sodium carbonate which consists in treating the brine with carbon dioxide to convert a substantial percentage of the sodium carbonate in the brine into sodium bicarbonate, filtering off the sodium bicarbonate precipitate, treating the sodium bicarbonate so obtained to produce sodium carbonate and carbon dioxide, and treating the filtrate with a material that reacts with the constituents of the filtrate to form a substance from which an additional supply of carbon dioxide can be obtained for use in treating a fresh quantity of brine.

1,415,207. AUTOMATIC ALARM. JULIUS SWANBERG, Chicago, Ill., assignor to Fabart Instrument Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 13, 1919. Serial No. 270,798. 3 Claims. (Cl. 116—106.)

3. An alarm, a spring driven shaft for actuating said alarm, a disk mounted on said shaft near the end thereof to rotate therewith, the portion of the shaft between

said disk and the main body of the shaft being of smaller cross-section than the main body of said shaft, a plate, means for supporting said plate, free from said shaft, a

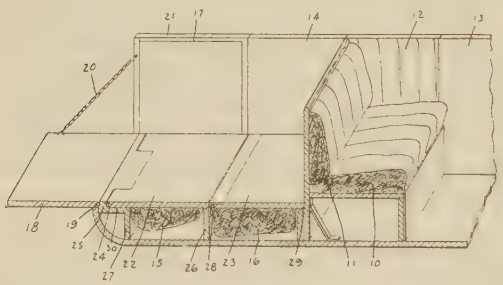


fusible means securing said disk to said plate, and thermal insulation between said plate and said supporting means.

1,415,208. COMPOSITION FOR SHOE DRESSING. PETER THORESON, Baldi, Wash. Filed May 26, 1921. Serial No. 472,868. 2 Claims. (Cl. 134—8.)

1. A composition adapted for use as a leather dressing and preservative consisting of a mixture of substantially equal parts, by measurement, of beef tallow, pure pine tar and rubber, to which mixture is added one part of neat's foot oil to eight parts of mixture.

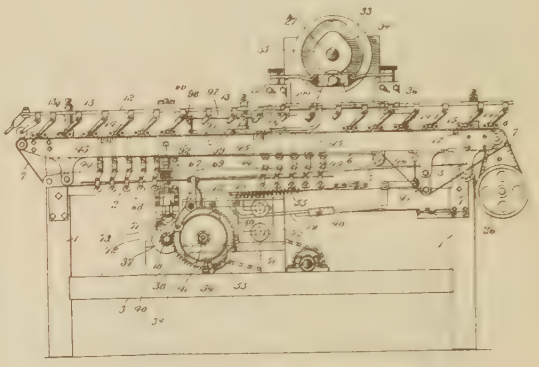
1,415,209. CONVERTIBLE VEHICLE BODY. THOMAS P. TROKE, Indianapolis, Ind. Filed Jan. 3, 1921. Serial No. 434,582. 3 Claims. (Cl. 296—63.)



1. A convertible vehicle body including a seat panel, a back rest panel of substantially the same size, a pair of transverse supporting standards spaced apart substantially the width of the panels, said seat panel being pivotally supported at its forward edge upon one of said supporting standards and movable forwardly from the seat forming position into an inverted horizontal position and the back rest panel being pivotally supported at its lower edge upon the rear supporting standard and movable forwardly into horizontal position to rest upon said forward supporting standard when the seat panel is moved forwardly, said panels when in the forward position forming a continuous flat surface, and a third supporting standard engageable by and supporting said seat forming panel in its forward position.

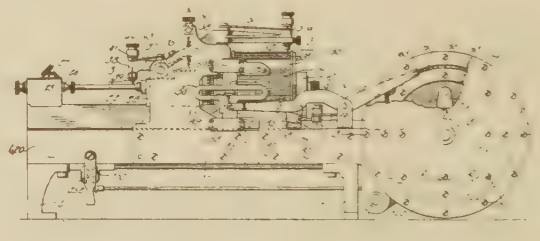
1,415,210. CARD CUTTING AND STACKING MACHINE. ISAAC WAGEMAKER, Grand Rapids, Mich. Filed Jan. 2, 1918. Serial No. 210,056. 3 Claims. (Cl. 101—237.)

1. In a machine of the character described, a horizontal table, an endless belt adapted to carry cards or like articles running lengthwise of and around the table, a vertically mounted reciprocable printing ram located back of the belt, a head pivotally depending from the lower end of the ram, a slide mounted for horizontal sliding movement back of said head, links connecting the slide and head, springs connected to the slide normally holding it in rear position with the head located directly below the ram, a drive shaft, means interposed between said



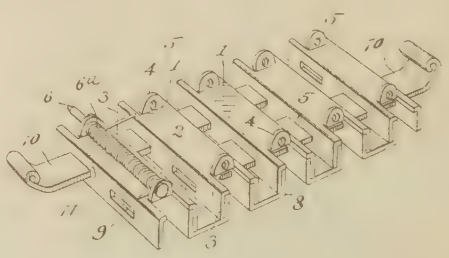
shaft and the head at the lower end of the ram for elevating said ram once with each revolution of the shaft, and means controlled by the passage of cards to the ram for controlling the position of said head on the ram substantially as described.

1,415,211. CHASING MACHINE. JOHN C. WAHL, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 22, 1920. Serial No. 425,903. 14 Claims. (Cl. 90—24.3.)



8. A chasing machine comprising a work-holding device, a chasing tool, means for successively rotating said work-holding device and said tool relatively to each other about the axis of said work-holding device and through predetermined arcs, means for oscillating said work-holding device and said tool relatively to each other, and means for rendering each of the last two mentioned means inoperative when the other is in operation.

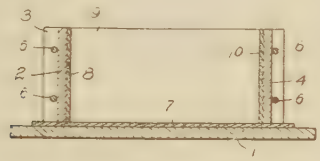
1,415,212. LEAF-HINGE DEVICE FOR ACCOUNT REGISTERS. ARTHUR S. WELDY, Cleveland, Ohio. Filed Feb. 15, 1918. Serial No. 217,301. 2 Claims. (Cl. 129—34.)



1. In an apparatus of the character described, a plurality of leaf supporting links, each of said links being

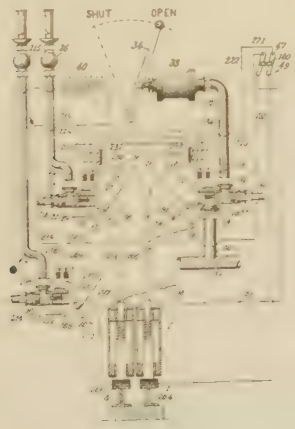
provided with upturned ears adapted to pivotally support a leaf, said links being provided with flanges, connecting links faced in an opposite direction with respect to the leaf supporting links, said connecting links being provided with flanges which overlap flanges on adjacent links of the leaf supporting links, aligned openings formed in the flanged portions of the said links, and a rod passing through the said aligned openings whereby the links may slide upon the rod to assume an extended or compacted position, and means for limiting the movement of the rod with respect to the links.

1,415,213. MOLD FOR CASTING CLAY ARTICLES. ROBERT W. WHITE, Elwood, Ind., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Aug. 24, 1920. Serial No. 405,709. 3 Claims. (Cl. 25—129.)



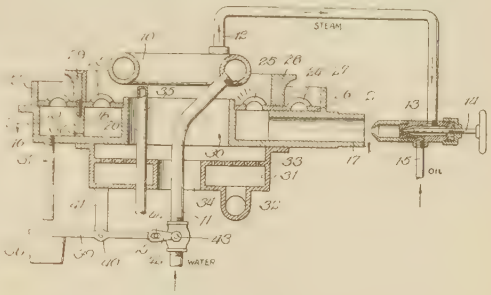
1. In combination in a mold for casting clay articles, walls comprising plates of relatively strong material having a facing of sheets of commercial plaster board.

1,415,214. RAILWAY SAFE-RUNNING DEVICE. ARTHUR REGINALD ANGUS, Minehead, England. Filed Mar. 20, 1913. Serial No. 755,686. 25 Claims. (Cl. 246—71.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



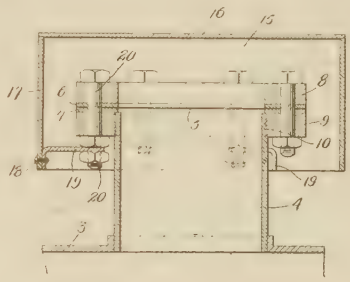
1. Train protecting apparatus comprising danger-indicating apparatus and train-stopping apparatus located on a train, non-electrical means adapted to restrain the operation of each of said apparatus, track contacts of two different natures located along a track, a single contacting device on said train adapted to come into contact with said track contacts and thereby to cause said non-electrical means to lose its restraint on said danger-indicating apparatus on contact with a track contact of one nature and to lose its restraint on said train-stopping apparatus on contact with a track contact of the other nature, and substitutional restraining means adapted to restrain the operation of said danger indicating apparatus and of said train-stopping apparatus.

1,415,215. VAPOR BURNER. ALFRED D. ANTOINE, Chicago, and ALBERT E. GEBERT, Wilmette, Ill., assignors to Advance Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 28, 1921. Serial No. 456,287. 18 Claims. (Cl. 158—56.)



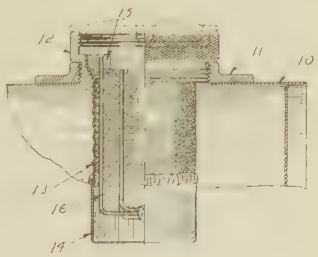
1. A device of the character described embodying a steam generating chamber, means for supplying water thereto, a burner chamber disposed beneath the generating chamber and operating to heat the latter, an injector nozzle, means connecting the nozzle with the said generating chamber, means for connecting the nozzle with an oil supply, means whereby vapor from said nozzle will discharge into the said burner chamber, and a liquid discharge outlet leading from the burner chamber.

1,415,216. SAFETY VALVE OR BLOW-OFF. ROBERT V. BINGAY, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Oct. 17, 1919. Serial No. 331,323. 1 Claim. (Cl. 220—89.)



The combination with a container having an outlet, of a fragile diaphragm closing said outlet, and a protective cap member releasably held in place and adapted to automatically open and permit unobstructed outflow through said outlet upon rupture of said diaphragm.

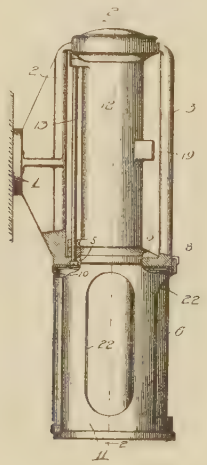
1,415,217. FUEL STRAINER FOR TANKS. WILLIAM E. BROCK, Indianapolis, Ind. Filed Sept. 15, 1919. Serial No. 323,986. 2 Claims. (Cl. 210—169.)



1. A strainer for fluid containers including a tubular straining and separating member, a depending cup secured to said tubular member for closing the same, means for supporting said straining member within said con-

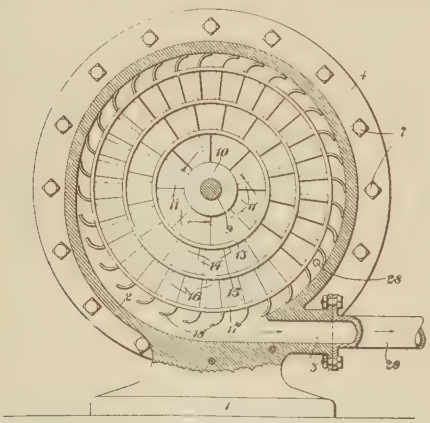
tainer, a plurality of metal rods forming a skeleton cylinder suspended from said means and extending into said straining member, said wire rods being bent inwardly at their outer ends and joined together to form a rigid skeleton bottom for preventing any downward thrust of a discharge nozzle from engaging and damaging the straining member and said cup, and for dissipating the pressure of the fluid supplied by the nozzle and reflected by the cup.

1,415,218. DISPENSER. EDMUND BRUDER, Chicago, Ill., assignor to Harold I. Koppelman, Wilmette, Ill. Filed Feb. 14, 1918. Serial No. 217,054. 15 Claims. (Cl. 221—79.)



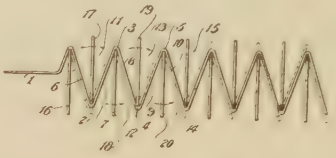
1. A dispenser having, in combination, a container provided with an outlet, a plunger for forcing the contents of the can through the outlet, an externally-threaded member connected to the plunger, an internally-threaded sleeve stationary relative to the container and containing said member, the plunger extending axially of the sleeve, a pawl carrier rotatably mounted in said member, a pawl on the pawl carrier, said member having ratchet teeth which are engaged by the pawl, a shaft extending slidably through the pawl carrier and axially of the plunger, said pawl carrier being rotatable with the shaft, and means for turning the shaft, said sleeve being formed of two pivoted sections adapted to be swung out of engagement with said member.

1,415,219. TURBINE. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey Rotary Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 19, 1919. Serial No. 318,577. 10 Claims. (Cl. 253—74.)



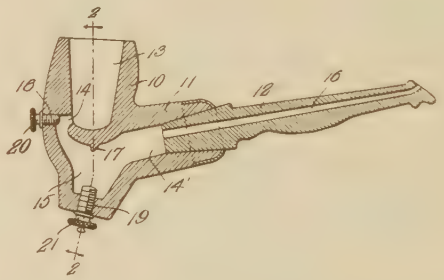
1. In a turbine, the combination of a stator case, a power shaft journaled in the case, and a rotor mounted on said power shaft having pockets therein, open at the sides, with an injector comprising an inlet nozzle arranged to inject a jet of steam into the pockets in the rotor, and an aspirator nozzle in connection with said first-named nozzle in communication with the pockets in the rotor for producing a suction in the pockets.

1,415,220. ELECTRICAL CONDENSER. HENRY F. CAUSEBROOK, Greenfield, Mass. Filed June 18, 1921. Serial No. 478,553. 6 Claims. (Cl. 250—41.)



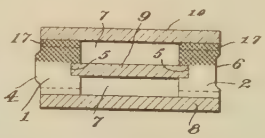
6. A folded condenser comprising a single strip of dielectric material to form pocket-like receptacles and individual pieces of electric conducting material in said receptacles and projecting beyond the opposite sides of the finished article.

1,415,221. PIPE. SAMUEL T. COOK, London, Ontario, Canada. Filed May 3, 1920. Serial No. 378,595. 2 Claims. (Cl. 131—12.)



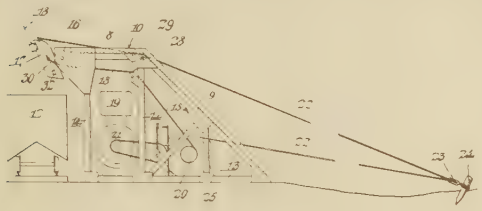
1. A pipe comprising a bowl having a neck extending therefrom, the bowl being provided with a tobacco pocket and with a smoke passage extending into the neck, the inner end of the smoke-passage communicating with the bottom portion of the tobacco pocket and the smoke passage being provided intermediate its length with an offset portion positioned beneath the tobacco pocket and constituting a nicotine well, removable plugs one fitting into the openings formed in the bottom of the nicotine well, and another in the smoke passage at a point in alignment with the connection of the smoke passage with the tobacco pocket, and an abutment rib extending transversely of the smoke passage above the nicotine well.

1,415,222. HOLLOW CONCRETE BLOCK. ANTON MARIUS CRAMER, Arendal, Norway. Filed June 20, 1919. Serial No. 305,528. 2 Claims. (Cl. 72—41.)



1. A hollow concrete building block, comprising concrete end walls having tapering, dovetail grooves in their opposite side faces; a coating of moisture-insulating material extending completely over the surface of each groove, and spaced concrete side walls having their inner faces provided, adjacent the ends thereof, with projections conformably fitting in said coated grooves to rigidly connect said side and end walls together.

1,415,223. EXCAVATING AND LOADING DEVICE. GEORGE CORLISS CROSSLEY, Trenton, N. J. Filed Oct. 13, 1920. Serial No. 416,632. 9 Claims. (Cl. 214—105.)

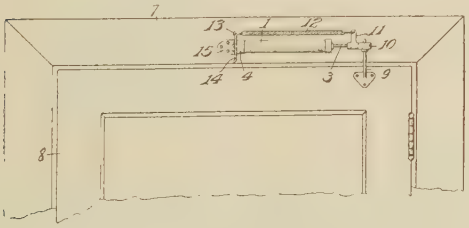


1. In an excavating and loading device, an inclined plane, a platform at the upper end of said plane, a cable passing over said platform and said plane, a horizontally disposed roller on said platform to support said cable, spaced vertically disposed rollers adjacent to said horizontal roller to limit the lateral movement of the cable, a conveyor attached to said cable, and means for drawing said cable.

1,415,224. DISPLAY STAND. WILLIAM C. DICKMEYER, Fort Wayne, Ind. Filed Nov. 9, 1921. Serial No. 514,056. 6 Claims. (Cl. 211—24.)

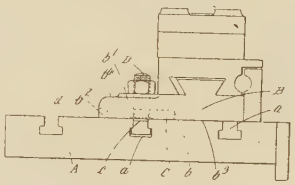
4. In a display stand cut or stamped from sheet material and bent into shape, a bottom, sides extending from said bottom and having notches therein, and a hinged front adapted for reciprocate movement upon said sides.

1,415,225. DOOR CHECK. WILLIAM G. DISCHER, Wheeling, W. Va., assignor of one-half to F. W. Perrin, Sr. Filed Jan. 5, 1922. Serial No. 527,227. 3 Claims. (Cl. 16—70.)



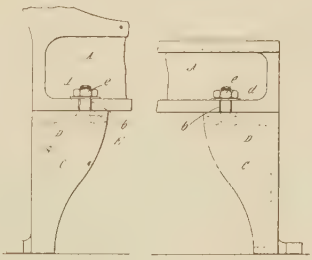
2. A door check comprising a cylinder, a piston reciprocable within said cylinder, a rod attached to said piston and movable through the rear end of said cylinder, a bracket carried by the door, an eye-piece carried by said piston rod and having a vertical arm, said eye-piece being reversible for mounting upon said bracket with the arm thereof occupying either upstanding or depending position, a hinge of leaf type having one leaf thereof rigidly mounted on the front end of the cylinder at right angles to the axis of the latter and the opposite leaf mounted upon the door casing over the door, opposite vertically extending lugs carried on the front end of the cylinder and projecting above and below the level of the latter, and a retractile coil spring connecting one of said lugs to the arm of the eye-piece and disposed parallel to said cylinder.

1,415,226. LATHE SLIDE. ARTHUR DRUMMOND, Ryde's Hill, near Guildford, England. Filed July 27, 1921. Serial No. 487,978. 1 Claim. (Cl. 82—24.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



Securing means for the slides of lathes, in which the lower side of the upper slide is formed with a circular recess within which lies a disc provided at its under side with a cross rib adapted to fit in one of the grooves or slots of the lower slide, the upper slide being fixed in an angularly adjustable position around the said disc, without gripping the disc, by a central bolt engaging the slot, for the purpose specified.

1,415,227. LATHE BODY. ARTHUR DRUMMOND, Ryde's Hill, near Guildford, England. Filed July 27, 1921. Serial No. 487,980. 1 Claim. (Cl. 82—32.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

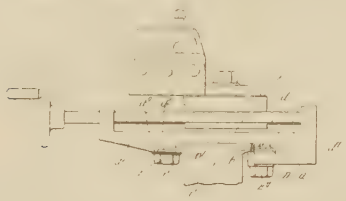


Means for connecting the legs or standards of lathes to the bed, comprising a horizontal web on the lower side of the bed and a corresponding web on the upper end of each leg or standard, the aforesaid webs having slots adapted to be superposed and when superposed to cross each other, and securing bolts passing through the said slots at their crossing points for connecting the aforesaid lathe members together.

1,415,228. LATHE. ARTHUR DRUMMOND, Ryde's Hill, near Guildford, England. Filed July 27, 1921. Serial No. 487,981. 4 Claims. (Cl. 82—2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

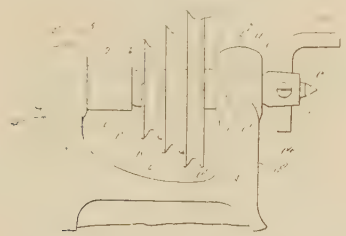
1. In means for fitting the sliding members of lathes on the bed or other guide, a guide having a pair of substantially parallel guiding surfaces at opposite sides,

a guiding surface on one side of the said sliding member adapted to slide in close contact with one only of the said guiding surfaces, and resilient pressure ap-



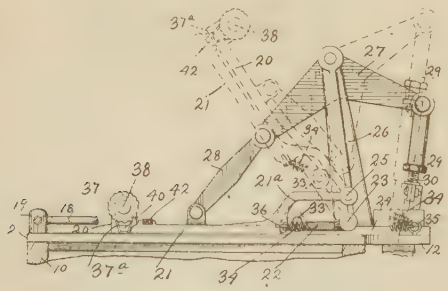
plying means situated between the sliding member and the second guide surface between which the sliding member is a clearance, for the purpose specified.

1,415,229. MANDREL AND ASSOCIATED MEMBERS OF LATHES. ARTHUR DRUMMOND, Ryde's Hill, near Guildford, England. Filed July 27, 1921. Serial No. 487,983. 5 Claims. (Cl. 82—30.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A lathe comprising a stepped pulley, a mandrel for said pulley provided with a positive bearing cone at each end and a taper along its length, and negatively coned seating members adapted to receive the positive bearing cones of said mandrel.

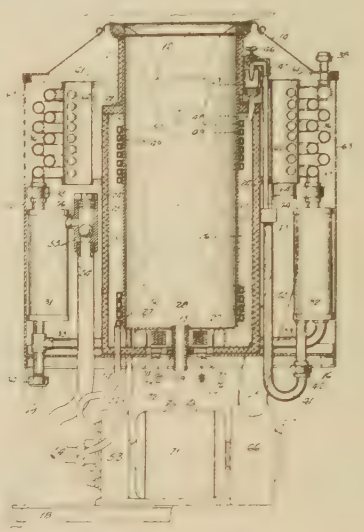
1,415,230. PHOTOGRAPHIC PRINTING AND NUMBERING MACHINE. GLEN M. DYE, Minneapolis, Minn., assignor to Photographic Appliances Corporation, Minneapolis, Minn., a Corporation of Minnesota. Filed July 22, 1918. Serial No. 246,117. 10 Claims. (Cl. 95—73.)



10. A photo printing machine having in combination, means for supporting a negative, means for holding a print on said negative, and supplemental means for holding said print on said negative, both of said holding means swinging about offset parallel axes and having closely adjacent sides extending normal to said axes.

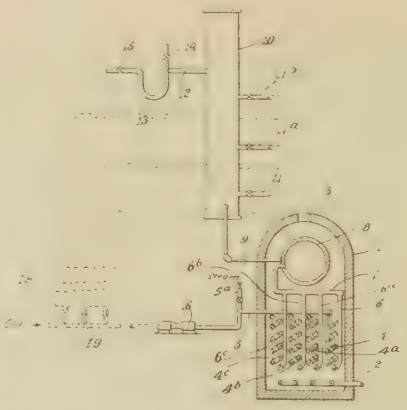
1,415,231. LIQUID-COOLING APPARATUS. HARRY WING DYER, East Orange, N. J. Filed Jan. 20, 1921. Serial No. 438,797. 10 Claims. (Cl. 62—115.)

1. In a liquid cooling apparatus the combination of a stand having means for detachably supporting an inverted vessel containing liquid to be chilled, a chamber communicating with said vessel and a refrigerating ap-



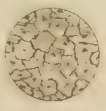
paratus supported on said stand comprising coils surrounding said chamber, and mechanical means for maintaining said coils at a low temperature.

1,415,232. PROCESS OF CRACKING OILS UNDER PRESSURE. CARLETON ELLIS, Montclair, N. J., assignor, by mesne assignments, to Standard Oil Company, a Corporation of New Jersey. Original application filed Oct. 4, 1913, Serial No. 793,377. Divided and this application filed Nov. 26, 1920. Serial No. 426,501. 10 Claims. (Cl. 196—25.)



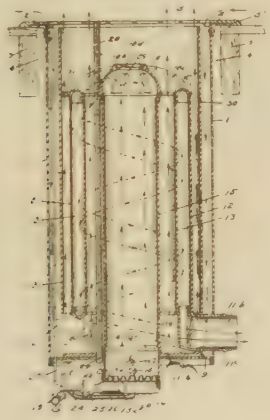
1. The process of making a gasolene substitute which comprises passing a kerosene or heavier oil through a heated zone wherein the oil is brought to a decomposing temperature in a single passage, and passing the products at a slower rate through an enlarged passageway without increasing their temperature, and without permitting the temperature to drop below a decomposing temperature and maintaining superatmospheric pressure upon the oil in its passage through the heated zone and the enlarged passageway.

1,415,233. COMPOSITION OF MATTER FOR PLATINUM SUBSTITUTE IN CHEMICAL APPARATUS AND OTHER USES AND METHOD OF MAKING SAME. FRANK A. FAHRENWALD, Cleveland, Ohio, assignor to The Rhotanium Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 6, 1916. Serial No. 129,911. 10 Claims. (Cl. 75—1.)



1. An article of chemical apparatus consisting of an alloy of a noble metal in the periodic group containing gold combined with not less than about twenty atomic per cent of palladium in homogeneous solid solution.

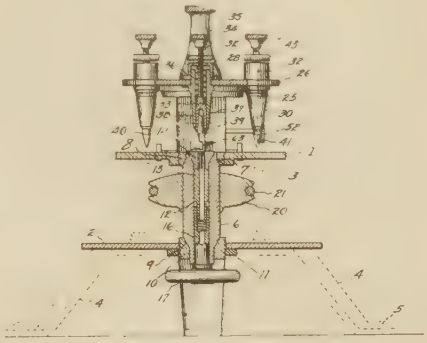
1,415,234. FLOOR FURNACE. AUGUST GAMBLE, Pasadena, Calif., assignor to American Gas Appliance Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 11, 1921. Serial No. 491,616. 6 Claims. (Cl. 126—116.)



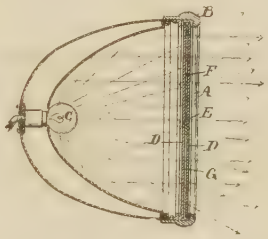
1. In a gas furnace, a burner, a superimposed central tubular combustion element upwardly through which the products of combustion pass, means providing an annular heat radiating chamber around said central tubular element, and spaced therefrom, means connecting the top of the central tubular element with the annular radiating chamber, said means being adapted to direct the heat and products of combustion spirally through said annular chamber, means for discharging said burnt products of combustion out of said furnace, and means for the passing of air to be heated through said furnace.

1,415,235. JEWEL-SETTING MACHINE. LEMUEL E. GARNETT, Tacoma, Wash. Filed May 18, 1920. Serial No. 382,367. 6 Claims. (Cl. 29—10.)

1. A jewel setting device of the character described comprising a supporting base, a lathe spindle operatively mounted in the said base, a work holding chuck applicable to the said spindle, a bracket fixed to and extending from the base, a turret adjusting arm mounted pivotally upon the bracket, a turret supported by the bracket upon said arm, a plurality of tools of different character operatively mounted on the said turret and adapted to be individually positioned by revolving the latter in working relation with pieces that may be held in the lathe chuck, means for securing the turret relative to the arm to retain a selected tool in working position and means for adjusting the arm to effect a finer adjustment of the tool toward or from the work being done.

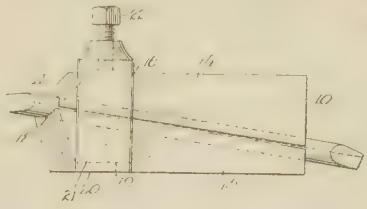


1,415,236. HEADLIGHT FOR VEHICLES. RALPH A. GIBBS, Philadelphia, Pa., assignor to Louis J. Kolb, trading as Safetee Glass Company, Philadelphia, Pa. Filed May 22, 1920. Serial No. 383,337. 1 Claim. (Cl. 240—48.4.)



A head light lens through which the light is caused to pass, comprising two sheets of glass having smooth adjacent surfaces and respectively secured firmly upon opposite sides of a sheet of pyroxylin, said sheet of pyroxylin having approximately one-half of its mass of transparent character and the other half of translucent character, and in which the juncture of the transparent and translucent portions forms a substantially straight line adapted to be arranged horizontally in use.

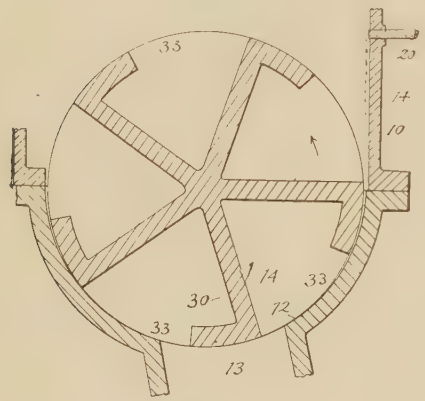
1,415,237. CUTTING TOOL AND HOLDER. ALPHONSE GUTTLY, Wisconsin Rapids, Wis. Filed Oct. 22, 1921. Serial No. 509,547. 8 Claims. (Cl. 29—96.)



1. In a device of the class described, a substantially round cutting tool provided with a straight groove ex-

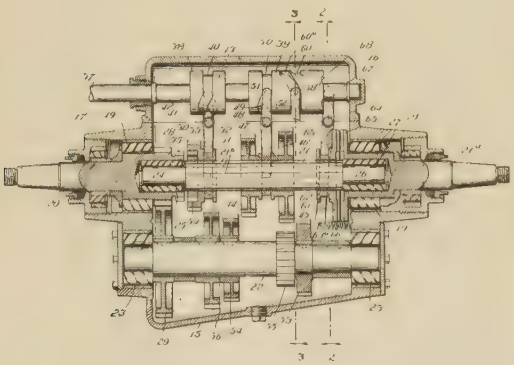
tending longitudinally thereof, and a holder fitting about said tool and having a projection fitting within said groove.

1,415,238. METHOD OF AND APPARATUS FOR PREVENTING THE ACCUMULATION OF STICKY CONDENSED PRODUCTS OF A GAS PRODUCER UPON THE RELATIVELY MOVABLE ENGAGING SURFACES OF THE FUEL-FEEDING MECHANISM APPLIED TO A GAS PRODUCER. CURTIS C. HOFFMAN, Chagrin Falls, and JOHN MCCASLIN, Cleveland, Ohio, assignors to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 11, 1919. Serial No. 329,931. 9 Claims. (Cl. 48—86.)



1. The method of preventing the accumulation of sticky condensed product of a gas producer upon the relatively movable engaging surfaces of the fuel feeding mechanism of said gas producer, which consists in the delivery onto said surfaces while the apparatus is in operation of a substance which prevents the accumulation on said surfaces of the sticky condensed vaporous products of the gas producer.

1,415,239. TRANSMISSION MECHANISM. IRVIN HUPP, Chicago, Ill. Filed Mar. 15, 1920. Serial No. 365,850. 24 Claims. (Cl. 74—58.)

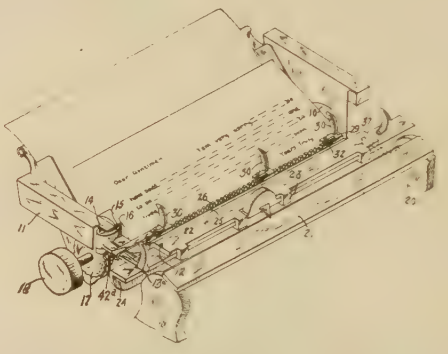


8. In a transmission mechanism, the combination of a transmission shaft and a driven shaft, a clutch interposed between said shafts, a counter-shaft, co-operating transmission gears mounted upon the transmission shaft and upon the counter-shaft, respectively, and selectively engageable with each other for different speeds, means for shifting certain of the transmission gears, and means for automatically opening the clutch as an incident to the shifting of said gears.

1,415,240. RESISTANCE UNIT. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed July 13, 1921. Serial No. 484,405. 8 Claims. (Cl. 219—63.)

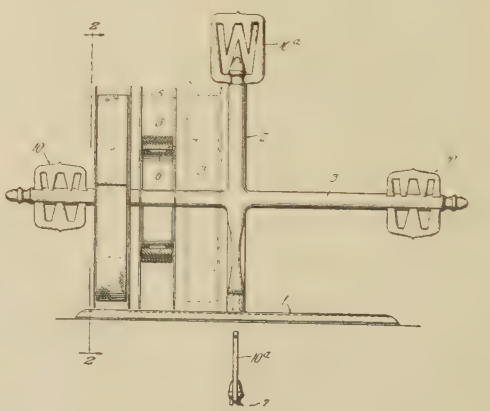
4. A resistance-unit comprising a refractory core, a resistance wire thereon and metallic end caps on said core provided with projecting lips to which the respective ends of the resistance wire are connected.

1,415,241. TYPEWRITING MACHINE. ARTHUR A. JOHNSON, New York, N. Y., assignor, by mesne assignments, to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 15, 1918. Serial No. 250,090. 49 Claims. (Cl. 197—177.)



45. In a typewriting machine, in combination, a traveling carriage, a platen on said carriage, line-space mechanism for the platen, a plurality of manually-operable members for operating the line-space mechanism located laterally in spaced relation along the front of the carriage, said members being independently operable, means to enable any of said manually-operable members to operate said line-space mechanism, and margin-determining means controlled by the line-spacing members.

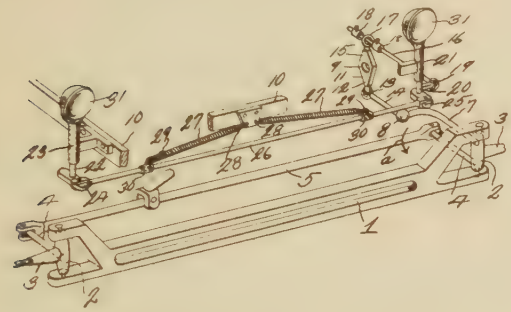
1,415,242. DISPLAY STAND FOR RIBBONS AND THE LIKE. JAMES G. JOHNSTON, Jr., Chicago, Ill., assignor to Warren Featherbone Company, Three Oaks, Mich., a Corporation of Michigan. Filed Apr. 8, 1921. Serial No. 459,578. 7 Claims. (Cl. 211—18.)



1. In a device of the character described, the combination of a standard provided with a spindle having a key

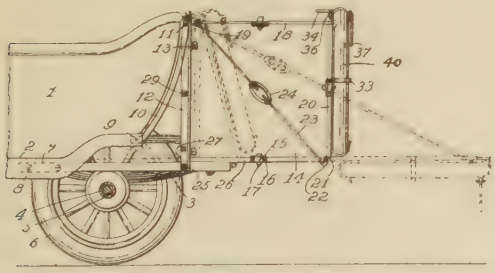
at the free end thereof, and a spool adapted to be supported upon said spindle and provided with a centrally located slot therethrough adapted to engage said key in the mounting of said spool on said spindle.

1,415,243. DIRIGIBLE HEADLIGHT. JOHN FRANKLIN KELLER, Pearl, Ill., assignor to Chris F. Andersen and J. R. Mitchell, Jacksonville, Ill. Filed Aug. 17, 1921. Serial No. 492,971. 2 Claims. (Cl. 240—62.)



1. A dirigible headlight mechanism for automobiles comprising a vertically pivoted lamp bracket, the lower end of said bracket having a transversely disposed outwardly extending arm, a lever pivoted to the side of the automobile, said lever being pivoted at a central point thereby forming an upwardly and downwardly extending arm, an eye carried by the end of an upwardly extending arm, a connecting rod extending through said eye and provided with stops located on each side of the eye, the forward end of said connecting rod being universally connected to the outwardly extending arm the pivotal points of said connecting rod being universal ones, said rearwardly and inwardly extending arm carried by the axle spindle of the automobile, a connecting link universally connected to and extending rearwardly from said rearwardly and inwardly extending arm, the rear end of said last named connecting link being connected to the downwardly extending arm of the pivoted lever by means of a universal joint.

1,415,244. SLIDING KNOCKDOWN FREIGHT CARRIER. GEORGE COLVIN KENNEDY, Waterloo, Iowa. Filed Jan. 25, 1918. Serial No. 213,695. Renewed Sept. 26, 1921. Serial No. 503,379. 8 Claims. (Cl. 224—29.)



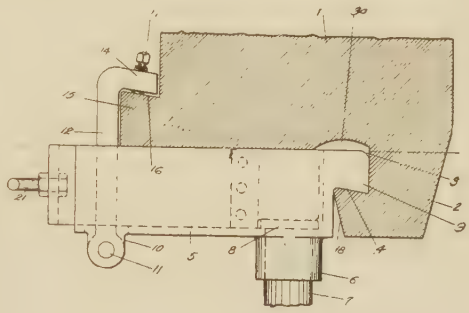
7. The combination with a vehicle having a rear axle and carrying-wheels mounted thereon, of a platform movable longitudinally past the rear axle to and from a position of extension rearwardly from the vehicle, and supporting-means upon said rear axle upon which said platform is slidably mounted, supported, and releasably secured.

1,415,245. PICTURE PUZZLE DEVICE. JAMES J. KENNEDY, New York, N. Y. Filed Apr. 26, 1920. Serial No. 376,815. 8 Claims. (Cl. 46—4.)

1. A pictorial puzzle device, comprising a picture having as part of its subject matter a determined object delineated so that its configuration is concealed, and a separate screen element adapted to be disposed upon the

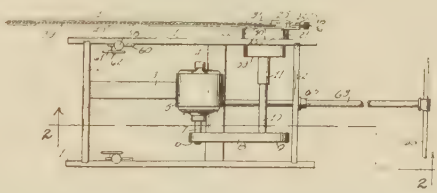
picture so that the object will be exposed to view, while the other portions of the picture are hidden from observation.

1,415,246. METAL-PUNCHING MACHINE. GEORGE P. KLINE, Moline, Ill., assignor to Williams, White & Company, Moline, Ill. Filed Oct. 27, 1919. Serial No. 333,744. 11 Claims. (Cl. 164—118.)



1. In a device of the class described, a movable member having a recessed extension the lower side of the recess having a downward and inward inclination; a tool-holder provided with a tongue adapted for engagement with said recessed extension; and means for attachment of said tool-holder to said movable member, at a point other than said extension.

1,415,247. LUMBER JACK SAW. HARVE ALLEN KNOWLES, Stockport, Iowa. Filed Sept. 30, 1920. Serial No. 413,720. 3 Claims. (Cl. 143—32.)



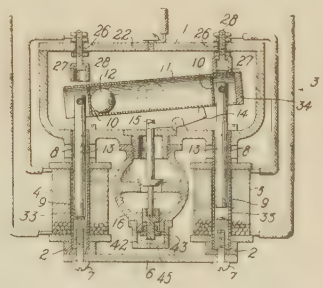
1. A power saw comprising a substantially rectangular frame, a rotatable disk disposed exteriorly of a side member of the frame and having a hub extending through the side member of the frame into the interior thereof, a transverse rotatable shaft journalled in the hub and having its outer end extended beyond the disk, a bearing for said disk, said bearing being secured to the adjacent side member of the frame, a cap arranged to loosely receive said bearing and being secured to the disk to rotate therewith, said cap being formed with a guidway in the outer wall of the top thereof, carrying means slidably disposed in said guideway, longitudinally carrying

and guiding member secured to said first named carrying means and substantially alined therewith, an endless chain saw arranged to be operated by said shaft and being passed around the outer ends of said carrying and guiding members, means for slidably moving said carrying means relatively to said cap to adjust the effective length of said chain saw, means for anchoring said frame in a desired position relative to the work to be engaged, means for operating the shaft, and a spring motor mounted on said hub and tending to rotate the same to rotate said cap and thereby constantly move said saw blade in the direction to operatively engage the work.

1,415,248. SPARK PLUG. LOUIS E. KOTTMEYER, Rhineland, Mo. Filed June 28, 1920. Serial No. 392,288. 2 Claims. (Cl. 123—169.)

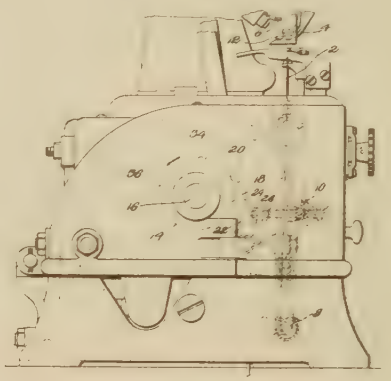
1. A spark plug for internal combustion engines comprising a stationary electrode, a chamber disposed opposite and adjacent thereto, and a plunger fitting loosely within said chamber, the base of said chamber being restricted to provide a space beneath the plunger when the latter is seated, whereby the plunger may be intermittently moved into contact with said electrode by aid of the gas within the engine.

1,415,249. VALVE. EDWIN B. LANE, West Hoboken, N. J. Filed June 17, 1918. Serial No. 240,337. 2 Claims. (Cl. 236—72.)



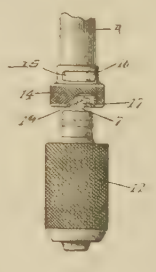
1. A valve combining a conduit, a movable part adapted to control the flow of fluid in said conduit, a pair of solenoids adapted respectively to move said part in one direction or the other, cores for said solenoids, a runway centrally pivoted and connected at either end with said cores, the initial movement of either core serving to reverse the inclination of the runway, a mass movable in the runway, whereby said mass travels to the other end of the runway and remains there, to hold said part in its new position, and means outside the runway whereby the circuit of the solenoid is broken during the movement of its core, after said mass has started to travel down the runway.

1,415,250. MACHINE FOR SEWING BUTTONS TO SHOE UPPERS. BERNARD T. LEVEQUE, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 14, 1920. Serial No. 396,075. 8 Claims. (Cl. 112—255.)



2. A button attaching machine having, in combination, means for passing a primary loop through a button eye and a secondary loop through the primary loop outside the eye and for spreading the secondary loop, means for passing the button head through the secondary loop, and means for relieving the tension on the thread of the secondary loop during the passing of the button head therethrough.

1,415,251. SCREW DRIVER. WARREN L. MCLEAN, San Francisco, Calif. Filed May 24, 1920. Serial No. 383,617. 2 Claims. (Cl. 145—53.)

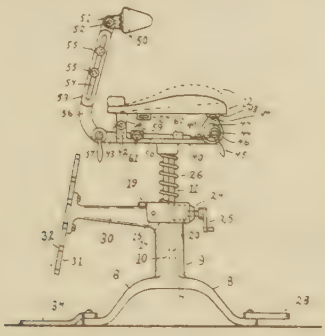


1. In a screw driver of the character described the combination with a spiral tool shank, a tube casing having a threaded connection with the shank to rotate the same by relative endwise movement and a handle secured to the tube of an annular shoulder formed on the tube below the handle and a collar turnably mounted on the tube between said shoulder and the handle.

1,415,252. TREATMENT STOOL. JOHN V. MCMANIS, Kirksville, Mo., and FRANK KOENIGKRAMER, Cincinnati, Ohio. Filed July 31, 1918. Serial No. 247,649. 14 Claims. (Cl. 155—28.)

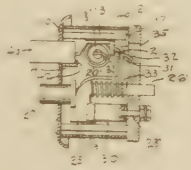
1. A treatment stool of the character disclosed comprising a seat for a patient having a polygonal seat standard and vertically adjustable relative to its supporting base, a supporting base having a vertically disposed channel with converging walls to engage a plurality of faces of said seat standard, and a clamping member pivotally mounted relative to said base opposite the channel on the base and provided with a vertically dis-

posed channel with converging walls to engage a plurality of faces of said seat standard to retain said standard rig-



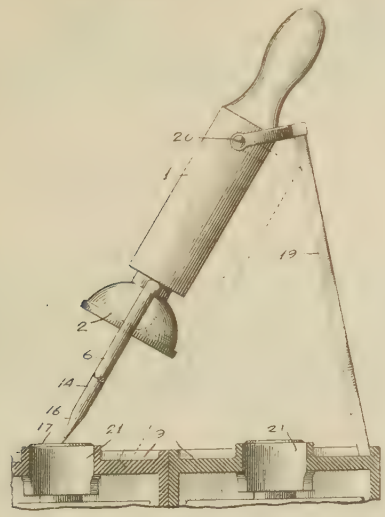
idly to its adjusted position against movement axially or rotatably relative to said base under the variety of strains incident to the use of said stool.

1,415,253. THERMAL ELECTRIC CUT-OUT. ROY H. MAPLE, Indianapolis, Ind. Filed Aug. 7, 1916, Serial No. 113,541. Renewed Sept. 29, 1921. Serial No. 504,149. 9 Claims. (Cl. 200—116.)



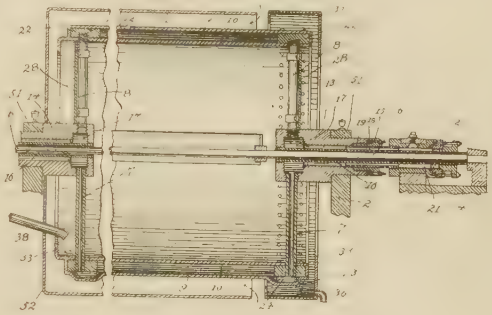
1. A thermal switch construction including a base plate, a helical thermal strip with its inner end fixed to said plate and the other end free to move when the strip is influenced by change in temperature, a lateral projection on the free end of said strip, a movable switch member with one end slotted to receive said thermal strip, said projections normally holding said switch member in closed position and releasing therefrom when the strip is expanded, and a spring for opening said switch member after it has been released.

1,415,254. BATTERY-TESTING LAMP. CARL L. MARITZEN, San Francisco, Calif. Filed Jan. 22, 1921. Serial No. 439,284. 8 Claims. (Cl. 240—2.)



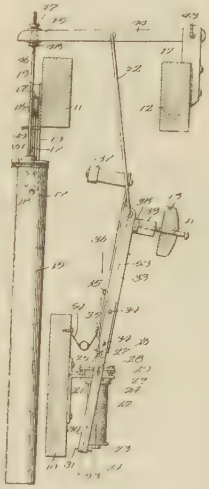
1. A new article of manufacture comprising a tripod two legs thereof being conductors and spaced to engage the terminals of a storage battery and the like; and an electric lamp connected to said legs and lighted by current from said battery passing through said legs, said lamp being positioned to direct light rays into the opening of said battery.

1,415,255. EVAPORATOR. JOHN C. MILLER, Covington, Ky., assignor to The Evaporating and Drying Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 10, 1918. Serial No. 233,744. 5 Claims. (Cl. 127—9.)



2. In an evaporating apparatus, the combination of an open cylinder of slightly greater diameter at one end than the other, with a closed concentric cylinder attached to and enclosing the same to form a heating compartment, means for providing a continuous circulation of heating medium through said compartment, means for rotating the open cylinder at a high rate of speed, and a scraper fixed with relation to the open cylinder to continuously stir the liquid under treatment, and means for collecting the evaporated liquid delivered by centrifugal force from the larger end of the open cylinder, and fan blades fixed across said open cylinder attached thereto and rotating therewith to drive a continuous current of air therethrough.

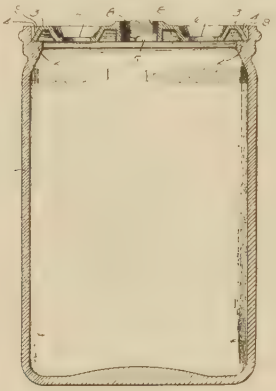
1,415,256. CHIME-STRIKING ACTION. LEONARD D. MORRIS, Chicago, Ill. Filed Aug. 7, 1919. Serial No. 315,801. 5 Claims. (Cl. 177—7.)



2. In a chime striking action, the combination of a vertically disposed electro-magnet, a yoke pivoted above said magnet and provided at its lower end with an armature adapted to be actuated by said magnet, a hammer carried by said yoke above the magnet, a chime disposed in the path of movement of said hammer, a horizontally disposed arm pivotally mounted above said hammer, a damper suspended from said arm in alignment with said chime, a

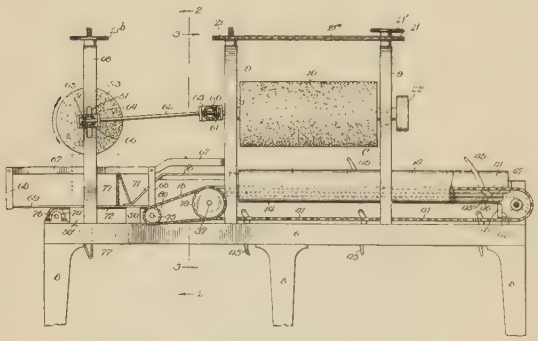
link pivotally connecting said arm and said hammer support providing in conjunction with said support a toggle adapted upon movement of said hammer toward said chime to lift said arm whereby said damper is lifted out of engagement with said chime, and means for restoring said hammer to inoperative position and reengaging said damper with said chime.

1,415,257. STORAGE-BATTERY CELL. ROBERT D. MOWRY, Chicago, Ill. Filed Apr. 12, 1920. Serial No. 373,159. 2 Claims. (Cl. 215—80.)



1. A storage battery cell comprising a rectangular jar having an inwardly projecting strengthening rib or flange near its upper end and being provided with unrestricted straight sides below said flange, a rectangular cover of insulating material having beveled side edges extending from the upper face of the cover to the lower edge thereof, the lower edge of the cover being arranged to rest on the inwardly projecting flange, whereby a V-shaped groove is formed between the cover and the sides of the jar above the flange, and a sealing material disposed in said V-shaped groove for sealing said cover to said jar.

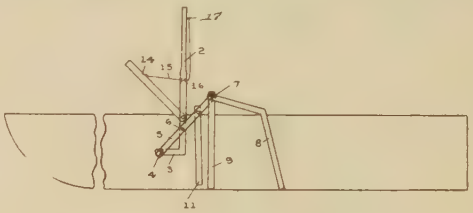
1,415,258. CAN-POLISHING MACHINE. ANDREW NELSEN, Chicago, Ill. Filed Nov. 22, 1920. Serial No. 425,604. 6 Claims. (Cl. 15—70.)



1. In a can polishing machine, the combination with a pair of parallel horizontally journaled buffing rolls, and a horizontal conveyor for causing cans to travel endwise beneath and between said rolls, of a third horizontally journaled buffing roll beyond and at right angles to said pair of buffing rolls, a conveyor for causing the cans to travel sidewise beneath said third roll, and means for guiding the cans and turning them on end between said rolls.

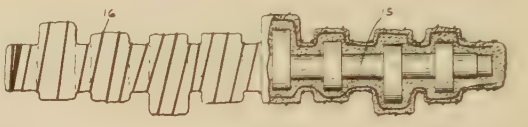
1,415,259. HAND-PROPELLED VEHICLE. WILLIAM L. NICOLS, Tuscumbia, Ala. Filed Dec. 27, 1920. Serial No. 433,126. 12 Claims. (Cl. 208—158.)

1. A hand propulsion mechanism for a vehicle, comprising a rowing arm having at its lower end a forward extension which is pivoted to the vehicle and having a member projecting rearwardly from and rigid with the



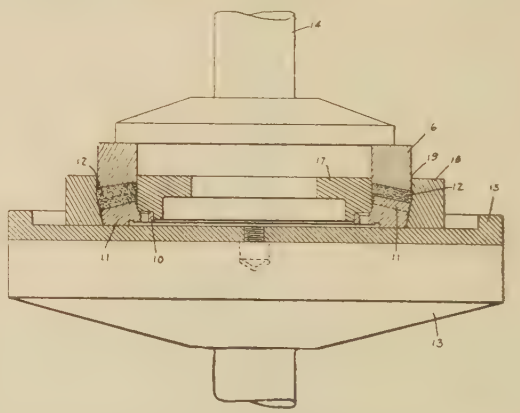
arm, and an angled kicker bar pivotally connected to said member.

1,415,260. PROCESS OF HARDENING METAL ARTICLES. GEORGE COLEMAN NIXON, Detroit, Mich., and FREDERICK CHARLES RAAB, Syracuse, N. Y. Filed Oct. 25, 1919. Serial No. 333,237. 2 Claims. (Cl. 148—30.)



1. The process of carburizing metal, which process includes combining carburizing material in suitable form with a substance that renders it adherent and plastic applying said plastic material to a relatively narrow strip of cloth or the like so as to form a relatively thick tape of carburizing material, wrapping and securing said tape like form of carburizing material spirally on the portion of the article to be carburized and then heating the article with the carburizing material thus secured thereon.

1,415,261. PROCESS OF CASE HARDENING ARTICLES. GEORGE C. NIXON and FREDERICK CHARLES RAAB, Syracuse, N. Y. Filed Jan. 17, 1921. Serial No. 437,846. 3 Claims. (Cl. 148—19.)

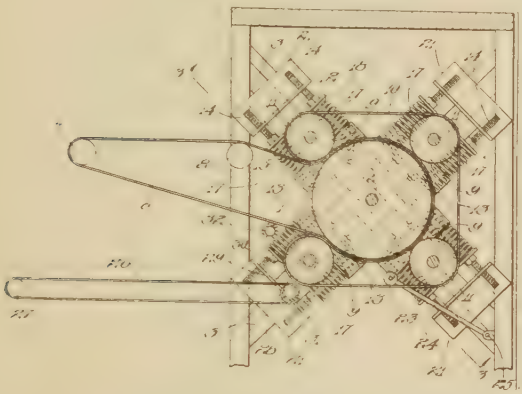


1. The process of carburizing metal, which process includes covering the portion of the article to be carburized with adhering carbonaceous material under pressure sufficient to cause the same to rigidly adhere to the article and form a relatively thick layer thereon, and then heating the article with the carburizing material thus secured thereon.

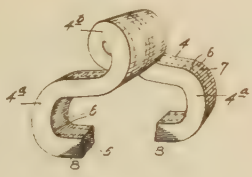
1,415,262. MANGLE. JAMES NORRIE, Quincy, Mass. Filed Mar. 5, 1921. Serial No. 449,748. 2 Claims. (Cl. 68—13.)

1. A mangle having a main roll, a plurality of pressure rolls grouped around said main roll, an endless apron which runs around said main roll and around a supporting

roll at a distance from said main roll, an endless apron which runs around all of said pressure rolls and also runs around the said main roll in superposed relation to the said first apron, two of said pressure rolls being on diametrically opposite sides of the main roll, two sets of springs which respectively maintain said pressure rolls against the main roll, exerting their pressure in diametrically opposite directions, slidable mounts for said pressure rolls, whereby said mounts are capable of being moved a limited distance at right angles to the axis of the main roll, and means whereby when the said slidable mount is moved in one direction one set of springs will have their tension increased and the other set of springs will have their tension correspondingly decreased.

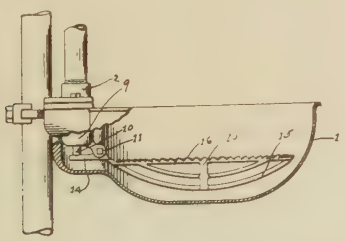


1,415,263. SPRING OILER. HALLIE NORRIS, Pittsburgh, Pa. Filed May 16, 1921. Serial No. 469,917. 8 Claims. (Cl. 184—1.)



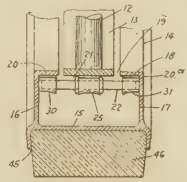
3. A spring oiler comprising a laminated body of oil-absorbing material having a protective covering of sheet material, and resilient wire reinforcing means contained within the said body of oil-absorbing material.

1,415,264. VALVE-ACTUATING MECHANISM FOR STOCK-WATERING BOWLS. JOHN B. OLSON, Fort Atkinson, Wis., assignor to James Manufacturing Company, Fort Atkinson, Wis., a Corporation of Wisconsin. Filed Dec. 27, 1921. Serial No. 524,975. 4 Claims. (Cl. 119—75.)



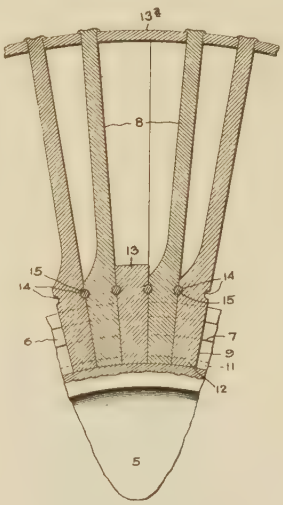
1. The combination with a watering bucket provided with a supply valve and a lever in said bucket adapted to operate said valve, of means connected with the lever for preventing stock from throwing out the water.

1,415,265. RESILIENT VEHICLE WHEEL. JOHN A. OSTENDORF, Baltimore, Md. Filed Aug. 21, 1920. Serial No. 405,141. 3 Claims. (Cl. 152—36.)



1. A resilient vehicle wheel, comprising an inner circular member having a hub, an annular casing of larger diameter than the inner member and having in its inner periphery an opening in which the peripheral edge part of the inner member is movably disposed, elastic strip like elements disposed crosswise at spaced intervals throughout the circumference of the interior of the casing, said elements carrying the inner member in yielding suspension in the annular casing and spaced parts of each element being resiliently connected to the casing, and an annular tread member on the outer periphery of the casing.

1,415,266. ELASTIC-FLUID TURBINE. CHESTER S. RICE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 30, 1919. Serial No. 320,759. 3 Claims. (Cl. 253—77.)

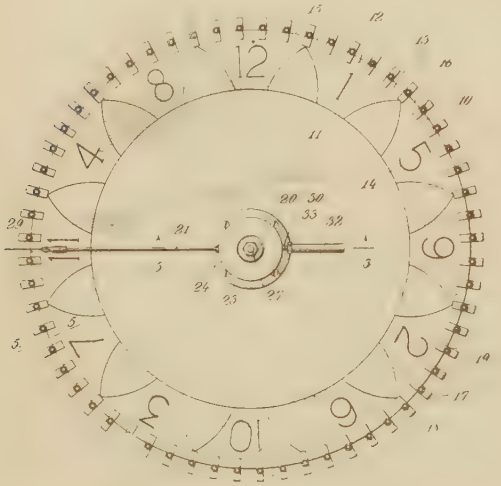


1. In combination, a bucket-carrying member, a ring of buckets having their bases fixed thereto, the bases of the buckets being in engagement with each other just beyond the periphery of the carrying member at which points said bases are provided with holes extending transversely of the member, each hole being formed partly in one bucket base and partly in the adjacent bucket base, and pins located in said holes making a tight fit therewith, said pins forming a supplemental holding means for the ring of buckets.

1,415,267. GAME APPARATUS. WILLIAM ROTH, New York, N. Y. Filed Mar. 10, 1921. Serial No. 451,398. 6 Claims. (Cl. 46—56.)

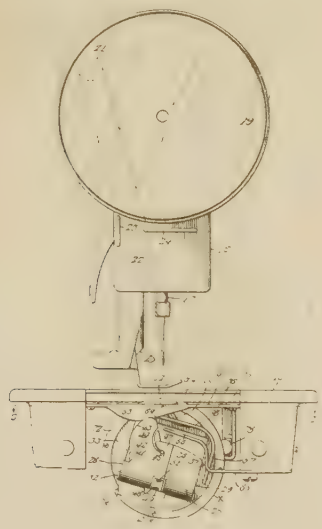
1. A game apparatus comprising a game board having an anuular portion divided into fields, each field bearing a distinguishing character, pins rising from said board at the periphery of said annular portion and dividing the same into equal divisions, said pins being adjustably se-

cured to said board, a rotary element operating in a plane parallel to that of said board and turning about an axis



in the center of said annular portion, and a blade-spring fixed to said rotary element and co-operating with said pins.

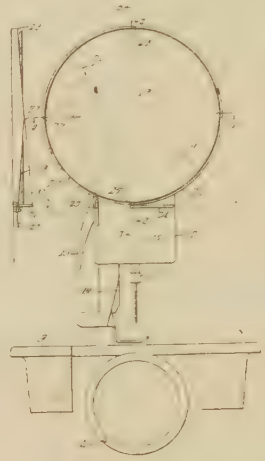
1,415,268. REVOLVING-HOOK SEWING MACHINE. ALBERT D. SMITH, Detroit, Mich. Filed July 30, 1918. Serial No. 247,423. 17 Claims. (Cl. 112—228.)



1. In a revolving hook sewing machine, the combination with a revolving hook, of a thread receptacle within the revolving hook, having an outer wall adapted to swing from an outer open position to an inner operative position, said outer wall having a thread-guiding surface extending above the thread body proper within the receptacle for guiding the loop end after it has been cast off the hook.

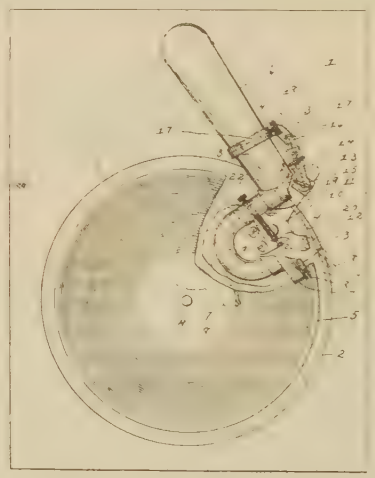
1,415,269. ROTARY TAKE-UP FOR SEWING MACHINES. ALBERT D. SMITH, Detroit, Mich. Filed Aug. 20, 1918. Serial No. 250,651. 3 Claims. (Cl. 112—248.)

1. A rotary take-up structure for sewing machines comprising a pair of rotary disks connected by an eccentric thread-engaging means, thread guides at the underside of the take-up as it enters between and leaves the disks so that a comparatively large slack of thread is produced, and means for controlling the slack thread when the eccentric thread-engaging means descends, comprising a casing for the rotary disks open at the front thereof and having



an annular wall at the descending side of the disks extending outwardly a substantial distance beyond the outermost disk.

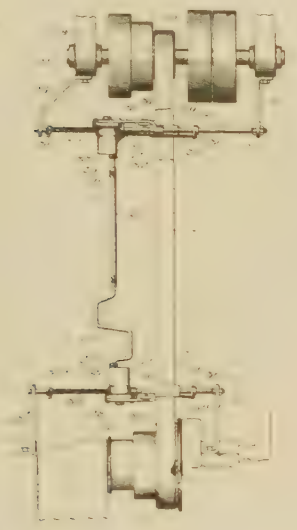
1,415,270. STOPPING ATTACHMENT FOR PHONOGRAPHS. FRANK E. SMITH, Troy, N. Y., assignor of one-half to E. Augustus Dennin, Troy, N. Y. Filed June 7, 1921. Serial No. 475,722. 5 Claims. (Cl. 192—116.)



2. In a phonograph-stopping mechanism, the combination with the tone-arm; and the record-supporting turntable; of a brake-lever; a link having one end pivotally connected with the tone-arm and the other end pivotally connected with the brake-lever; and a brake carried by said brake-lever engageable with the turntable in either extreme position of the tone-arm.

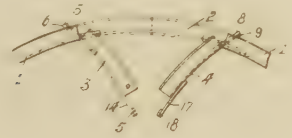
5. In a phonograph-stopping mechanism, the combination with a tone-arm; and the record-supporting turntable; of a bracket adjustably mounted upon the tone-arm; means for securing said bracket in selected adjusted position; a brake-lever; a link having one end pivotally connected with said bracket and the other end pivotally connected with the brake-lever; a brake carried by said brake-lever engageable with the turntable at the end of the record-induced movement of the tone-arm; and a spring tending to move the tone-arm in the same direction in which its movement is induced by the record.

1,415,271. BELT SHIFTER. ROBERT SPURGIN, Jr., Chicago, Ill. Filed Feb. 23, 1918. Serial No. 218,872. 17 Claims. (Cl. 64—4.)



1. In a belt shifting mechanism, a guide member, an operating shaft, a carrier including a belt shifting element slidable on the guide member and transversely of the shaft, and manually operable means including a stationary flexible element for propelling the carrier along the guide member.

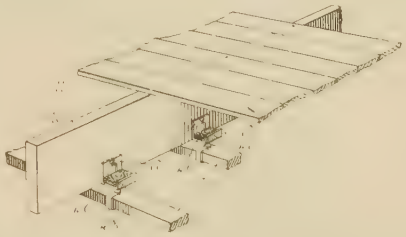
1,415,272. DEMOUNTABLE RIM. ALFRED C. STANTZ, Detroit, Mich. Filed Sept. 20, 1920. Serial No. 411,480. 4 Claims. (Cl. 301—32.)



1. A rim of the class described, having a plurality of sections adapted to have end abutment, one section having a pair of sockets adjacent to its end and the other section a single socket adjacent to its end, a pair of angled fingers projecting from the end of the section having a single socket and adapted to lap the end of the adjoining section and to enter the sockets thereof, and a single angled finger projecting from the end of the other section and adapted to lap the end of the adjoining section between the fingers thereof and to enter the socket in the lapped section.

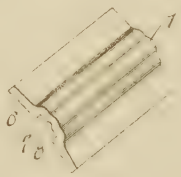
1,415,273. CEILING CONSTRUCTION. CHARLES WHITNEY STEVENS, Chicago, Ill., assignor to Stevens Partition and Floor Deadener Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 9, 1917. Serial No. 153,678. 6 Claims. (Cl. 20—4.)

1. A building construction comprising a horizontally-extending support, a ceiling construction therebeneath, and a plurality of cushioning supports for suspending said ceiling construction from said horizontal support, each cushioning support serving as a sound indicator to prevent the ready transmission of sound from the horizontally extending support to the ceiling, and also as a yield-



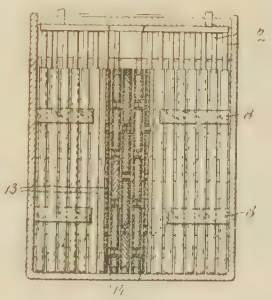
ing ceiling support whereby the possibility of cracking of the ceiling plaster is minimized.

1,415,274. FLUME CONSTRUCTION. AUGUSTUS H. STOWELL, Spokane, Wash. Filed June 7, 1920. Serial No. 386,989. 2 Claims. (Cl. 72—37.)



1. A tile for double wall construction having a groove centrally of the inner face adapted to receive portions of the inner tiles of said wall, said groove having a recess extending longitudinally thereof adapted to receive a reinforcing rod, and said tile having longitudinally extending central ribs on its exterior surface.

1,415,275. STORAGE BATTERY. NORMAN DEXTER STURGES, Bellerose, N. Y., assignor, by mesne assignments, to Multiple Storage Battery Corporation, a Corporation of Delaware. Filed Jan. 5, 1921. Serial No. 435,059. 8 Claims. (Cl. 204—29.)

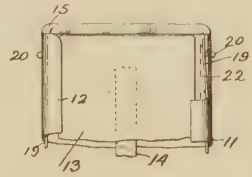


1. A method of preventing disintegration of the plates of electric storage batteries of the lead-sulphuric acid type, which comprises subjecting the active material on the opposite faces of the plates to pressure of a flexible non-conducting medium contacting therewith and rigidly connected at a plurality of points through the faces of the plates whereby the effective pressure is applied to a plurality of relatively restricted areas of the active material.

1,415,276. CARD HOLDER. EDWARD TERNER, Milwaukee, Wis. Filed Feb. 21, 1921. Serial No. 446,827. 5 Claims. (Cl. 206—39.)

1. A card holder with a contracted opening in the top thereof, a hinged cover at one end, a spring pressed

follower within the holder and adapted to press a stack of cards toward the contracted opening, flexible guide springs arranged within the holder and spaced by a stack

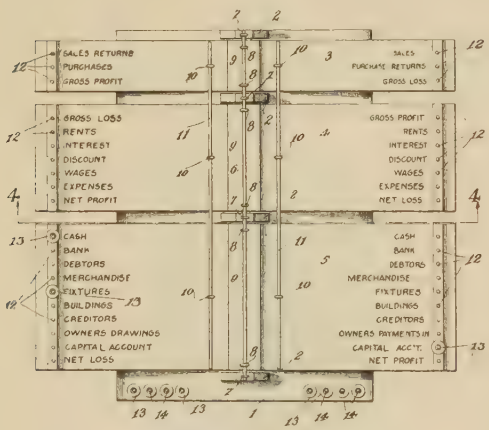


of cards inserted therein, means on the hinged cover engaging the said springs to hold the cover in closed position and prevent the ejection of the cards other than singly from the holder.

1,415,277. PROCESS FOR THE MANUFACTURE OF DECOLORIZED, ODORLESS, AND TASTELESS ALBUMINS FROM BLOOD. ADRIANUS JOHANNES LEONARDUS TERWEN and CORNELIS JOHANNES CHRISTIAAN VAN HOOGENHUYZE, Amsterdam, Netherlands. Filed Sept. 30, 1918. Serial No. 256,362. 1 Claim. (Cl. 99—11.)

The process of obtaining decolorized, odorless and tasteless water-soluble albumin from blood, which comprises subjecting the blood to a protracted treatment with a dilute acid; adding hydrogen peroxide and allowing the liquid to stand, and thereafter adding an alkali to neutralize the blood and allowing the liquid to stand until completely decolorized.

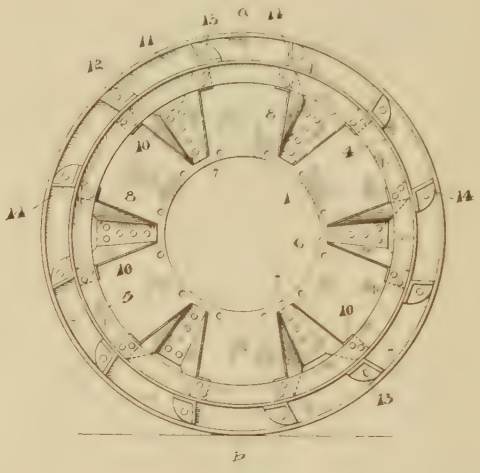
1,415,278. APPARATUS FOR TEACHING BOOKKEEPING. FREDERICK TOD, Winnipeg, Manitoba, Canada. Filed May 10, 1921. Serial No. 468,376. 14 Claims. (Cl. 35—12.)



14. A means for teaching bookkeeping comprising a plurality of levers arranged side by side to rock about a common axis, each of said levers representing a general account and having both arms provided with a corresponding plurality of upwardly projecting pins or studs and representing individual accounts, a series of apertured discs adapted to be fitted about any of said pins to represent items of the particular account, and means for connecting said levers so that they will vibrate together.

1,415,279. TRACTOR WHEEL. WILLIAM GRIFFITH TRETHEWEY, Cuckfield, England. Filed June 4, 1921. Serial No. 475,117. 5 Claims. (Cl. 301—52.)

1. A tractor wheel comprising a disk adapted to be secured to a hub; a narrow rim band carried by said disk; brackets secured to said disk; a second rim band spaced from the first and secured to and supported by

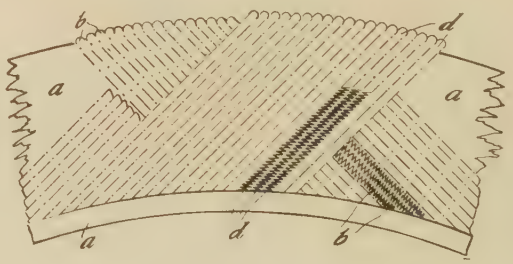


the brackets; and transverse ground gripping members secured to said rims.

1,415,280. METHOD FOR THE PRODUCTION OF COMPOUNDS CONTAINING SILICON AND NITROGEN. FOORD VON BICHOWSKY, Glendale, Calif. Filed Feb. 23, 1921. Serial No. 447,281. 4 Claims. (Cl. 23—13.)

1. The process of producing compounds containing silicon and nitrogen by heating a silicon oxygen compound containing reactive mass and comprising a metallic oxide and a metal of the iron group together wtih an alkali metal salt, in the absence of carbon, as a chemical reactive, but in the presence of methane and nitrogen.

1,415,281. TIRE COVER AND THE LIKE. ALFRED EDMUND WALE, Coleshill, England, assignor to Alfred Eugene Harris, Leamington, England, and Ernest Henry Jones, Islington, London, England. Filed June 6, 1913. Serial No. 772,098. 5 Claims. (Cl. 152—18.)

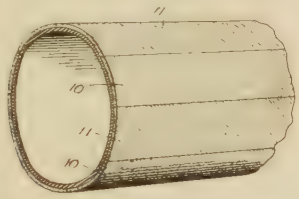


1. A pneumatic tire casing comprising layers of wire helices filled with elastic material such as rubber, said wire helices passing diagonally over the tire casing but not being connected into a continuous intercoiled fabric, the helices in one layer crossing those of another layer, beaded edges at the side margins of the tire casing, and said wire helices being arranged so that they pass over not only the perimeter of the tire casing but also down each side of said casing to the beaded edges thereof and are suitably anchored there.

1,415,282. COATING COMPOSITION. MICHAEL J. WALSH, Philadelphia, Pa. Filed Mar. 9, 1920. Serial No. 364,392. 8 Claims. (Cl. 134—45.)

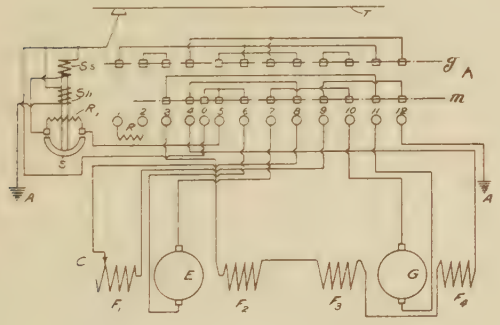
1. A coating composition comprising a liquid component resulting from the admixture of sulphuric acid, whiting, gum, rosin, petrolatum, mineral oil, sodium silicate and kerosene.

1,415,283. INNER TUBE FOR AUTOMOBILE TIRES. HERBERT N. WAYNE, Washington, D. C. Filed Aug. 21, 1920, Serial No. 405,005. Renewed Sept. 28, 1921. Serial No. 503,928. 6 Claims. (Cl. 152—13.)



1. An inner tube for pneumatic tires consisting of a body portion constructed of calendered fibrous material in mixed combination with rubber applied in two or more zones, the longitudinal direction of the fibres in one zone lying at a different angle to the longitudinal direction of the fibres in the next adjoining zone.

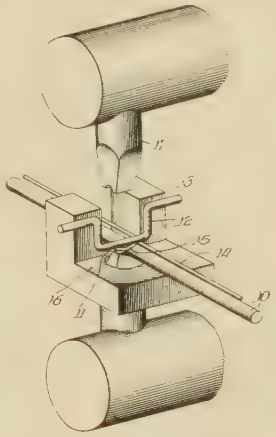
1,415,284. REGENERATIVE MOTOR-CONTROL SYSTEM. SAMUEL T. WEBSTER, St. Louis, Mo., assignor, by mesne assignments, to General Electric Company, a Corporation of New York. Filed Jan. 6, 1919. Serial No. 269,772. 10 Claims. (Cl. 172—179.)



3. In a regenerative control system, the combination with a line circuit, and a series motor having an armature and field windings, adapted to act as a braking generator, and adapted for connection to said line circuit to receive current therefrom and operate as a motor, of means for connecting said motor to said line circuit, adapted to cause said motor to act as a generator and return current to said line circuit, and means cooperating with said motor, adapted to limit the value of but maintain the flow of the regenerated current, and thereafter decrease the value of the regenerated current upon further increase of the speed of said motor.

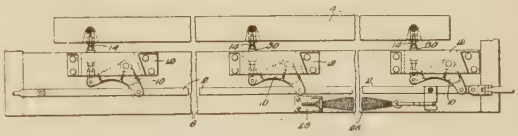
1,415,285. METHOD OF MAKING SPACING DEVICES FOR REENFORCING BARS. WILLIAM E. WHITE, Chicago, Ill. Filed June 25, 1920. Serial No. 391,776. 3 Claims. (Cl. 29—160.)

1. The method of making spacing devices, which consists in bending a tie wire to provide an eye therein, then forming a chair member, then placing the chair and a spacing element in a die with the eye of the tire wire interposed between the chair and spacing element, and then applying pressure as an incident to an electric welding operation by which the chair and spacer are



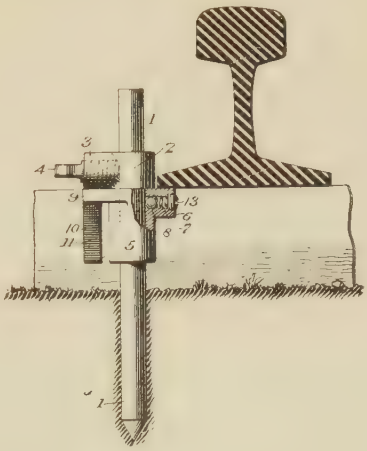
joined at a point within the said eye, substantially as described.

1,415,286. LOOM. EZEKIAL J. WILSON, East Greenbush, N. Y., assignor to F. C. Huyck & Sons, Rensselaer, N. Y., a Corporation of New York. Filed May 23, 1921. Serial No. 471,641. 5 Claims. (Cl. 139—67.)



4. A loom having, in combination, a lay, an endwise reciprocating actuating bar parallel thereto, and a series of adjustable connections connecting the bar with the lay at intervals throughout its length.

1,415,287. INDICATOR FOR DOWNWARD DEFLECTION OF RAILROAD RAILS. WARREN W. WOOSTER, Berlin, N. J. Filed Oct. 30, 1919. Serial No. 334,622. 7 Claims. (Cl. 73—51.)

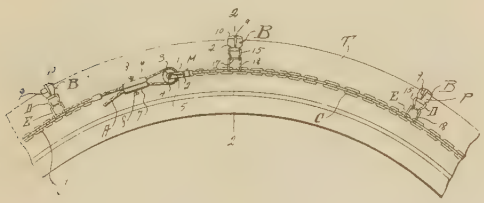


1. A portable indicator for the downward deflection of railroad rails, comprising a support adapted to be inserted in the ground, a member adapted to be depressed by the rail, a movable index finger cooperating with said last-named member, and a relatively fixed member cooperating with the said finger and retained in its position on the member on which the said finger is movable.

1,415,288. VEHICLE WHEEL. CHESTER B. ALLEN, Memphis, Tenn. Filed July 1, 1921. Serial No. 481,843. 11 Claims. (Cl. 301—63.)

1. A dished single disk wheel composed of a plurality of layers of wood secured together by an adhesive substance.

1,415,289. ANTISKIDDING DEVICE. ALFRED R. ANDERSEN, Rock Springs, Wyo. Filed Feb. 23, 1922. Serial No. 538,716. 1 Claim. (Cl. 152—14.)

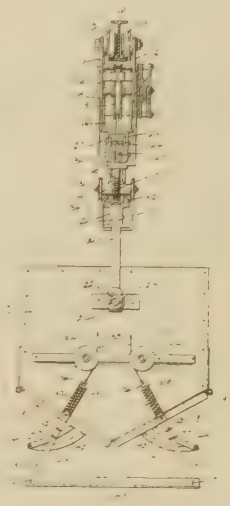


A device of the class described comprising a pair of side members, tread units interposed between and connected with said side members, a flexible member secured to an extremity of each of said side members, a substantially U-shaped member carried by the opposite end portion of said side member, one of the side arms of said last named member having swinging movement, a shaft supported by the outer extremities of the side arms of the last named member, a pulley mounted upon said shaft between the arms, the flexible member at the opposite extremity of said side member being disposed around the pulley, spring hooks carried by the side arms of the last named member and engageable with the extremities of the shaft to hold the shaft and pulley in applied position, and means connecting the portion of the flexible member in advance of the pulley and the portion of the flexible member outwardly of the pulley.

1,415,290. METHOD AND APPARATUS FOR GARBAGE DISPOSAL. CHARLES G. ARMSTRONG, New York, N. Y. Filed Feb. 24, 1917. Serial No. 150,859. 2 Claims. (Cl. 71—6.)

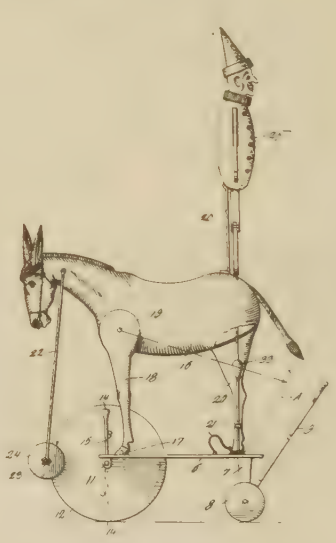
1. The process of collecting and disposing of garbage consisting in establishing one or more receiving bins for the garbage, saturating the garbage in the depots with a hydrocarbon to deodorize the same and to act as a solvent in the subsequent treatment thereof, then transferring the garbage from the depots to a reduction plant, then adding to the garbage any additional hydrocarbon required and applying heat to the same, separating therefrom the oils, greases and water contained therein.

1,415,291. BUCKET-DOOR-OPENING MECHANISM. FRANKLIN E. ARNDT, Galion, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed Mar. 26, 1921. Serial No. 455,903. 8 Claims. (Cl. 294—71.)



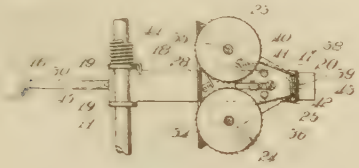
1. In a material transporting mechanism of the character described, a bucket having a door controlling the discharge of material therefrom, means for raising or lowering the bucket, means for automatically closing the door upon the upward movement of the bucket to a predetermined height, means for latching said door in a closed position, and means acting to unlatch the door to permit the door to swing open when the bucket has descended to a predetermined position.

1,415,292. TOY. THOMAS NORWOOD ARNOLD, Fairport, N. Y. Filed Dec. 23, 1920. Serial No. 432,733. 3 Claims. (Cl. 46—45.)



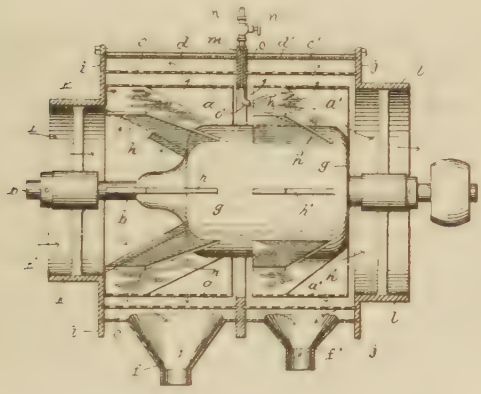
1. A toy including a base, one end of which is equipped with a driver wheel, a figure mounted upon said base, a pendulum operable by movement of said driver to lower one end of said figure and raise the opposite end thereof, and means carried by said figure and automatically movable by the elevation of one end thereof to describe various phases of movement.

1,415,293. ERASING ATTACHMENT FOR TYPEWRITERS. JOHN H. BALDWIN, Chicago, Ill., assignor to The Baldwin Eraser Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 14, 1918, Serial No. 249,793. Renewed Sept. 26, 1921. Serial No. 503,993. 8 Claims. (Cl. 197—181.)



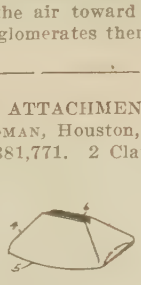
1. The combination with a typewriter frame and platen, of a spool carrying frame swingingly mounted upon the typewriter frame for movement toward the platen and having a contact surface for cooperation therewith, and winding and supply spools rotatably mounted in the spool carrying frame for feeding an adhesive tape over the said contact surface.

1,415,294. DUST SEPARATOR. WILLIAM J. BALDWIN, Brooklyn, N. Y. Filed Mar. 14, 1921. Serial No. 452,223. 3 Claims. (Cl. 183—30.)



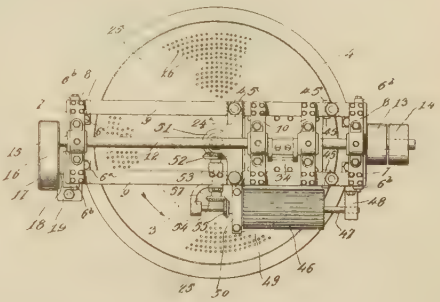
1. In an apparatus for separating gas from heavier materials, the combination, with an outer casing, of a shaft extended longitudinally within the same, primary and secondary cylindrical screens attached to the said shaft with open ends adjacent to one another for the free passage of gas, a drum upon the shaft arranged to clear the inlet of the primary screen for a considerable space, to freely admit the gas within said screen, and extended through the secondary screen, fan-blades connecting the drum with the screens and operating to propel the gas into and through the interiors of the two screens successively, means for spraying moisture into the gas between the secondary screen and drum, and the drum operating to crowd the air toward the secondary screen and discharge the agglomerates therethrough.

1,415,295. FENDER ATTACHMENT. ORLO O. BALLARD and JACOB C. STEDMAN, Houston, Tex. Filed May 15, 1920. Serial No. 381,771. 2 Claims. (Cl. 280—150.)



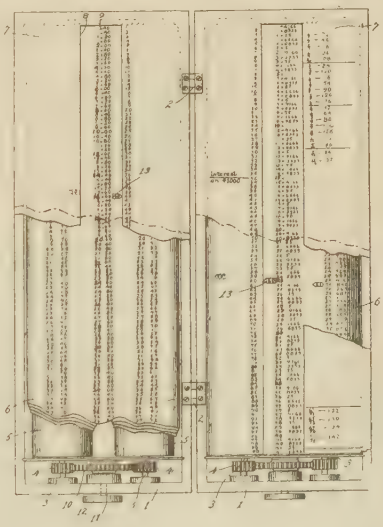
1. An attachment of the character described adapted to be inserted between the automobile fender and the adjacent side plate, and consisting of a cushioning block having a lengthwise groove in one side thereof to receive said plate and having a concave portion on its other side to rest on said fender.

1,415,296. MACHINE FOR SEPARATING FLESH FROM THE SKIN AND BONES OF FISH. JAMES J. BARRY, East Boston, Mass., assignor to L. Pickert Fish Company, East Boston, Mass., a Corporation of Maine. Filed Nov. 12, 1921. Serial No. 514,740. 11 Claims. (Cl. 17—10.)



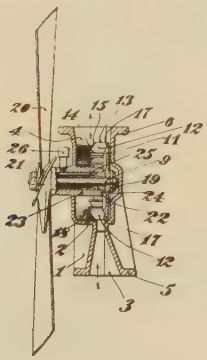
1. In means for separating the flesh of fish from the skin and bones thereof, the combination of a traveling perforated septum, means for pressing the fish against said septum, means for reciprocating said pressing means toward and from said septum, and a yielding connection between said presser means and said means for reciprocating it.

1,415,297. CALCULATING MACHINE. FRANCIS A. BELT, Cincinnati, Ohio. Filed Mar. 4, 1920. Serial No. 363,155. 3 Claims. (Cl. 235—86.)



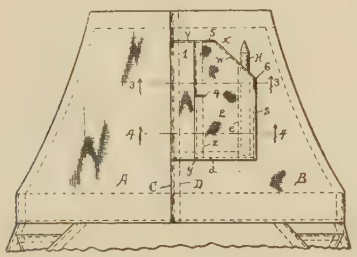
1. In a calculating machine, the combination with a housing, a chart mounted therein upon suitable rollers having transverse columns of numerals, said housing having an elongated opening to expose the transverse columns on the chart, a series of numerals arranged along the opening, each numeral of said series having special relation to one of the columns on the chart, and a special indication device on each column on the chart adapted to come opposite the numeral having special relation to said column, whereby the operator may rapidly move the chart and watch the special numeral for the desired column until an indicator comes opposite it.

1,415,298. STEAM TURBINE. OLIVER D. H. BENTLEY, Roslindale, Mass., assignor to B. F. Sturtevant Company, Hyde Park, Mass., a Corporation of Massachusetts. Filed Aug. 29, 1917. Serial No. 188,848. 14 Claims. (Cl. 253—55.)



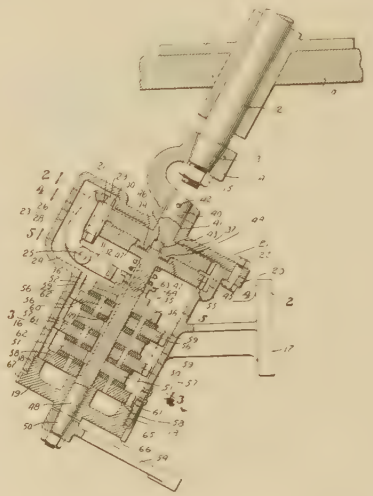
1. A steam turbine, having, in combination, a rotor having steam passages therein with their inlet or receiving end portions adjacent the outer periphery of the rotor substantially in line with the inlet nozzles in the casing and with discharge ports at one side of the rotor, and a casing for the rotor having a steam inlet nozzle and an exhaust opening at the outer periphery of the rotor, an exhaust space at the side of the rotor and a wall in close proximity to the periphery of the rotor between the nozzle and the exhaust opening.

1,415,299. SAFETY OVERALL POCKET. ALONZO S. BLOWERS, Portland, Ind. Filed Dec. 29, 1919. Serial No. 348,063. 1 Claim. (Cl. 2—15.)



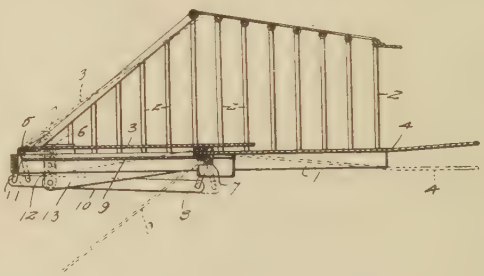
In combination with overalls having a two-part bib secured at its lower edge with the two parts of the bib connected by a vertical line of stitching; a safety pocket comprising two distinct pieces of fabric forming minor and major members, the minor member being formed of a straight oblong strip secured in vertical position at its upper, lower, and left-hand edges, the left hand edge of the minor member being secured between the edges of the members of the bib, the major member of the pocket being of the same length as the minor member but formed considerably wider and its left hand corner portions are truncated, a hem formed at the left hand edge of the major portion said hem being secured by two lines of stitching, the said hemmed edge of the major portion being arranged to extend over the right hand portion of the minor member with the ends thereof located even with each other, lines of stitching for permanently securing together the lower half of the minor and the major members only, whereby a pocket mouth is formed above said lines of stitching, and reinforcements located at the ends of the mouth to the pocket and at the ends of said truncated corner, all substantially as shown and described.

1,415,300. AUTOMATIC LOCKING AND RETAINING DEVICE FOR STEERING MECHANISMS. ALLEN BOROFSKY, Ayer, Mass. Filed June 23, 1919. Serial No. 305,980. 7 Claims. (Cl. 74—39.)



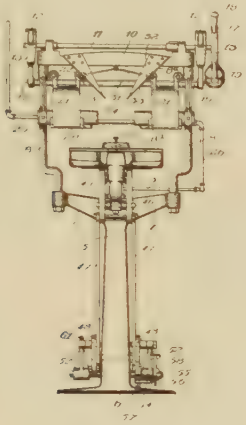
1. A device of the character described, comprising a casing member adapted to be secured to a fixed member for remaining stationary therewith; co-related adjacent and peripherally scalloped disc members coupled to operate together with means provided therebetween for yielding angular play to effect a lead and lag between them, said disc members being rotatably mounted within said casing member and each provided with centrally located spindles projecting in opposite directions and protruding beyond said casing, one engaging with the steering post for rotating therewith, and the other engaging with the steering mechanism operating link; a friction disc clutch mounted on said latter spindle and adapted to control the turning operations thereof; and a co-related transmitting lever adapted to couple said peripherally scalloped disc members with said spindle clutching mechanism for locking and releasing the spindle therewith.

1,415,301. SELF-SET ANIMAL TRAP. RUEL E. BOUNDS and PERRY S. DUMBOLTON, Wortham, Tex. Filed May 26, 1921. Serial No. 472,621. 2 Claims. (Cl. 43—67.)



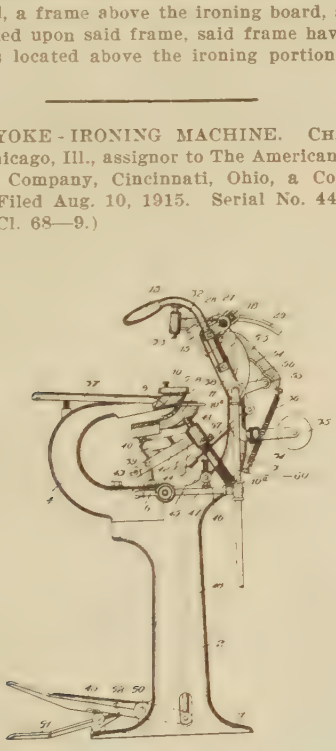
1. A trap of the character specified comprising a body open at one end and bottom, pivoted doors closing the bottom of the trap and arranged the one to swing upwardly and the other downwardly, a third door pivoted at its inner end and adapted to swing downwardly at its outer end and disposed beneath the upwardly swinging door, and connecting means between the several doors, whereby the third door forms counter balancing means for the first two mentioned doors.

1,415,302. IRONING MACHINE. CHARLES L. BRALEY, Chicago, Ill., assignor to American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 19, 1914. Serial No. 878,058. 16 Claims. (Cl. 68—9.)



15. In a machine for ironing the yokes of shirts, an ironing board, a frame above the ironing board, and irons slidably carried upon said frame, said frame having heating chambers located above the ironing portions of said irons.

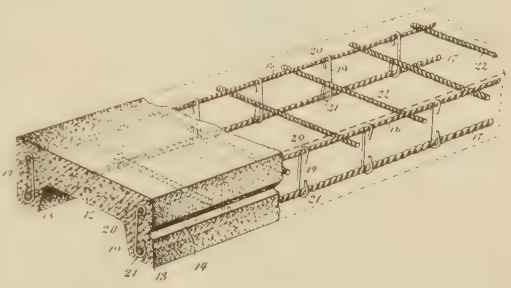
1,415,303. YOKE-IRONING MACHINE. CHARLES L. BRALEY, Chicago, Ill., assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 10, 1915. Serial No. 44,698. 20 Claims. (Cl. 68—9.)



1. In a yoke ironing machine, the combination with a bed, of a carrier swingingly mounted with relation to the bed, and a pair of pressing members mounted on the carrier and movable together up and down relative to said bed, and also having movement toward each other during the downward swinging movement of the carrier.

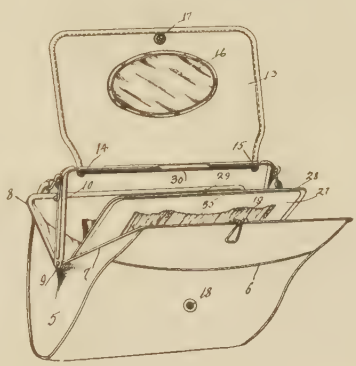
16. In a machine for ironing the yokes of shirts, an ironing board, a horizontally disposed frame above the ironing board, irons slidably carried upon the underside of the frame, said frame having heating chambers above the irons.

1,415,304. PLANKING FOR BRIDGES, ETC. OSCAR E. BRAY, Buffalo, N. Y., assignor of one-half to George C. Broadbooks, Attica, N. Y. Filed Sept. 9, 1920. Serial No. 409,186. 1 Claim. (Cl. 72—64.)



A plank having a concrete body consisting of a horizontal web and vertical flanges depending from opposite longitudinal edges of the web and each flange being provided on its outer side with a horizontal longitudinal groove, and a reinforcement for said body consisting of a plurality of transverse metal bars arranged in a longitudinal row in the web and each extending substantially the full width of said body and having its opposite ends arranged immediately above the longitudinal grooves in said flanges, two upper metal longitudinal rods arranged in the body at the corners between its web and flanges and resting on said transverse rods, a plurality of metal hangers arranged vertically at intervals in each of said flanges throughout the length thereof and each provided at its upper end with a hook engaging over one of said upper longitudinal rods and provided at its lower end with a lower hook, and a lower metal longitudinal rod arranged lengthwise in the lower part of each flange and supported by the lower hooks of the hangers in the respective flange of the body.

1,415,305. HAND BAG. MAX BRILL, New York, N. Y. Filed Jan. 11, 1921. Serial No. 436,425. 7 Claims. (Cl. 150—29.)

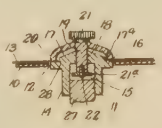


1. In a hand bag a frame comprising an intermediate section and side sections disposed on opposite sides of the intermediate section and pivotally connected thereto, a partition section pivotlaly connected to the intermediate section and arranged so as to telescope therewith and be moved into spaced relation with either side thereof, and a flexible bag body secured to the said side section and to the partition section.

1,415,306. CHART SUPPORT FOR RECORDING INSTRUMENTS. FREDERICK C. BUECHMAN, Brooklyn, N. Y. Filed Mar. 7, 1921. Serial No. 450,324. 6 Claims. (Cl. 234—1.)

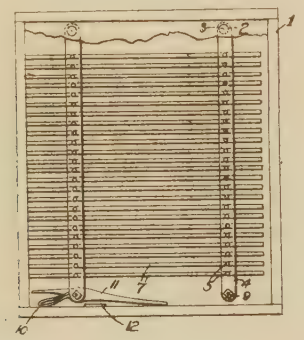
2. A device of the class described comprising a suitable body portion, a cap irremovably mounted in connection

with said body portion and capable of movement toward and from one face thereof, and said cap being apertured



to permit of the threading of an article therethrough whereby said article may be clamped between the abutting faces of said cap and said body portion.

1,415,307. FILING CABINET. AMBROSE ROY BULLOCK, Boston, Mass. Filed July 25, 1921. Serial No. 487,289. 3 Claims. (C. 45—64.)



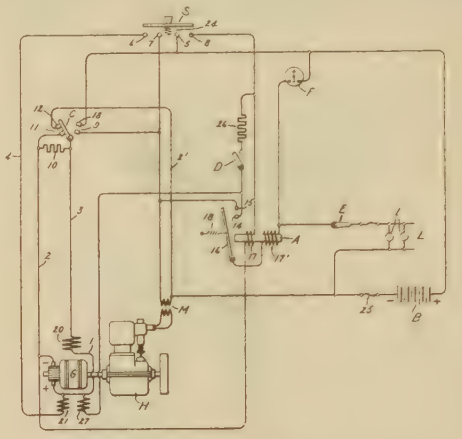
1. A filing cabinet, including a casing, rods secured in the casing, arms suspended from the rods and free to swing thereon, said arms arranged in pairs and provided with alining apertures spaced apart longitudinally thereof, shelves positioned between the arms, wires secured to the shelves and having their ends supported in the apertures, spacing rods secured to the lower ends of the arms, a loop secured to the forward spacing rod for manually swinging the shelves, a lever carried by the forward spacing rod and a catch adapted to contact the rear end of the lever when the shelves are swung to extended position to retain the shelves in such position.

1,415,308. DECOMPOSITION OF ALUMINUM SULPHATE, ETC. HARVEY M. BURKEY, Plainfield, N. J., and HENRY M. SCHLEICHER, Boston, Mass., assignors to American Metal Company, Ltd., New York, N. Y., a Corporation of New York. Filed Feb. 16, 1920. Serial No. 359,044. 6 Claims. (Cl. 23—13.)

1. The method of effecting the decomposition of aluminum sulphate, which comprises heating a solution of the same to a high temperature and pressure.

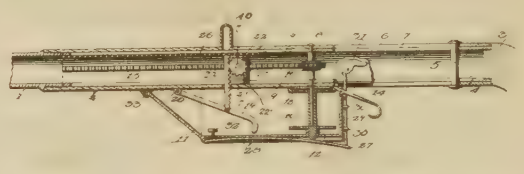
1,415,309. ELECTRIC SYSTEM. FRANK A. BYLES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 12, 1919. Serial No. 303,601. 7 Claims. (Cl. 290—35.)

5. The combination of an engine, a dynamo electric machine connected thereto and adapted to operate as a motor or as a generator, a storage battery, a starting switch for closing a circuit including said storage battery and said dynamo electric machine to operate said machine as a motor to crank said engine, a relay having a coil responsive to the voltage of said machine when operating as a generator for operating said relay to close a circuit between said machine and battery independent of said starting switch to charge said battery, a locking coil for said relay in series with said charging circuit and arranged to maintain said charging circuit closed as long as the charging current exceeds a predetermined



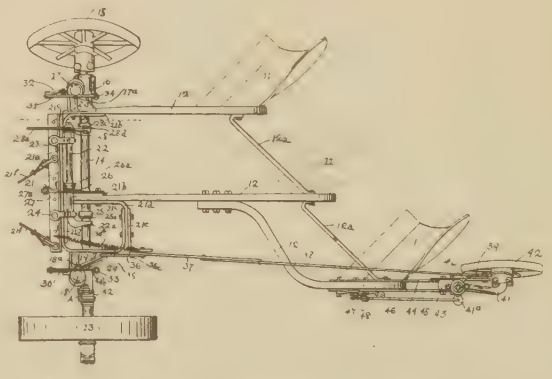
value, and means for energizing said relay independent of said locking coil so as to maintain said charging circuit closed to overcharge said battery.

1,415,310. FISHING ROD. JOHN CLAY CALDWELL, Miami, Fla. Filed June 19, 1920. Serial No. 390,162. 3 Claims. (Cl. 43—20.)



2. A fishing rod comprising a handle, a sleeve slidable therein, a reel associated with the sleeve, a line carrying arm pivoted to said handle and adapted for guiding the line onto the reel, a rack pivoted to said arm for swinging the same, a pinion meshing with said rack, and means operated by the movement of said sleeve to oscillate said pinion.

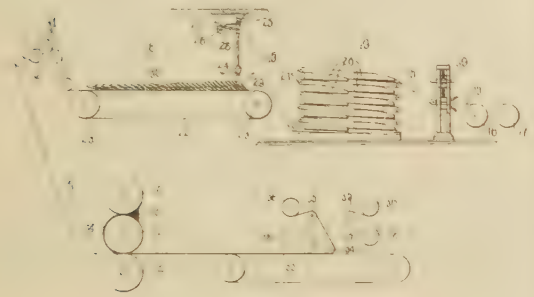
1,415,311. PLOW. WILLIAM W. CAMERON, La Crosse, Wis., assignor, by mesne assignments, to Fred Gerlach and Arnold B. Keller, trustees, Chicago, Ill. Original application filed Feb. 27, 1917, Serial No. 151,347. Divided and this application filed Aug. 1, 1919. Serial No. 314,664. 6 Claims. (Cl. 97—54.)



1. In a plow, the combination of carrying wheels, a plow carrying structure, a supporting structure comprising a crank shaft, a raising and lowering connection between the crank shaft and the plow carrying structure, power operated means for operating the crank shaft,

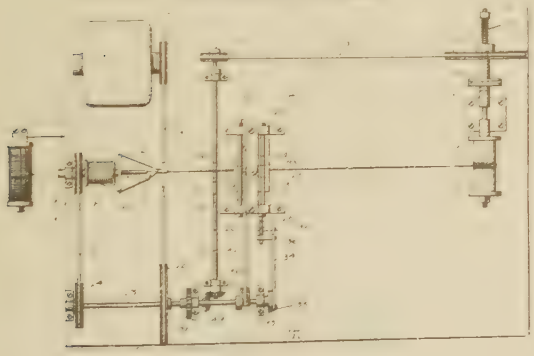
means for releasing the operating means when the crank shaft has passed the dead center, a lock for the shaft, means for carrying the crank shaft from the releasing point to the locking position, and means for releasing the lock.

1,415,312. CONTINUOUS FABRIC FEED. MARTIN CASTRICUM, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed July 15, 1920. Serial No. 396,457. 1 Claim. (Cl. 91—18.)



In combination with a calender, a source of fabric supply, means for joining the end of one fabric web with the leading end of another fabric web, a belt interposed between the said joining means and the calender and presenting a supporting surface for the fabric web, said belt being driven at a surface speed materially slower than the speed of the fabric web through the calender, and means for laying the fabric web upon the belt in a plurality of substantially even overlying folds.

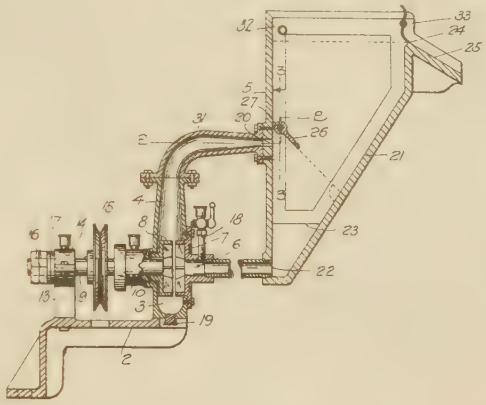
1,415,313. METHOD OF MAKING LEATHER YARN AND ARTICLE. WILLIAM M. CAVANAUGH, New York, N. Y. Filed Oct. 15, 1918. Serial No. 258,210. 4 Claims. (Cl. 28—21.)



3. A leather yarn comprising a core, and twisted, leather strips surrounding the same.

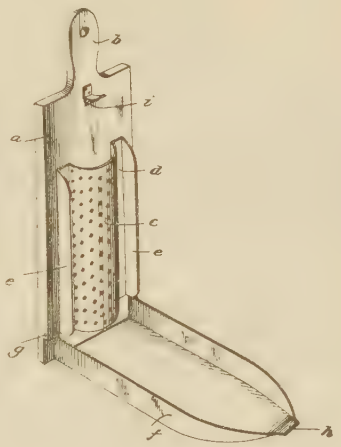
1,415,314. APPARATUS FOR THE SEPARATION OF ORES BY FLOTATION. HERBERT C. COLBURN and ERNEST A. COLBURN, Denver, Colo., assignors to The Colburn Flotation & Engineering Company, Denver, Colo., a Corporation of Colorado. Filed Jan. 3, 1919. Serial No. 269,517. 4 Claims. (Cl. 83—85.)

1. The combination of a settling chamber having an inclined surface and provided with an inlet opening located opposite the said surface and beneath a predetermined liquid level and arranged to discharge in the direction of the inclined surface, a mixing chamber, means for introducing the material from the mixing chamber into the settling chamber in sheet like form, a vertically angularly adjustable baffle arranged within the settling



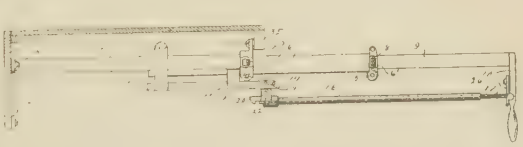
chamber in position overhanging the inlet opening for directing the said material towards the inclined surface of the settling chamber, and means for returning the settling material to the mixing chamber.

1,415,315. GRATER. ATTILIO CONTE, Buenos Aires, Argentina. Filed Aug. 4, 1921. Serial No. 489,801. 3 Claims. (Cl. 146—15.)



1. A device of the class described comprising in combination, a supporting element, a separate element having a grating surface secured to the supporting element and projecting outwardly therefrom, a member pivoted to one of said elements and movable relatively thereto and constituting in one position a receptacle for the grated material and in a second position adapted to be folded against said supporting element to constitute a protective cover for the grating element.

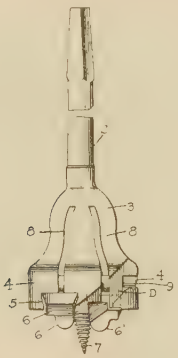
1,415,316. GARMENT-HANGER BRACKET. CHARLES B. CORBIN, Grand Rapids, Mich. Filed May 27, 1921. Serial No. 473,188. 5 Claims. (Cl. 211—16.)



1. In a garment hanger bracket, a channeled supporting bar secured in a clothes cabinet, a longitudinally extensible

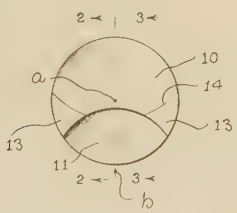
bar mounted in said supporting bar, tracks mounted below, supported by and longitudinally movable upon the supporting bar, the front end of said track supported by and longitudinally movable with the extensible bar, a second bar mounted in the first extensible bar and longitudinally extensible therefrom, a garment holder bar having one end mounted so this bar will be made to move longitudinally with the second extensible bar, and the other end mounted to be supported by and to travel longitudinally upon the tracks, and a handle connected at one end with the end of the second extensible bar, and connected near its center with one end of the garment hanger bar so the garment hanger bar will be made to move with the movements of the extensible bars.

1,415,317. EXPANSIBLE BIT. JOHN CRAWFORD and FREDERICK A. WEAVER, Denver, Colo. Filed May 12, 1920. Serial No. 380,875. 10 Claims. (Cl. 145—127.)



1. A bit comprising a head, having a flat end face and a plurality of cutters adjustably mounted in the flat end face of said head, said cutters having their long axes inclined relative to the end face of the head and their cutting edges inclined downward from said face to the outer end of the cutter.

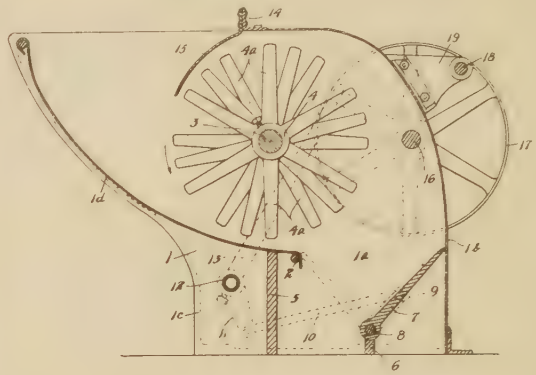
1,415,318. MULTIFOCAL OPHTHALMIC LENS. ANDREW JAY CROSS, New York, N. Y. Filed Jan. 21, 1922. Serial No. 530,744. 4 Claims. (Cl. 88—54.)



1. As an improved article of manufacture, a trifocal lens having near and distance visual fields arranged one above the other, and intermediate visual fields at opposite edge portions and partly between the near and distance visual fields, the intermediate fields having an approximately common optical center which is not common to the other visual fields of the lens.

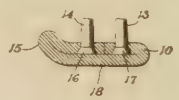
1,415,319. FEEDING DEVICE. EMIL R. DRAVER, Richmond, Ind., assignor to B. F. Gump Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 1, 1921. Serial No. 519,262. 6 Claims. (Cl. 83—44.)

1. A mill feeder having in combination, a casing having an inlet chamber with a downwardly and inwardly curved bottom, terminating with an abrupt inner edge, a rotatable feeding member in said casing comprising a shaft extending therethrough substantially vertically alined with said edge, a plurality of short hub members secured to said shaft, each having a plurality of radially extending



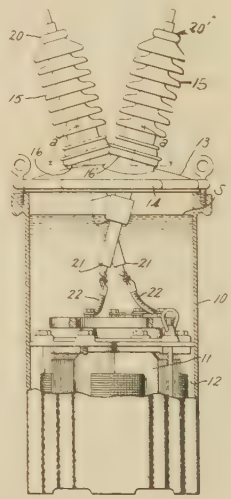
arms thereon, the ends of which pass in close proximity to said bottom, and means for rotating said shaft to move said arms downwardly through said inlet chamber towards the said edge.

1,415,320. CONTACT FINGER AND METHOD OF MAKING THE SAME. THOMAS E. DROHAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 17, 1920. Serial No. 431,522. 8 Claims. (Cl. 29—155.5)



1. A contact member formed of a strip of metal having a pin passing through a portion thereof, the portions of the strip being folded onto each other.

1,415,321. ELECTRICAL APPARATUS. EUGENE D. EBY, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 23, 1919. Serial No. 332,618. 3 Claims. (Cl. 175—361.)



2. In oil submerged electrical apparatus, the combination with a tank having a cover, of high voltage bushings mounted in said cover at a distance less than the per-

missible electrical clearance between the exposed ends of the conductors of said bushings, said bushings having their axes reversely inclined on opposite sides of the cover whereby both their ends diverge sufficiently to provide the necessary electrical clearances.

1,415,322. KNITTING-MACHINE NEEDLE. JOHN C. EGLY, Philadelphia, Pa. Filed Mar. 13, 1920. Serial No. 365,412. 2 Claims. (Cl. 66—5.)

1. A knitting machine needle having a flexible portion in proximity to its butt formed by removing a portion of the wall on opposite sides of the needle and bent at the flexible portion to give the proper friction when in use in a needle cylinder.

1,415,323. MANUFACTURE OF ARSENIC ACID. CARLETON ELLIS and VERNON T. STEWART, Montclair, N. J. Filed May 21, 1921. Serial No. 471,436. 10 Claims. (Cl. 23—1.)

2. The process of making arsenic acid which comprises reacting on a mixture of white arsenic and a slightly lesser amount of water with chlorine gas, in forming a solution of the white arsenic and in continuing the introduction of chlorine to completely oxidize the material to arsenic acid.

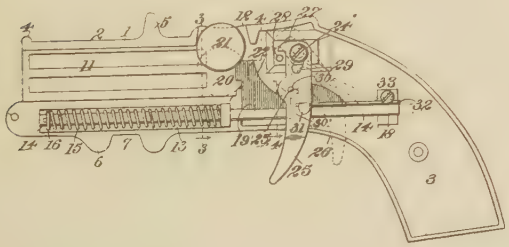
1,415,324. PROCESS OF RENDERING CONCRETE RESISTANT TO WATERS CHARGED WITH SOLUBLE COMPOUNDS AND PRODUCT THEREOF. BERNARD F. ERDAHL, Duluth, Minn. Filed Sept. 30, 1920. Serial No. 413,931. 23 Claims. (Cl. 106—24.)

10. As a new product, concrete having the capillaries thereof coated with a metal-alginate-film.

1,415,325. ICE MANUFACTURE. RIDSDALE ELLIS, Oak Park, Ill. Filed Feb. 14, 1919. Serial No. 277,095. 4 Claims. (Cl. 62—172.)

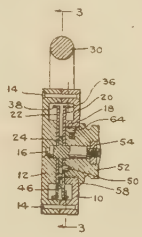
1. The process of making artificial ice which includes the addition to the water of readily adsorbed material to inhibit the freezing of air bubbles into the ice and then freezing the water so treated.

1,415,326. SELF-COCKING PISTOL. EDMUND C. FEY, San Francisco, Calif. Filed June 21, 1921. Serial No. 479,179. 2 Claims. (Cl. 124—12.)



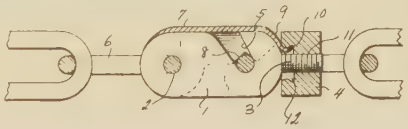
1. A pistol including a body formed with a barrel and a hand grip portion, said body provided with a projectile discharge opening disposed longitudinally of the barrel and a receiving opening communicating with the rear of the discharge opening, a spring actuated projectile impeller within the body, a trigger mounted at its upper end to pivot on a variable fulcrum, a curved shoulder on said projectile impeller, a pin on said trigger for engaging said shoulder on the manual rearward movement of the trigger to first move the impeller rearwardly and then release the same to shoot the projectile from the barrel, and a spring for moving the trigger forwardly on the release of manual pressure therefrom for a succeeding engagement of the pin with the shoulder.

1,415,327. PERMUTATION PADLOCK. PETER J. FONOS, New Richmond, Wis. Filed Jan. 3, 1921. Serial No. 434,533. 4 Claims. (Cl. 70—112.)



1. A permutation padlock comprising a casing, a shackle mounted upon said casing, a forwardly extending post secured to the back of said casing, tumblers rotatably mounted on said post, means on said tumblers for cooperation with the locking end of said shackle, a knob rotatively mounted upon the forward portion of said post, means for connecting said knob to the front tumbler, and means which permits said connection to be shifted to change the combination when the lock is in unlocked condition.

1,415,328. ANTISKID-CHAIN HOOK. ALFRED E. FORSETH, Hardwick, Minn. Filed Aug. 20, 1921. Serial No. 493,945. 2 Claims. (Cl. 24—241.)

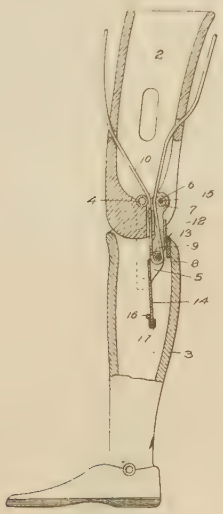


1. An anti-skid chain hook comprising a body having a link receiving notch therein, a longitudinal threaded extension on the body, a notched keeper pivoted upon the body and adapted to hold a link within the notch, a curved spring tongue on the free end of the keeper, and a nut threaded on the extension and having one face formed with an under cut groove conformingly engaging upon said tongue.

1,415,329. BACK CHECK AND CONTROLLER FOR ARTIFICIAL LEGS. ADAM FORSTER, Pittsburgh, Pa., assignor of one-half to James J. Mount, Pittsburgh, Pa. Filed Aug. 1, 1921. Serial No. 488,995. 4 Claims. (Cl. 3—11.)

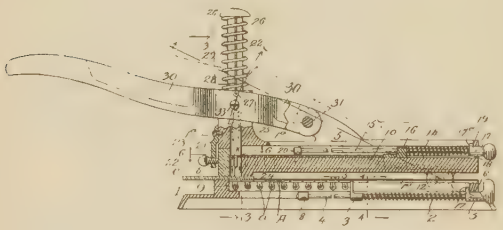
3. The combination of a thigh-section and a leg-section pivotally connected together, a back check sus-

pended from the said thigh-section extending down into the leg-section and adapted to be bear against the rear of the said leg-section, sheaves carried by the said



back-check, and a suspender loop passing around said sheaves and adapted to pass over and to be supported on the shoulder of the wearer.

1,415,330. MACHINE FOR SETTING SNAP FASTENERS. ADOLPH FRANKEL, New York, N. Y. Filed Mar. 18, 1921. Serial No. 453,303. 7 Claims. (Cl. 1—3.)



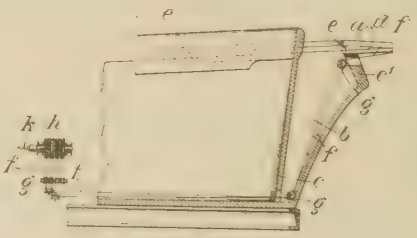
1. The combination of a base having a longitudinal guideway, means tending constantly to feed a plurality of members in the guideway, an arm over the base having a longitudinal guideway opposed to the first named guideway, means to feed members in the second named guideway, said arm and base being movable relatively one to another to receive fabric therebetween, abutments at the ends of said guideways to retain members over one another, and a plunger operative relatively to said guideways to push members from the second named guideway to members in the other guideway through the interposed fabric.

1,415,331. GRINDING WHEEL. EDWARD B. GARDNER, Beloit, Wis. Filed Apr. 8, 1920. Serial No. 372,289. 2 Claims. (Cl. 51—209.)

1. As an article of manufacture, an integral continuous circular abrasive element composed of abrasive material presenting a grinding face perpendicular to its axis of rotation, the rear face of said element having a plurality of anchoring devices embedded therein and fixedly secured thereto, which devices are adapted to

receive fastening members by which said element may be detachably mounted upon a rotating support.

1,415,332. COVERING DEVICE FOR FOLDING HOODS OF VEHICLES. CONRAD GEBHARD, Munich, Germany, assignor to The Firm "Asfag" Aktiengesellschaft, Glarus, Switzerland. Filed Dec. 1, 1920. Serial No. 427,639. 3 Claims. (Cl. 296—136.)

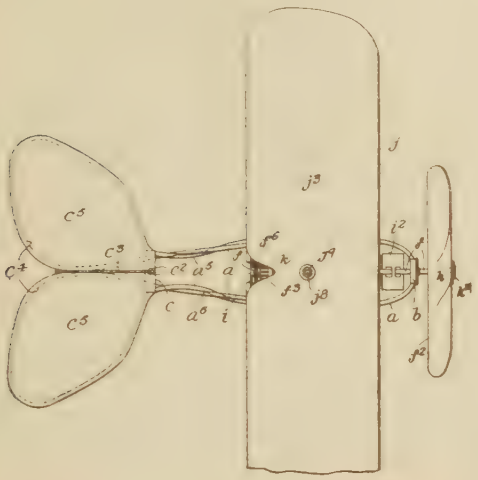


2. A covering device for folding hoods of vehicles, comprising two curved covering parts slidably supported in prismatic guides so as to allow of their being drawn out in an oblique direction to the vehicle body, two pulling members being provided for each of the two covering parts, attached to opposite points of the latter and winding around a drum so that the covering parts may be simultaneously opened or closed according to the direction in which said drum is revolved.

1,415,333. TOY FLYING MACHINE. ROSARIO GENOVESE, New York, N. Y. Filed Mar. 30, 1921. Serial No. 456,852. 3 Claims. (Cl. 244—14.)

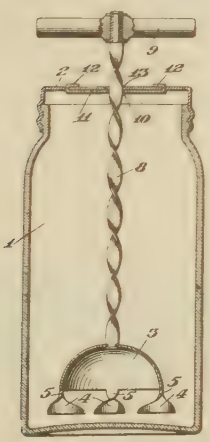
1. In a toy flying machine of the class described; a body or frame-work composed entirely of reeds or reed material, a spring power casing mounted centrally and transversely of said frame work, a propeller shaft mounted in the front portion of the body or frame-work and projecting forwardly thereof and provided with a propeller, said propeller shaft being also provided within

said casing with a gear, a lock device operating in connection with said gear, a spring shaft mounted below said gear and provided with a large gear which operates in connection therewith, a spiral spring mounted on said spring shaft and one end of which is connected



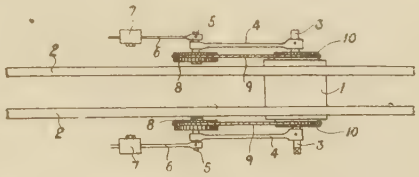
therewith and the other end with said casing, a ratchet wheel mounted on the propeller and a pawl operating in connection therewith whereby the spring may be wound up by means of the propeller and propeller shaft, and means whereby said spring may also be wound up by a key inserted through the back of said casing.

1,415,334. CHURN. MARSHALL D. GIBSON, Webster Groves, Mo. Filed Sept. 23, 1918. Serial No. 255,246. 5 Claims. (Cl. 259—144.)



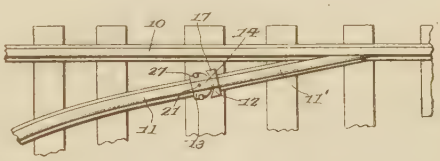
1. In a device of the character described, a dasher comprising an inverted cup having an unobstructed interior chamber and a series of blades depending from the edge thereof.

1,415,335. MECHANISM FOR CONVERTING ROTARY INTO RECIPROCATORY MOTION. RUDOLF GOLDSCHMIDT, Berlin, Germany, assignor to Det Tekniske Forsögsaktieselskab, Ordrup, Charlottenlund, Denmark, a Company of Denmark. Filed Jan. 29, 1921. Serial No. 441,097. 7 Claims. (Cl. 74—14.)



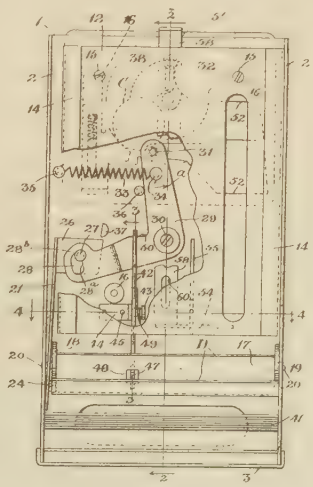
1. Mechanism for converting rotary into reciprocatory motion comprising a reciprocatory member, a jointed arm pivoted to said member and a weight mounted on the outer part of said jointed arm.

1,415,336. SWITCH-POINT CONNECTOR. GUS GOODART, Latuda, Utah. Filed Jan. 10, 1922. Serial No. 528,221. 1 Claim. (Cl. 238—165.)



A switch point connector comprising a pair of pivotally connected members having a scarf joint connection, one of the members having a vertical opening, the lower portion of which is enlarged to produce a shoulder, the opening having a channel in its side wall, means carried by the members for connection respectively with a rail and a switch point, and a pin carried by the other member rotatably disposed in the opening of the first member and having a transverse web movable through the channel of the said opening and normally engaging beneath the shoulder of the said opening.

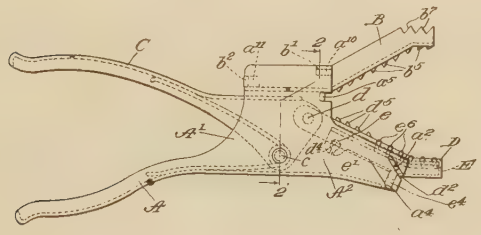
1,415,337. COIN-CONTROLLED VENDING MACHINE. ALBERT D. GROVER, New York, N. Y., assignor, by mesne assignments, to Autosales Corporation, a Corporation of New York. Filed Aug. 20, 1917. Serial No. 187,206. 8 Claims. (Cl. 211—8.)



1. In a vending machine, a casing having a magazine for containing the vendible articles, a delivery cylinder

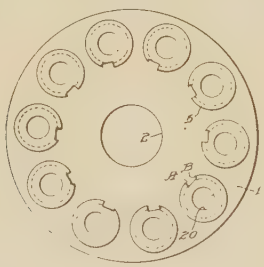
pivoted below said magazine for ejecting the bottom article, a vertically slidable bar mounted at one side of said casing and provided at its lower end with an approximately horizontal slot, a pin carried by said cylinder and engaging said slot, whereby vertical movement of said bar causes rotation of said cylinder to discharge the bottom package, a pivoted lever provided with a cam-slot at one end, a lug on said bar for engaging in said cam-slot, whereby the operation of said lever first shifts said bar transversely of the casing and then moves the same vertically to rotate said cylinder, means for manually operating said lever from the outside of said casing, and a fixed stop for preventing operative movement of said bar otherwise than by said lever, said preliminary transverse shifting of the bar causing it to avoid said stop during the subsequent vertical movement of the bar.

1,415,338. NUTCRACKER. AUGUST C. GUHL, Chicago, Ill. Filed Aug. 8, 1921. Serial No. 490,450. 5 Claims. (Cl. 146—3.)



1. In a nut cracker or the like, in combination with a handle member having a jaw at the end opposite the handle; a lever handle member fulcrumed on the first mentioned handle member; a second jaw member pivotally connected with the lever handle member for reciprocation of its point of pivotal connection in a path making an acute angle with the first mentioned jaw, and cooperating means on the first mentioned handle member and second jaw member for guiding the end of said second jaw member remote from the lever connection in a path at a wider angle to the first mentioned jaw than said acute angle.

1,415,339. MILLING CUTTER. PETER P-G. HALL, Philadelphia, Pa. Filed Mar. 24, 1920. Serial No. 368,239. 13 Claims. (Cl. 29—105.)

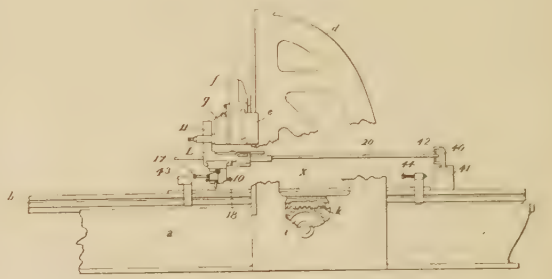


1. In a metal working mechanism, the combination of a cutter provided with a plurality of cutting elements, means for adjustably securing said cutting elements in operative cutting position, each cutting element being provided with a cutting surface and a plurality of unconnected peripheral parallel ridges each having the profile of a thread to be formed in the work.

1,415,340. MANUFACTURE OF BORNEOL. ALBIN HALLER, Paris, France, assignor to Societe Fabriques de Produits Chimiques de Thann et de Mulhouse, Mulhouse (Alsace,) France. Filed Jan. 30, 1920. Serial No. 355,217. 2 Claims. (Cl. 260—99.)

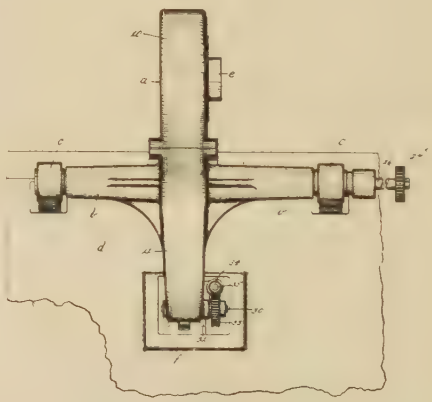
2. As a new product, di-bornyl ester of a tetrachlorophthalic acid.

1,415,341. METAL-WORKING MACHINE. BENGT M. W. HANSON, Hartford, Conn. Filed Jan. 16, 1920. Serial No. 351,799. 14 Claims. (Cl. 90—24.3.)



1. In a metal working machine, a work support, a tool support movable retcilinearly one relative to the other in one direction, means for moving said tool support back and forth a plurality of times in another direction to effect a zig-zag cut, and means for varying the extent of movement of said tool support.

1,415,342. WORK HOLDER. BENGT M. W. HANSON, Hartford, Conn. Original application filed Apr. 28, 1920, Serial No. 377,267. Divided and this application filed Dec. 9, 1920. Serial No. 429,353. 7 Claims. (Cl. 51—237.)

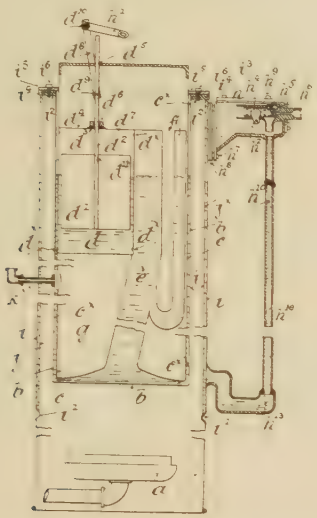


1. In a device of the character described, a work support having a head and laterally extending trunnions, bearing rings mounted in said head, a rotatable member supported by said rings, a ring gear connected to said member and having a bearing about one of said bearing rings, bearings for said trunnions, a shaft extending axially through one of said trunnions and the bearing therefor, and a gear on the inner end of said shaft through which said ring gear is driven.

1,415,343. WATER HEATER. HAROLD HARGREAVES, Burnley, England. Filed July 29, 1920. Serial No. 399,659. 9 Claims. (Cl. 126—344.)

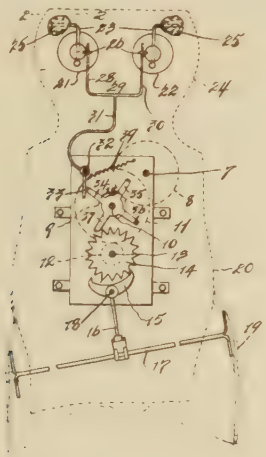
1. In a water heater, a heating device, a chamber wherein the water is boiled, and a second independent chamber

wherein the boiled water is collected, the boiling water being forced by steam pressure from the boiling chamber



to the second independent collecting chamber, and automatic means for feeding water to the boiling chamber.

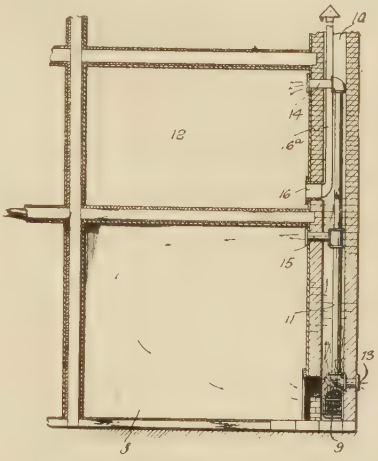
1,415,344. MECHANICAL DOLL. SAMUEL HASKELL, Brooklyn, N. Y. Filed Dec. 31, 1921. Serial No. 526,274. 4 Claims. (Cl. 46—40.)



1. In a mechanical toy, a body member, a flexible skirt carried thereby, movable eyes also carried by the body member, a motor mechanism, a vibratory arm adjacent the motor mechanism, means carried by the arm to operate said eyes, means actuated by the motor to vibrate said arm, and means actuated by the motor to vibrate said skirt.

1,415,345. HEATING APPARATUS. MARVIN PEARCE HATCHETT, Durant, Okla. Filed Mar. 23, 1920. Serial No. 368,008. 1 Claim. (Cl. 126—121.)

A heating apparatus comprising in combination with an open grate and flue thereof, a heating pipe disposed within the flue adjacent the back wall thereof and having its lower end leading through a wall of the building directly to the external atmosphere, an elbow at the lower end immediately above the grate, oppositely extending lateral outlet pipes leading from said heating pipe into the extreme upper portions of the rooms to be heated adjacent to the ceiling thereof, and a ventilator pipe

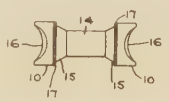


leading into and along the flue from the lower portion of the room above the one in which the grate is located, said ventilator pipe being separate from the flue and of smaller diameter than the heating pipe.

1,415,346. TREATMENT OF SLATE. CARLE R. HAYWARD, Quincy, and HENRY M. SCHLEICHER, Boston, Mass., assignors to American Metal Company, Ltd., New York, N. Y., a Corporation of New York. Filed Mar. 4, 1920. Serial No. 363,240. 4 Claims. (Cl. 23—13.)

1. The method of treating potassiferous slate for the recovery of potassium and aluminum therefrom, which comprises treating the slate with sulfuric acid at an elevated temperature, leaching out the soluble sulfates, and recovering potassium alum from the solution by crystallization.

1,415,347. MOUTH PROP. JAY A. HEIDBRINK, Minneapolis, Minn. Filed Mar. 22, 1920. Serial No. 367,901. 5 Claims. (Cl. 128—12.)

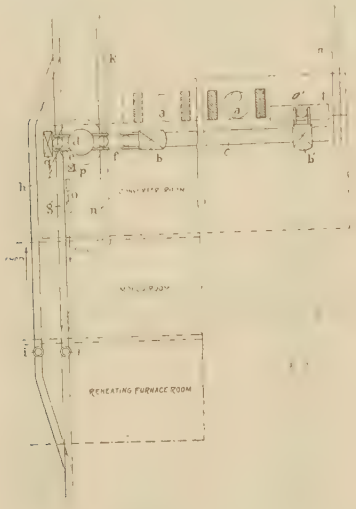


1. A mouth prop comprising two end members, shank portions integral with said end members, and a sleeve within which said shank portions are held.

1,415,348. CASTING APPARATUS. HUBERT HERMANNS, Berlin-Pankow, Germany. Filed Apr. 30, 1919. Serial No. 293,889. 2 Claims. (Cl. 22—64.)

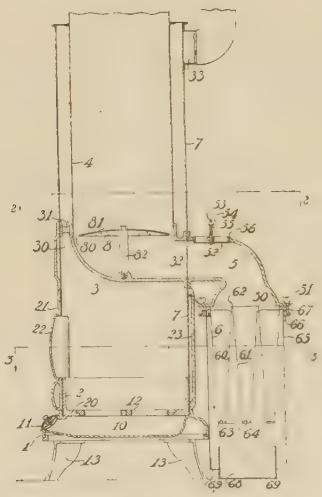
1. In apparatus of the character described, the combination of a melting furnace, a casting device, means for transferring ladles from said furnace to said casting device, a mold carrier and means for moving molds on said carrier to and from said casting device, a slag

receiver movable to and from said casting device, and means forming part of said casting device for positioning



ladles selectively either over said mold carrier or over said slag receiver.

1,415,349. STOVE. AUGUST HOLMQUIST, Monroe, Wash. Filed Oct. 13, 1921. Serial No. 507,455. 3 Claims. (Cl. 126—67.)



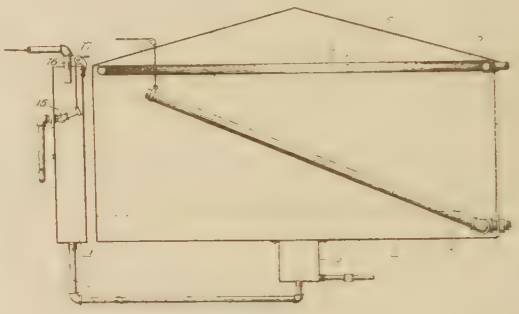
1. A stove comprising a vertical cylindrical shell, a firebox at the lower end of said shell, an inverted dome over the firebox and of less diameter than said shell to provide an annular gas flue, said dome having an air supply flue extending horizontally to without the shell, a stem extending centrally upward from said dome and a perforated air distributer plate carried by the upper end of said stem and of smaller diameter than the dome to leave an annular air passage about it.

1,415,350. COMBINED HORN AND RETURN BALL. JOHN J. HOPPS, Lawton, Okla., and CARL W. HOPPS, Westfield, N. J. Filed June 3, 1920. Serial No. 386,342. 3 Claims. (Cl. 46—46.)

1. In a device of the class described, a receiver of hollow tapered form provided interiorly near its major end with an abutment, a ball, and an elastic element connected with the ball and extending into the receiver and

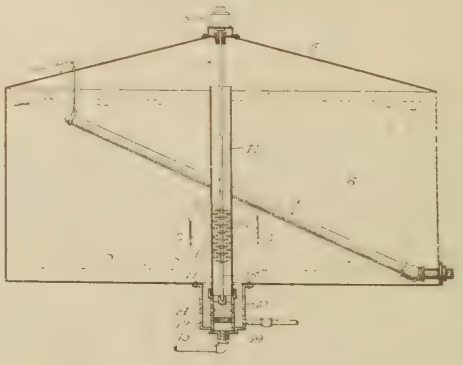
connected therewith inwardly of the abutment, the receiver between its said end and the said abutment being formed with an outwardly circumferentially bulged bell.

1,415,351. PREVENTION OF EVAPORATION OF STORED LIQUIDS. FRANK A. HOWARD and CLARENCE I. ROBINSON, Westfield, and JAMES M. JENNINGS, Elizabeth, N. J., assignors to Standard Oil Company, Bayonne, N. J., a Corporation of New Jersey. Filed Apr. 12, 1920. Serial No. 373,454. 15 Claims. (Cl. 23—11.)



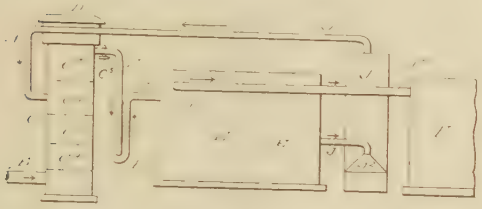
1. The method of preventing the evaporation of liquids confined in a vented storage container, which consists in maintaining on the surface of the liquid a layer of permanent foam.

1,415,352. PREVENTION OF EVAPORATION. FRANK A. HOWARD, Westfield, and JAMES M. JENNINGS, Elizabeth, N. J., assignors to Standard Oil Company, Bayonne, N. J., a Corporation of New Jersey. Filed Apr. 12, 1920. Serial No. 373,455. 16 Claims. (Cl. 23—11.)



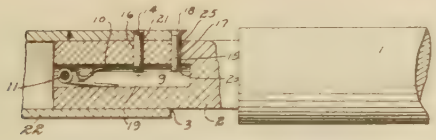
1. The method of preventing the evaporation of liquids confined in suitable storage containers, which consists in maintaining thereupon a layer of foam, thereby retaining the liquid in substantially its original state.

1,415,353. SULPHURIC-ACID MANUFACTURE. GEORGE F. HURT, Atlanta, Ga., assignor, by mesne assignments, to Joel Hurt, Atlanta, Ga. Filed May 9, 1919. Serial No. 295,943. 3 Claims. (Cl. 23—1.)



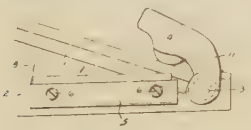
2. The method of sulphuric acid manufacture comprising passing gases from the Glover tower through a chamber and thence back into an intermediate part of the Glover tower for recirculation.

1,415,354. LOCK FOR MOVABLE PARTS. ISIDOR M. JACOBS, Kansas City, and WILLIAM CRAMER, St. Louis, Mo., assignors to Truck, Tractor, and Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 5, 1920. Serial No. 371,455. 5 Claims. (Cl. 287—119.)



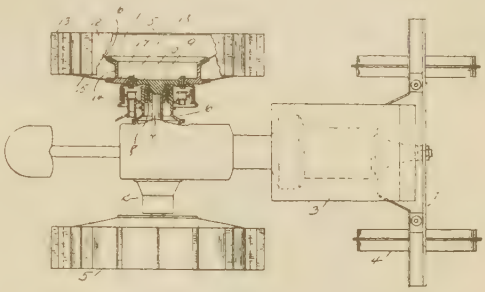
1. The combination of hollow members telescoping each other, the inner one being provided with a longitudinal bore and a lateral bore communncating with the longitudinal bore, a spring located in one of the said bores, a dog slidable in the remaining bore actuated by the said spring and adapted to lock the said members together, and another dog adapted to actuate the said spring for releasing the said first-mentioned dog.

1,415,355. BELT CUTTER. ISIDOR M. JACOBS, Kansas City, and WILLIAM CRAMER, St. Louis, Mo., assignors to Truck, Tractor, and Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 13, 1920. Serial No. 430,281. 3 Claims. (Cl. 164—40.)



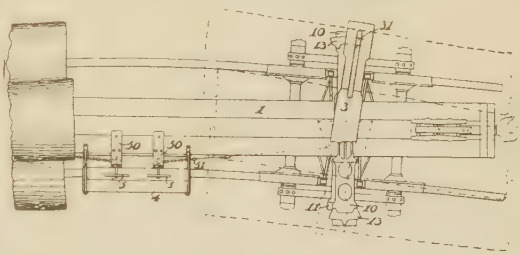
1. The combination of an anvil, a hammer, a shaft to which the said hammer is pivoted, and a knife pivoted to the said shaft, the said shaft so extending beyond the edge of the said anvil as to locate the pivoting of the said knife thereto underneath the said hammer when the same is descending toward operative position.

1,415,356. TRACTOR. JOSEPH JANDASEK, Detroit, Mich., assignor to Paige-Detroit Motor Car Company, Detroit Mich., a Corporation of Michigan. Filed Nov. 14, 1918. Serial No. 262,442. 4 Claims. (Cl. 301—128.



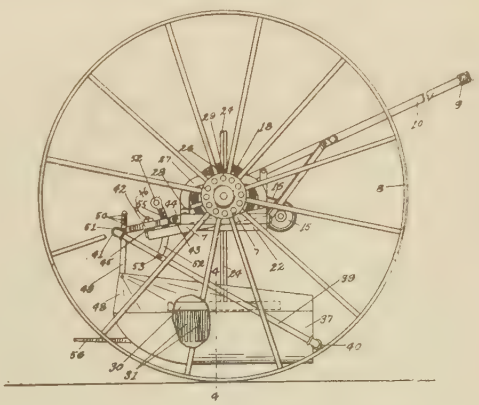
1. In a motor vehicle, the combination with an axle, and a wheel mounted on said axle, of an axle housing, and a reversible bearing container between said axle and housing.

1,415,357. PIVOTED-BUNK LOGGING CAR. HERBERT C. JARVIS, Portland, Oreg., assignor to Pacific Car & Foundry Co., Seattle, Wash., a Corporation of Washington. Filed Dec. 31, 1920. Serial No. 434,236. 6 Claims. (Cl. 105—4.)



2. A car having a bogie truck under each end, a body structure connecting the trucks, bolsters beneath the car body and pivotally connected with each truck and a load carrying bunk carried by and above each end of the car body and centrally pivoted to swing horizontally.

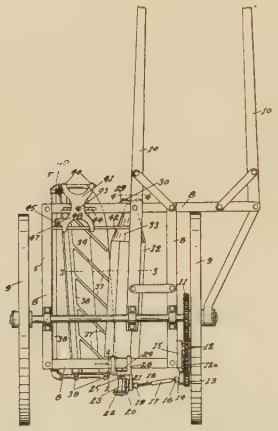
1,415,358. BUG EXTERMINATOR. WALTER A. JOHNSON, Rochester, Minn., assignor to Pioneer Manufacturing Company, Albert Lea, Minn., a Corporation of Minnesota. Filed Sept. 28, 1920. Serial No. 413,405. 2 Claims. (Cl. 43—142.)



1. A machine of the class described consisting of a frame mounted on wheels, two adjusting members slidably

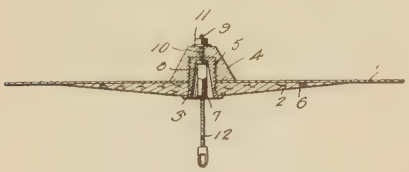
secured one on each side of the front part of the frame on which they are transversely adjustable, two longitudinally positioned receiving pans positioned under the frame, inclined hangers pivotally connected at their upper ends to said adjusting members and adapted to support the rear ends of said pans with their lower rear ends, means for adjusting the inclination of said hangers, and means for adjustably suspending the front ends of said pans, a rapping frame rotatably mounted above the space between the two pans and means for actuating the same.

1,415,359. POTATO-BUG EXTERMINATOR. WALTER A. JOHNSON, Rochester, Minn., assignor to Pioneer Manufacturing Company, Albert Lea, Minn., a Corporation of Minnesota. Filed Nov. 29, 1920. Serial No. 427,099. 4 Claims. (Cl. 43—142.)



1. A machine of the class described consisting of a suitable frame supported on wheels, a receiving pan suspended under one side of the frame, a multilateral drum journaled to rotate in contiguous relation to the pan, and operative connection between said drum and one of said wheels, said drum being conical at its forward end.

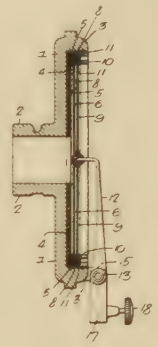
1,415,360. DIAPHRAGM ATTACHMENT. JOSEPH E. JONES, Waltham, Mass. Filed June 18, 1920. Serial No. 389,927. 2 Claims. (Cl. 274—29.)



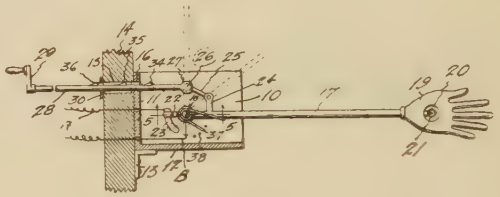
1. A diaphragm attachment comprising a diaphragm disc, a threaded plug extending through said disc a cone carried by said plug, a cord, a shank engaging said cord and fitting within said plug, a disc engaging flange clamping said disc in a set position, and means connected to said cord engaging shank and engaging said cone for locking said cone upon said plug.

1,415,361. REPRODUCER. MARTIN JONES, Philadelphia, Pa., assignor of one-half to Joseph S. MacLaughlin, Philadelphia, Pa. Filed June 19, 1917. Serial No. 175,628. 1 Claim. (Cl. 274—27.)

The combination in a sound box of a body having a cylindrical cavity closed at one end; a main diaphragm mounted across said cavity; a stylus lever attached to said diaphragm; an auxiliary diaphragm in the form of a relatively thin light disc of vulcanized fibre less in diameter than the cavity of the sound box and having opposite edge projections; washers engaging said projections and supporting said latter disc in the space between the main diaphragm and the closed end of the cavity; and means for holding said washers and diaphragms in position in the body.



1,415,362. TRAFFIC SIGNAL. THEODORIC JONES, Dallas, Tex. Filed June 18, 1921. Serial No. 478,533. 5 Claims. (Cl. 116—54.)



1. In a traffic signal, a support adapted for attachment to an automobile, a signal arm pivoted to said support to swing in a vertical arc, an actuating bar pivotally and rotatively connected with the arm, and fastening means actuated when the member is rotated for holding said member against outward displacement, and maintaining the signal arm in position.

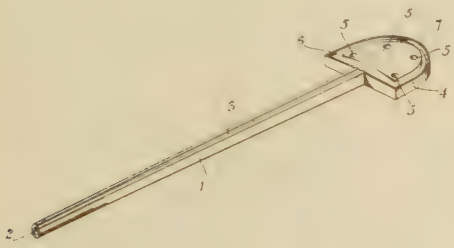
1,415,363. METHOD FOR THE EMULSIFICATION OF RESIN SOAP IN WATER. OLIVER KAMM, Holyoke, Mass., assignor to American Writing Paper Company, Holyoke, Mass., a Corporation of New Jersey. Filed Apr. 23, 1919. Serial No. 292,086. 3 Claims. (Cl. 134—21.)

1. Method of preparing resin size-in-water emulsions from resin size containing free resin, characterized thereby, that the size is incorporated with water in the proportion required to yield at the operating temperature a practically clear size-in-water emulsion, said emulsion stable at approximately the boiling point, and capable of being indefinitely diluted by introduction in a heated state into additional water.

1,415,364. GAME OF SKILL. JOSÉ KECKEIS, Portland, Oreg. Filed Jan. 22, 1921. Serial No. 439,120. 3 Claims. (Cl. 46—61.)

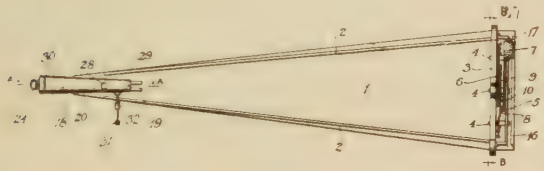
1. In a game of skill, a hollow handle, a groove in the handle, a flat body at the end of the handle, a plurality of apertures in the upper surface of the flat body, the groove in the handle leading onto the upper surface of the flat body, a groove encircling said flat body in the upper

surface near the edges, tunnels in the flat body for the apertures and the groove, said tunnels intersecting and



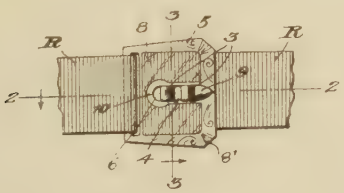
leading to the hollow handle, whereby a ball rolling from the groove in the handle onto the flat body will return to the open end of the hollow handle.

1,415,365. TOY SHOOTING GALLERY. JOSÉ KECKEIS, Portland, Oreg. Filed Jan. 28, 1921. Serial No. 440,596. 3 Claims. (Cl. 46—62.)



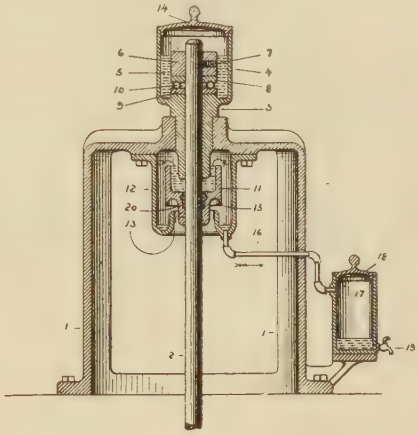
1. In a toy shooting gallery, the combination of a triangular field, a target wall at one side of the field, push buttons near the bottom of the target wall, a gun pivotally mounted in a corner of the field opposite the target wall, said gun comprising a slotted metal plate resting on the field, a barrel having the lower surface flattened and attached to the metal plate, a bore in the barrel, said slotted metal plate forming the lower wall for the bore and serving as runway for the ball, a spring piston within the bore, a handle extending rearwardly of the piston and projecting outside the bore, a nose on the handle inside the bore, a pin traversing the bore and adapted to engage the nose, and a trigger to disengage the nose from the pin.

1,415,366. RIBBON BRACELET. RUFUS KING, Plainville, Mass., assignor to Bugbee & Niles Company, North Attleboro, Mass. Filed Nov. 1, 1921. Serial No. 512,160. 4 Claims. (Cl. 24—208.)



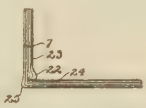
1. In a ribbon bracelet clasp, a female member formed of a flat plate having a slot and having end walls and having a part extending beyond its inner end to simulate the appearance of the free end of a buckle tongue, and a male member having a pair of clasp elements thereon formed to be snapped into engagement with said end walls of the slot and to occupy the latter to create the appearance of the body of the buckle tongue, the female member being formed to simulate the appearance of a buckle frame and a part of the ribbon.

1,415,367. SHAFT-LUBRICATING SYSTEM. FERDINAND W. KROGH, San Francisco, Calif.; Mary L. Krogh, Fannie J. Clarke, C. A. Krogh, and Oscar Poulsen, being legatees by court order of distribution of the estate of said Ferdinand W. Krogh, deceased, assignors to Krogh Pump and Machinery Company, San Francisco, Calif., a Corporation of California. Filed May 23, 1918. Serial No. 236,243. 3 Claims. (Cl. 64—56.)



1. In combination with a vertical suspended rotary shaft and its bearing, a lubricant supply tank on said bearing, a supporting block within said supply tank for said shaft, a receiving cup secured to said shaft below said bearing and adapted to receive waste lubricant therefrom, an annular fixed cup surrounding said receiving cup, provided with an upturned edge projecting upwardly below said receiving cup and adapted to receive overflow waste lubricant from said receiving cup.

1,415,368. BOX JOINT. BERTHOLD A. LANGE, St. Louis, Mo. Original application filed May 24, 1920, Serial No. 383,740. Divided and this application filed Aug. 2, 1920. Serial No. 400,625. 2 Claims. (Cl. 217—2.)

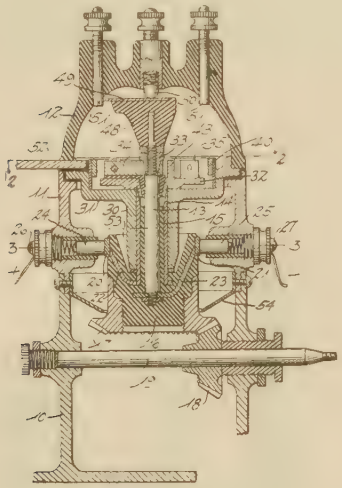


1. In a device of the character described, a box corner formed along creased lines, a bracing portion formed on the inner side of said corner from the excess paste-board resulting from the forming of said corners.

1,415,369. ELECTRIC-CURRENT MAKING, BREAKING, AND REVERSING DEVICE. JOSEPH H. LEHMAN, Hasbrouck Heights, N. J. Filed Oct. 30, 1917. Serial No. 199,242. 20 Claims. (Cl. 200—20.)

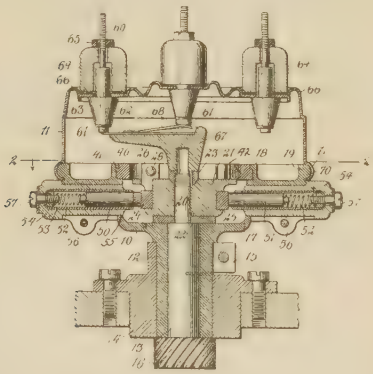
1. A timer including a rotatable member, a pair of semi-cylindrical plates carried thereby and insulated from each other and arranged in succession in the same annular path, a pair of diametrically opposed, normally stationary brushes engaging with said plates in succession during the rotation of said member and adapted to be connected to the opposite poles of a source of electrical energy whereby the polarity of said plates is reversed

twice during each rotation of said member, and make-and-break device, and means for effecting a relative movement



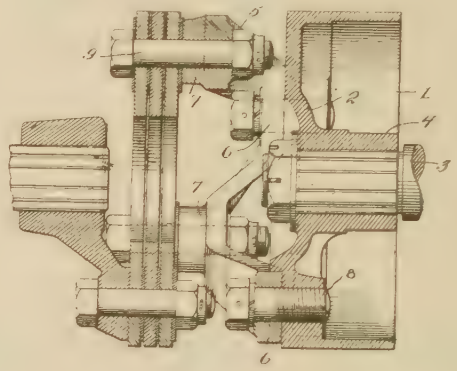
of the parts thereof to make and break a circuit a predetermined number of times during each rotation of said member.

1,415,370. CIRCUIT CONTROLLER FOR IGNITION SYSTEMS. JOSEPH H. LEHMAN, Hasbrouck Heights, N. J. Filed Feb. 26, 1918. Serial No. 219,229. 20 Claims. (Cl. 200—20.)



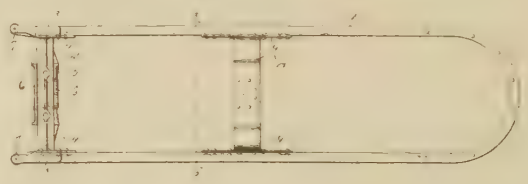
18. A timer having a head formed of insulation material, a shaft for supporting and rotating the same, a casing having a cup shaped body portion receiving said head and having a bearing sleeve within which said shaft is mounted, said casing having an outwardly extending annular flange substantially in the plane of the upper surface of said head, make-and-break contacts carried by the upper surface of said head, an annular member within said casing and having a plurality of spaced projections adjacent to the inner edge of said flange, means carried by said head for engaging with said projections in succession during the rotation of the head to move one make-and-break contact in respect to the other, and a cover member secured to said casing at the outer edge of said flange.

1,415,371. UNIVERSAL JOINT AND BRAKE-DRUM UNIT. ALFONSO M. LEONI and ARTHUR TISCHER, Philadelphia, Pa., assignors, by mesne assignments, to Steinmetz Electric Motor Car Corporation, Baltimore, Md., a Corporation of Maryland. Filed Feb. 13, 1920. Serial No. 358,551. 2 Claims. (Cl. 64—89.)



1. In a motor vehicle drive, a drive shaft, a driven shaft, a brake drum mounted on the driven shaft, a universal joint, and a spider having alternate points of connection with the brake drum and universal joint.

1,415,372. VEHICLE FRAME CONSTRUCTION. ALFONSO M. LEONI, Philadelphia, Pa., assignor, by mesne assignments, to Steinmetz Electric Motor Car Corporation, Baltimore, Md., a Corporation of Maryland. Filed Mar. 12, 1920. Serial No. 365,282. 4 Claims. (Cl. 180—86.)



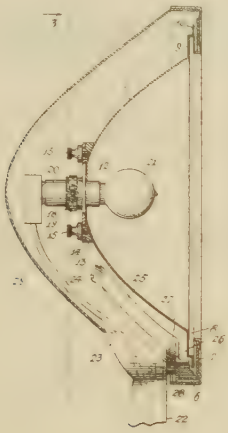
1. A frame construction for motor vehicles, comprising a main frame member of hair pin shape with the rounded end at the rear and providing a direct support for the rear axle housing, a cross bar connecting the forward ends of the main frame member, said cross bar forming a motor support and having depending portions to provide an axle support.

1,415,373. AUTOMOBILE HEADLAMP. WILLIAM F. LITTLE, Nepperhan Heights, N. Y., assignor to Mary Virginia Wines Little, Nepperhan Heights, N. Y. Filed Feb. 26, 1921. Serial No. 447,980. 6 Claims. (Cl. 240—41.)

4. A reflector for automobile head lamps having a paraboloidal section for producing a concentrated light beam around the axis of the reflector, two hyperboloidal sections arranged angularly with respect to the vertical for producing two oblique beams or bands of general illumination, both merging with the paraboloidal beam and extending downwards and outwards to illuminate the sides of the road, and a paraboloidal section supplying a concentrated light beam between the two diverging hyperboloidal beams, all of said sections having the same focus and axis, substantially as set forth.

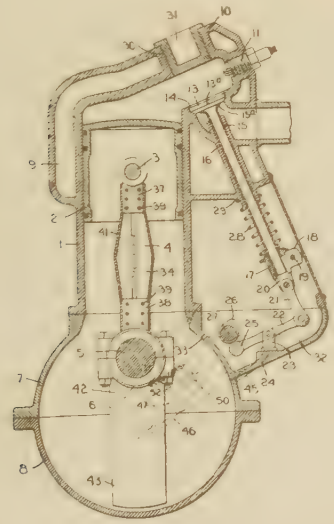
5. In an automobile head lamp the combination with a frame, a front glass and a reflector secured together, of a lamp removable from the rear and carried within the re-

flector, a plate supporting said lamp and within which the lamp is adjustable longitudinally, and means for adjust-



ing said plate vertically and horizontally, whereby the lamp will be capable of universal adjustment with respect to the reflector, substantially as set forth.

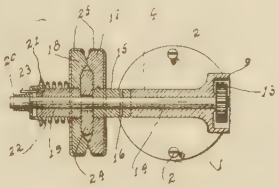
1,415,374. INTERNAL-COMBUSTION ENGINE. RALPH M. LOVEJOY, Meredith, N. H. Filed June 8, 1916. Serial No. 102,570. 3 Claims. (Cl. 123—90.)



1. An internal combustion engine comprising a combustion chamber, a port leading to said chamber having a cylindrical countersunk wall providing a recess of sufficient depth to enclose the body of the valve, a valve seat at the bottom of said cylindrical recess, a valve for said port fitting within said recess and means for actuating the valve operable to cause relatively slow initial and final movements to occur while the valve is within the countersunk portion of the valve seat and a rapid movement when removed therefrom whereby the port will be quickly opened and fully closed.

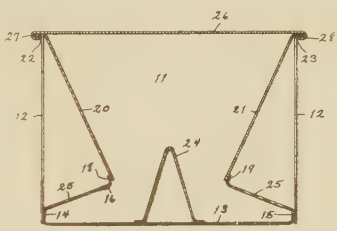
1,415,375. KNIFE SHARPENER. MELCHIOR L. LUEBBEN, Long Beach, Calif. Filed Dec. 2, 1920. Serial No. 427,788. 3 Claims. (Cl. 51—111.)

1. In a knife sharpener, the combination of a support, a main shaft mounted therein, means for rotating said shaft, a pair of co-acting abrading members carried by said shaft, and a non-abrading body of yieldable



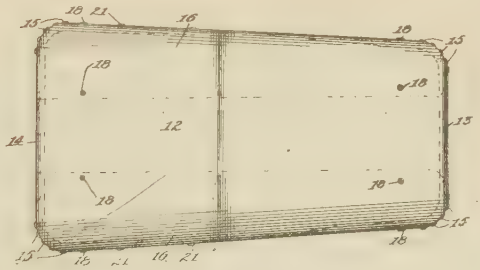
material loosely mounted upon the shaft between said abrading members.

1,415,376. CHICK FEEDER. WILLIAM A. MCCOLLOUGH, Webster City, Iowa, assignor to W. A. McCollough & Sons, Inc., Webster City, Iowa, a Corporation of Iowa. Filed Apr. 11, 1921. Serial No. 460,234. 2 Claims. (Cl. 119—52.)



1. A poultry feeder, comprising a bottom, vertical side walls rising therefrom, ledges extending inwardly and upwardly from said side walls, said ledges being formed with upturned flanges at their inner margins, and formed with feeding apertures, hopper walls fixed to and extending upwardly and outwardly from the flanges of said ledges, and end walls mounted against end portions of said bottom, side walls, ledges and hopper walls.

1,415,377. VEHICLE TOP. ALEXANDER GRANT MCGREGOR, Warren, Ariz. Filed May 18, 1920. Serial No. 382,418. 1 Claim. (Cl. 296—98.)



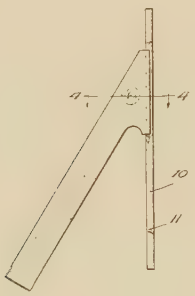
A vehicle top comprising front and back bows and intermediate bows, in combination with a flexible cover permanently attached to said front and back bows between its corner portions, but detachably secured to said bows at its corner portions, said cover comprising

a body portion to extend over the tops of the bows, and depending parts at the sides of said body portion; whereby, when the top is to be folded down, the depending side parts of said cover, when detached from the bows, may first be folded over on to the body of the cover and fastened down, and the cover then be folded back and rolled up without danger of wrinkling or injuring the same, as set forth.

1,415,378. MANUFACTURE OF BOOTS AND SHOES AND STIFFENERS THEREFOR. DAVID BAIRD MACDONALD, Leicester, England. Filed Sept. 15, 1920. Serial No. 410,406. 3 Claims. (Cl. 36—77.)

1. In the manufacture of boots and shoes where stiffeners of the kind herein referred to are used, the method of protecting an adjacent part of a boot or shoe against the action of the stiffening agent or of the spirituous medium contained in the stiffener, which consists in interposing between said part and the stiffener a protective guard or shield consisting of a water soluble colloidal body which is impervious to the solvent used in the stiffener, substantially as described.

1,415,379. TOOL HOLDER. TREVILLIE O. MARTIN, Jackson, Tenn. Filed Nov. 30, 1920. Serial No. 427,382. 1 Claim. (Cl. 29—99.)



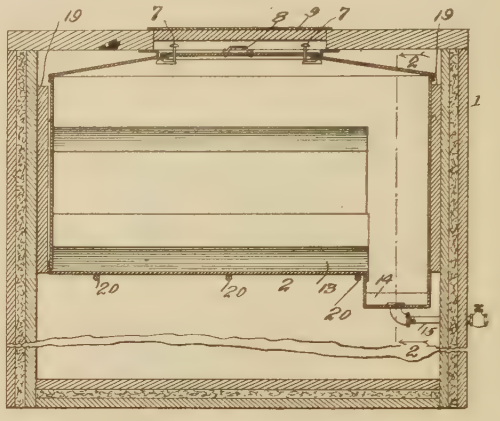
A tool holder comprising a shank provided with an obliquely disposed nose, the said holder being formed with a slot extending the entire length of the nose and for a portion of the length of the shank and dividing the nose into spaced jaw portions arranged to clamp between them a tool to be held, and clamping means for the jaws located substantially midway between the ends of the nose.

1,415,380. COMPOSITION OF MATTER FOR FIRE AND WATER PROOF PAINT. AZARIAH H. MIKESELL, Oakland, Calif., assignor, by direct and mesne assignments, of one-half to Joseph Dietrich, Oakland, Calif., and one-tenth to Charles Dietrich, San Francisco, Calif. Filed Aug. 3, 1921. Serial No. 489,569. 3 Claims. (Cl. 134—50.)

1. The composition of matter as above described, comprising casein in a borax solution in the proportion of twenty-five pounds; magnesite residue in the proportion of seventy-two and one half pounds and water in the proportion of sixty gallons.

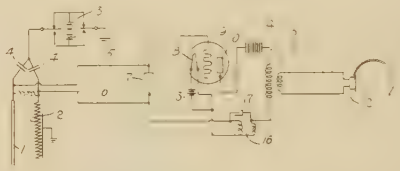
1,415,381. TANK FOR REFRIGERATORS. JOSEPH MILLER, Minneapolis, Minn. Filed Feb. 11, 1922. Serial No. 535,845. 6 Claims. (Cl. 62—69.)

1. In an apparatus of the class described, the combination of a body provided with a bottom, said bottom comprising a plurality of V-shaped troughs and a plurality of flue-structures having V-shaped tops, a drain



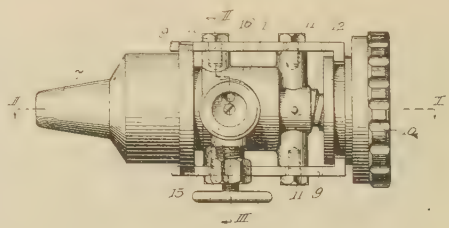
formed in said bottom, and an outlet pipe communicating with said drain.

1,415,382. AMPLIFIER. JOSEPH W. MILNOR, New York, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Jan. 17, 1918. Serial No. 212,332. 2 Claims. (Cl. 178—88.)



1. Signal amplifying apparatus such as described, comprising an audion arranged to produce a current of oscillatory character, means for conducting signals to be amplified to the controlling circuit of the audion, and signal receiving means operated by the audion, and comprising a tuned vibrating relay arranged to vibrate in unison with the oscillations produced by the audion and to rectify the oscillatory current produced by the audion.

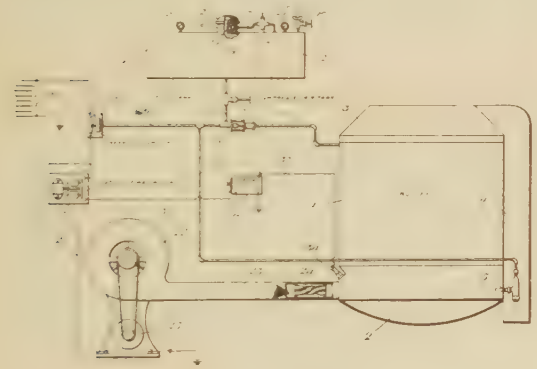
1,415,383. BURNER FOR GASEOUS AND LIQUID FUELS. HEINRICH NETTGENS, Albisrieden, near Zurich, Switzerland, assignor to Eduard Straub-Keller, Sulgen, Switzerland. Filed Feb. 3, 1922. Serial No. 533,811. 3 Claims. (Cl. 158—76.)



1. A burner for gaseous and liquid fuels, having in combination a nozzle with a bore that is funnel-shaped at one end and adapted for the passage of a medium constituting an element of a combustible, a regulating device for controlling the quantity of the medium passing through said nozzle, a second nozzle coaxially arranged to said first nozzle and adapted to be displaced

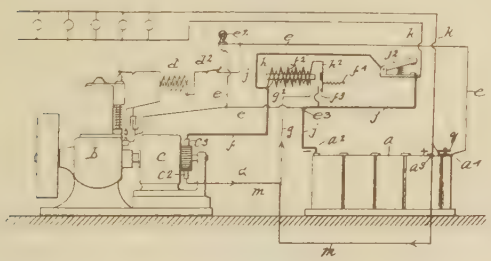
in the axial direction relatively to the former, the bore of the second nozzle and the outer wall of the first nozzle forming together an annular channel the width of which can be adjusted by said displacement of said second nozzle and the outer wall of said annular channel being so shaped that the medium passing through said channel flows in an oblique direction to the medium leaving the funnel shaped end of said first nozzle for causing an efficient mixture of said mediums, a ring wall around said first mentioned nozzle and forming an annular channel with the latter that is a continuation of the afore mentioned annular channel, means to provide for a passage of the medium from said annular channel to the bore of the first nozzle, means to admit to said annular channel a medium constituting an element of a combustible, and means to effect said displacement of the adjustable nozzle and to regulate thereby the quantity of the respective mediums supplied to said annular channel.

1,415,384. HYDROCARBON-BURNER APPARATUS. CARLETON A. ORR, Pueblo, Colo., assignor to The Baker Steam Motor Car and Manufacturing Co., Inc., Pueblo, Colo. Filed Dec. 10, 1919. Serial No. 343,887. 10 Claims. (Cl. 158—36.)



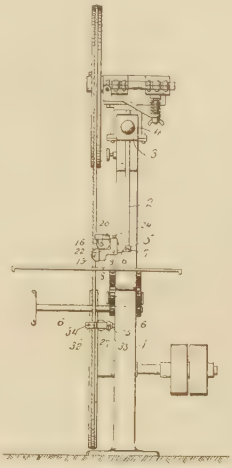
1. A hydrocarbon burner comprising a combustion chamber, and means for discharging fuel and air under pressure independently into said chamber from opposite directions toward one another so that the independent streams of fuel and air impinge against one another within said chamber.

1,415,385. GENERATING PLANT. EARL P. OSWALD, Detroit, Mich. Filed Oct. 24, 1918. Serial No. 259,463. 6 Claims. (Cl. 290—35.)



1. In an apparatus of the kind described, a storage battery, a hydrometer tube in the liquid of said battery, an armature carried by said tube and adapted to make and break an electric circuit, a signal in said circuit and a magnet adapted to attract said armature and hold it yieldingly in position to complete said circuit, whereby the signal will be energized.

1,415,386. BAND-SAW GUIDE. WILLIAM W. PADDOCK, Kansas City, Kans. Filed Jan. 12, 1920. Serial No. 350,722. 5 Claims. (Cl. 143—160.)

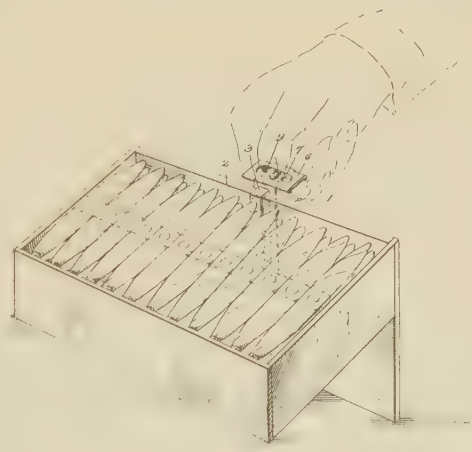


1. In a band saw guide, a support, two sleeves having one set of ends bearing against said support, two plates respectively bearing against the other set of ends of said sleeves, two bolts respectively connected to said support and respectively extending through said plates and said sleeves, the sleeves being laterally adjustable on said bolts, and two rollers respectively rotatable on said sleeves and adapted to respectively bear against opposite sides of a band saw.

1,415,387. PROCESS OF DEHYDRATING AND RECOVERING VALUES FROM SLIMES. MARGARET A. PARMETER, Denver, Colo. Filed Nov. 24, 1919. Serial No. 340,221. 5 Claims. (Cl. 75—17.)

1. A dehydrating process comprising mixing a pulverized resinous binder with a liquid containing finely divided solids in suspension and filtering said liquid.

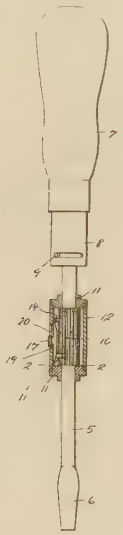
1,415,388. CIGAR-BOX-LID HOLDER. FRANK D. PELOT, Dallas, Tex., assignor to Frank D. Pelot, R. L. Thornton, and Milton F. Brown, trustees for the Holder Company, a common law trust, Dallas County, Tex. Filed July 16, 1921. Serial No. 485,230. 4 Claims. (Cl. 217—61.)



1. A box lid holder including a shank, a gripping tongue carried by the shank and extending in spaced

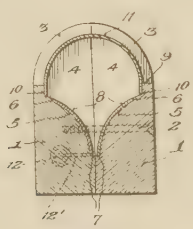
relation thereto, the shank being provided with a plate portion having a sight opening therein, and the plate portion being provided at its opposite edges with flanges struck under to support a tag beneath the said plate portion.

1,415,389. RATCHET ATTACHMENT FOR SCREW DRIVERS. WILLIAM H. PUHL, Zion City, Ill. Filed Sept. 22, 1920. Serial No. 412,032. 1 Claim. (Cl. 145—75.)



The combination with a shank of a screw driver having a handle, of an elongated gear rigidly secured to the shank, a pair of heads arranged upon opposite ends of the gear and rotatable upon the shank, a tubular casing connecting the heads enclosing the gear and having a longitudinal opening, a pair of resilient pawls arranged within the casing and secured thereto and adapted to engage the gear when depressed and tensioned to automatically move outwardly, a sliding keeper having beveled ends to engage and depress the pawls, and a headed shank carried by the keeper and operating within the longitudinal opening.

1,415,390. FIRE INDICATOR. ORREN D. PURINGTON, Providence, R. I. Filed Apr. 1, 1921. Serial No. 457,589. 2 Claims. (Cl. 200—142.)

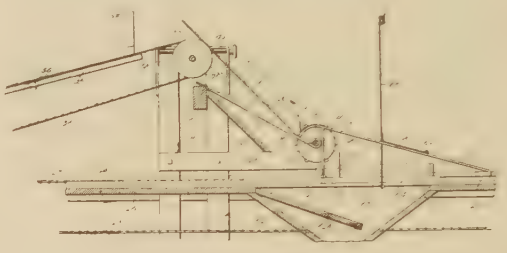


1. In a fire indicator, a casing formed of two similar parts which have their inner faces abutting, and are formed with confronting convex seats located below the tops of the outer sides of the parts said tops forming second L-shaped seats, the end walls of said parts having curved flanges which extend inwardly, screws for detachably connecting the parts, curved contact plates on said convex seats and abutting the shoulders thereof, a binding post connected to each contact plate, and a curved fuse of dome-form engaged between the ends of the parts and beneath the curved flanges thereof and engaged at their lower sides in the L-shaped seats.

1,415,391. WHITE PIGMENT. HAROLD ROBERT RAFSKY, Roxbury, Mass. Filed Mar. 29, 1916, Serial No. 87,624. Renewed June 2, 1921. Serial No. 474,529. 1 Claim. (Cl. 134—58.)

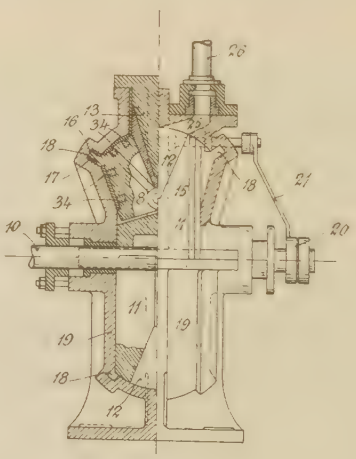
A composition of matter of very fine grain, the same consisting of the insoluble product resulting from the interaction of slaked lime containing magnesia and sodium carbonate in an aqueous medium.

1,415,392. PAN-DUMPING APPARATUS FOR CAKE AND CRACKER CONVEYERS. PETER RASMUSSEN, Denver, Colo., assignor of one-half to Stephen Knight, Denver, Colo. Filed Jan. 3, 1921. Serial No. 434,554. 13 Claims. (Cl. 214—1.)



1. In a pan dumping mechanism for pan conveyers, the combination with oppositely moving conveyers arranged one above the other, and a transferring mechanism for transferring the pans from the upper to the lower conveyer, of a pan dumping conveyer mechanism connected to and movable with said lower conveyer, and means for releasing the pans at a predetermined point, downwardly inclined members on which said pans run when released from said conveyer, a roller at the lower end of said members against which said pans strike, means on said roller for raising said pans up over it and for moving them onto the lower conveyer, whereby they are conveyed to a reloading point.

1,415,393. ROTARY ENGINE. THOR RAUGSTAD, Sandnæs, near Stavanger, Norway. Filed Aug. 26, 1921. Serial No. 495,529. 4 Claims. (Cl. 121—93.)



1. A rotary engine comprising a casing, a rotor journaled therein having a peripheral channel, a stationary abutment projecting into the later, vane blades pivoted in the channel and movable transversely through lateral

slots formed in the sides of the channel, the walls of the casing constituting guides for the blades to move the latter into and out of the channel during the movement of the rotor.

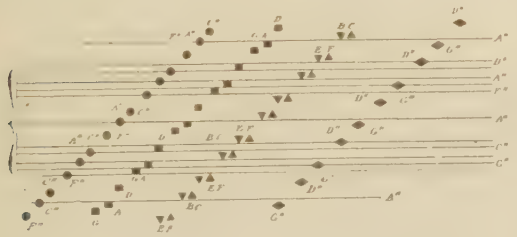
1,415,394. LOCKING DEVICE FOR MOTOR VEHICLES. ELSIE J. REDDING, Mount Holly, N. J. Filed July 28, 1920. Serial No. 399,473. 2 Claims. (Cl. 188—265.)

1. The combination with a motor vehicle having the front wheels thereof mounted to oscillate, of tire engaging means at the side of the vehicle, and means to coact with the tire engaging means for shifting the tire engaging means to coact with the tires of the front and rear wheels at said side of the vehicle for locking such wheels against rotation as well as also locking the front wheels against oscillation.

1,415,395. PROCESS OF OBTAINING MANGANESE DIOXIDE AND NITRIC ACID. CHARLES J. REED, Homestead, Calif., assignor of one-half to James G. Berryhill, San Francisco, Calif. Filed July 27, 1921. Serial No. 487,999. 4 Claims. (Cl. 23—13.)

1. The process of making manganese dioxide and nitric acid which consists in heating to a reacting temperature a mixture of manganese sulphate containing water with a metallic nitrate and thereby volatilizing nitric acid and leaving a residue containing manganese dioxide.

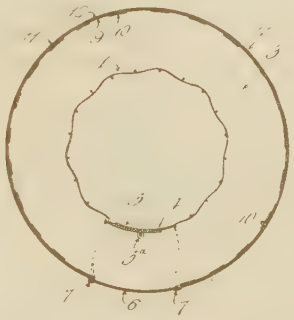
1,415,396. MUSICAL NOTATION. SIDNEY ARMOR REEVE, New Brighton, N. Y. Filed July 14, 1919. Serial No. 310,635. 2 Claims. (Cl. 283—47.)



1. A musical notation comprising a plurality of horizontal lines relatively spaced like the black keys of the pianoforte-keyboard, with the twelve half-tones of each octave indicated by noteheads of four contrasted forms, one such form being used for the white keys A, D and G natural, a second form for the white keys B, C, E and F natural, a third form for three out of the five black keyboard-keys, and the fourth form for the remaining two black keyboard-keys, substantially as described.

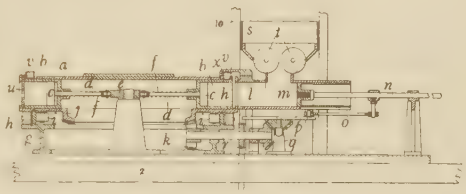
1,415,397. CHICKEN COOP. JULIA E. RISTY, Pipestone, Minn. Filed Apr. 22, 1921. Serial No. 463,455. 4 Claims. (Cl. 119—19.)

1. A chicken brooding coop comprising a substantially cylindrical housing closed at its top and having inlet and escape openings in its vertical wall adjacent the bottom thereof, and a wire cage or confining compartment for the hen arranged inside of the housing and permanently



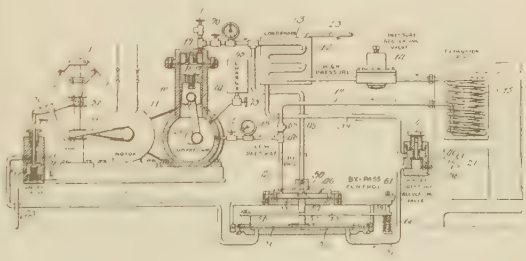
spaced from the wall of the latter to form a runway for the small chicks and to permit the latter to pass freely in and out between the wires of the cage.

1,415,398. PRESSING OF PEAT AND THE LIKE. WALLACE BRUCE JOSEPH ROBERTSON, Edgbaston, England. Filed May 14, 1921. Serial No. 469,751. 3 Claims. (Cl. 25—80.)



1. In machines for compressing peat and the like, the combination of an intermittently rotatable compression box, a plunger in the box, a fixed cam acting in one direction on the plunger for compressing and ejecting the contents of the box, a spring acting on the plunger in the opposite direction for returning the plunger, a door on the outer end of the box, and means for charging the box with the material to be compressed, substantially as described.

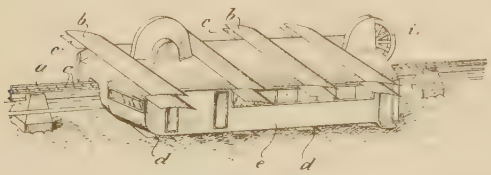
1,415,399. REFRIGERATING SYSTEM. WALTER W. ROBINSON, Beloit, Wis., assignor of one-half to Benjamin F. Lyons, Beloit, Wis. Filed July 5, 1921. Serial No. 482,459. 6 Claims. (Cl. 62—115.)



4. In a refrigerating device of the character described, the combination of a condenser, means for supplying a gas-cooling medium to the condenser, means for forcing gas under pressure through the condenser and back to the gas-forcing means in a circuit, means forming an expansion chamber forming part of said circuit, the same being beyond the condenser in the direction of the flow of the refrigerating gas, means for impeding the flow of gas through said circuit to form a high-pressure side and

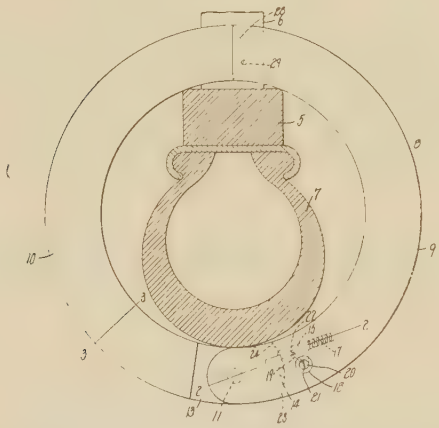
a low-pressure side therein, means for forming a by-pass between the high-pressure side and the low-pressure side of said circuit, valve means in said by-pass, means for holding said valve closed against pressure in the high-pressure side which is less than normal, and auxiliary means under the control of the cooling medium cooperating to hold said valve closed against the normal pressure in the high-pressure side.

1,415,400. MONORAIL RAILWAY WITH AEROPLANE CARS. THEODOR ROGHMANNS, Sonsbeck, Germany. Filed June 30, 1920. Serial No. 393,217. 3 Claims. (Cl. 104—23.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



2. Mono-rail railway having aeroplane cars, consisting of a carriage wtih carrying wheels, a rail with toothed-shaped means, toothed-shaped pins in one of the carrying wheels, a motor for driving the toothed wheel, a box-shaped room vertically movable on the carriage, means for limiting the lifting movement of said box-shaped room, supporting and flying planes fastened to said box-shaped room.

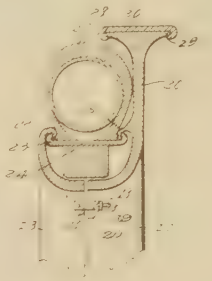
1,415,401. VEHICLE LOCK. WINGATE ROLLINS, Hyde Park, CLINTON K. SEYMOUR, Winchester, and JOHN A. SARGENT, Cambridge, Mass. Filed Jan. 16, 1920. Serial No. 351,917. 15 Claims. (Cl. 70—90.)



9. A vehicle lock having, in combination, two members hinged together and adapted to be positioned upon the rim of a vehicle wheel and means on one of said members adapted to engage the other of said members to lock said members in fixed relation to each other, comprising a segmental ratchet on one of said members and a spring actuated pawl on the other of said members adapted to engage said ratchet.

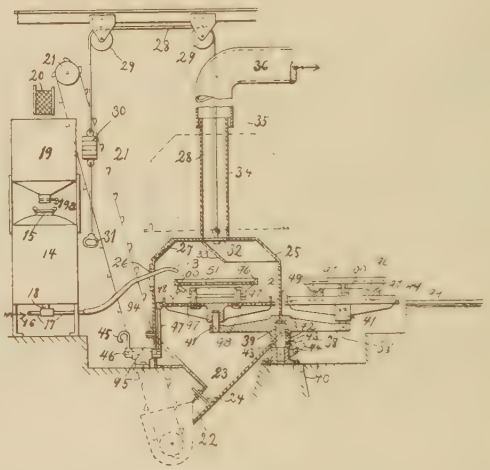
1,415,402. RIM FOR AUTOMOBILE WHEELS. ROSE ROSSBACH, Missoula, Mont. Filed Apr. 11, 1921. Serial No. 460,256. 5 Claims. (Cl. 301—39.)

5. In a supplemental rim for automobiles, approximately semi-circular sections on each side of the wheel, latches for connecting the sections on one side of the wheel together, latches for connecting the sections on the other side of the wheel together, lugs on the sections on one side of the wheel, yokes pivoted to said lugs on the sections on the opposite side of the wheel embraced by said yokes, screws threaded in the yokes bearing against the



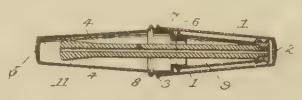
last mentioned lugs, means carried by the sections adapted to interlock with the flanges of the wheel, rim elements carried by the sections on one side of the wheel, and tires applied to the said rim sections.

1,415,403. SAND-BLAST APPARATUS. RICHARD RUEMELIN, Stillwater, Minn. Filed June 4, 1920. Serial No. 386,570. 8 Claims. (Cl. 51—15.)



3. In a sand blast apparatus, a rotary table consisting of a lower perforated member to which rotary movement is imparted, and an upper perforated member adapted to be supported by the lower member, means for locking the members together so that the upper member will not move during rotation, said upper member having supporting rollers or wheels which rest on the lower member, means for supplying and directing a blast of sand onto articles carried by the upper member, and a track beyond the lower member for said wheels to roll on in removing and replacing the upper member.

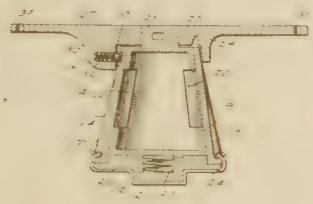
1,415,404. CIGARETTE OR CIGAR HOLDER. WILLIAM RUMBLE, Jr., East Orange, N. J.; Elsie G. Rumble, being administratrix of said William Rumble, Jr., deceased, assignor to Battin & Company, Newark. N. J., a Corporation of New Jersey. Filed Jan. 13, 1921. Serial No. 436,974. 4 Claims. (Cl. 131—10.)



4. In a device of the class described, the combination of a hollow casing element, said element having a nozzle

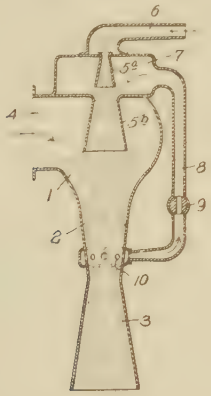
of two diameters at one end; a second casing element, the open end whereof passes onto the nozzle section of larger diameter; means for locking said elements together; and a cigarette holder comprising a head and a stem having a telescopic connection therewith, the mouth of said head being of such diameter as to pass over and to make frictional contact with the nozzle section of smaller diameter.

1,415,405. AIR-BRAKE ATTACHMENT. ARCHIE PIERCE SALE, San Antonio, Tex. Filed June 1, 1921. Serial No. 474,166. 2 Claims. (Cl. 246—170.)



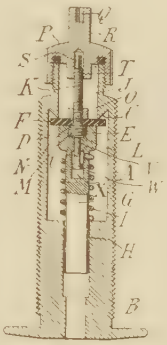
2. The combination with an air brake pipe of a railway car, of means by which said air pipe may be open to the atmosphere when the car becomes derailed, said means comprising a valve interposed in said air pipe adapted to normally permit a continuous air passage through the air pipe and when moved to a predetermined degree to open said pipe to the atmosphere, a cross member carried by the stem of said valve and adapted to operate the same, a ball and compression spring carried by said cross member, said ball being adapted to engage in a recess in the outer wall of the valve and yieldingly hold the arm in position so that the valve will be inoperative, and means connecting the outer end of said cross member to a truck of the car whereby upon the derailment of said car the valve will be operated for establishing communication with the atmosphere.

1,415,406. ELASTIC-FLUID-OPERATED EJECTOR. ARTHUR EDWIN LEIGH SCANES, Ashton-on-Mersey, England, assignor to The British Westinghouse Electric and Manufacturing Company Limited, a Company of Great Britain. Filed June 1, 1917. Serial No. 172,145. 14 Claims. (Cl. 230—13.)



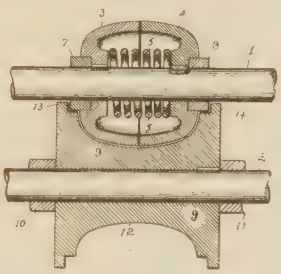
4. In an elastic fluid operated ejector, a combining or collecting chamber adapted to be connected to the device to be evacuated, a diffuser connecting with said chamber, an expansion nozzle for discharging elastic operating fluid into said combining and collecting chamber, and means for admitting variable pressure elastic fluid to said expansion nozzle at a point intermediate its ends and for varying the amount of elastic fluid so admitted in accordance with the variations in pressures at a point in said combining or collecting chamber.

1,415,407. TIRE VALVE AND THE LIKE. MAXIMILIAN CHARLES SCHWEINERT, New York, N. Y., and HENRY P. KRAFT, Ridgewood, N. J. Filed Jan. 6, 1915, Serial No. 758. Renewed Aug. 2, 1921. Serial No. 489,203. 26 Claims. (Cl. 132—12.)



1. A valve for tires or the like, comprising a shell having a valve seat and a check valve inwardly of said seat, said check valve being of larger diameter than said seat when in working position, and said check valve being adapted to assume a condition of lessened diameter sufficient to enable it to pass through said seat, and said check valve comprising a rigid body and a packing material.

1,415,408. ROLLS FOR SHEET-METAL-FORMING MACHINES. E HARRISON SCOTT, Richmond, Ind., assignor to Johnson Automobile Sheet Metal Works, Richmond, Ind., a Corporation of Indiana. Filed May 16, 1921. Serial No. 469,964. 3 Claims. (Cl. 153—54.)

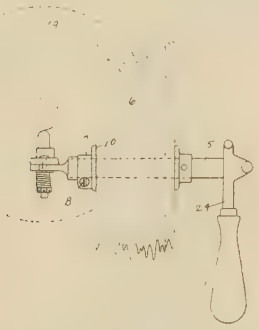


1. In combination with a shaft, a roll adapted to revolve with the shaft, a collar rotatably mounted in each end of the roll and each collar being also rotatably mounted on said shaft.

1,415,409. SPOTLIGHT CONTROL. HOWARD J. SEGUR, Portland, Oreg. Continuation of joint application Serial No. 402,727, filed Aug. 10, 1920. This application filed Mar. 31, 1921. Serial No. 457,293. 1 Claim. (Cl. 240—7.)

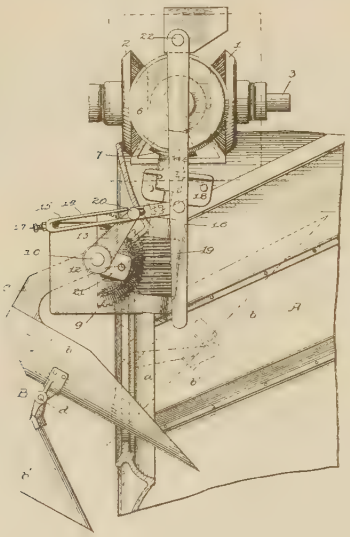
A spot light control consisting of a horizontal tube member adapted to pass through an upright member of an automobile, a collar on either side of said upright one of which is secured to the tube by means of a set screw and the other by means of friction, said friction held collar also being attached to the upright member by means of screws, a central tube member projecting from each end of said first mentioned tube, a collar member secured to one of said projecting ends, a lever hinged to said collar, a rod attached to said lever and passing through said

central tube, an arm attached to the opposite end of said central tube, a wrist plate attached to said arm and con-



nected to said rod member, a means for producing friction between said wrist plate and said arm, and a means for attaching said spot light to said wrist plate.

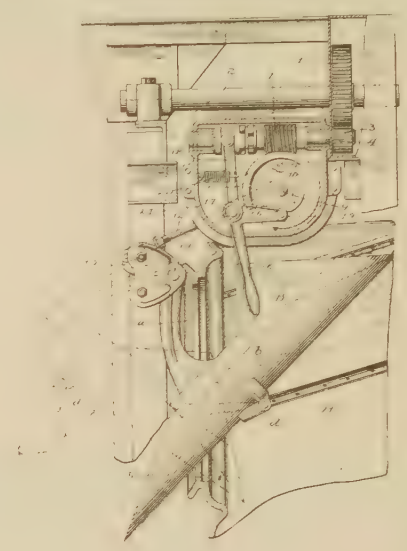
1,415,410. OPERATING MECHANISM FOR CHUTES. SAMUEL SHAFER, Jr., Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 7, 1921. Serial No. 435,661. 8 Claims. (Cl. 193—29.)



8. A chute and a shaft supporting it, power-driven mechanism for intermittently oscillating the shaft, including a clutch, and a breakable pin adapted to yield should the shaft and chute be moved beyond the desired limits, an arm connected with the shaft, and means operated by the arm for shifting the clutch to neutral position, with the chute and supporting shaft disconnected from the source of power when the chute comes to the position at which it is to be arrested.

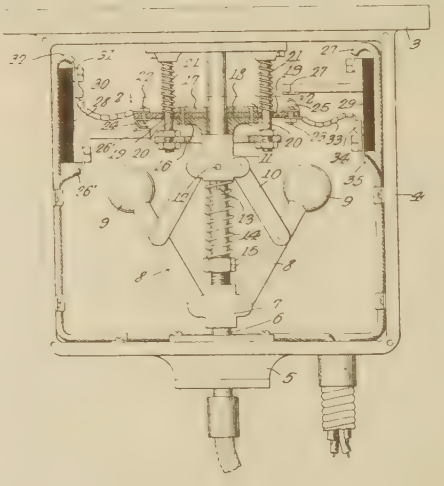
1,415,411. POWER-DRIVEN CHUTE-OPERATING MECHANISM. SAMUEL SHAFER, Jr., Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 20, 1921. Serial No. 438,801. 6 Claims. (Cl. 193—29.)

1. A chute, a shaft by which it is supported, a second shaft, connections between these shafts whereby on the rotation of the latter the chute-carrying shaft is oscillated; power transmitting gearing, including a clutch, for driving the said second shaft, a shifter for operating



the clutch and a cam arranged to actuate the clutch shifter to automatically disconnect the power at predetermined positions of the chute-carrying shaft.

1,415,412. SPEED CIRCUIT CONTROLLER. ARCHIBALD G. SHAVER, Chicago, Ill., assignor to Regan Safety Devices Company, Inc., a Corporation of New York. Filed Feb. 7, 1921. Serial No. 443,292. 2 Claims. (Cl. 200—80.)

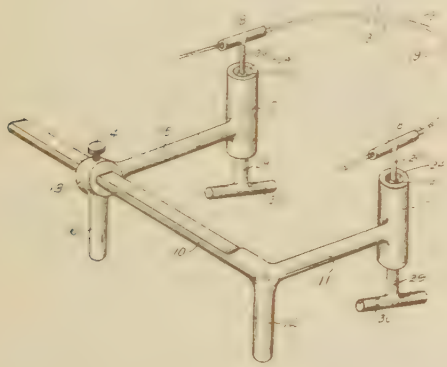


1. In a device of this character, the combination of a support, a shaft journalled therein for rotation, a spring adjusted centrifuge device mounted thereon, a sleeve connected to the centrifuge device for sliding movement upon the shaft, a disk of insulation carried by the sleeve, cooperative contact points carried by the disk and in the path thereof, means for guiding said sleeve and holding it against rotation, and resilient means opposing said disk in opposition to the spring of the centrifuge device.

1,415,413. CONTAINER APPLICATOR. RICHARD SLEE, Swiftwater, Pa. Filed Mar. 29, 1921. Serial No. 456,621. 7 Claims. (Cl. 128—236.)

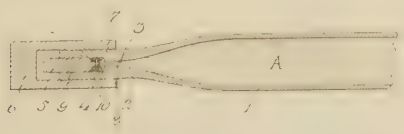
1. A container-applicator comprising a body having an inclined annular shoulder at one end, a screw inserted through the body and having its extremity expanded to form means for engaging the shoulder and passages for the contents, a plunger mounted to move within the body and means to apply manual stress to apply the action of the screw to the plunger.

1,415,414. INSTRUMENT FOR HOLDING APPLIANCES WHILE HEATED. ROBERT H. W. STRANG, Bridgeport, Conn. Filed Mar. 12, 1921. Serial No. 451,848. 17 Claims. (Cl. 266—2.)



1. A device of the character described comprising a pair of tubular arch holding members adapted for insertion of the ends of a tooth regulating arch, and supports by which said members are adjustably carried adapted to permit said members to hold said arch in a position to permit its intermediate portion to be heated and manipulated.

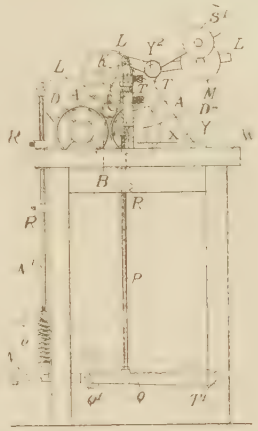
1,415,415. DRAWN PIPE AND PROCESS OF STRETCHING SAME. GENJI TANOMURA, Tokyo, Japan. Filed June 17, 1920. Serial No. 389,713. 2 Claims. (Cl. 205—8.)



1. The method of preparing a pipe for drawing, consisting in filling the pipe with liquid, closing the ends of the pipe, and providing the same at one end with a connecting member for attachment to a stretching means.

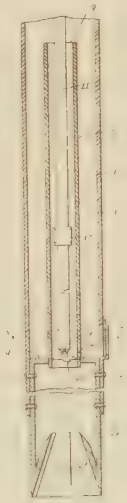
1,415,416. APPARATUS FOR TURNING HANDLES FROM ROUND STOCK. JOSEPH STOREY TILLING and HENRY DOBBINS, Warrington, England. Filed May 17, 1921. Serial No. 470,303. 2 Claims. (Cl. 142—1.)

1. In a lathe for successively shaping and detaching articles from the end of a round rod, comprising a pair of rotating rollers upon which the rod rests with one end thereof projecting beyond the rollers to the length of the desired article, a pattern knife having a travel towards such projecting portion of the rod, a roller movable towards and from the rod when mounted between



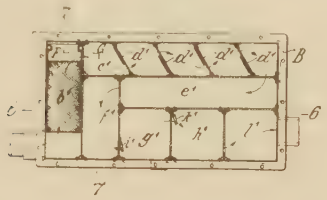
the above mentioned pair of rollers and common means for depressing said roller into contact with the rod and for moving the knife into engagement with the projecting part thereof.

1,415,417. PUMP. GEORGE BARNETTE TREW, Shreveport, La. Filed Aug. 23, 1920. Serial No. 405,285. 1 Claim. (Cl. 166—19.)



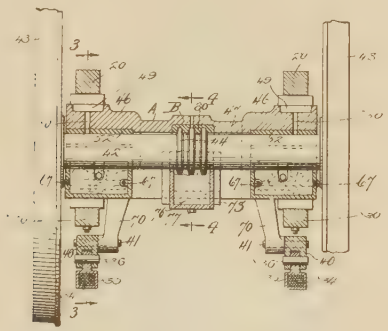
In a device of the class described, an outer casing having a bottom; a cylinder carried by the bottom and opening through the bottom; a plunger mounted to reciprocate in the cylinder; a piston carried by the plunger and embodying pivotally mounted upwardly-foldable leaves provided with cooperating means for limiting the downward folding movement of the leaves, the piston and the plunger constituting means for delivering material from within the cylinder into the space between the cylinder and the casing; and interengaging elements on the plunger and on the casing, cooperating to limit relative movement between the casing and the plunger, when the plunger moves upwardly and when the plunger moves downwardly, one of said elements being resilient, to serve as a cushion.

1,415,418. ARRANGEMENT FOR PURIFYING AND RENDERING ODORLESS THE EXHAUST GASES OF INTERNAL-COMBUSTION ENGINES AND THE LIKE. PHILIPP WACHTEL, Frankfort-on-the-Main, Germany, assignor to Wilhelm Schmidding, Köln-Mannsfeld, Germany, a Firm. Filed Sept. 10, 1920. Serial No. 409,493. 1 Claim. (Cl. 183—48.)



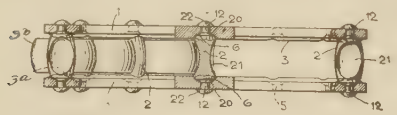
An apparatus for purifying and rendering odorless the exhaust gases of internal combustion engines and the like consisting of a series of chambers, baffling plates in the first of said chambers adapted to conduct the exhaust gases passing through along a horizontal zigzag path to collect any still contained oily matter, porous material in the second chamber, the following filled with absorbent material as sponges and again conducting the gases along a zigzag path, and adapted to completely remove the objectional smell of the exhaust gases.

1,415,419. CONNECTED DRIVING BOX. JOHN C. WALDRON, Brooklyn, N. Y. Filed July 12, 1920. Serial No. 395,719. 5 Claims. (Cl. 105—79.)



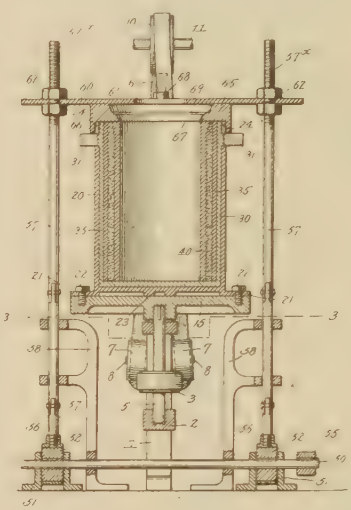
1. The combination in connected driving boxes of a pair of heads, bearings for an axle in said heads, a U shaped member connecting said heads and a thrust bearing for said axle in said U shaped member.

1,415,420. BALL OR ROLLER CAGE FOR ANTIFRICTION BALL OR ROLLER THRUST BEARINGS. ERNST HJALMAR WALODDI WEIBULL, Gottenborg, Sweden, assignor to Nordiska Kullager Aktiebolaget, Gottenborg, Sweden. Filed July 1, 1920. Serial No. 393,396. 6 Claims. (Cl. 64—62.)



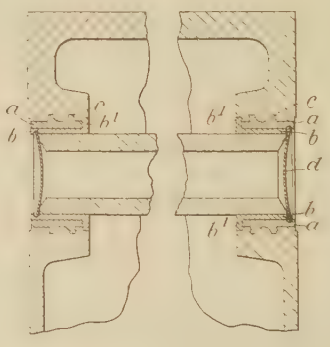
2. A ball or roller cage for antifriction bearings comprising two side rings each having spaced cavities, a plurality of cross-pieces securing said rings together, spacing the rings apart and constituting spacing means for rolling elements, each of said cross-pieces having thickened end portions engaging the cavities in the rings, the central portion of each of said cross-pieces being flattened and curved surfaces arranged between the flattened portion and the ends of the cross-piece, the curved surfaces corresponding to the operative surface of the rolling elements, said flattened portions being provided with recesses located in the radial middle plane of the cage.

1,415,421. CENTRIFUGAL CASTING MACHINE. WILLIAM F. WOLF, Somerville, N. J. Filed Apr. 30, 1921. Serial No. 465,810. 10 Claims. (Cl. 22—65.)



1. In a centrifugal molding machine, the combination of a rotary mold, with a nonrotating cap piece movable into and out of fixed operative relation with the open end of said mold and formed with a pouring opening and an inwardly presented annular flange or lip.

1,415,422. GUDGEON-PIN BUSH FOR PISTONS. ROBERT ALLEN, Woodcote, Reading, England. Filed Mar. 2, 1920. Serial No. 362,706. 9 Claims. (Cl. 74—108.)

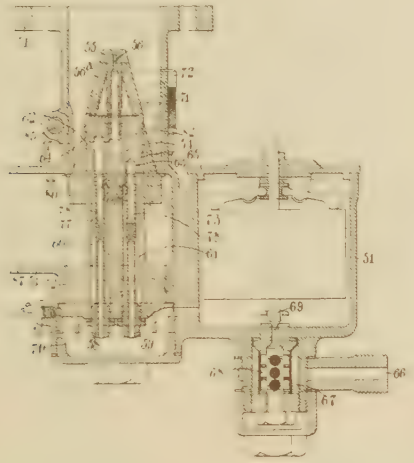


1. The improved gudgeon pin bush for pistons comprising an outer bush member and an inner bush member adapted to fit closely within the outer bush member and receive the gudgeon pin.

1,415,423. CARBURETOR FOR INTERNAL-COMBUSTION ENGINES. WALTER HILLIER ANDERSON, London, England. Filed May 6, 1920. Serial No. 379,363. 2 Claims. (Cl. 261—41.)

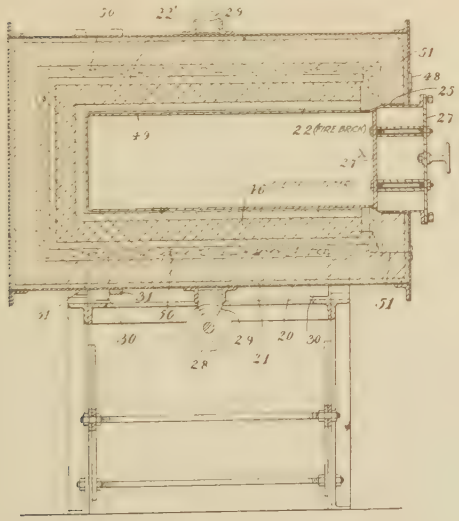
1. A jet or spray carburetor comprising in combination a main casting, a central member therein and having a supplementary jet nozzle situated on the central axis, a mixing chamber, a plurality of main fuel jet

nozzles fitted within said central member on parallel axes, an air inlet for each main fuel nozzle for providing a separate initial air supply thereto, a cone shaped valve



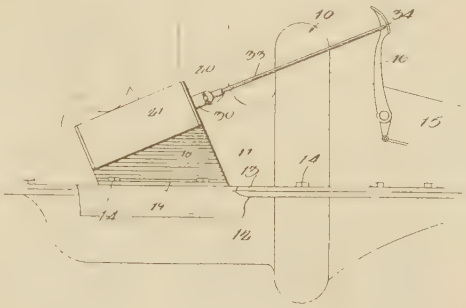
slidable over said central member adapted to simultaneously control both the fuel mixture and a main air supply to the mixing chamber.

1,415,424. MUFFLE FURNACE. JOHANNES ROBERT CARL AUGUST, Halifax, England. Filed May 8, 1920. Serial No. 379,995. 4 Claims. (Cl. 263—34.)



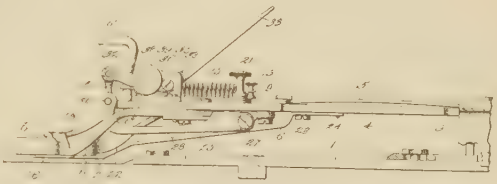
1. A rotary furnace of the rotary barrel type, formed by the combination of a rotary chamber closed at one end, and having a central aperture at the other, a muffle or barrel concentrically mounted inside the said rotary chamber so that while both revolve together an annular space is left between them, an electric heater located in the said space, and insulated from the said rotary chamber, and a removable container inserted closed end first into the barrel through the said central aperture, while the open end which is closed by a detachable cover is left projecting.

1,415,425. PEDAL LOCK. CURTIS DILLON BAILEY, Massillon, Ohio. Filed Mar. 23, 1921. Serial No. 454,712. 10 Claims. (Cl. 74—81.)



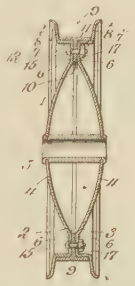
1. A pedal lock comprising a body having a channel provided with branches representing the high and low speed positions of a pedal, and a pedal operated pin movable in said branches.

1,415,426. BUTTON CLAMP FOR SEWING MACHINES. WILLIAM L. BARRON, Newark, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed May 29, 1919. Serial No. 300,687. 12 Claims. (Cl. 112—114.)



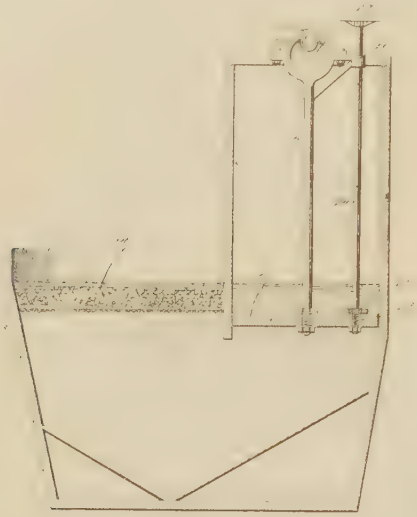
1. A button-clamp for sewing machines comprising a carrier, button clamp-jaws sustained by said carrier, button-confining fingers interposed between said jaws, and means readily accessible while the button clamp-jaws remain in operative relation, for shifting the button confining fingers relatively to said jaws.

1,415,427. VEHICLE WHEEL. WILLIAM F. BETZELL, Washington, D. C. Filed Sept. 16, 1920. Serial No. 410,714. 3 Claims. (Cl. 301—63.)



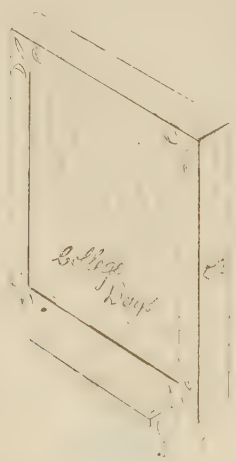
1. An automobile wheel comprising two sheet metal disks bulging oppositely from the rim portion of the wheel toward the axial portion thereof to produce a double convex wheel body, each disk terminating at the peripheral portion in a tire-retaining flange, with the flanges together forming a tire-receiving channel, said wheel having a flat transverse ring seated in the channel and provided with an interior radial flange interposed between the disks, means for uniting the disks and radially flanged ring together, and means for holding one of the tire-retaining flanges removably in place on the wheel.

1,415,428. JIG FOR CONCENTRATING ORES. JOHN R. COMBS, Tipton Ford, Mo. Filed Jan. 31, 1920. Serial No. 355,496. 6 Claims. (Cl. 83—79.)



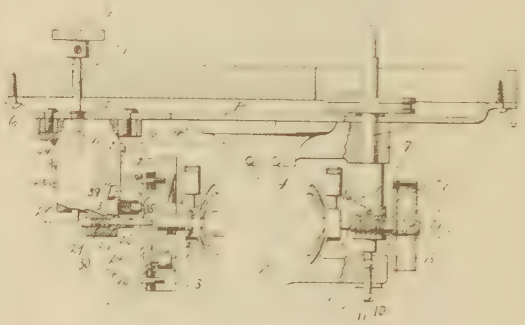
2. In a jig for concentrating ores embodying a suitable receptacle having therein stationary means for supporting the ores being concentrated, a plunger for agitating the fluid by which the ores are concentrated, means for varying the size of the fluid engaging surface of said plunger, during the operation of said plunger.

1,415,429. ALBUM OR HOLDER FOR PHOTOGRAPHS. BENJAMIN U. CUENY, Springfield, Mass., assignor to Taber-Prang Art Co., Springfield, Mass., a Corporation of Massachusetts. Filed June 10, 1921. Serial No. 476,500. 1 Claim. (Cl. 40—102.)



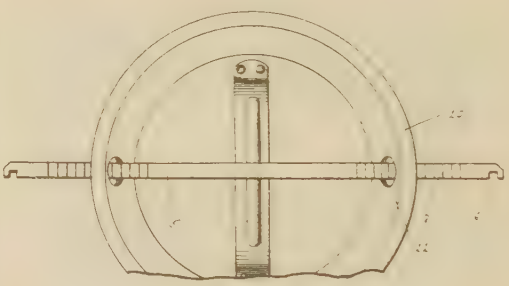
A display album having, in combination, a plurality of leaves, a pair of covers comprising rectangular frames hinged together and having panels fitted therein to provide recesses at both the inner and outer sides of the covers, the construction being such that the inner recesses will receive said leaves and the inner faces of the frames will abut each other when the album is closed so that the edges of the leaves will then be entirely enclosed within said frames, an expansible binder for securing the leaves to the covers, a thickened pedestal centrally located beneath the lower side of each frame for firmly supporting the album in upright position whether the same be opened or closed, and a clasp for positively securing the covers in closed position.

1,415,430. ELECTRIC MOTOR FOR TALKING MACHINES. WILLIAM W. DEAN, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J., a Corporation of New Jersey. Filed July 17, 1918. Serial No. 245,358. 12 Claims. (Cl. 171—222.)



1. The combination with an electric motor having a driving shaft, of a driven shaft, and a train of mechanism for imparting movements from the motor shaft to the driven shaft, said train of mechanism including a resilient device for absorbing any end thrust which may be imposed upon said train of mechanism by the driven shaft.

1,415,431. MILK-CAN SEAL. WILLIAM KERR EDGAR, Lawrence, Kans., assignor to The Edgar Steel Seal & Mfg. Co., Lawrence, Kans. Filed Sept. 19, 1919. Serial No. 324,757. 5 Claims. (Cl. 292—307.)

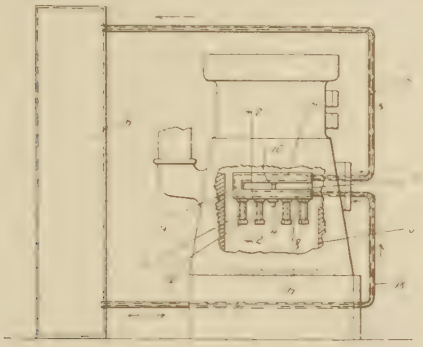


1. The combination with a milk can having opposed openings and a closure insertable between the openings of a seal comprising a strip of metal inserted through the openings, and over the closure the strip being provided with score lines in one face thereof near its ends, said ends being bent at the score lines to form loops engaging the can, and means at the ends of the strip for engaging intermediate portions of the strip to close the can engaging loops, the strip being adapted to break along any one of the score lines when a loop is opened.

1,415,432. WATER HEATER. WILLIAM J. EDWARDS, Geneva, Ohio. Filed Mar. 22, 1921. Serial No. 454,449. 1 Claim. (Cl. 122—20.)

A water heating attachment adapted to be secured inside a furnace over the fire-pot thereof, said attachment comprising a hollow casting having upper and lower water chambers arranged horizontally and substantially parallel to each other and connected together at one end by a relatively short vertical chamber, vertical heating

tubes having closed lower ends and having their upper ends connected to the lower water chamber, and water



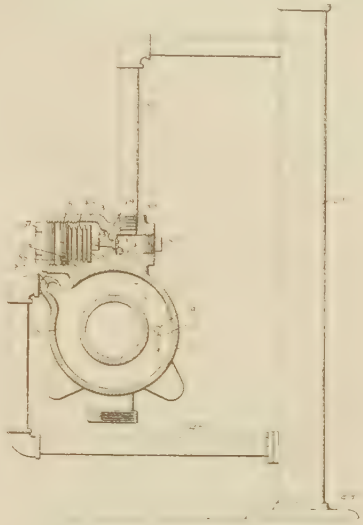
pipes connected to the opposite ends of the upper and lower water chambers from their vertical connecting chamber.

1,415,433. APPARATUS FOR THE EXTRACTION OF OILS AND THE LIKE. HENRI ENGEL, Hatch End, England. Filed Dec. 16, 1919. Serial No. 345,253. 10 Claims. (Cl. 87—6.)

3. Apparatus for the extraction of oils, fats or greases from substances containing or yielding the same, comprising an extracting vessel, a central shaft mounted therein, propelling devices mounted upon said shaft, central bosses formed in said propelling devices, sleeves mounted upon said shaft between adjacent propeller bosses, an inlet for heating fluid at one end of said shaft, an outlet for said fluid at the opposite end of said shaft, means causing said heating fluid to traverse successively through the blades of each propelling device, and ports in said sleeves for maintaining constant communication between said propelling devices.

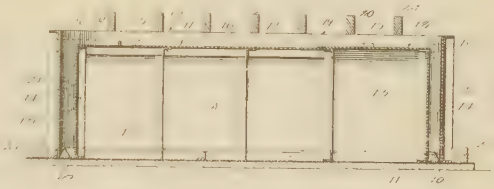
1,415,434. BURNER. MILTON A. FESLER, Oakland, Calif., assignor to Petroleum Heat and Power Company, a Corporation of Delaware. Filed July 2, 1920. Serial No. 393,646. 14 Claims. (Cl. 158—73.)

1. The combination of a burner having a water jacket adapted to be heated by heat developed by the burner, thermo-siphonic means for supplying water to said jacket, means to conduct oil adjacent to said water jacket preliminarily to delivery of the oil to the burner, that the oil may be subjected to heating or cooling influence from the



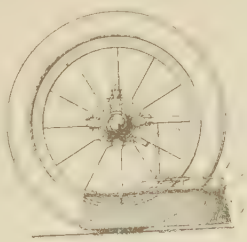
water in said jacket, a valve for the water supply means, and a thermostat responsive to the temperature of the water automatically to control said valve.

1,415,435. BURIAL VAULT. CHARLES BENJAMIN FRANKLIN, Pineville, La. Filed Apr. 29, 1921. Serial No. 465,395. 2 Claims. (Cl. 25—130.)



2. In combination, an outer form and an inner form, the side walls of which are telescopic for adjusting the length thereof, and a triangular form interposed between the said side walls and end walls at the lower edges thereof, the triangular form comprising sections adapted to permit the length thereof to be adjusted.

1,415,436. MUD GUARD FOR WHEELS OF VEHICLES. ALBERT GERMANN and ERNST LANG, St. Gallen, Switzerland. Filed Jan. 19, 1921. Serial No. 438,397. 7 Claims. (Cl. 280—157.)



1. A mud guard for automobiles and other vehicles, comprising guard members for the sides and back of a wheel and means to permit the individual members to be swung into a horizontal plane and held out of operative position.

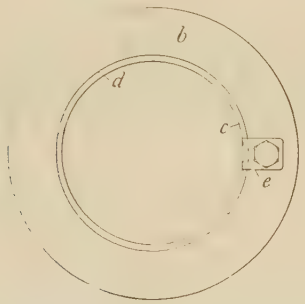
1,415,437. METHOD OF MAKING TENNIS BALLS AND LIKE HOLLOW ARTICLES. WILLIS A. GIBBONS, New York, N. Y., assignor to Revere Rubber Company, a Corporation of Rhode Island. Filed Aug. 24, 1921. Serial No. 494,868. 6 Claims. (Cl. 154—16.)

1. A method of making hollow articles of vulcanized rubber composition which consists in curing the articles in a mold and simultaneously creating within the articles an internal fluid pressure which, during the cure, shapes the composition to the mold and, after the cure, maintains the article inflated to shape and size at a pre-determined pressure suited for the contemplated use.

1,415,438. METHOD OF COVERING TENNIS BALLS. WILLIS A. GIBBONS, New York, N. Y., assignor to Revere Rubber Company, a Corporation of Rhode Island. Filed Aug. 24, 1921. Serial No. 494,946. 4 Claims. (Cl. 154—16.)

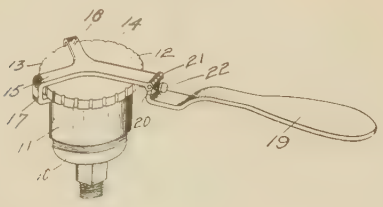
1. The method of covering tennis balls which consists in coating either or both a vulcanized and inflated center and cover sections with a heat settable plastic, expanding the center from its normal size to a size at least as great as that it assumes on heating in play, assembling the cover sections on the center with their edges in abutting relation while the center is expanded, reducing the thus covered center to normal size, and finally permanently adhering the cover sections to the center in a mold by heating.

1,415,439. METHOD OF MAKING PISTON RINGS AND DIE FOR SAME. WILLIAM HENRY GRAY and JOHN WILLIAM HOWLETT, Lymington, England. Filed Dec. 23, 1920. Serial No. 432,813. 3 Claims. (Cl. 29—1.)



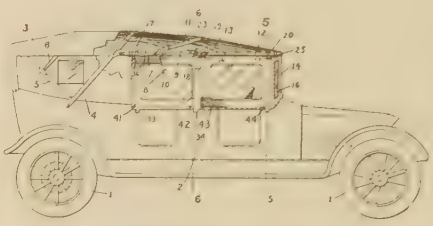
1. In the manufacture of piston and like rings, the holding of a divided ring which is stretched, or initially shaped, to a non-circular form, in a correspondingly shaped die, and hammering the ring while thus held, substantially as described.

1,415,440. GREASE-CUP TOOL. LEONARD W. GREIN, Cheney, Wash. Filed July 18, 1921. Serial No. 485,573. 3 Claims. (Cl. 81—3.)



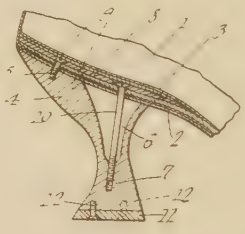
1. A wrench comprising diverging arms and L-shaped hooks at the ends of said arms to engage under a flange, a handle having a hinge joint extending transversely of the longitudinal axis of the wrench, said handle having a bent portion adjacent the hinge-joint, and a screw passed through said bent portion adapted to form a fulcrum point for co-action with said L-shaped hooks.

1,415,441. SIDE CURTAIN FOR AUTOMOBILES. RAOUL J. GRUENBERG, San Francisco, Calif. Filed Apr. 16, 1919. Serial No. 290,378. 7 Claims. (Cl. 296—140.)



1. The combination including an automobile top having longitudinal side rails and a plurality of transverse guides, abutment elements associated with said guides, and relatively stiff flexible side curtains slidably supported by the guides and adapted to have their lower edges brought against the side rails and their upper portion brought against the abutments to be frictionally maintained against displacement by their inherent tension.

1,415,442. HEEL. CHARLES HOMER HALL, Chicago, Ill. Filed Jan. 10, 1919. Serial No. 270,518. 1 Claim. (Cl. 36—40.)

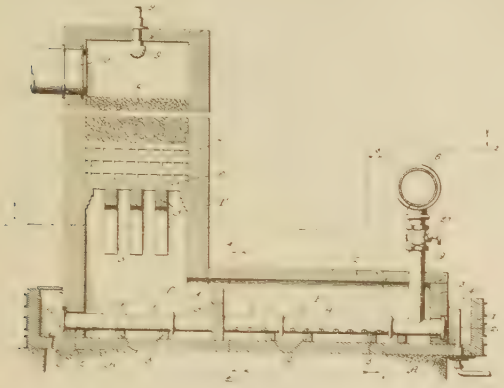


In a shoe, an upper and a heel, a sole superposed on the heel, a plate superposed on the sole, and a screw passing through the plate and the sole and threaded into the heel, the screw having a head engaging the plate, the forward end of the plate being free, whereby the plate will move toward the heel and conform readily to the sole when the screw is advanced, and means for securing the rear end of the plate fixedly to the heel, against movement, whereby the plate will be prevented from moving longitudinally or laterally and leaving a space between the edge of the plate and the upper, the heel having a cavity through which the screw passes, the cavity being located beneath the free portion of the plate, and beneath the corresponding portion of the sole, and being of sufficient size so as to permit the sole to yield slightly, thereby to secure a firm bearing engagement between the plate and the sole, regardless of minor irregularities in the sole or the plate.

1,415,443. METHOD OF AND APPARATUS FOR CONCENTRATING ACID. INGENUIN HECHENBLEIKNER and THOMAS C. OLIVER, Charlotte, N. C., assignors to Chemical Construction Company, a Corporation of North Carolina. Filed Sept. 16, 1920. Serial No. 410,626. 20 Claims. (Cl. 23—1.)

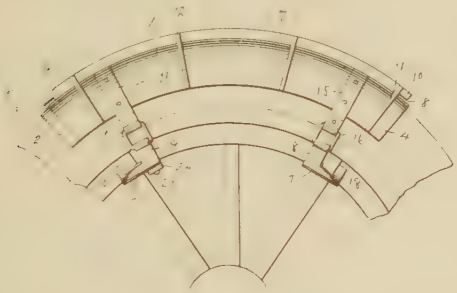
1. The herein described method of concentrating and purifying sludge acids or separated sludge acids which con-

sists in first concentrating the sludge acid by subjecting a body of the acid to heat at one stage and then purifying



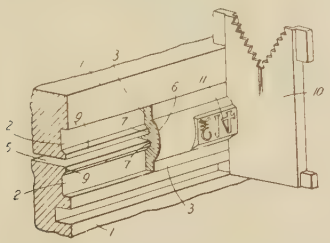
the concentrated acid by subjecting the same to a higher degree of heat at another stage to eliminate or neutralize impurities.

1,415,444. WHEEL SHOE FOR AUTOMOBILES. FRANK HIBNER, North Platte, Nebr. Filed July 14, 1920. Serial No. 396,054. 3 Claims. (Cl. 152—16.)



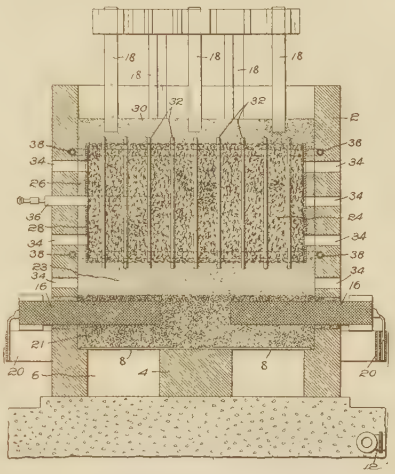
1. A sectional tire armor having the sections provided each with a tread forming rib undercut at each end and terminating in a tongue and groove respectively whereby the sections may be relatively interlocked with the undercut portions of the rib providing a slot below each interlocking joint into which any suitable key means may be inserted for holding the sections in place.

1,415,445. APPARATUS FOR CASTING TYPE BARS OR SLUGS. JOHN GLENNIE HOLBOURNS, London, England, assignor to Linotype and Machinery Limited, London, England, a Limited Liability Company of Great Britain. Filed Feb. 28, 1919. Serial No. 279,835. 6 Claims. (Cl. 199—55.)



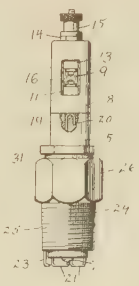
1. An apparatus for casting type bars or slugs of greater width than the height of the type faces thereon, embodying a mold formed in its front face with a recess of a length and width corresponding to the length and width of the cast slug in its ultimate form and having a relatively narrow longitudinal parallel-walled slot communicating with said recess to produce a thin severable sprue on the slug and provided with a lip located in said facial recess to produce a recess in the base of the slug adjacent the sprue to permit the severance of the sprue above said base.

1,415,446. APPARATUS FOR MAKING ALUMINUM NITRIDE AND OTHER CHEMICAL SUBSTANCES. WILLIAM HOOPES, Pittsburgh, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 19, 1919. Serial No. 324,763. 30 Claims. (Cl. 204—64.)



1. In apparatus of the class described, in combination, a reaction chamber enclosed laterally by a wall; a grate adjacent the bottom of said reaction chamber; a plurality of pipes extending through said wall and opening into the space beneath said grate and connected to a suitable gas supply; a lower layer of coke above said grate and supporting a charge within said reaction chamber; an upper layer of coke supported by said charge; a lateral layer of coke surrounding and supporting said charge laterally and interposed between the latter and said wall and connecting said upper and lower layers; a plurality of lower electrodes having their inner ends embedded in said lower coke layer; a plurality of upper electrodes having their inner ends in contact with said upper coke layer; and electrical connections connecting said electrodes with a suitable source of electric current.

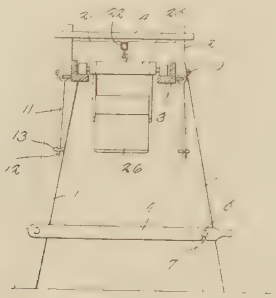
1,415,447. SPARK PLUG. LORENZO G. HOWARD, Providence, R. I. Filed June 15, 1920. Serial No. 389,194. 1 Claim. (Cl. 123—169.)



A spark plug having a core, an electrode loosely mounted therein, a cage resting on the core and said electrode, interengaging means intermediate the core and cage, a

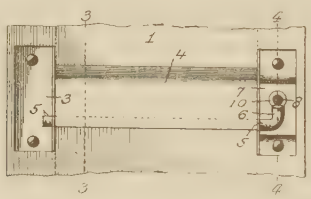
second electrode, said second electrode being loosely mounted in the core and said cage, a head on the second electrode to underlap the core and to cooperate with the first electrode, the cage having a window, a nut in said window engaging the second electrode to prevent displacement thereof, a third electrode, said third electrode being mounted by the cage and having a fastening nut in said window, projections on the nuts in said window, a visual protector for the electrodes in said window and into which said projections extend to mount it, a bushing, means to secure the core to the bushing, and electrode means on the bushing to cooperate with the said electrodes.

1,415,448. OVERHEAD CARRIER. LEONIDAS S. HUDSON, Newark, N. J. Filed Dec. 20, 1920. Serial No. 432,050. 3 Claims. (Cl. 104—26.)



1. A structure of the class described including a series of units each including supports arranged in pairs, upwardly projecting extensions upon the supports, opposed rails bearing on the supports and secured to the extensions, said rails having upwardly extending guide flanges, cross braces detachably connecting the lower portions of the supports, and means for detachably and pivotally connecting the ends of the rails of abutting units.

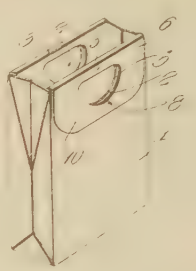
1,415,449. FRUIT AND VEGETABLE CUTTER. MICHAEL KIRNBAUER, Forest Park, Ill. Filed Jan. 14, 1922. Serial No. 529,108. 2 Claims. (Cl. 146—7.)



1. In a slicing implement, a flat work board, a cutter blade arranged transversely of the same, a shaft journalled transversely on said work board and having a lateral arm at one end, the butt of the cutter blade being secured to said shaft, and means for imparting a turning movement to said arm and its associated parts, the same comprising gear teeth on the outer end of the lateral arm, and a worm shaft journalled in the work board and having operative engagement with the gear teeth of said arm.

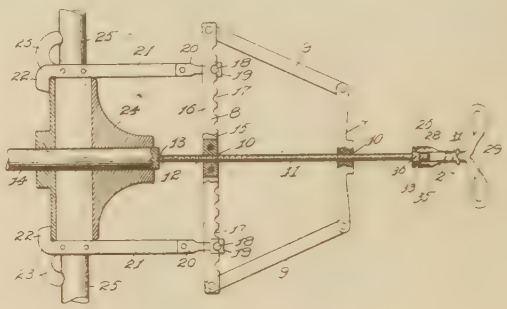
1,415,450. BAG. FRED L. JOHNSON, Binghamton, N. Y., assignor to Mid-East Specialty Company, Inc., a Corporation of New York. Filed Apr. 18, 1921. Serial No. 462,097. 2 Claims. (Cl. 229—54.)

2. A bag having a hand opening in its side adjacent the open end of the bag, a reinforcing sheet for the said side of the bag reinforcing the side about the opening therein, and a separate covering element straddling the said side of the bag and having its inner and outer side portions of substantially the same size and shape as the



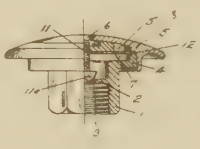
reinforcing sheet, the reinforcing sheet and side portions of the covering being relatively large and having openings registering with the opening in the side of the bag.

1,415,451. WHEEL PULLER. ALFRED B. JONES, Farmington, Mo. Filed Aug. 23, 1920. Serial No. 405,532. 1 Claim. (Cl. 29—85.)



A wheel puller of the character described comprising a rack bar, and a cross-bar, the connecting arms connecting both ends of said bars, a screw threaded member passing through said bars, a detachable handle mounted on the free end of the screw threaded member, the opposite end of the screw threaded member designed to contact with the end of the shaft on which the wheel is mounted, and pulling arms supported by the rack bar, its opposite ends adapted to contact with the hub or spokes of the wheel, substantially as specified.

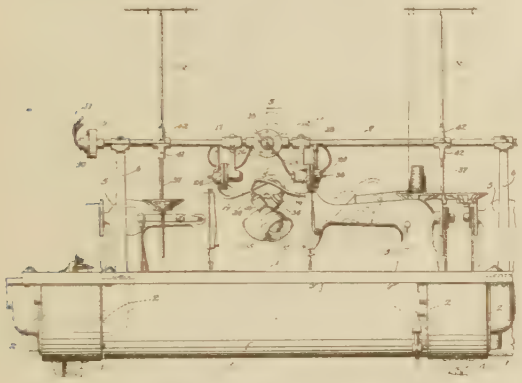
1,415,452. SPRAY SPRINKLER. VENICE A. H. KAHLER, Pasadena, Calif. Filed Feb. 8, 1921. Serial No. 443,375. 1 Claim. (Cl. 299—118.)



A spray lawn sprinkler of the character shown and described comprising in combination a body internally threaded at one end, having a floor or partition member with central opening therein and having its opposite end of larger internal diameter and externally threaded, a top cap internally threaded and adapted to screw on to the larger externally threaded portion of said body and having a central opening, a disc member of a diameter corresponding to the diameter of the larger part of said body and adapted to be clamped between the edge thereof and said top cap, said disc member having a series of holes therethrough adjacent its outer edge and having a central portion on its upper side of thicker construction and provided with a plurality of tangentially disposed openings

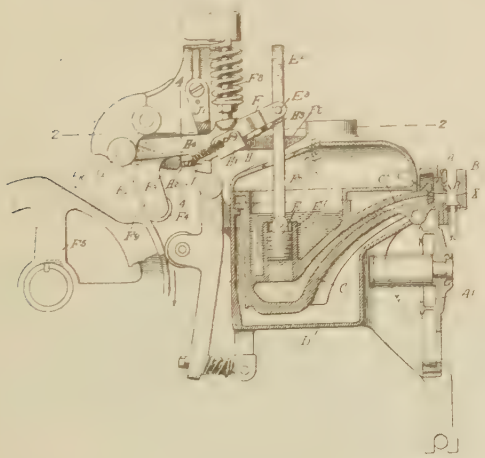
extending from the holes through the outer edge of the disc to the central part of said thicker part, and a screw valve member threaded through said disc portion and havinng its end adapted to seat in the central opening in the floor or partition member, whereby to cut off communication through said opening.

1,415,453. LIGHTING SYSTEM FOR POWER TABLES. JOHN D. KARLE, Roselle Park, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed May 5, 1919. Serial No. 295,012. 3 Claims. (Cl. 240—2.)



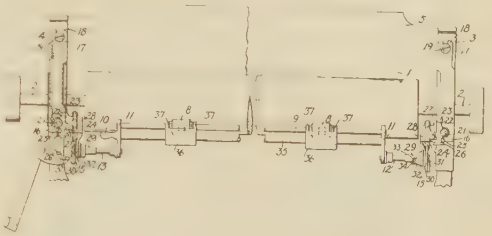
1. In a lighting system for sewing machine power-tables, a lighting unit including a fixed arm and a movable arm frictionally pivoted at the free end of said fixed arm to swing vertically, said movable arm including a support having a socket extending parallel to and closely adjacent the transverse vertical plane through the stitching point of the sewing machine to be illuminated, an arm proper adjustably mounted in said socket and having its extremity offset from but directed toward said vertical plane, and a lighting element mounted at the extremity of said movable arm.

1,415,454. TYPOGRAPHICAL CASTING MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Aug. 25, 1921. Serial No. 495,272. 8 Claims. (Cl. 199—53.)



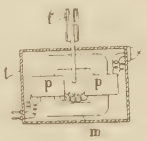
1. In a typographical casting machine, the combination of a melting pot, a plurality of pump plungers located therein, operating means for said plungers, and means for preventing the operation of one plunger independently of another.

1,415,455. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 25, 1920. Serial No. 391,675. 15 Claims. (Cl. 197—138.)



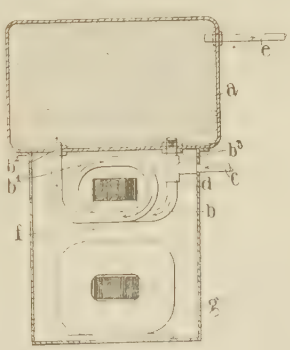
1. In a typewriting machine, the combination with a platen and a platen frame having ends, of an upper feed-roll to run upon the platen, a shaft upon which said roll is slidably journaled, supports for said shaft in said ends, a second stiffening shaft located radially of the platen in front of the first shaft, and a slidable brace engaging both of said shafts and connected to slide with a roll.

1,415,456. ELECTRIC COOKING OR HEATING VESSEL. CLARENCE HAROLD LAUTH, London, England. Filed Dec. 16, 1919. Serial No. 345,352. 2 Claims. (Cl. 219—47.)



1. An electric cooking and heating apparatus for use in a supply circuit of high amperage and low voltage comprising a vessel for receiving the contents to be heated, the shell of the vessel constituting the main resistance of the circuit wherein the heat necessary for heating purposes is developed, and current distributing contacts rigidly secured to the shell of the vessel solely in the proximity of its bottom edge, said contacts being rigidly secured to, and in good thermal and electrical contact with the shell of the vessel and dimensioned and shaped in such a manner as to cause an intense sheet of current to flow through and evenly heat the entire bottom of the vessel and a less intense current to flow through the sides thereof, gradually diminishing in intensity towards the top of the vessel, as set forth.

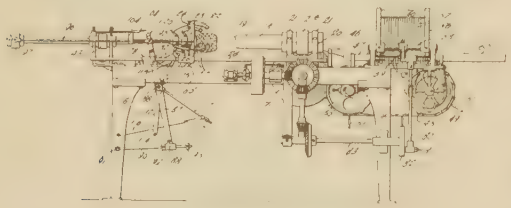
1,415,457. ELECTRICALLY-HEATED LIQUID HEATER. CLARENCE HAROLD LAUTH, London, England. Filed June 16, 1920. Serial No. 389,471. 5 Claims. (Cl. 219—47.)



1. The combination with a liquid heater and a transformer for heating the said heater by a current of high

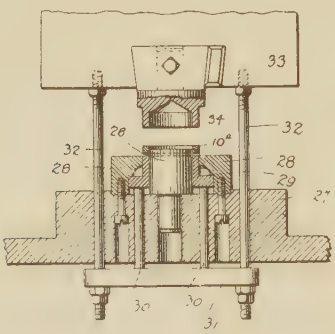
amperage and low voltage derived from the secondary of the transformer of a path for the flow of liquid to the heater, which path is so arranged that the liquid will absorb heat from the transformer prior to its reaching the heater, as and for the purposes set forth.

1,415,458. FRUIT CORING, SIZING, AND SLICING MACHINE. ELGIE J. LEWIS, Middleport, N. Y. Filed Nov. 7, 1921. Serial No. 513,270. 30 Claims. (Cl. 146—6.)



28. In a machine for operating on fruit, the combination of means for sizing fruit, conveying means to which the fruit passes from said sizing means, and slicing means to which the fruit is passed by said conveying means.

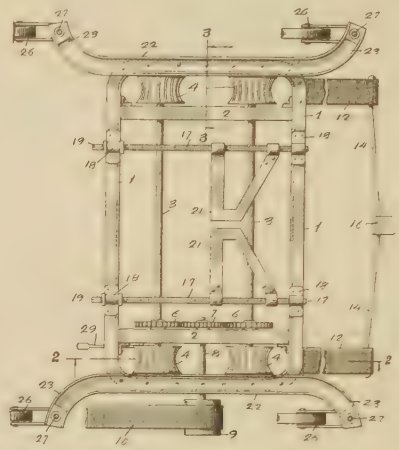
1,415,459. MACHINE FOR SIZING PROJECTILE BANDS. ALEXANDER W. LIMONT, Bridgeport, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn., a Corporation of Connecticut. Original application filed June 28, 1918, Serial No. 242,401. Divided and this application filed Feb. 17, 1919, Serial No. 277,662. Renewed Nov. 16, 1921. Serial No. 515,690. 9 Claims. (Cl. 78—1.)



1. In a machine for making projectile bands, the combination of a die bed, an upstanding, stationary mandrel thereon, a die member surrounding the mandrel with clearance to receive a band, and separate means to compress the band in the space between the mandrel and the die member.

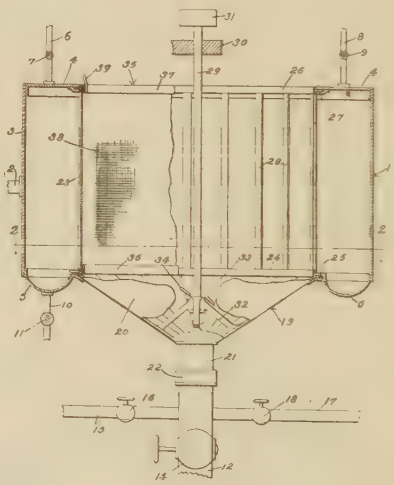
1,415,460. PORTABLE POWER-TRANSMITTING DEVICE. WILLIAM J. LINDECKER, San Francisco, Calif. Filed June 11, 1921. Serial No. 476,906. 9 Claims. (Cl. 74—106.)

1. A portable power transmitting device comprising a frame; rollers rotatably mounted upon said frame and arranged to engage and support the rear wheels of a motor vehicle; a driving pulley connected to said rollers whereby the same may be rotated by the said rear wheels; castors pivotally mounted upon said frame whereby the same may be transported; means for lowering and raising said castors whereby said frame may rest upon the ground and be easily transported; inclines hingedly connected to the frame and a draw-bar connected to the inclines whereby said device may be towed behind a



motor vehicle and directly in line with the rear wheels thereof to facilitate placement of said vehicle on said device.

1,415,461. FILTER PRESS. RICHARD DANIEL LUCAS, Wallaceburg, Ontario, Canada. Filed Dec. 9, 1920. Serial No. 429,589. 3 Claims. (Cl. 210—180.)

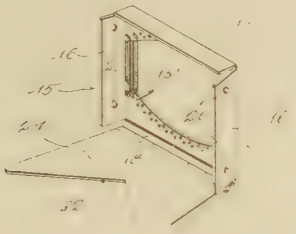


1. In a device of the class described, a casing, a rotary filter journaled in the casing, means for rotating the filter, a combined inlet and outlet member wherewith the filter communicates, a valve in said member, a valve-controlled inlet for unfiltered material, and a valve controlled washing inlet, each communicating with said member between the valve thereof and the filter, a valve-controlled suction conduit, and a valve-controlled pressure conduit, each communicating with the casing.

1,415,462. VOICE INTENSIFIER. ISAAC V. MORRELL, Elgin, Ill. Filed Jan. 20, 1921. Serial No. 438,742. 8 Claims. (Cl. 181—27.)

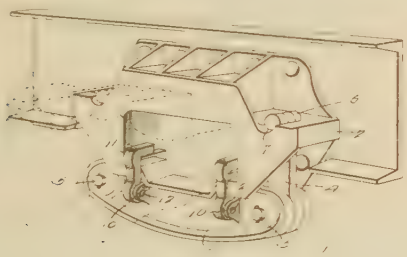
8. A voice intensifier comprising a horn and a mouthpiece, an open reed carrier fitting within said mouth-

piece, and a flexible element carried by and extending from the frame longitudinally within the mouth-piece



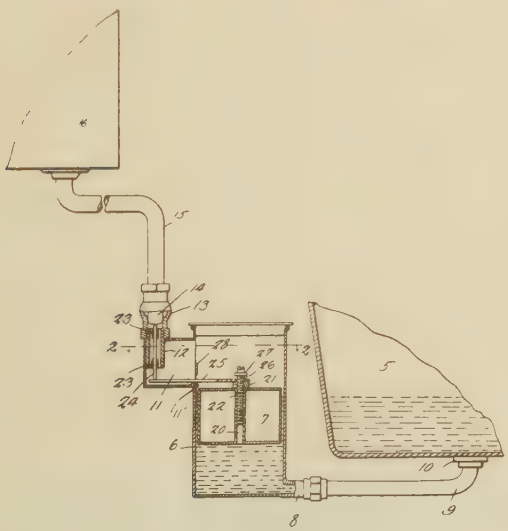
for engaging the chin and moving with the same and directing sound waves through the mouth-piece and reed carrier.

1,415,463. CENTERING DEVICE FOR CAR COUPLINGS. WALTER P. MURPHY, Chicago, Ill. Filed Dec. 30, 1919. Serial No. 348,286. 7 Claims. (Cl. 213—42.)



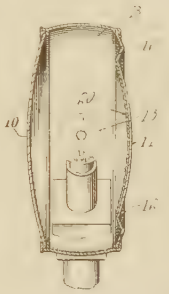
1. In a car, the combination of a coupler, of means to temporarily hold the coupler in proper coupling position while cars are being coupled, said means being released by impact or pull on the coupler.

1,415,464. AUTOMATIC OILING DEVICE FOR INTERNAL-COMBUSTION ENGINES. FRANK J. C. NICHALSON, Baltimore, Md. Filed Apr. 8, 1921. Serial No. 459,518. 1 Claim. (Cl. 184—103.)



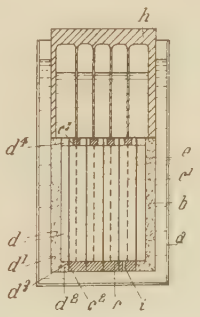
The combination of a float chamber having, at its lower end, an outlet adapted to be connected to the crank-case of an engine, and a side recess toward the top, said recess having internally, on its bottom, a transverse ledge, a nipple connected to said recess and opening thereinto, a valve-casing connected to the nipple and containing an upward-opening valve, an oil-supply connection to the valve-casing, a push-rod slidably mounted in the nipple and extending into the valve casing to engage the valve and unseat the same, a lever projecting into said recess and resting upon said ledge as a fulcrum and being elevated thereby above the bottom of said recess, said lever engaging the push-rod for actuating the same, a float in the chamber, and a stem carried by the float and provided with an abutment above the lever to engage the same, said lever having an aperture through which the float-stem passes, said stem being longitudinally threaded and screwed into said float, whereby said stem is longitudinally adjustable to vary the spacing between the lever and the abutment.

1,415,465. SIGNAL LIGHT FOR AUTOMOBILES. OMAR I. NIGH, Washington, D. C. Filed Oct. 28, 1920. Serial No. 420,195. 7 Claims. (Cl. 240—7.)



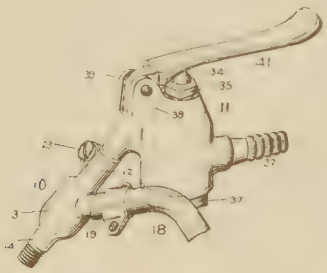
3. A signal light for automobiles comprising a curved frame, a transparent closure at one side thereof, a mirror at the other side, a lamp positioned between the two, the rear surface of the mirror being covered with reflecting material to provide a reflector for the lamp, and a light transmitting colored annular closure surrounding the mirror, substantially as set forth.

1,415,466. ELECTROLYZER. RODOLPHE PECHKRANZ, Carouge-Geneva, Switzerland. Filed June 1, 1920. Serial No. 385,598. 3 Claims. (Cl. 204—5.)



1. In an electrolyzer of the tank type in combination vertical diaphragms, a plurality of frames of insulating material, vertical electrodes of slightly smaller size than said diaphragms, said electrodes being arranged in alternation with said diaphragms and so dimensioned that when inserted into said frames they do not reach to the outer edges of the latter, substantially as described.

1,415,467. CLEANING DEVICE. GEORGE B. PICKOP, New Haven, Conn., assignor to The Malleable Iron Fittings Company, Branford, Conn., a Corporation of Connecticut. Filed July 1, 1918. Serial No. 242,871. 2 Claims. (Cl. 230—13.)



1. A portable manually directed engine or like cleaner having a nozzle and a mixing chamber provided with connections for a motive fluid and for a cleaning substance, and having a socket, a valve housing containing a spring pressed valve and having its outlet nozzle detachably and rigidly mounted in said socket and means to operate the valve against the tension of the spring, said means being located in position to be operated by the hand directing the cleaner nozzle.

1,415,468. PROCESS FOR MANUFACTURE OF RUBBER-LIKE SUBSTANCES. HERMANN PLAUSON, Hamburg, Germany. Filed Jan. 13, 1921. Serial No. 437,113. 4 Claims. (Cl. 260—6.)

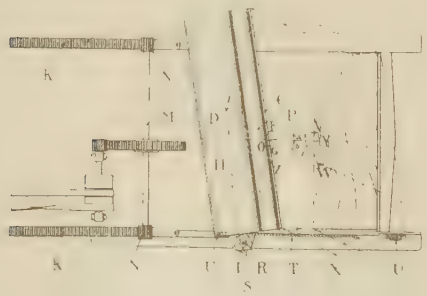
1. Process of polymerizing hydrocarbons of the butadiene series at temperatures not above normal, by employing high pressures of the order of fifty to six-hundred atmospheres in presence of a diluent.

1,415,469. PROCESS OF IMPROVING THE ODOR, TASTE, AND DIGESTIBILITY OF RAW YEAST FOR THE PURPOSE OF EMPLOYING IT AS EDIBLE YEAST. HERMANN PLAUSON, Hamburg, Germany. Filed Jan. 13, 1921. Serial No. 437,120. 9 Claims. (Cl. 99—10.)

4. The process of treating yeast which consists in rupturing the cells by disintegration in water at high speed and then hydrogenating the yeast.

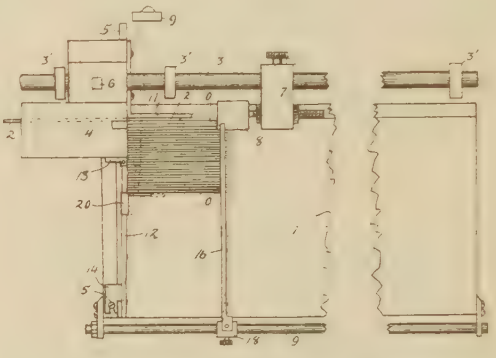
9. A hydrogenated yeast milk in which the yeast cells are mechanically distintegrated and form a colloidal solution.

1,415,470. WOOD SLICING MACHINE. PIERRE JEAN RENÉ POSTEL-VINAY, Paris, France, assignor to Societe Des Moteurs Salmson, (Systeme Canton-Unne,) Paris, France. Filed June 24, 1921. Serial No. 480,184. 2 Claims. (Cl. 144—162.)



1. A wood slicing machine comprising a frame, a reciprocating carriage on said frame, means for operating said carriage, a slide, means for guiding said slide on the carriage in a direction at an angle with the direction of travel of the carriage, a tool-holder on said slide, a cutter on said tool-holder having its cutting edge at an angle with the said direction of travel, a shaft rotatably supported on said carriage, two pinions on said shaft, a rack secured to the slide and in engagement with one of said pinions, a rack slidably mounted on the machine frame and in engagement with the other pinion and stop members on the machine frame for limiting the stroke of the latter rack.

1,415,471. SLUG STACKER. WILLARD E. PRESSLER, Fort Wayne, Ind. Filed Apr. 22, 1921. Serial No. 463,615. 3 Claims. (Cl. 199—61.)



1. In an attachment for a slug machine having a table and a movable cutting mechanism, a guide having pivotal connection at one end with the table and at its opposite end with the cutting mechanism; a slide having a stop thereon and being frictionally engaged in connection with the guide; and a bar arranged in parallel relation with the guide and having connection at one end with the cutting mechanism and pivotal support at its opposite end.

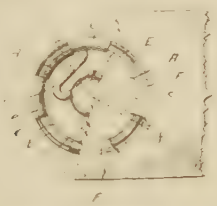
1,415,472. CROCHET NEEDLE. VOJTĚCH PUC, Prague-Vinohrady, Bohemia. Filed Aug. 1, 1919. Serial No. 314,764. 3 Claims. (Cl. 66—17.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

3. A crochet needle formed from a single piece of wire having a hooked working end and a handle formed by bending the wire upon itself to form a loop, and a ring to provide a finger rest in combination with a clamp for holding the free end of the wire below the ring close to the inner portion of the working end of the handle.

1,415,473. SAFETY PIN. VOJTĚCH PUC, Prague-Vinohrady, Bohemia. Filed Aug. 4, 1919. Serial No. 315,112. 4 Claims. (Cl. 24—73.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

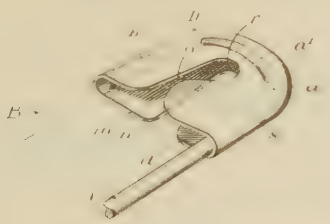
1. A safety pin, provided with a laterally projecting member and having parts which are movable under spring tension to lengthen the pin as a whole and to thus withdraw the pointed end of the pin from its guard.

1,415,474. SNAP BUTTON. VOJTĚCH PUC, Prague-Vinohrady, Bohemia. Filed Aug. 6, 1919. Serial No. 315,618. 3 Claims. (Cl. 24—208.)



3. A garment fastener comprising a member having in its peripheral portion hollow tubular parts adapted to receive a wire when inserted endwise and which tubular parts are arranged suitable distances apart to provide spaces to receive portions of the cloth to which the button is applied.

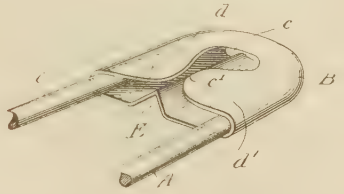
1,415,475. SAFETY PIN. VOJTĚCH PUC, Prague-Vinohrady, Bohemia. Filed Aug. 6, 1919. Serial No. 315,620. 2 Claims. (Cl. 245—156.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A safety pin, comprising a stationary member, a movable pointed member connected by a coil, and a sheet metal guard, one side of which is formed with a diagonal slot and is flat and straight between the stationary and pointed members and the opposite side of which is formed with a diagonal slot and provided with a tongue of single thickness extending without bend from the extreme outer side of the stationary member diagonally inwards toward the opposite side of the guard across the slot therein.

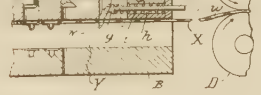
1,415,476. SAFETY PIN. VOJTĚCH PUC, Prague-Vinohrady, Bohemia. Filed Aug. 11, 1919. Serial No. 316,571. 3 Claims. (Cl. 24—156.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A safety pin, comprising a stationary member, a pointed member, and a guard to which the stationary member is attached, which guard is formed on one side with a slot and on the opposite side with a fixed ridge beneath the slot and the outer end of which is disposed on



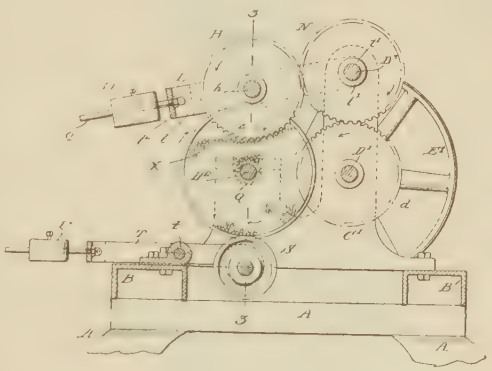
that side of the slot next the fixed member, said ridge having an inclined surface extending to the outer side of the guard for guiding the pointed end of the pin.

1,415,477. DIES FOR PUNCHING SMALL METAL PARTS. VOJTĚCH PUC, Prague-Vinohrady, Bohemia. Filed Feb. 4, 1920. Serial No. 356,115. 8 Claims. (Cl. 164—89.)



1. In a machine for forming small metal parts or articles from a strip of metal, the combination with means for punching the strip, for raising and lowering it and for advancing it step-by-step, of a pivotally mounted finger adapted to engage the strip when raised and to be moved thereby, and means for limiting the movement of said finger.

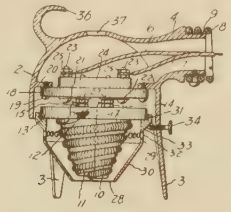
1,415,478. POLISHING MACHINE. VOJTĚCH PUC, Prague-Vinohrady, Bohemia. Filed Feb. 6, 1920. Serial No. 356,783. 20 Claims. (Cl. 51—164.)



1. A polishing machine comprising a container for the articles to be polished, means for rotating the container, a toothed roller journalled outside the container extending thereinto and bearing on the articles, and means for rotating said roller.

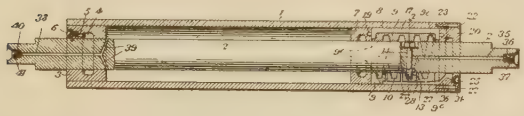
2. A polishing machine comprising a container for the articles to be polished, means for rotating the container, a toothed roller journalled outside the container and operating above the articles therein, means for rotating said roller, and a roller operating in the container below the articles.

1,415,479. ELECTRICALLY HEATED FUSING IMPLEMENT. EDWIN W. PUTNAM, Hartford, Conn. Filed Oct. 28, 1921. Serial No. 511,028. 8 Claims. (Cl. 219—21.)



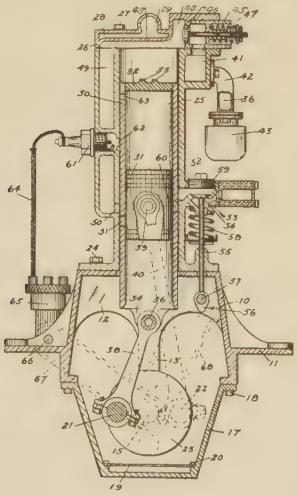
1. An implement of the class described, comprising a heating element, and a guard device surrounding the heating element and having an opening for radiant heat, the implement being provided with means for positively holding the heating element out of contact with a body in connection with which said implement is being used.

1,415,480. INK DISTRIBUTOR. WILLIAM JACOB RAMSAFER, New York, N. Y. Filed July 5, 1921. Serial No. 482,488. 8 Claims. (Cl. 101—348.)



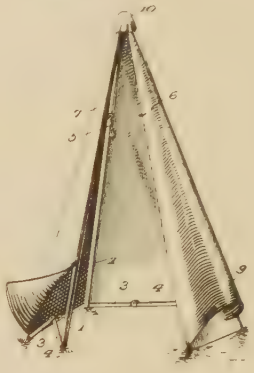
1. An ink distributor comprising a shaft, a distributing roll slidably and revolubly mounted on said shaft and formed with a chamber at one end, a sectional sleeve fitting within said chamber and provided with an internal duplex thread wholly within said sleeve, means for locking the sleeve to the roll to rotate therewith, means for confining the sleeve within the chamber, and a crescent switch pivotally mounted on said shaft and engaging the duplex thread of the sleeve.

1,415,481. INTERNAL-COMBUSTION ENGINE. FRANK J. REED, Omaha, Nebr., assignor of one-half to Alvin H. Siert, Omaha, Nebr. Filed Dec. 3, 1920. Serial No. 427,980. 3 Claims. (Cl. 123—66.)



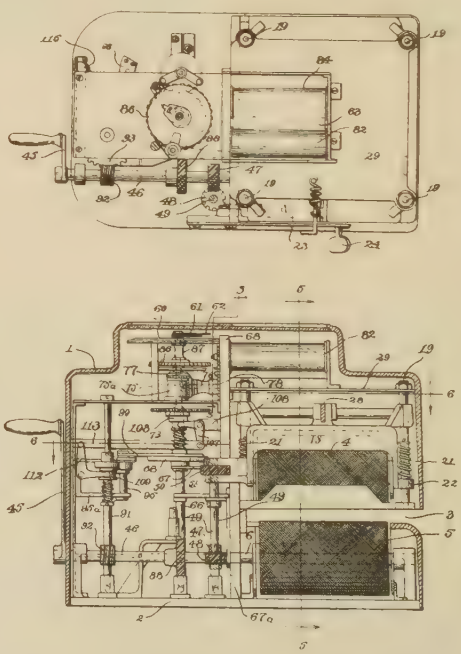
1. In an internal combustion engine, the combination of a two-part crank case, the upper part of said case having transverse webs with depending supporting arms having bearings in their lower ends, a crank shaft supported in said bearings, cylinders mounted upon the crank case, a pair of pistons mounted in each cylinder, said crank shaft having a pair of offset cranks in registry with each cylinder, and independent connecting rods between the pistons and the crank portions of the crank shaft whereby said crank portions are adapted to move said pistons toward and from each other during turning of the crank shaft.

1,415,482. COLLAPSIBLE TENT. RAYMOND THEODORE REED, Wichita, Kans. Filed Aug. 6, 1921. Serial No. 490,278. 2 Claims. (Cl. 135—4.)



1. A folding tent comprising a series of uprights, a ring upon which the upper ends of the uprights are mounted to swing and slide into spaced relation or into contact with each other, folding arms connecting the lower ends of the adjacent uprights and a covering for the uprights, said folding arms consisting of sections pivoted to the uprights at their outer ends and connected by a rule joint at their adjacent ends, one of the arms being omitted, and a hook pivoted to one upright at the omitted arm and an eye on the other upright for engagement by the hook.

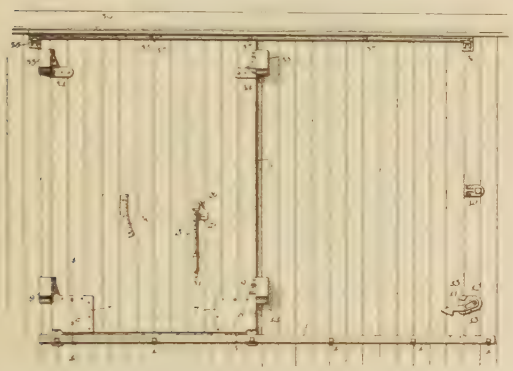
1,415,483. LACE-MEASURING MACHINE. FREDERICK REICHMANN, Webster Groves, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 9, 1920. Serial No. 402,295. 13 Claims. (Cl. 33—133.)



1. In a fabric measuring machine, the combination of a pair of oppositely disposed movable members con-

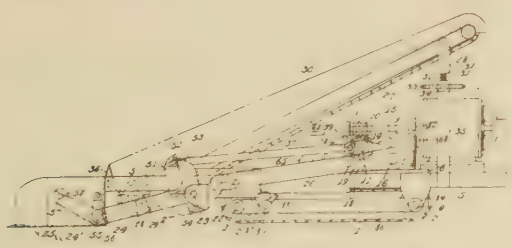
structed to receive the fabric therebetween, means for indicating substantially the amount of lineal movement of the movable members as the fabric passes therebetween, and a compensating device connected with the movable members and moving in unison continuously and proportionately therewith to prevent inaccuracies in the indicated measurement.

1,415,484. RAILWAY CAR DOOR. WILFRID SALMON, St. Paul, Minn. Filed Feb. 26, 1920. Serial No. 361,370. 10 Claims. (Cl. 20—23.)



5. The combination of sill castings with track portions, mounted in each corner of the sill of a door opening, and a car door, with wheels normally running on a rail, arranged to be lifted from the rail into the door opening and provided with guide wheels then running on the track portions.

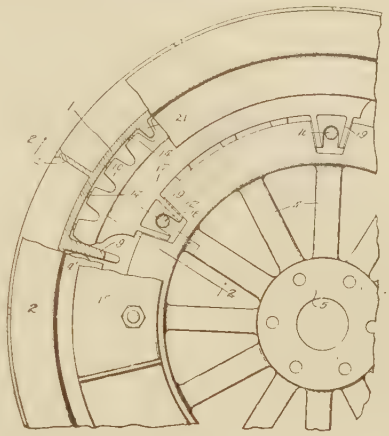
1,415,485. LOADING MACHINE. WILLIAM SCHLUTER, Jr., Bellaire, Ohio, assignor of one-third to C. H. Dankworth and one-third to G. W. Dankworth, Bellaire, Ohio. Filed Mar. 29, 1921. Serial No. 456,724. 11 Claims. (Cl. 214—90.)



1. A loading machine comprising a tractor, a frame carried thereby, slides mounted on said frame, means for reciprocating said slides, arms pivoted to said slides, a scoop pivotally connected to said arms, and means acting upon said arms at the limit of the forward movement of the scoop for elevating said arms to scoop dumping position.

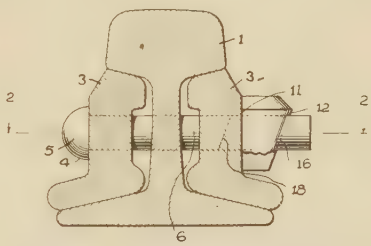
1,415,486. RESILIENT WHEEL. ALBERT L. SCHULTZ, Pittsburgh, Pa. Filed Feb. 11, 1920. Serial No. 357,982. 10 Claims. (Cl. 152—36.)

1. As intermediaries between the inner and outer rim members of a resilient wheel in which the inner rim member has outwardly flaring socket formations, cushioning members each comprising a substantially integral cushion in direct contact with both rims and with the socket formations, and a metal reinforcement imbedded in the cushion and having portions conformably extending into



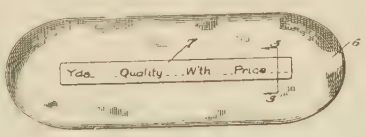
the socket formations but kept from direct contact with the latter by parts of the cushion.

1,415,487. BOLT. MARCEL K. SESSLER, New York, N. Y. Filed Mar. 29, 1919, Serial No. 286,144. Renewed Oct. 8, 1921. Serial No. 506,486. 19 Claims. (Cl. 238—260.)



16. In combination, two metallic plates, a bolt passing transversely thereof, a staple formed wedge straddling said bolt, said bolt being grooved to accommodate the legs of said wedge, one face of said wedge resting against one of said plates and one of said legs having a shelf, as and for the purpose described.

1,415,488. TAB HOLDER. EDWARD SEYFARTH, Dixon, Ill. Filed May 27, 1921. Serial No. 472,964. 4 Claims. (Cl. 40—22.)

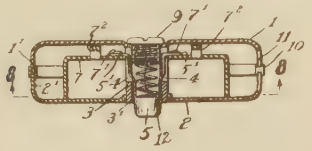


1. A tab holder comprising a tab-carrying body, a pair of slides, means for holding the slides on the tab-carrying body, and supporting means for said body comprising wire arms, each connected to one of said slides whereby to be adjustable to accommodate centerboards of different width.

1,415,489. POCKET TAPE. ROBERT J. SIMPSON, Athol, Mass. Filed Nov. 5, 1921. Serial No. 513,142. 3 Claims. (Cl. 33—138.)

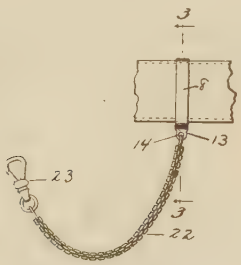
1. In a pocket take, a casing comprising a pair of shells, a central post on one shell, a rotatable tape spool

on said post, and an interposed strip of greater width than the thickness of the shell edges and channelled to receive the shell edges, and a screw engaging said cen-



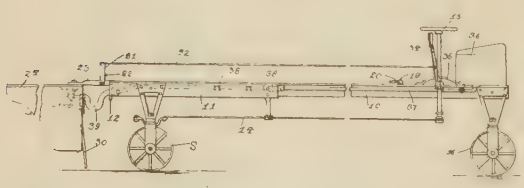
tral post and passing through the other shell for drawing the shells together with their edges lodged in said channels.

1,415,490. BELT LOOP FOR CHAINS. EZRA S. SMITH, Attleboro, Mass., assignor to R. F. Simmons Company, Attleboro, Mass., a Firm. Filed Feb. 1, 1922. Serial No. 533,312. 1 Claim. (Cl. 24—3.)



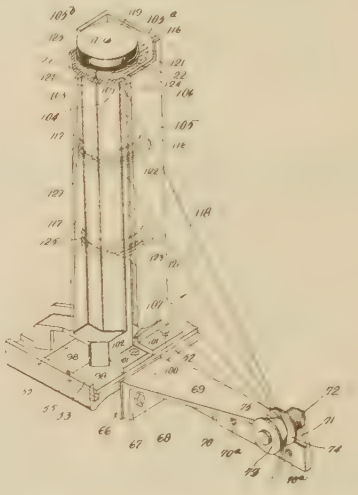
In a belt loop, a flat resilient arm comprising a body portion, an inwardly bent shoulder provided with an opening, and a depending portion, a second flat resilient arm integrally connected at one end to the body portion of the first arm, an inwardly directed convexo concave finger upon the lower end of the second arm provided with a reduced end movable through the opening to engage the body portion of the first arm, and a chain upon the depending portion of the first arm.

1,415,491. WEED AND INSECT BURNER. LEWIS FREAMON SOUTHER, Larson, N. Dak. Filed Dec. 11, 1920. Serial No. 430,038. 2 Claims. (Cl. 126—271.2.)



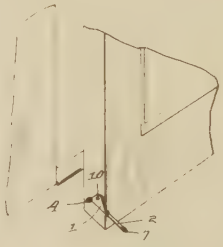
1. A weed and insect destroyer comprising a deflector plate, an angle iron supporting member, said member having one flange thereof secured to the lower face of said plate, brackets depending from said flange, burner means carried by the brackets, a drag plate hinged to the lower portion of the remaining flange of said angle iron supporting member, and means for pivotally connecting said deflector plate to a support.

1,415,492. APPARATUS FOR AUTOMATICALLY FEEDING WIRE FILLING UNITS TO WIRE-FABRIC SHUTTLES. WILLIAM S. SOUTHWICK, Clinton, Mass., assignor to Wickwire Spencer Steel Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 5, 1921. Serial No. 449,835. 5 Claims. (Cl. 139—85.)



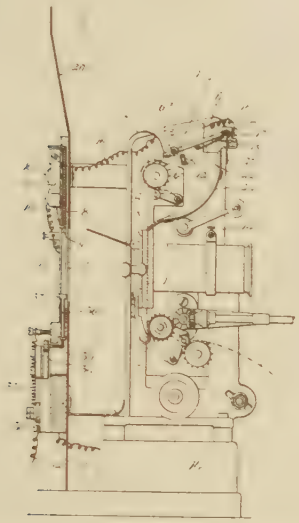
2. In a loom for weaving wire fabric, a lay, a shuttle carried thereby, a magazine to the front of the lay constituted to hold a series of filling units, means associated with each unit to yieldingly resist the unwinding of its filling, a slot on one side of said magazine, a notch in the wall of said magazine near its lower end connecting with the said slot, a series of filling units in said chamber, the free end of each filling passing through the said slot, a tension connected to the end of each filling, a guide for said fillings between said slot and said tension, means for keeping said tension separated, means for transferring the filling unit from the magazine to the shuttle, the free end of each filling automatically passing from said slot into said notch, co-operating parts upon said unit and said magazine to maintain said units in a predetermined path in their passage through and out of said magazine.

1,415,493. COMBINED DOOR CHECK AND BUFFER. DANIEL H. STRAYER, Los Angeles, Calif. Filed June 7, 1921. Serial No. 475,575. 6 Claims. (Cl. 16—86.)



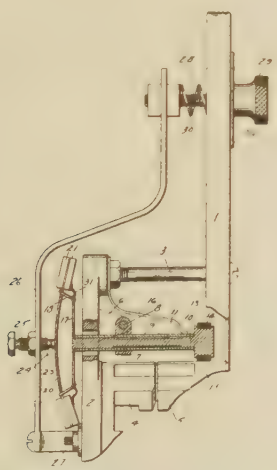
4. A structure of the class described comprising a member adapted to be pivotally mounted on the edge of a door and having an elongated portion normally projecting outwardly from the plane of the door, means carried by said member contacting with the door jamb when the door is closed for pivoting said elongated portion from its normal position, and means carried by said elongated portion for yieldingly contacting with the side of the door when said elongated portion is pivoted from its normal position during the door closing operation.

1,415,494. SAFETY DEVICE FOR CINEMATOGRAPH PROJECTING APPARATUS. FRIEDRICH STEIN, Villingen, Germany. Filed Aug. 5, 1921. Serial No. 490,126. 1 Claim. (Cl. 88—17.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



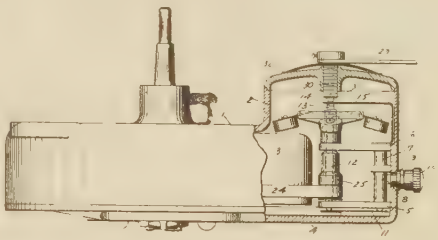
A fire-preventing device for cinematographic apparatuses in which a shutter intercepting the light rays of the projection lamp is released when the film breaks above the first sprocket or when it piles up below the same, comprising in combination with two feed sprockets, a contact lever resting on the film in front of the first of said feed sprockets and coming into operation when the film breaks above this first feed sprocket, a second contact lever which when the feed fails is raised by the loop of the film rising between said two feed sprockets, and a common pivot pin for said two contact levers.

1,415,495. GOVERNOR FOR ELECTRICAL CIRCUITS. EDWARD J. TOMLINSON, East Orange, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Apr. 7, 1919. Serial No. 288,385. 8 Claims. (Cl. 200—80.)



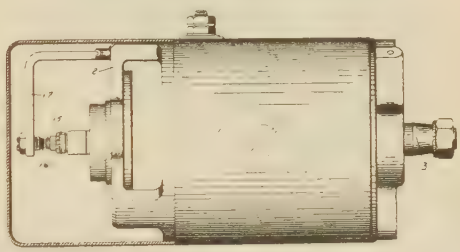
1. In a governor for an electrical circuit, the combination of a bearing support carrying a rotatable shaft, a member supported on the end of said shaft and extending at right angles thereto and having its ends upturned, a flexible member supported on said upturned end and having weights fastened to the ends thereof, a contact carried by said flexible member and a member carrying a contact to cooperate with the first contact for the purpose described.

1,415,496. GOVERNOR FOR ELECTRIC CIRCUITS. EDWARD J. TOMLINSON, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed June 22, 1920. Serial No. 390,984. 8 Claims. (Cl. 200—80.)



1. In a governor for an electrical circuit the combination of, an operating shaft with means for supporting and driving the same, a member carried by said shaft having a plurality of slots diametrically opposite each other, a groove in said member opening into said slots, a resilient member carried in said slots and having weights on its extremity outside said member, a resilient member carried in said groove for holding said first mentioned resilient member in place in said slots, a contact carried by the last mentioned resilient member and a relatively stationary contact for co-operating with the first mentioned contact.

1,415,497. AUTOMATIC CUT-OUT FOR ELECTRIC GENERATORS. EDWARD J. TOMLINSON, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed June 22, 1920. Serial No. 390,985. 8 Claims. (Cl. 200—80.)

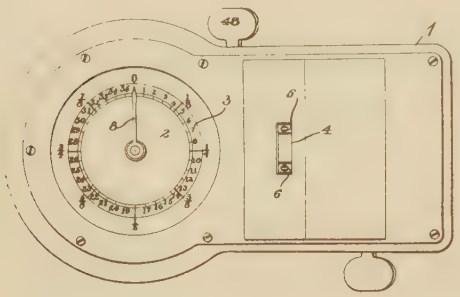


1. In an automatic cut-out for electrical generators, the combination of an operating shaft, a stud member fastened thereto, a cross member attached to said stud, weights pivoted to said cross member near its extremities, fingers on the ends of said weights, a pair of cooperating contacts and a flat spring having notches to receive said fingers operative upon movement thereof to close the contacts.

1,415,498. FABRIC-MEASURING AND COST-COMPUTING MACHINE. DOUGLAS TURNER, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 13, 1920. Serial No. 409,834. 8 Claims. (Cl. 235—91.)

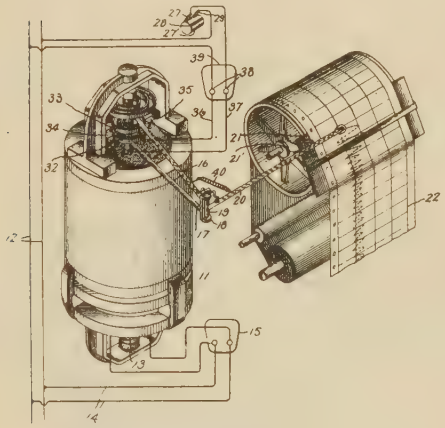
1. In a measuring machine, the combination of an indicator including a pointer for indicating fractions of the unit of measure, a totalizer mechanism having a plurality of counter-wheels carrying numbers for indicating quantities in the unit of measure, a measuring roller, a clutch

for driving the indicator pointer from the measuring roller, a second clutch for driving the totalizer mechanism from the measuring roller, a hand-operated member,



means actuated thereby for opening both clutches, and means also actuated thereby for returning the indicator pointer and the counter-wheels to their zero position when the clutches are open.

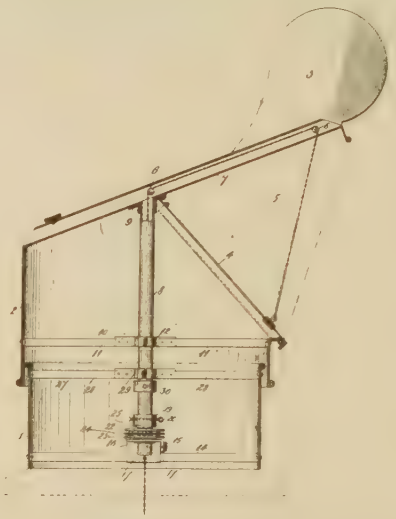
1,415,499. RECORDER. JAMES N. TUTTLE, Boston, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 13, 1919. Serial No. 330,257. 4 Claims. (Cl. 234—55.)



1. In a recorder, a record sheet provided with a surface sensitive to heat, a heated stylus relatively movable thereto, and means for periodically moving said stylus to and from the surface of said sheet, said surface being adapted to indicate where the stylus has been in contact therewith.

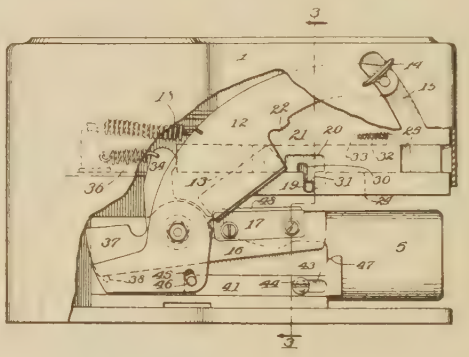
1,415,500. VENTILATOR. EZEKIEL VAN NOORDEN, Brookline, Mass., assignor to E. Van Noorden & Co., Boston, Mass., a Voluntary Trust Association. Filed May 6, 1920. Serial No. 379,262. 5 Claims. (Cl. 98—3.)

3. In a ventilator, having a lower member, an upper rotatable member, a post centrally arranged for supporting the upper member, means for fixing said post to one of said members, a bearing for said post fixed to the other of said members, an anti-friction device carried by said bearing, the combination therewith of a collar loosely arranged upon the post beyond said anti-friction device, and means for fixing the collar to the post whereby the post may turn upon an axis relatively to the collar, said collar being provided with an edge by which it has bearing



against said anti-friction device and thereby may turn thereon on an axis substantially at right angles to the first-named axis.

1,415,501. FLOATING SHEAR CONTROL FOR PRESSURE ROLLERS. JOHN L. WHEELER, St. Louis, and EDWIN A. REED, Maplewood, Mo., assignors to The Measuregraph Company, St. Louis, Mo., a Corporation of Missouri. Filed May 3, 1920. Serial No. 378,480. 12 Claims. (Cl. 33—130.)

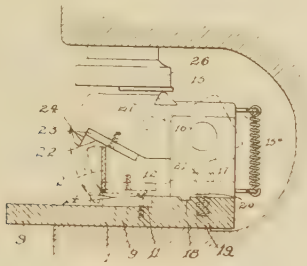


1. In a machine of the kind described, the combination of a measuring roller, a presser roller mounted to move toward or from the measuring roller and co-operating with the same, marking means for marking the fabric at the point where it is to be cut off, and including a hand actuated lever and a hand actuated part, the latter having locking means capable of co-operating with the lever to hold the hand actuated part against movement during the marking operation, and means for controlling the operation of the pressure roller by said hand actuated part.

1,415,502. METAL-TWISTING MECHANISM. WILLIAM J. YOUNG, Rochester, N. Y., assignor to Young's Wrought Iron Works, Rochester, N. Y., a Corporation of New York. Filed May 15, 1920. Serial No. 381,650. 15 Claims. (Cl. 153—78.)

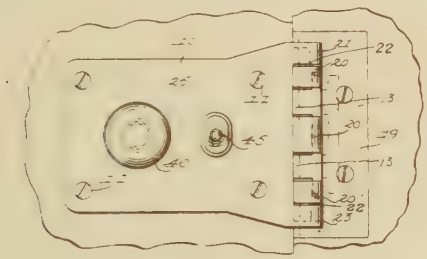
2. A machine for twisting flat metal strips comprising a pair of spaced clamps by which the strip is held, and a twisting mechanism operating between the clamps and embodying two dies cooperating with opposite edges

of the strip to move a portion of one edge laterally out of line with those portions held by the clamps and a



portion of the other edge into alignment with the portions of the first named edge held by the clamps.

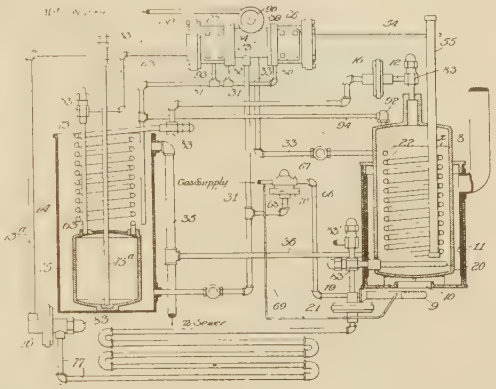
1,415,503. LOCK. ANDREW YUROW, New York, N. Y. Filed July 14, 1920. Serial No. 396,134. 2 Claims. (Cl. 70—46.)



2. A lock of the character described comprising a casing, a partition wall, transversely arranged in said casing, a skeleton bolt therein composed of a pair of side bars, operating plates at the inner ends of said bars, springs surrounding said bars between said partition wall and said operating plates, a cross-bar uniting said side bars at their front ends, projections on said cross bar adapted to normally engage the keeper, said keeper composed of three members, a central and two outer keeper members, one of said members provided with shoulders for the engagement by said projections of the cross bars, shoulders on said casing engaging the outer faces of the outer keeper members, one of the side bars of said bolt recessed at its lower edge, an operating member pivotally secured to the inner wall of the cover for said casing, an outer operating knob having a cylindrical stem extending into the casing and having its lower edge hammered down upon the inner face of said member and a pair of operating fingers on said member adapted to engage the operating plates at the ends of the bolt bars, for operating said bolt upon the operation of said knob, a sliding latch sliding between guides on the inner face of the casing wall, a rectangular bent arm on said latch provided with a hook at its outer end adapted to be engaged in the recess of said side bar, a pin on said latch extending through a longitudinal slot in the front wall of the casing to play therein, a slide plate on the outer end of said pin, and a slide socket surrounding said slot upon which said slide plate is gliding for locking and unlocking said bolt and its operating means.

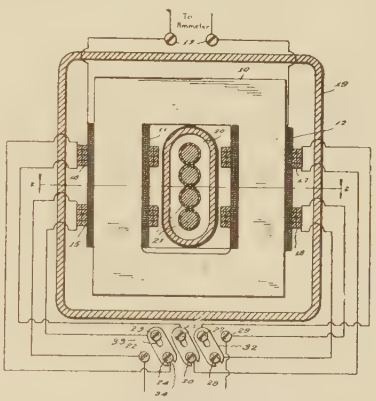
1,415,504. REFRIGERATING APPARATUS. JOHN ZANDER, Chicago, Ill. Filed May 17, 1916. Serial No. 98,038. 32 Claims. (Cl. 62—5.)

1. In refrigerating apparatus, the combination of generating means for gasifying a refrigerating agent in solution, condensing means for the gasified refrigerating agent in communication with said generating means, a refrigerating coil in communication with said generating means and said condensing means, means for supplying heat to said generating means, and means operated by fluid-pressure, operating automatically, to control



said last-named means to discontinue the supplying of heat to said generating means when the solution containing the refrigerating agent becomes weakened to a predetermined degree.

1,415,505. CURRENT TRANSFORMER. DONALD J. ANGUS, Indianapolis, Ind. Filed June 28, 1920. Serial No. 392,182. 13 Claims. (Cl. 175—361.)

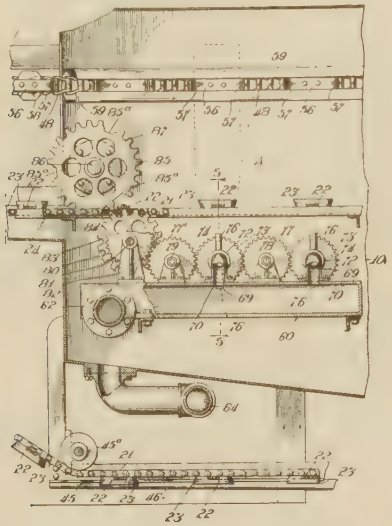


1. In a current transformer, a core having an opening through it, a plurality of primary windings on said core, a secondary winding on said core, said windings being permanently fixed on said core and passing through such opening and together being of materially smaller cross-section where they pass through such opening than such opening is itself so that when in place they still leave a relatively large clear passage through the same opening permitting the temporary insertion through such opening of one or more loops of a conductor to constitute another primary winding, and means for connecting the permanently fixed primary windings in different groupings to vary the ratio of transformation of the transformer.

1,415,506. WASHING MACHINE. GEORGE P. ANSTISS, Chicago, Ill., assignor to G. S. Blakeslee & Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 21, 1918. Serial No. 255,169. 22 Claims. (Cl. 141—1.)

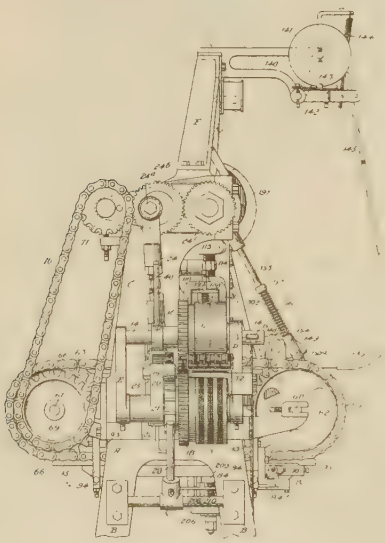
2. A washing machine comprising in combination a tank, a conveyor movable therethrough and comprising an endless chain, a track on which said conveyor-chain is movably supported, a rotatable toothed wheel located below said track and projecting through an opening in

the track and having its teeth in engagement with said chain, a second rotatable toothed wheel located above the track and also engaging said chain to prevent disengagement of such chain from the first-named wheel, means for holding a supply of water under pressure, in



which means is a port through which water is discharged against articles supported by said conveyor, a rotatable valve for controlling said port, and means interposed between said first-named wheel and said valve for rotating said valve.

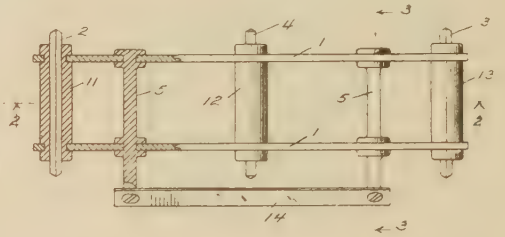
1,415,507. BOTTLE-CAP MACHINE. OREN F. BALTZLEY, Hagerstown, Md., assignor to The Smith-Lee Company, Oneida, N. Y., a Partnership composed of Wilbert L. Smith, Hurlbut W. Smith, and the Estate of M. C. Smith. Filed Sept. 28, 1920. Serial No. 413,388. 45 Claims. (Cl. 93—1.)



1. In a machine for making bottle caps or the like, the combination of means for holding a blank of material, and means for splitting a portion of such blank parallel to the surfaces thereof to form a tab.

1,415,508. SCALE-BEAM CONSTRUCTION. ERICH A. M. BANDOLY, Chicago, Ill. Filed Aug. 3, 1921. Serial No. 489,409. 4 Claims. (Cl. 265—49.)

1. A scale beam comprising a metal beam having a transverse perforation, a bearing member of smaller cross-section than the perforation and extending through the latter, and a molded bushing tightly embracing the portion of the bearing member which extends through the

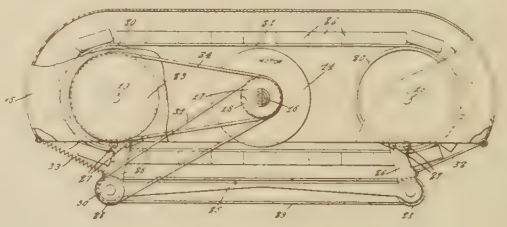


perforation and filling the space between the said member and the wall of the perforation and having opposed shoulders clamping the sides of the beam between them.

1,415,509. SAFETY CLASP. HARVEY V. BASLEY, Jersey City, N. J. Filed July 23, 1920. Serial No. 398,527. 5 Claims. (Cl. 24—150.)

4. A clasp of the type indicated comprising a pin, a pivotal support for the pin, a post to be engaged by the pin, the pin comprising a main part and a post-engaging part, the post-engaging part comprising a portion of the pin bent back upon itself to provide an opening adapted to receive the post, the post having a head thereon, the opening being of less width than the head, the post-engaging part of the pin being of resilient material whereby to render the walls of the opening resilient and adapted to snap over the head, and the material of the pin being shaped to provide a restricted passage into said opening adjacent the point of the pin.

1,415,510. SHOE-POLISHING DEVICE. JOHN BAUER, Detroit, Mich. Filed Sept. 8, 1919. Serial No. 322,289. 1 Claim. (Cl. 15—97.)

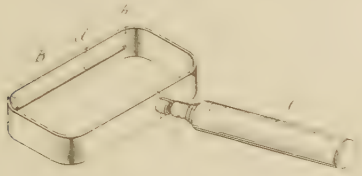


The combination with a housing adapted to be held in the hand, of a motor therein, an endless belt partly housed in said housing and driven by the motor, and buffing devices on the belt.

1,415,511. MOUNTING FOR READING LENSES. JOHN J. BAUSCH, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 31, 1920. Serial No. 407,180. 6 Claims. (Cl. 88—39.)

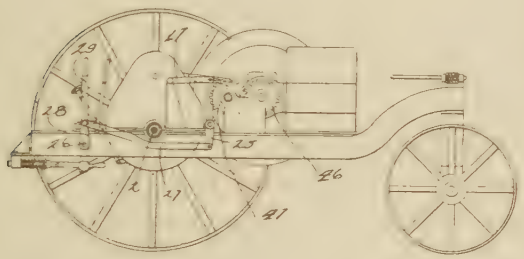
1. A holder for glass articles such as lenses, comprising a suitable frame embracing the edge of the article and provided with grooves in its inner opposed sides, in combination with the article, such as a lens, having

substantially straight edges in contact with the grooved sides of the frame, provided with grooves therein open



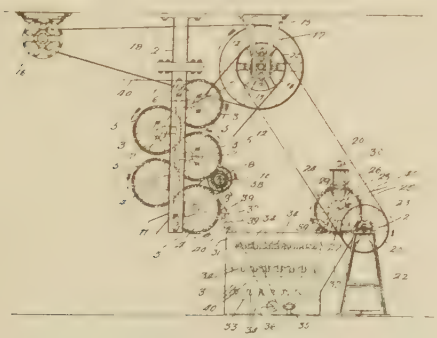
toward the outer side only and arranged adjacent the grooves in the frame, and the keys or rods arranged in both the grooves in the article and in the frame.

1,415,512. ADJUSTABLE TRANSMISSION MECHANISM. GEORGE G. BAYNE, Bushnell, Ill., assignor of one-fourth to John C. Hoehnen, one-fourth to Clement G. Branstrator, and one-fourth to Bayne Manufacturing Company, a Corporation of Illinois, Bushnell, Ill. Filed Apr. 29, 1920. Serial No. 377,428. 9 Claims. (Cl. 180—14.)



5. The combination with a tractor, of variable speed driving means therefor comprising an operating lever for the driving means, a shiftable fulcrum for said lever, a draw bar, a yielding abutment for said draw bar, and means for connecting said fulcrum and draw bar for varying the position of said fulcrum according to the load on said draw bar.

1,415,513. APPARATUS FOR AND METHOD OF DYEING MATERIAL. LUDWIG K. BIACH, New Haven, Conn. Filed July 13, 1920. Serial No. 395,965. 7 Claims. (Cl. 8—5.)

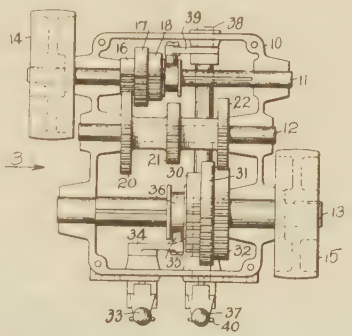


1. The method of dyeing which consists in first heating and superdrying substantially dry material to be dyed, and then subjecting the material to the action of the dyeing fluid.

1,415,514. CAMERA. JAMES STANLEY BISHOP, Cincinnati, Ohio. Fied Sept. 11, 1916. Serial No. 119,472. 14 Claims. (Cl. 95—1.1.)

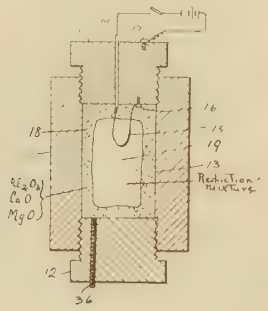
1. Means to mark a sensitized surface comprising a light-admitting element with a mark on one side, means whereby said side with the mark may be brought into photographic proximity with said surface, means for controlling admission of light to said surface past said mark, whereby light is excluded from said part of said surface except for short periods during approach and recession of said mark toward and away from said part of said surface, and means impeding the action of said light sufficiently to prevent material action thereof on said part of said surface during said periods, but permitting the desired action of the light thereon while said mark is for a longer period held in said photographic proximity to said part of said surface.

1,415,515. CHANGE-GEAR MECHANISM. CONSTANT BOUILLON, Torrington, Conn., assignor to Hendey Machine Company, Torrington, Conn., a Corporation of Connecticut. Filed Aug. 11, 1920. Serial No. 402,811. 2 Claims. (Cl. 74—58.)



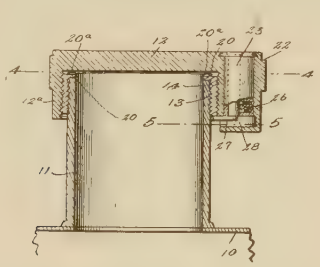
1. A change gear mechanism comprising a driving shaft, an intermediate shaft and a driven shaft, a set of three gears forming a unit rotatable with and slidable on said driving shaft, a second set of three gears forming a unit rotatable with and slidable on said driven shaft, a third set of three gears mounted in fixed angular and spaced relation on said intermediate shaft, and means to slide said first and second sets of gears longitudinally relatively to said third set of gears, each intermediate gear being adapted to mesh directly with one driving gear and with one driven gear.

1,415,516. METHOD OF AND APPARATUS FOR REDUCING METALS, ETC. ARTHUR BRIDGE, Washington, D. C. Filed May 29, 1919. Serial No. 300,587. 9 Claims. (Cl. 75—17.)



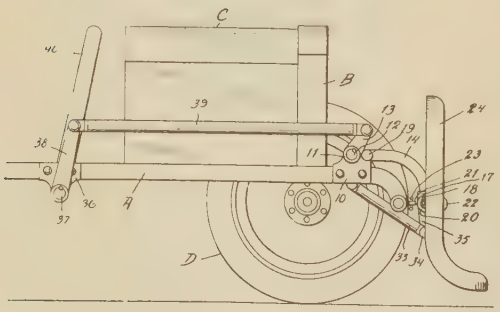
1. A method of reduction which consists in disposing within a closed, air-tight, pressure resisting chamber a mass of mixed materials of such a nature that they will undergo thermal reaction upon initial ignition, insulating said mass from the walls of the chamber, and causing an initial ignition of the mass to thereby effect reduction.

1,415,517. LOCK FOR RADIATOR CAPS. FRANCIS NATHANIEL BROWN, Jr., El Paso, Tex. Filed Nov. 19, 1920. Serial No. 425,253. 5 Claims. (Cl. 70—90.)



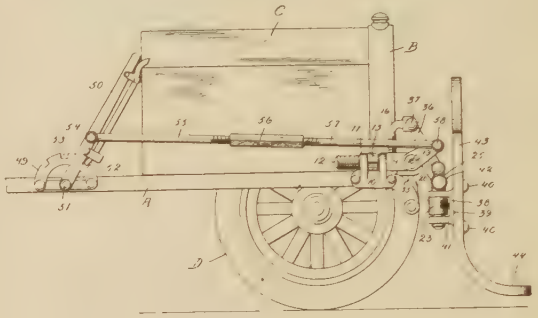
4. In a device of the character described, a radiator having a filling neck, a cap for the filling neck of the radiator, a sleeve providing for connection between the cap and the neck and having a portion constituting an abutment and locking mechanism carried by the cap and including a bolt engageable with the abutment of the sleeve for releasably securing the cap on the filling neck.

1,415,518. SAFETY FENDER FOR AUTOMOBILES. THOMAS F. BUCK, New Castle, Pa. Filed Dec. 16, 1921. Serial No. 522,832. 8 Claims. (Cl. 293—34.)



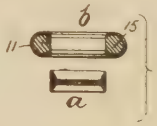
1. A safety fender for motor vehicles comprising bracket members secured upon the forward ends of the frame bars of the vehicle, a rock shaft journaled through said brackets, arms carried by said shaft, a fender proper carried by said arms and detachably associated therewith, adjustable link members pivotally connected with the frame and with said arms, and means for rocking said shaft.

1,415,519. SAFETY FENDER FOR AUTOMOBILES. THOMAS F. BUCK, New Castle, Pa. Filed Jan. 6, 1922. Serial No. 527,439. 8 Claims. (Cl. 293—34.)



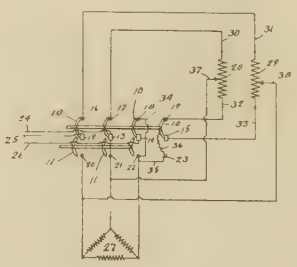
1. A device of the character described comprising brackets secured upon the forward portions of the frame bars of an automobile, a rock shaft journaled through said brackets, arms carried by said rock shaft, lever operated means for rocking the rock shaft, a bar carried by the arms, and a fender proper detachably mounted upon said bar, the detachable mounting consisting of T's mounted on the ends of said bar, rearwardly extending U-shaped brackets carried by the fender proper and straddling said T's, and removable pivot pins passing through said brackets and through said T's.

1,415,520. METHOD FOR MAKING COMPOSITE RINGS. ANDREW O. BURGESS, Newark, N. J., assignor to A. L. Newman Company, Providence, R. I. Filed Oct. 1, 1920. Serial No. 414,009. 3 Claims. (Cl. 29—160.6.)



1. A method of making a composite ring comprising the provision of a ring of metal, the provision of a sheet of metal, folding the sheet around the ring so that the edges of the sheet are at the inner face of the ring, and then cutting away the inner edge of the ring and of the folded sheet.

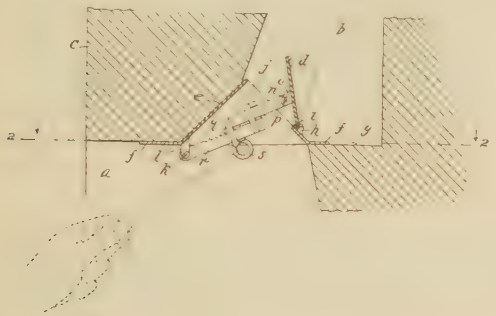
1,415,521. MOTOR-STARTING DEVICE. GEORGE A. BURNHAM, Saugus, Mass., assignor to Sears B. Condit, Jr., Brookline, Mass. Filed Aug. 2, 1918. Serial No. 247,975. 8 Claims. (Cl. 172—179.)



7. A motor starting device including a manually operable switch movable into a starting position for the start-

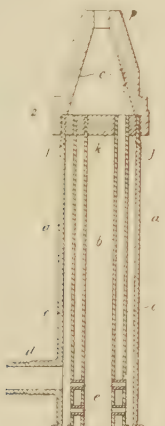
ing of the motor and movable into a running position for the running of the motor, an auxiliary switch controlled by the aforesaid switch, a motor-starting transformer having generally open-ended coils, and an electrically controlled contactor controlled by said auxiliary switch to interconnect said normally open-ended coils for the starting of the motor.

1,415,522. FIREPLACE DAMPER. HARRY N. CAIN, Cleveland, Ohio, assignor to The Donley Brothers Company, Cleveland, Ohio, a Corporation. Filed May 4, 1918. Serial No. 232,432. 2 Claims. (Cl. 126—288.)



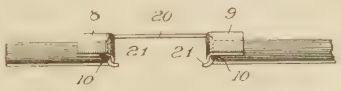
1. A regulating device of the class described comprising a pair of substantially parallel bars, the upper bar having a detent-shaped end with a guideway loop for the lower bar and a handle depending therefrom, and the lower bar being provided with ratch-teeth engageable with said detent to prevent shortening of the device and having a guideway loop for the upper bar mounted upon its inner termination.

1,415,523. SPRAYING AND DISTRIBUTING NOZZLE. PETER CAMERON, Methil, Scotland. Filed Jan. 3, 1920. Serial No. 349,261. 1 Claim. (Cl. 299—115.)



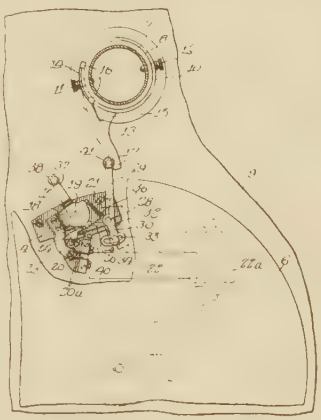
A nozzle comprising a plurality of concentric tubes forming a central passage and two annular passages, a conical extension carried by the external tube, partitions between said extension and two of said tubes, said partitions having a plurality of oppositely disposed helical ports communicating with said extension and tubes, transfer ports communicating with the outer and central passages, said annular passages each having an inlet and said extension being provided with an outlet orifice.

1,415,524. METHOD OF MENDING ELECTRIC RESISTANCE ELEMENTS. NOEL CARRICO, Sidney, Mont., assignor of one-half to Frank C. Hughes, Evanston, Ill. Filed Jan. 22, 1921. Serial No. 439,189. 2 Claims. (Cl. 219—10.)



1. The method of mending an electric resistance element in place in its mounting by bringing the broken ends in contact with the ends of a bridging member and passing through the element and said bridging member the current which normally operates the translator of which the element is a part.

1,415,525. CONTROL MEANS FOR SOUND-REPRODUCING MACHINES. FOREST CHENEY, Chicago, Ill., assignor to Cheney Talking Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 14, 1917. Serial No. 201,921. 2 Claims. (Cl. 192—116.)



1. In a sound reproducing machine, in combination, a motor for actuating a record, a switch in the motor circuit, a latch for holding said switch in closed position, tripping mechanism for operating said latch adjustable with respect to said latch to time the occurrence of the tripping action, said tripping mechanism including two relatively movable members, one of which members engages said latch, a projection secured to the tone arm and arranged to engage the other member of said tripping members under certain conditions, and a spring for actuating the tripping mechanism to open said switch when one member of said tripping mechanism is engaged by said projection.

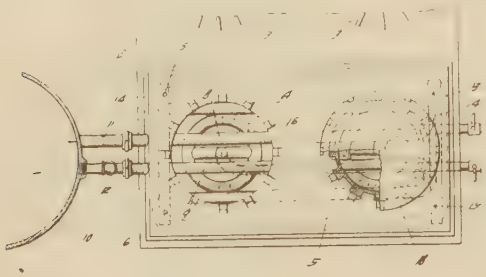
1,415,526. PROCESS FOR RECOVERING SELENIUM AND NOBLE METALS FROM ELECTROLYTIC SLIMES AND THE LIKE. MASUMI CHIKASHIGE and DENZO UNO, Kyoto, Japan. Filed Oct. 1, 1919. Serial No. 327,736. 5 Claims. (Cl. 75—17.)

1. A process for treating material containing non-metallic elements of the sulphur group and the noble metals, comprising fusing the same in the presence of a collector of the noble metals and an alkali metal flux, and recovering the non-metallic elements of the sulphur group and the noble metals from the fusion-products.

1,415,527. WATER HEATER FOR GAS STOVES. CLIFFORD E. COLE, Birmingham, Ala., assignor to Linka L. Cole, Birmingham, Ala. Filed Oct. 20, 1919. Serial No. 332,043. Renewed Oct. 13, 1921. Serial No. 507,490. 5 Claims. (Cl. 126—53.)

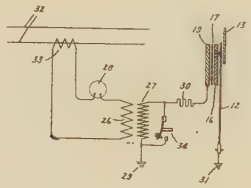
1. A water heating attachment for gas stoves comprising a casting having a top and marginal flanges forming

an open-bottom chamber therein, a water heating coil mounted in the chamber formed under said casting, said casting being provided with openings in its top under which portions of the coil pass, raised marginal lugs



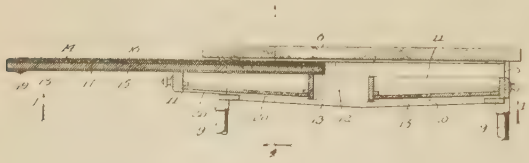
surrounding said openings, and a lid closure for said openings having a depending notched flange disposed in juxtaposition to said lugs and adapted to co-operate therewith, as and for the purposes described.

1,415,528. RECORDING INSTRUMENT. JAMES R. CRAIGHEAD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 17, 1919. Serial No. 331,282. 7 Claims. (Cl. 234—5.5)



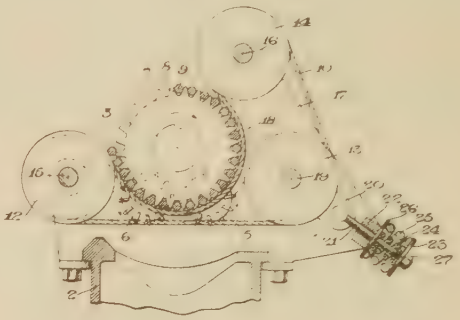
1. An electrical recording instrument of the type in which an electric discharge is caused to make a record on a recording sheet, said discharge passing between two electrodes, one of which is moved relative to the recording sheet in response to the quantity to be measured, characterized by the fact that means are provided for producing said discharge which derives its energy from the measured circuit and is independent of the voltage thereof.

1,415,529. COMBINED KITCHEN TABLE AND IRONING BOARD. GEORGE J. CRONENBERGER, Chicago, Ill., assignor of one-half to Hobart G. Miller, Chicago, Ill. Filed July 15, 1919, Serial No. 311,003. Renewed Sept. 26, 1921. Serial No. 503,382. 6 Claims. (Cl. 68—10.)



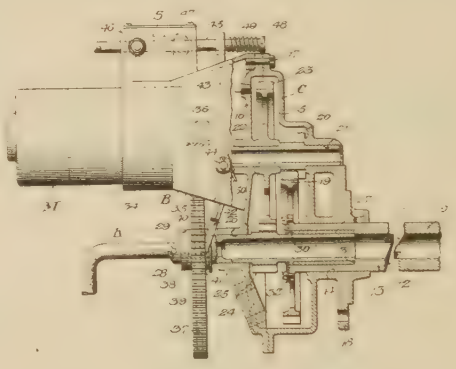
6. In an article of the character set forth, the combination of a table having a top, an ironing-board supported on said table to be moved into and out of a position in which it extends laterally beyond the table, a drawer slidably mounted on the table and extending beneath said ironing-board and serving when drawn outwardly, as a support for the board when the latter is in extended position for use, and means operating automatically in the act of drawing said drawer outwardly to clamp said board in place.

1,415,530. FEEDING AND CLAMPING MEANS FOR METAL-WORKING MACHINES. FRANK M. DAVIS, Milwaukee, Wis. Filed Dec. 31, 1920. Serial No. 434,307. 7 Claims. (Cl. 90—20.)



1. In a metal-working machine, the combination of a movable work carrier, a cutting tool, and a band travelling with the work carrier during the cutting operation and held under tension to clamp the work against movement between it and the carrier.

1,415,531. ENGINE-STARTING APPARATUS. JAMES KENDALL DELANO, New York, N. Y. Filed Sept. 28, 1918. Serial No. 256,126. 14 Claims. (Cl. 290—38.)

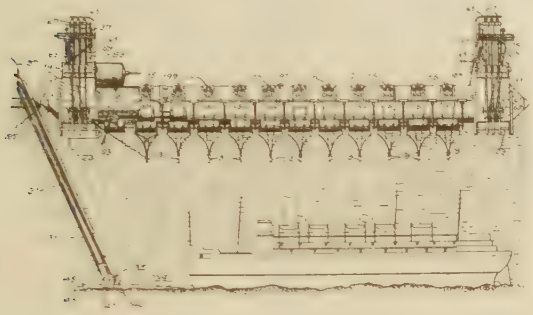


1. Engine starting apparatus comprising a shiftable shaft adapted for manual operation to start the engine, in combination with power operable means adapted to operate said shaft to start the engine, said shaft being alternatively operable manually or by said power means, and speed-changing mechanism for transmitting power from said shaft to the engine at a different speed from that applied to said shaft manually or by said power means.

1,415,532. APPARATUS FOR RAISING SUNKEN VESSELS. JOHN A. DE VITO, Medford, Mass. Filed Dec. 30, 1920. Serial No. 434,122. 24 Claims. (Cl. 114—53.)

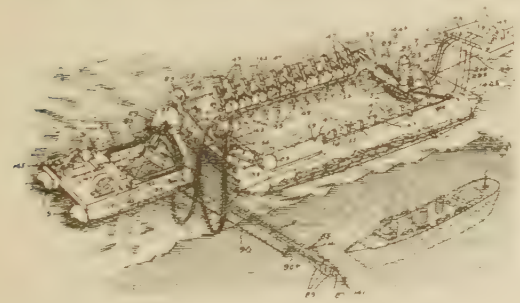
1. An apparatus for raising sunken vessels, comprising, in combination, pontoons having series of supporting arms projecting therefrom, means connecting the ends of said pontoons having provision permitting movement of the pontoons toward or away from each other, a group of cylinders at each end of the pontoons having pistons and rods for relatively moving the pontoons, means to supply fluid to said cylinders to operate said pistons, racks for

said rods, lock dogs co-operating with said racks, cylinders having pistons therein, and connections including links



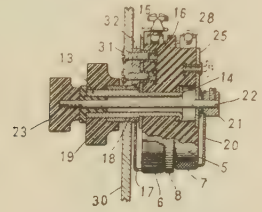
and levers between said dogs and last-named pistons for releasing the dogs from the racks.

1,415,533. APPARATUS FOR RAISING SUNKEN VESSELS. JOHN A. DE VITO, Medford, Mass. Filed Jan. 12, 1920, Serial No. 350,757. Renewed Dec. 7, 1921. Serial No. 520,720. 98 Claims. (Cl. 114—53.)



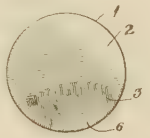
1. An apparatus for raising sunken vessels, comprising, in combination, pontoons, means to hold said pontoons in fixed spaced relation, that they may move as a unit down to opposite sides of a sunken vessel, means to move the pontoons in a direction of approach toward opposed sides of the sunken vessel, series of jaws mounted on said pontoons, and means differentially to move said jaws relatively to said pontoons to cause said jaws to engage and conform to the contour of the hull of the sunken vessel.

1,415,534. VARIABLE RESISTANCE. HAROLD POTTER DONLE, Meriden, Conn., assignor to The Connecticut Telephone & Electric Company, Incorporated, Meriden, Conn., a Corporation of Connecticut. Filed Dec. 15, 1921. Serial No. 522,460. 13 Claims. (Cl. 219—55.)



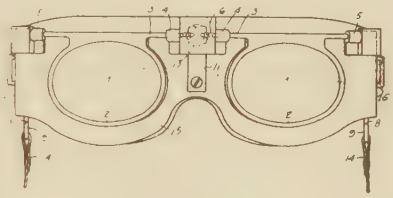
1. A resistance device of the character described, comprising an insulating body, resistance coils mounted on the front and rear thereof, adjustable contact arms for said coils, and operating knobs for such contact arms having a common axis.

1,415,535. MULTIFOCAL LENS AND METHOD OF MAKING THE SAME. THEODORE B. DRESCHER, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 27, 1922. Serial No. 539,429. 3 Claims. (Cl. 88—54.)



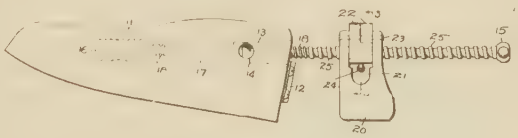
1. A multifocal lens comprising a single glass crystal having on one surface two adjacent areas having different surface curves and a smaller lens formed of glass of a different index from that of the other crystal embedded in the smaller of said areas, the opposite surface of said lens being finished on a curve coordinating with those of the opposite surface and with the embedded lens to produce a lens having three different powers.

1,415,536. PROTECTIVE GLASSES FOR FLYERS, CASTERS, WELDERS, ETC. NILS RICHARD GÖSTA EKWALL, Halmstad, Sweden. Filed Jan. 11, 1921. Serial No. 436,536. 4 Claims. (Cl. 2—149.)



1. Protective glasses comprising a frame adapted to be held in front of the eyes and movable glass or glasses on said frame, and means to move said glass or glasses by movements of the chin.

1,415,537. COMBINED SHOE STRETCHER AND TREE. ANSHELM BURTON ELMSTROM, Malden, Mass. Filed Nov. 20, 1920. Serial No. 425,399. 2 Claims. (Cl. 12—128.3.)

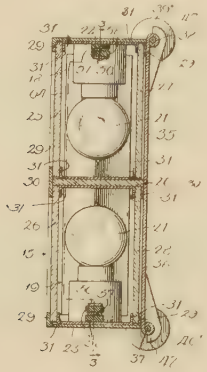


1. A combined shoe stretcher and tree comprising two connected but laterally separable last blocks, a threaded nut mounted in definite relation to said blocks, a heel piece having a separable nut mounted therein, and an operating rod having a thread fitting said first mentioned nut and having also a second thread of steeper pitch fitting said separable nut, said rod having means at its front end to separate said last blocks.

1,415,538. STOP AND TURN SIGNAL FOR VEHICLES. EMIL A. FEHRING, Chicago, Ill. Filed June 14, 1920. Serial No. 388,774. 10 Claims. (Cl. 116—45.)

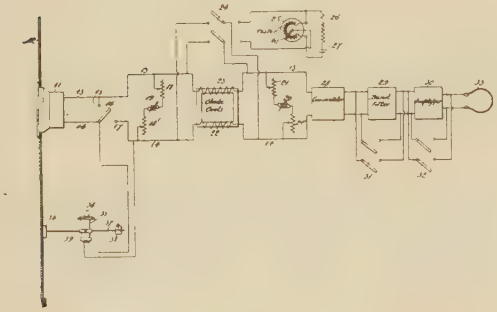
1. A signal device comprising a casing interiorly unobstructed to fore and aft passage of light rays there-

through, and provided with a front, uncovered lens and with a rear lens, said lenses bearing corresponding signal characters, the characters of said rear lens being legible both by through and reflected illumination of said rear



lens and the characters of said front lens being legible only by through illumination of said front lens, an opaque closure normally to cover said rear lens, and operating means for said closure.

1,415,539. METHOD AND APPARATUS FOR SUBMARINE SIGNALING. REGINALD A. FESSENDEN, Brookline, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed July 20, 1917. Serial No. 181,857. 5 Claims. (Cl. 177—352.)



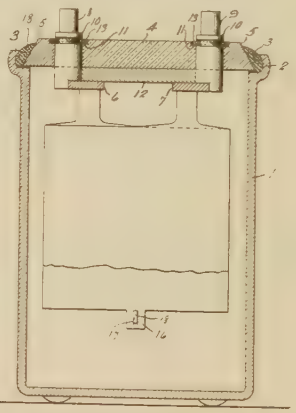
5. Means for detecting on board a vessel impulses originating from sources outside the vessel, which consists in a receiving means located on board said vessel and a compensating means also located on said vessel at a point where the pulsations of said vessel are substantially equal in amplitude and wave form to the vibrations of that part of the vessel at which the said receiving means is located but are in opposite phase thereto, and an indicator connected both to said receiving means and said compensating means whereby undesired impulses produced by the vessel in said receiving means will be neutralized by said compensating means and the desired impulses received on said indicator.

1,415,540. CARD HOLDER. HENRY W. FESSER, Sacramento, Calif. Filed May 25, 1921. Serial No. 472,410. 5 Claims. (Cl. 40—11.)

1. A device of the character described comprising a vertically disposed standard having a supporting base, a helical spring, secured at its center to the standard and having a plurality of its convolutions disposed on oppo-

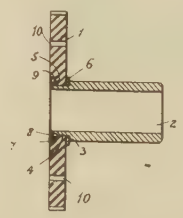
sides of the standard for supporting one or more cards or like articles to be displayed.

1,415,541. BATTERY. OLIVER P. FRITCHLE, Denver, Colo. Filed Apr. 12, 1920. Serial No. 373,220. 8 Claims. (Cl. 204—29.)



1. In a battery, a casing having at its upper end a recessed collar defining overhanging interior walls and a cover plate having upwardly beveled edges adapted to be seated in the recess of the collar.

1,415,542. GEAR CONSTRUCTION. GOTTLOB FUEGEL and HERMAN SCHMID, Brooklyn, N. Y., assignors, by mesne assignments, to Apollo Magneto Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed Dec. 27, 1918. Serial No. 268,555. 1 Claim. (Cl. 287—53.)



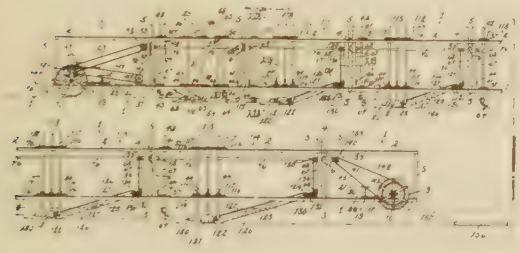
The combination of a gear wheel having a central opening and a shoulder surrounding said opening, a

washer engaging said shoulder, a hollow shaft having a shoulder at one end and a washer engaging the shoulder on said shaft, the gear wheel being fitted upon the shaft so that the gear wheel engages the washer on the shaft, the end of the shaft being expanded against the washer on the gear wheel, and a pin to engage the shaft and said last named washer.

1,415,543. CARTON. JOSEPH J. GANNON, St. Clair, Mich., assignor to Diamond Crystal Salt Company, St. Clair, Mich., a Corporation of Michigan. Filed Oct. 18, 1920. Serial No. 417,597. 7 Claims. (Cl. 229—7.)

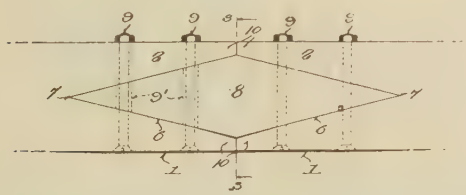
1. In a container or carton, the combination with a circular body, of a circular hinged lid or cover therefor, and a segmental flange on said cover for overlapping said body and limiting the width of the pouring opening.

1,415,544. EXCAVATING APPARATUS. STANDLEY GAUTEREAUX, Los Angeles, Calif. Filed Mar. 5, 1919. Serial No. 280,877. 25 Claims. (Cl. 37—25.)



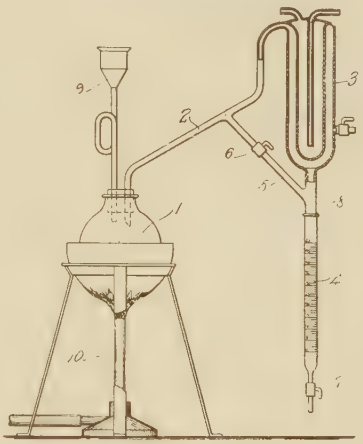
1. In an excavator, a frame; pairs of beams spaced apart and mounted in said frame; said beams adapted to move vertically independent of said frame; pairs of plows on the lower ends of said beams, said plows arranged so that one plow of each pair is in advance of the other; plates for limiting the movement of said beams; and a flexible connection between said plows and said frame.

1,415,545. RAIL SPLICE. SPIRO GEORGE, Milwaukee, Wis. Filed May 5, 1921. Serial No. 466,986. 1 Claim. (Cl. 238—219.)



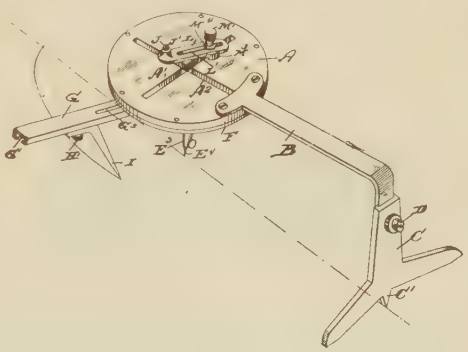
In combination with the contacting ends of a pair of rail sections having their heads provided with recesses and tapered downwardly at their abutting ends, a splicing member of diamond shape in plan positioned within said recesses, flush with the heads, the entire lower face of said member being flat and said member having a plurality of transverse openings therethrough, the greatest transverse dimension of said member being at the end of said rail sections, said rail sections having transverse apertures therethrough, and bolts extending through said openings and said apertures for locking said splicing member within said recesses.

1,415,546. APPARATUS FOR DETERMINING MOISTURE. FRANK E. GREENWOOD, New Rochelle, N. Y. Filed Sept. 10, 1920. Serial No. 409,466. 2 Claims. (Cl. 23—3.)



1. Apparatus for the determination of moisture content comprising an extraction flask, a reflux condenser, a conduit from the extraction flask to the upper portion of the condenser, a return connection from the lower part of the condenser to the extraction flask and a measuring receptacle connected with the condenser at a point below the return connection.

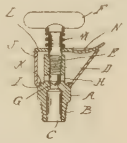
1,415,547. DRAFTING INSTRUMENT. DAVID GRIEVE, Detroit, Mich. Filed Dec. 12, 1921. Serial No. 521,674. 5 Claims. (Cl. 33—31.)



1. In an instrument of the class described, a plate having intersecting slots, a pair of slidable elements linked together mounted in the slots of the plate, a rotatable element carried by the plate having a central pivot pin, means carried by the plate co-operating with the pivot pin in supporting the instrument in spaced relation to a drafting board and in line with the predetermined axis of an ellipse to be described, a swinging beam pivotally connected with one of the slidable linked elements and adjustably connected with the slidable linked

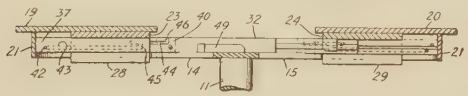
element and also with the rotatable element carried by the plate, and a scribing element adjustable upon the swinging beam.

1,415,548. PRIMING CUP. WILLIAM GRIKSCHEIT, Detroit, Mich. Filed Apr. 16, 1919. Serial No. 290,488. 5 Claims. (Cl. 123—187.5.)



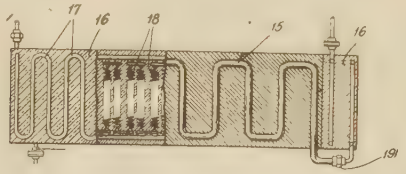
1. The combination of a member having an axial bore therethrough, externally threaded at one end and internally threaded at its opposite end, a valve member having a threaded portion for engaging the internal threads and a portion for engaging a seat upon said first-mentioned member, there being a transverse aperture in first named member above the seat when the valve is separated therefrom, and a sheet metal cup member of greater diameter than said first-mentioned member engaging the same, surrounding the portion having said transverse aperture.

1,415,549. EXTENSION TABLE. MEYER GROSSMAN, New York, N. Y., assignor of one-half to Adolph M. Deutsch, New York, N. Y. Filed July 16, 1919. Serial No. 311,136. 10 Claims. (Cl. 45—112.)



4. An extension table including, in combination, mated parts adapted to be drawn toward or away from one another, aprons depending therefrom, an auxiliary leaf detachably held substantially in parallelism under either one of said parts within the apron thereof and means arranged to bear from said leaf against said apron.

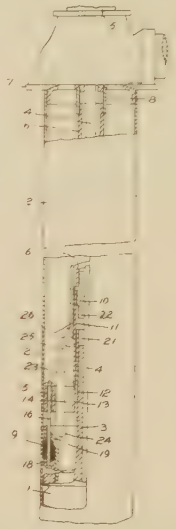
1,415,550. ELECTRIC HEATING APPARATUS. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y. Filed July 31, 1915. Serial No. 42,934. 46 Claims. (Cl. 219—37.)



1. The combination with a source of relatively low pressure steam, a radiator, a tubular distributing member interposed between the radiator and said source, heat insulation for the distributing member, and means for generating heat within the insulation to determine the temperature of the steam at the radiator.

1,415,551. WELL MECHANISM. SAMUEL N. HALL, Los Angeles, Calif., assignor to Mahlon E. Layne, Los Angeles, Calif. Filed Sept. 8, 1920. Serial No. 408,950. 7 Claims. (Cl. 166—1.)

1. In combination in a well mechanism, a well casing, a pump in the casing, a drive shaft extending upward therefrom, packing means between the well casing and pump supported from the surface of the ground, and

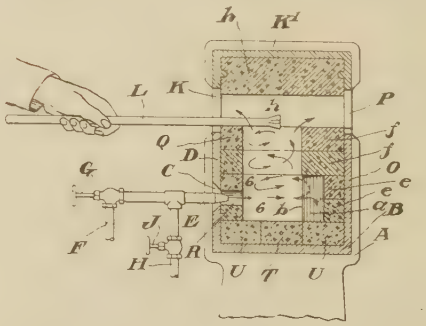


releasable therefrom, means on the pump engaging the packing whereby the weight of the pump is applied to said packing, and a shaft casing for the shaft.

1,415,552. PROCESS OF INCREASING THE QUALITY AND VOLUME OF OIL IN WELLS AND REMOVING THE OIL THEREFROM. ELMER C. HALLMARK, Mission, Tex., assignor to George M. Swift, Okmulgee, Okla. Filed Mar. 10, 1922. Serial No. 542,789. 1 Claim. (Cl. 166—21.)

A process for improving the quality and grade of oil prior to the final delivery thereof from the well, which consists in first mixing at the initial point of contact between the oil and gas the proper proportions of each and in such manner so as to cause the oil to absorb a portion of the gasoline contained in the gas, then in conveying the gas and oil while confined in contact to the point of final delivery from the well at a predetermined speed of travel of the gas and oil to said delivery point in accordance with the grade of the oil and the gasoline content of the gas.

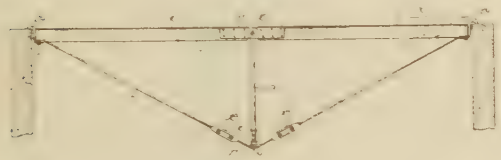
1,415,553. OIL-BURNING FORGE. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 13, 1921. Serial No. 477,221. 4 Claims. (Cl. 263—9.)



1. An oil burning forge, comprising a casing having a renewable lining composed of blocks of refractory material, the lower central block being wedge shaped and projecting towards the fuel inlet of the forge in order to divide the flame vertically, the remaining blocks being of standard rectangular construction and the conforma-

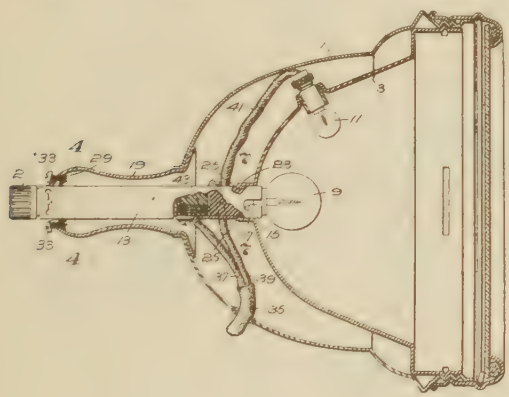
tion of the chamber being adapted to cause the portions of the divided flame to ascend at both sides of the central block in double spirals for heating the articles to be forged, thereby distributing the heat substantially throughout the whole chamber and retarding the flame to afford substantially complete combustion.

1,415,554. FLOOR CONSTRUCTION. ARTHUR G. HATCH, Duluth, Minn. Filed Jan. 31, 1921. Serial No. 441,202. 6 Claims. (Cl. 25—131.5.)



2. A truss adapted for use in supporting concrete forms, comprising a longitudinal compression member consisting of two sections pivotally connected by a pivot member, a transverse compression element having one end pivotally connected to said pivot, and longitudinal tension sections having their adjacent ends separably connected to the transverse compression element.

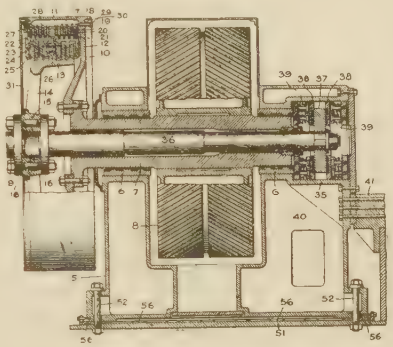
1,415,555. LAMP. ELLSWORTH A. HAWTHORNE, Bridgeport, Conn. Continuation of applications Serial No. 105,282, filed June 22, 1916, and renewed Mar. 1, 1918, Serial No. 219,869 and Serial No. 149,088, filed Feb. 16, 1917. This application filed Apr. 2, 1920. Serial No. 370,850. 17 Claims. (Cl. 240—44.)



6. A lamp comprising an exterior casing, a housing projecting rearwardly from the back thereof and forming a handle for the lamp, a reflector in said casing, a light-carrying member disposed in said housing and extending through the reflector and the wall of the casing and joined to one of the same for non-rotary sliding movement whereby to adjust the focus of the light by rectilinear movement of the end of said member which projects through the housing, and means interposed between said member and the wall of the housing between the bearings of the member in reflector and casing, and bearing against said member to hold it fixed against undesired sliding movement relatively to the wall.

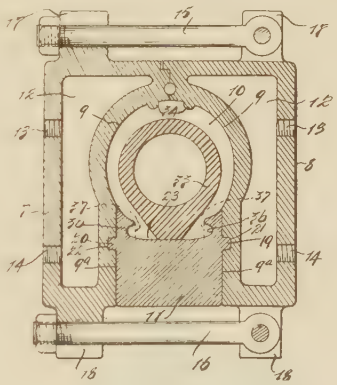
1,415,556. GEARING. CHARLES L. HEISLER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 9, 1920. Serial No. 372,628. 9 Claims. (Cl. 74—7.)

1. In combination, a gear casing, a low speed gear wheel having a quill shaft carried therein, a low speed shaft, a flexible coupling connecting it to one end of said quill shaft, an extension on said low speed shaft which



extends through said quill shaft to its other end, a thrust bearing for said extension, carried by the casing, and a fixed abutment to which said thrust bearing is fastened.

1,415,557. TIRE MOLD. ROBERT HELLER, Brooklyn, N. Y., assignor to Stanley Tire & Rubber Corporation of Delaware. Filed Jan. 29, 1920. Serial No. 354,854. 6 Claims. (Cl. 18—38.)

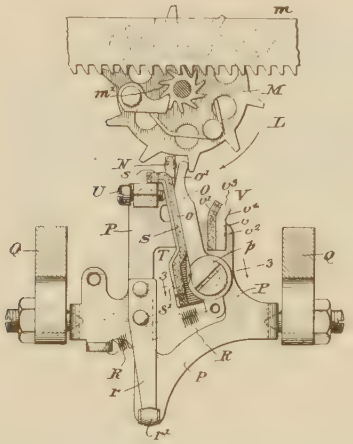


1. In a tire mold, a plurality of separably connected members, each member being recessed to form a chamber to receive the body portion of a tire when said members are connected, each member being further provided with a flat surface extending from the recessed portions, said flat surfaces being spaced from the center of the mold to form a channel, said flat surfaces each being provided with an annular groove, a bead engaging ring located in said channel, and ribs carried by said ring to engage the annular grooves.

1,415,558. TYPEWRITING MACHINE. EDWARD B. HESS, Manhattan Beach, and GEORGE F. HANDLEY, Glendale, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 24, 1921. Serial No. 495,041. 7 Claims. (Cl. 197—82.)

1. In a typewriting machine, escapement mechanism comprising a dog rocker, fixed and limber dogs carried thereby, said limber dog having an extended bearing sur-

face and a bent outer end, a pad against which the limber dog strikes having an extended bearing surface for the



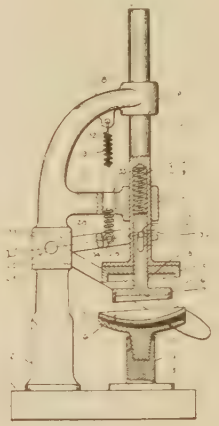
dog and bent ends removed from contact with the dog, and means for adjusting the position of the pad.

1,415,559. WATER-REPLENISHING DEVICE FOR STORAGE BATTERIES. GEORGE H. HICKMAN, Jamestown, Ind. Filed Mar. 1, 1920. Serial No. 362,569. 3 Claims. (Cl. 226—39.)

1. A water replenishing device for electric storage batteries comprising a primary cylinder having a pair of longitudinally disposed passageways of different lengths, the shorter passageway being of comparatively small size and having an opening connecting with the atmosphere intermediate its ends, said opening adapted to be closed by the finger of the operator.

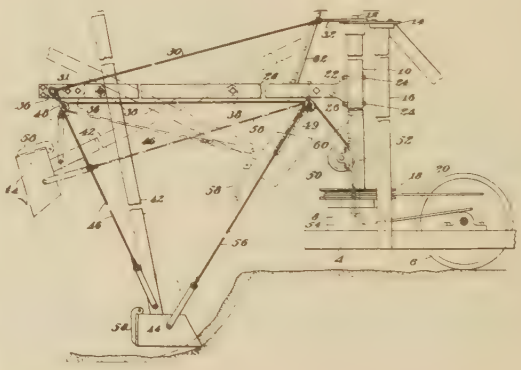
1,415,560. LENS-BLOCKING MACHINE. HARRY W. HILL, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts. Filed Jan. 18, 1919. Serial No. 271,874. 7 Claims. (Cl. 51—277.)

4. A lens blocking device including a lens block support, and a plunger in alinement therewith, said plunger having a head for engagement with the lens formed with its contacting face disposed at an oblique angle to the



direction of reciprocation of the plunger for tiltingly blocking a lens, substantially as and for the purpose described.

1,415,561. EXCAVATOR. PETER W. HILL, Dorchester, Mass. Filed Aug. 6, 1919. Serial No. 315,667. 2 Claims. (Cl. 214—135.)

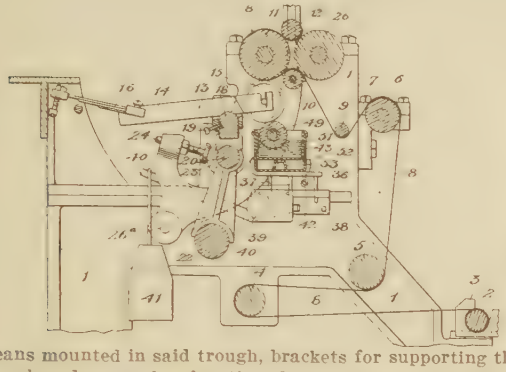


1. An excavator having, in combination, a mast, a boom supported by the mast and provided with an elongated guideway extending longitudinally thereof, an excavator dipper, a dipper handle extending through the guideway and working freely by gravity from end to end thereof during the operation of the dipper, and means for operating the dipper.

1,415,562. GUMMING DEVICE FOR RIBBON-CUTTING MACHINES. JOHN HENRY HOFFMAN, New York, N. Y., assignor to Theo. Tiedemann & Sons, Inc., New York, N. Y., a Corporation of New York. Filed July 26, 1918. Serial No. 246,859. 9 Claims. (Cl. 91—14.)

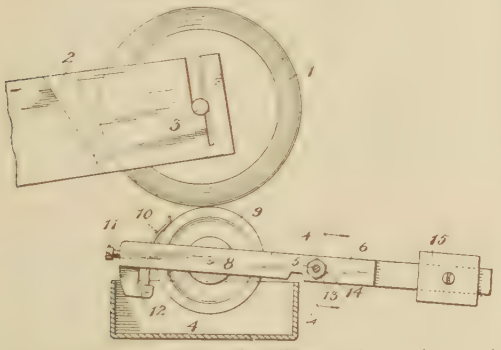
1. In a ribbon cutting apparatus or the like, the combination with a plurality of rotary cutters, rotary means for applying gum thereto, a trough from which said rotary gum applying means receives gum, and means for raising said trough.

9. In a ribbon cutting apparatus or the like, the combination with a cutter, a gum-containing trough, rotatable



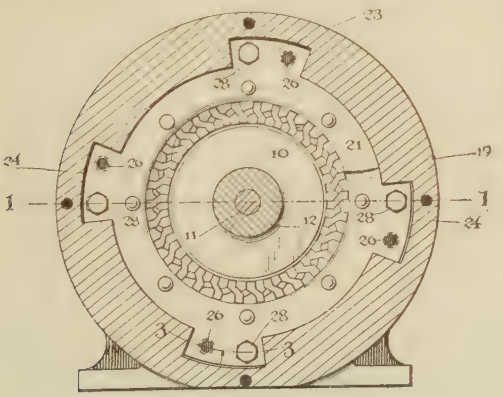
means mounted in said trough, brackets for supporting the trough and means for elevating the brackets and trough.

1,415,563. GUMMING DEVICE FOR RIBBON-CUTTING MACHINES. JOHN HENRY HOFFMAN, New York, N. Y., assignor to Theo. Tiedemann & Sons, Inc., New York, N. Y., a Corporation of New York. Filed July 26, 1918. Serial No. 246,860. 2 Claims. (Cl. 91—14.)



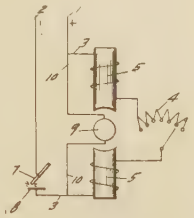
1. A gumming apparatus for ribbon to be cut into strips, comprising the combination of a rotary cutter, a roller adapted to bear frictionally against said cutter, a pivoted bar in which said roller is rotatably mounted, said bar having a reduced outer end and a weight slidably adjustable on said reduced portion.

1,415,564. MECHANICAL CONSTRUCTION OF ELECTRICAL MOTORS. JOHN JOSEPH HOLAHAN, Norfolk, Va. Filed Nov. 2, 1920. Serial No. 421,309. 5 Claims. (Cl. 172—36.)



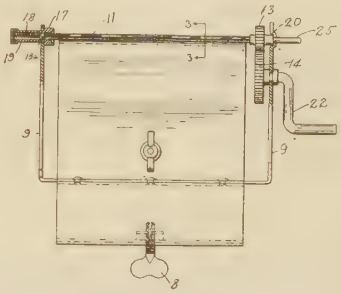
1. A motor including a stator, a frame having an inner seat for the stator on and off of which the latter is shiftable parallel to the axis of the rotor, and also having a removable side plate, and means for shifting the stator on to and off its seat, said means extending through portions of the stator and adapted for connection with the frame as described.

1,415,565. ARC-CURRENT REGULATOR. JOSEPH A. HOLIFIELD, Mobile, Ala. Filed Nov. 20, 1919. Serial No. 339,372. 8 Claims. (Cl. 219—15.)



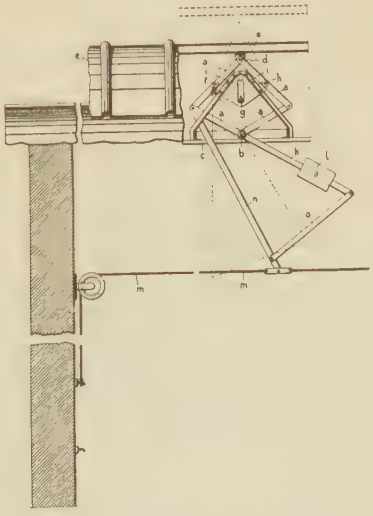
1. In an electric welding apparatus, a welding circuit having electrodes therein, means to interpose a resistance in the welding circuit, a by-pass circuit around said resistance, means to oppose a counter E. M. F. to the flow of current through the by-pass, and means to vary said counter E. M. F. automatically and directly responsive to the resistance of the arc.

1,415,566. MACHINE FOR MAKING BEADS. WALTER E. HORROCKS, Lakewood, Ohio. Filed June 1, 1920. Serial No. 385,859. 4 Claims. (Cl. 93—81.)



1. In a machine for winding paper beads or the like, the combination of a frame having bearings, a mandrel removable from said bearings, and a guide table mounted on the frame and extending under the mandrel.

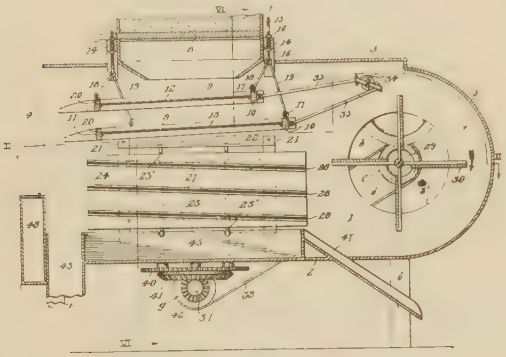
1,415,567. VENTILATING-HOOD-LIFTING DEVICE. PAUL HOSSFELD, Bad Harzburg, Germany. Filed Sept. 11, 1920. Serial No. 409,750. 4 Claims. (Cl. 268—22.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a device of the kind described in combination, a foldable frame having a fixed linking point, links pivoted

to two adjoining arms of said frame and having their free ends pivoted to each other and a vertical guide for guiding said free ends and means for operating said frame.

1,415,568. GRAIN SEPARATOR. DMITRO HRYNIEWICH, Livermore, Pa. Filed May 11, 1921. Serial No. 468,550. 2 Claims. (Cl. 130—15.)



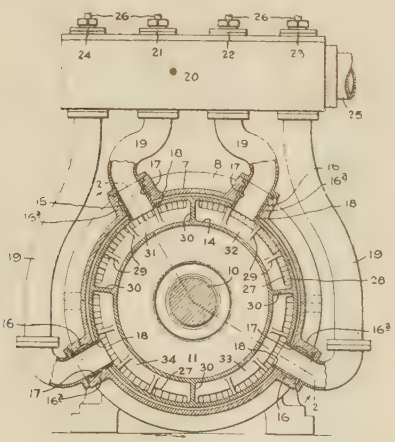
1. In a grain separator of the type described, a casing, a feed hopper for the upper end thereof, a set of screens within the casing arranged beneath the hopper, means for moving the set of screens in a circular path, said means including perpendicular side plates for removably supporting the screens, vertically disposed crank shafts carrying the side plates, and means for rotating said crank shaft.

1,415,569. [WITHDRAWN.]

1,415,570. POLISHING COMPOSITION OR MIXTURE. JAMES M. INOUYE, Ridgefield Park, N. J. Filed May 6, 1921. Serial No. 467,327. 5 Claims. (Cl. 134—24.)

1. A polishing composition comprising acetic acid, boiled linseed oil, turpentine, and benzyl ester, the whole being emulsified.

1,415,571. ELASTIC-FLUID TURBINE. OSCAR JUNGGREN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 29, 1920. Serial No. 392,776. 8 Claims. (Cl. 253—78.)

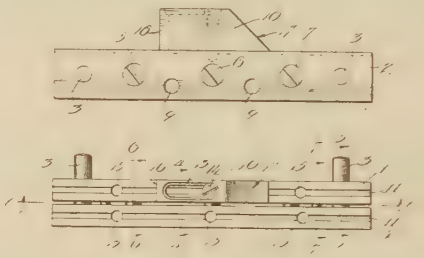


1. In an elastic fluid turbine, the combination of a casing, an annular elastic fluid chest located therein in spaced relation to the walls thereof, and radially-projecting, circumferentially-spaced, telescoping members carried by the casing and chest which have sliding engagement with each other and form a support for said chest whereby it is free to expand and contract radially in all directions.

1,415,572. PROCESS FOR THE RECOVERY OF POTASH FROM CEMENT MIXTURES. DANIEL D. JACKSON, Brooklyn, N. Y. Filed June 29, 1920. Serial No. 392,619. 3 Claims. (Cl. 23—22.)

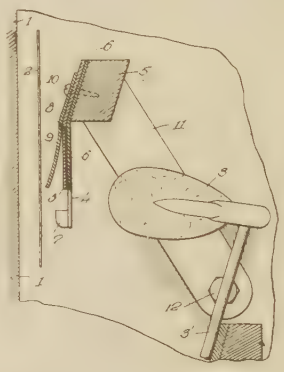
1. In the recovery of potash from cement mixtures containing potassium in insoluble form, the process of subjecting the cement mixtures in a kiln to such temperatures as are necessary to form them into cement, and introducing water vapor into the kiln during the operation to change the potash constituent of such mixtures into the form of hydroxide and volatilize it.

1,415,573. TEMPLET-FILING JAWS. THEODORE T. JANIS, Chicago, Ill. Filed Mar. 24, 1919. Serial No. 284,551. 4 Claims. (Cl. 33—185.)



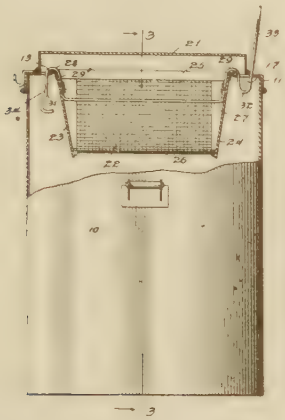
1. A device of the character described, comprising two bars of extremely hard steel and screws connecting the same together to form clamping jaws, said bars having flat upper faces lying in a common plane and having flat inner side faces parallel with each other, said screws passing through the bars and being of such length that the outer side faces of the bars are left unobstructed when a thin piece of work is gripped in the jaws.

1,415,574. MANDOLIN ATTACHMENT FOR PIANOS. PHILIP C. JOHNSON, Chicago, Ill. Filed Sept. 9, 1920. Serial No. 409,113. 3 Claims. (Cl. 84—224.)



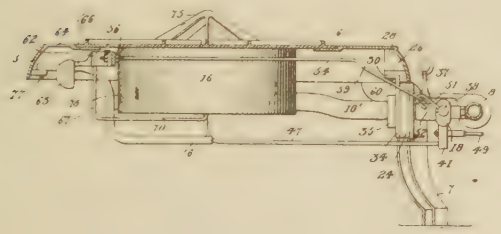
2. An attachment for use with a musical instrument wherein a sounding string is arranged for actuation by a hammer, said attachment comprising a stop movable into position between said string and hammer, a striker located between said stop and hammer and arranged to be struck by the hammer so as to react upon the string, and a shock absorbing member arranged between said stop and striker and located in the path of movement of the hammer to arrest the advance of the hammer toward the string.

1,415,575. ASH SIFTER. MEYER KAMENSTEIN, New York, N. Y. Filed July 28, 1921. Serial No. 488,120. 7 Claims. (Cl. 83—60.)



1. An ash sifter comprising a barrel top provided with an opening, a reinforcing wire encircled by the portion of the barrel top outlining the opening, a sifter member depending below said opening and provided with hooks at opposite sides thereof and hung on said reinforcing wire thereby to suspend the sifter member for oscillatory movement and a cover hinged to said reinforcing member for closing said opening with the sifter in place.

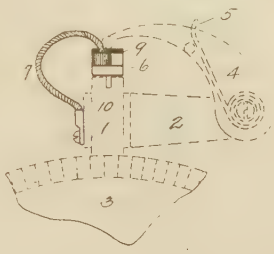
1,415,576. GAS STOVE. JAMES E. KENNEDY, Washington, D. C. Filed Dec. 23, 1920. Serial No. 432,810. 16 Claims. (Cl. 126—52.)



1. In a gas stove, the combination with a main burner and a pilot burner, of a valve for governing the supply of gas to both of said burners, said valve including a closing member constructed to normally close communication to the main burner and to allow slight seepage of gas to the pilot burner and arranged to increase the flow of gas to the pilot burner before turning on the gas to the main burner, means to automatically maintain the valve in its normal closed position, and means operable by the positioning of a device to be heated above the burners for automatically opening said valve.

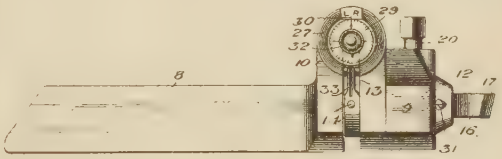
1,415,577. ADAPTER FOR MOTOR-BRUSH SHUNTS. DAVID R. KNAPP, Pottsville, Pa., assignor to Co-Operative Utilities Co., Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Oct. 12, 1920. Serial No. 416,538. 6 Claims. (Cl. 171—323.)

2. The combination with a brush, a holder for supporting said brush for sliding movement relative to said holder, a member formed of conducting material arranged to move said brush into or through said holder, means for removably attaching said member to one end of said brush, insulating material secured to one end of said member, a spring pressed trigger acting



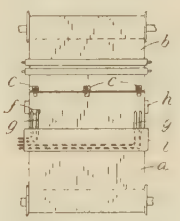
through said insulating material to press said member and brush transversely of said holder, and a conductor electrically connecting said member and said holder.

1,415,578. TOOL HOLDER. FREDERICK KNOOP, Washington, D. C. Filed Feb. 16, 1920. Serial No. 358,895. 13 Claims. (Cl. 29—96.)



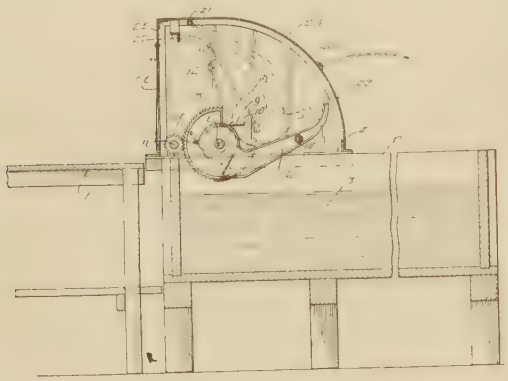
1. In a threading tool, the combination of a tool stock; a cutting tool mounted upon said stock and capable of angular adjustment thereon to adapt it to cut threads of different angular pitches; adjusting means for said tool including a dial and a reduction gear; and a clamp acting between the stock and tool and serving to clamp the tool to the stock in its adjusted positions.

1,415,579. TUNE SHEET FOR AUTOMATIC MUSICAL INSTRUMENTS. LOTHAR KÖHLER, Bremen, Germany, assignor to Dr. Jur. Wilhelm Lürman, Bremen, Germany. Filed Sept. 14, 1921. Serial No. 500,666. 3 Claims. (Cl. 84—162.)



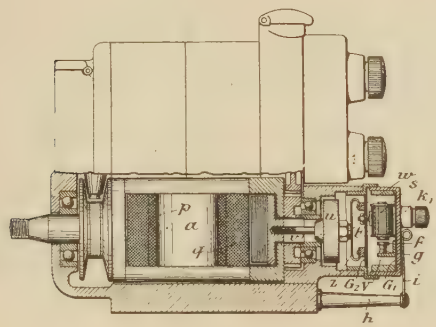
1. The employment, in automatic musical instruments, for the incidental music accompanying the projection of kinematographic pictures, of two independent tune-sheets made up of detachably connected sections, each section containing a different tune, electric contact elements connected to the sheets, and contact springs arranged so as to cooperate with said elements for controlling the starting and stopping of the sheets, the contact elements being arranged on the sheets so that one sheet is started when a tune of the other sheet has been played to a finish and so that such other sheet is stopped as soon as the tune of the next section reaches the proper starting position, the tunes being arranged in the sheets in alternate succession, substantially as and for the purpose set forth.

1,415,580. CARCASS-DEHAIRING MACHINE. LOUIS A. KRAMER, Chicago, Ill. Filed Nov. 1, 1920. Serial No. 421,123. 32 Claims. (Cl. 17—11.)



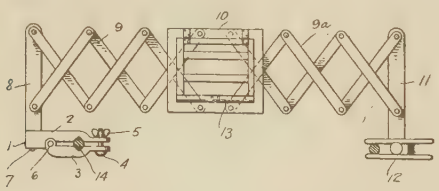
1. In a carcass dehairing machine, a scalding tank, a revolving beater member overhanging the same, and means for lifting a carcass out of the scalding tank and carrying it through the beating path of the beater member over the beater member.

1,415,581. IGNITION APPARATUS FOR INTERNAL-COMBUSTION ENGINES. FRANZ KRATZ, HEINRICH STARKER, and OTTO SELLING, Stuttgart, Germany, assignors to the Firm of Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Mar. 31, 1920. Serial No. 370,361. 2 Claims. (Cl. 123—148.)



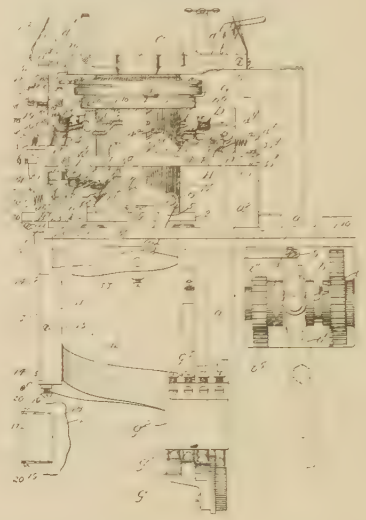
1. Magneto electric ignition apparatus for internal combustion engines comprising a magneto armature having primary and secondary windings, an interrupter, a housing for said interrupter, a buzzer for amplifying the ignition current, and a housing for said buzzer adapted to be attached to said interrupter housing.

1,415,582. EXTENSIBLE BOOKRACK. JOSEPH A. KRIVACS, Mount Vernon, N. Y. Filed Sept. 8, 1921. Serial No. 499,314. 2 Claims. (Cl. 45—82.)



2. A book rack comprising in combination, a pair of extensible lever arms, a book rest to which the lever arms are severally pivotally secured on opposite sides, two vertical arms to which the opposite ends of the lever arms are respectively secured, a pivotal bearing adapted to carry one vertical arm and a support for the other vertical arm.

1,415,583. SPLIT-WORK KNITTING MACHINE. ALDEI LANDRY, Central Falls, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Feb. 5, 1919. Serial No. 275,228. 27 Claims. (Cl. 66—24.)



1. A split-work knitting machine having, in combination, a needle-cylinder, needles, main and auxiliary yarn-feeds, main knitting cams for round and round and also reciprocating knitting, narrowing and widening pickers cooperating with said main knitting cams, means for supporting said cams and pickers at one level in the machine, upper and lower instep cams, and an auxiliary set of radially-movable knitting cams for reciprocating knitting only, permanently located opposite the main knitting cams, and having the said auxiliary set of knitting cams located at an entirely different level from that of the main knitting cams.

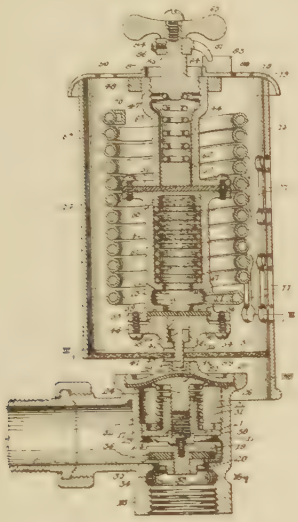
14. A split-work knitting machine comprising, in combination, a needle-cylinder, a series of needles, main knitting cams, widening pickers, a radially-movable block carrying said pickers, and pattern-connections for automatically moving said picker-block radially to place said pickers in and out of operative relations with the needles.

26. In a knitting machine having main and auxiliary feeds, the combination with a sinker-cam ring having sinker-actuating cams corresponding with said feeds, at least one of the latter movable into working and non-working positions respectively, of sinkers comprising a set having butts adapted to pass said movable sinker-cam without being engaged thereby, and a set having butts adapted to be engaged and actuated by the said cam when in working position, and pattern-connections for controlling the position of the said movable cam.

1,415,584. THERMOSTATIC HEAT-CONTROLLING REGULATOR. JAMES J. LAWLER, Pelham, N. Y. Filed Mar. 12, 1919. Serial No. 282,075. 4 Claims. (Cl. 236—42.)

1. A regulator for a valve comprising a tubular column, a downwardly projecting actuator slidably carried by the column and operatively associated with the valve, a thermostatic coil surrounding the column and communicating with the interior of the column for automatically operating the actuator during a change of temperature,

means arranged exteriorly of said column and resiliently associated therewith for adjusting the internal capacity of said column whereby the actuator is initially positioned as desired, and means within the tubular column cooperating with the capacity adjusting means to hold the same under tension.

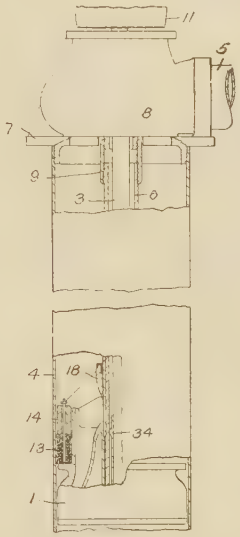


1,415,585. WELL MECHANISM. MAHLON E. LAYNE and SAMUEL N. HALL, Los Angeles, Calif.; said Hall assignor to said Layne. Filed Sept. 8, 1920. Serial No. 408,941. 10 Claims. (Cl. 253—199.)

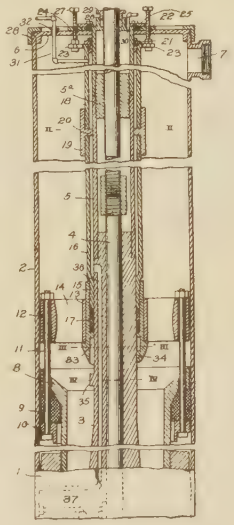
1. In combination in well mechanism, a pump, a discharge casing extending upwardly from the pump, a power transmission shaft extending upward from the pump, a shaft casing surrounding the shaft and provided with a series of spaced bearings for the shaft, and spring means constantly applying tension to said shaft casing.

1,415,586. WELL MECHANISM. MAHLON E. LAYNE and SAMUEL N. HALL, Los Angeles, Calif.; said Hall assignor to said Layne. Filed Sept. 8, 1920. Serial No. 408,943. 10 Claims. (Cl. 166—10.)

1. In combination in a well mechanism, a combined well and discharge casing, a pump in the casing, a drive shaft extending upward therefrom, a shaft casing provided with bearings for the shaft, a packing between the upper portion of the pump and said well and discharge casing, and means operable from the surface of the ground for tightening said packing after the pump has been set.



1,415,587. WELL MECHANISM. MAHLON E. LAYNE and SAMUEL N. HALL, Los Angeles, Calif.; said Hall assignor to said Layne. Filed Nov. 16, 1920. Serial No. 424,568. 17 Claims. (Cl. 253—199.)

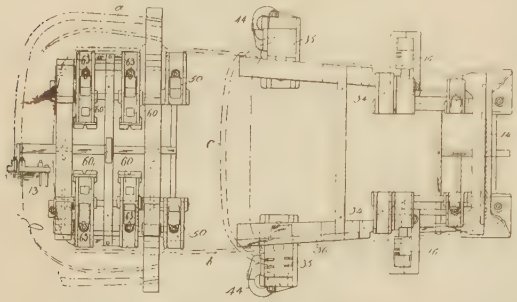


1. In combination in a well mechanism, a well casing, a pump in the casing, a drive shaft extending upward therefrom, packing means between the well casing and pump casing, a shaft casing extending upwardly from the pump, means on the pump casing engaging the packing whereby the weight of the pump is applied to the packing, and means extending to the surface of the ground and independent of the shaft casing for supporting the packing.

1,415,588. JIG FOR USE IN ELECTRICALLY WELDING THE PARTS OF AUTOMOBILE BODIES AND OTHER STRUCTURES. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 1, 1919. Serial No. 307,920. 3 Claims. (Cl. 219—4.)

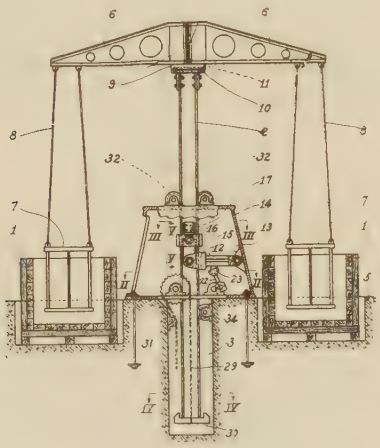
1. In a machine for welding together sheet metal stampings to form an automobile body, an assembly frame to

receive the stampings in position to be welded together, a rod carried by said frame, a rock member carried by said rod to rock thereon and shiftable therealong, a conductor bar carried by said rock member to be brought into con-



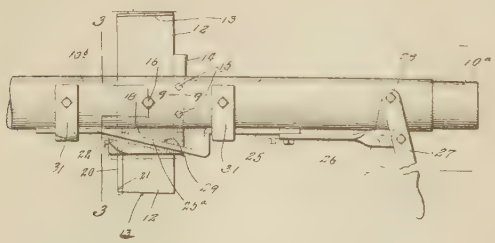
tact with the portions of the stampings to be welded, and a movable electrode cooperating with said contact bar to effect the welding action at any desired point along the length of said bar, said bar and electrode forming parts of an electric welding circuit.

1,415,589. PICKLING MACHINE. WARREN C. LEINBACH, Wilkinsburg, Pa. Filed Mar. 26, 1921. Serial No. 455,770. 11 Claims. (Cl. 266—7.)



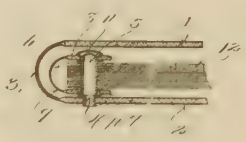
1. In a pickling machine, the combination with a plurality of vats, of a vertically movable ram provided with lateral arms having cages suspended therefrom, a pivoted arm engaging to said ram, a motor, and connections between said motor and arm for oscillating the arm to reciprocate the ram.

1,415,590. EXPANSIBLE BORING TOOL. JOHN LITTLE, St. Louis, Mo., assignor to John J. Larkin, St. Louis, Mo. Filed Dec. 31, 1920. Serial No. 434,198. 10 Claims. (Cl. 77—58.)



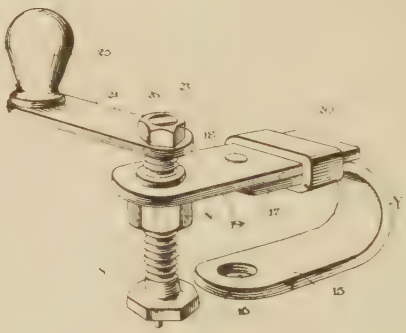
1. In a boring tool, a lathe bar, a radially disposed boring tool fixed to said bar, an expansible cutting tool mounted on said fixed boring tool, and manually controlled means for operating said expansible tool.

1,415,591. DETACHABLE COVER FOR PADS, BOOKS, ETC. OSCAR LOEWENBACH, Milwaukee, Wis. Filed Apr. 5, 1920. Serial No. 371,389. 1 Claim. (Cl. 129—23.)



The combination with a pair of cover members hingedly connected together, of a pair of posts carried by one of the cover members and extending toward the other member, a binder having corresponding portions to engage the opposite sides of a filler, eyelets in one of said portions and slidable on the posts and attaching sockets on the other of said portions for cooperation with the free ends of said posts.

1,415,592. VALVE-GRINDING TOOL. ALBERT LOVELESS, Aberdeen, Wash. Filed May 16, 1921. Serial No. 469,771. 5 Claims. (Cl. 51—29.)

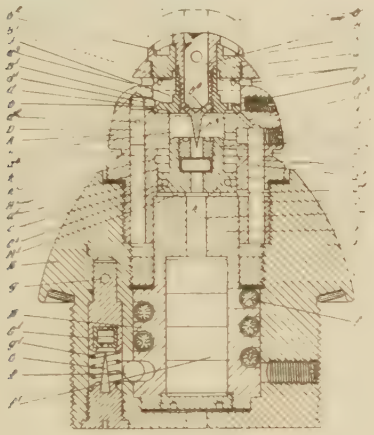


1. A valve grinding tool comprising a yoke, an extension formed on the yoke, said yoke and extension being formed of resilient material, a screw threaded spindle loosely extending through the extension, a head formed on one end of the spindle, pins carried by said head, a reduced extension formed on the other end of the spindle, a crank mounted on said reduced extension, a securing nut on said reduced extension engaging said crank, and an adjusting nut on said spindle and engageable with the first extension to effect when rotated a vertical adjustment of said spindle.

1,415,593. SHELL FUSE. OWEN DAVID LUCAS, Bayswater, London, England, assignor to V. M. L. Experimental Limited, Westminster, London, England. Filed Feb. 16, 1922. Serial No. 536,858. 8 Claims. (Cl. 102—39.)

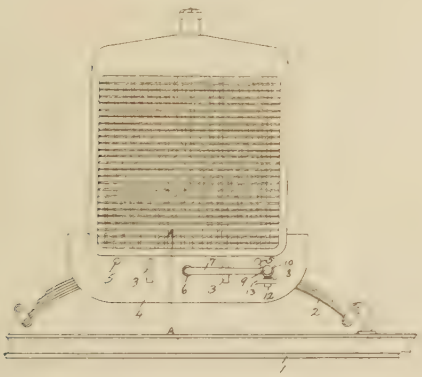
7. In a fuse of the kind set forth, a pair of cylinders in the fuse body, a striker and a detonator pellet both provided with pistons adapted to be displaced under air pressure due to flight of the shell from the rear to the forward part of the said pair of cylinders, a set back pin or pins holding the striker and pellet in rearward inoperative position, an air passage through the striker into the space behind the striker piston and an air passage from the said space to the cylinder space behind the pellet piston, the fuse being adapted on discharge of the shell to cause the set back pin or pins to release both

the striker and pellet, whereupon the air pressure due to the flight of the shell acts on the striker piston to



move the striker forward and then acts on the pellet piston to cause the pellet to follow up the striker, for the purpose specified.

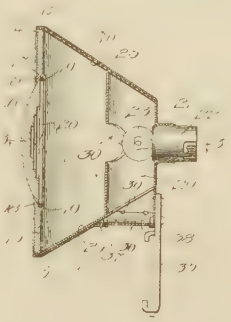
1,415,594. AUTO PLATE AND CRANK HOLDER. GEORGE MCGARRY, Youngstown, Ohio. Filed May 11, 1921. Serial No. 468,519. 2 Claims. (Cl. 180—1.)



1. In a device of the class described, a plate member secured snugly underneath a radiator, outwardly pressed rectangular parts for housing connecting parts, an inturned flange on said plate, a strap formed by pressing outwardly a portion of the said plate, an arm provided with a downwardly extending part hinged within said strap and plate, a clip secured to the upper and outer end of said arm, substantially as described for the purpose set forth.

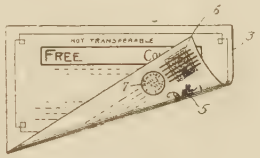
1,415,595. SIGNAL DEVICE. JOHN THOS. MCGRATH, Bloomington, Ill. Filed Jan. 19, 1920. Serial No. 352,405. 8 Claims. (Cl. 240—7.)

1. As an article of manufacture, a directly and indirectly illuminated signal device comprising a casing having a light emitting opening, lenses of different tints occupying different zones of said opening, a point source of light within the casing to directly illuminate said lenses, and mutually opposed reflector means within the



casing arranged to reflect and diffuse light entering the casing when the point source of light fails to illuminate said lenses.

1,415,596. ADVERTISING DEVICE. VICTOR P. MCKINNIE, New York, N. Y., assignor to Ward Baking Company, a Corporation of New York. Filed Nov. 18, 1920. Serial No. 424,808. 4 Claims. (Cl. 283—36.)

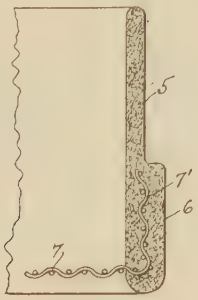


1. An advertising device comprising a card folded so that its parts lie in contact, means for temporarily holding them in such relation, one of the parts being designed to bear an address and being printed in the form of a coupon.

1,415,597. REST-PRODUCING STRUCTURE. MARK F. MADDEN, Chicago, Ill. Filed Oct. 19, 1921. Serial No. 508,739. 3 Claims. (Cl. 128—155.)

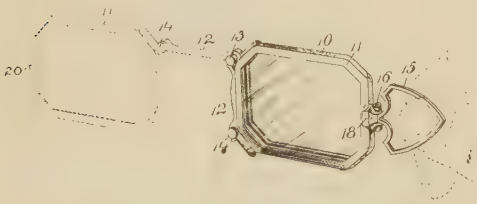
1. A structure for the purpose set forth comprising a body of padding material having an internal contour to fit portions of the body, an external contour comprising a substantially regular surface adapted to contact uniformly with a flat supporting surface, and means to secure the structure upon the body, whereby undue pressure upon any part is eliminated and bed sores prevented.

1,415,598. RIDDLE. HENRY O. MAGNUSON, Chicago, Ill. Filed Sept. 13, 1920. Serial No. 409,804. 2 Claims. (Cl. 83—60.)



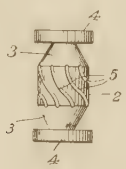
1. A molder's riddle comprising an annular frame of molded fiber composition, and a flat reticulated bottom disposed above the plane of the lower edge of said frame and having an upturned marginal portion embedded in the lower portion of said frame.

1,415,599. LORGNETTE. IRVING MANDEVILLE, Newark, N. J. Filed Jan. 27, 1922. Serial No. 532,082. 4 Claims. (Cl. 88—44.)



1. A lorgnette comprising a pair of lens frames connected so that they can be extended and also assembled in parallel relation, and a handle hinged to one frame, the handle including a catch disposed so that it releases the other frame when the assembled frames are swung on the handle.

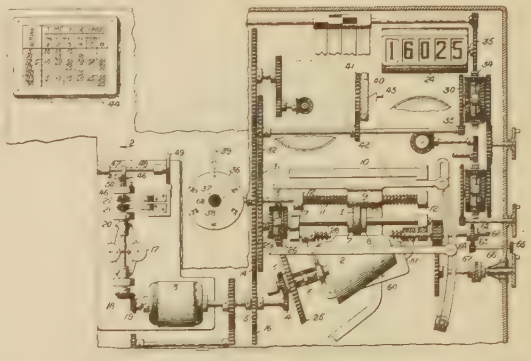
1,415,600. ADJUSTABLE PLUG FOR CLEANING CONDENSER TUBES. MARTIN MANNION, Perth Amboy, N. J., and ROBERT C. ARTHUR, Tottenville, N. Y., assignors of one-third to John Mannion, Perth Amboy, N. J. Filed July 1, 1921. Serial No. 481,942. 8 Claims. (Cl. 15—104.06.)



1. A tube-cleaner of plug shape, and consisting of a projectile having an intermediate grooved portion and annular end flange-forming portions.

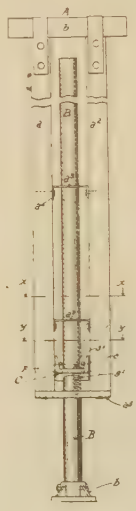
1,415,601. CORRECTION MECHANISM FOR INTEGRATING DEVICES. ELEMER MEITNER, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 15, 1918. Serial No. 222,613. 11 Claims. (Cl. 235—61.5.)

1. In combination, a driving member, a driven member actuated by said driving member at a speed depending upon the relative position of said members, indicating means actuated by said driven member, means comprising a part actuated in accordance with the relative posi-



tion of said members for determining what the reading of said first mentioned indicating means should be and means for adjusting the speed of at least one of said members.

1,415,602. ADJUSTABLE SHORE. GEORGE W. MEYER and CHARLES A. ROOS, Cincinnati, Ohio. Filed Sept. 27, 1920. Serial No. 413,239. 4 Claims. (Cl. 248—3.)

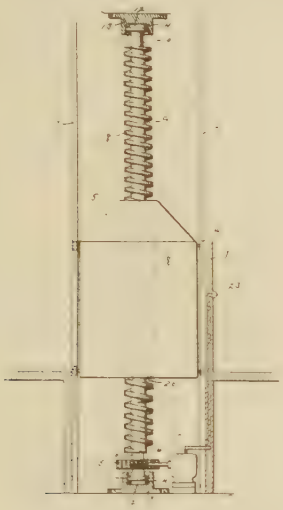


1. An extensible shoring device comprising a relatively fixed member, an adjustable member telescopically engaged upon said fixed member, said adjustable member comprising parallel bars slightly spaced apart, a series of perforated spacing and bracing plates rigidly secured to and between the inner faces of said parallel bars, one end of the fixed member being free to pass through any or all of the perforations of said plates, and means for securing the relative position of the fixed and adjustable members.

1,415,603. ELEVATOR DEVICE. MARTIN MICKELSON, Muskegon Heights, Mich. Filed July 28, 1920. Serial No. 399,518. 1 Claim. (Cl. 187—24.)

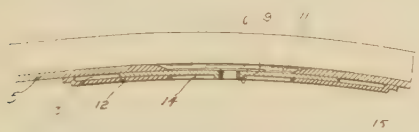
In a device of the character described, the combination with two vertically held guide rails, of an upper and lower bearing located between the said rails, a vertically held screw column the ends of which are reduced and provided with an enlarged bearing head arranged for cooperation with said bearings, a worm held to the lower end of said column, a car having a suitable bottom, said car provided with a vertically extending well passing through the same and enclosing said column, a spiral on the screw column having an upstanding rim, brackets se-

cured to the said car bottom, a grooved roller carried by the said brackets and arranged to ride on said upstanding



rim, and a guide carried by the said car for engagement with said guide rails, all as and for the purpose set forth.

1,415,604. PNEUMATIC TIRE. WILLIAM W. MOORE, Spokane, Wash. Filed Apr. 21, 1921. Serial No. 463,275. 3 Claims. (Cl. 301—10.)

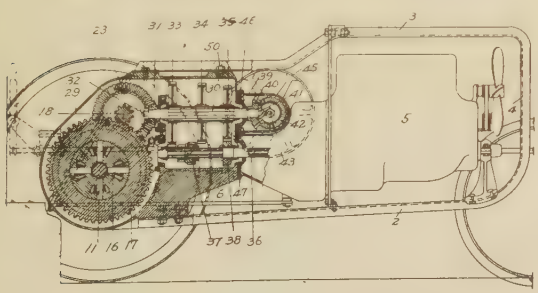


1. The combination with a circumferentially slotted wheel, rim and a slotted, fixed plate thereon forming a pocket on its inner periphery, of a movable guide plate in said pocket and said slotted rim and movable plate adapted to receive a valve stem as described.

1,415,605. CLEANSING COMPOUND. WARREN C. NEWBURY, East Boston, Mass., assignor to Samuel Cabot, Inc., a Corporation of Massachusetts. Filed Mar. 23, 1918. Serial No. 224,371. 2 Claims. (Cl. 87—5.)

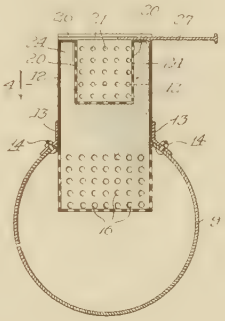
1. A liquid for removing tar or road oil from finished automobile bodies or the like, comprising creosote in predominating amount, a light petroleum oil and linseed oil.

1,415,606. TRANSMISSION CASING FOR TRACTION MACHINES. HAROLD NILSON and LEONARD NILSON, Wayzata, Minn. Filed Feb. 3, 1919. Serial No. 274,669. 10 Claims. (Cl. 74—56.)



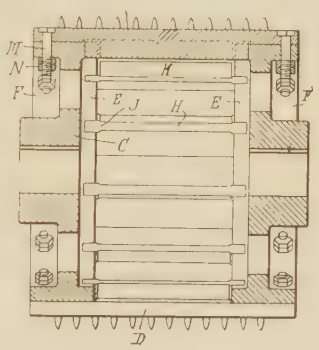
10. In a traction machine, a frame a transmission casing mounted thereon, a rear axle journaled in the side walls of said casing and having traction wheels, differential gearing mechanism on said axle within said casing, said axle and differential gearing being removable bodily from said casing without separation.

1,415,607. FUEL SAVER. ADOLPH OSCHMANN, Chicago, Ill. Filed June 7, 1920. Serial No. 387,046. 1 Claim. (Cl. 110—58.)



The combination with a smoke pipe of an air feeding device comprising a hollow open ended box-shaped member partially inserted into the smoke pipe through the wall thereof the inserted portion being perforated a second similarly shaped hollow member having its walls perforated inserted within the open end of the first mentioned member and having its walls spaced from the walls of the first mentioned member and means for varying the opening in the first mentioned member.

1,415,608. CRUSHER ROLL. BOYD C. OSLER, Hazleton, Pa. Filed June 14, 1921. Serial No. 477,399. 4 Claims. (Cl. 83—12.)



1. A crusher roll comprising separate heads and peripheral segments carrying crushing projections on their outer faces, said segments engaging each other at their side edges and being bolted to the separate heads, and additional means on said supporting heads adapted for interlocking engagement with the segments for holding said segments against peripheral movement, and relieving the bolts of strain in the peripheral direction.

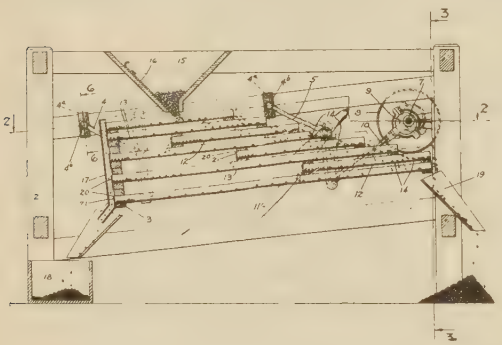
1,415,609. HAND SHEARS. WILLIAM PACEY, Dunedin, New Zealand. Filed Nov. 19, 1919, Serial No. 339,059. Renewed Apr. 1, 1922. Serial No. 548,795. 1 Claim. (Cl. 30—1.)

Hand shears having the shank portions formed concavo-convex with the edges bent to present lips, and blades

having extensions to fit the inner surfaces of such shanks and be retained by the lips, said blade extensions having

spring catches to ride over the surface of the shanks opposite that engaged by such extensions and cooperate with openings formed in said extensions.

1,415,610. WILD-PEA SEPARATOR. CHARLES L. PALMER and JOHN R. HOLLISTER, Sleepy Eye, Minn., assignors to Rollemout Manufacturing Company, Sleepy Eye, Minn., a Corporation of Minnesota. Filed Oct. 22, 1921. Serial No. 509,522. 14 Claims. (Cl. 130—15.)

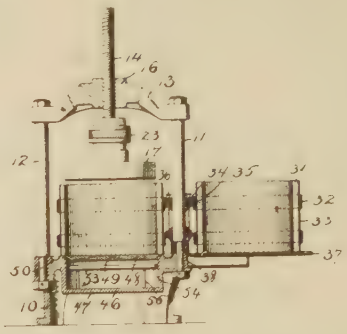


8. In a separator, an oscillating shoe having a plurality of inclined plates therein, one above the other, means for delivering a mixture of elongated and spherical seeds upon the upper plate of the shoe, the movement of said shoe tending to feed the material toward the upper end of the plate on which it lies, while the spherical seeds, separated therefrom, roll to the lower end of said plate, and each plate having near its upper end means for delivering the mixture of elongated and spherical seeds in a thin sheet upon the surface of the plate next beneath to continue the separation.

1,415,611. PRESS. LEWIS PEROTTI, Newark, N. J. Filed Jan. 11, 1921. Serial No. 436,439. 8 Claims. (Cl. 100—44.)

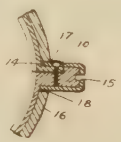
1. A press comprising a support, a pressure means on the support, the base of the support being recessed and having an annular groove around the mouth of the recess, the base having passages from the groove to the upper part of the recess, a cover on the recess, and a screen mounted in the recess below the passages.

8. A press comprising a support including a base and a standard, a bracket swinging on the standard, baskets attachable to the brackets and disposed so as to swing with their bottoms slightly above the level of the base, a pressure means on the standard and above the base, a shelf of curved form at the level of the base and adapted to support the contents of the basket swung toward the base, said shelf being short enough to permit enough space



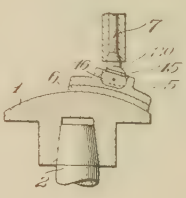
whereby a basket swung beyond the base can have its contents dropped, the parts being disposed so that the other basket is then in position under the pressure means, and a latch for stopping the bracket whenever the baskets are in the above described position.

1,415,612. OPHTHALMIC MOUNTING. ELMER L. SCHUMACHER, Southbridge, and WILLIAM H. BOUTELLE, Sturbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 25, 1921. Serial No. 517,722. 8 Claims. (Cl. 88—47.)



1. A frame of the character described comprising a metallic bridge and eye wire, said eye wire being split at the outer side, an end piece member carried by one end of the split eye wire and having a recess formed therein, a connecting plate carried by the other end of the eye wire and of size to fit within the recess, and a unitary composition frame member having a portion enclosing the end piece, a second portion encircling the metallic rim, and a terminal flap overlying the connecting plate on the opposite end of the metallic rim and when closed making flush joint with the end piece covering to substantially conceal the union of the split ends of the frame.

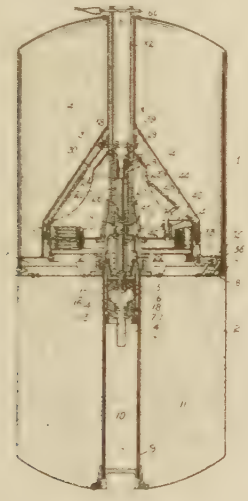
1,415,613. LENS-GRINDING MACHINE. LEON G. SIMPSON, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 30, 1918. Serial No. 264,849. 5 Claims. (Cl. 51—131.)



1. The combination of a lens carrier and a grinding tool cooperating therewith, one of said parts having a recess

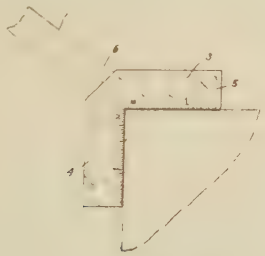
therein on the side thereof opposite the other of said parts, a guide bar and a universal joint between said recessed part and bar comprising a bearing member within the recess and rounded on the bottom for pivotal movement in said recess and a pin pivotally connecting the bearing member and guide bar within and adjacent the bottom of said recess.

1,415,614. DEPTH-CONTROLLED MINE. ELMER A. SPERRY, Jr., Brooklyn, N. Y. Filed Apr. 16, 1917. Serial No. 162,245. 32 Claims. (Cl. 102—3.)



1. In combination, a mine, means for exploding said mine at a predetermined depth below the surface of the water, adjusting mechanism for predetermining the depth at which said mine will be exploded and means for preventing the release of said exploding means while said adjustment is being effected.

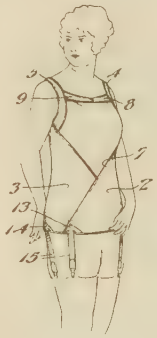
1,415,615. MACHINIST'S RULE AND GAUGE. ADAM J. STOCK, Wilkinsburg, Pa. Filed July 23, 1919. Serial No. 312,694. 2 Claims. (Cl. 33—185.)



1. A gauge of the character described made of a single piece of flat material and comprising a pair of straight legs of uniform width disposed angularly in one plane; the apex formed by the outer edges of said legs being cut normally to the bissectrix of the angle formed by said legs; said gauge being adapted to be placed with its reentrant angle in contact with the adjacent sides of an angular body.

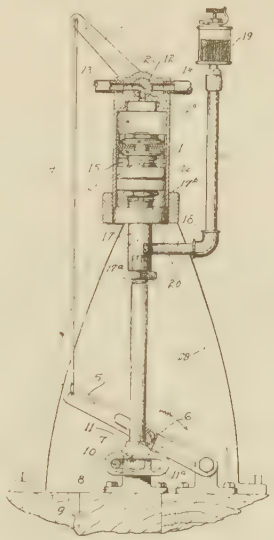
1,415,616. UNDERWAIST. MABEL M. STURGIS, Burley, Idaho. Filed Aug. 25, 1920. Serial No. 405,895. 1 Claim. (Cl. 2—98.)

An underwaist including with a shaped back portion, substantially triangular front portions secured at the sides of the back portion to have their tapered ends overlapped over the abdomen of the wearer and secured, shoulder straps extending from the top edge of the back portion looped over and connected at their free ends on the ta-



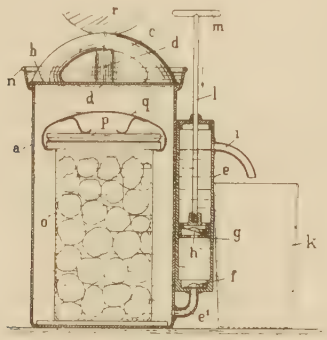
pered edges of the front portions to present arm loops, and straps connected with the forward loops of the shoulder straps to be fastened across the chest of the wearer to hold the shoulder straps in place.

1,415,617. PUMP. ISAAC W. WEPPLO, Chicago, Ill. Filed Nov. 15, 1920. Serial No. 424,256. 2 Claims. (Cl. 103—63.)



1. In a measured delivery pump, a reciprocating piston, an oscillating valve, means for operating said piston and valve in the proper time relation, said piston having a central body and a pair of heads, one head attachable from each side of said body, each head comprising a pair of flexible rings and having resilient members urging said rings against the sides of the cylinder, and means for maintaining the space between said heads constantly filled with lubricants.

1,415,618. METHOD AND DEVICE FOR HANDLING PRESERVING JARS. GUSTAV WINKLER, Dessau, Germany. Filed Sept. 8, 1920. Serial No. 409,014. 3 Claims. (Cl. 226—82.)



1. The method which consists in surrounding a superficially closed preserving receptacle within a closed container with a suitable liquid and forcibly pumping some of said liquid from said container.

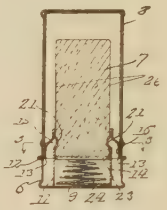
1,415,619. DRILLING BIT. EDWIN J. AKINS, Moundsville, W. Va. Filed Mar. 18, 1921. Serial No. 453,361. 5 Claims. (Cl. 255—63.)

1. A tool for deep-well drilling, comprising a bit shaped to form a central spine of substantially cylindrical form and two diametrically opposite wings, the latter terminating in downwardly-facing shoulders, said spine being prolonged below said shoulders and constituting a drilling point of relatively small diameter.

1,415,620. METHOD OF MAKING PISTON RINGS. ALBERT W. ALBRECHT, St. Louis, Mo. Filed Oct. 20, 1919. Serial No. 332,105. 3 Claims. (Cl. 29—156.6.)

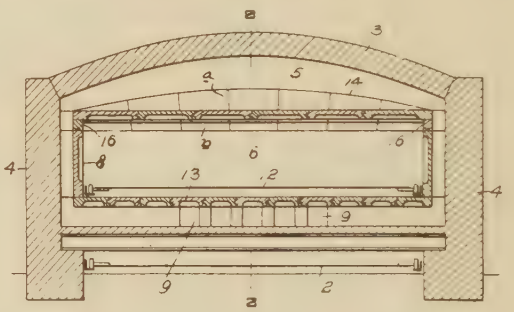
1. The method of making a one-piece piston ring, which consists in shaping a noncircular bar to form a rectilinear central portion of equal width throughout its length, and tapering end portions narrower than the central portion throughout their length and each end portion being bordered on one side edge throughout its length by a rectilinear continuation of one of the side edges of the central portion and its opposite side edge being inclined from an intersection with said rectilinear continuation to an intersection with the opposite side edge of the central portion, and rolling said noncircular bar into annular form to place the inclined side edges of said end portions in contact with the side edges of the central portion respectively, so that the completed ring will be of the same width throughout its circumference.

1,415,621. CONTAINER AND HOLDER FOR SHAVING STICKS. JOHN B. ALBRIGHT, Rockford, Ill. Filed July 18, 1919. Serial No. 311,831. 6 Claims. (Cl. 206—56.)



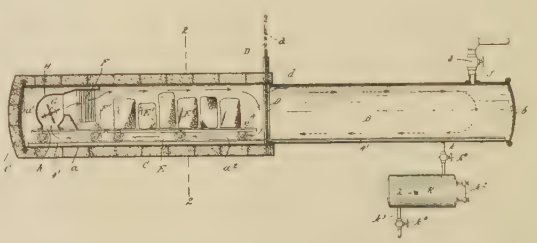
1. A holder for shaving sticks, comprising a holder element composed of a base member and a socket member, the face member having an outer tubular wall, the socket member having an inner tubular wall spaced inwardly from said outer wall, reaching above the latter and turned downwardly and fastened to the upper portion of said outer wall, the tubular wall of the socket member having an inwardly extending boss of greater length than width and arranged in a plane transverse to the axis of the socket, a shaving stick having a bayonet shaped recess for the reception of said boss, and a cover casing adapted to inclose the shaving stick and detachably connect to the holder element.

1,415,622. ANNEALING FURNACE OR LEER. WALTER O. AMSLER, Pittsburgh, Pa. Filed May 21, 1920. Serial No. 383,258. 6 Claims. (Cl. 263—46.)



1. A flat roof structure including a series of flat tiles and a series of arched members assembled in interlocked relationship.

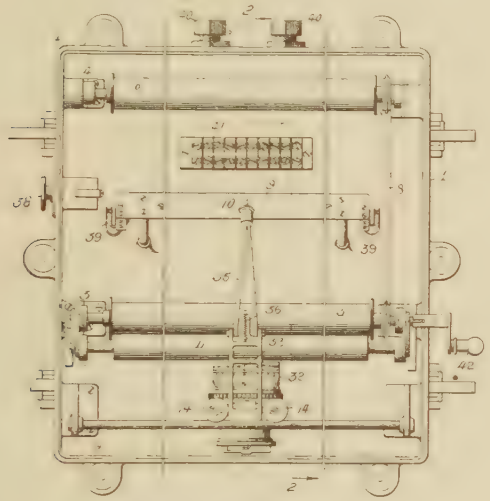
1,415,623. METHOD OF DRYING GOODS. WILLIAM ATKINSON, Boxford, Mass., assignor to The Vacuum Company, Somerville, Mass., a Corporation of Massachusetts. Filed Oct. 12, 1918. Serial No. 257,855. 5 Claims. (Cl. 34—24.)



5. That method of drying goods under a partial vacuum in a closed chamber, which consists in alternately

heating and cooling the air while under a pressure less than atmospheric pressure whereby the moisture will be alternately withdrawn from the goods and taken up by heated air, and then condensed and the dried air reheated to take up more moisture from the goods, and the same air under a partial vacuum used constantly until the drying is complete.

1,415,624. APPARATUS FOR INDICATING AND RECORDING THE DIRECTION AND DISTANCE OF TRAVEL OF VEHICLES. ARTHUR ERNEST BREWERTON, Wandsworth Common, London, England, assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed June 4, 1919. Serial No. 301,767. 9 Claims. (Cl. 234—26.5.)

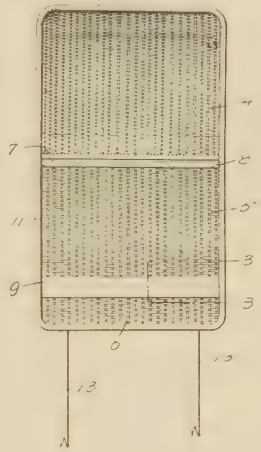


1. Apparatus for indicating and recording the direction and distance of travel of a vehicle comprising a chart movable in one axis or direction in its own plane and a carriage carrying a marking device for making a record on the chart and movable along an axis at right angles to said first mentioned axis, the said carriage carrying propelling mechanism which drives the carriage and the chart at speeds the ratio of which is equal to the ratio of the two components of the direction being traversed at any instant by the vehicle.

1,415,625. MOVABLE-BLOCK PUZZLE. MARTIN BULISTER, Pittsburgh, Pa. Filed June 3, 1921. Serial No. 474,745. 4 Claims. (Cl. 46—41.)

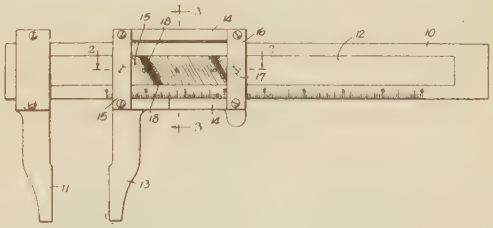
1. A movable block puzzle of the character described comprising a square field and nineteen movable blocks; fifteen of said blocks being square and of equal size, three blocks rectangular having a width equal to the sides of said square blocks and a length equal to twice the side; and one rectangular block of equal width as the aforementioned blocks and a length equal to three times the width.

1,415,626. GARMENT PROTECTOR FOR AUTO SEATS. EDWARD L. FUCHS and ANTHONY L. FUCHS, St. Louis, Mo. Filed June 11, 1921. Serial No. 476,842. 3 Claims. (Cl. 155—182.)



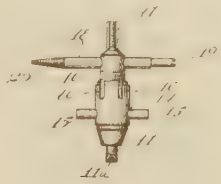
1. A reversible and flexible garment protector for auto seats composed of a section for the back, a section for the seat, and a section for the front edge of the seat, the seat section and back section being spaced apart almost throughout their widths, a continuous piece of binding tape stitched at the outer margins of said section for holding the same in assembled form, the lower edge of the back section and the rear edge of the seat section being unattached except at the side margins, so that the seat back section may conform with the shape of the seat back.

1,415,627. PRECISION INSTRUMENT. GIOVANNI EUSEBIO GIAMBIASI, Philadelphia, Pa., assignor to Howard S. Levy and Lionel F. Levy, Philadelphia, Pa. Filed Nov. 7, 1919. Serial No. 336,458. 1 Claim. (Cl. 88—14.)



A measuring instrument, comprising a pair of translucent members having adjacent flat faces and being movable one over the other along parallel axes, the adjacent flat faces of each of said members being provided with a series of parallel lines, the lines on both members being inclined in the same direction at an angle to their axes but the lines on one member being inclined at a different angle from the lines on the other member to form alternate dark and light parallel bands extending at an oposite angle to said lines, whereby when one of said members is moved axially of the other the intersecting points of the lines on the two members will traverse said members across the adjacent faces thereof so that said parallel dark bands will move axially of said members at a rate of speed equal to the axial distance one member is moved relatively to the other member to cause the intersection to travel the entire length of said lines.

1,415,628. TIRE-VALVE TOOL. HARRY C. GIELOW, Chicago, Ill., assignor to Elgin Auto Tool Company, Elgin, Ill., a Corporation of Illinois. Filed Apr. 19, 1921. Serial No. 462,506. 10 Claims. (Cl. 7—1.)

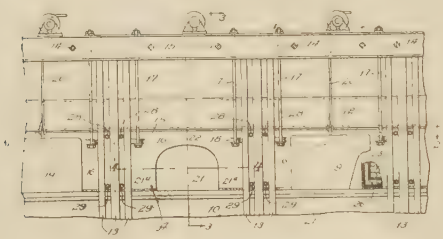


8. In a device of the class described, the combination of a threaded rod having clamping jaws extending from one end thereof of a diameter to enter the bore of a valve stem, a sleeve engaging said threads to forcibly move said jaws toward each other, and a cross rod extending from said threaded rod and secured thereto to form a handle for said threaded rod.

1,415,629. METHOD FOR FILING PRINTING PLATES. HARLO R. GRANT, Chicago, Ill. Filed Nov. 13, 1919. Serial No. 337,853. 1 Claim. (Cl. 99—8.)

The method of preserving printing cuts, which comprises arranging said cuts in vertical superimposed relation, and confining them in a narrow container so as to leave a slight air space between the backs of said cuts and the adjacent walls of the container.

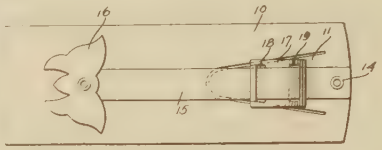
1,415,630. FRONT WALL FOR OPEN-HEARTH FURNACES. JOHN O. GRIGGS, Youngstown, Ohio. Filed Jan. 31, 1921. Serial No. 441,204. 7 Claims. (Cl. 263—46.)



1. A front wall for open hearth furnaces having buck stays, comprising a plurality of portable, removable and replaceable front wall sections, set end to end behind the buck stays, and each formed with a door opening therein through which access may be had to the interior of the furnace.

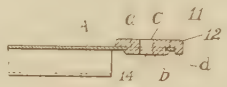
1,415,631. BOOKMARK. AUGUST GRIMM, Newark, N. J. Filed Aug. 30, 1921. Serial No. 496,891. 3 Claims. (Cl. 116—119.)

3. As a new article of manufacture a bookmark of the class described comprising a main plate, means integral with said plate for attaching it to the leaves of the book, a flexible pointer having one end attached to the said plate, a plate of any shape or size on which advertising



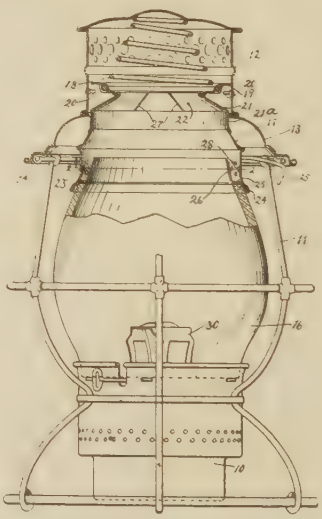
matter may be marked integral with said pointer, and a buckle slidably mounted on the pointer to bend it to fit a corner of the leaf deck of the book.

1,415,632. BONNET CORNER PAD FOR AUTOMOBILES. JOHN A. GURKE, Detroit, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed May 28, 1921. Serial No. 473,416. 4 Claims. (Cl. 180—69.)



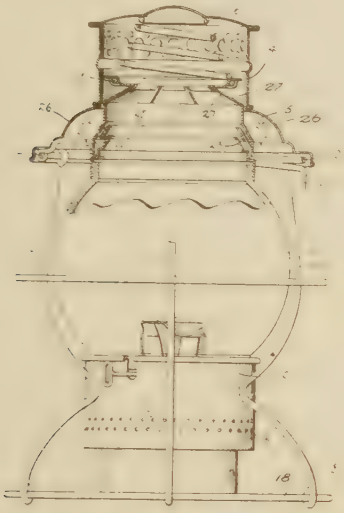
1. In combination with a bonnet of an automobile, a protecting member formed of cushioning material, said bonnet and protecting member having portions which interlock with each other, said protecting member having an edge which extends around over the proximate edges of the bonnet at the corner.

1,415,633. LANTERN. WILLIAM S. HAMM, Hubbard Woods, and FRANK A. SCHUETZ, Chicago, Ill., assignors to The Adams & Westlake Company, a Corporation of Illinois. Filed July 8, 1919. Serial No. 309,334. 6 Claims. (Cl. 240—38.)



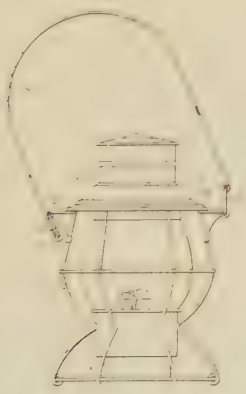
6. A signal lantern adapted for use of a light fuel oil such as kerosene, comprising, in combination, a base having air induction ports open to the atmosphere, a burner for light fuel such as kerosene, a globe inclosing the burner and having an open upper end of substantially greater cross-sectional area than is neccessary to discharge therethrough the vapors of combustion, a dome covering the upper end of the globe and having an annular series of air induction ports in its base, and a shield plate facing the last named ports.

1,415,634. LANTERN. WILLIAM S. HAMM, Hubbard Woods, Ill., assignor to The Adams & Westlake Company, a Corporation of Illinois. Filed July 11, 1921. Serial No. 483,769. 8 Claims. (Cl. 240—29.)



1. In a lantern, in combination, a dome having a series of lateral air induction ports, and a perforated shield within the dome and facing the induction ports the opening in the shield being above the induction ports, the lower end of the shield making a substantially air tight contact with the dome and the top of the shield being free to permit air currents from the ports to pass over it.

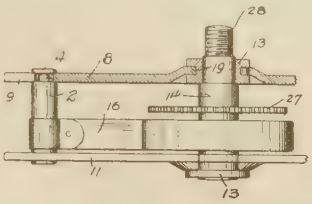
1,415,635. LANTERN. WILLIAM S. HAMM, Hubbard Woods, Ill., assignor to The Adams & Westlake Company, a Corporation of Illinois. Filed July 11, 1921. Serial No. 483,770. 10 Claims. (Cl. 220—95.)



1. In a lantern, in combination, a frame, a pair of brackets secured to the frame and each having a pivot eye, a pair of links pivotally engaging the bracket eyes, and a bail pivotally attached to the links.

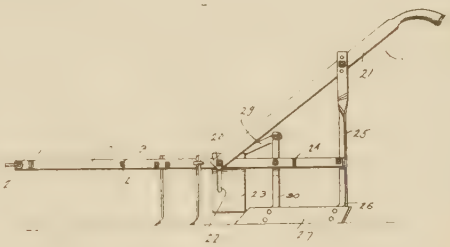
1,415,636. CLOCK FRAME. WILLIAM F. HANSON, San Francisco, Calif. Filed May 8, 1919. Serial No. 295,653. 6 Claims. (Cl. 58—52.)

5. In a clock, a front and rear frame each formed with an aperture therein and a slot connecting the aperture with the edge of the frame, and a post for connecting said frames having a flattened neck at each end whereby the



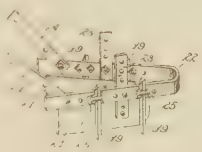
post is adapted to be moved transversely through said slots and rotated in said apertures to secure it in said frames.

1,415,637. CULTIVATOR. JESSIE F. HARDEN, Brundidge, Ala. Filed Nov. 18, 1919. Serial No. 338,821. 2 Claims. (Cl. 97—10.)



2. In combination with a straddle-bow cultivator having side pieces carrying scraper blades, of vertical plates suspended from the side pieces and disposed substantially in the line of draft to enter the soil at the sides of the plants and assist the operator in guiding the travel of the cultivator over the row of plants, and means for adjusting said plates vertically with respect to the side pieces of the cultivator; together with wings extending rearwardly from scraper blades to travel over the bed and cooperate with the aforesaid plates in guiding the cultivator, substantially as herein shown and described.

1,415,638. CULTIVATOR. JESSIE F. HARDEN, Brundidge, Ala. Filed July 27, 1920. Serial No. 399,301. 1 Claim. (Cl. 97—44.)

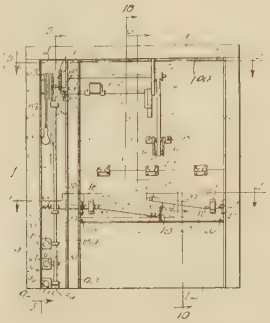


In a straddle-row cultivator, the combination with the diverging side pieces having handles of an attachment comprising a bar bent upon itself in substantially U-shape to provide side members, a plurality of harrow-teeth attached to each side member for cultivating the soil at both sides of a row of plants, vertical oblong plates attached to the side members respectively to extend longitudinally at the inner side of the harrow-teeth, and metal strips extending upwardly from the side members of the attachment for connecting the latter to the side pieces of the cultivator, substantially as shown and for the purpose set forth.

1,415,639. ELEVATOR-DOOR CONSTRUCTION. JOHN C. HEINZELMAN, Chicago, Ill. Filed Oct. 22, 1920. Serial No. 418,699. 9 Claims. (Cl. 187—59.)

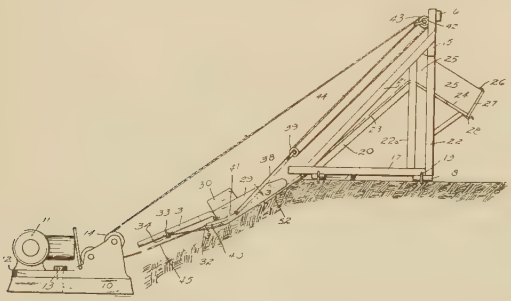
5. In an elevator construction, a frame for an opening in the wall of an elevator well, a collapsible door

hinged at its upper edge to said frame, manually operable means for moving said door into collapsed position, gravity controlled means for locking said door in collapsed position, means for operating said last named means to release the door, a contact member carried by



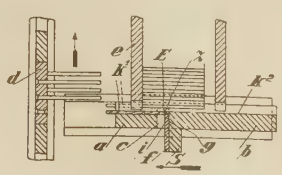
a car moving in the well for actuating said last named means when the car is in a certain position with respect to the opening in the wall of the well, means for locking said door in extended or closed position, and means for operating said last named locking means to release the door.

1,415,640. DUMPING DEVICE AND PROCESS. MORRIS O. HENDERSON, Story City, Iowa. Filed Aug. 10, 1920. Serial No. 402,660. 8 Claims. (Cl. 37—19.)



1. In a machine of the class described, a base, a hoisting mechanism pivotally supported thereon, a dump having upright members, rearwardly inclined brace members, an inclined floor having at its upper end a downwardly inclined extension, side walls on said extension, a pulley supported at the upper part of said dump above the highest part of said inclined floor, a slip, a bail connected with said slip, a pulley on said bail, a rope connected with said dump and extended around said last pulley, thence around said first pulley and thence to said hoisting mechanism, a draft device connected with said slip forwardly of the points of connection of said bail, and a handle on said slip adapted to serve as a stop for said bail.

1,415,641. MATCH-MAKING MACHINE. LUDWIG HENNINGER, Durlach, Germany, assignor to Badische Maschinenfabrik & Eisengiesserei vormals G. Sebold und Sebold & Meff, Durlach, Germany. Filed Jan. 3, 1922. Serial No. 526,850. 3 Claims. (Cl. 144—64.)

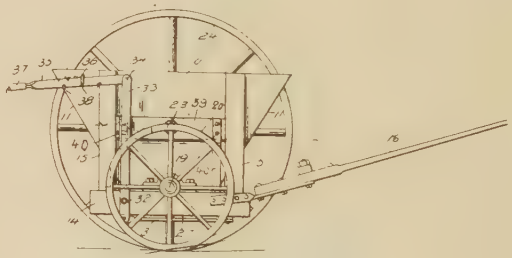


1. The combination, in an automatic machine for manufacturing matches, of a hopper for the sticks, a stepped push-plate below said hopper provided with front and rear grooves for the reception of the sticks and a waste discharge slot at the step, means for reciprocating the push-plate, and a device for raising the ends of the sticks situated above said slot to such a height that the said ends lie with their upper surfaces at least flush with the bottoms of the rear grooves in said push-plate.

1,415,642. FLEXED-BLOTTER HOLDER. NEWTON S. HILLYARD, St. Joseph, Mo. Filed July 20, 1920. Serial No. 397,584. 1 Claim. (Cl. 120—24.)

A sheet holder transversely of segmental form; a pressing edge formed of one of the longitudinal edge portions of said holder return bent upon itself; a holding edge on the other longitudinal edge of said holder said holding edge being formed of a portion of said holder bent at an incline inward and upward with a space between said holding edge and said pressing edge for insertion therebetween of one of the transverse edges of an elastic flexed back sheet and of a flexed plurality of perforated sheets of blotting paper; another sheet holder of the same construction for similarly holding the opposite ends of said sheets; and a rod the ends of which are secured in the center of one of the sides of said holders respectively at a right angle thereto with the pressing edges of said holders beneath the respective ends of said rod.

1,415,643. FERTILIZER DISTRIBUTOR. ALEXANDER A. HODGES, Headland, Ala. Filed Apr. 21, 1921. Serial No. 463,261. 1 Claim. (Cl. 275—2.)

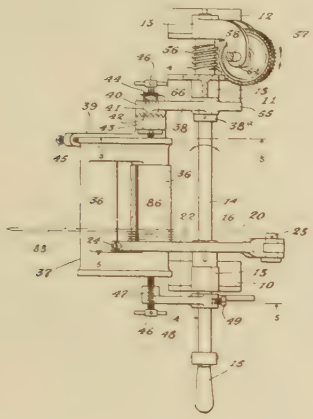


An apparatus of the class described comprising a receptacle having a discharge opening, an upper axle extending through said receptacle and adapted to carry agitating means, a lower axle extending through said receptacle and adapted to carry feeding means, a relatively large traction wheel rotative with said upper axle, and a relatively small traction wheel rotative with said lower axle, whereby the upper axle and its attachment is operative faster than the lower axle and its attachment.

1,415,644. WINDING MECHANISM. ANDREW J. HOLMES, Tacoma, Wash. Filed Jan. 25, 1921. Serial No. 439,888. 4 Claims. (Cl. 242—9.)

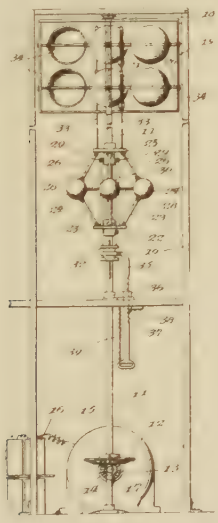
1. A coil winding mechanism comprising support bearings; a shaft rotatably mounted within said bearings, means to rotate said shaft, a work holder disposed for selective angular adjustment about said shaft, clamping

means to retain said work holder in selective angular positions, means carried by said work holder adapted to



support and rotate the element upon which the coil is to be wound, and means actuated by said shaft adapted to rotate said last named means.

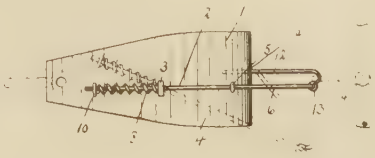
1,415,645. WIND WHEEL. SAMUEL HOLTERUD, Duluth, Minn. Filed Aug. 1, 1921. Serial No. 488,944. 3 Claims. (Cl. 170—20.)



1. A windmill device comprising a wheel having feathering blades, a vertical shaft carrying the wheel and rotatable therewith, a governor on the shaft and including sliding collars and centrifugal weights connected with the collars, cords connected with one of the collars and with the vanes, a locking rod operatively engaged with the other collar, and cords connected with the last-named collar and with the locking rod and engage with the first-named collar.

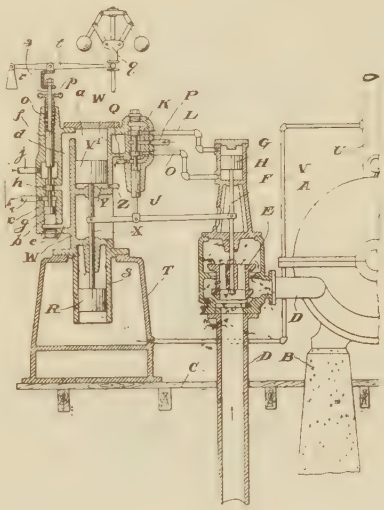
1,415,646. AUTOMATIC RELEASE COUPLING. GEORGE WILBER HOWDEN, Pompey, N. Y. Filed Mar. 28, 1921. Serial No. 456,424. 2 Claims. (Cl. 213—67.)

1. An automatic coupling comprising a draft bar, a draft plate, a resilient connection between said draft bar and draft plate permitting relative extensible movement, removable means engaging the draft plate and draft bar for preventing angular rocking movement of the draft bar with respect to the draft plate, and a coupling hook



pivotally connected to the draft bar having a part engaging the draft plate under normal load conditions, said part released from engagement with said draft plate by relative extensible movement of the draft bar and draft plate against the action of said resilient connection.

1,415,647 PRESSURE REGULATOR FOR TURBOCOMPRESSORS. LESLIE R. HUFF, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 19, 1921. Serial No. 446,388. 8 Claims. (Cl. 103—92.)

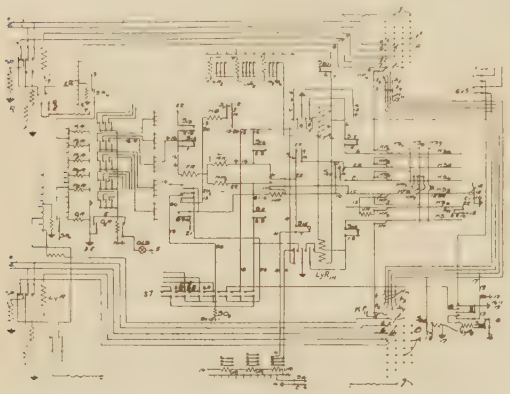


1. A pressure regulator for a motor driven turbocompressor, comprising a movable fluid pressure regulating member subject to the pressure in the discharge of the compressor and operatively connected to control the power supplied to the motor, a fluid pressure thrust compensating device connected to the said movable regulating member and means for automatically maintaining substantially constant pressure in said compensating device.

1,415,648. SELECTOR SWITCH. CARL AXEL WILHELM HULTMAN, Stockholm, Sweden. Filed Dec. 23, 1918. Serial No. 268,068. 12 Claims. (Cl. 179—18.)

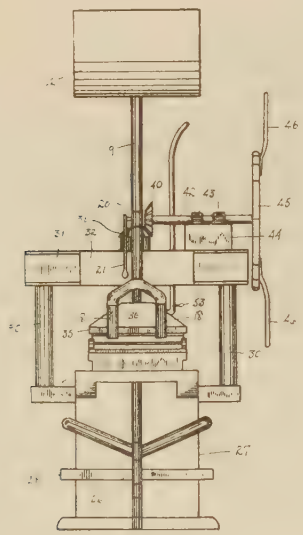
1. In a selector switch having hunting movements in two different co-ordinate directions, means for starting the contact arms from a variable initial position in the first co-ordinate direction upon a call being initiated,

means for setting the contact arms in the first coordinate direction for the selection of a contact row, and



means for setting the contact arms in the second coordinate direction for the selection of a particular contact.

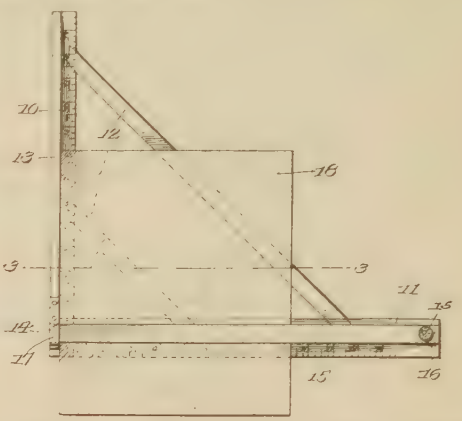
1,415,649. MACHINE FOR MAKING SHINGLES. ROBERT W. JAGENBURG, Utica, N. Y., assignor to M. William Bray, Utica, N. Y. Filed July 17, 1920. Serial No. 397,043. 11 Claims. (Cl. 25—42.)



1. In a machine for making shingles, a mould having beveled edges covered with rubber, and means cooperating with said mould, whereby to form shingles with beveled edges.

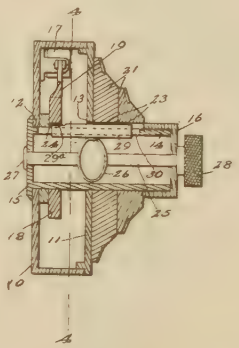
1,415,650. GLASS-CUTTING SQUARE. HENRY E. JOHNSON, Fort Bragg, Calif. Filed June 1, 1921. Serial No. 474,215. 1 Claim. (Cl. 33—32.)

A glass support and cutting guide comprising a pair of right-angularly connected arms, oblique braces between the arms, the arms and braces being adapted to support a sheet of glass to be cut, one of the arms having a vertical longitudinal stop rib for one edge of the glass, both of the arms having graduations, the inner end of the rib terminating adjacent the inner edge face of the other arm, a cutter guiding arm pivotally connected to the outer end of said other arm, and a detent carried by the said inner end of the rib for gripping engagement with the free end of the pivoted arm, to releasably hold the



arm against the end of the rib and the glass on the angularly connected arms and braces.

1,415,651. LOCK. ANDREW KENDECHY, Cleveland, Ohio. Filed June 15, 1920. Serial No. 389,167. 1 Claim. (Cl. 70—53.)



A device of the class described comprising a casing provided with a central opening a cover plate having an opening of a greater diameter than the opening in said casing and provided with an indicating arrow, a hollow cylindrical member extending through the openings in said casing and said cover and provided with a longitudinally extending slot, a flanged head extending from one end of said member and engaging said casing, a threaded cap removably secured to the opposite end of said member, a locking bolt mounted for sliding movement within the casing and provided with a shank having bifurcated ends, a disk rotatably mounted upon said cylindrical member, having a notch formed therein and provided with a slotted lug pivotally secured to the bifurcated end of the shank of said lock-bolt, a plurality of disks rotatably mounted upon said cylindrical member upon the outside of said casing provided upon their marginal edges with indicia and having notches formed therein, a sectional rod located in said hollow cylindrical member and extending through said head and said cap, an oval shaped spring secured to the adjacent ends of the sections of said rod, a knurled knob secured to one end of said rod, said sectional rod at the opposite end thereof engaging the head of said cylindrical member, and a dog secured to said spring and adapted to engage the notches in said disk.

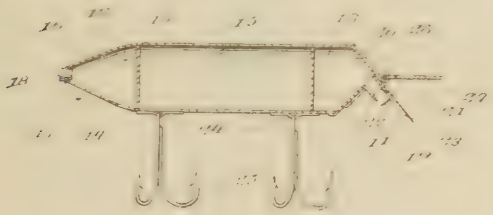
1,415,652. BRUSH. HARRY JAMES KIRKPATRICK, Toronto, Ontario, Canada, assignor to The Boeckh Company, Limited, Toronto, Canada. Filed Aug. 9, 1921. Serial No. 491,030. 3 Claims. (Cl. 15—193.)

1. A brush comprising an oblong metal plate having a plurality of holes therein; bristle tufts extending

through said holes; a mass of bristle sealing compound applied to the back of the plate and the inner ends of the tufts of bristles; a sheet metal back having a rim within which the plate is adapted to fit, the back having

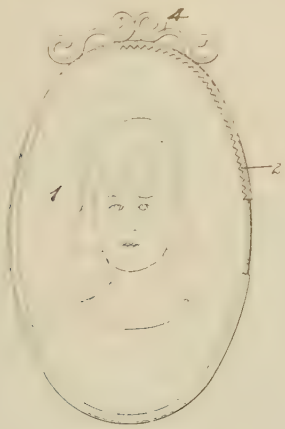
a central depression stamped longitudinally in its back forming a longitudinal shoulder engageable by the mass of sealing compound and the edge of the rim being turned over the plate to hold it in place.

1,415,653. ARTIFICIAL BAIT. FRANK L. KOEPKE Ridgefield, Wash. Filed Mar. 19, 1921. Serial No. 453,618. 1 Claim. (Cl. 43—46.)



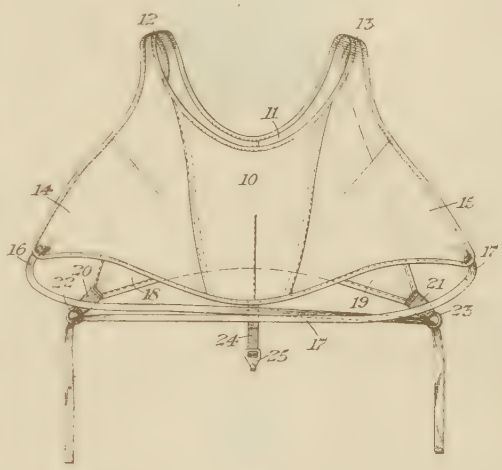
An artificial bait comprising a hollow elongated body having its rear end tapered and provided with a filling opening in the apex thereof, a closure removable in said opening, the forward end of the body beveled from the upper and lower sides toward the transverse center of the end of the body, a filling nozzle in the forward end of the body extending at right angles from the lower bevel face and provided with a removable stopper, and a downwardly and forwardly extending and downwardly widening fin on the upper bevel face of the forward end of the body for contact with the water of a stream to deflect the body downwardly thereinto, said fin extending in parallel relation to the filling nozzle and projecting past the end thereof.

1,415,654. PICTURE FRAME. LOUIS KOPPERSMITH, New York, N. Y. Filed Apr. 20, 1921. Serial No. 462,826. 2 Claims. (Cl. 40—154.)



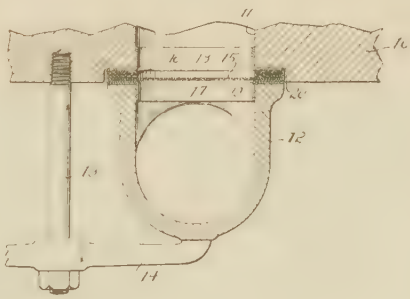
1. A frame comprising a sheet metal strip angular in cross-section to provide a channel along its inner side, the outer edge of said strip being serrated, said serrations terminating short of the bottom of said channel.

1,415,655. BRASSIÈRE. WALDEMAR KOPS, New York, N. Y., assignor, by mesne assignments, to Nemo Circlet Company, Inc., a Corporation of New York. Filed Feb. 17, 1921. Serial No. 445,642. 4 Claims. (Cl. 2—73.)



1. In a brassière, a front member having portions adapted to extend partially around the waist of the wearer, a back member having portions adapted to extend partially around the waist of the wearer, the said portions of the front and back members being adapted to overlie each other at the sides of the wearer, and tapes connected to the ends of one of the said members and adapted to continue around the waist of the wearer and to be threaded through and to coact with devices associated with the ends of the other member whereby in drawing the tapes and securing the same together the said members are simultaneously adjusted to position on the body of the wearer.

1,415,656. GASKET FOR INTAKE MANIFOLDS. GEORGE KUNZ, Cleveland, Ohio. Filed Feb. 10, 1921. Serial No. 443,975. 12 Claims. (Cl. 219—38.)

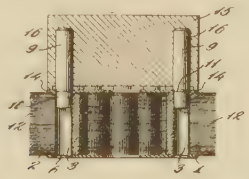


1. In combination an intake manifold, a screen extending transversely thereof, a packing ring extending around the marginal edge of the screen, and means for securing the ring to the screen, said means being adapted to be inserted across the intake manifold in an internal combustion engine.

1,415,657. PROCESS OF MAKING BRUSHES. ARTHUR W. LAMP, Cleveland, Ohio, assignor to Walter J. Carter, Cleveland, Ohio. Filed Aug. 13, 1920. Serial No. 403,253. 7 Claims. (Cl. 300—21.)

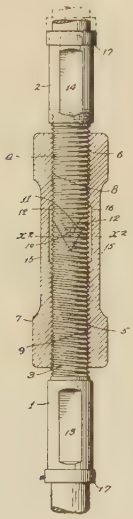
6. The process of making a brush which comprises providing a head with posts having removable extensions,

applying tuft material to the posts and extensions, compressing the tuft material toward said head and strip-



ping it from the extensions, and securing a second head to the said posts and in operative engagement with such compressed tuft material.

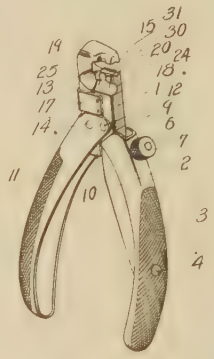
1,415,658. ROD AND TOOL COUPLING. SAMUEL E. LANE, Santa Ana, Calif., assignor of one-half to William Baker, Santa Ana, Calif. Filed Nov. 17, 1919. Serial No. 338,780. 4 Claims. (Cl. 287—105.)



1. A coupling for sucker rods comprising right and left threaded pins provided at their ends with male and female V-shaped members adapted to slip endwise into engagement with each other to prevent relative rotation, and a collar internally threaded with right and left hand screw threads and adapted to be connected to said members to bring said members into and out of engagement with each other for the purpose of preventing disconnection of the members except when rotation of the collar relative to both such members alike, or vice-versa, is effected; said rods and said coupling being provided with plane wrench faces arranged in predetermined position relative to the slip joint members so that when wrenches are applied to the wrench faces of the sections, and their handles are extended to predetermined positions, the slip joint members will be in position to allow the joint to be united so as to prevent relative rotation of the bodies.

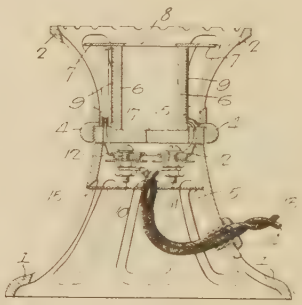
1,415,659. OPTICIAN'S TOOL. JAMES M. LAWLOR, Topeka, Kans., assignor of one-half to T. H. Cutsinger, Topeka, Kans. Filed Oct. 1, 1920. Serial No. 414,035. 6 Claims. (Cl. 81—15.)

1. An optician's tool comprising a rigid jaw member having a longitudinal groove and a transverse groove in its outer face parallel with the end of the jaw, and a grooved clamping face at its end, a longitudinally movable jaw member having a groove in its outer face aligning with the longitudinal groove in the rigid jaw member, and means for moving the movable jaw member toward



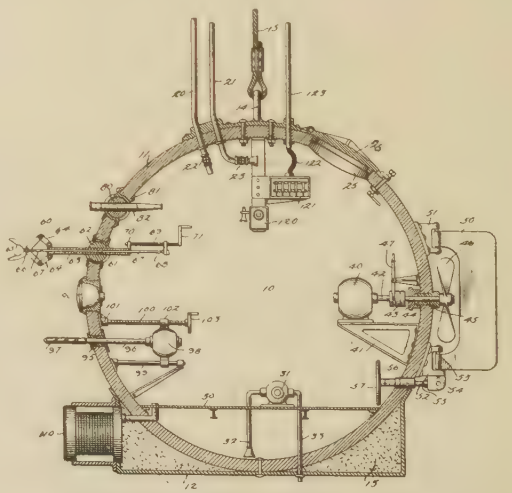
and away from the rigid jaw member in parallel relation thereto.

1,415,660. ELECTRIC HEATER. RICHARD G. LEDIG, Philadelphia, Pa., assignor to A. Mecky Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 27, 1921. Serial No. 495,886. 7 Claims. (Cl. 219—43.)



1. The combination in an electric heater of a frame including two hollow frusto-conical members; means for holding said members with their small diameter ends together; a refractory structure fixed within said frame; and a heating element wound on said structure.

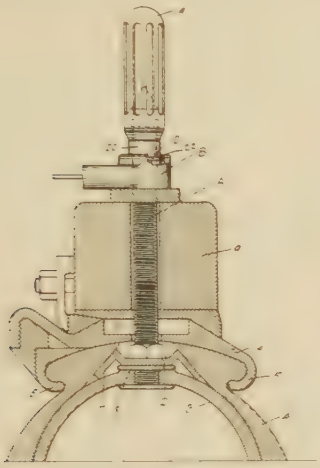
1,415,661. DEEP-SEA SALVAGE APPARATUS. ALFRED E. LEMON, Douglas, Ariz. Filed Dec. 30, 1919. Serial No. 348,317. 1 Claim. (Cl. 61—69.)



A gripping device for a deep sea salvage apparatus, comprising a tube adapted to be mounted in the wall of

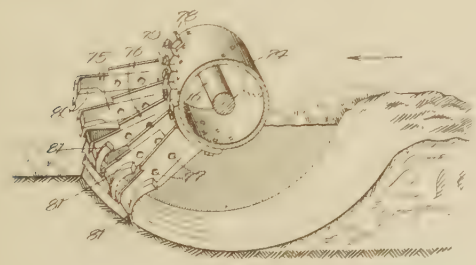
the body of the apparatus, a rod slidable in the tube, a pair of jaws fulcrumed on the outer end of the said rod, links connecting the said jaws with the outer end of the said tube, a nut on the inner end of the said rod, a screw rod screwing in the said nut and having one end mounted to turn on the said tube, and a handle on the other end of the said screw rod.

1,415,662. LOCK. HENRI G. LEVY, San Francisco, Calif., assignor to Robert H. Butters, Atlanta, Ga. Filed Aug. 15, 1921. Serial No. 492,501. 3 Claims. (Cl. 70—122.)



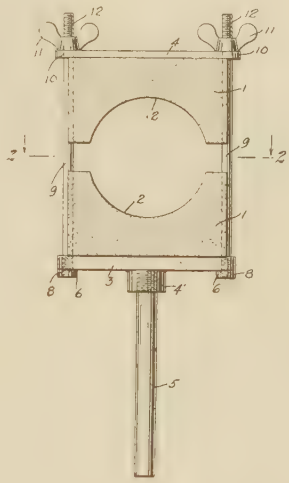
1. A lock comprising in combination a stem adapted for turning movement about its axis and a block which may be fitted closely and conformably upon the stem, said block comprising two parts and lock mechanism incorporated with one part for cooperation with the other and said parts having relative movement by which they may be engaged with the stem in a manner to hold the block against endwise and turning movement on the stem and also may be brought into the relative position required for operation of said lock mechanism.

1,415,663. ROTARY PLOW. CHARLES L. LILLEBERG, Chicago, Ill. Filed June 28, 1917. Serial No. 177,479. 1 Claim. (Cl. 97—62.)



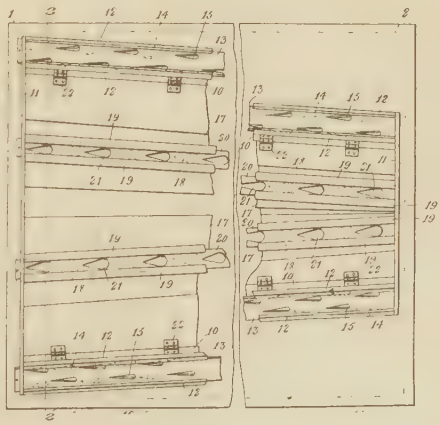
A plow structure including a rotary plow element having a rotatable support; and a plurality of staggered sets of plow knives carried by said support, the knives of each set operating substantially in the same plane which is the plane of rotation of said support, said knives having outer angular ends extending transversely of the plow structure, and substantially parallel with the axis of said rotary plow element, the end portions of the knives of each set terminating at the plane of rotation of the inner portions of the knives of the adjacent set, the cutting edges of said knives extending along their angular ends and being continued from their angular ends along their radial portions.

1,415,664. GRINDING TOOL. PAUL UCLAIR LOVELACE, Clinton, Okla. Filed July 16, 1921. Serial No. 485,365. 2 Claims. (Cl. 51—206.)



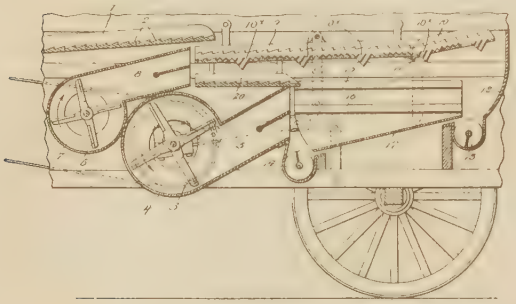
1. A tool of the character described, comprising a pair of rectangular grinding stones having concentric opposed curved recesses, said stones having grooves in their outer edges, bars engaging the backs or rear faces of the stones, and clamping bolts located in said grooves and holding the bars in relative position.

1,415,665. REED-ORGAN SWELL. ANDERS GUSTAF LUNDQUIST and KARL JOHAN ALGOT JONSON, Stockholm, Sweden, assignors to Aktiebolaget Skandinaviska Orgel-Och Piano-Fabriken, Stockholm, Sweden, a Corporation. Filed Oct. 28, 1920. Serial No. 420,305. 2 Claims. (Cl. 84—372.)



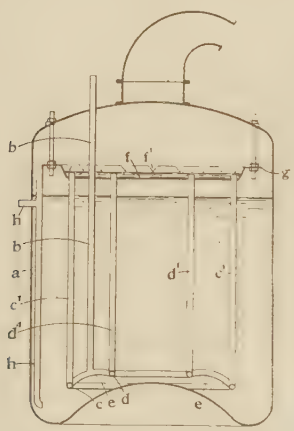
1. A reed organ or the like instrument in which the tongue sare mounted within a casing provided with air-openings or apertures and one or more valve members adapted to control these apertures, the said valve members consisting of slidable shutters provided with a corresponding number of apertures which are gradually brought into registration with the first mentioned apertures when the shutter is displaced, the apertures tapering substantially to a point.

1,415,666. CLEANING ATTACHMENT FOR THRASHING MACHINES. JOHN R. MCMILLAN and ERNEST C. MCMILLAN, Bushong, Kans. Filed July 17, 1920. Serial No. 396,976. 1 Claim. (Cl. 130—24.)



In combination, a grain pan with serrations, a chaffer body arranged below and in spaced relation to the rear portion of said pan and extending rearwardly of the same, a rearwardly extending chaffer section connected to the rear end of the chaffer body, a casing below the chaffer body and chaffer extension, conveyors in said casing, a shoe sieve arranged in said casing and below the chaffer body and chaffer section, a short grain pan section arranged under and in spaced relation to the chaffer body, spouts carried by the chaffer body and extension, the forward of said spouts being arranged to discharge grain to said short grain pan section, means for delivering a rearwardly directed blast of air between the rear end of the grain pan and the forward ends of the chaffer body and the short grain pan section, and means for delivering a rearwardly directed blast of air into the casing and above and below the shoe sieve therein.

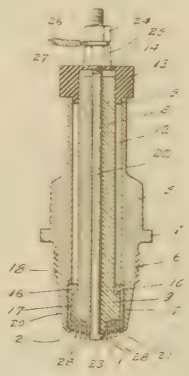
1,415,667. DISTILLATION OR EVAPORATION OF LIQUIDS. JOHN LEWIS MAJOR, Sculcoates, Hull, England. Filed Jan. 19, 1918. Serial No. 212,751. 3 Claims. (Cl. 196—25.)



1. A method of continuous distillation of liquid in a still subject to external heat, consisting in causing the liquid to be distilled to be fed into the still in a plurality of upward streams through but not in contact with the main bulk of liquid in the still under conditions in which the liquid fed gradually acquires the temperature necessary for the distillation to be effected, the said liquid passing to the upper part of the still above the bulk of liquid therein where the lighter fractions are disengaged for removal from the still, the liquid then passing into the main bulk of liquid in the still, substantially as described.

2. A still consisting of a vessel subject to external heat and a plurality of pipes within the said vessel through which the liquid to be distilled passes upwardly in a plurality of streams, the said pipes passing up through the bulk of liquid in the still and extending from near the bottom of the still into a position above the level of the bulk of liquid within the still, whence the liquid to be distilled discharges into the still, substantially as described.

1,415,668. SPARK PLUG. GABRIEL MAROTTA, Seattle, Wash., assignor of one-half to Abram Van Aalst, Seattle, Wash. Filed Sept. 2, 1920. Serial No. 407,781. 1 Claim. (Cl. 123—169.)



A spark plug comprising a metal shell provided with a central opening with an enlarged lower portion to afford a shoulder, a sleeve of insulating material of less diameter than said opening extending lengthwise therethrough, said sleeve having a head of relatively large diameter disposed within the enlarged lower portion of the shell opening and spaced from the walls thereof, said head having a convex extremity, insulating material surrounding said head, a copper jacket enclosing said insulating material the lower edge of said copper jacket and the lower edge of said shell being bent over the edge of said head, a cap of insulating material arranged to seat on said shell and having an annular projection extending into the annular space between said shell and said sleeve, an electrode extending lengthwise through said sleeve, the lower end of said electrode protruding a short distance from the center of said head, and a plurality of metal posts embedded in said head in spaced relation beween said central electrode and said shell.

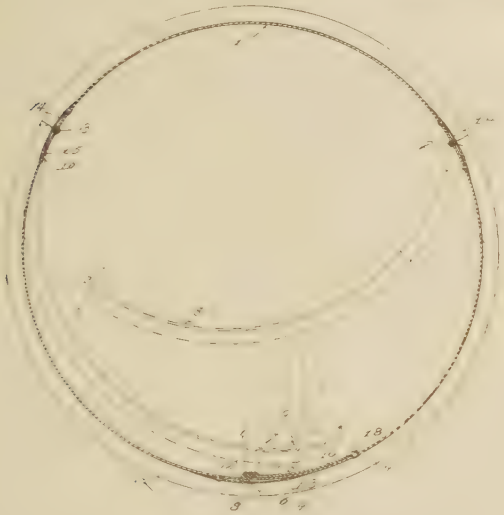
1,415,669. PROCESS FOR THE PRODUCTION OF ICE CREAM. LEE H. P. MAYNARD, Philadelphia, Pa., assignor of one-half to George P. Sacks, Bradley Hills, Md. Filed Dec. 30, 1920. Serial No. 434,117. Renewed Dec. 7, 1921. Serial No. 520,693. 9 Claims. (Cl. 99—11.)

1. The herein described process of producing an ice cream mix, consisting in producing an acid milk mixture, an alkali cream emulsification, and mixing the milk mixture and the emulsion under agitation.

1,415,670. WHEEL RIM. JAQUELIN M. MEREDITH, Jr., Norfolk, Va. Filed Apr. 29, 1920. Serial No. 377,520. 6 Claims. (Cl. 301—33.)

1. In a device of the class specified, a transversely split rim provided with a plurality of segments comprising two relatively free and movable segments, a transversely disposed fixed pin mounted adjacent to the end of one of said movable segments and having the greater portion thereof projecting inwardly clear of the segment on which it is mounted, and a locking lever carried by the remaining movable segment end adjacent to said pin, the locking

lever having an enlarged cam end eccentrically connected to its segment and also provided with a recess in rear of the said cam end to receive and exert a frictional stress

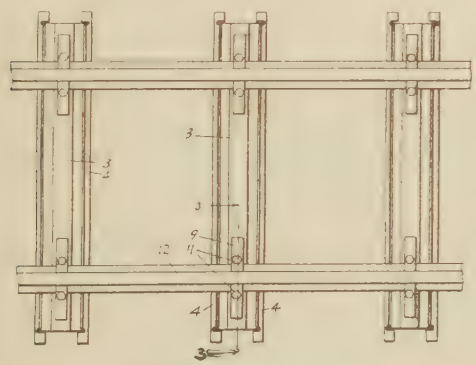


on the fixed pin of the other segment and operating to draw the movable segments into alignment and also to distend the latter and separate and collapse the segments.

1,415,671. TANNING HIDES AND SKINS. ERNEST WYNDHAM MERRY, Sheffield, England, assignor to Pyrotan Leather Corporation, Wilmington, Del., a Corporation of Delaware. Filed Feb. 11, 1919. Serial No. 276,341. 4 Claims. (Cl. 149—5.)

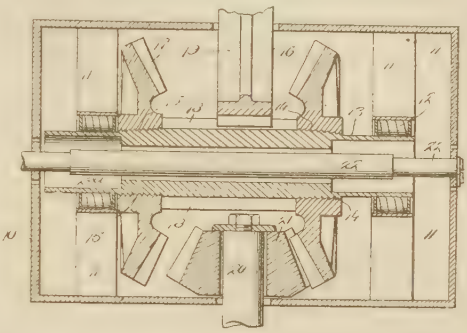
2. A method of combined tannage of hides and skins, to produce heat and moisture resistant leather, which comprises the successive treatment of the hide with solutions including a soluble pyrophosphate and including a chrome liquor, the latter being employed in proportions varying from one to eight per cent of the weight of the hide substance treated.

1,415,672. METALLIC RAILWAY TIE. DUNCAN MILLER, deceased, by Guy A. Ramsdell, administrator, Indianapolis, Ind. Filed Oct. 4, 1921. Serial No. 505,291. 5 Claims. (Cl. 238—60.)



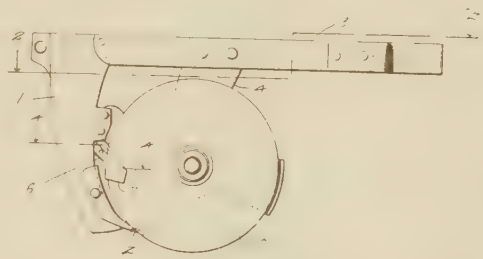
5. In a railway cross tie, the combination of a suitable base, an A-shaped upper portion of sheet metal, a heavy supporting A-shaped plate disposed in the main shell and beneath the rail, clip pieces for engaging the opposite sides of the base of a rail and conformed thereto, and a U-shaped bolt disposed to embrace said heavy support with its upper ends extended upwardly through the top of the shell and retained upon the clip pieces by suitable nuts thereon, coacting as specified.

1,415,673. REVERSE-GEAR STRUCTURE. CLAUD E. MILLS, Des Moines, Iowa. Filed July 8, 1919. Serial No. 309,411. 1 Claim. (Cl. 74—58.)



In a device of the class described, spaced supporting members, a hollow hub slidably and rotatably mounted in said members, said hub having mounted therein spaced bevelled gears, having between said gears teeth, a gear meshing with said teeth, a bevelled gear adapted to mesh with either of said first bevelled gears or to be free from both in different positions of the sliding movement of said hub, said hub having near its ends, enlarged recesses with shoulders at their inner portions, a shaft extended through said hub and projecting therefrom at its ends, and means for supporting said shaft independently of said hub.

1,415,674. HOE DRILL. WILLIAM H. MITCHELL, Sulphur Well, Ky. Filed June 30, 1920. Serial No. 393,141. 1 Claim. (Cl. 97—72.)



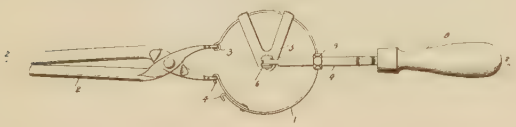
The combination, in an implement of the class described, of beams, a hoe secured to and depending from said beams at their rear ends, a plow point on said hoe, a standard secured intermediate said beams and to said hoe, angularly disposed disks journaled to and on opposite sides of said standard and relatively close to the plow point, said plow point extending intermediate said disks to prevent accumulation of trash, a bracket on said hoe intermediate the point and connection of the standard thereto, and scraper blades extending from said bracket and engaging opposite sides of each disk.

1,415,675. AUTOMOBILE RIM. THOMAS MOHN and ALBERT MOHN, Red Wing, Minn. Filed Nov. 5, 1920. Serial No. 421,962. 2 Claims. (Cl. 301—33.)

1. A tire rim comprising a rim body having separable ends, a tongue secured to the rim body at one of said

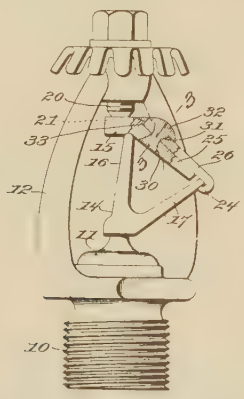
ends, a locking plate hinged to the rim body adjacent the other end and to the tongue, and an extension formed on one side edge of the plate and of a thickness corresponding to the thickness of said plate to permit the latter to rest evenly on the felly of a wheel and adapted to be engaged by a tool to swing the locking plate for expanding and contracting the rim body.

1,415,676. CAN OPENER. CHAILLIE E. MORGAN, Rockville, Ind. Filed Apr. 27, 1921. Serial No. 464,847. 1 Claim. (Cl. 30—3.)



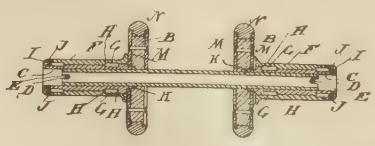
A device of the character specified comprising a can holder including a clamping band, and pivoted members engaging opposite ends of said band, a bracket secured to an end portion of said band, a post pivotally mounted upon the inner end of the bracket, and an arm pivoted to the post and provided with a cutter adjustable thereon.

1,415,677. SPRINKLER HEAD. ADELBERT F. MOWRY, Worcester, Mass. Filed Aug. 11, 1919. Serial No. 316,577. 4 Claims. (Cl. 169—39.)



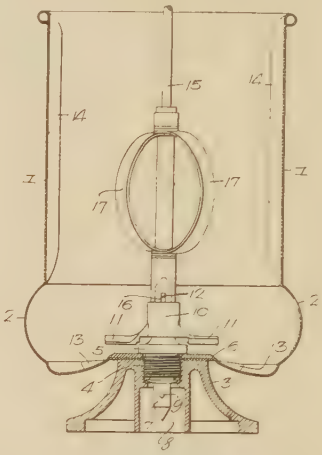
1. An automatic sprinkler head having, in combination, a nozzle having a frame, a cap adapted to close the nozzle, a two-member heat responsive device interposed between the cap and frame consisting of a triangular structure, two legs of the triangular structure being formed by a V-shaped two armed member and the third leg by a single member cooperating with the ends of the arms of said two armed member, said heat responsive device having provision whereby one leg of the triangular structure is subjected to a direct tensile stress in the direction of its length, and a fusible joint in said leg.

1,415,678. STRIPPING REEL. OWEN MOYNIHAN, Cleveland, Ohio. Filed Apr. 14, 1920. Serial No. 373,717. 3 Claims. (Cl. 242—77.)



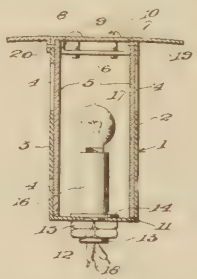
1. In a reel for the purpose described, a spindle, spaced discs mounted thereon and revolvable therewith, said discs provided with friction margins, a sleeve detachably secured to said spindle at each end, and outer sleeves adapted to be held by the hands, said spindle and inner sleeves rotatable within said outer sleeves.

1,415,679. DRINK-MIXING MACHINE. WILLIAM M. MURPHY, Glenside, Pa. Filed Jan. 8, 1921. Serial No. 435,846. 10 Claims. (Cl. 251—107.)



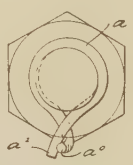
1. The combination in a mixing device of a bowl; a base therefor having a threaded opening; a threaded sleeve formed to fit the opening of the base and clamp the bowl thereto; and a liquid propeller rotatably mounted on the sleeve.

1,415,680. ILLUMINATED PENNANT. THOMAS J. NAVINS, Ottawa, Ill. Filed Apr. 9, 1921. Serial No. 459,841. 5 Claims. (Cl. 40—133.)



1. In a device as set forth a casing provided with suitable indicia cut in one side, a translucent panel within said casing against said side, brace arms within said casing and extending thereacross, said brace arms having angular portions for engaging said translucent panel and clamping it in position.

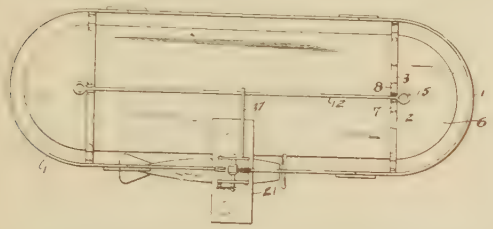
1,415,681. DEVICE FOR LOCKING NUTS AND THE LIKE. OSWALD NETTLEFOLD, London, England. Filed Jan. 12, 1921. Serial No. 436,756. 2 Claims. (Cl. 151—30.)



1. A device for locking nuts or the like, consisting of a metal band adapted to seat itself in the grooves of the

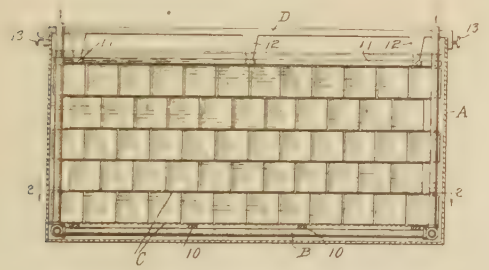
screw thread of the bolt or stud to which the nut or the like is applied and having its ends shaped to interlock with each other in the lock-fast position with the band closely engaging and cross-threading the thread of the bolt.

1,415,682. TOY. HERMAN NORDMARK, Chicago, Ill., assignor of one-half to Thomas J. Johnson, Chicago, Ill. Filed Apr. 20, 1920. Serial No. 375,351. Renewed Oct. 24, 1921. Serial No. 510,101. 5 Claims. (Cl. 104—23.)



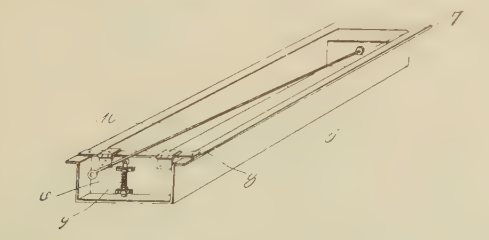
1. In an electric toy, an elevated track having substantially parallel elongated portions, the ends of which are connected by curved portions, a carriage movable upon said track, a toy figure suspended from said carriage, a driving motor on the carriage, an electric conductor arranged between and occupying a position substantially parallel with the parallel portions of the track and a member projecting from the carriage and adapted to contact with said conductor.

1,415,683. PROCESS OF TREATING SEPARATORS FOR STORAGE BATTERIES. HORACE W. NORDYKE, Indianapolis, Ind., assignor to Indianapolis Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Apr. 26, 1921. Serial No. 464,607. 8 Claims. (Cl. 204—29.)



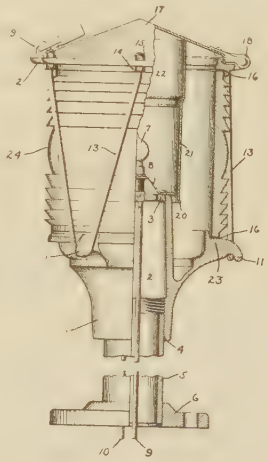
2. In the manufacture of wood separators for storage batteries, the process of removing from the wood pore obstructing substances by subjecting the wood to boiling in a solution of a salt of sulphuric or sulphurous acid and vaporizing off the volatile substances by passing live steam through the solution, substantially as set forth.

1,415,684. GRAIN-SAVING DEVICE. ADOLPH G. NORSKOG, Miles City, Mont. Filed Feb. 18, 1921. Serial No. 445,955. 1 Claim. (Cl. 56—207.)



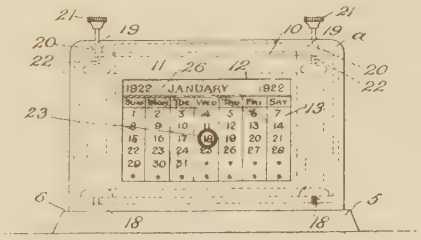
A grain saving device comprising an open topped trough or receptacle located between the platform conveyor and binder elevator of a grain binder, a bar extending over the rear end of the receptacle, a door for closing the rear end of the receptacle hinged to the bar, a fastening means for the door, and a scraper having a head corresponding in size and shape to the interior of the receptacle, located in the receptacle.

1,415,685. NAVIGATION LIGHT. JAMES A. O'NEIL, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 22, 1921. Serial No. 463,604. 2 Claims. (Cl. 240—11.)



1. An electric lighting unit comprising a tubular base member having an external circular flange formed with ears, an electric lamp supported by said base member, a cylindrical lens mounted on said flange, a ring carrying a hinged cover supported by the lens, and V-shaped members engaging said ears removably secured at their free ends to said ring.

1,415,686. CALENDAR. LEO OPPENHEIM, New York, N. Y. Filed Feb. 2, 1922. Serial No. 533,587. 1 Claim. (Cl. 40—117.)

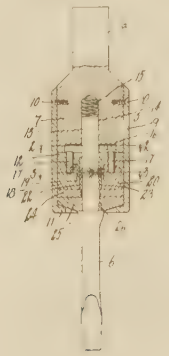


In a calendar, the combination of a casing having an opening in the front side thereof, a month sheet removably mounted within the casing and visible through the opening and a movable indicating web mounted within the casing and arranged over the visible surface of the month sheet, said web provided with a series of circles arranged in echelon in order that dates on the month sheet may be successively indicated when the web is moved.

1,415,687. SCREW-DRIVER CHUCK FOR DRILL PRESSES. MAGNAR ORO, Roxbury, Mass. Filed Jan. 3, 1921. Serial No. 434,688. 9 Claims. (Cl. 144—32.)

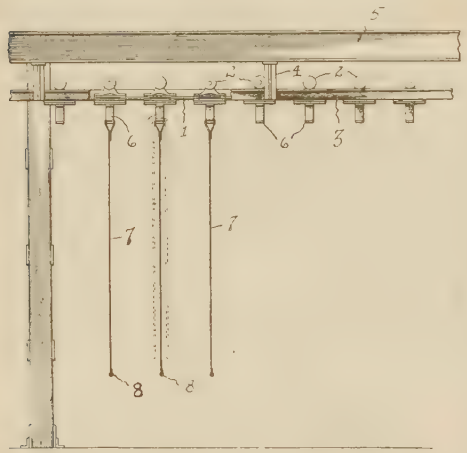
1. A chuck having, in combination, a rotatable body portion adapted to receive a tool, a sleeve attached to said body portion and co-operating therewith to form a

chamber, a pair of clamping jaws located within said chamber normally disconnected from said body portion



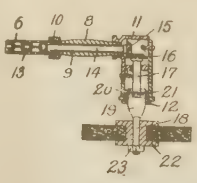
and free to rotate independently thereof and frictionally engaging said tool and means to rotate said jaws in unison with said body portion and thereby rotate said tool.

1,415,688. CONVEYER. MAX. H. PADE, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 6, 1920. Serial No. 422,296. 6 Claims. (Cl. 198—177.)



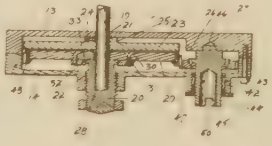
1. A conveyer for the uses and purposes set forth, comprising a moving conveyer element, a support on said conveyer element from which material may be suspended and a separator connected with the support to prevent contact of the material.

1,415,689. SHOE-SHINING MACHINE. JOSEPH ARTHUR PARENT, Montreal, Quebec, Canada. Filed Feb. 14, 1921. Serial No. 444,816. 2 Claims. (Cl. 15—93.)



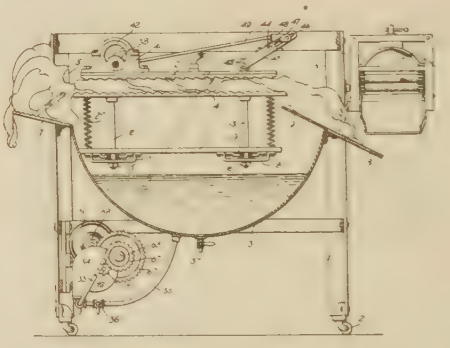
1. In a brushing machine, the combination of a portable casing having a handle rigidly secured to it for moving it about; a shaft section journaled within said casing; driving means connected to one end of said shaft section; a bushing in said casing; a second shaft section disposed within the casing in alinement with the first section and having an enlargement which fits in said bushing and is provided with a pair of spaced lugs between which the other end of said first section is interposed, the second section projecting outwardly of said casing; a pin passing through said lugs and the interposed end of the first section to connect the two sections together; and a brush carried by the projecting end of the second section.

1,415,690. MOTION-TRANSMISSION DEVICE. MILTON L. PARRET, Marshalltown, Iowa. Filed July 23, 1920. Serial No. 398,601. 3 Claims. (Cl. 192—66.)



1. In a device of the class described, a casing member, a shaft mounted therein, a disc fixed on said shaft, a second casing member secured to said first casing member, a short shaft mounted in the second casing member and journalled also in the first casing member, a gear between the casing members mounted on said second shaft, a plug mounted in the second casing member having an opening in its inner end receiving said first shaft, a disc loosely mounted on said first shaft and rotatably mounted on said plug, said plug having a screw-threaded connection with the second casing member, an adjusting arm on said plug, said second disc having teeth meshing with said gear.

1,415,691. WASHING MACHINE. SYLVESTER PATT, Willoughby, Ohio. Filed May 13, 1921. Serial No. 469,241. 3 Claims. (Cl. 68—20.)

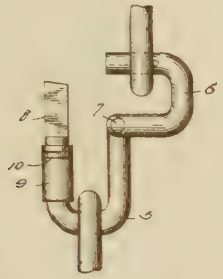


1. In a washing machine of the character described a casing, a pair of washboards arranged in said casing and adapted to co-act for washing clothes, resilient means for resiliently supporting one of said washboards in a given position, a plurality of rods for guiding said last mentioned washboard in a reciprocatory movement with and against said resilient means, means for guiding said rods, means for supplying a washing fluid to the clothes between said washboards, and means for moving said upper washboard downwardly toward the lower washboard, said means also moving the upper washboard longitudinally as it is lowered.

1,415,692. DETACHABLE LINK. JOSEPH PAVONI, Sioux City, Iowa. Filed Aug. 9, 1921. Serial No. 490,909. 1 Claim. (Cl. 24—241.)

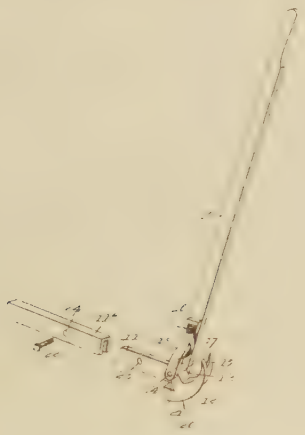
A detachable coupling comprising a pair of U-shaped sections having their adjacent ends pivotally connected together and their free ends cut away and adapted to be arranged in overlapping relation, a locking sleeve slidable

and rotatable on one of the sections and adapted to embrace the cut away ends, the locking sleeve being pro-



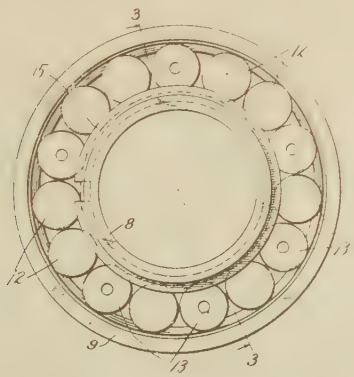
vided with a bayonet slot, and a pin carried by the other section adapted to be engaged in the bayonet slot whereby to hold the sleeve in operative position.

1,415,693. BOARD-PULLING TOOL. JOHN M. PEDERSON, Nome, N. Dak. Filed May 23, 1921. Serial No. 471,540. 6 Claims. (Cl. 254—131.)



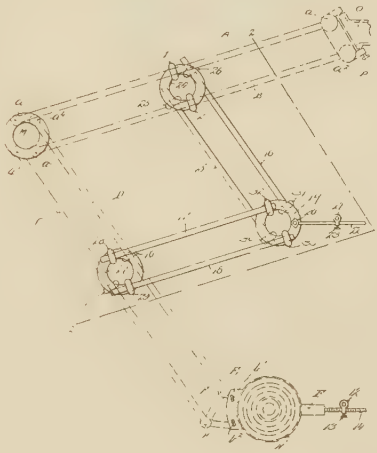
1. A tool for the purpose indicated having a lever forming at one end a handle and provided at the other end with a transversely extending bearing foot, and a claw head pivotally mounted for swinging movement upon the lever adjacent to the angle between the body portion thereof and said foot.

1,415,694. ROLLER BEARING. EDWIN A. PERKINS, Jamaica, N. Y. Filed Aug. 12, 1918. Serial No. 249,402. 9 Claims. (Cl. 64—61.)



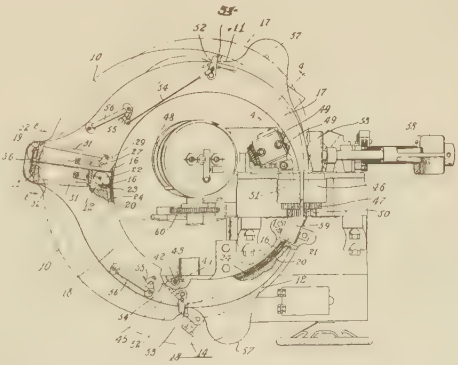
2. In a roller bearing an inner ring having substantially cylindrical external bearing surfaces and an external flange having bearing surfaces, an outer ring having substantially cylindrical internal bearing surfaces and an internal flange having bearing surfaces, roller members having substantially cylindrical bearing surfaces and recesses having bearing surfaces adapted to bear on either side of said flanges together with means for holding said rollers in proper circumferential position consisting of roller lubricating members adapted to bear at one end on said flanges and at the other end on a split retaining ring secured in position at each end of the bearing.

1,415,695. PANTOGRAPHIC APPARATUS FOR ATTACHING TO UNIVERSAL DRAFTING MACHINES. WAYNE A. PERKINS, Hawthorne, Nev. Filed Apr. 30, 1920. Serial No. 377,871. 3 Claims. (Cl. 33—25.)



1. An attachment for a drafting machine having pivotally connected arms, comprising two arms pivotally connected to each other and having their free ends adapted to be pivotally secured to the arms of said machine, and means for securing a marking instrument to the pivotal connection between said arms, substantially as described.

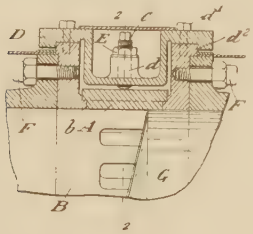
1,415,696. GROMMET-WINDING MACHINE. ROBERT C. PIERCE, Tallmadge, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 7, 1921. Serial No. 520,522. 16 Claims. (Cl. 117—5.)



1. In a machine of the character specified, the combination of a form for giving wire an annular shape, means

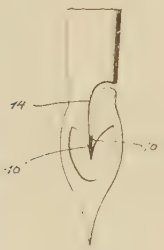
for feeding wire into said form, and mechanism timed with the wire-feeding means for automatically varying the effective diameter of said form.

1,415,697. CYLINDERS OF UNIFLOW STEAM ENGINES. HENRY PILLING, Chorlton-cum-Hardy, England. Filed July 8, 1918. Serial No. 243,905. 4 Claims. (Cl. 121—125.)



1. In a steam engine of the uniflow type, a working cylinder having a central exhaust belt having an aperture therein, a seating on the walls of said aperture, a removable closure for said aperture adapted to rest on said seating, a cover external to said closure making a steam tight joint with the cylinder, and means associated with the cover for securing the removable closure on the seating.

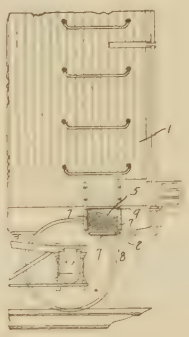
1,415,698. NEEDLE. GUIDO PITONI, Rochester, N. Y. Filed May 29, 1920. Serial No. 385,252. 1 Claim. (Cl. 112—224.)



A device of the class described comprising a pointed shank provided with an eye and having a curved tapering slot formed therein and communicating with said eye, a pair of converging pointed members extending into said eye upon opposite sides of said slot, and a plurality of spaced opposed spring fingers extending from the inner converging walls of said pointed members.

1,415,699. CAR STEP. CHARLES E. PORTER, Neville Township, Allegheny County, Pa. Filed Oct. 22, 1921. Serial No. 509,456. 3 Claims. (Cl. 228—49.)

1. As a new article of manufacture, a step of the character described, including a platform, upstanding triangular guard plates at the sides of the platform, an inclined guard plate connected to the upper edges of the triangular

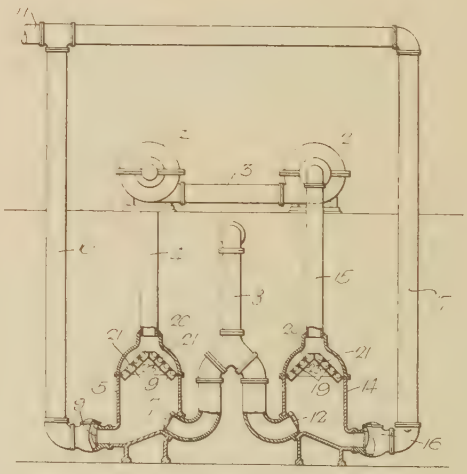


members and the rear edge of the platform, and means at the forward edges of the triangular guard plates and platform engageable with a support.

1,415,700. PROCESS FOR THE MANUFACTURE OF 1-ALLYL-3.7-DIMETHYLXANTHINE. ERNST PREISWERK, Basel, Switzerland, assignor to The Hoffmann-La Roche Chemical Works, New York, N. Y., a Corporation of New York. Filed June 9, 1921. Serial No. 476,308. 2 Claims. (Cl. 260—34.)

1. The process for the manufacture of 1-allyl-3.7-dimethylxanthine which consists in allowing allyl bromide to act upon an alkali compound of 3.7-dimethylxanthine at temperatures below 100° C. without application of pressure.

1,415,701. PUMPING SYSTEM. ALBERT PRIESTMAN, Philadelphia, Pa. Filed Feb. 17, 1922. Serial No. 537,271. 4 Claims. (Cl. 103—79.)



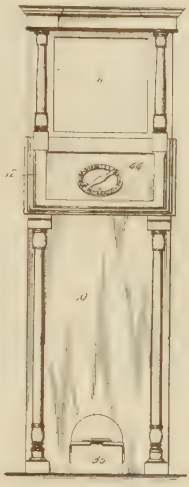
3. The combination in a pumping system of a reversible pumping apparatus; two screen casings connected between said apparatus and a source of supply of solid-carrying liquid; discharge conduits connected to said screen casings; and screens in said casings formed to provide relatively larger openings for the passage of material away from the pumping apparatus than are provided for the passage of liquid to the said apparatus.

1,415,702. SHAFT ATTACHMENT. George Gerard Purcell, Brooklyn, N. Y. Filed Mar. 1, 1921. Serial No. 448,931. 5 Claims. (Cl. 193—32.)

1. A shaft attachment including in combination with a shaft, of a plurality of partitions secured within said shaft and normally extending across and within the same, and means for simultaneously moving said partitions.

1,415,703. DIRECTORY CABINET. Stephen A. D. Puter, Berkeley, Calif., and Alois F. Eltscher, New York, N. Y., assignors, by direct and mesne assignments, to The Classified Automatic Directory Company, a Corporation of Delaware. Filed Apr. 3, 1919. Serial No. 287,148. 8 Claims. (Cl. 40—28.)

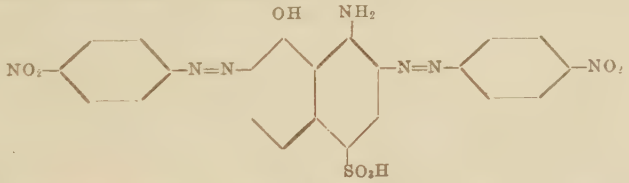
1. In a directory cabinet, a plurality of cards, a rotatable selecting means, means for communicating motion from said rotatable means to the cards to select and bring any one of said cards opposite a predetermined point, a foot operative means for detaching and displaying the selected card, a locking means operable upon operation of said foot operative means to lock the selecting means against movement, said locking means being



released when the foot operative means is released, and a second locking means operable to retain the selecting means locked until the first-locking foot operative means are fully released and returned to normal position.

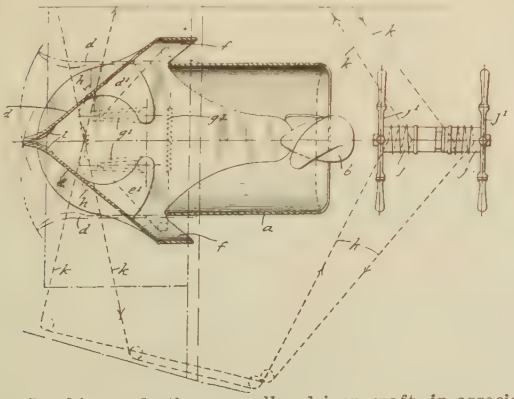
1,415,704. PRODUCTION OF DISAZO DYE. Walter M. Ralph and Lawrence H. Flett, Buffalo, N. Y., assignors to National Aniline & Chemical Company, New York, N. Y., a Corporation of New York. Filed Jan. 3, 1920. Serial No. 349,277. 6 Claims. (Cl. 260—84.)

6. The method of producing a disazo dyestuff which comprises subjecting a dyestuff of the following composition



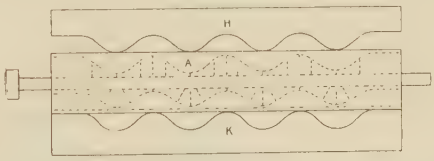
to reduction in alkaline solution by means of sodium disulfide to reduce the two nitro groups to amino groups and isolating the resulting dyestuff by the addition of sodium bisulfite and dilute hydrochloric acid.

1,415,705. APPARATUS FOR MANEUVERING SHIPS AND AIRCRAFT. Edmund Scott Gustave Rees, Wolverhampton, England. Filed Nov. 2, 1920. Serial No. 421,363. 7 Claims. (Cl. 114—145.)



1. In ships and other propeller driven craft, in association with the propeller an augmenter tube of circular section at its forward end and of rectangular section and greater area at its rear end.

1,415,706. METHODS AND MEANS FOR BLOCKING OR CORRUGATING HEADERS FOR STEAM BOILERS. Rees Rees, Kapunda, South Australia, Australia. Filed Sept. 2, 1921. Serial No. 498,062. 3 Claims. (Cl. 153—73.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

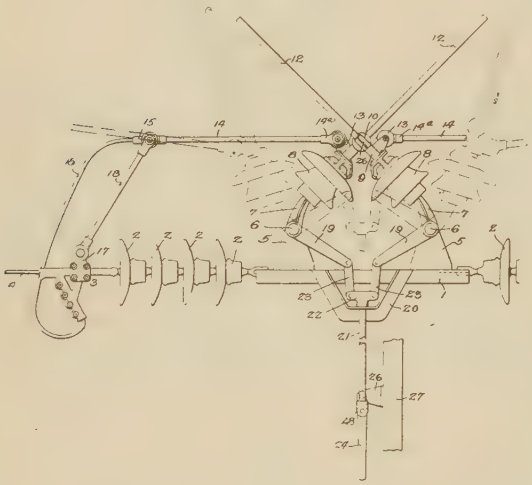


2. Means for blocking or corrugating a header for a steam boiler, comprising top and bottom dies, and a core formed of a number of suitably shaped blocks, and an intermediate frictionally held draw-bar, the blocks being arranged on opposite sides of the draw-bar in two longitudinal rows on each side, the blocks of the rows on one side being separate and independent of and spaced from the blocks of the rows on the other side, the abutting faces of the blocks of the rows being inclined, whereby when the tube has been pressed to shape the draw-bar can be readily removed and the blocks shaken from the tube.

1,415,707. ROLLER-BAR TIP FOR SPINNING MACHINES. LESTER B. REID, Gaffney, S. C. Filed Aug. 16, 1921. Serial No. 492,649. 6 Claims. (Cl. 19—134.)

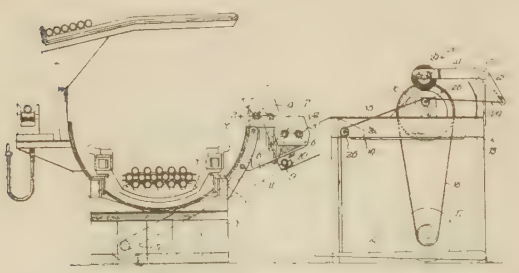
1. A roller bar tip for spinning machines having spaced heads forming guides for the terminals of the bearing rollers, the space between the heads being open between the ends of the rollers and one of the heads having stop shoulders for limiting the endwise movements of the rollers.

1,415,708. HIGH-VOLTAGE AIR-BREAK SWITCH. ROBERT RENKE, Philadelphia, Pa., assignor to Lewis and Roth Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 25, 1919. Serial No. 306,629. 11 Claims. (Cl. 200—48.)



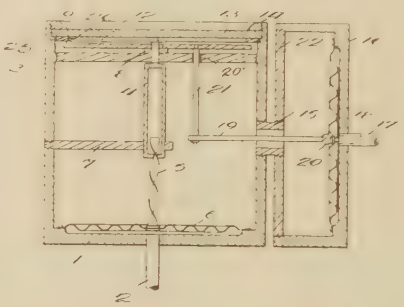
4. The combination in a high voltage switch of two movably supported cooperative contacts; horns respectively associated with said contacts and positioned to maintain an arc gap of constant length as the contacts are separated until the extremities of the horns have been brought immediately adjacent each other and thereafter move said extremities apart; with means for operating the switch.

1,415,709. APPARATUS FOR UNWRAPPING INNER TUBES. LEWIS C. RIBLETT, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 8, 1919. Serial No. 295,772. 2 Claims. (Cl. 242—7.)



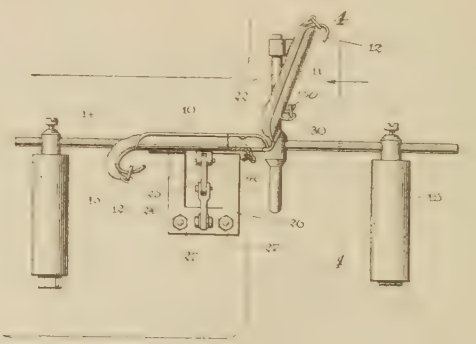
1. Apparatus for unwinding and then coiling the protective winding of inner tubes, comprising means for rotatably supporting at its ends the mandrel of an inner tube with its protective wrapping thereon, a positively driven unwinding roll mounted in substantially parallelism with the position of the mandrel, and means for forming the wrapping into a coil as it leaves the unwinding roll, said means including a positively driven roll for frictional engagement by the wrapping strip, and a rotatable spool upon which the wrapping is to be coiled said spool being in frictional driving relation with the driven roll and mounted for movement into and out of operative relation with the said roll.

1,415,710. PRESSURE GAUGE. WILLY RICHTER, Olmsted, Ill. Filed Feb. 14, 1919. Serial No. 277,015. 9 Claims. (Cl. 73—54.)



1. A pressure gauge for liquid containing tanks including a casing having a plurality of pressure inlet means, a dial having different sets of graduations in said casing, independent indicating means cooperating with the dial, motion transmitting means operable by the pressure introduced by said inlet means, one of said indicating means cooperating with graduations on the dial indicating the atmospherical pressure under which the means of pressure is placed, and the other indicating means cooperating with graduations corresponding and readable in conjunction with the first graduations for indicating the quantity of liquid in the tank.

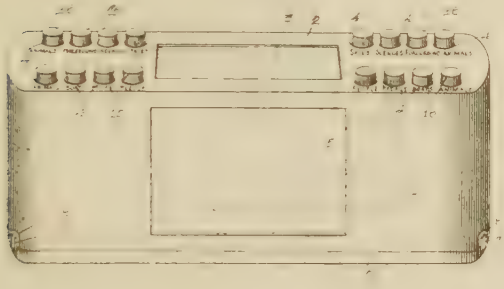
1,415,711. SEAT. HIRAM S. ROBERTS, Albany, Ala. Filed Apr. 27, 1921. Serial No. 464,841. 13 Claims. (Cl. 155—51.)



1. A vehicle seat of the kind described, comprising a pair of spaced cylinders secured to the vehicle, piston rods slidable through the lower heads of said cylinders, pistons secured to the upper ends of said rods, springs surrounding said piston rods in said cylinders, nuts screwed on the outer ends of said piston rods, said pistons having upper extensions provided with transverse apertures, a rod passing through said apertures, a second rod slidably mounted on said first mentioned rod and having a lower right-angled extension adapted to abut a relatively stationary part of the vehicle, a seat portion formed of sheet metal and having a pair of sleeves formed

on its outer edge surrounding said first mentioned rod, a U-shaped frame of sheet metal pivoted on said first mentioned rod between said sleeves, a knuckle-jointed brace rod having its upper member pivoted to the under side of said seat near the outer edge thereof and having its lower member pivoted to the lower part of said frame, bolts slidably mounted in the lower part of said frame and having outer heads adapted to slidably engage a relatively stationary part of the vehicle, springs surrounding said bolts between the outer heads thereof and said frame, nuts on the inner ends of said bolts, a back pivoted to the upper portion of said second rod, said seat having an upwardly and rearwardly projecting lip adapted to engage the lower edge of said back to hold the latter in operative position.

1,415,712. PICTURE CONSTRUCTOR. PIERRE A. RONTEY and ROBERT TAYLOR, Coscob, Conn. Filed Oct. 20, 1920. Serial No. 418,257. 9 Claims. (Cl. 46—40.)



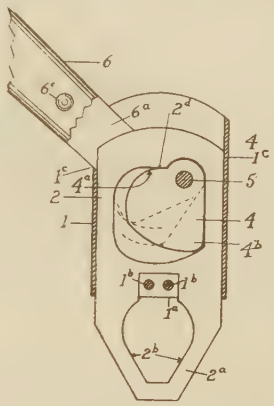
1. A picture constructor, comprising a series of movable aligned strips, each strip independently movable in both directions and having transparent portions and opaque illustrations thereon adapted to register with the illustrations of the other strips to form a picture.

1,415,713. LAUNDRY TAG. MORRIS G. ROSENTHAL, Cincinnati, Ohio, assignor of one-half to Fred E. Klein, Cincinnati, Ohio. Filed Dec. 31, 1921. Serial No. 526,171. 3 Claims. (Cl. 40—2.)

3. In a laundry tag comprising a strip of stiff material provided with a means of suspension, and a strip of soft, flexible material to which the stiff strip is permanently attached, the soft strip adapted to be detachably secured by sewing to the goods to be identified.

1,415,714. WRENCH. JAMES WEBB SAFFOLD, Cleveland, Ohio. Filed May 10, 1921. Serial No. 468,206. 10 Claims. (Cl. 81—126.)

1. In a wrench, a guide head, a slide having a nut engaging portion longitudinally movable in said head and provided with a median cam receiving bearing portion, a cam pivoted on said head and operable against said

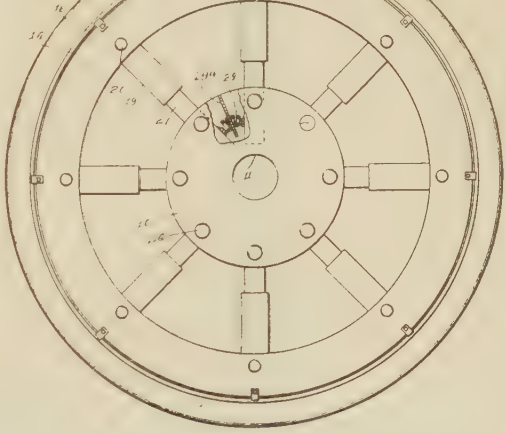


cam bearing portion of said slide, and a handle for operating said cam.

1,415,715. PROCESS FOR MAKING ICE-CREAM MIX. ANTHONY R. SANNA, Chevy Chase, Md., assignor to George P. Sacks, Bradley Hills, Md. Filed Nov. 15, 1921. Serial No. 515,338. 5 Claims. (Cl. 99—11.)

1. The process of making ice cream mix, consisting in treating the milk to separate the casein particles and enlarge the same to substantially a state of initial agglomeration, and thereafter subjecting the treated milk to a homogenizing action to arrest further agglomeration.

1,415,716. SPRING WHEEL. PAUL M. SCHNECKENBURGER, Wolcott, Ind. Filed Aug. 23, 1920. Serial No. 405,267. 3 Claims. (Cl. 152—47.)

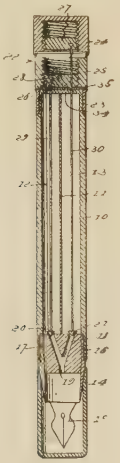


1. A spring wheel comprising a hub portion, a felly carrying a rim, telescopic spoke members enclosing springs and pivotally connected with the felly and with the hub member, said pivot point being spaced from the ends of the spokes, springs engaging the outer ends of the spokes whereby to oppose circumferential movement, partition plates in the hub member between the successive spokes, and coil springs engaging the inner ends of the spokes and said partition plates for assisting in opposing circumferential movement of the spokes.

1,415,717. PORTABLE FIRE EXTINGUISHER. GUSTAV SCHWORETZKY, Eplingen-on-the-Neckar, Germany. Filed Dec. 20, 1921. Serial No. 523,703. 3 Claims. (Cl. 169—31.)

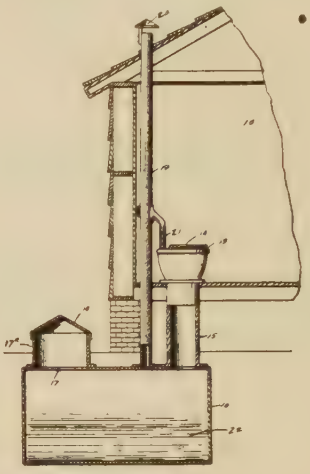
1. In a portable fire extinguisher, a shell containing the extinguisher liquid, end plates secured to said shell, one of said end plates being formed with a charging opening, a hollow stay bolt inserted through said charging opening for connecting said end plates, means on said stay bolt for sealing said charging opening, said bolt being adapted to confine the pressure medium until the device is operated, and a discharge pipe for the extinguishing liquid.

1,415,718. FOUNTAIN PEN. FLORENTINO E. SHARAH Y CANTOS, Tacloban, P. I. Filed Oct. 3, 1921. Serial No. 505,073. 5 Claims. (Cl. 120—42.)



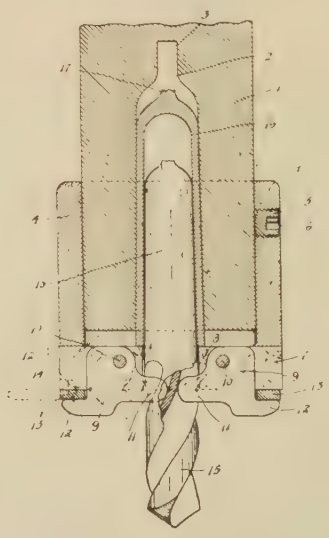
5. A fountain pen having a compartmental barrel or stock fitted at one end with a removable pen point carrying a tip having ink conveying canals respectively in communication with the compartments of the barrel and fitted at the other end with a head having independently revoluble internally threaded sleeves, valves for respectively closing said canals, followers mounted in and having threaded connection respectively with said sleeves and having connection respectively with the stems of said valves, and means for independently locking said sleeves against rotation, said barrel being provided at its upper end with a closure disk through which the stems of the valve extend, and an absorbent packing disk disposed upon said closure disk and held in place by said head.

1,415,719. SANITARY CLOSET. BENJAMIN B. SHOLLENBERGER, Marshalltown, Iowa. Filed July 5, 1918. Serial No. 243,358. 1 Claim. (Cl. 4—21.)



In a sanitary closet, the combination with a room, of a toilet bowl therein, having a seat and hinged cover, a tank below said bowl, a relatively large tubular conducting member between said bowl and said tank, a primary vent pipe leading from the upper portion of said tank upwardly through said room, immediately back of the bowl and adjacent to it, and a comparatively small by-pass or secondary vent pipe connecting the upper rear interior of said bowl at the point nearest said primary vent pipe, with said primary vent pipe at an angle of substantially forty-five degrees.

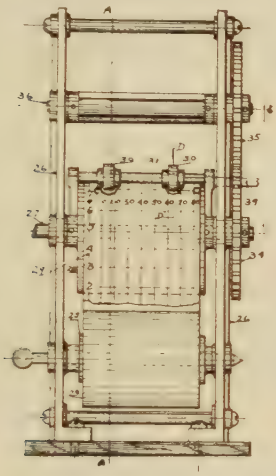
1,415,720. DRILL CHUCK. FRANK C. SHORE, Minneapolis, Minn., assignor of one-half to George B. Arones, Minneapolis, Minn. Filed Oct. 13, 1920. Serial No. 416,611. 3 Claims. (Cl. 279—35.)



1. A drill chuck having in combination a cylindrical member adapted to be adjustably mounted on the arbor

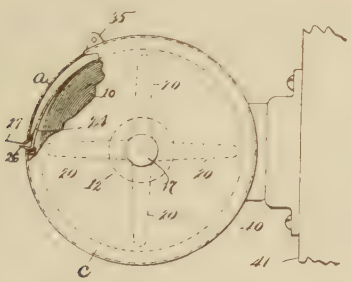
of a drill press, oppositely disposed pivoted lugs carried by the lower end of said member and adapted to swing in a vertical plane, projections on said lugs for engaging in opposite grooves of the drill and pivoted swinging wing members carried by the lower end of said member adapted to hold said lugs in engaging position.

1,415,721. STRIP-FEED DEVICE. SAMUEL R. SHOUP, Weehawken, N. J. Filed Apr. 10, 1918. Serial No. 227,759. 8 Claims. (Cl. 273.)



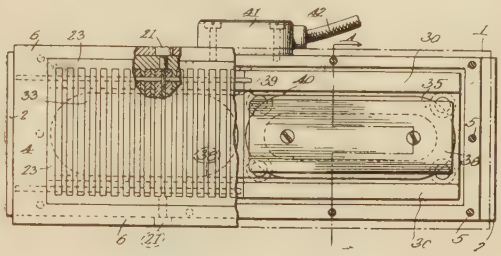
1. In a device of the type described a rotatable cylinder, a strip having punched holes therein adapted to pass thereover, a grip wheel adapted to register the punched holes in said strip together with a segmental grip wheel adapted to grip and advance the strip intermittently.

1,415,722. CONTAINER FOR FIBROUS MATERIAL. MORTIMER SILVERMAN, Boston, Mass. Filed Feb. 14, 1919. Serial No. 276,964. 4 Claims. (Cl. 211—33.)



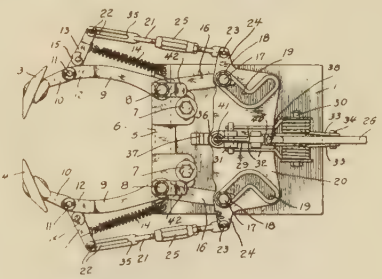
1. A device of the character described, comprising a casing normally open at one side for the insertion therein of a roll of fibrous material and provided with a slot in its circumference through which the outer layer is extended, a cover to close said open side, a rotatable device within said casing upon which said roll is mounted to turn therewith, a guide for the fibrous material located in said casing and co-operating with said slot to guide the outer layer of the paper thereto, a knife attached to said guide and extended from within the casing through said slot, and means co-operating with said rotatable device for rotating said roll from outside of said casing.

1,415,723. BIPOLAR MAGNETIC CHUCK. FRANK L. SIMMONS, Woonsocket, R. I., assignor to The Taft-Peirce Manufacturing Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed Sept. 11, 1917. Serial No. 190,698. 17 Claims. (Cl. 175—367.)



15. A magnetic chuck comprising a shell, magnetizing means supported on the bottom of said shell and insulated therefrom, a frame superposed on said shell, and pole pieces carried by and insulated from said frame, and adapted to be energized by said magnetizing means.

1,415,724. TIRE-BUILDING APPARATUS. CHERI M. SLOMAN, Detroit, Mich. Filed June 7, 1919. Serial No. 302,541. 16 Claims. (Cl. 154—10.)



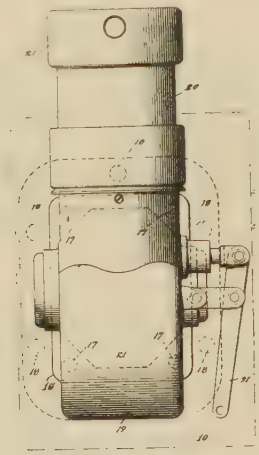
7. In a tire building machine, in combination, stitching devices, a reciprocable carriage for said stitching devices, pivotally connected levers for sustaining each of said stitching devices and supported by said carriage, a rectilinearly movable member for differentially moving said levers, and manual means for shifting said member relative to said carriage.

1,415,725. TRUCK TIRE PUMP. GREGORY J. SPOHRER, East Orange, N. J. Filed June 21, 1920. Serial No. 390,335. 17 Claims. (Cl. 230—27.)

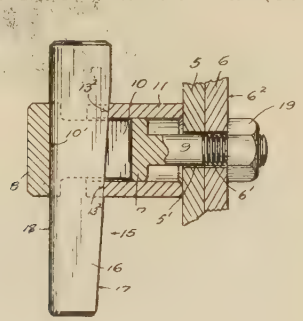
1. In a device of the class described, the combination with a transmission casing provided with a standard opening and with a mounting pad outlining the opening and disposed in a vertical plane, of an air compressor including a mounting member fashioned to fit on said pad and means for securing the compressor to the transmission casing so as to be supported thereby offset laterally outward in relation thereto, the center of mass of said compressor being substantially at the center of figure thereof and positioned within the laterally projected outlines of the pad and relatively close thereto thereby to minimize any tendency of the compressor to turn relative to the mounting pad under the influence of the torque imposed on the compressor by the cantilever effect of the mounting.

11. In a device of the class described, the combination with a transmission casing provided with an opening in a vertical wall thereof and containing a power member,

of an air compressor having a chamber exposed to the opening in the transmission casing thereby to receive lubricant from the casing, said compressor including a piston cylinder which is liable to become highly heated and connected to the part forming the lubricant containing chamber through means which tend to minimize resistance to heat conduction a piston in said piston cylinder and a driving connection between the power member and the piston constituting means for causing the lubricant to circulate through the chamber and transmission casing.



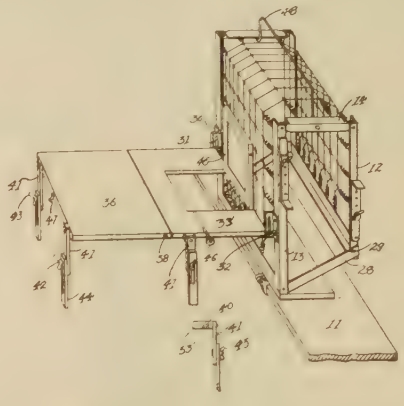
1,415,726. BOLTING-UP DEVICE, JAMES STANMORE and DAVID KENNEDY, Seattle, Wash. Filed July 30, 1919. Serial No. 314,217. 4 Claims. (Cl. 85—1.)



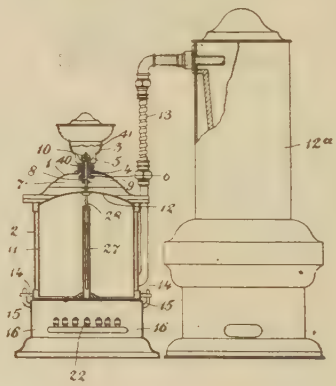
1. A bolting-up device comprising a post member having a body element with a slot extending diametrically therethrough, a screw threaded stud extending axially from said body element, a nut engaging the screw thread of said stud, a sleeve provided at one end with notches having inclined inner faces, and a wedge adapted to be driven through the body slot and the notches of said sleeve to force the latter toward said nut.

1,415,727. FOLDING AUTOMOBILE BED. CLARENCE C. STARR, San Francisco, Calif. Filed Jan. 24, 1921. Serial No. 439,488. 1 Claim. (Cl. 5—72.)

In a combination camping equipment, a folding bed having means at one end to clamp the same to the running board of an automobile and permitting it to assume an inactive folded position and a position set up transversely of the automobile, and a folding table carried under the bed adapted to be set up when the bed is in inactive folded position and folded under the bed when the bed is set up, said table having a hinged panel adapted to assume a vertical position against the bed when the bed is folded and leaving an opening in the table providing a seat and a space for accommodating the legs of a person occupying the seat and with the vertically presented panel serving as a mirror or the like support substantially as and for the purpose described.

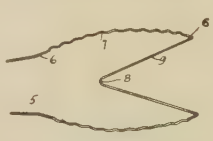


1,415,728. WATER HEATER. VERNON HEYWOOD STOTT and LEE SCHOFIELD, Oldham, England. Filed Aug. 22, 1921. Serial No. 494,331. 15 Claims. (Cl. 53—3.)



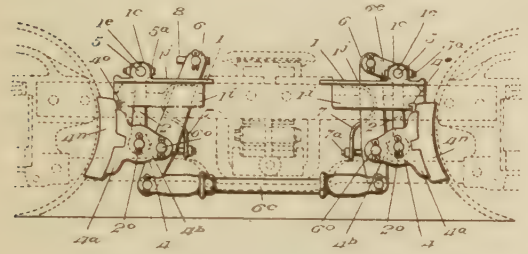
1. A water heater having means for ejecting boiling water therefrom comprising a boiler, a discharge pipe for boiling water, an air and steam escape passage normally open, a valve for closing said passage and means for actuating said valve to close said passage to cause steam pressure generated within said boiler to eject the boiling water therefrom.

1,415,729. HAIR-PUFF DEVICE. IDA WHALEY STRAHAN, Montclair, N. J. Filed June 3, 1921. Serial No. 474,609. 1 Claim. (Cl. 132—54.)



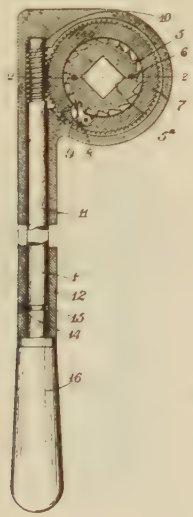
A hair puff device including a body portion presenting a pair of legs having their outer ends extending towards each other, said legs being bowed outwardly and upwardly throughout a part of their length, said body portion being bent at a point substantially intermediate its extremities, and presenting substantially straight side portions, the outer ends of which form continuations of the inner ends of said legs.

1,415,730. CAR BRAKE. JOHN TAYLOR, Albany, N. Y., assignor to Taylor Electric Truck Co., Troy, N. Y., a Corporation of New York. Filed Nov. 15, 1920. Serial No. 424,205. 25 Claims. (Cl. 188—205.)



1. A beamless brake mechanism comprising a slotted gusset bracket attached to the truck frame to the inside of the truck wheel and in line with the periphery thereof; a bifurcated brake hanger swingably suspended from the said gusset bracket in line with the tread of the wheel; a brake head pivoted on the lower end of said hanger in line with the tread of the wheel; a brake lever pivotally connected with said head in line with the tread of the wheel and projecting through the slot in the bracket and operating between the bifurcations of the hanger; and a brake release spring connected with the bracket in line with the tread of the wheel and adjustably connected with the brake head.

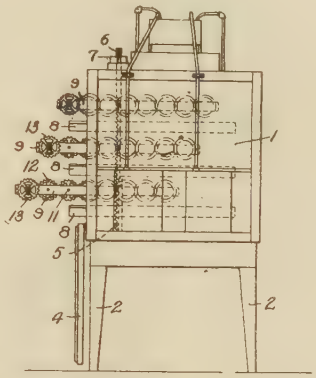
1,415,731. RATCHET WRENCH. MERRILL H. TERRY, Columbus, Ohio. Filed Dec. 31, 1921. Serial No. 526,247. 3 Claims. (Cl. 81—60.)



1. A wrench including, in combination, a ratchet member, a worm-gear ring surrounding the ratchet member and provided with a pawl to engage the ratchet member and a worm engaging the worm-gear ring.

1,415,732. INCUBATOR. ALPHONSE CLÉOPHAS THÉRIAULT, Montreal, Quebec, Canada. Filed Aug. 21, 1920. Serial No. 405,145. 3 Claims. (Cl. 119—44.)

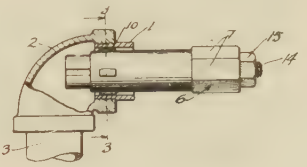
1. In an incubator, the combination of a casing; a plurality of superposed frames slidably mounted therein; a plurality of egg carriers disposed in parallel, longitudinal relation in each frame with their opposite ends journaled in the adjacent side members of the frame; a gear fixed to one journal of each of the carriers in each frame at one side of the casing, all of the gears of the carriers in each frame intermeshing; a gear fixed to the gear-carrying journal of one carrier in each frame, all of the last-named gears being disposed in vertical alinement; a vertical rack movably mounted in the casing and meshing with all of the last-named gears so as to rotate them in unison and thereby rotate all of the carriers in all of the frames simultaneously; and means for operating said rack at will to variable extents and in either direction.



1,415,733. PROCESS OF MAKING AND USING METAL SCAVENGING ALLOY. HERMANN G. C. THOFEHRN, deceased, late of Roselle, N. J., by Donald H. McLean, administrator, Elizabeth, N. J., assignor to Light Metals Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Feb. 2, 1920. Serial No. 355,667. 4 Claims. (Cl. 75—1.)

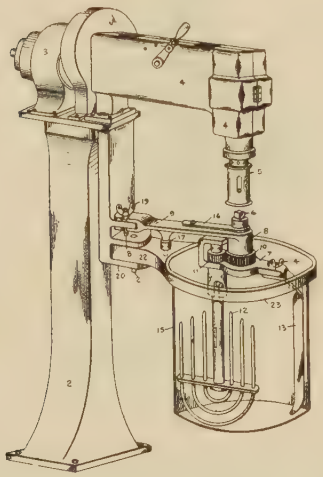
1. The herein described process of obtaining a uranium aluminium alloy, consisting in melting together ferro-uranium and aluminium, separating the molten material from the slag resulting from such process and allowing the molten material to cool.

1,415,734. WRENCH. GEORGE W. THOMAS, Los Angeles, and HARVEY L. SCOTT, Long Beach, Calif. Filed Jan. 26, 1921. Serial No. 440,218. 1 Claim. (Cl. 81—72.)



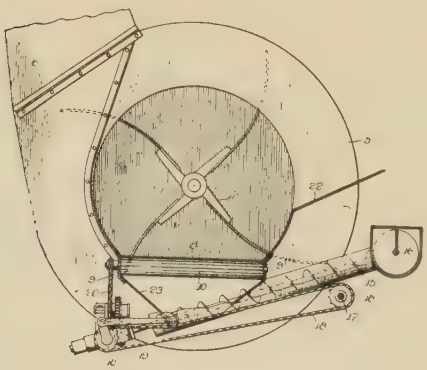
A wrench comprising a hollow member having circumferentially spaced slots formed therein, a rod within and movable longitudinally of the member, said rod having a threaded end and an enlarged end, said enlarged end being formed with circumferentially spaced slots tapering in depth, teeth having blades disposed within said slots and shanks slidably fitted in said lots, and a nut engageable with the threaded end of the rod for moving the latter longitudinally for the purpose described.

1,415,735. FOOD MACHINE. JOSEPHINE TRUST and HENRY TRUST, Park Ridge, N. J., assignors, by mesne assignments, to Meteor Mixing Machine Co., Inc., a Corporation of New York. Filed Sept. 18, 1919. Serial No. 324,596. 1 Claim. (Cl. 259—102.)



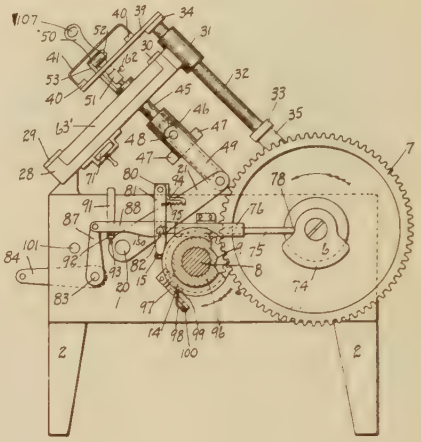
In a machine of the class described having a tool chuck, means for mounting a container to swing laterally of the tool chuck thereof, and in combination therewith means for mounting the tool supporting mechanism to swing laterally therewith.

1,415,736. PNEUMATIC STRAW STACKER. WILLIAM O. VAN DEVENTER, Indianapolis, Ind., assignor to The Indiana Manufacturing Company, Indianapolis, Ind., a Corporation of West Virginia. Filed Mar. 12, 1921. Serial No. 451,670. 6 Claims. (Cl. 130—17.)



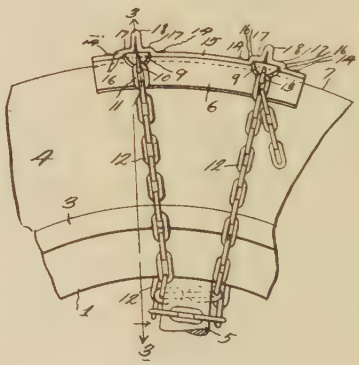
1. In a wind stacker, the combination of a fan casing, a fan therein, a hopper communicating with said casing for conveying material thereinto, a grain trap between said casing and hopper comprising a longitudinally corrugated roll, and means for rotating said roll to convey material towards said fan and for trapping and conveying grain separated from such material.

1,415,737. SHOE-BUTTONING MACHINE. LOUIS J. VAN GUELPEN, Cincinnati, Ohio. Filed Apr. 3, 1918. Serial No. 226,544. 14 Claims. (Cl. 12—1.)



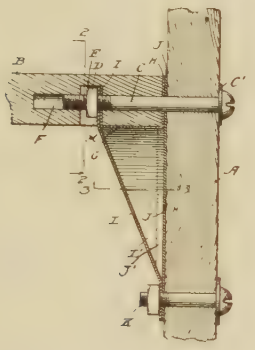
1. In a shoe buttoning machine, initial means for grasping and holding the buttons on the button fly and means for pushing the button hole fly over the buttons to connect with them, said means also releasing the buttons and the buttoned flies from the machine.

1,415,738. ANTISKID ATTACHMENT. FREDERICK T. VERGIN, South Bend, Ind. Filed Feb. 13, 1922. Serial No. 536,294. 4 Claims. (Cl. 152—14.)



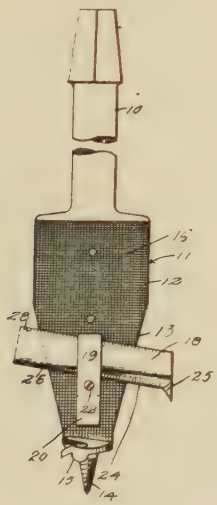
4. An antiskid device for vehicle tires, said device comprising an elongated tire engaging plate, transversely disposed members secured to said plate, means carried by the ends of said transversely disposed members for the reception of securing means, a reinforcing plate secured to the elongated tire engaging plate and arching the transversely disposed members, said reinforcing plate being bent upon itself centrally of the arched portions thereof and forming outwardly extending ground engaging members.

1,415,739. STEPLADDER. CLAUDE M. WAGGONER, Riverside, Calif., assignor of one-half to Isaac B. Potter, Riverside, Calif. Filed May 16, 1921. Serial No. 469,855. 6 Claims. (Cl. 228—58.)



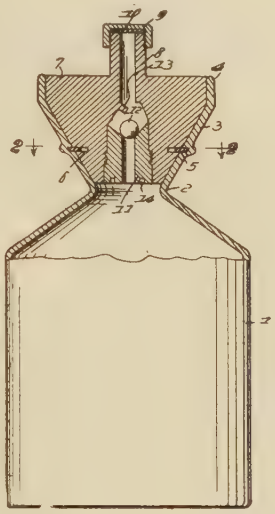
4. The combination with a wood stile and a step abutting the same, of a plane metal brace sheet extending obliquely from the step to the stile, secured to both, and having a flange fitting the angle between the two and perpendicular to the plane of said sheet.

1,415,740. EXPANSION COUNTERBORING BIT FOR WOOD. WILLIE F. WALL, San Francisco, Calif. Filed Oct. 29, 1920. Serial No. 420,456. 7 Claims. (Cl. 145—127.)



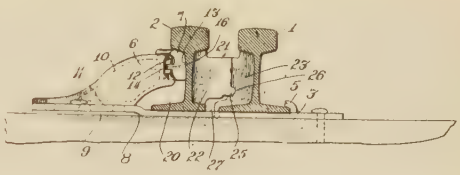
5. A combined expansion and counterboring bit comprising a head having a flat serrated face in alinement with the axis of the bit and having an upper semi-cylindrical portion and a lower semi-conical portion located on the same side of said face, a lead screw and a cutting lip or flange carried by the lower end of said conical portion, a cutter blade provided with serrations, and a cutting blade clamp provided with serrations, and means adapted to secure said clamp in different positions to the flat side of the head.

1,415,741. NONREFILLABLE BOTTLE. WILLIAM P. WALSH, Chicago, Ill. Filed Sept. 8, 1921. Serial No. 499,220. 4 Claims. (Cl. 215—14.)



1. In a device for the purpose indicated, the combination with a receptacle provided with a flaring mouth, of a stopper of a shape corresponding with that of the mouth, and means for irremovably locking the stopper in the mouth, the stopper having a valve controlled discharge opening formed therethrough.

1,415,742. GUARD-RAIL CLAMP. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 4, 1920. Serial No. 408,234. 13 Claims. (Cl. 238—20.)

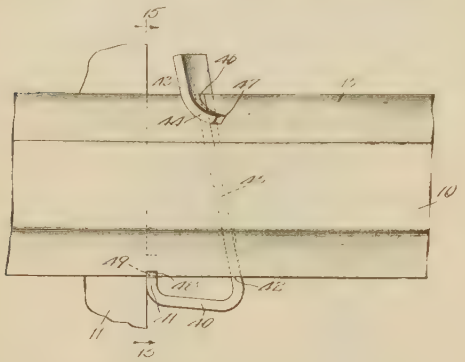


1. A guard rail clamp of the type described comprising in combination a base, a guard rail brace comprising a member rigidly secured to said base and a block adapted to engage a guard rail, said member and block having cooperating engaging faces inclined to the rail engaging face of said block, said block engaging only the upper portion of a guard rail and leaving a space below said block and member to permit the free upward movement of the guard rail.

1,415,743. RAIL ANCHOR. HAROLD G. WARR, Chicago, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed May 8, 1919, Serial No. 295,555. Renewed Mar. 2, 1921. Serial No. 449,077. 38 Claims. (Cl. 238—330.)

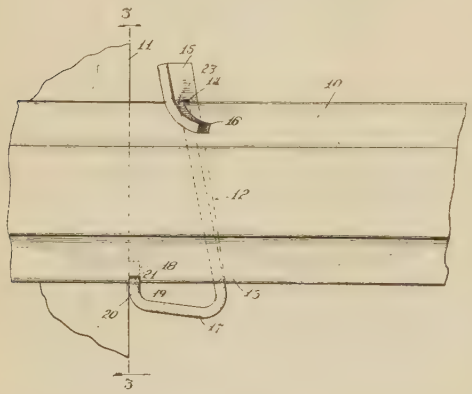
5. A rail anchor comprising a spring metal member provided at one end with a single jaw having a lip bent obliquely to the body portion of said member to engage the upper surface of the rail base and at the other end with a return bent portion terminating in a jaw to engage

the other side of the rail base, said jaws being positioned so that they are forced apart when the anchor is applied



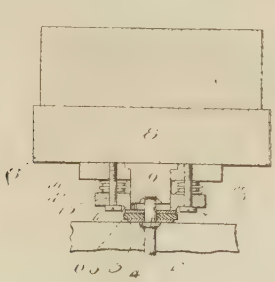
to and in operative position on the rail to create a strain which gives the device a resilient hold on the rail.

1,415,744. RAIL ANCHOR. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 25, 1921. Serial No. 495,387. 11 Claims. (Cl. 238—330.)



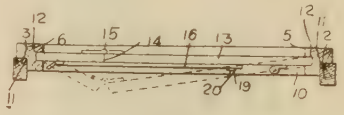
2. A one-piece rail anchor comprising a spring metal member formed at one end with a jaw for engaging one edge of a rail base, at the other end with a return bent portion adapted to abut against a tie and provide a jaw for engaging the other edge of said rail base, and a web portion between said jaws which is normally flat when the anchor is free of the rail and is subjected to a tortional strain when the anchor is applied to a rail.

1,415,745. PROCESS OF MANUFACTURING LAMINATED VALVES. WILLIAM H. WASHBURNE, Chicago, Ill., assignor to Frank S. Shaw, Chicago, Ill. Filed Oct. 4, 1920. Serial No. 414,450. 2 Claims. (Cl. 29—156.7.)



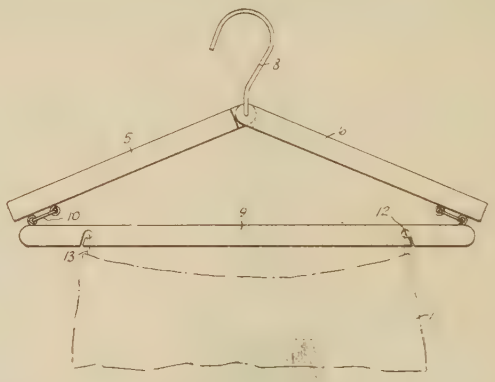
1. The process of making a laminated valve which consists in inserting a valve stem through a series of laminæ lying between clamping plates applying pressure to said plates in the vicinity of their margins to press the laminæ firmly together, and then riveting said stem over.

1,415,746. GRAIN-CAR DOOR. ARTHUR COULSON WATSON, Sarnia, Ontario, Canada. Filed May 5, 1921. Serial No. 467,155. 1 Claim. (Cl. 20—27.)



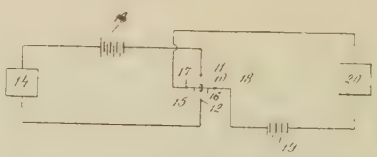
A grain car door adapted to be opened by the outward pressure of grain within the car, comprising a frame structure having rabbet grooves in the outer vertical edges adapted to fit the inner vertical edges of two adjacent vertical car timbers and having vertical grooves in the inner opposing faces of the vertical portions of the frame, a series of door sections extending crosswise of the door and fitting at their end edges into the aforesaid opposing grooves and divided vertically intermediately of their length into two portions, a hinge secured to the inner face of each section to connect the aforesaid portions together, a locking bar pivotally secured to one of such portions and a keeper member secured to the other of such portions, and means for locking the free end of the locking bar within the keeper member so that it extends crosswise at the joint between the aforesaid section portions.

1,415,747. GARMENT HANGER. PALMER D. WEEKS, New York, N. Y. Filed July 28, 1921. Serial No. 488,164. 1 Claim. (Cl. 211—13.)



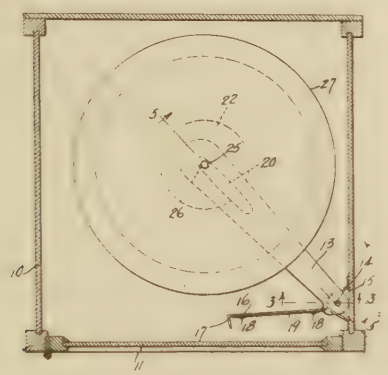
A hanger of the character described comprising a pair of bars pivotally secured together at one end to a suspension hook, said hook being adapted to be collapsible flush to one side of either of said bars, an eye screw secured to the free end of each bar, eye screws secured to the ends of said third bar, and links interposed between the eye screw of the pivoted bars and the eye screw of the third bar so as to form a triangular frame having its lower member in pendulum with respect to the upper member.

1,415,748. ELECTRICAL RESISTOR. EZECHIEL WEINTRAUB, New York, N. Y. Filed Apr. 30, 1920. Serial No. 377,942. 7 Claims. (Cl. 219—48.)



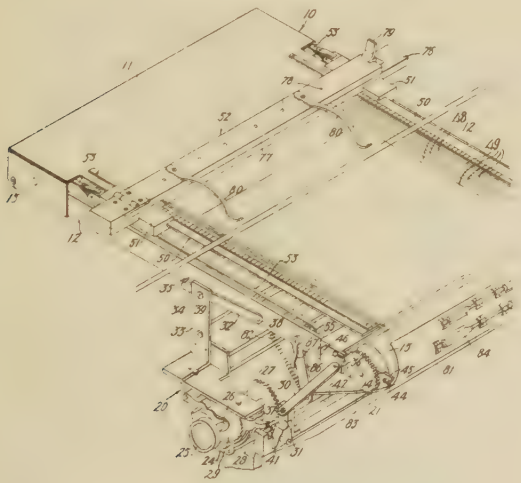
1. An electrical resistor of micronic dimensions possessing a negative temperature coefficient of resistance.

1,415,749. PHONOGRAPH-RECORD HOLDER. AARON WENGER, Bayonne, N. J. Filed Nov. 16, 1921. Serial No. 515,634. 6 Claims. (Cl. 211—16.)



1. The combination with a graphophone record cabinet, of means for normally supporting the records in superposed relation within the cabinet, said means including members mounted for horizontal swinging movement to project the record from the cabinet or position the same therein, and elements carried by said members, said elements being connected therewith for rotary and sliding movements.

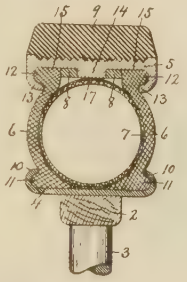
1,415,750. TYPEWRITING MACHINE. JOHN A. WHERRY, New Orleans, La., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 4, 1921. Serial No. 475,060. 14 Claims. (Cl. 197—126.)



1. In a typewriting machine, in combination, a platen-frame having a platen journaled therein, a collating device mounted at the front of the platen and comprising a collating table, and a carbon-roll mounted for reciprocatory movement on said device, said roll supplying carbon-sheets to be fed around said platen to said collating table, said carbon-roll moving downwardly on said device as said sheets are fed around said platen and upwardly on said table.

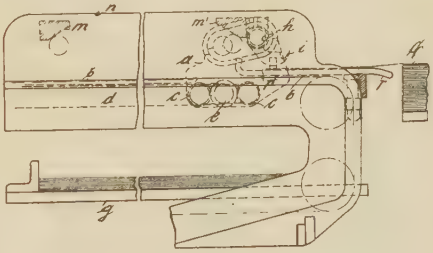
1,415,751. VEHICLE WHEEL. FREDERICK H. WILBUR, Binghamton, N. Y., assignor of one-fourth to George A. Reynolds and one-fourth to Samuel W. Reynolds, Binghamton, N. Y. Filed Mar. 24, 1920. Serial No. 368,212. 3 Claims. (Cl. 152—33.)

3. In a vehicle wheel, the combination of inner and outer circular rims in radially spaced relation, the outer rim being provided with inturned annular flanges along its marginal edges, separate flexible casing sections seated on the inner rim and engaged with the inner faces of said flanges, an inflatable tube between said casing sections, separate split rings seated against the inner face of the



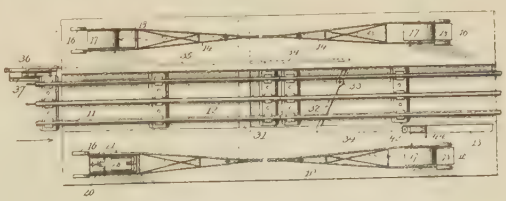
outer rim at opposite sides of the longitudinal center of said outer rim and engaging the inner faces of the outer edges of the casing sections for holding the latter in engagement with the flanges, and means for holding said split rings in transversely spaced relation.

1,415,752. DEVICE FOR INTERLEAVING SHEETS PRINTED IN CYLINDER-FLAT-BED MACHINES. CARL WINKLER, Berne, Switzerland. Filed July 30, 1921. Serial No. 488,636. 2 Claims. (Cl. 34—1.)



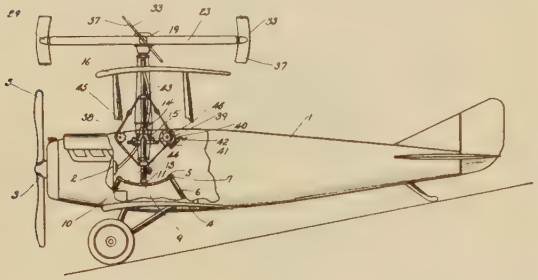
1. A device for interleaving sheets printed in cylinder-flat-bed machines, comprising, in combination with a reciprocation delivery device, normally closed grippers adapted to move backwards and forwards with said delivery device, a portable pile table for interleaving sheets provided just outside the range of said reciprocating delivery device, and tappets to open said grippers at the ends of the backward and forward strokes of said delivery device, substantially as, and for the purpose, set forth.

1,415,753. TOY RAILROAD-GATE SET. CHARLES WILLIAM WIRTH, Millvale, Pa. Filed Sept. 10, 1920. Serial No. 409,311. 6 Claims. (Cl. 39—62.)



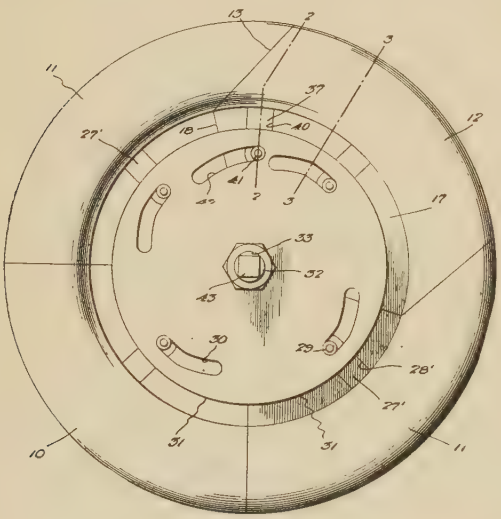
1. In a device of the class described, a gate mounted to swing on a horizontal axis, a pivoted platform connected to the gate so that the gate and platform swing together, said platform having guiding means, a weight slidable on the platform and guided by said means, and mechanism for shifting the position of the weight.

1,415,754. AEROPLANE ATTACHMENT. PHINEAS S. WOODS, Smithville, Mo. Filed Feb. 27, 1920. Serial No. 361,753. 6 Claims. (Cl. 244—15.)



1. In a device of the class described, a mast, a rotatable member carried by said mast, and retarding and sustaining members carried by the rotatable member normally in a plane parallel with the plane of the rotatable member, said sustaining members having radial and rotative movement into operative position due to centrifugal force generated by the rotatable member.

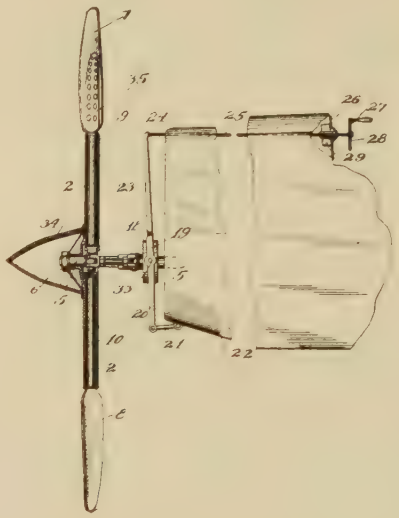
1,415,755. TIRE CORE. EDWARD WRIGHT, Dayton, Ohio. Filed Sept. 13, 1921. Serial No. 500,278. 4 Claims. (Cl. 18—45.)



1. A core for tire molds comprising opposed substantially circular core members, yieldable means for normally urging the members toward one another, radially movable means positioned between the core members, whereby the latter may be expanded and means including a rotatable cam plate engageable with the radially movable means, whereby the latter may be operated.

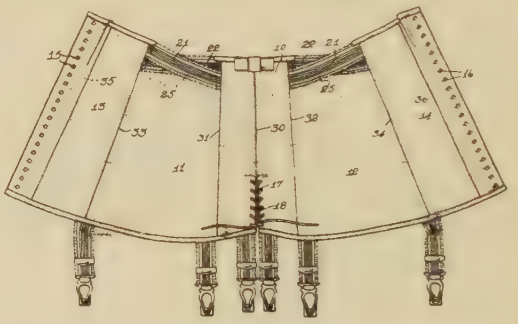
1,415,756. VARIABLE-PITCH PROPELLER. DAVID F. ZOOK, Pasadena, Calif. Filed Aug. 18, 1919. Serial No. 318,255. 1 Claim. (Cl. 170—163.)

A variable pitch propeller comprising a power driven shaft, a metal housing having a plurality of sleeves radially extending therefrom, a short sleeve centrally located with respect to said housing and extending outwardly therefrom, said last named sleeve arranged to engage said shaft and to support said housing thereupon at its outermost end, whereby the opposite side of said housing is unobstructed by supporting means and the interior thereof made readily accessible, tubular shafts disposed in said radial sleeve and arranged to project beyond both ends thereof, propeller blades carried by said tubular shafts at the outer ends of said sleeve, and means communicating with the opposite ends of said



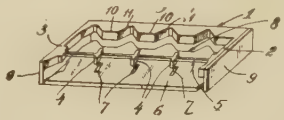
tubular shafts within said housing for turning said blades simultaneously at will, said radial sleeves being relatively longer than said propeller blades.

1,415,757. CORSET. ABRAHAM ZWIEBELSON, New York, N. Y. Filed Nov. 11, 1920. Serial No. 423,421. 4 Claims. (Cl. 2—73.)



2. A corset, comprising a front, sides extending integrally from the said front and having cut-out top edges, back parts extending integrally from the said sides, a lacing engaging the back parts for closing the corset at the back, a pair of crossed elastic bands attached at their ends to the front and corresponding back part at the upper ends thereof and extending across the cut-out portions of the said sides, the upper edges of the sides adjacent the bands being gathered to allow of expanding the sides on placing the elastic bands under tension.

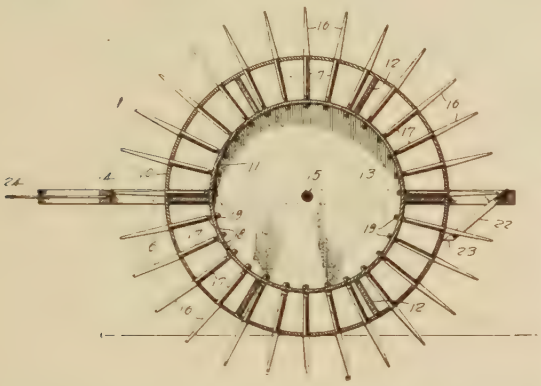
1,415,758. STRIP-SHINGLE CUTTER. HERBERT ABRAHAM, New York, N. Y., assignor to The Ruberoid Co., a Corporation of New Jersey. Filed May 19, 1920. Serial No. 382,495. 3 Claims. (Cl. 164—29.)



1. A device for cutting shingle strips from a web of prepared roofing comprising a reciprocating cutter having a transverse member extending diagonally of the web and

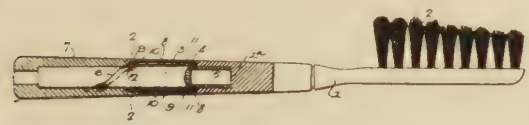
two side members extending parallel to the edges of the web, and a shear plate co-operating with the cutter in severing strips from the webs.

1,415,759. CULTIVATING IMPLEMENT. JAMES ALEXANDER ALLEN, Choccolocco, Ala. Filed Oct. 21, 1920. Serial No. 418,386. 1 Claim. (Cl. 55—24.)



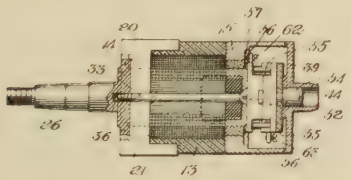
In a cultivator, a pair of concentric cylinders carrying radially projecting teeth, the teeth of pyramidal form and fixed with a face of the pyramid alined with the axis of the cylinders, the fixing means including a polygonal shank to the teeth with the faces of the polygon at an angle to the faces of the pyramid, the shank fitting a perforation in the outer cylinder and secured to the inner cylinder.

1,415,760. TOOTHBRUSH. LOUIS H. ALLES, Wilmington, Del. Filed June 14, 1921. Serial No. 477,510. 4 Claims. (Cl. 15—22.)



1. In a tooth brush, the combination with a brush-carrying body portion, of a handle element movable with respect to said body portion, said body and handle elements having registering spiral grooves therein, and an element established within said grooves and free to move relative to both body and handle element.

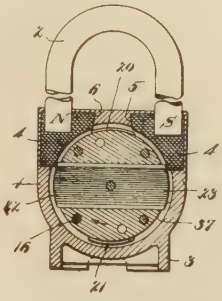
1,415,761. ROTOR FOR ELECTRICAL MACHINES. BUTLER AMES, Lowell, Mass. Filed Feb. 16, 1918. Serial No. 217,468. 15 Claims. (Cl. 171—208.)



1. In an electrical machine, a rotor comprising an axial magnetic core, a winding mounted upon the core axially with the rotor, end members on opposite sides of the winding, and laminated pole pieces secured in the end members, the pole pieces being disposed in juxtaposition to the core and extending radially from the axial region of the rotor.

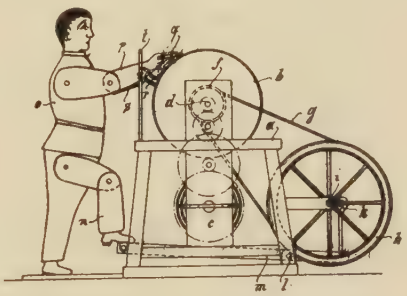
6. A rotor comprising an axial core, a winding surrounding said core, a cylinder of rigid insulating material surrounding said winding, end members covering the ends of said winding and the ends of said cylinder, and rods extending longitudinally through said cylinder for connecting said end members together.

1,415,762. STATOR FOR ELECTRICAL MACHINES. BUTLER AMES, Lowell, Mass. Original application filed Feb. 16, 1918, Serial No. 217,468. Divided and this application filed Apr. 20, 1921. Serial No. 465,414. 4 Claims. (Cl. 171—209.)



1. In an electrical machine, a stator comprising a laminated pole piece, the laminations on one side of said pole piece having alined openings therein and the succeeding laminations being continuous so as to form a recess with a flat bottom, and a magnet fitting into said recess, said magnet having a flat end seating against said flat bottom.

1,415,763. DEVICE FOR PRODUCING SPARKS FOR TOYS. KARL ARNOLD, Nuremberg, Germany. Filed Jan. 24, 1914. Serial No. 814,240. 1 Claim. (Cl. 46—40.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

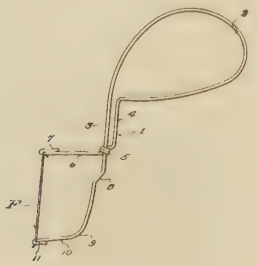


A toy representing a knife grinder with grinding lathe comprising in combination with the grinding lathe, a figure of a man with movable arms, a tool held by said arms, an emery disc forming the grinding disc, a body of pyrophorous metal such as ferro-cerium fixed to the arm of the figure so that it is pressed with slight pressure against said emery disc, the sparks coming out from under said tool.

1,415,764. ARTIFICIAL FLOWER AND METHOD OF MAKING IT. ESTELLA BAKER AUSTIN, Los Angeles, Calif. Filed Jan. 18, 1921. Serial No. 438,192. 10 Claims. (Cl. 41—13.)

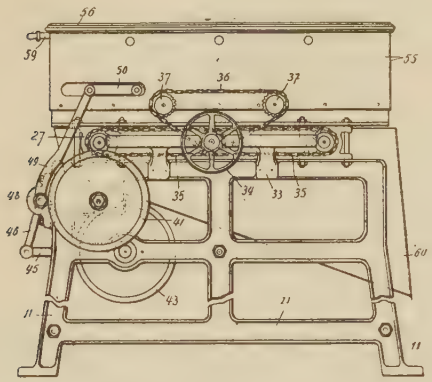
1. As a new article of manufacture, an artificial flower member comprising a fibrous body, and a section of netting enclosing said fibrous body and forming an external covering therefor.

1,415,765. DENTAL FLOSS HOLDER. THEODORE A. BAILEY, Orlando, Fla. Filed July 28, 1921. Serial No. 488,112. 1 Claim. (Cl. 132—91.)



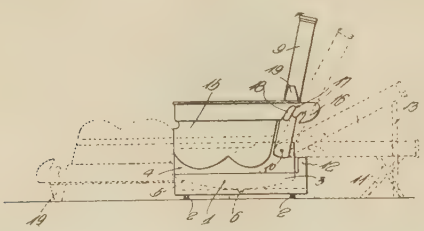
An implement of the class described composed of a single piece of spring wire bent intermediate its ends to form a substantially ovate loop, wire arms extending from the smaller end of said loop in parallel relation and substantially at right angles to the loop, one of said arms being twisted around the other to form a guide therefor and then extended laterally in a plane at right angles to the arm around which it is twisted, the upper arm being extended laterally, the terminals of said arms bent inwardly to form thread clamping elements.

1,415,766. PEELING MACHINE. VINCENT EMILÆ BALLESTER, Brussels, Belgium. Filed May 24, 1921. Serial No. 472,218. 9 Claims. (Cl. 146—14.)



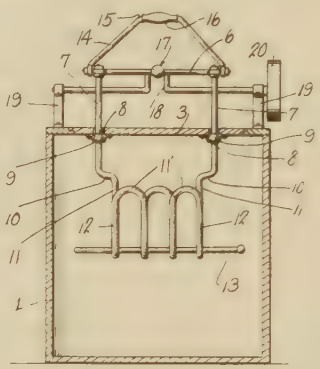
1. A machine for peeling potatoes and like articles comprising a support for the articles to be peeled constituted by a plurality of rotary abrading members or scrapers upon and between which the potatoes rest and means for rotating said members substantially as described.

1,415,767. CONVERTIBLE CHAIR. BENJAMIN C. BARTLEBAUGH, Wheeling, W. Va. Filed Sept. 19, 1921. Serial No. 501,729. 4 Claims. (Cl. 155—49.)



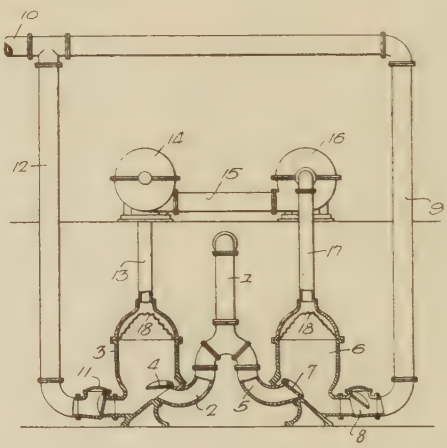
1. A convertible chair comprising a base, a seat section rockably mounted on said base, a back section pivoted to said seat section and movable downwardly to coact therewith in forming a bed, and means for preventing said seat section from rocking when said back section is swung downwardly, comprising a wall rising from and extending transversely across said base in rear of said seat section to support the inner end of said back section.

1,415,768. AGITATOR FOR WASHING MACHINES. SIMON BECK, Rathdrum, Idaho. Filed Nov. 22, 1920. Serial No. 425,887. 1 Claim. (Cl. 68—15.)



An agitator for washing machines formed from a single piece of material and comprising a pair of spaced inclined parallel loops provided with vertical tips, an oppositely disposed inclined loop extending upwardly from the inner ends of the spaced loops and having a vertical tip disposed in a plane parallel to the tips of the spaced loops, a pair of parallel arms extending upwardly from the outer ends of the spaced loops, provided with inclined intermediate portions and having spherical enlargements adjacent to the inclined portions thereof.

1,415,769. PUMPING SYSTEM. HUBERT BEDDOES, Florence, S. C. Filed Feb. 17, 1922. Serial No. 537,222. 8 Claims. (Cl. 103—79.)

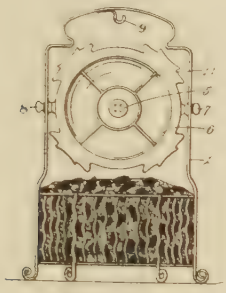


1. The combination of flow reversing pumping apparatus; a source of solid-carrying liquid and a delivery conduit both connected to said apparatus; and a screen connected between said pumping apparatus, the source and the delivery conduit for preventing solid bodies passing to the pumping apparatus.

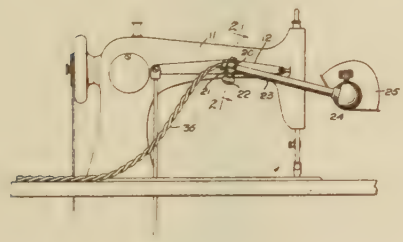
1,415,770. ELECTRIC RADIATOR. HERBERT HENRY BERRY, London, England. Filed May 3, 1921. Serial No. 466,519. 2 Claims. (Cl. 219—34.)

1. An electric radiator for imitating fire, comprising a frame, imitation fuel carried in the lower end of the

frame, a lamp for illuminating said fuel, a reflector pivoted in the frame above the fuel, a heating element secured to and in front of said reflector, and means for supporting a utensil from the top of the frame over the reflector, whereby in one position of the reflector the heat of the heating element will be directed laterally from the same and in another position will direct the heat toward the bottom of a utensil supported on said means, while the fuel is illuminated imitating fire.



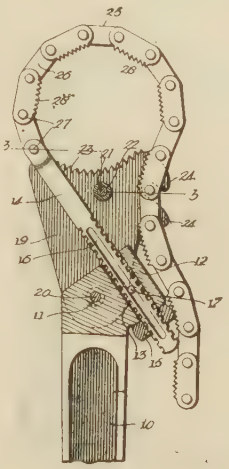
1,415,771. LIGHT ATTACHMENT FOR SEWING MACHINES. ANGELO TORQUATO BERTOLINI, New York, N. Y. Filed Jan. 28, 1921. Serial No. 440,751. 1 Claim. (Cl. 240—2.)



A light attachment for sewing machines, comprising a stud for attachment to a sewing machine, a lamp carrying bracket, a clamp engaging the said bracket, a joint having U-shaped joint members pivotally connected with each other at their ends, a screw connecting one of the joint members with the said clamp, and a screw connecting the other joint member with the head of the said stud.

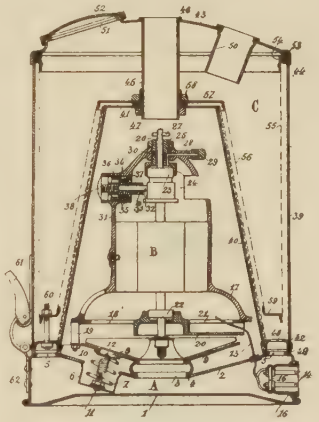
1,415,772. FLEXIBLE CHAIN WRENCH. WILLIAM LOUIS BESSOLO, San Diego, Calif. Filed Feb. 12, 1921. Serial No. 444,440. 3 Claims. (Cl. 81—66.)

1. A wrench comprising a handle having a head at one end provided with an angular extension having a bore therethrough at an angle to the handle, a powell consisting of spaced side plates in connected relation, whose inner portions extend upon and are pivoted to opposite sides of the said head, said plates being provided at one side with hooks, a shank extending angularly between the said side plates and having its inner threaded portion projecting through the bore of the head extension, a nut engaging the threaded portion of the said shank and bearing against the outer face of the head, and a flexible chain connected at one end to the outer end of said shank, said chain consisting of a series of links having connecting



pivot pins projecting laterally beyond the links for engagement by the hooks of the pivoted powell.

1,415,773. ELECTRICALLY-OPERATED VACUUM CLEANER. GEORGES ROBERT BIMM, Aubervilliers, France. Filed Oct. 29, 1921. Serial No. 511,500. 6 Claims. (Cl. 183—37.)



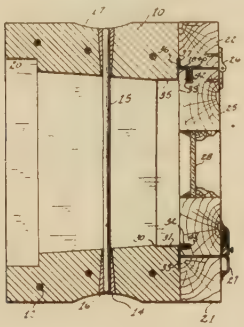
1. In an electrically operated portable vacuum cleaner, a box, a motive group within the box, a casing inside the box, surrounding the motive group to form an annular space between box and casing, a filtering cloth suspended in the said annular space, a cover, an air outlet from the space within the said casing, a dust inlet to the space between the cover and the filtering cloth, means to ensure tensioning of said filtering cloth, and means, to permit passage of filtrated air through the inner space of the said casing to the outlet, substantially as described.

1,415,774. ELECTRODE FOR ELECTRIC-ARC WELDING AND METAL-CUTTING PURPOSES. WILLIAM HANSON BOORNE, London, England. Filed Mar. 28, 1921. Serial No. 456,186. 3 Claims. (Cl. 219—8.)

1. An electrode for arc welding and like purposes comprising a metal core on which is placed a coating of calcium hydrate and water, a carbonaceous fibre winding to which is applied asbestos which contains a high percentage of silica and ferrous protoxide; calcined mag-

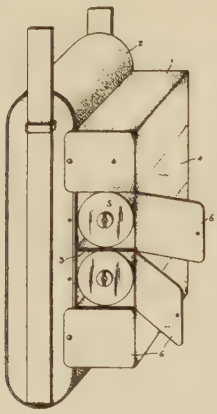
nesite with ferrous silicate and graphite, all intimately incorporated and ground to a powder, and mixed with a solution of silicate of soda.

1,415,775. FRAME CONSTRUCTION. ALBERT G. BORCHERT, Cleveland, Ohio. Filed Oct. 20, 1920. Serial No. 418,290. 9 Claims. (Cl. 72—98.)



8. A concrete frame having a rabbeted edge, metal reinforcement therefor doubled on itself to provide a projecting flange and a closure having a groove to receive said flange.

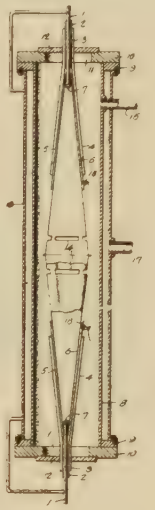
1,415,776. FILM HOLDER. ALEXANDER BRUCE BOURNE, Wallaceburg, Ontario, Canada. Filed Nov. 4, 1918. Serial No. 260,970. 1 Claim. (Cl. 190—52.)



A camera film holder adapted to be connected to the side of the camera case and having one longitudinal side thereof open, a cover adapted to close said open side, and partitions arranged transversely of said holder forming a plurality of transverse compartments each open at one end.

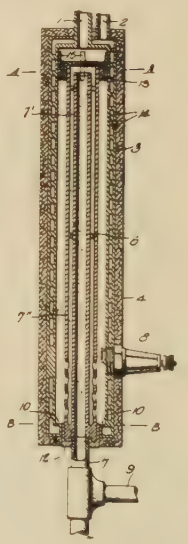
1,415,777. STEAM GENERATOR. WILLIAM SPENCER BOWEN, New York, N. Y. Filed Feb. 16, 1920. Serial No. 359,079. 6 Claims. (Cl. 60—46.)

1. A steam generator comprising a casing provided with a water jacket, a hollow conical body within and spaced from said jacket having outlet ports therein, a source of heat within the casing and surrounding said conical body and means for introducing water from said jacket to



the interior of said body in the form of a finely divided spray.

1,415,778. STEAM GENERATOR. WILLIAM SPENCER BOWEN, New York, N. Y. Filed Feb. 16, 1920. Serial No. 359,080. 9 Claims. (Cl. 60—46.)

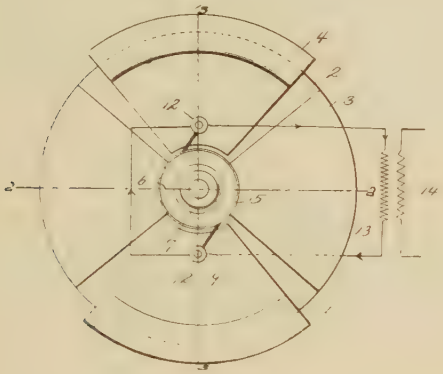


1. A device for developing energy comprising a water jacket, formed at one end with restricted orifices, insulating material surrounding said jacket, infusible burner tubes adapted to be heated to high temperatures located within the jacket, whereby the water in passing through the jacket is heated above the temperature of vaporization at the pressure prevailing on the interior of said jacket and flashes into steam on passing through said orifices.

1,415,779. ELECTROSTATIC GENERATOR. WILLIAM SPENCER BOWEN, New York, N. Y. Filed Mar. 30, 1920. Serial No. 369,890. 2 Claims. (Cl. 171—23.)

1. A pulsating current generator comprising a stationary condenser having spaced plates with a dielectric medium therebetween, a condenser adapted to rotate be-

tween said plates and move into and out of the electrostatic field set up in said dielectric and means for electrically connecting the plates on opposite sides of said rotating condenser whereby a pulsating surge of electrical charges is set up in said means.

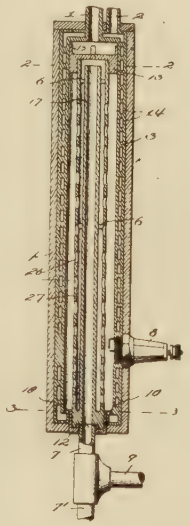


1,415,780. METHOD OF PRODUCING HEAT. WILLIAM SPENCER BOWEN, New York, N. Y. Filed Aug. 17, 1920. Serial No. 404,248. 3 Claims. (Cl. 60—44.)

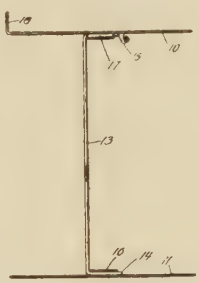
1. The method of producing heat, which consists in conducting fuel and a combustion supporting gas in proportions to form an explosive mixture in co-axial gradual tapering streams, mixing the fuel and gas near the point of ignition, enveloping a cone-shaped moving column of air in the burning fuel and gas mixture, and subsequently introducing air from said column into the products of combustion.

1,415,781. METHOD OF PRODUCING HEAT. WILLIAM SPENCER BOWEN, New York, N. Y. Filed Aug. 17, 1920. Serial No. 404,249. 4 Claims. (Cl. 60—44.)

1. The method of producing heat, which consists in causing an explosive gaseous mixture to flow with an initial velocity greater than the rate of propagation of inflammation through the mixture, reversing the path of flow of the mixture into a stream of greater sectional area whereby the flow velocity of the mixture is rapidly reduced and burning takes place where the flow velocity equals the rate of propagation of inflammation through the mixture.



1,415,782. DISPLAY STAND. HENRY P. BRACE, Chicago, Ill., assignor to Lee Trailer & Body Company, Chicago, Ill. Filed Nov. 1, 1920. Serial No. 421,045. 2 Claims. (Cl. 211—24.)

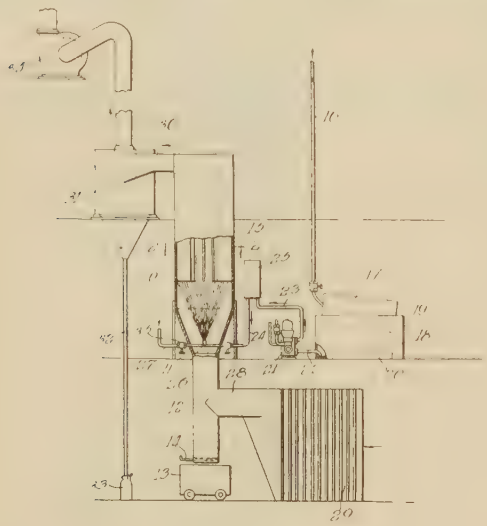


1. A device of the character described comprising a shelf portion, a base plate and a standard, and means for removably uniting the opposite extremities of said standard with said shelf and base respectively, said means including wide, flat fingers on said standard and loops upon the shelf and base into which said fingers respectively project, said loops being formed from the body of the material by being expanded laterally therefrom.

1,415,783. METHOD OF AND APPARATUS FOR EVAPORATING LIQUID OR SEMILIQUID SUBSTANCES. RICHARD G. BRINDLE and AMOS H. FLINT, Chicago, Ill., assignors to Corn Products Refining Company, a Corporation of New Jersey. Filed July 3, 1918. Serial No. 243,246. 4 Claims. (Cl. 127—9.)

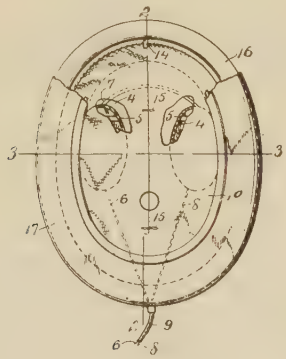
2. Method of evaporating a liquid or semi-liquid substance which consists in subjecting the substance to alternate treatments as follows: First directing the substance in the form of a spray against a collecting surface together with a draft of a drying gas insufficient in amount

to completely evaporate the moisture from said substance, and then changing the proportion of the liquid substance



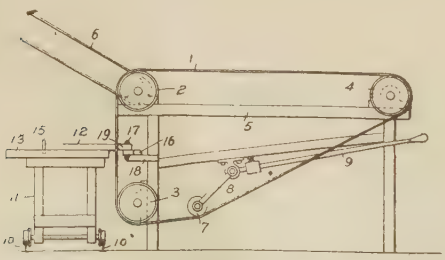
to the drying gas so that the latter will be capable of drying the substance collected on said surface.

1,415,784. ELECTRICAL BODY HEATER AND STEAMER. HOMER G. BROCK, Kansas City, Mo. Filed Mar. 2, 1921. Serial No. 449,188. 6 Claims. (Cl. 128—254.)



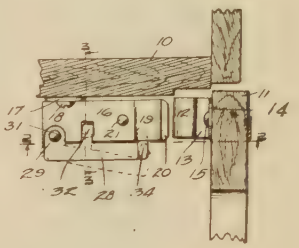
1. In a device of the kind described, an outer shell, an inner shell attached thereto, heating insulating material between said shells, a heating element between said material and the inner shell, and an absorbent pad carried by and removably mounted in the inner shell, substantially as set forth.

1,415,785. EDGE-SMOOTHING MACHINE. CHRISTOPHER BROWN, Charleroi, Pa. Filed May 18, 1918. Serial No. 235,263. 2 Claims. (Cl. 51—141.)



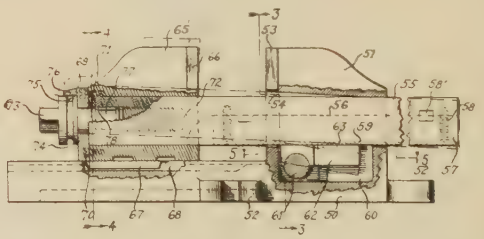
1. In combination in an edge smoothing machine, a sheet support, an endless abrading or smoothing belt mounted to run transversely of the sheet carried on the support, means for driving the belt, and a presser member back of the belt opposite the edge of the sheet and mounted to move freely toward the belt to press it against the edge of the sheet, and also longitudinally of the belt.

1,415,786. LATCH. JAMES NEULIN BROWN, Des Moines, Iowa, assignor of one-half to John C. Little, Des Moines, Iowa. Filed Apr. 13, 1921. Serial No. 460,906. 1 Claim. (Cl. 292—17.)



In a door latch structure, a latch member comprising a strip of resilient material folded over on itself and having in its parallel portions elongated registering openings, said portions forming near one end spaced engaging members curved toward each other and then from each other at their free ends, a coacting member having an enlarged hollow end adapted to be received between said engaging members, a locking element, a means arranged to pivot one end of the locking element to said first latch member and securing together the portions of the first latch member, a member on said locking element overlapping said first latch member having a portion projecting in to said elongated openings for limiting the pivotal movement of the locking member, and means on the locking member for entering said hollow end for locking the latch members together.

1,415,787. QUICK-SETTING VISE. GEORGE H. BUCKLEY, Indianapolis, Ind., assignor to National Metal Products Company, Indianapolis, Ind., a Corporation of Indiana. Filed Sept. 15, 1920. Serial No. 410,527. Renewed Apr. 1, 1922. Serial No. 548,800. 6 Claims. (Cl. 90—60.)



1. A milling machine vise, comprising the combination of a base carrying a stationary jaw, a shank movable longitudinally through said standard jaw, locking means for holding said shank in a fixed position in said stationary jaw, said locking means being releasable by tilting upward the front end of said shank, and a movable jaw adjustable on said shank and normally resting on said base.

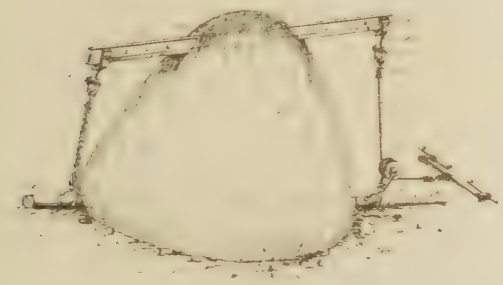
1,415,788. COUPLING DEVICE FOR OIL WELLS. PORTER H. BURLIN, Limestone, N. Y. Filed May 25, 1921. Serial No. 472,431. 1 Claim. (Cl. 285—22.)

A coupling device for oil wells in one piece or a single casting comprising a body portion having an outwardly projecting flange at its lower end providing a shoulder, an integral tube-receiving portion extending from said shoulder throughout of approximately the same diameter as said body portion threaded to receive the upper end of the well tubing and having a plain external surface imme-

diately below the shoulder, a pipe connection projecting from one side of the body portion, and a threaded integral tubular extension on the body portion above the connection to receive a gland nut; said coupling device being

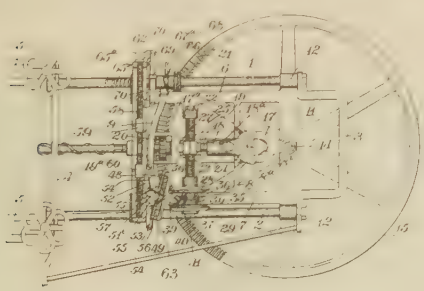
adapted for use in connection with a casing-head and an annular disk secured in the upper end of said casing-head and upon which said coupling device is seated, as herein shown and described.

1,415,789. POWER-ACTUATED HAY KNIFE. FRANK CABALKA, Geddes, S. Dak. Filed Feb. 3, 1922. Serial No. 533,812. 5 Claims. (Cl. 146—33.)



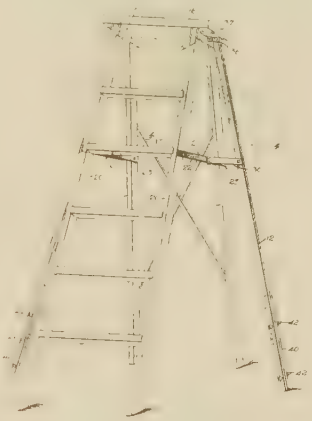
1. A hay knife, comprising an elongated bar or support adapted to underlie and traverse a stack of hay, an elongated knife of a length to extend over the stack for the full diameter of the latter and located over the bar lengthwise of the latter, flexible connections to each end of the bar knife, and power means connected with one end of said flexible connections and adapted to draw said knife longitudinally in the direction of the extension of said bar.

1,415,790. MORTISING MACHINE. GEORGE W. CAMPBELL, Columbus, Ohio. Filed Dec. 30, 1920. Serial No. 434,022. 3 Claims. (Cl. 144—70.)



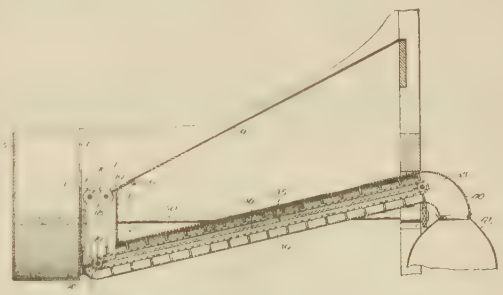
1. In a mortising machine, a main frame, an oscillatory tool carried by said frame, a screw having an operative connection with said tool, means for rotating said screw in opposite directions comprising a shiftable clutch, a pivoted shifting lever for said clutch, a pair of springs carried by said lever, a latch for said lever in each of its positions, a slidable bar operated by the oscillations of the tool adapted to compress one or the other of said springs for initially shifting said lever, a beveled member on said shifting lever extending from the side thereof at right angles to the plane of its oscillation, and a beveled spring-actuated pin on the main frame of the machine cooperating with said beveled member on the shifting lever to finally shift said clutch into operative position.

1,415,791. STEPLADDER. FRANK JOSEPH CARONIA, New York, N. Y. Filed Mar. 5, 1921. Serial No. 449,737. 3 Claims. (Cl. 228—31.)



3. The combination of a ladder having a top shelf, of an attaching plate having an angularly extending portion rotatably connected to the said top shelf and beneath the same, and a prop having its upper portion flatly connected with one side of said attaching plate and having its upper end flatly engaging the angularly extended portion of said plate, and bracing means for said prop.

1,415,792. PNEUMATIC STRAW STACKER. FRANK B. CARTER, Indianapolis, Ind., assignor to The Indiana Manufacturing Company, Indianapolis, Ind., a Corporation of West Virginia. Filed Jan. 26, 1921. Serial No. 439,926. 16 Claims. (Cl. 130—17.)

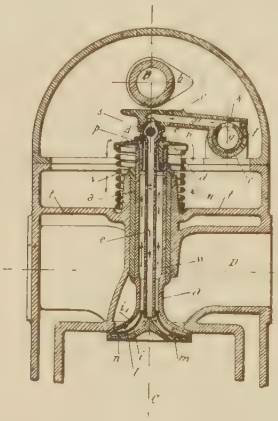


13. In a pneumatic stacker, a grain trap comprising rollers arranged in parallel and spaced relation, and means for actuating the same.

1,415,793. COOLING ARRANGEMENT FOR EXHAUST VALVES OF INTERNAL-COMBUSTION ENGINES. GIUSTINO CATTANEO, Milan, Italy. Filed Apr. 27, 1918. Serial No. 231,283. 4 Claims. (Cl. 123—177.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

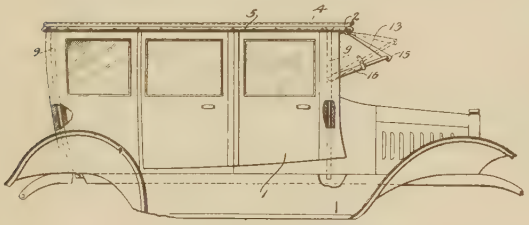
1. In an internal combustion engine, the combination with a valve having a hollow body and stem, and a hollow

valve head mounted in said stem, of a hollow actuating member engaging said valve head, the engaging surfaces



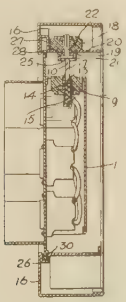
of said actuating member and valve head having apertures connecting the interior of said member with the interior of said valve head.

1,415,794. DRAINAGE SYSTEM FOR VEHICLES. LEONARD CHARBONNEAU, Ogdensburg, N. Y. Filed July 26, 1921. Serial No. 487,639. 7 Claims. (Cl. 296—137.)



2. In a drainage system for vehicle tops, the combination with a drip trough extending completely about the top of the body, of a windshield protector arranged at the front of the vehicle body and adapted to receive water from the top collected by the drip trough and convey it from the top, said windshield protector projecting in advance of the windshield to prevent the water from collecting upon said windshield.

1,415,795. ELECTRIC CONTACT. JOHN B. CHEMIDLIN, Plainfield, N. J. Filed Apr. 13, 1921. Serial No. 461,129. 3 Claims. (Cl. 40—130.)

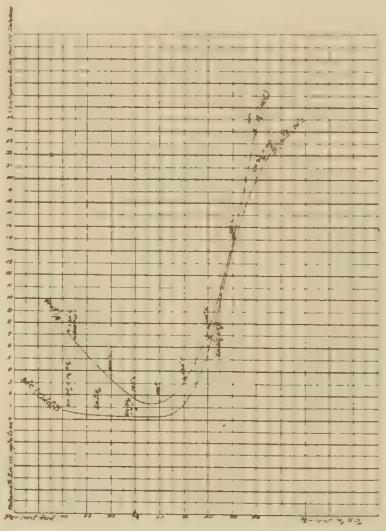


1. In a contact of the character described a supporting insulating plate, a pin arranged on said plate, a co-acting plate, a spring pressed contact rod carried by said second plate and an insulating cup surrounding the end of said pin.

1,415,796. PROCESS OF TREATING LEAD-ZINC SULPHIDE ORES. NIELS C. CHRISTENSEN, Salt Lake City, Utah. Filed Oct. 11, 1919. Serial No. 330,035. 20 Claims. (Cl. 75—18.)

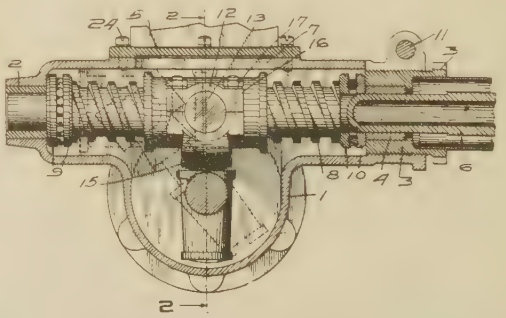
1. The process of treating lead-zinc sulphide ores and concentrates which consists in treating the comminuted ore with hot concentrated sulphuric acid, thereby dissolving the zinc as a sulphate, separating the hot acid solution from the residue of the ore, and cooling said solution and thereby precipitating zinc sulphate therefrom, treating the residue of ore from foregoing treatment with a hot concentrated chloride solution containing acid and thereby dissolving the lead and silver as chlorides, and separating last said hot solution from the remainder of the ore and precipitating the silver and lead therefrom.

1,415,797. PROCESS OF TREATING ZINC ORES AND ZINC PRODUCTS. NIELS C. CHRISTENSEN, Salt Lake City, Utah. Filed Feb. 21, 1920. Serial No. 360,484. 8 Claims. (Cl. 75—18.)



1. The process of treating zinc ores and zinc products to separate the zinc therefrom as zinc sulphate, which consists in dissolving the zinc from said products in sulphuric acid to form a solution of zinc sulphate in a relatively dilute sulphuric acid solution and concentrating said acid solution and precipitating zinc sulphate therefrom by reason of the increased concentration of the H_2SO_4 in said solution.

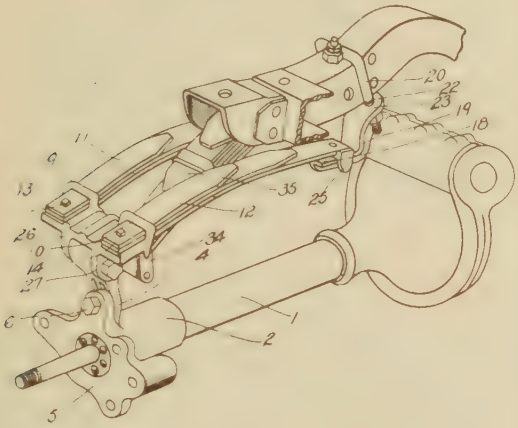
1,415,798. STEERING GEAR. JAMES R. CLARK and HOWARD A. FLOGAUS, Toledo, Ohio. Filed Dec. 20, 1920. Serial No. 431,834. 3 Claims. (Cl. 74—79.)



1. In a steering gear, the combination of a worm, a block for receiving the worm and having bearing trunnions extending on opposite sides of the block, the axes of the trunnions being located in line at right angles to the axis of the worm and extending through the axis

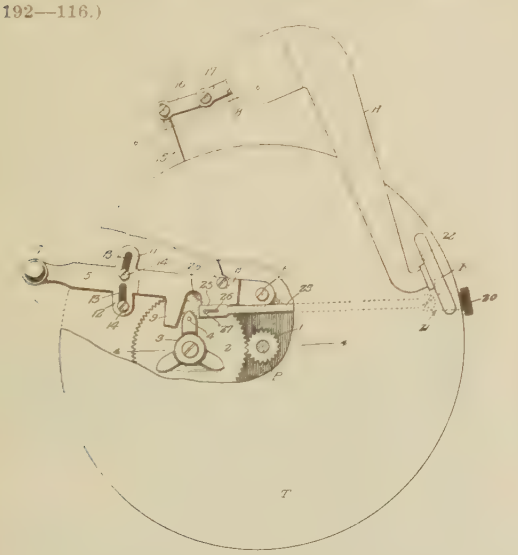
of the worm, a yoke having bearing members and clamping bearing blocks forming bearing surfaces at the ends of the yokes and on the blocks, and fitting the trunnions, a pin formed integral with the yoke, a shaft located at right angles to the axis of the worm and at right angles to the pin, and having a boss extending away from the axis of the worm, and having a bearing surface for the pin extending through the shaft and the boss.

1,415,799. SHOCK ABSORBER. RAY V. CONVERSE, Kansas City, Mo. Filed Oct. 11, 1920. Serial No. 416,132. 7 Claims. (Cl. 267—17.)



4. In combination with a motor vehicle, perches secured to opposite ends of the rear axle, pivoted brackets carried by the perches, parallel leaf springs carried by the pivoted brackets and having inwardly projecting free ends, box-shaped bearing members on the free ends of the springs, step brackets carried by the vehicle frame and extending beneath the box-shaped bearings on the free ends of the springs, anti-friction bearings between the step brackets and the box-shaped bearings, and connections between the pivoted brackets and the rear springs of the vehicle.

1,415,800. AUTOMATIC NONSET STOP FOR TALKING MACHINES. LE ROY COPLIN, Windber, Pa. Filed Oct. 11, 1920. Serial No. 416,227. 13 Claims. (Cl. 192—116.)

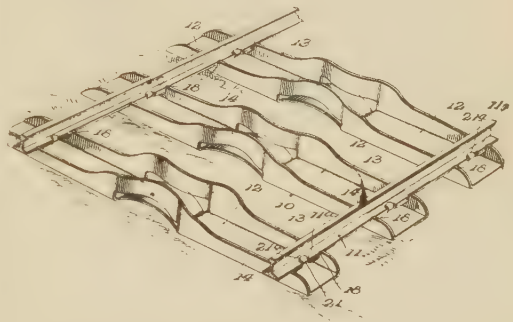


13. In an automatic non-set stop for talking machines, the combination with a tone arm; of an arm carried by said tone arm, a bar pivoted at one end to the free end of said arm, a brake normally held in inoperative position, means to apply said brake, and cooperating means carried by said bar and one member of said brake applying means, operable on the inward movement of the tone arm to prevent application of the brake.

1,415,801. ANIMAL TRAP. GEORGE F. CORLE, Bolton, Kans. Filed July 7, 1921. Serial No. 482,944. 2 Claims. (Cl. 43—65.)

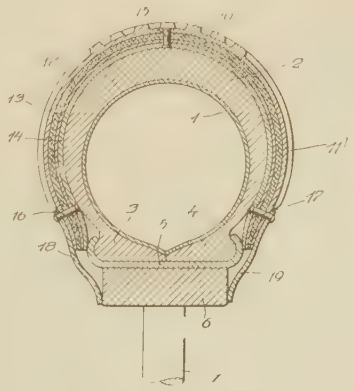
1. An animal trap comprising a body, a wooden frame applied to an end portion of the body and having the extremity of the latter bent to overlie the face of the frame, fastenings driven into the wooden frame and securing the body thereto and a metal casing protecting the inner side of the wooden frame.

1,415,802. RAILWAY TRACK. JAMES LE ROY COSBY, Albuquerque, N. Mex. Filed Feb. 4, 1922. Serial No. 534,115. 7 Claims. (Cl. 238—63.)



2. A railway tie constructed entirely of metal and comprising a channel having a base section and side flanges, the base section and the side flanges having flexing portions adapted to come into bracing and positive engagement after having partaken of a certain degree of flexion, said side flanges having means for engaging and supporting rails.

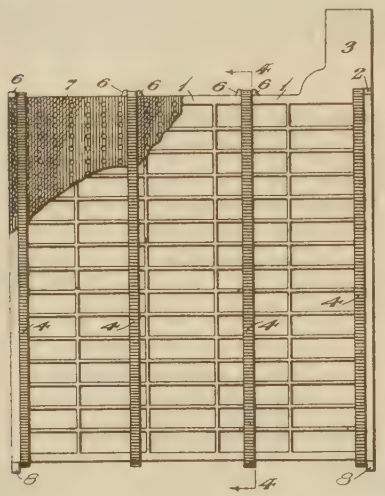
1,415,803. TIRE PROTECTOR. PATRICK M. CRAIN and JOHN P. SMITH, Hammond, Ind. Filed Mar. 1, 1922. Serial No. 540,264. 2 Claims. (Cl. 152—16.)



2. A tire protector comprising an outer sectional sheath of aluminum having antiskid studs on its tread

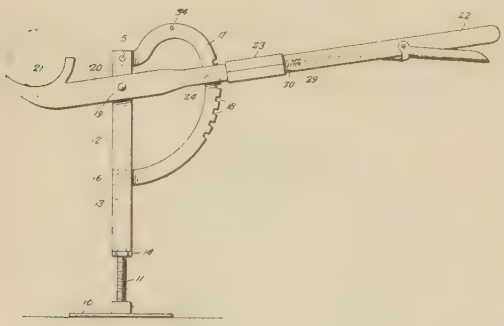
part and external ribs on the outer side portions thereof, a relative deep layer of felt within the sheath, a layer of asbestos lying beneath the felt, a layer of fabric within the asbestos, means for securing the several layers to the tread and side portions of the sheath, and yieldable means for holding the sections of the sheath together.

1,415,804. STORAGE BATTERY AND METHOD OF MAKING IT. WALTER H. CRISSEY, Reading, Pa. Filed May 12, 1921. Serial No. 468,849. 3 Claims. (Cl. 204—29.)



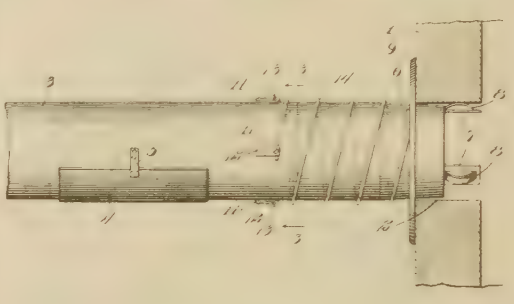
1. The method of insulating a battery plate, which consists in forming a battery plate with seats, heating hard rubber rings to expand them, passing said rings over said plates into register with said seats, and allowing said rings to cool, whereby they contract and are positively locked in said seats and retained thereby in spaced relationship on said plate.

1,415,805. JACK. THOMAS H. CYRUS, Covelo, Calif., assignor of one-half to George W. Goforth, Covelo, Calif. Filed May 19, 1921. Serial No. 470,803. 1 Claim. (Cl. 254—129.)



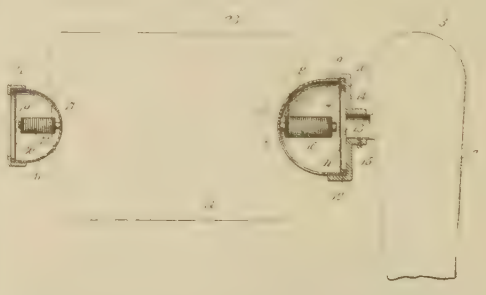
In a lifting jack, a supporting standard, a notched segmental member connected to said standard, an operating lever pivoted intermediate the ends to said standard, a sleeve member slidable on said operating lever and having a projecting lip at one end bearing over said segmental member and with a perforated lug outturned at the other end, a pawl device connected internally of said sleeve and adapted to engage the notch of said segmental member which for the time being is covered by said lip, a guide pin carried by said lever, a spring carried by said rod and operating to maintain said sleeve with the pawl device in yieldable engagement with the notch of the segment, and means operative on said lever to move said sleeve and the pawl device carried thereby against the resistance of said spring to release the pawl from the segment.

1,415,806. STOVEPIPE ANCHOR OR LOCK. JOSEPH E. DAMAN, St. Louis, Mich. Filed Nov. 17, 1917, Serial No. 202,669. Renewed Mar. 30, 1922. Serial No. 548,190. 1 Claim. (Cl. 126—318.)



A means for holding a stove pipe in a chimney flue opening, comprising, in combination with a stove pipe having a tapered end to be received in the flue opening, longitudinally arranged spaced flat spring plates having their inner ends secured in the pipe inward of the tapered end thereof and their outer ends extending through the tapered end, and said spring plates having each an integral outwardly directed arched spring tongue adjacent to the outer end thereof, and having an opening opposite the tongue through which the tongue is free to move, said tongues having their inner and free ends disposed to contact with the end of the pipe to limit the outward springing movement thereof.

1,415,807. SOUND-REPRODUCING DEVICE. PATRICK B. DELANY, South Orange, N. J. Filed Feb. 1, 1918. Serial No. 214,951. 9 Claims. (Cl. 179—100.1.)

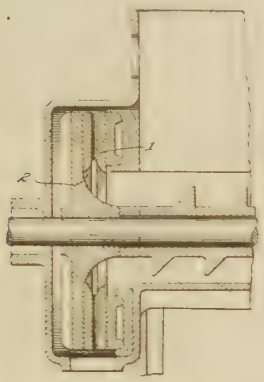


1. A sound reproducing device comprising: a sound reproducing instrument having a tubular sound wave directing member, a telephone transmitter of the current-generating type mounted on the side of said tubular member in position to be actuated by sound wave disturbances within said member, and a telephone circuit within which said transmitter is included.

1,415,808. GRINDING DISK. ABRAHAM M. DELLINGER, Lancaster, Pa. Filed Apr. 28, 1920. Serial No. 377,224. 12 Claims. (Cl. 83—8.)

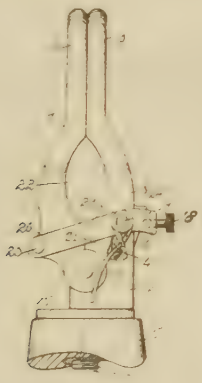
1. A grinding disk provided with a feed rib extending within the eye of said disk, and having a web extend-

ing from said rib to said disk, said web being disposed at that side of said rib which is toward the direction



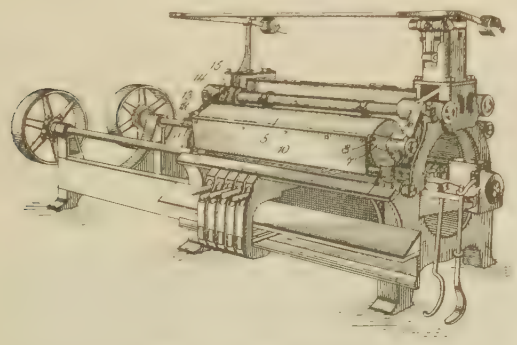
of rotation of said disk and terminating at the tip of said rib.

1,415,809. ARTIFICIAL HAND. OTTO LE GRAND DILWORTH, Hartford, Conn. Filed Aug. 31, 1920. Serial No. 407,200. 6 Claims. (Cl. 3—12.)



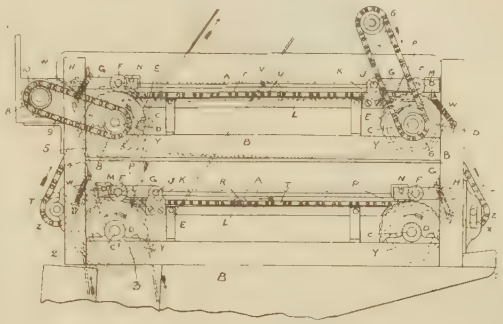
2. An artificial hand comprising a rigid finger, a swinging finger movably supported by the rigid finger, a lever pivotally attached to one of said fingers and in movable contact with an abutment on the other finger, whereby movement of said lever with respect to said abutment will cause a swinging movement of said finger, and means for operating said lever.

1,415,810. ROLL GUARD FOR EDGING MACHINES. GEORGE W. DORMAN, Everett, Wash., assignor to Sumner Iron Works, Everett, Wash., a Corporation of Washington. Filed Aug. 26, 1920. Serial No. 406,162. 9 Claims. (Cl. 144—251.)



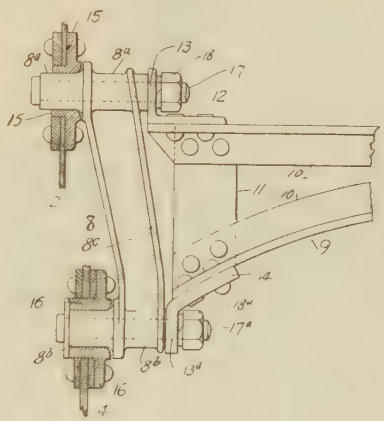
1. A feed roll guard for edging machines having upper swingable rolls, comprising an apron hingedly supported upon the upper roll arms in front of the roll.

1,415,811. APPARATUS FOR CLEANING AND SEPARATING SEEDS, GRAIN, AND THE LIKE. FREDERICK M. DOSSOR, Doncaster, England. Filed Oct. 4, 1920. Serial No. 414,645. 3 Claims. (Cl. 130—15.)



1. A sieve apparatus for cleaning and separating seeds, and the like of the type aforesaid, comprising a frame, escalloped wheels on the frame having rounded or comparatively shallow scallops; pivoted lever arms on the frame carrying a small roller engaging said scallops, pins or trunnions upon the sieves resting in slotted bearings in said arms, gears on the frame and driving chains to impart motion to the sieves.

1,415,812. GRAB BUCKET. JOHN P. DOWD, Cleveland, Ohio, assignor to The Brown Hoisting Machinery Company, Cleveland, Ohio, a Corporation. Filed July 19, 1921. Serial No. 485,819. 3 Claims. (Cl. 37—30.)

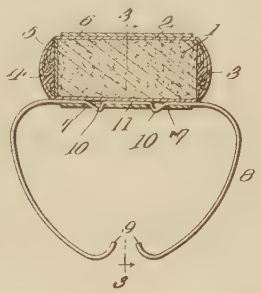


1. In a grab bucket having spades with spade-arms pivotally connected to a cross-head therein, a unitary link-connection between the bucket frame and said spades, comprising the combination of links provided with trunnions at their upper ends, axle bearings for said trunnions on the bucket-frame, means for pivotally connecting the lower ends of said links to said spades, and means for securing said links against lateral movement when the ends of the links are in said bearing and pivoted relations with, respectively, said frame and said spade, said means consisting of a frame-like member between, and removably connected to, said links so placed, all substantially as shown and described.

1,415,813. RAILWAY SIGNAL TORPEDO. FRANK DUTCHER, Versailles, Pa., assignor to Central Railway Signal Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed May 26, 1921. Serial No. 472,626. 7 Claims. (Cl. 246—487.)

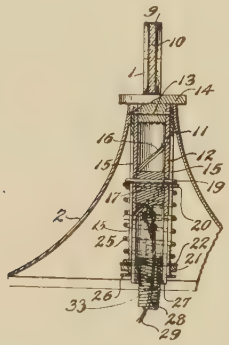
1. A railway signal torpedo comprising an explosive carried within an open ended case provided with open-

ings in its side, a rail-engaging member provided with depressed portions carried within the case and extending



outwardly through its open ends, the openings in the case and the depressed portions of the rail-engaging member registering for the purpose described.

1,415,814. VEHICLE SIGNAL DEVICE. IVAN DYER, Indianapolis, Ind. Filed Apr. 12, 1921. Serial No. 460,702. 10 Claims. (Cl. 116—46.)

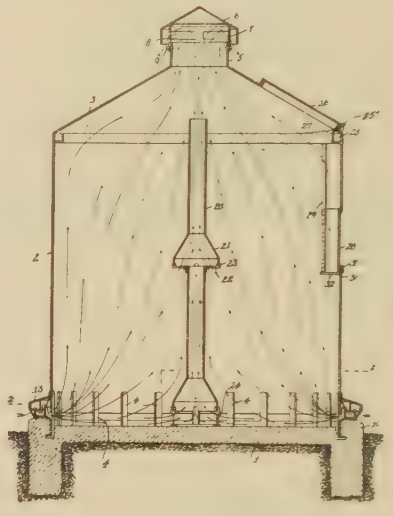


1. A signal comprising a relatively stationary supporting member, a rotary member journaled in said stationary member and having a spiral slot in the wall thereof, a signal arm carried by said rotary member and means for shifting said signal arm as an incident to actuation of the rotary member comprising a part relatively movable with respect to said rotary member and including a pin extending through the slot thereof, said pin engaging with the relatively stationary member and being guided thereby.

1,415,815. DOOR. CLARENCE W. EALY, Black Lick, Ohio. Filed Apr. 23, 1920. Serial No. 376,119. 1 Claim. (Cl. 20—16.)

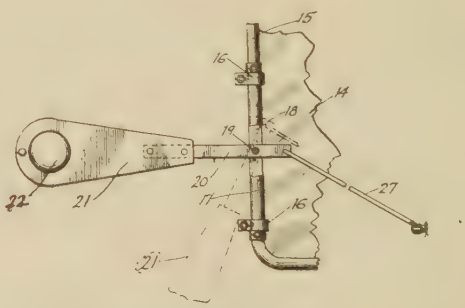
A device of the character set forth comprising a door proper mounted for swinging movement in a doorframe and having its lower end spaced from the lower end of the doorframe to permit the door to swing freely when foreign matter extends above the lower end of the frame, a closure strip hinged to the lower edge of the door and when in one position adapted to close the space between the lower edge of the door and the frame, and a flexible element having its ends secured to opposite faces of the strip and passing freely through the door to permit the raising and lowering of the strip from either side of the door.

1,415,816. GRAIN BIN. FRANCIS R. EDWARDS, Jacksonville, Fla. Filed Aug. 20, 1920. Serial No. 404,870. 11 Claims. (Cl. 98—26.)



11. A bin having walls and ventilating openings at the top and bottom thereof, a fumigant trough formed along the walls within the bin, means by which fumigant may be introduced from without into the trough, means for closing the top openings, and means for closing the bottom openings when the contents of the bin are to be fumigated.

1,415,817. TRAFFIC SIGNAL FOR MOTOR VEHICLES. FRANCIS M. ELLIOTT, Gardena, Calif. Filed Dec. 22, 1921. Serial No. 524,144. 7 Claims. (Cl. 116—52.)

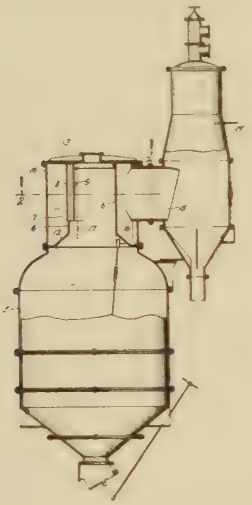


1. The combination with a motor vehicle, its windshield and steering post, of a slotted support detachably connected to the windshield frame, a collar detachably applied to the steering post, a signaling arm pivotally mounted in said slotted support, an actuating lever fulcrumed on the support on the steering post, and an operating connection between said lever and the signaling arm.

1,415,818. SACCHARINE TRAP. GODFREY ENGEL, Sr., Brooklyn, N. Y., assignor to Buffalo Foundry & Machine Co., Buffalo, N. Y., a Corporation of New York. Filed Nov. 3, 1919. Serial No. 335,303. 3 Claims. (Cl. 127—18.)

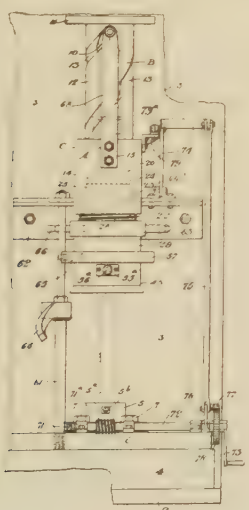
1. A saccharine trap having a conduit for the flow of vapor in a substantially horizontal plane constructed to

produce a change in direction in the flow of vapor and having an entrainment collecting chamber open thereto at the point of such change in direction but partly below the direct path of vapor flow therethrough and an entrainment trapping pocket on an outer wall of the conduit substantially at the point of change in direction of the vapor flow to thereby catch the heavier particles



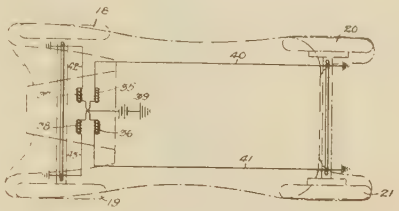
thereon outward by centrifugal force from the vapor by the change in direction of movement and extending from the horizontal plane of direct vapor flow down into the entrainment collecting chamber to thereby catch the heavier entrainment carried by the vapor and thrown outwardly by centrifugal force and to hold the same at one side of the vapor path and conduct it directly down into the entrainment collecting chamber.

1,415,819. FLUTING MACHINE. WILLIAM G. ESTEP, Duquesne, ALFRED E. HAMILTON and ELMER L. SIMONSON, Homestead, Pa. Filed Dec. 18, 1920. Serial No. 431,677. 12 Claims. (Cl. 90—43.)



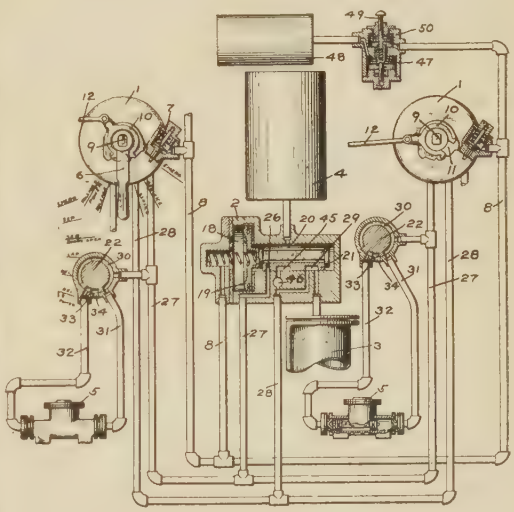
1. A fluting machine comprising a base, a work holding chuck on said base, a vertically movable tool head, said tool head being arranged to reciprocate above said chuck, tool holders carried by said head, and means for automatically adjusting said tool holders transversely of said head on each upward stroke thereof.

1,415,820. FLAT-TIRE INDICATOR. THOMAS M. EYNON, Philadelphia, Pa., assignor to Margaret Y. Eynon, Philadelphia, Pa. Filed Dec. 18, 1918. Serial No. 267,396. 6 Claims. (Cl. 177—311.)



1. In an automobile flat tire indicator, front and rear means at each side of the automobile for closing electrical contacts with depression of that side of the automobile, a plurality of indicators having contrasting indicia to signify depression of opposite sides of the automobile at the front or back, and independent connections including a battery and a plurality of electromagnets for throwing the indicators to show similar indications when the entire side is depressed and contrasting indications when one end only is depressed on one side thereof.

1,415,821. CAR DOOR AND BRAKE CONTROLLING DEVICE. CLYDE C. FARMER, Edgewood, Pa., asignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 2, 1920. Serial No. 370,636. 14 Claims. (Cl. 303—6.)



1. In a safety car control equipment, the combination with a brake valve device for controlling the car brakes having an operating handle, of means for controlling the car doors and a treadle operatively connected to said handle for also operating said brake valve device and for controlling said means.

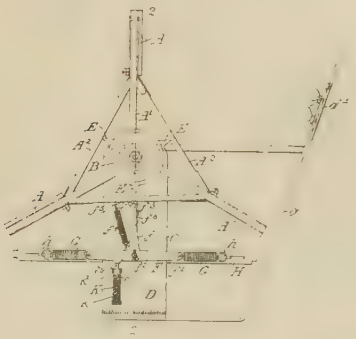
1,415,822. SCREW DRIVER. THOMAS J. FEGLEY and WALTER S. SNYDER, Philadelphia, Pa., assignors to North Bro's. M'f'g. Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 22, 1920. Serial No. 383,506. 3 Claims. (Cl. 145—53.)

1. The combination in a push screw driver, of a spindle; a nut arranged to turn the handle; a cylinder having a spiral groove therein with which the threads of the nut

engage; a spiral spring arranged to retract the handle after it has been pushed forward to turn the spindle;

and a yielding coupling piece slotted to engage the spindle and connected to the handle so as to turn therewith.

1,415,823. TARGET FOR SMALL-ARMS PRACTICE. CECIL FENTON, Brocton, England. Filed July 7, 1920. Serial No. 394,589. 4 Claims. (Cl. 124—15.)

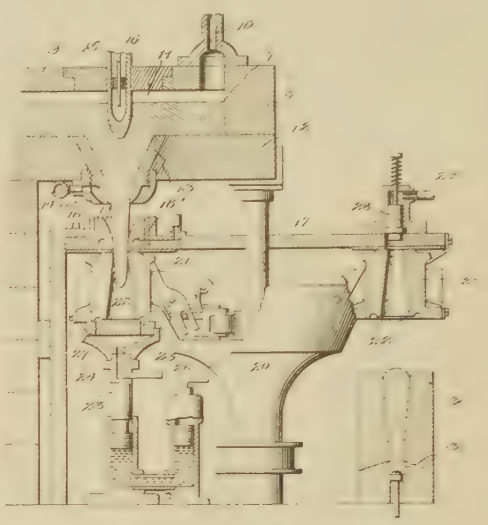


1. A target for small arms practice, comprising a plurality of target plates, a structure mounted upon a pivot axis and carrying such plates, and means which ensure that when one of the plates is in position and is struck by a bullet, the structure is caused to turn through such an angle only that the next following plate is brought into position, the first mentioned target plate passing out of sight.

1,415,824. METHOD OF TREATING AND WORKING GLASS. ENOCH THEODORE FERNGREN, Beaver, Pa. Filed Jan. 24, 1914. Serial No. 814,066. 32 Claims. (Cl. 49—77.)

20. The method of manipulating glass, which consists in depositing, by gravity, a body of glass into a shaping mold with sufficient force to cause a portion of said body to fill the neck mold, and leaving the remainder in condition to be blown.

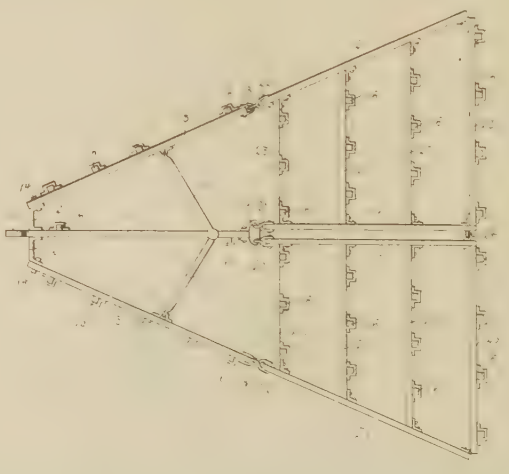
29. The method of feeding glass to molds which consists in flowing a stream of glass into and through a zone of active radiant combustion and a heated shearing medium and periodically cutting mold charges from the stream as it emerges from said radiant zone, and varying the amount of flow by the adjustment of a clinging, medium toward and from said stream.



30. The method of delivering glass to a hollow receptacle which consists in passing molten glass through the bore of a heated member into the adjoining hollow cavity of the receptacle, severing the glass between the receptacle and the heated member and lubricating the surface of the bore in the heated member by depositing finely divided carbon on the exterior of the surface portions of the said member.

31. The method of forming mold charges which consists in flowing a stream of glass freely through a surrounding heat delivering flame and a heated shearing medium towards a series of molds successively elevating towards said stream and shearing medium, and successively severing mold charges at said shearing medium without obstructing the downward movement of the remaining portion of said stream thereby.

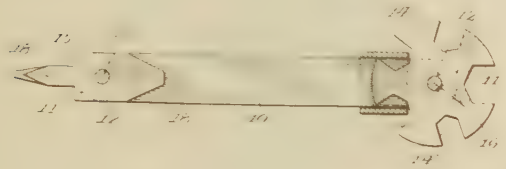
1,415,825. HARROW. GEORGE W. FERRELL, Appleton, Tenn. Filed Aug. 3, 1920. Serial No. 400,958. 3 Claims. (Cl. 55—32.)



3. In a harrow, the combination of a forward section having diverging side members, coacting rear sections each having confronting side members in parallel relation and outer diverging side members in longitudinal aline-

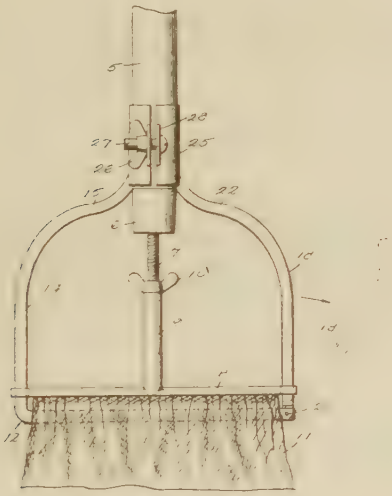
ment with the diverging members of the forward section, means for flexibly coupling said rear sections together, and means for flexibly coupling the rear sections to the forward section.

1,415,826. WRENCH. CAREY C. FINKHOUSEN, Wren, Ohio. Filed Jan. 4, 1922. Serial No. 526,948. 2 Claims. (Cl. 81—119.)



1. A tool including a shank, a member rotatable in one end of the shank and having a plurality of notches in its periphery with the outer ends of the portions intermediate the notches of substantially equal width, and a collar slidable on the shank and arranged to enter two adjacent notches of the rotatable member to embrace one of said intermediate portions.

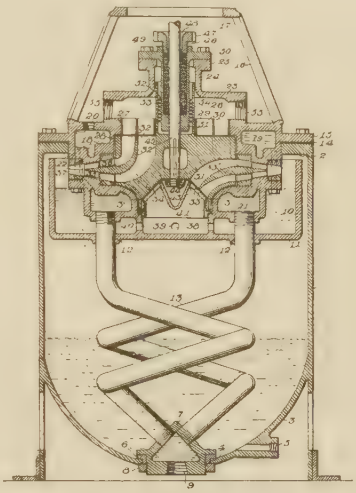
1,415,827. MOP HANDLE. EARL FINLEY, Detroit, Mich. Filed July 20, 1921. Serial No. 486,207. 1 Claim. (Cl. 15—153.)



A mop comprising a handle, a pair of side bars having their rear portions formed with bends defining attaching members, the forward end of the handle being provided with recesses receiving said attaching members, means to permanently secure one of said attaching members within one of said recesses, a split locking sleeve slidable on said handle and adapted for engaging said attaching members, the forward end of said locking sleeve being provided with oppositely arranged slots adapted to receive the bent portions of said side bars, radially projecting ears formed on said sleeve, fastening means extending through said ears to hold said sleeve in gripping engagement with said attaching members and said handle, and a cross bar having connection with said side bars, one of said side bars being pivoted to said cross bar.

1,415,828. REFRIGERATING APPARATUS. ERNEST F. FISHER, Essington, Pa. Filed Oct. 8, 1919. Serial No. 329,242. 3 Claims. (Cl. 230—14.)

1. In a refrigerating apparatus, a vessel provided centrally with a chamber formed between apertured walls rising from the bottom of said vessel, a portion of said walls spreading laterally and enlarged and hollow to form a peripheral chamber for a cooling liquid, a member having an inlet and secured to the peripheral portion of said walls and hollow to provide a chamber for a cooling liquid and connecting with the chamber in said walls, a member provided with outwardly tapering nozzles interposed between said walls and said member, and a unit revolv-



able in alignment with said nozzles and positioned between said walls and said member, and having alternately positioned channels adapted to convey a gas from the inlet in said member, and to convey a liquid from said first chamber, and to discharge said gas and liquid in alternately positioned quantities into the respective nozzles of said interposed member.

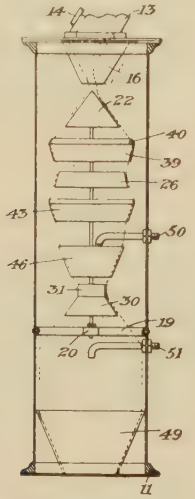
1,415,829. THERMOSTATIC CIRCUIT CLOSER FOR LAUNDRY IRONS. ARTHUR ERNEST FITZGERALD, Wellington, New Zealand. Filed July 16, 1919. Serial No. 311,287. 3 Claims. (Cl. 200—137.)

1. In an electric laundry iron, a coiled operating member forming part of the circuit by which the iron is heated, a well of non-conducting and heat-resisting material containing said coiled member, a contact secured to the inner end of said coil, a bracket secured on and insulated from the base of said iron, a contact mounted on said bracket and adapted to be engaged by the contact on said coiled member, and means engaging the outer end of the coiled member for adjusting it within said well.

1,415,830. AGITATOR. MICHAEL M. FREDEL and WILLIAM BOSANKO, Brooklyn, N. Y. Filed Jan. 6, 1922. Serial No. 527,475. 4 Claims. (Cl. 259—4.)

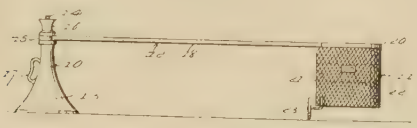
1. An agitator in which the material to be treated is caused to assume a hollow completely closed wall formation, comprising a delivery hopper, a plurality of conical

deflectors over which the maetrial passes, a plurality of conical deflectors through which the material passes, and



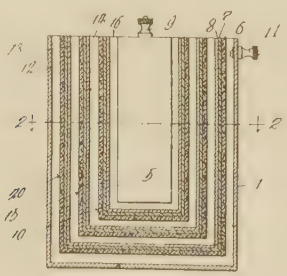
an inturned flange providing an inner curved surface associated with one of the said deflectors through which the material passes.

1,415,831. INFANT'S MERRY-GO-ROUND. HARRY A. FREDERICKS, Port Angeles, Wash. Filed Feb. 10, 1920. Serial No. 357,498. 1 Claim. (Cl. 46—27.)



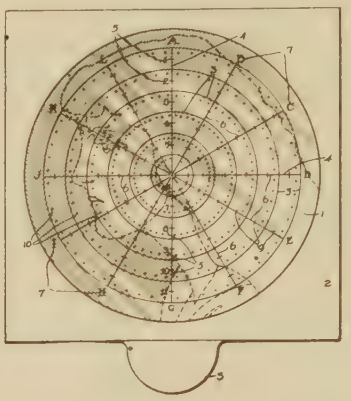
An infant's perambulator consisting of an anchoring standard formed with a weighted base adapted by reason of its weight to maintain itself in position wherever placed on a flat surface, the said standard being provided with a hand grip to permit its removal and being also provided with an up-standing spindle on its top, a radius frame formed at one end with an eye engaging said spindle and adapted for turning movement thereon, a cap nut threadingly engaged with the spindle to prevent movement of the radius rod upwardly in a vertical plane, the top of the standard preventing such movement of the frame downwardly, and a wheel supported car connected at the outer end of the radius frame.

1,415,832. BATTERY. FRANK GARACA, Cleveland, Ohio. Filed Oct. 15, 1918. Serial No. 258,164. 6 Claims. (Cl. 204—54.)



1. A battery of the class described comprising a metal casing containing water, and means therein whereby electricity is generated in said battery on the application of heat to the casing.

1,415,833. PERSPECTOSCOPE. HENRIETTA GINSBURG, El Paso, Tex. Filed Jan. 5, 1921. Serial No. 435,203. 2 Claims. (Cl. 33—1.)

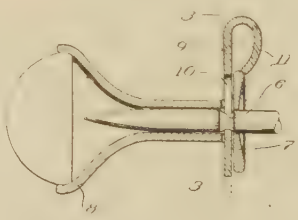


1. A device of the character stated comprising, a transparent member having a series of concentrically arranged circular lines thereon, and having radially disposed lines intersecting said circular lines and having marks indicating radial directions arranged on the circular lines between the radial lines, said device adapted to be used in connection with a sheet of drawing material similarly marked.

1,415,834. LOOSE-LEAF BINDER. LLOYD E. GOODYEAR, Cedar Rapids, Iowa. Filed Dec. 16, 1918. Serial No. 267,071. 2 Claims. (Cl. 129—24.)

2. In a loose leaf binder, a supporting tablet, catch plates forming bearings secured to the tablet, and a leaf holder comprising a spring shaft mounted in the bearings and provided with a pair of terminal arches whose free ends are adapted to releasably engage the catch plates, the arches being released by twisting one of them to spring the shaft and disengage the arch and sliding the shaft to disengage the other prong.

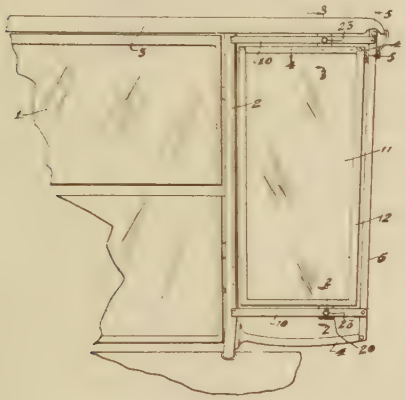
1,415,835. PIN-POINT PROTECTOR. JAMES C. GORDON, Calgary, Alberta, Canada. Filed Sept. 6, 1921. Serial No. 498,782. 2 Claims. (Cl. 24—155.)



1. A hat pin having an annular depression adjacent to its pointed end and a protector for the point of the pin, including a socket member in which the said point is received, said socket having its outer end provided with a flange and having a transverse opening therethrough inward of the flange, a plate slidable through the opening having a key-hole slot therethrough whereby, when the plate is brought to one position the pin may be inserted through the enlarged passage thereof to enter the socket and when brought to another position the walls of the restricted passage in the key-hole slot of the plate will engage the shoulders provided by the annular depression

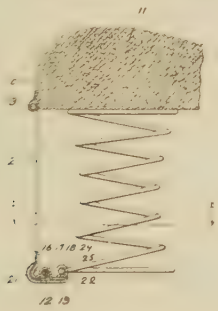
in the pin, and said plate having on one of its ends an inwardly rounded spring lip designed, when the plate is in its last mentioned position to rest on the outer edge of the flange to hold the said plate in pin locking position.

1,415,836. WIND DEFLECTOR. JOSEPH P. GRAY, Los Angeles, Calif. Filed June 11, 1920. Serial No. 388,161. 3 Claims. (Cl. 296—84.)



1. The combination with a windshield, of supporting means extending from said windshield, a frame, a wind deflector received in said frame, rods extending along the upper and lower ends of said frame, pivot pins projecting from said rods beyond the upper and lower edges of said deflector intermediate of its side edges, bearing lugs comprising a bearing portion adapted to receive said pins, a U-shaped clamping member projecting forwardly from said bearing portion, and adapted to fit said supports, a stud in said U-shaped member adapted to hold said clamping member to said supports.

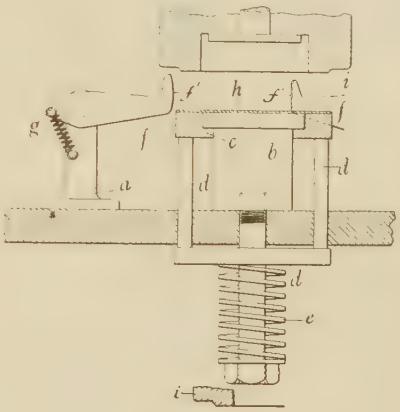
1,415,837. SEAT SPRING. CHARLES F. GREEN, Defiance, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Nov. 18, 1918. Serial No. 262,991. 11 Claims. (Cl. 155—180.)



1. In a device of the class described, a cushion having a skirt portion, a spring unit having a base frame adapted to be positioned within said skirt, and a supporting frame comprising a plurality of plates encircling said base frame and clamping said skirt therebetween, one of said plates being provided with integral members adapted to engage the base frame and retain the same in position relative to the skirt.

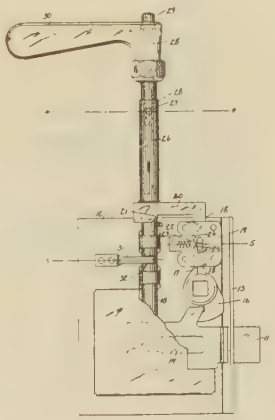
1,415,838. PRESS FOR OPERATING ON METAL SHEETS. HARRY ALBERT GRIFFITHS, Birmingham, and RICHARD HANSON GRIFFITHS, Sutton Coldfield, England. Filed Aug. 23, 1921. Serial No. 494,534. 6 Claims. (Cl. 113—38.)

1. In presses for operating on metal sheets or blanks, the combination with a fixed tool, of a stop pivotally mounted alongside of the said tool and having a stop portion extending into close proximity to the edge of said tool, means for automatically moving the stop to a position where the stop portion projects beyond the operative



surface of said tool, and a second tool movable toward and away from the fixed tool and engageable with said stop portion for gradually moving the latter over the edge of the fixed tool when the movable tool is moving toward said fixed tool.

1,415,839. LATCH FOR VEHICLE DOORS. RICHARD V. KAIMER, New Haven, Conn., and CHARLES E. RITTER, Chicago, Ill., assignors to The English & Mersick Co., New Haven, Conn., a Corporation. Filed May 17, 1921. Serial No. 470,366. 3 Claims. (Cl. 292—169.)

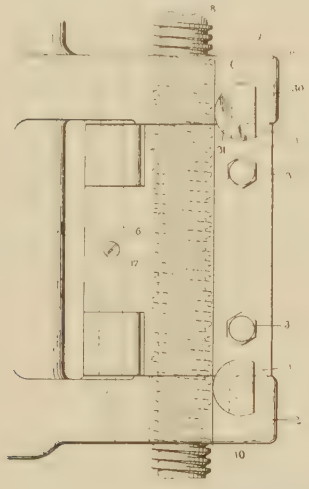


1. In a latch for vehicle doors, the combination with a latch-bolt of a vertically-arranged rotatable spindle for moving the same, a roll-back by which the latch-bolt may be moved, said roll-back formed with a stop, a vertically-movable bolt adapted to be projected into the path of said stop, and means operated by the turning of said spindle for lifting said bolt.

1,415,840. SECTIONAL INSPECTIVE NUT. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 8, 1921. Serial No. 483,231. 8 Claims. (Cl. 74—40.)

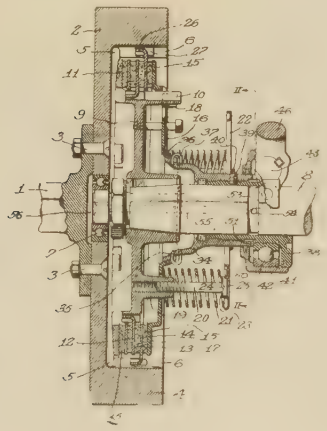
1. A machine-tool combining an upwardly movable frame-element; a lifting-screw therefor; a nut operating

in conjunction with said screw, said nut being constructed of two separable sections; and means for preventing the



one section from being withdrawn from said screw without first locking the other section against withdrawal.

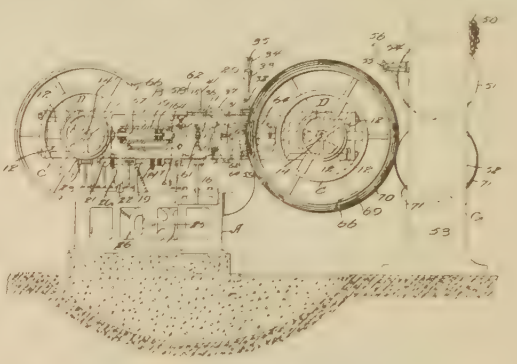
1,415,841. DISK CLUTCH. CHARLES G. SEITZ, Detroit, Mich. Filed Sept. 24, 1920. Serial No. 412,453. 14 Claims. (Cl. 192—69.)



4. A friction disk for clutches consisting of an annular body of sheet metal having a radially projecting lug, a portion of the lug being bent at an angle to the body, and another portion bent to form a wing lying at right angles to the plane of the lug.

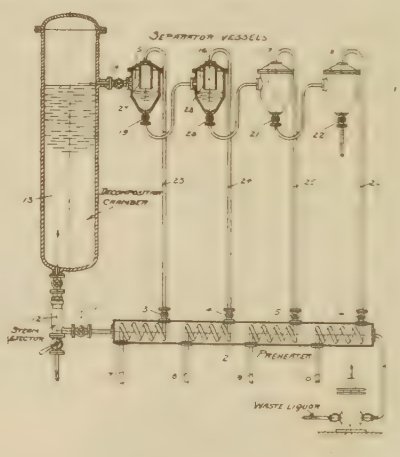
1,415,842. APPARATUS FOR BUILDING TIRES OF THE SOLID TYPE. ROBERT W. SNYDER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 3, 1918. Serial No. 256,689. 12 Claims. (Cl. 154—9.)

1. The combination with a calender for forming a strip of material, of mechanism for winding the strip therefrom upon tire rims comprising, means adapted to support a plurality of rims for rotational movement thereon, said means being operable to revolve the rims about a common



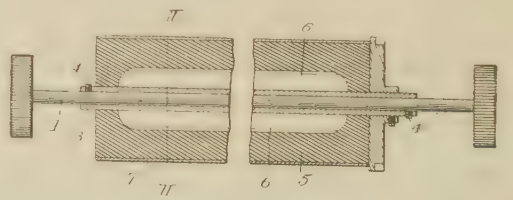
horizontal axis to successively effect rotation of each rim through movement of a roll of the calender.

1,415,843. CONTINUOUS PROCESS OF DECOMPOSING WASTE SULPHITE LIQUOR. KRISTOFFER MÖRCH, Christiania, Norway. Filed May 10, 1920. Serial No. 380,413. 11 Claims. (Cl. 252.)



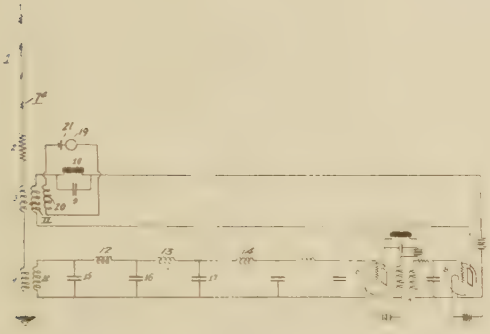
1. The process of decomposing waste sulphite liquor which comprises continuously leading waste sulphite liquor through a container and regulating the temperature and pressure in said container so as to cause decomposition of the said liquor when passing through the said container.

1,415,844. NOISE-REDUCING TYPEWRITER PLATEN. WILLIAM REDFORD MULOCK, Winnipeg, Manitoba, Canada. Filed Sept. 3, 1921. Serial No. 498,270. 6 Claims. (Cl. 197—147.)



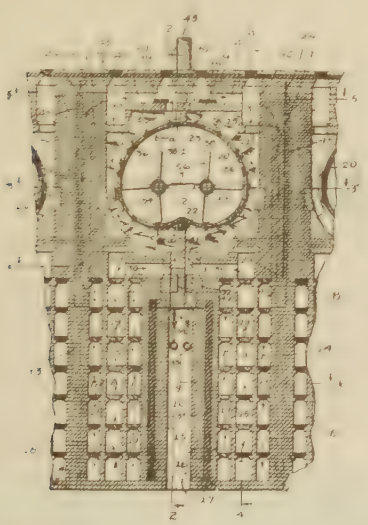
1. In a typewriter platen, the combination with a supporting member, of a thin surface member of hard material, and a soft rubber core extending from said supporting member to said surface member.

1,415,845. SELECTIVELY OPPOSING IMPEDANCE TO RECEIVED ELECTRICAL OSCILLATIONS. MICHAEL I. PUPIN, Norfolk, Conn., and EDWIN H. ARMSTRONG, Yonkers, N. Y. Filed Feb. 10, 1916. Serial No. 77,437. Renewed Nov. 6, 1920. Serial No. 422,365. 7 Claims. (Cl. 250—20.)



5. A receiving conductor offering high initial resistance to received electrical wave energy, a resistance compensator in energy-transferring relation thereto and excited by wave energy received thereby, and means for delaying the compensating action for a time sufficient substantially to prevent its full development with respect to received electrical disturbances of short duration.

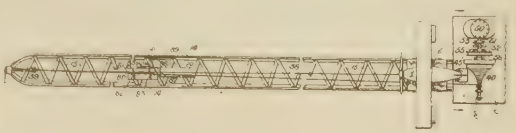
1,415,846. FURNACE-RETORT. CHARLES HOWARD SMITH, Short Hills, N. J., assignor to International Coal Products Corporation, Richmond, Va., a Corporation of Virginia. Filed May 9, 1918. Serial No. 233,422. 10 Claims. (Cl. 202—9.)



1. A furnace-retort provided with a paddle shaft extending longitudinally of and operating in a longitudinally extending retort chamber provided with a combustion chamber divided by vertical transversely extending partitions, and by a vertical longitudinally extending partition along the lower portion of the retort so as to provide combustion flues.

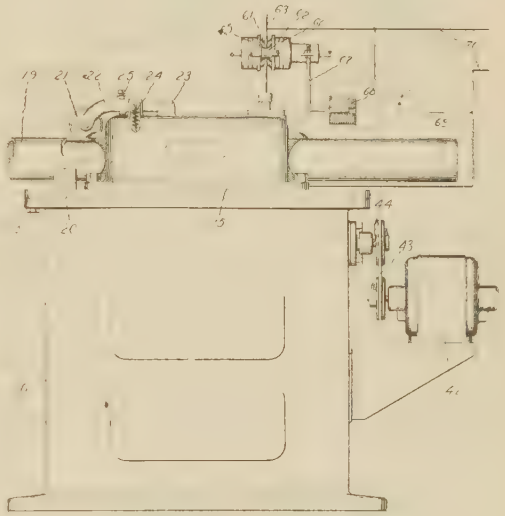
1,415,847. LAUNCHING MECHANISM FOR AEROPLANES. ELMER A. SPERRY, Brooklyn, N. Y. Filed Aug. 8, 1918. Serial No. 248,834. 18 Claims. (Cl. 244—2.)

1. In a launching device for aeroplanes, the combination with a car, means for detachably securing the aeroplane to the car, a fly wheel, means for driving the same, a normally stationary cable coupled to said car, a cable



drum and a clutch connecting said drum and fly wheel for accelerating the drum and car.

1,415,848. TUBE-WELDING MACHINE. JOHN W. WHITE, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 25, 1920. Serial No. 406,019. 15 Claims. (Cl. 219—6.)



1. In tube welding apparatus the combination of a base having a lubricant reservoir in the upper portion thereof, a table secured to the base above said reservoir, a plurality of rolls mounted upon said table, and driving means for said rolls carried by said table and arranged in said reservoir.

1,415,849. METHOD OF PRODUCING GELLING METAL ALGINATES AND PRODUCT DERIVED THEREFROM. BERNARD F. ERDAHL, Duluth, Minn. Filed Sept. 30, 1920. Serial No. 413,932. 25 Claims. (Cl. 252.)

1. The method of producing a gelling metal-alginate comprising treating a metal compound with sodium alginate eliminating the impurities from the reaction-product, and thereafter adding a substance capable of transforming the reaction-product into a colloidal alginate-metal-gel, all the reactions being performed in the cold.

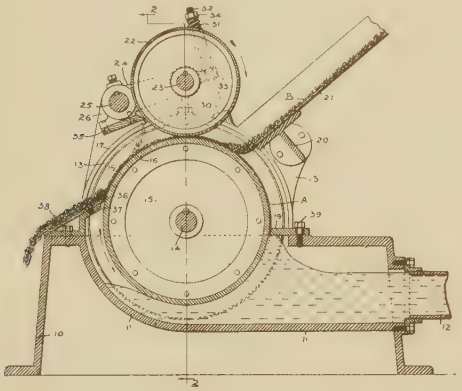
1,415,850. ALGINATE COMPOSITION AND ARTICLE. BERNARD FEZLING ERDAHL, Duluth, Minn. Filed Dec. 5, 1921. Serial No. 520,017. 31 Claims. (Cl. 106—39.)

1. As a new composition of matter, a cellular or pervious material carrying a filling or film resulting from treatment with a colloidal-alginate-gel.

1,415,851. METHOD AND MEANS FOR MIXING LIQUIDS WITH DRY MATERIAL. THORWALD B. PETERSON, Plattsmouth, Nebr., assignor to Lee C. Sharp, Plattsmouth, Nebr. Filed Aug. 19, 1921. Serial No. 493,607. 8 Claims. (Cl. 99—2.)

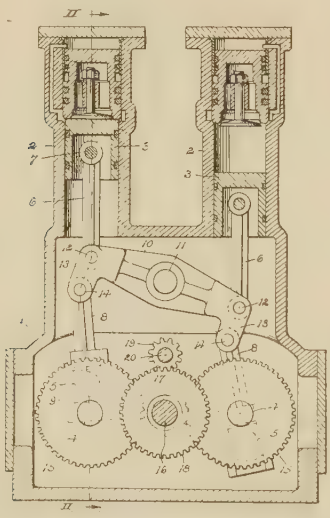
7. Mechanism for mixing a liquid with pulverulent material, comprising in combination a horizontal rotating

cylinder having a smooth peripheral surface, a liquid receptacle into which said cylinder dips whereby to receive upon the surface thereof a coating of the liquid, a stationary member positioned adjacent to the ascending side of the cylinder to strike from the surface the excess of liquid and gage to uniformity the thickness of the coating upon the surface, means for applying dry material at the upper portion of the cylinder, and means at the descending side of the cylinder for striking all of the material therefrom.



8. The method of mixing a liquid with pulverulent material, consisting in applying a uniform coating of the liquid to a portion of a smooth endless continuously moving surface, then applying a layer of the pulverulent material over a successive portion of the liquid-coated surface, and finally dislodging all of the material from the surface at a further successive portion thereof.

1,415,852. FLUID COMPRESSOR. CHARLES B. VAN HORN, Detroit, Mich. Filed June 30, 1919. Serial No. 307,609. 7 Claims. (Cl. 230—27.)



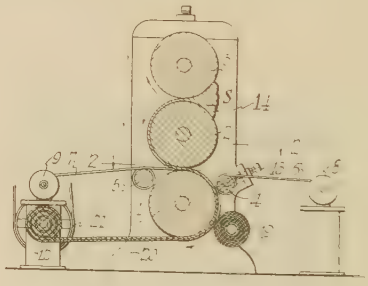
5. The combination of a pair of vertically disposed cylinders spaced apart and in parallel relation, pistons in said cylinders, cranks for operating the pistons, a connecting rod and a pitman for connecting each crank with its piston, and a rocker bar pivotally supported intermediate its ends and to the ends of which the adjacent ends of the rods and pitmen are pivotally attached, the axis of the pivotal attachment of the connecting rods to the ends of said rocker bar being in the plane of the axis of the pivotal support of said bar and the plane of the axis of the pivotal attachment of the pitmen to said bar, being below and at a distance from said plane passing through the axis of the pivotal support of said bar.

REISSUES.

15,348. CLOCK. JOSEPH F. DUNN, New York, N. Y. Filed Feb. 27, 1922. Serial No. 539,808. Original No. 1,270,706, dated June 25, 1918, Serial No. 855,619, filed Aug. 7, 1914. 4 Claims. (Cl. 58—16.)

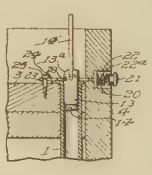
4. In an alarm clock, an alarm setting and releasing mechanism, an alarm dial, an alarm hour indicator, an alarm minute indicator, both concentrically mounted on the alarm dial, and means for causing the minute indicator to move in time relation with the setting of the hour indicator at a speed of twelve revolutions to one.

15,349. APPARATUS FOR MAKING STRAND FABRIC. WILLIAM JAMESON, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Jan. 7, 1922. Serial No. 527,774. Original No. 1,327,826, dated Jan. 13, 1920, Serial No. 268,633, filed Dec. 28, 1918. 10 Claims. (Cl. 154—1.)



5. In an apparatus of the character indicated, in combination, a pair of contiguous rolls coacting to work out a sheet of rubber between them, a grooved roller constructed and arranged to contact with the freshly-worked sheet to guide thereagainst a series of parallel strands, and means to force the strands into the freshly-worked sheet.

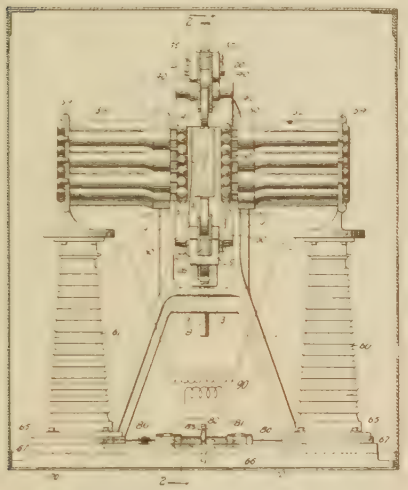
15,350. DROP-COVER CHECK. GEORGE E. RUDNICK, Boston, Mass., assignor to Victor Talking Machine Company, Camden, N. J., a Corporation of New Jersey. Filed Mar. 13, 1922. Serial No. 543,512. Original No. 1,333,939, dated Mar. 16, 1920, Serial No. 283,320, filed Mar. 18, 1919. 10 Claims. (Cl. 217—60.)



1. Means for checking the closing movement of a cabinet cover comprising a cylinder having a valve, a plunger

in the cylinder, a catch to engage the plunger and hold it in outward position, and a supporting member connecting the plunger with the cover.

15,351. APPARATUS FOR TREATING ARTICLES BY DISRUPTIVE CONDUCTION. FRANKLIN S. SMITH, Philadelphia, Pa. Filed Apr. 6, 1922. Serial No. 550,857. Original No. 1,399,161, dated Dec. 6, 1921, Serial No. 285,485, filed Mar. 27, 1919. 4 Claims. (Cl. 175—311.)



1. In an apparatus of the character described, the combination of a plurality of sets of elastors and electrodes supported in opposing relation with respect to each other, posts for supporting each set of elastors, means for connecting the opposing posts supporting the said elastors, means for simultaneously adjusting the said opposing posts toward or from each other, an endless conveyer for conveying articles to be treated between the said opposing sets of electrodes, said conveyer comprising portions which are arranged in parallel relation with respect to each other, said portions being situated intermediate the said electrodes, and means for moving one of said portions toward or from the other to vary the distance between the same.

15,352. SHINGLE. EDWARD R. SNYDER, East Orange, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Mar. 13, 1922. Serial No. 543,509. Original No. 1,365,800, dated Jan. 18, 1921, Serial No. 244,209, filed July 10, 1918. 15 Claims. (Cl. 108—8.)

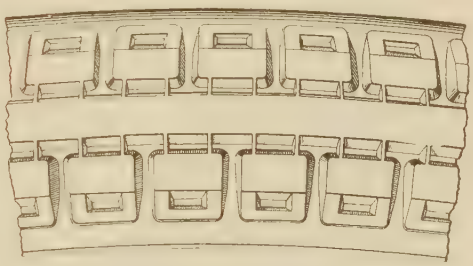
1. A shingle of the class described having one end only covered on one side with a wear-resisting material, and covered on the other side of the same end with a different sort of wear-resisting material.

DESIGNS.

60,932. TOY. JOSEPH G. BECKER, Pittsburgh, Pa. Filed Feb. 7, 1921. Serial No. 443,276. Term of patent 3½ years.

The ornamental design for a toy as shown.

60,933. PNEUMATIC-TIRE TREAD. HARRY S. BERLIN, Springfield, Ohio, assignor to The Victor Rubber Company, Springfield, Ohio, a Corporation of Ohio. Filed Sept. 26, 1921. Serial No. 503,404. Term of patent 14 years.



The ornamental design for a pneumatic tire tread, as shown.

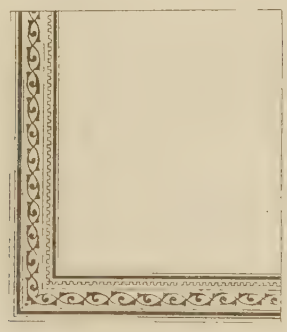
60,934. FLAG OF THE ETHIOPIAN RACE. JAMES CANNON, Long Branch, N. J. Filed Aug. 21, 1920. Serial No. 405,176. Term of patent 14 years.

The ornamental design for a flag of the Ethiopian race, as shown.

60,935. LACE. JOHN DRAYCOTT, Pawtucket, R. I., assignor to Richmond Lace Works, Alton, R. I., a Corporation of Maine. Filed Jan. 30, 1922. Serial No. 446. Term of patent 3½ years.

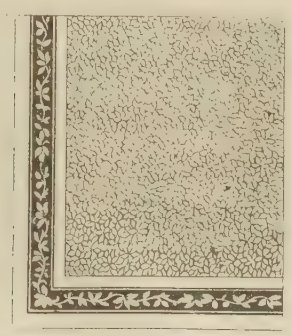
The ornamental design for lace, as shown.

60,936. RUG. GUSTAVE M. FAUSER, New York, N. Y., assignor to Model Mills Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 30, 1922. Serial No. 426. Term of patent 7 years.



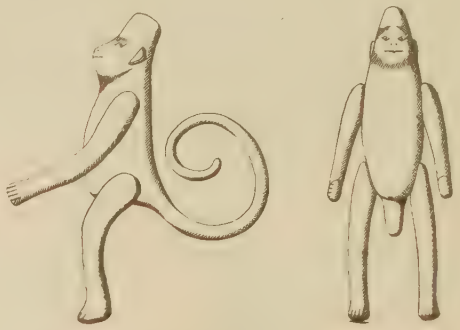
The ornamental design for a rug, as shown.

60,937. RUG. GUSTAVE M. FAUSER, New York, N. Y. assignor to Model Mills Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 30, 1922. Serial No. 427. Term of patent 7 years.



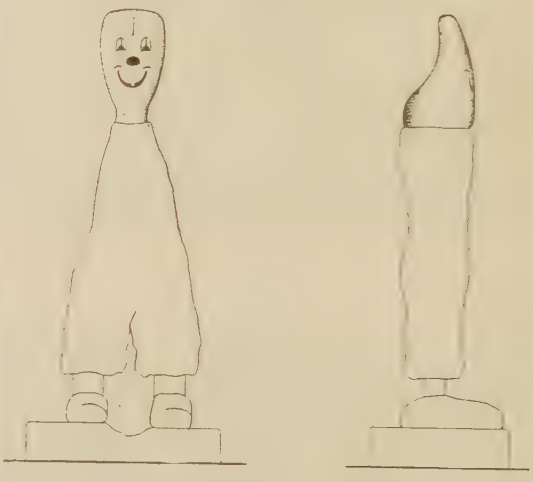
The ornamental design for a rug, as shown.

60,938. TOY. ALFRED GERBENSKY, Okauchee, Wis. Filed Sept. 1, 1921. Serial No. 497,716. Term of patent 14 years.



The ornamental design for a toy as shown and described.

60,939. DOLL. CHARLOTTE GREENHOOD, Berkeley, Calif. Filed Nov. 9, 1921. Serial No. 514,104. Term of patent 3½ years.

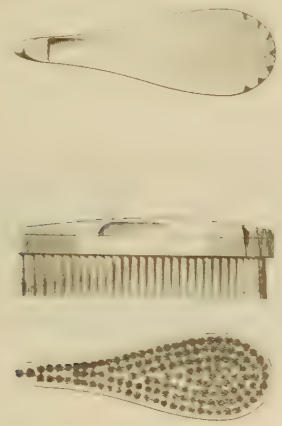


The ornamental design for a doll, as shown.

60,940. DOLL. CHARLOTTE GREENHOOD, Berkeley, Calif. Filed Nov. 9, 1921. Serial No. 514,105. Term of patent 3½ years.

The ornamental design for a doll, as shown.

60,941. BRUSH. ALFRED L. KOHN, New York, N. Y. Filed Dec. 7, 1921. Serial No. 520,755. Term of patent 14 years.

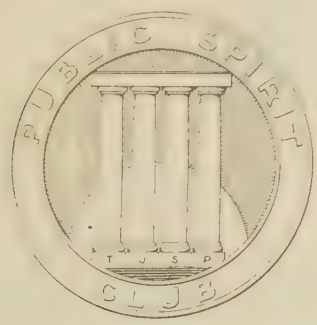


The ornamental design for a brush as described and shown.

60,942. BOY'S SUIT. FRANCES MACKAY, Norwalk, Conn. Filed Oct. 20, 1921. Serial No. 509,181. Term of patent 14 years.

The ornamental design for a boy's suit, as shown.

60,943. EMBLEM, BADGE, BUTTON, PIN, OR ARTICLE OF A SIMILAR NATURE. GEORGE B. MONK, San Francisco, Calif. Filed Dec. 7, 1921. Serial No. 520,751. Term of patent 3½ years.

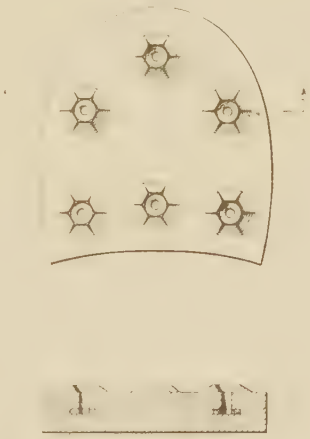


The ornamental design for an emblem, badge, button, pin or article of a similar nature, as shown.

60,944. STREET LAMP. JUSTUS F. NE PAGE, Seattle, Wash. Filed Aug. 5, 1921. Serial No. 490,138. Term of patent 3½ years.

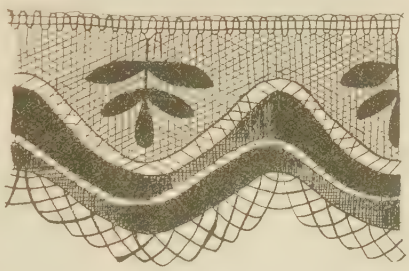
The ornamental design for a street lamp as shown.

60,945. RESILIENT HEEL LIFT. LAURENCE M. OAKLEY, Trenton, N. J., assignor to Essex Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Mar. 10, 1921. Serial No. 451,314. Term of patent 14 years.



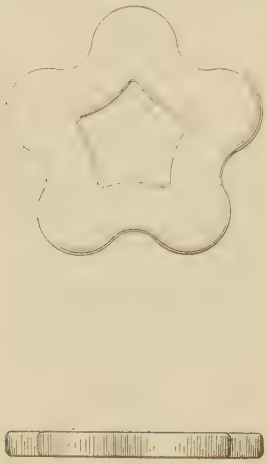
The ornamental design for a resilient heel lift, as shown.

60,946. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Feb. 3, 1922. Serial No. 518. Term of patent 7 years.



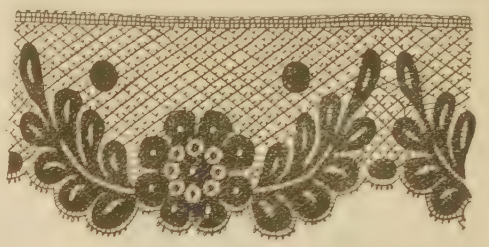
The ornamental design for lace substantially as shown.

60,947. TEETHING RING. JACOB N. PATRICH, New York, N. Y. Filed July 13, 1921. Serial No. 484,499. Term of patent 3½ years.



The ornamental design for a teething ring, substantially as shown.

60,948. LACE. HANS ALBERT PHILIPS, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Feb. 3, 1922. Serial No. 512. Term of patent 7 years.



The ornamental design for lace substantially as shown.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 9, 1922.

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 114,670. (CLASS 17. TOBACCO PRODUCTS.) GEO. FEHL BLUE RIBBON CIGAR CO., St. Louis, Mo. Filed Dec. 16, 1918.

BLUE RIBBON

Particular description of goods.—Cigars.
Claims use since Nov. 22, 1875.

Ser. No. 124,556. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) TAYLOR AND ATKINSON, Washington, D. C. Filed Nov. 4, 1919.

The use of the word "Soap" and the printed matter appearing on the banner portion of the mark is hereby formally disclaimed except when used in connection with the other features of the mark.
Particular description of goods.—Soap.
Claims use since July 15, 1919.

Ser. No. 126,803. (CLASS 38. PRINTS AND PUBLICATIONS.) INTERNATIONAL FEDERATION OF TECHNICAL ENGINEERS', ARCHITECTS', AND DRAFTSMEN'S UNIONS, Washington, D. C. Filed Jan. 5, 1920.

The words "Union Label" being disclaimed apart from the mark as shown.
Particular description of goods.—Pamphlets, Books, Circulars, Prints, Drawings, Blue Prints, Tracings, and Specifications.
Claims use since Nov. 21, 1919.

Ser. No. 128,283. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) SIMPLEX AUTOMOBILE COMPANY, INC., New York, N. Y. Filed Feb. 11, 1920.

Particular description of goods.—Automobiles.
Claims use since prior to Jan. 2, 1913.

Ser. No. 128,943. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) GEORGE RINGLER & CO., New York, N. Y. Filed Feb. 26, 1920.

Portaringco

Particular description of goods.—Nonintoxicating Maltless Beverage Containing Less Than One-half of One Per Cent of Alcohol by Volume.
Claims use since December, 1919.

Ser. No. 130,254. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) AARON-FLEISCHER SILK CO., St. Louis, Mo. Filed Mar. 27, 1920.

No exclusive claim being made to the word "Silks" apart from the mark shown. The mark comprises a cross enclosed within spaced concentric circles crosswise upon both members of the cross, as shown, its middle letter "l" being common to both cross members.
Particular description of goods.—Silks, Both in the Piece and in the Bolt.
Claims use since Jan. 1, 1920.

Ser. No. 133,490. (CLASS 38. PRINTS AND PUBLICATIONS.) PALMER PHOTOPLAY CORPORATION, Los Angeles, Calif. Filed June 9, 1920.

PALMER PLAN MESSENGER

PALMER PHOTOPLAY INSTITUTE

The words "Palmer Photoplay Institute Palmer Plan of Photoplay Writing" do not form a part of the registration sought apart from the mark shown in the drawing.
Particular description of goods.—Books, Pamphlets, and Circulars Devoted to Photoplay Information and Instruction in Photoplay Writing.
Claims use since Oct. 10, 1919.

Ser. No. 133,736. (CLASS 39. CLOTHING.) IDEAL BATH ROBE CO., INC., Brooklyn, N. Y. Filed June 15, 1920.

BABIES IDEAL

Consists only of the words "Baby's Ideal," as shown in the drawing.
Particular description of goods.—Infants' Bath Robes.
Claims use since May 10, 1920.

Ser. No. 134,138. (CLASS 40. FANCY GOODS, FURNISHING AND NOTIONS.) MULLER AND PHIPPS (ASIA) LIMITED, New York, N. Y. Filed June 24, 1920.

MOGUL

PHILOLAC

Particular description of goods. Fermented Milk to be Used for Dietetic and Therapeutic Uses and Purposes.
Claims use since July 7, 1921.

Ser. No. 156,406. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) PASSAIC PRINT WORKS, Passaic, N. J. Filed Dec. 7, 1921.

LOTUS

Particular description of goods.—Cotton Piece Goods.
Claims use since January, 1882.

Ser. No. 156,409. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) PASSAIC PRINT WORKS, Passaic, N. J. Filed Dec. 7, 1921.

ORIOD

Particular description of goods.—Cotton Piece Goods.
Claims use since January, 1884.

Ser. No. 156,463. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE PURABRAND PRODUCTS CO., Pleasant Hill, Ohio. Filed Dec. 8, 1921.

DIGESTONE

Particular description of goods.—Medicine for the Treatment of Biliousness, Headache, Indigestion, Nausea, Dizziness, Heartburn, Bloating, Stomach Ache, Gassy Stomach, and Sour Stomach.
Claims use since Nov. 16, 1921.

Ser. No. 156,488. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) GREEN FOUNDRY & FURNACE WORKS, Des Moines, Iowa. Filed Dec. 9, 1921.

COLONIAL

Particular description of goods.—Furnaces for Heating Buildings.
Claims use since October, 1907.

Ser. No. 156,509. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DOUGLAS S. WILSON, Midville, Ga. Filed Dec. 9, 1921.

The picture of the person forming a feature of the mark represents a likeness of the applicant, no claim being made to the words, "Wilson's Special Tonic," apart from the mark shown.

Particular description of goods.—Preparation for Treatment of Bots, Colic, Distemper, and Fever for Horses and Mules.
Claims use since Oct. 25, 1921.

Ser. No. 156,518. (CLASS 38. PRINTS AND PUBLICATIONS.) EDWIN CALLOW, Washington, D. C. Filed Dec. 10, 1921.

TONY THE BARBER

Particular description of goods.—Humorous Newspaper Articles and Humorous Circulars Issued from Time to Time.
Claims use since May, 1913.

Ser. No. 156,623. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DUNLAP MEDICINE CO., Columbus, Ohio. Filed Dec. 13, 1921.

The portrait shown is that of C. H. Dunlap, deceased.
Particular description of goods.—Medicinal Preparation for Catarrh in the Head and Ear, Coughs, Colds, Croup, Diphtheria, Sore Eyes, and Sores of All Kinds; Asthma, Bronchitis, Consumption, Cuts and Burns, and All Diseases of the Throat and Lungs.
Claims use since 1881.

CARUSO

The name "Caruso," also portrait of Enrico Caruso, deceased, has been used continuously.
Particular description of goods.—Olive Oil.
Claims use since July 1, 1921.

Ser. No. 157,048. (CLASS 38. PRINTS AND PUBLICATIONS.) SHAPLEIGH HARDWARE COMPANY, St. Louis, Mo. Filed Dec. 22, 1921.

SHAPLEIGH FREE PRICE SERVICE

Particular description of goods.—Catalogue Published from Time to Time.
Claims use since November, 1921.

Ser. No. 157,171. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE PHYTAMIN CORPORATION, Wilmington, Del., and New York, N. Y. Filed Dec. 27, 1921.

PHYTAMIN

Particular description of goods.—Medicinal Food Product Comprising Vitamins, Organic Phosphorus, Organic Iron, and Other Nutrition Salts for Use as a General Tonic.
Claims use since Dec. 14, 1921.

Ser. No. 157,172. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE PHYTAMIN CORPORATION, Wilmington, Del., and New York, N. Y. Filed Dec. 27, 1921.

Particular description of goods.—Medicinal Food Product Comprising Vitamins. Organic Phosphorus, Organic Iron, and Other Nutrition Salts for Use as a General Tonic.
Claims use since Dec. 14, 1921.

Ser. No. 157,177. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BLAIR B. REILLY, doing business as Cyclone Rat Destroyer Company, Audubon, Iowa. Filed Dec. 27, 1921.

CYCLONE

Particular description of goods.—Rat, Mice, and Squirrel Poison.
Claims use since Nov. 29, 1921.

Ser. No. 157,204. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE AMERICAN CHEMICAL WORKS, San Francisco, Calif. Filed Dec. 28, 1921.

KEMITE

Particular description of goods.—Noble Metal Precipitants.
Claims use since Nov. 23, 1921.

Ser. No. 157,227. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ELLSWORTH LOESCH, doing business as Bowelax Co., Cleveland, Ohio. Filed Dec. 28, 1921.

Bowelax
LAXATIVE TABLETS

No claim being made to the exclusive use of the words "Laxative Tablets" apart from the mark shown.
Particular description of goods.—Laxative Tablets.
Claims use since June 3, 1920.

Ser. No. 157,232. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) PARKER BROTHERS, Salem, Mass. Filed Dec. 28, 1921.

PIT

Particular description of goods.—Card Games.
Claims use since about Feb. 1, 1903.

Ser. No. 157,246. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHARLES D. ABSHEAR, doing business as National Laboratories, San Antonio, Tex. Filed Dec. 29, 1921.

Particular description of goods.—Liver Medicine in the Form of Capsules.
Claims use since Dec. 1, 1916.

Ser. No. 157,267. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ELECTRICAL & SPECIALTY SUPPLY CO., Chicago, Ill. Filed Dec. 29, 1921.

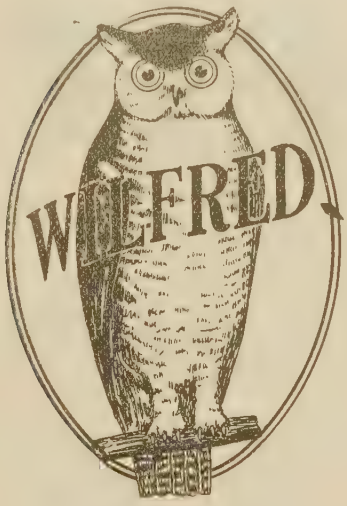
MUSHROOM

Particular description of goods.—Illuminated Traffic Markers for Streets and Roads.
Claims use since Apr. 20, 1921.

Ser. No. 157,283. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DR. SMITH'S STOCK-VIGOR REMEDIES COMPANY, Atlanta, Ga. Filed Dec. 29, 1921.

The picture is that of Dr. R. B. Smith, no claim being made to the words "Stock Vigor" apart from the mark shown.
Particular description of goods.—Stock-Vigor Tonic. Stock-Vigor Laxative, Poultry Tonic, and a General Tonic and Blood Purifier for Stock, Horses, Dogs, and Poultry.
Claims use since Dec. 1, 1921.

Ser. No. 157,290. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAMS & FREDERICK INC., New York, N. Y. Filed Dec. 29, 1921.



Particular description of goods.—Toilet Preparations—viz, Nail-Polish Liquid, Astringent Face Mask, Cuticle Remover, Liquid Rouge, Hair Whitener, Brilliantine, Nail White, Acne Cream, Acne Lotion, Skin Bleach, Bleach and Freckle Cream, Special Tissue Builder, Nail-Polish Paste, Cleansing Cream, Vanishing Cream, Curling Fluid, Cuticle Cream, Scalp Lotion, Almond Lotion, Hair Color Restorer, Astringent Tonic, and Face Lotion.
Claims use since Oct. 20, 1921.

Ser. No. 157,296. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN J. BLACKMAN, doing business as Pepsol Company, Atlantic City, N. J. Filed Dec. 30, 1921.

Particular description of goods.—Tooth Paste.
Claims use since Oct. 10, 1921.

Ser. No. 157,318. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) INDEPENDENT SALT COMPANY, New York, N. Y. Filed Dec. 30, 1921.

Particular description of goods.—Salt.
Claims use since 1900.

Ser. No. 157,321. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JULIAN W. LYON & CO., New York, N. Y. Filed Dec. 30, 1921.

Particular description of goods.—Thymol, Menthol, Chlorophyl, Essential Oils Suitable for the Production of Perfumes, and Synthetic and Aromatic Chemicals Suitable for Perfuming Purposes.
Claims use since Nov. 25, 1921.

Ser. No. 157,323. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LA SOCIETE DES PRODUITS CHIMIQUES COIGNET, Paris, France. Filed Dec. 30, 1921.

No claim being made to the words "Paris" and "Lyon" apart from the mark shown in the drawing.
Particular description of goods.—Phosphorus.
Claims use since Mar. 7, 1890.

Ser. No. 157,358. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) COHN-HALL-MARX CO., New York, N. Y. Filed Dec. 31, 1921.

No claim being made to the exclusive use of the word "Crepe" apart from the mark shown in the drawing.

Particular description of goods.—Cotton Piece Goods.

Claims use since Dec. 21, 1921.

Ser. No. 157,401. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) MOSES ASHCROFT, trading as Moon Chuckle Products Co., Maywood and Chicago, Ill. Filed Jan. 3, 1922.

Particular description of goods.—Nonalcoholic, Noncereal, Maltless Beverage Sold as a Soft Drink and Sirup for Making the Same.

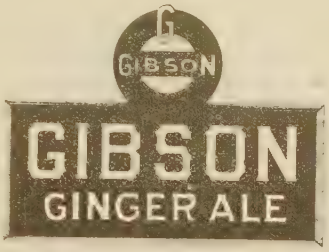
Claims use since Jan. 1, 1917.

Ser. No. 157,403. (CLASS 38. PRINTS AND PUBLICATIONS.) AUDIT BUREAU OF CIRCULATIONS, Chicago, Ill. Filed Jan. 3, 1922.

Particular description of goods.—Statements, Auditors' Reports and Bulletins Issued Periodically.

Claims use since November, 1920.

Ser. No. 157,420. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) WILLIAM J. GIBSON, trading as Crystal Soda Water Works, Uniontown, Pa. Filed Jan. 3, 1922.



No claim being made to the words "Ginger Ale" apart from the mark shown.

Particular description of goods.—Ginger Ale, a Non-alcoholic, Noncereal, Maltless Beverage Sold as a Soft Drink and Sirup for Making the Same.

Claims use since Dec. 1, 1919.

Ser. No. 157,424. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) HAMBURGER FACTORIES INC., Chicago, Ill. Filed Jan. 3, 1922.

OPTIMO

Particular description of goods.—Safety Razors, Safety Blades; Combination Tools Including Hammers, Saws, Awls, Tweezers, Corkscrews, Screw Drivers, Tack Pullers; Pocketknives, and Scissors.

Claims use since Jan. 1, 1921.

Ser. No. 157,429. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) JENKINS MANUFACTURING COMPANY, Bloomfield, N. J. Filed Jan. 3, 1922.

VALVO

Particular description of goods.—Valve Handles or Wheels.

Claims use since Dec. 15, 1921.

Ser. No. 157,453. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FRED M. SCRUTON, doing business as Vi-to-tab Company, Lewiston, Me. Filed Jan. 3, 1922.

VI·TO·TABS

Particular description of goods.—Medicinal Preparation Used as a Blood Purifier and Flesh and Nerve Builder.

Claims use since Dec. 1, 1921.

Ser. No. 157,471. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) BARRINGTON MANUFACTURING CORPORATION, Dover, Del., and Mt. Vernon, N. Y. Filed Jan. 4, 1922.

Particular description of goods.—Washing Compound.
Claims use since Nov. 12, 1921.

Ser. No. 157,472. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) GEORGE BORGFELDT & CO., New York, N. Y. Filed Jan. 4, 1922.

EXCELSIOR

Particular description of goods.—Electric Household Appliances—Namely, Ovens, Toasters, Frying Pans, Kettles, Stoves, Waffle Bakers, Teapots, Percolators, Milk Boilers, and Electric Sad Irons.
Claims use since about Feb. 1, 1921.

Ser. No. 157,474. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CONNER AND WALTERS COMPANY, INC., Charlotte, N. C. Filed Jan. 4, 1922.

No claim being made to the exclusive use of the words "Dandruff Destroyer" apart from the mark as shown.
Particular description of goods.—Medicated Toilet Preparation for the Treatment of the Hair and Scalp.
Claims use since Nov. 29, 1921.

Ser. No. 157,479. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) RENÉ EYBEN, doing business under name and style of Hujarvis, New York, N. Y. Filed Jan. 4, 1922.

Mon Secret

Particular description of goods.—Perfumes.
Claims use since Feb. 11, 1921.

Ser. No. 157,496. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) R. H. MACY AND CO., INC., New York, N. Y. Filed Jan. 4, 1922.

ALCO-LIN

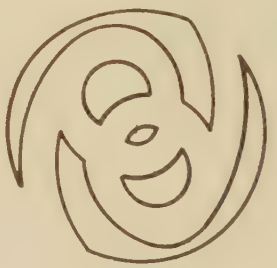
Particular description of goods.—Lotions.
Claims use since Dec. 29, 1921.

Ser. No. 157,516. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WESLEY C. DAVEY, doing business as D. & C. Specialty Co., Hazleton, Pa. Filed Jan. 5, 1922.

O-KIL-O

Particular description of goods.—Powder Insecticide.
Claims use since May 1, 1921.

Ser. No. 157,532. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE PEPSODENT COMPANY, Chicago, Ill. Filed Jan. 5 1922.



Particular description of goods.—Dentifrices.
Claims use since May 6, 1915.

Ser. No. 157,571. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HOUBIGANT, INC., New York, N. Y. Filed Jan. 6, 1922.

LE TEMPS DES LILAS

Particular description of goods.—Perfume Extract and Toilet Water.
Claims use since Dec. 30, 1921.

Ser. No. 157,578. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE LAIRD MANUFACTURING CO. INC., Richmond, Va. Filed Jan. 6, 1922.

RICHMOND MAID

Particular description of goods.—Baking Powder.
Claims use since Sept. 1, 1921.

Ser. No. 157,588. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) RUBBER PROCESS CORPORATION, Detroit, Mich. Filed Jan. 6, 1922.

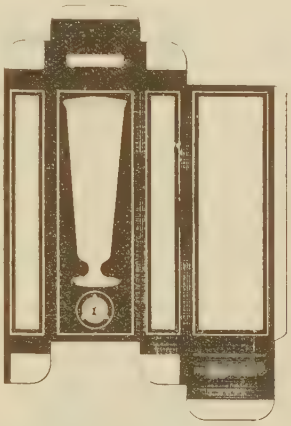
NUBBER

Particular description of goods.—Rubber Preservative.
Claims use since Oct. 1, 1921.

Ser. No. 157,597. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) SAMUEL BERNSTEIN, doing business as Reliable Household Specialties Manufacturing Company, New York, N. Y. Filed Jan. 7, 1922.

Particular description of goods.—Washing Compounds in Powder, Tablets, or Paste Form.
Claims use since Dec. 1, 1921.

Ser. No. 157,668. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HART-SHAW-MILLER DRUG COMPANY, Adrian, Mich. Filed Jan. 9, 1922.



Particular description of goods.—Blood Purifier and Cleanser and System Builder.
Claims use since Jan. 1, 1919.

Ser. No. 157,669. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HART-SHAW-MILLER DRUG COMPANY, Adrian, Mich. Filed Jan. 9, 1922. Under ten-year proviso.

WHITMARSH

Particular description of goods.—Blood Purifier and Cleanser and System Builder.
Claims use since about 1880.

Ser. No. 157,691. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) RE-NU-M MANUFACTURING CO., St. Louis, Mo. Filed Jan. 9, 1922.

RE-NU-M

Particular description of goods.—Belt Dressing.
Claims use since Jan. 5, 1922.

Ser. No. 157,709. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BLANDING AND BLANDING, INC., Providence, R. I. Filed Jan. 10, 1922.

PARALATUM

Particular description of goods.—Liquid Petrolatum Combined with Antiseptic and Germicidal Ingredients for Use in Cases of Constipation.
Claims use since about Dec. 15, 1921.

Ser. No. 157,722. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FRANK X. MANTSION, Philadelphia, Pa. Filed Jan. 10, 1922.

F. X. M.

Particular description of goods.—Medicinal Preparations for the Treatment of Constipation, Rheumatism, Indigestion, Headache, and All Ailments Due to Auto-intoxication.

Claims use since Dec. 21, 1921.

Ser. No. 157,731. (CLASS 17. TOBACCO PRODUCTS.) GEORGE PAPPANICOLAOU, Washington, D. C., and New York, N. Y. Filed Jan. 10, 1922.

Particular description of goods.—Cigarettes.

Claims use since November, 1921.

Ser. No. 157,732. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE RAISIN PRODUCTS CO. OF AMERICA, New York, N. Y. Filed Jan. 10, 1922.

RAISINIZED IRON

The word "Iron" is disclaimed.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—Ninth Circuit.

PACIFIC STATES ELECTRIC CO. *v.* WRIGHT.

Decided January 9, 1922.

[277 Fed. Rep., 756.]

1. PATENTS—IMPROVEMENT ON ELECTRIC COOKING APPARATUS HELD NOT PIONEER INVENTION.

A patent for an electric cooking apparatus, which combined in different form elements previously well known in the art, and the specification for which expressly declared it was an improvement on the prior art, does not embody a pioneer invention, so as to be entitled to a generic claim.

2. SAME—DEVICE SUBSTANTIALLY DIFFERENTIATED DOES NOT INFRINGE.

If the device embodied in the patent can be substantially differentiated from defendant's device, the charge of infringement is not sustained.

3. SAME—TRANSFORMATION OF PARTS EFFECTING SUBSTANTIALLY DIFFERENT OPERATION AVOIDS INFRINGEMENT.

Though a change in the relative position of the parts of a machine does not avoid infringement, where the parts perform the same respective functions after the change as before, the change of those positions which changes the functions of the several parts, so as to give the machine a substantially different mode of operation, does avoid infringement, though the ultimate result remains the same.

4. SAME—CLAIM FOR COMBINATION MUST DISCLOSE OPERATIVE COMBINATION.

A claim for combination, to be valid, must be for an operative combination, so that there can be eliminated therefrom an element without which the device would not operate.

5. SAME—1,214,486, CLAIMS 5 TO 9, FOR ELECTRICAL COOKING DEVICE, HELD NOT INFRINGED.

The Wright patent, No. 1,214,486, claims 5 to 9, for electric cooking apparatus, *Held* not infringed by a device effecting substantially the same result, but without using one element of the claims which, according to the declaration of the patentee, was one of the principal parts of his invention.

APPEAL from the District Court of the United States for the Southern Division of the Southern District of California. Oscar A. Trippet, judge.

Suit for infringement of patent by William D. Wright against the Pacific States Electric Company. Decree for complainant ,and defendant appeals. Reversed and remanded, with directions to dismiss the bill.

Mr. Raymond Ives Blakeslee and *Mr. John P. Bartlett* for the appellant.

Mr. Fredcrick S. Lyon and *Mr. Leonard S. Lyon* for the appellee.

Before GILBERT, Ross, and MORROW, Circuit Judges.

Ross, *Cir. J.:*

The appellee is the patentee of Letters Patent 1,214,486, issued January 30, 1917, for "Electric cooking apparatus," stating in his specification that his invention relates to improvements in electric heating apparatus, more particularly to be used for grilling and waffle-baking purposes, but which may be also used for any purpose of the ordinary electrically-heated stove, and which may be folded up so as to occupy a small space when not in use, and which provides a large heating surface when unfolded. One of the objects of the invention, as declared in the specification, was—

to provide a device of the kind that may be quickly converted from one use to a different use, as from a waffle iron to a grill, or to a device providing a large heating surface when required.

And the specification declared the principal parts of the invention to be—

the base or grill member *a* (shown upon the drawings accompanying the specification), the lower waffle member *b*, and the upper waffle member *c*.

After stating that the waffle member *b* is preferably made of aluminum, and may be of any shape desired, but that the patentee's preferred construction is an oblong rectangular shape, the specification proceeds to describe at length both of the waffle members and their connection, as also the wires for the electrical heating and the insulating material, and concludes the specification with the statement:

Although I have described my improvements with considerable detail and with respect to certain particular forms of my invention, I do not desire to be limited to such details since many changes and modifications may well be made without departing from the spirit and scope of my invention in its broadest aspect.

The first five claims related to and covered the grill member of the invention and are not for consideration, since it was only the last four claims which were adjudged by the court below to have been infringed by the appellant. Those claims are as follows:

6. In a device of the class described, a pair of casings pivotally connected together, a waffle member provided with an aluminum baking surface mounted in each of said casings so that each of said aluminum baking surfaces

covers the upper edge of one of said casings, and means mounted in said casings between said casings and said waffle members for electrically heating said waffle members.

7. In a device of the class described, a pair of casings pivotally connected together, a waffle member provided with aluminum baking surfaces mounted in each of said casings so that their surfaces extend past the edges of said casings, means mounted in said casings between said casings and said waffle members for electrically heating said waffle members, consisting of an electrical heating element adjacent said waffle member and a nonconducting element spacing said electrical heating element from said casing.

8. In a device of the class described, a pair of box-shaped casings pivotally connected together so as to fold one upon the other, a waffle member mounted in each of said casings provided with outwardly extending flanges extending past the edges of said casing, whereby said waffle members are supported on the edge of said casing and spaced apart from the bottom thereof, and electrical means mounted in the space between said waffle member and said casing for heating said waffle member.

9. In a device of the class described, a pair of box-shaped casings pivotally connected together so as to fold one upon the other, a waffle member mounted in each of said casings provided with outwardly extending flanges extending past the edges of said casing, whereby said waffle members are supported on the edge of said casing and spaced apart from the bottom thereof, electrical means mounted in the space between said waffle member and said casing for heating said waffle member, consisting of an electrical heating element adjacent said waffle member and a nonconducting element spacing said electrical heating element from said casing.

(1) There is no doubt that a pioneer inventor is entitled to a generic claim, but the record in the present case affords, in our opinion, no ground for the contention that the appellee occupies any such position. The various patents introduced in evidence show that various forms of electrical cooking apparatus were well known in the prior art, as was also aluminum as a cooking surface, and electrically heated waffle irons hinged together had also been made and publicly sold. What the appellee did was to improve upon the prior art, and, as has been shown, that was what he expressly declared in his specification.

(2) We therefore think the court below was quite right in its conclusion that the claims in question should receive a narrow construction, and the patent be limited to the precise device therein described. And it is well settled law that, if the device embodied in the appellant's patent can be substantially differentiated from that of the appellee, the charge of infringement can not be maintained. (*Eaid et al.* v. *Twohy Bros. et al.*, 230 Fed., 444, 447; 144 C. C. A., 586, and cases there cited. See, also, *Simplex Window Co.* v. *Hauser Reversible Window Co.*, 248 Fed., 919, 926; 161 C. C. A., 37; *Stebler* v. *Porterville Citrus Ass'n*, 248 Fed., 927, 930; 161 C. C. A., 45.)

(3) It is apparent from a comparison of the devices of the appellant and appellee that they both produce the same result. The real question is: Do they do so by substantially the same means? And we repeat what we said under like circumstances in *Simplex Window Co.* v. *Hauser Reversible Window Co.*, 248 Fed., at page 926; 161 C. C. A., 44:

> It is needless to cite the numerous cases in support of the law clearly stated in section 348 of Walker on Patents, the substance of which is that changing the relative position of the parts of a machine does not avert infringement, where the parts transformed perform the same respective functions after the change as before, but that such change does do so where the changing of those positions so changes the functions of the parts that the machine acquires a substantially different mode of operation, even though the ultimate result remains the same.

(4) Both the drawings and the specifications of the appellee's device show that both its lower and its upper waffle members are separately pivotally connected with its base or grill member, which three parts the patentee, as has been shown, expressly declares to be the principal parts of his invention. It is plain, therefore, that to eliminate either one of those parts is, as it said for the appellant, to destroy not only the structure but the law of operation of the device of the appellee. That a claim for a combination to be valid must be for an operative combination is clear. (*F. F. Slocomb & Co., Inc.*, v. *Layman Machine Co.*, (D. C.), 227 Fed., 94, 104; *Id.*, 230 Fed., 1021; 144 C. C. A., 286; *M'Caslin* v. *Link Belt Machinery Co.*, (C. C.), 139 Fed., 393; *Id.*, 147 Fed., 243; 77 C. C. A., 385.)

In *Wilson & Willard Mfg. Co.* v. *Union Tool Co.* (249 Fed., 729, 731; 161 C. C. A., 639, 641,) this court said:

> To make one mechanical device the equivalent of another, it must appear, not only that it produces the same effect, but that such effect is produced by substantially the same mode of operation.

(5) The waffle members of the appellant's device being directly pivoted together, its mode of operation is necessarily substantially different from that of the device of the appellee, and the base or grill of the latter, constituting, according to the express declaration of the patentee, one of the principal parts of his invention, has no corresponding element in the device of the appellant.

It is apparent, we think, that the two devices are substantially unlike, and, accordingly, the decree must be reversed, and the case remanded, with directions to the court below to dismiss the bill, at complainant's cost.

So ordered.

Court of Appeals of the District of Columbia.

IN RE MUMMERT.

No. 1473. Decided February 6, 1922.

PATENTS—REISSUE—EXCUSE FOR DELAY OF THREE AND ONE-HALF YEARS INSUFFICIENT.

While the rule requiring an application for reissue to be made within two years after the original issue is not inexorable, it is enforced with strictness and exception is only made where the excuse for the delay is either unavoidable or it is clear that the rejection would result in great injustice. The excuse that a delay of three and one-half years was caused by the ill health of the applicant, the death of her husband, and the absence of her son in the military service, in the light of the record was held insufficient.

Mr. Fred L. Chappell and *Mr. Otis A. Earl* for Mummert.

Mr. T. A. Hostetler for the Commissioner of Patents.

VAN ORSDEL, *J.*:

This appeal is from a decision of the Commissioner of Patents rejecting the following claims in a reissue application:

> 9. A dust collecting bag for a vacuum cleaner formed of crêpe paper, the texture of which permits the passage of air and filters the dust therefrom.
>
> 10. A dust collecting bag for vacuum cleaners formed of paper, the texture of which has been opened sufficiently to permit the free passage of air therethrough and to filter and collect the dust therefrom.

The claims were rejected upon two grounds:

(1) Laches or delay in filing the application.

(2) On the ground that appellant is estopped to make the claims, since claims to the same subject had been formerly made by appellant and canceled.

The present application for reissue was filed more than three and one-half years after the original patent was granted, and while appellant has attempted to excuse her delay in applying for reissue, on the grounds of ill health, the death of her husband, and the absence of her son in the military service, we agree with the Commissioner that in the light of the record the excuse is not sufficient.

It is apparent that it was not until others had entered the field that appellant appreciated the value of porous paper as a dust-collecting medium. In her original specification she defined the invention as relating—

to new and improved dust-collecting bags and vacuum cleaners and more particularly to an improved bag for this purpose which is constructed of a single blank of paper or cloth.

In another place canton flannel and crêpe paper are suggested as suitable material. The importance of paper was not suggested in the original claims, but on September 29, 1913, three claims were presented by amendment relating to a bag comprising a paper body, and subsequently on December 12, 1913, by an amendment which called for "crimped" and "crêpe" paper. These claims were rejected by the Examiner and the patent was not allowed until appellant had canceled the references therein to "paper," "crêpe paper," and "crimp paper." The application was allowed to forfeit and upon renewal two claims were presented which related solely to a bag for vacuum cleaners made of crêpe paper. These claims the Examiner rejected upon certain references, whereupon applicant canceled the claims and inserted two others directed to the form of the bag and the blank from which the bag is made. Nothing further was said relative to the importance of paper. In this condition the patent was granted and accepted. It is therefore apparent that the value of porous paper as a dust-collecting medium was an afterthought, hence this delayed application for reissue.

While the rule that an application for reissue must be made within two years after the issue of the original patent is not inexorable, yet the courts have enforced the limitation with strictness, and exception is only made in cases where the excuse for delay is either unavoidable or it is clear that the rejection of the application would result in great injustice. Without stopping to analyze the facts in this case we are of the opinion that the Commissioner was justified in rejecting the application. It is unnecessary therefore to consider the question of estoppel.

The decision of the Commissioner is affirmed.

Affirmed.

In the absence of Mr. Chief Justice SMYTH, Mr. Justice HOEHLING, of the Supreme Court of the District of Columbia, took part in the hearing and disposition of this case.

PATENT SUITS.

Adverse Decisions in Interference.

PATENT No. 1,338,923.

On April 3, 1922, a decision was rendered that John M. Hopwood was not the first inventor of the subject matter covered by claim 8 of his Patent No. 1,338,923, subject, "Controlling combustion by flow and pressure," and no appeal having been taken within the time allowed such decision has become final.

Disclaimers.

1,267,776. *Leo W. Lawrence*, Winston-Salem, N. C. TOBACCO-STEMMING MACHINE. Patent dated May 28, 1918. Disclaimer filed April 22, 1922, by the assignee, *Standard Tobacco Stemmer Company.*

Enters this disclaimer as follows:

"1. In respect of claims 41, 42, 43, 44, 45, 48, 52, 74, 75, and 78, the combination of the recited elements is hereby disclaimed except when and unless said elements are so constructed and coordinated that the stripping medium therein recited operates continuously at stripping position in performing the stripping operation.

"2. In respect of claims 46, and 47, the combination of the recited elements is hereby disclaimed except when and unless said elements are so constructed and coordinated that the stripping mediums therein recited operate continuously at stripping position in performing the stripping operation."

936,078. *Charles A. Benbow*, Portland, Oreg. ROPE-COMPUTING MACHINE. Patent dated October 5, 1909. Disclaimer filed April 27, 1922, by the assignee, *Grand Rapids Show Case Co.*

Enters this disclaimer—

To that part of the description and to that part of the claim in said specification which is in the following words, on page 2, lines 117 to 125, inclusive, of the printed copy of the patent, to wit:

"Should it be desired at any time to elevate the sheave 21 from contact with the rope attached to the machine, the lever 25 is pressed downwardly at its outer end and the spring 20^a which normally holds said lever in the position shown in Fig. 2 will then cause the ends of the lever carrying the sheave 21 to be slightly elevated and rest against the member 22.

"And also claim 5 of the patent, to wit:

"5. In a machine of the class described, the combination of computing mechanism, including a registering scale, rope feeding means embodying a series of pairs of rollers between each pair of which rope of a certain size is adapted to be fed, one roller of each pair being rotatable about a permanent axis and being operably connected with the computing mechanism, the other roller of each pair being bodily movable toward and from the first mentioned roller to cause operative engagement of the first mentioned roller with the rope adjacent thereto, a lever for effecting bodily movement of the movable roller above referred to, and spring means normally tending to hold the bodily movable roller in a position permitting free passage of rope between the various rollers without operation of the computing mechanism."

1,310,131. *Paul O. Noble*, Schenectady, N. Y. ELECTRIC WELDING. Patent dated July 15, 1919. Disclaimer filed April 26, 1922, by the assignee, *General Electric Company.*

Enters this disclaimer under the provisions of and for the purpose set forth in Rule 181, to the following claims in said Letters Patent, to wit:

"1. The method of electric arc welding which consists in regulating the amperage and voltage of the welding current inversely with respect to each other to maintain substantially constant energy in the arc.

"2. The method of supplying energy to an electric welding circuit in which an arc of variable length is maintained which consists in charging the circuit from a source of electric current of constant characteristic and modifying said current in accordance with the variations of resistance in said arc to vary the amperage and voltage of said current inversely with respect to each other in order to maintain the energy consumption in said arc substantially constant.

"3. An electric arc-welding apparatus comprising a welding circuit containing an arc-supporting electrode and means connected directly to said circuit adapted to deliver welding current, the amperage and voltage of which vary inversely in substantially constant energy relation over a given range.

"6. An electric arc welding apparatus comprising a welding circuit containing an arc-supporting electrode and a source of electrical energy connected directly to said circuit, said source comprising the combination of means for regulating the voltage and current inversely with respect to each other in a substantially constant energy relation in response to the rapid changes of resistance encountered in a welding arc within a given range of welding voltages."

1,359,400. *Edwin N. Lightfoot*, New York, N. Y. ELECTRIC HEATER. Patent dated November 16, 1920. Disclaimer filed April 25, 1922, by the assignee, *The Cutler-Hammer Mfg. Co.*

Enters its disclaimer—

"To so much of claims 17, 19, and 20 of said patent, and each of them, as may cover an electric heater which is not bendable and not of such length or elongation that the resistor cannot be accurately and effectively centered or spaced with respect to the tubular metal jacket by tension imposed upon the resistor;

"Thereby limiting said claims 17, 19, and 20 of said patent, and each of them, to an electric heater which is bendable and of such length or elongation that the resistor must be centered or spaced mechanically and progressively in advance of and as the filling with the insulation proceeds and independently of the tension imposed on the resistor.

"Your petitioner further enters its disclaimer to so much of claims 23, 24, 25, 26, 27, and 28 of said patent, and each of them, as may cover a process in which the resistor is not placed, assembled or positioned within the tubular metal jacket by positively and mechanically centering or spacing the resistor continuously and progressively in advance of and as the filling with insulation proceeds;

"Thereby limiting said claims 23, 24, 25, 26, 27, and 28, and each of them, to a process of making an electric heater in which the resistor is placed, assembled or positioned within the tubular metal jacket by positively and mechanically centering or spacing the resistor continuously and progressively in advance of and as the filling with insulation proceeds."

Interference Notices.

Department of the Interior,
United States Patent Office,
Washington, D. C., April 25, 1922.

Clarence H. Henton, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Claude F. Osborne, 120 South Reeve Street, Hampton, Iowa, for registration of a trade-mark and trade-mark registered December 4, 1906, No. 58,077, to Clarence H. Henton, 3819 North Hermitage Avenue, Chicago, Ill., and a notice of such declaration sent by registered mail to Clarence H. Henton at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Clarence H. Henton, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Department of the Interior,
United States Patent Office,
Washington, D. C., April 25, 1922.

J. Osiason, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of O. D. Baker Company, 525 West Forty-fifth Street, New York, N. Y., for registration of a trade-mark and trade-mark registered February 10, 1914, No. 95,341, to J. Osiason, 154 Broadway, Bristol, Mass., and a notice of such declaration sent by registered mail to J. Osiason at the said address having been returned by the post office undeliverable, notice is hereby given that unless said J. Osiason, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Department of the Interior,
United States Patent Office,
Washington, D. C., April 25, 1922.

Crystal Spring Bottling Company, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Purity Crystal Rock Mineral Spring Water Co., 4611–15 North Western Avenue, Chicago, Ill., for registration of a trade-mark and trade-mark registered October 10, 1893, No. 23,699, to Crystal Spring Bottling Co., Barnet, Vt., and a notice of such declaration sent by registered mail to Crystal Spring Bottling Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Crystal Spring Bottling Co., their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Department of the Interior,
United States Patent Office,
Washington, D. C., April 26, 1922.

Coast-Wide Chemical Company, Incorporated, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Frank P. Symonds, 16 Water Street, Salem, Mass., for registration of a trade-mark and trade-mark registered October 17, 1916, No. 113,491, to Coast-Wide Chemical Company, Incorporated, 74 Cortlandt Street, New York, N. Y., and a notice of such declaration sent by registered mail to Coast-Wide Chemical Company, Incorporated, at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Coast-Wide Chemical Company, Incorporated, its assigns or legal representatives shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

Adverse Decisions in Interference.

Patent No. 1,344,823.

On April 14, 1922, a decision was rendered that Rodney G. Richardson was not the first inventor of the subject-matter covered by claims 1, 2, 3, 5, 10, and 27 of his Patent No. 1,344,823, subject, "Automatic telephone system," and no appeal having been taken within the time allowed such decision has become final.

Condition of Applications Under Examination at Close of Business May 6, 1922.

(Total number of applications waiting action, excluding Trade-Mark division, 66,195; Trade-Mark division, 8,726. Oldest new case, Mar. 2: oldest amended, Mar. 23, 1921. The dates given are 1921 except where * indicates 1922.)

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
		New.	Amended.

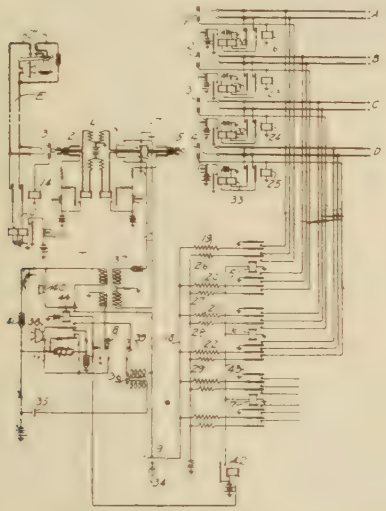
PATENTS

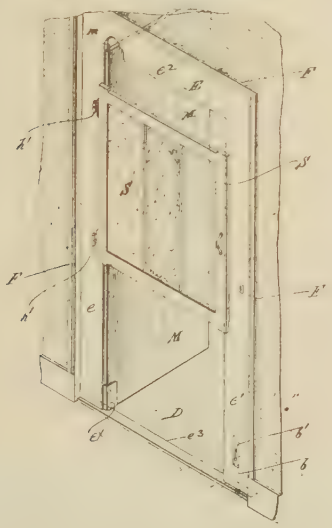
GRANTED MAY 16, 1922.

1,415,853. TELEPHONE-EXCHANGE SYSTEM. WALLACE P. ANDRICK, Hohokus, and JACK F. DAHL, East Orange, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 25, 1920. Serial No. 419,413. 6 Claims. (Cl. 179—73.)



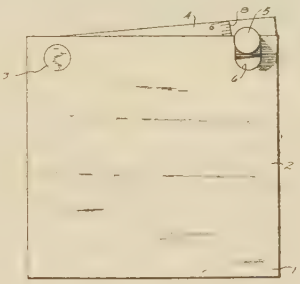
5. In a manual telephone exchange system, a group of associated common battery telephone lines normally adapted for individual connection, terminals for said lines having test contacts, an operator's telephone circuit, means for grouping the lines together with said operator's telephone circuit for common talking and ringing, and means for maintaining the test contacts of the terminals at essentially the same potential for both common and individual connections.

1,415,854. CLOSURE FOR DOORWAYS. LOUIS ALLEN ABRAMSON, New York, N. Y. Filed Apr. 4, 1921. Serial No. 458,472. 4 Claims. (Cl. 20—16.)



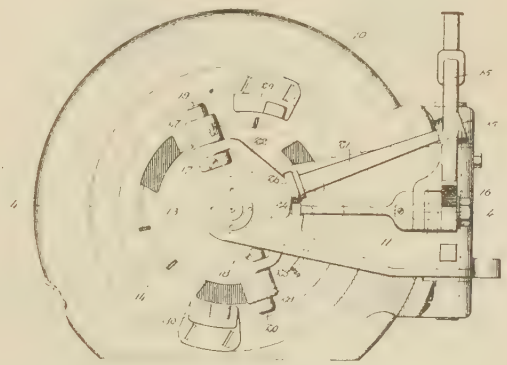
1. A closure for doorways of the character designated, comprising a major emergency door of maximum fixed doorway area, said emergency door being formed with a supplementary normal doorway, and a medial door pivotally mounted on said emergency door and adapted to function as a closure for said supplementary normal doorway, together with an auxiliary screen door demountably supported on said major emergency door, and adapted to partially close said normal doorway, said medial door and screen door hinged to extend entirely across the door opening and to swing in opposite directions, for the purpose described.

1,415,855. WORK HOLDER. PER MARTIN ANDERSON, Hartford, Conn. Filed Aug. 27, 1920. Serial No. 406,386. 1 Claim. (Cl. 90—59.)



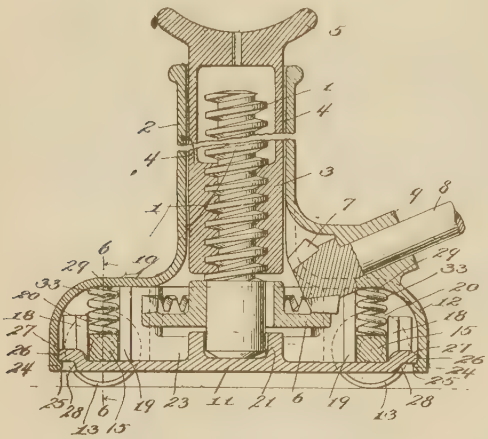
In a work holder, a notched frame, a table having one end pivotally secured to said frame, plugs formed at the non-pivoted end of said table for disposal in the notches of said frame, oppositely disposed segments depending from the non-pivoted end of said table into said frame, means connecting said segments and frame for releasably retaining said segments in adjusted relation with said frame, and a V-block within said frame.

1,415,856. BREECH MECHANISM. DORSEY F. ASBURY, Washington, D. C. Filed Oct. 12, 1920. Serial No. 416,486. 12 Claims. (Cl. 89—20.)



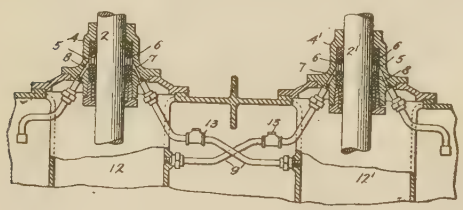
1. In a breech mechanism, the combination of a carrier, a breech plug mounted on the carrier for both motions of rotation and translation with respect to the carrier, and an operator for the plug reacting from the carrier at one place to rotate the plug and at spaced places to translate the plug.

1,415,857. ROLLER-BASE LIFTING JACK. TRUE M. AVERY, Glens Falls, N. Y., assignor to Arrow-Grip Manufacturing Co., Inc., Glens Falls, N. Y., a Corporation of New York. Filed June 16, 1919. Serial No. 304,546. 7 Claims. (Cl. 254—1.)



1. A lifting jack having a base provided with cooperating guide lugs and clearances between the guide lugs, axles fitted in the clearances for vertical movement and each provided with roller supporting means, said base including a cover which encloses said lugs, axles and roller supporting means and also having means secured below said lugs against which said axles may normally rest and springs acting within and on said cover and on said axles whereby to urge the latter downward relatively to said base, said roller supporting means normally projecting below said base and the latter being formed for stable engagement with the ground or floor to assume the supporting function under the weight of the object supported by the jack.

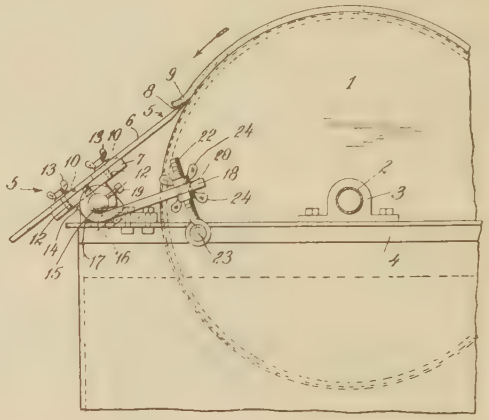
1,415,858. INTERNAL-COMBUSTION ENGINE. CHARLES G. BARRETT, Brookline, Mass., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed June 14, 1921. Serial No. 477,376. 6 Claims. (Cl. 184—1.)



4. Means for conserving lubricant in multiple cylinder internal combustion engines, comprising chambers receiving oil from lubricated parts of said engines, outlets therefor, and cross-over connections between the respective oil chambers and scavenging air chambers of other cylinders for supplying air under pressure to said oil-receiving chambers.

1,415,859. SCRAPER FOR ROTARY FILTERS. JOSEPH SUMNER BATES, Bridgeport, Conn., assignor to The National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 8, 1921. Serial No. 450,684. 5 Claims. (Cl. 144—115.)

1. A scraping device for scraping agglomerated material from the surface of a cylindrical rotary filter, comprising a scraping knife, means for adjusting the scraping knife in its own plane toward and away from the surface of the filter, and means for angularly adjusting the scraping

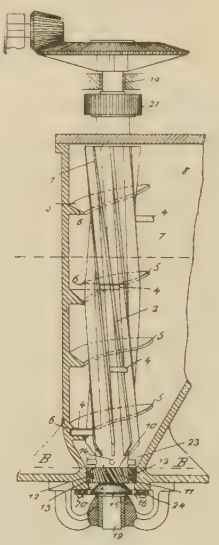


knife about an exis substantially parallel to the axis of the filter and for holding it in any desired adjusted position.

1,415,860. DEPOLARIZER FOR PRIMARY BATTERIES. RAYMOND C. BENNER and HARRY F. FRENCH, Fremont, Ohio, assignors to National Carbon Company, Inc., a Corporation of New York. Filed Aug. 22, 1918. Serial No. 251,030. 4 Claims. (Cl. 204—38.)

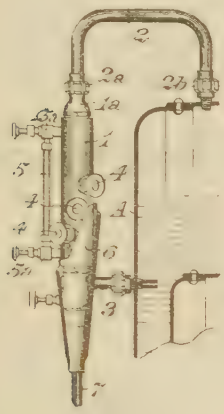
1. A depolarizer for alkaline cells containing cuprous oxide mixed with sulphur each of said ingredients being effective, substantially as described.

1,415,861. MACHINE FOR REDUCING TURNING CHIPS AND THE LIKE. JULIUS BING, Eisenach, Germany. Filed Oct. 25, 1919. Serial No. 333,381. 19 Claims. (Cl. 29—45.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



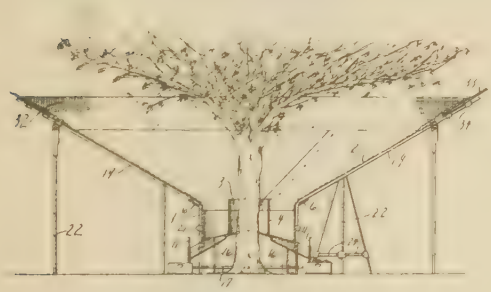
1. In a machine for reducing turning chips and the like, coarse reducing means, fine reducing means arranged behind said coarse reducing means, and an agitating device arranged between said coarse and fine reducing means.

1,415,862. WATER-GAUGE COLUMN. JAMES G. BLUNT, Schenectady, and HARRY SWOYER, Dunkirk, N. Y. Filed May 26, 1921. Serial No. 472,742. 2 Claims. (Cl. 73—54.)



1. The combination of a water gauge column; upper and lower connection castings, secured to the ends of said body; a plurality of gauge cocks, secured to said body, intermediate of its ends; and a circumferentially adjustable dripper, connected to the lower connection casting.

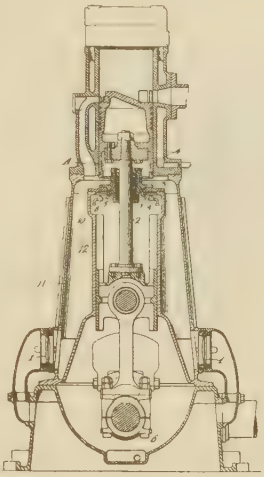
1,415,863. FRUIT CATCHER. GEORGE BOELMAN, Gridley, Calif. Filed Apr. 4, 1921. Serial No. 458,210. 5 Claims. (Cl. 56—329.)



1. In a fruit catcher, a basin comprising two symmetrical parts forming a central opening, means for pivotally connecting said two parts at one end and for locking them at the other end, the bottom of said basin rising toward the connecting line and having outlets at its lowest points, and a plurality of vertical guideways arranged on the outside of said basin.

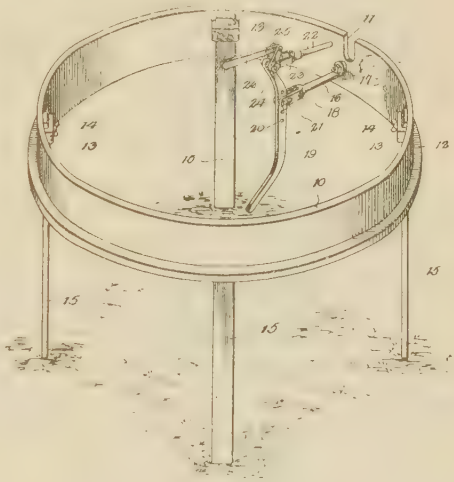
1,415,864. INTERNAL-COMBUSTION ENGINE. PHILLIPS P. BOURNE, Winchester, Mass., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed June 14, 1921. Serial No. 477,392. 7 Claims. (Cl. 123—196.)

1. Oil recovering means for engines, comprising a piston-rod stuffing box having an open-ended oil-collecting chamber accessible to a piston-compressed medium, and



an outlet from said chamber through which oil is delivered.

1,415,865. PNEUMATIC TRUCK TIRE CHANGING DEVICE. GUY C. BROWN, Waco, Tex. Filed Oct. 2, 1920. Serial No. 414,186. 15 Claims. (Cl. 29—84.)



1. A device of the character described including means for supporting a demounted wheel rim, and means for ejecting the valve casing of a tire through the rim.

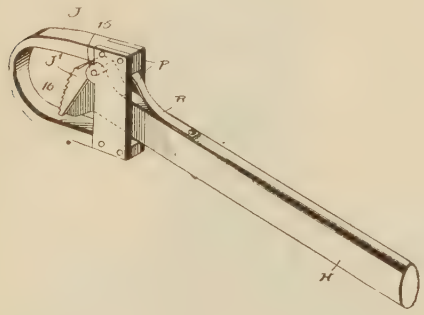
1,415,866. CLEANER AND POLISH COMPOSITION. GEORGE W. CABLE, Marysville, Calif. Filed Jan. 4, 1921. Serial No. 435,022. 3 Claims. (Cl. 134—24.)

2. A cleaning and polishing composition consisting of orange juice, kerosene, flour, water, and eucalyptus oil.

1,415,867. WRENCH. EDWARD CLAYTON COLEMAN, Hammond, La. Filed Nov. 2, 1921. Serial No. 512,268. 1 Claim. (Cl. 81—53.)

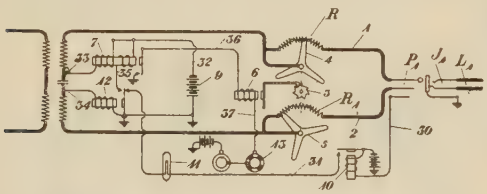
A wrench comprising a U-shaped stationary jaw, plates spanning and secured to the free ends of the stationary

jaw, a shank operating between and pivotally secured to the plates, a jaw fixed to the inner end of the shank and disposed wholly within the stationary jaw, a handle integral with the outer end of the shank for operating the jaw carried thereby, and a bent blade spring having



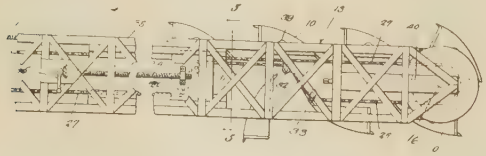
one end secured to the shank exteriorly of the stationary jaw and having its other end slidably engaging the stationary jaw between the plates whereby said spring urges the jaw carried by the shank inwardly of the stationary jaw.

1,415,868. TRANSMISSION-EQUALIZATION ARRANGEMENT. LEO H. DARROW, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 2, 1919. Serial No. 328,013. 3 Claims. (Cl. 178—44.)



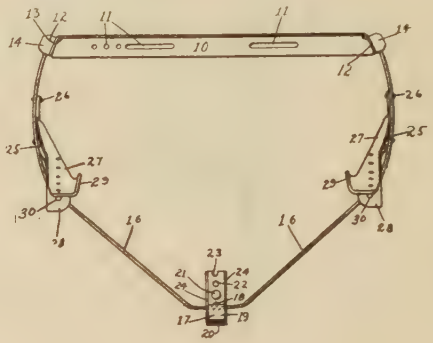
1. In a telephone exchange system, subscribers' lines of differing electrical characteristics, a connecting means for establishing connections with said lines, a source in said connecting means for supplying talking current for said lines, a differentially wound relay in said connecting means, one of the windings of said relay being included in the talking circuit of said connecting means and a line, the other winding being included in a local circuit, said local circuit being so adjusted that when said talking circuit includes a line of predetermined electrical characteristics said relay will not operate, and means controlled by said relay for varying the current flow from said source over said talking circuit.

1,415,869. CONVEYER. HENRY J. FISCHER, Baltimore, Md., assignor of one-sixth to Robert H. Haase and one-sixth to Frederick C. Dettmar, Baltimore, Md. Filed June 23, 1921. Serial No. 479,745. 6 Claims. (Cl. 198—145.)



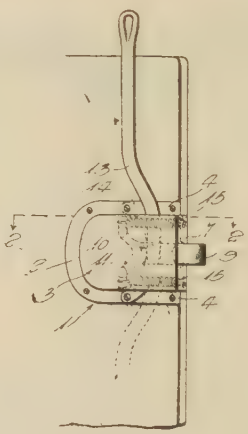
1. A conveying apparatus comprising an endless driving element, pivoted buckets carried by said element and unbalanced to have a normal tendency to tilt to dumping position, a restraining element running parallel to the path of the buckets and engageable thereby to prevent tilting thereof to dumping position, said element having a portion which is spaced from the buckets a distance to clear the same and permit tilting, and means for changing the position of said spaced portion in the direction of the length of the apparatus.

1,415,870. TIRE CARRIER. JOSEPH GALAMB, Detroit, Mich., assignor to Ford Motor Company, Highland Park, Mich., a Corporation of Delaware. Filed Dec. 9, 1920. Serial No. 429,448. 3 Claims. (Cl. 224—29.)



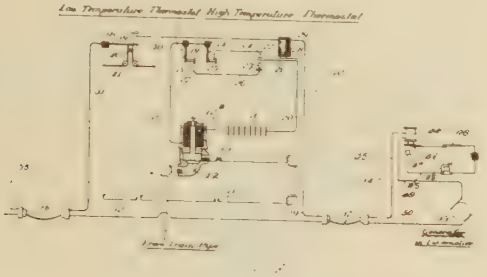
1. In a tire carrier a cross bar, rim engaging means at either end thereof, a body member having curved end portions, the ends of which are disposed adjacent to the ends of said bar, means for securing said rim engaging means, the ends of the body member, and the ends of the bar together, a rim engaging device disposed intermediate of the ends of the body member, the latter being formed with straight portions between said last described rim engaging device and the curved portions, and a coacting movable member disposed adjacent to the last described rim engaging device.

1,415,871. LATCH. SAMUEL P. GEHRET, York, Pa. Filed Oct. 4, 1920. Serial No. 414,642. 6 Claims. (Cl. 292—173.)



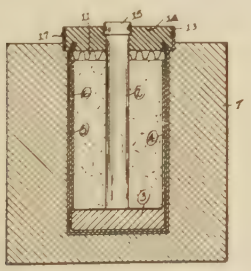
1. A device of the class described comprising a mechanism casing including a base plate for disposition against one side of the door, and a recess cover plate connected to the base plate, said cover plate being provided with a relatively wide slotted front wall extending laterally beyond said base plate, this front wall providing an attaching flange and being designed to be disposed against the front vertical edge of the door so as to serve the additional function of a wear plate, and a locking mechanism disposed in said casing, including a bolt projectable through the slot in said attaching flange.

1,415,872. HEATING SYSTEM FOR RAILWAY TRAINS. HARRY G. GEISSINGER, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed May 9, 1919. Serial No. 295,954. 6 Claims. (Cl. 236—36.)



6. In combination with a railway car, signalling apparatus comprising an electric circuit, means for closing said circuit upon coupling up of the car in a train and breaking this circuit on uncoupling of the car, a heating apparatus in the car and means for controlling the supply of heating medium to said heating apparatus the operation of which means is dependent upon whether said electric circuit is open or closed.

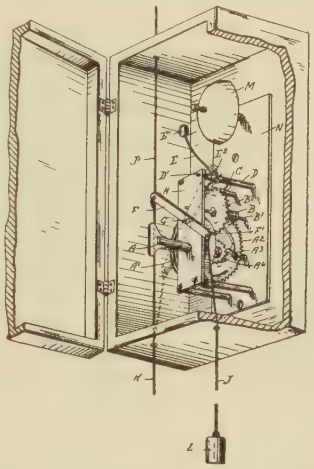
1,415,873. DRY CELL. CLARENCE W. HAZELETT, Lakewood, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed May 9, 1919. Serial No. 295,992. 6 Claims. (Cl. 204—38.)



1. A cartridge adapted to coact with a metal cup to form a dry battery, said cartridge comprising a depolarizing electrode bobbin having a body of fluid material attached to its lower end in such a way that the fluid material can be caused to rise between the bobbin and said metal cup on pressing the bobbin into said metal cup.

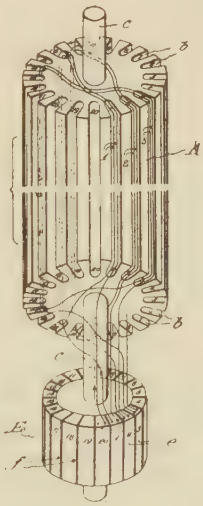
1,415,874. AUTOMATIC ALARM. SIMON HICKEY, Marrickville, New South Wales, Australia. Filed Aug. 24, 1920. Serial No. 405,653. 2 Claims. (Cl. 116—94.)

1. An alarm device, comprising in combination spring actuated mechanism, means for tensioning the spring, a serrated wheel actuated by said mechanism, a pallet centrally mounted on an oscillating sleeve and actuated by the serrated wheel, a hammer-shank projecting from said sleeve, a head on said shank, a stop arm for said shank, a gong associated with said head, a detent lever pivoted at a point between its ends, and having a member to engage said stop arm and restrain said hammer shank from operating when said detent lever is in one position and a cord



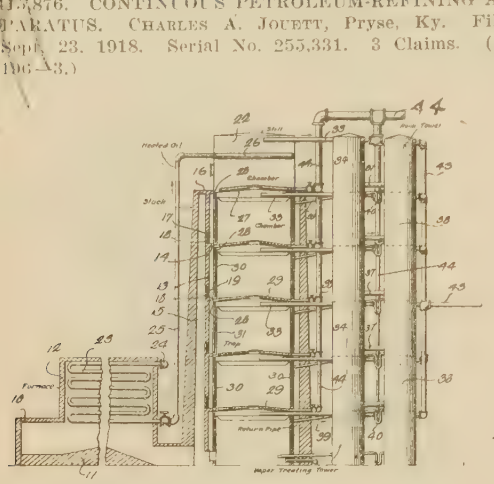
connected to the detent lever and so directed that a pull thereon will move said lever to the "off" position.

1,415,875. ARMATURE WINDING. ALFRED W. HOUCHIN, Kirkwood, N. J., assignor to Shockless Electric Corporation, Kirkwood, N. J., a Corporation of New Jersey. Filed Apr. 30, 1917. Serial No. 165,589. 2 Claims. (Cl. 171—206.)



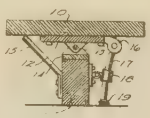
1. In combination: an armature having a plurality of slots, and a plurality of coils disposed in said slots, said coils being symmetrically arranged in pairs, the coils of each pair being disposed in slots on opposite sides of and next to a line drawn through the axis of the armature and extending across the ends of the armature on correspondingly opposite sides of said axis; and a commutator having as many segments as there are coils; the two terminals of each of said coils being connected to adjoining commutator segments, the contiguous terminals of the coils of each pair being connected to the same commutator segment, and the contiguous terminals of the adjoining coils of the adjoining pairs being connected to the same commutator segment.

1,415,876. CONTINUOUS PETROLEUM-REFINING APPARATUS. CHARLES A. JOUETT, Pryse, Ky. Filed Sept. 23, 1918. Serial No. 255,331. 3 Claims. (Cl. 196—13.)



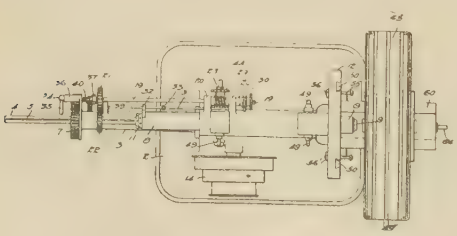
1. In an apparatus for refining oil, the combination of a plurality of superposed chambers, provided with annular traps at their lower ends, the trap of each chamber opening into the top of the subjacent chamber, means for feeding oil into the top of the uppermost chamber, the oil being adapted to drain from the upper chamber through the trap into the tops of the subjacent chambers, heating means surrounding said trap, means for independently carrying off the vapors from the chambers of the still, and means for independently treating the vapors.

1,415,877. SLED. WILPPU KAITTILA, Grayling, Mich. Filed May 13, 1920. Serial No. 381,080. 1 Claim. (Cl. 280—23.)



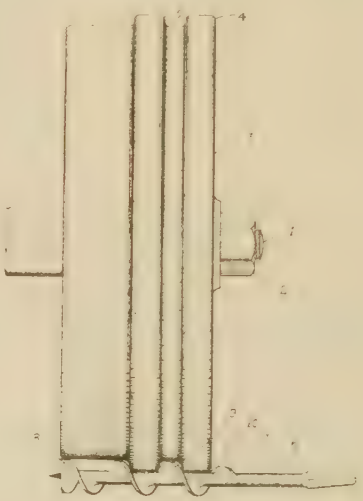
In a sled, a foot rest pivotally carried by one of the sled runners, angle bars secured to one side of the sled runner for supporting engagement with one lateral edge of said foot rest, a guide bracket secured to the opposite side of said runner, and a brake rod pivotally carried by said foot rest and extending through said guide bracket for frictional engagement with the roadway in one position of said foot rest.

1,415,878. BORING AND MILLING MACHINE. GUSTAVE F. KRIESEL, Minneapolis, Minn., assignor, by mesne assignments, to Esther V. Safstrom, Minneapolis, Minn. Filed Apr. 24, 1918. Serial No. 230,412. Renewed Sept. 10, 1921. Serial No. 499,863. 17 Claims. (Cl. 29—26.)



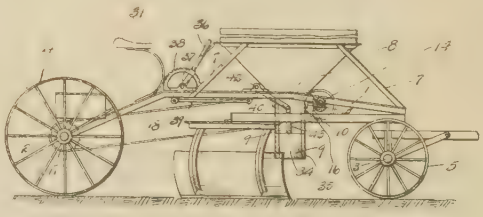
1. The combination, with a frame having an orifice and a surface around said orifice against which the piece of work is clamped, of a reciprocating member mounted in said frame for forward and backward movement with respect to said orifice, a tool-supporting shaft fitting within said member to move forward and backward therewith and revolve therein, a drive shaft, a transmission shaft geared to said drive shaft and said tool-supporting shaft, and a second transmission shaft having a driving connection with said tool-supporting shaft and with said reciprocating member.

1,415,879. METHOD OF CUTTING, SHAPING, AND POLISHING METAL ARTICLES. DELL LACY, Wilmington, Ohio, assignor to The Irwin Auger Bit Company, Wilmington, Ohio, a Corporation of Ohio. Filed Apr. 1, 1920. Serial No. 370,404. 3 Claims. (Cl. 76—108.)



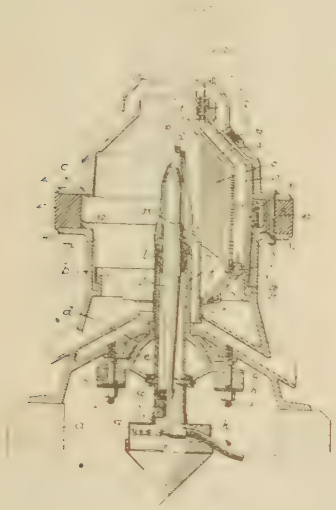
1. The herein described method of producing auger bits comprising forming a bar of stock, revolving and reciprocating the bar of stock against a rapidly revolving metal cutting wheel, the cutting wheel having configurations thereon adapted to act upon the stock to form the twist and the stem therebetween on said bar of stock, holding the stock in such relation to the wheel as the stock is turned and reciprocated so that a part of the configuration of the cutting wheel will form curved surfaces on the sides of the twist while other configurations of the wheel are simultaneously removing the surplus part of the stock and continuing this same operation until the twist and stem are reduced to a proper shape and size.

1,415,880. COMBINED GRADER AND MATERIAL-TRANSPORTING VEHICLE. JOHN T. LEINBERGER and JOHN L. ROTH, Monitor Township, Bay County, Mich. Filed Mar. 14, 1921. Serial No. 452,270. 2 Claims. (Cl. 96—44.)



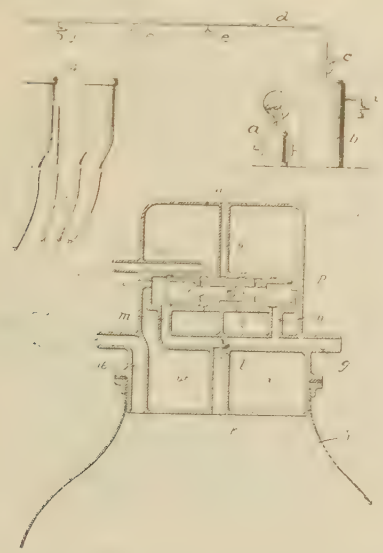
1. The combination with a grader, of a material hopper having a spout integral therewith, discharge openings in said spout and a ribbon conveyor transversely mounted therein, gates for closing said discharge openings, manually operated means for opening and closing said gates, and a foot lever for shifting a clutch into engagement for operating said screw conveyer.

1,415,881. CENTRIFUGAL OIL PURIFIER. MEREDITH LEITCH, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 22, 1920. Serial No. 375,735. 31 Claims. (Cl. 233—21.)



1. In a centrifugal separator, a compound rotatable bowl comprising an inner member with a perforated periphery and an outer shell member, in combination with means to rotate the inner member either independently of, or in unison with, the outer member.

1,415,882. MILKING-MACHINE-OPERATING SYSTEM. MEREDITH LEITCH, deceased, late of Poughkeepsie, N. Y., by Lucy Burruss Leitch, administratrix, Montgomery, Ala., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 6, 1920. Serial No. 428,450. 10 Claims. (Cl. 31—101.)



1. In a milking machine operating system, in combination, an air suction apparatus, a single pipe line connected therewith, means to intermittently open communication between the pipe line and the suction apparatus to cause momentary reductions of pressure in the pipe line and alternately therewith to block the pipe line against flow of air therethrough, a teat cup, a pulsator, a pneumatic connection between the teat cup and the pulsator, and means to pneumatically connect the pulsator with the pipe line, the pulsator being adapted, responsive to successive reductions of pressure, to be shifted in opposite directions to cause pneumatic pulsations in the teat cup.

3. In a milking machine operating system, in combination, an air suction apparatus, a single pipe line connected therewith, means to close communication between the pipe line and the suction apparatus and alternately therewith to open said communication to cause momentary reductions of pressure in the pipe line, a cylinder, means adapted to connect opposite ends of the cylinder with the pipe line, a piston valve in the cylinder adapted, in one position, to close the connections between one end of the cylinder and the pipe line and in the opposite position to close connection between the other end of the cylinder and the pipe line, whereby each pressure reduction tends to draw the piston from one position to the other, a teat cup, and a pneumatic connection between the teat cup and the cylinder, there being ports and passages adapted, in the operation of the piston, to connect the teat cup alternately with the pipe line and with atmosphere.

5. In a milking machine operating system, in combination, an air suction apparatus, a single pipe line connected therewith, means to close communication between the pipe line and the suction apparatus and alternately therewith to open said communication to cause momentary reductions of pressure in the pipe line, a cylinder, means adapted to connect opposite ends of the cylinder with the pipe line, a piston valve in the cylinder adapted, in one position, to close the connections between one end of the cylinder and the pipe line and in the opposite position to close connection between the other end of the cylinder and the pipe line, whereby each pressure reduction tends to draw the piston from one position to the other, a teat cup, and a pneumatic connection between the teat cup and the cylinder, there being ports and passages adapted, in the operation of the piston, to connect the teat cup alternately with the pipe line and with atmosphere, the arrangement of the ports and passages being such that the air when exhausted from the teat cup acts upon the end of the piston that at the time is receding.

7. In a milking machine operating system, in combination, an air suction apparatus, a single pipe line connected therewith, means to close communication between the pipe line and the suction apparatus and alternately therewith to open said communication to cause momentary reductions of pressure in the pipe line, a cylinder, means adapted to connect opposite ends of the cylinder with the pipe line, a piston valve in the cylinder adapted, in one position, to close the connections between one end of the cylinder and the pipe line and in the opposite position to close connection between the other end of the cylinder and the pipe line, whereby each pressure reduction tends to draw the piston from one position to the other, two teat cups, separate pneumatic connections from the teat cups to the cylinder, there being ports and passages adapted, in the operation of the piston, to admit air through one of said pneumatic connections to one teat cup and exhaust air through the other of said pneumatic connections from the other teat cup, and vice versa.

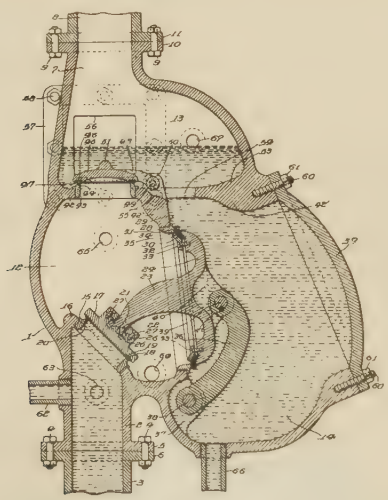
10. In a milking machine, in combination, an air suction apparatus, means to exhaust air therefrom, a pipe line, means to close communication between the pipe line and the suction apparatus and alternately therewith to open said connection to cause momentary reductions of pressure in the pipe, teat cups, a pulsator, pneumatic connections between the pulsator and the teat cups, the pulsator being operable responsive to said reductions of pressure to connect the teat cups alternately with atmosphere and the pipe line; said pulsator comprising a casing and a diaphragm dividing the same into two chambers, means providing free communication from one chamber to said pipe line and restricted communication from the other chamber to said pipe line, a valve movable by the diaphragm, a cylinder, a piston therein, there being ports and passages in the valve adapted to cause

movement of the piston and ports and passages in the piston and cylinder adapted to connect the teat cups, through said pneumatic connections, alternately with atmosphere and the pipe line.

1,415,883. CALENDAR AND DIARY PAGE. CHARLES FREDERICK LEWIS, Chicago, Ill. Filed Sept. 1, 1921. Serial No. 497,635. 6 Claims. (Cl. 283—2.)

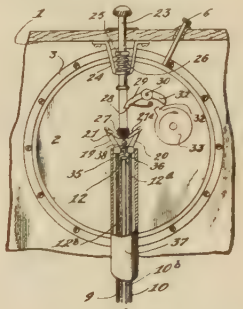
1. In a calendar or diary having a sheet for each day of the year, indicia showing the date and month and the name of the day of the week upon which said date falls in several successive years.

1,415,884. DRY-PIPE VALVE FOR FIRE EXTINGUISHERS. LEROY M. LEWIS, Philadelphia, Pa., assignor, by mesne assignments, to Central Automatic Sprinkler Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 15, 1920. Serial No. 365,747. 2 Claims. (Cl. 169—22.)



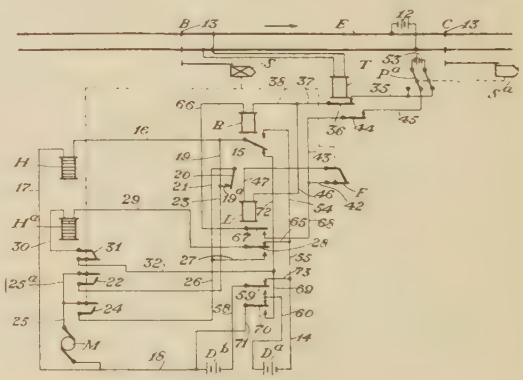
2. In an automatic dry pipe valve for fire extinguishing systems, the combination of a casing provided with an inlet, an outlet and a cushion chamber, a differential valve having the valves thereof in acute angular disposition, a short connecting arm rigid with one of said valves and universally connected to the other of said valves whereby the latter is self-adjustable to its seat, the smaller valve of said differential valve adapted to control the flow of extinguishing fluid through said casing and the larger valve of said differential valve located out of the path of the fluid passage between said inlet and said outlet, an arm pivotally mounted in said cushion chamber and rigidly secured to said larger valve, means to supply air pressure to said larger valve and means for cushioning the opening movement of said differential valve to prevent rebound thereof.

1,415,885. TIME LOCK FOR AUTOMOBILES. ARTHUR W. LYDA, North Canton, Ohio. Filed June 18, 1920. Serial No. 389,977. 2 Claims. (Cl. 200—39.)



2. In an electric circuit, a pair of switches, means for holding one switch normally open and means for holding the other switch normally closed, a plunger arranged to be depressed to close the normally open switch and open the normally closed switch, a spring pressed pawl arranged to hold the plunger in the depressed position and a time operated mechanism arranged to engage said pawl to release the plunger at a predetermined time.

1,415,886. RAILWAY SIGNAL. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 13, 1919. Serial No. 337,642. 14 Claims. (Cl. 246—223.)



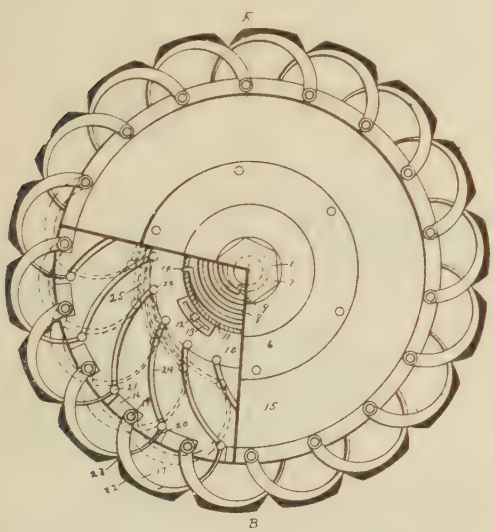
1. In combination, a signal mechanism comprising two arms biased to lower positions, a motor for moving each arm to an elevated position, means including a magnet for each arm for operatively connecting the arm with the motor and for holding the arm in the elevated position; a source of current; means for connecting said magnets in series across said source when both arms are elevated, and for connecting each magnet directly across said source at all other times when the magnet is functioning; and signaling means controlled by said arms.

1,415,887. ICE PICK. JAMES ALISON MCWILLIAMS, Chicago, Ill. Filed Dec. 31, 1921. Serial No. 526,090. 1 Claim. (Cl. 83—62.)

An ice pick comprising a handle provided with a slot extending longitudinally of the handle from the forward end thereof, a head secured on said handle at the forward

end of the latter and being formed with a slot registering with the slot of the handle, a pointed blade pivotally supported within the slot of the handle to extend through the slot of the head when in one position with respect to the handle, a latching cap threadedly engaging the head for co-acting with the latter to releasably hold the blade against movement relatively to the head, said latching cap being formed with a slot therein adapted to register with the slot of the head when the latching cap is in a certain position with respect to the head and with an arcuate slot extending along the edge thereof, and a stop pin carried by said head in position to engage with said last named slot to limit the rotation of the latching cap about the axis of the head.

1,415,888. RESILIENT WHEEL FOR VEHICLES. ARTHUR T. MALTBY, Chicago, Ill. Filed Feb. 21, 1918. Serial No. 218,470. 10 Claims. (Cl. 152—30.)

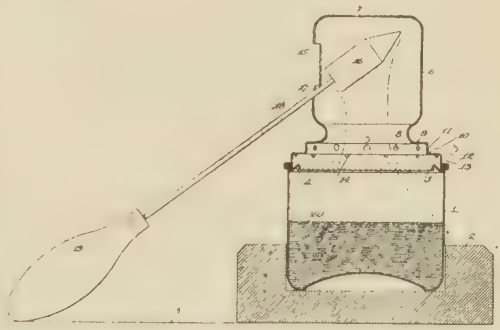


1. The combination in a resilient wheel, for vehicles, of a central hub member, adapted to be mounted on the axle of a vehicle, and having two annular spaced part flanges said flanges arranged to support two spaced part circular side members, in lieu of spokes, the outer peripheries of said side members fastened together with spacing pieces interposed between, and forming a rigid wheel rim with openings to the interior of said wheel between said side members, a collapsible outer tread surface circumferentially surrounding said wheel rim, said collapsible tread surface consisting of a plurality of curved, outwardly projecting tread members, each of said tread members having one end divided into two arms and pivotally secured to said wheel rim, the opposite or movable end overlapping and passing between the said arms of the next succeeding member, and through said wheel rim between said side members, the intermediate portion of said tread members projecting outwardly from said wheel rim to form said outer tread surface, and cushioning means for holding the said tread members in operative resilient relation to said wheel rim, said means consisting of a metallic spring coiled spirally around said central hub member, the inner end of said spring demountably secured to said central hub member, the outer, movable end of said spring connected to a circular rotary disk, said rotary disk arranged to have rotary motion around said central hub member and also arranged for adjusting or changing the tension of said spring, and a plurality of connecting rods, each having one end connected to the movable end of one of said tread members and their opposite ends all connected consecutively around the periphery of said circular rotary disk in such manner and relation that any inward or collapsing movement of any one or more of said tread members will impart rotary motion to said rotary disk, thereby opposing the tension of said spring against said movement substantially as set forth.

1,415,889. EXPLOSIVE. JOHN R. MARDICK, New York, N. Y., assignor to Acheson Graphite Company, Niagara Falls, N. Y., a Corporation of New Jersey. Filed July 29, 1921. Serial No. 488,460. 2 Claims. (Cl. 52—14.)

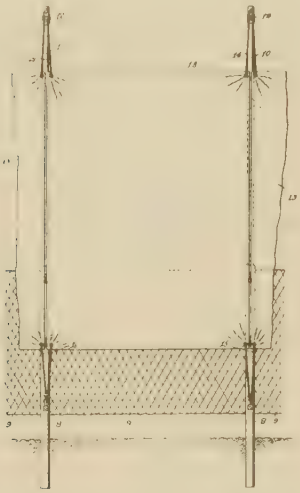
1. Black blasting powder provided with a characteristically uniform glaze of finely divided amorphous electrically produced graphite, such powder being characterized by improved covering and moisture resisting qualities, uniformity of carbon and mineral content, increased sensitiveness, uniform progression of fire and uniform velocity of explosion.

1,415,890. HEATER. GEORGE STANLEY MEIKLE, Manhattan, N. Y., assignor to S. Sternau & Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 8, 1919. Serial No. 343,302. 5 Claims. (Cl. 126—239.)



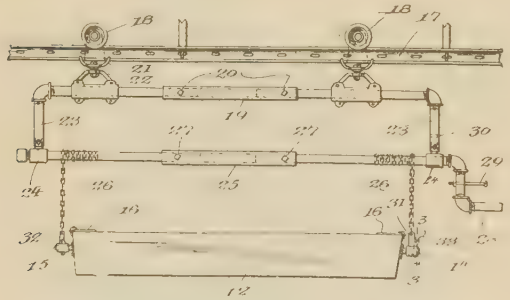
1. A heater comprising a hollow body and an integral portion forming a support for the body, there being a contraction between the body and support and forming a throat, a draft opening in the body in alinement with the throat, there being draft openings in the support, and means for gripping and supporting an article to be heated within the body and between the throat and the alined draft opening.

1,415,891. STACK-FORMING APPARATUS. ROBERT A. MINKS, Dewey, Ill. Filed Oct. 25, 1920. Serial No. 419,374. 3 Claims. (Cl. 130—20.)



1. In stack forming apparatus, rows of fixed posts arranged substantially on arcs of concentric circles, sections of foraminous material detachably mounted on said posts, auxiliary posts adjustably carried by the upper ends of said fixed posts, means for securing together the auxiliary and fixed posts, fabric sections detachably connected at their lower edges to the fixed posts, pulleys on the upper ends of the auxiliary posts, and cables connected to the upper edges of said fabric sections and passing over said pulleys.

1,415,892. CONVEYING APPARATUS. HERMAN C. MOEN and GEORGE H. BENSON, Cambridge, Wis. Filed Apr. 5, 1921. Serial No. 458,762. 2 Claims. (Cl. 212—136.)



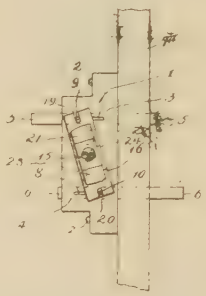
1. The combination with a receptacle; of a conveyer mounted for travel above the receptacle, and elevating means for the receptacle having a detachable connection therewith and supported by the conveyer, said elevating means including hoisting lines, bearings carried by the free ends of said lines, the receptacle having trunnions at its ends adapted to be removably seated in said bearings, one of the trunnions having a keeper recess, and a latch lever carried by one of the bearings and adapted to seat in said recess.

1,415,893. FOOD PRODUCT AND PROCESS. GEORGE MOORE, Joplin, Mo. Filed July 30, 1919. Serial No. 314,257. 5 Claims. (Cl. 99—11.)

3. A food product comprising peanut butter and bran, the bran being in a quantity sufficient for therapeutical action and less than forty per cent of the whole product, and the peanut butter containing the natural oil of the nuts.

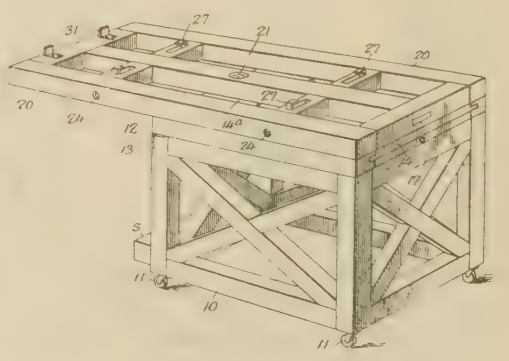
5. In the art of forming a food product, preparing peanut meat by pulverizing the nuts and mixing them with a little water, then boiling syrup to a point where it will form a soft consistent mass upon cooling, stirring into the syrup before cooling the prepared peanut meat, and mixing bran in the mass before cooling.

1,415,894. CUT-OFF VALVE FOR PNEUMATICALLY-OPERATED MUSICAL INSTRUMENTS. MAXIMILIAN W. OBERMILLER, New York, N. Y. Filed Dec. 18, 1920. Serial No. 431,598. 7 Claims. (Cl. 84—49.)



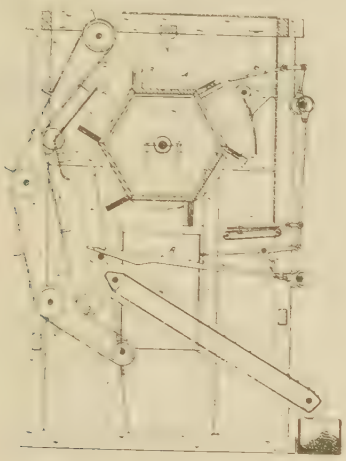
1. A cut-off valve for air conduits of pneumatic player mechanisms, comprising a block having air ports therein, a movable valve member having communicating recesses on its under face arranged for registration with the aforesaid ports, and manually operated means to move the valve first in one direction and additional manually operated means to move the valve in an opposite direction to cause said recesses to move into and out of register with said ports to connect and disconnect them.

1,415,895. POLISHING TABLE. MAXIMILIAN W. OBERMILLER, New York, N. Y. Filed June 8, 1921. Serial No. 476,004. 7 Claims. (Cl. 144—288.)



1. A piano polishing table comprising a base, a frame hinged to said base, and a second frame in pivotal relation to and longer than the first frame and projecting beyond both the first frame and base, and means to reciprocate the second frame.

1,415,896. METHOD OF SHELLING PEAS. CLARENCE H. PLUMMER, Kewaunee, Wis. Filed June 17, 1918. Serial No. 240,392. 5 Claims. (Cl. 130—30.)

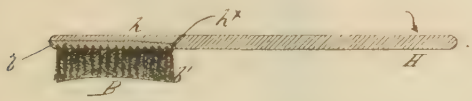


1. The method of removing green peas from their pods and vines which consists in dropping them in free air, subjecting the freely falling pods to a beating operation, agitating them to shake out the free peas, and repeating the dropping and beating operations.

1,415,897. METHOD OF TREATING SULPHIDE ORES. CHARLES J. REED, Glenside, Pa. Filed June 9, 1920. Serial No. 387,729. 5 Claims. (Cl. 23—13.)

1. The process of treating sulphide ores which comprises heating the same under non-oxidizing conditions to vaporize sulfur, treating the residue with sulfuric acid whereby hydrogen sulphide is evolved and metal sulfate is formed, and converting the metal sulfate to metal oxid and sulfuric anhydride.

1,415,898. TOOTHBRUSH. BENJAMIN H. ROST, New York, N. Y. Filed July 26, 1920. Serial No. 399,143. 1 Claim. (Cl. 15—176.)

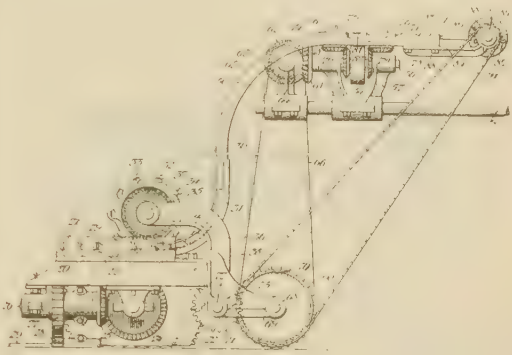


As an improved article of manufacture, a tooth brush comprising a rigid handle the forward portion of which is formed with an open-end elongate dovetail mortise the rear portion of the floor of which is inclined outward and terminates in an approximately rectangular transverse shoulder, and a removable brush the back of which is of dovetail shape in cross section and the insert end of which is inclined and terminates in a transverse rectangular shoulder for engagement with that at the rear end of said handle mortise, whereby the inward thrust of the brush is limited and prescribed as related to the handle, as and for the purpose set forth.

1,415,899. FLOTATION AGENT AND METHOD OF PRODUCING THE SAME. RALPH E. SAYRE, Pittsburgh, Pa., assignor to Metals Recovery Company, New York, N. Y., a Corporation of Maine. Filed Jan. 31, 1921. Serial No. 441,514. 12 Claims. (Cl. 252.)

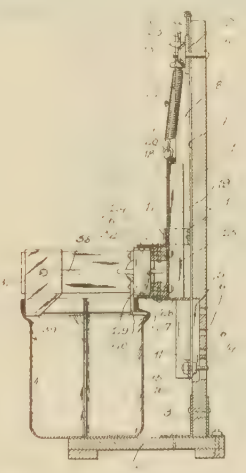
12. A composite flotation agent comprising a solvent having marked frothing qualities and a plurality of thiourea compounds produced therein by the combination of carbon bisulfide with anilin and substituted anilin.

1,415,900. TRAY-FEEDING MECHANISM FOR BOX-FILLING MACHINES. HENRY C. SCHUMACHER, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1919. Serial No. 347,302. 2 Claims. (Cl. 198—25.)



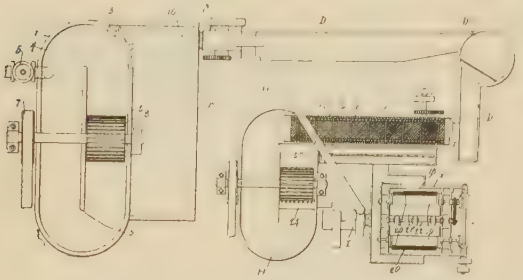
1. The combination with a conveyer having a succession of tray holders comprising spaced transverse walls, and means for impelling the conveyer, of means for feeding trays successively adjacent the receiving end of the conveyer, a rotary feed-wheel overhanging the receiving end of the conveyer and having spaced tappets which contact with the inner forward walls of the succeeding leading trays and also with the succeeding opposing walls of the tray holders, impositive means for actuating said wheel at a normally higher speed than the conveyer, and a connection between said impositive means and the said conveyer impelling means whereby the accurate positioning of the tappets in relation to the proximate trays and the respective walls of the conveyer is maintained.

1,415,901. BAG HOLDER. JOHN N. SCHWALEN, New Richmond, Wis. Filed July 21, 1921. Serial No. 486,552. 4 Claims. (Cl. 83—26.)



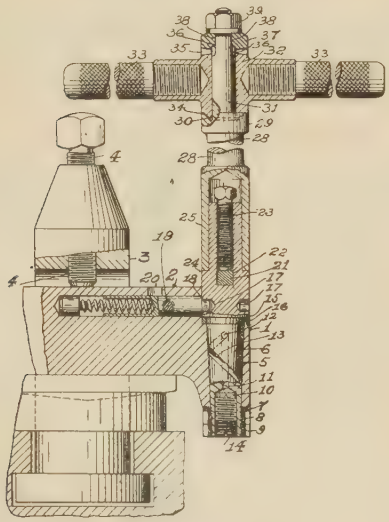
1. A sack holder comprising a support, a hanger slidably carried by said support and yieldably held against downward movement, a longitudinally slotted cross bar carried by said hanger and having upper and lower flanges, carrier blocks between the flanges of said cross bar and adjustable longitudinally thereof, arms pivotally connected with the outer end portions of said blocks and extending forwardly and rearwardly thereof, springs connected with said blocks and extending through the slot of the cross bar and connected with the rear ends of said arms, and sack engaging means carried by said blocks and the forward portions of said arms.

1,415,902. APPARATUS FOR MAKING PULP USED IN THE MANUFACTURE OF PAPER. CHARLES W. SHARTLE, Middletown, Ohio. Filed June 17, 1920. Serial No. 389,582. 6 Claims. (Cl. 92—20.)



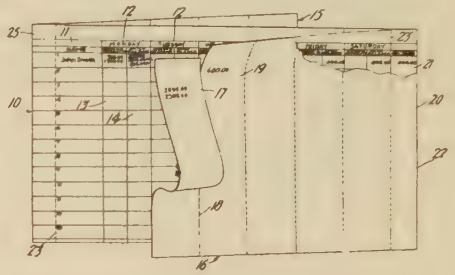
1. In a pulp reducing apparatus, the combination, with a breaker adapted to be charged with raw stock and to grind the stock to initial reduction, or a settling trough, means to deliver the reduced material from the breaker to said trough, screening mechanism into which the floating material is delivered from the settling trough, thickening mechanism connected to receive the screenings from the screening mechanism and adapted to separate water from these fine screenings and to deliver them as one finished product, and a beater arranged to receive the tailings from said screening mechanism and adapted to continuously reduce said tailings and having a discharge opening for the fine material produced thereby, whereby another finished product is delivered.

1,415,903. RADIUS TOOL. ANDREY SHEBERASHENKO, Detroit, Mich. Filed Sept. 3, 1921. Serial No. 498,436. 5 Claims. (Cl. 29—98.)



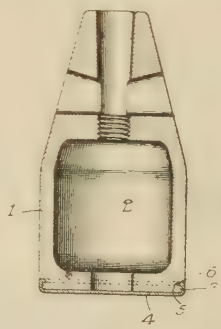
1. In a tool of the character described, a stock or member provided with a shank adapted to be supported in a tool post and with a tapering bore to receive a rotatable spindle, a spindle fitted to the bore of said stock and provided with a lateral opening to receive a cutting tool, a cutting tool mounted in said opening, a set screw adapted to secure the tool in the spindle, means adapted to engage the spindle to secure it against rotation in the stock, a socket member adapted to engage said spindle having a projecting shank manually operated means loosely sleeved upon the shank of said socket member, and means for securing said handle rigidly to the shank of the socket member when the handle is adjusted.

1,415,904. LEDGER SHEET. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 30, 1919. Serial No. 293,641. 13 Claims. (Cl. 283—57.)



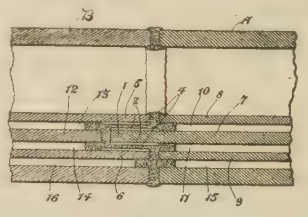
1. The combination with a "Boston" ledger-sheet, for use in a combined typewriting and computing machine in which computation of a transaction for any day involves the typing of the previous balance and the running of the same into the register, said ledger-sheet having day columns, each including subsidiary columns for transactions and daily balances, of means to take the place of the "pick-up" columns which would otherwise be necessary in the ledger-sheet, said means comprising a "pick-up" sheet attached at one edge to and normally overlying the ledger-sheet, and comprising a plurality of temporary "pick-up" columns separated by lines of less strength so positioned as to coincide with the lines between the day columns, exposure of any day column in which it is desired to compute being effected by detaching the corresponding portion of the "pick-up" sheet and withdrawing it from overlying position.

1,415,905. BUTT FOR SAND RAMMERS. EDWARD W. STEVENS, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 2, 1920. Serial No. 400,599. 5 Claims. (Cl. 22—187.)



1. A sand rammer butt comprising a body made of a light soft material and a separate end made of sheet metal.

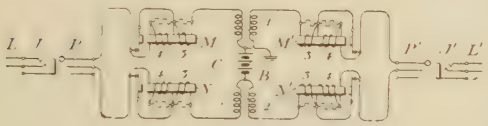
1,415,906. INTERLOCKING TILE. VANCE E. TAYLOR, St. Louis, Mo. Filed July 14, 1919. Serial No. 310,799. 1 Claim. (Cl. 72—41.)



An interlocking tile structure comprising tile sections, one of which is provided with an end groove and the

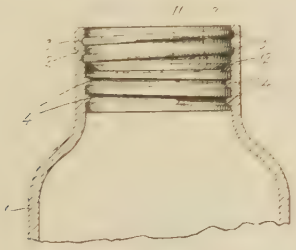
other with an end tongue entering into said end groove, each of said tile sections being provided with a plurality of cavities which extend longitudinally through said tile sections, the cavities of one tile section being adapted to register with the cavities of another tile section when said tile sections are placed in juxtaposition, one of the cavities in the tile section having a tongue being located immediately above said tongue and another of said cavities being located immediately below said tongue, and a mortar seal connecting said tile sections together, said mortar seal being interposed between the edges of adjacent tile sections and extending into and entirely filling the end portions of said cavities adjacent to said tongue and groove.

1,415,907. MEANS FOR EQUALIZING TRANSMISSION OVER LINES OF DIFFERENT ELECTRICAL CHARACTERISTICS. GEORGE K. THOMPSON, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 29, 1918. Serial No. 260,150. 12 Claims. (Cl. 178—44.)



3. The combination of a plurality of transmission lines having different electrical characteristics, a link circuit for interconnecting said lines, impedances in said link circuit, and relays responsive to current flow over said lines to increase the impedance of said link circuit as the current flow over the lines with which it is connected tends to increase so that the transmission will be substantially equalized over all of the lines with which the link circuit may be associated.

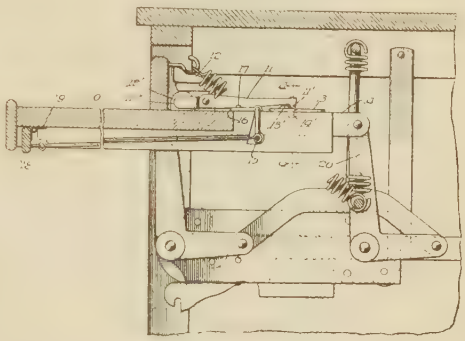
1,415,908. JAR CLOSURE. NIELS THOMSEN TOFTING, Bradgate, Iowa. Filed Oct. 5, 1921. Serial No. 505,490. 2 Claims. (Cl. 215—50.)



1. In a jar closure, a lower section comprising a solid member formed with peripheral grooves, a finger piece integral with the body of said member, a spacer ring adapted to rest upon said lower section, an upper shell-like section formed with peripheral ribs pitched in a direction opposite to the grooves of said lower section, a lip terminating one end of said upper closure section and adapted to rest upon said spacer ring, and cross bars at the opposite end of said upper section.

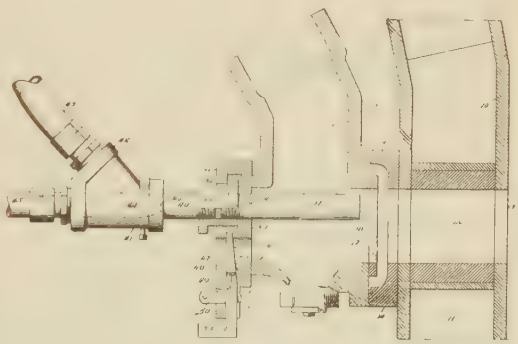
1,415,909. TYPEWRITER DESK. JENS VAALER, Chicago, Ill., assignor to Clemetsen Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 18, 1916. Serial No. 115,724. 12 Claims. (Cl. 45—52.)

1. The combination, in a desk, of a platform mounted for movement into and withdrawal from the desk body, a latch pivoted to the desk body on the inner side thereof, means secured to the platform to co-operate with the latch for locking the platform against outward movement, and means secured to the under side of said platform and operable from substantially any point across the front edge of the platform for releasing the latch.



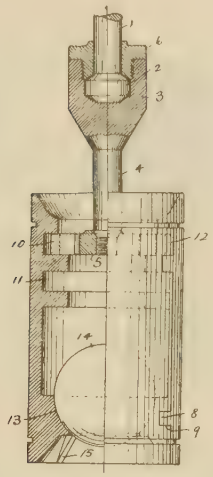
5. In combination, a desk, a movable platform mounted therein adapted to be moved forwardly and rearwardly with respect thereto, automatic means for stopping said platform at the limit of its rearward motion, and automatic means cooperating therewith to continually wedge the platform tighter upon subsequently attempted vibration thereof.

1,415,910. BLAST-FURNACE TUYÈRE CAP FOR PULVERIZED COAL. RICHARD A. WAGSTAFF, Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 15, 1920. Serial No. 365,829. 23 Claims. (Cl. 266—28.)



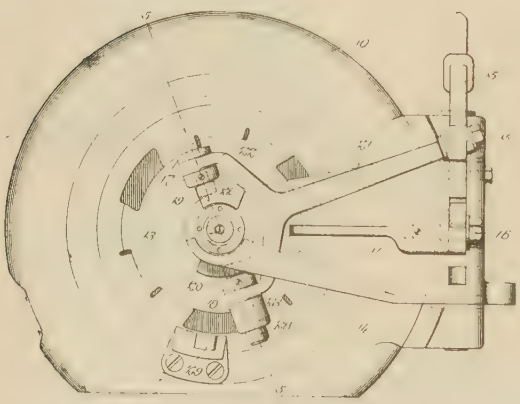
1. In a furnace structure, the combination of a furnace provided with a tuyère body in communication with the interior of the furnace, said body provided with an opening on the side thereof opposite the furnace, a cap for closing said opening, a feed tube for conducting fuel to the furnace, said tube carried by the cap, extending therethrough and through said opening into the interior of the tuyère body, easily separable means for securing the tube to the cap and for permitting the ready dismounting of the tube from the cap, said tube being removable as a unit with the cap.

1,415,911. PUMP PLUNGER. THOMAS M. ADAMS, Houston, Tex. Filed Apr. 11, 1921. Serial No. 460,480. 3 Claims. (Cl. 103—63.)



1. The combination with a pump rod of a hollow plunger formed of radially movable sections and having a swivelling connection with the rod, a valve seat within the plunger, and a valve controlling said seat.

1,415,912. BREECH MECHANISM. DORSEY F. ASBURY, Washington, D. C. Filed July 13, 1920. Serial No. 395,869. 21 Claims. (Cl. 89—20.)

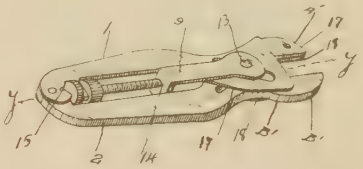


1. In a breech mechanism, a rotatable plug, an actuating lever, a plug operating member, a bearing connection between one end of the member and plug, and a bearing connection between the other end of the member and lever, said last named bearing connection having its axis disposed longitudinally of the member.

1,415,913. ARTIFICIAL BAIT. WILLIAM AUBERLIN, Northfield, Ohio. Filed June 4, 1921. Serial No. 474,947. 5 Claims. (Cl. 43—48.)

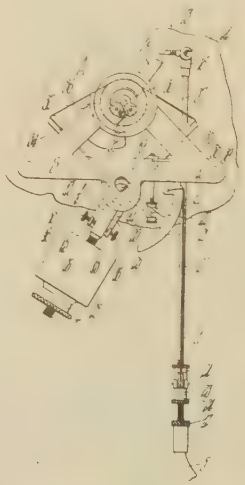
3. An artificial bait comprising a concave sheet metal body having a downwardly projecting tongue, and a pair of wings hinged to the sides of the body and adapted to stop against said tongue when partly folded.

1,415,914. ADJUSTABLE WRENCH. LOUIS E. BALTZLEY, Bloomfield, N. J. Filed Mar. 19, 1918. Serial No. 223,442. 2 Claims. (Cl. 81—113.)



1. A wrench comprising two members provided with substantially parallel opening jaw pieces at one end, one of said members being formed of a single thickness of metal and the other member made of two similar pieces for the single piece member to operate therebetween, said members being pivoted together near the ends thereof remote from the jaws, and said members being provided with slots near said jaws and inclined relative to one another, a yoke with pivot to operate in said slots, and a screw, one end of which is seated at the pivotal end of said members and the other end of said screw arranged to cooperate with the yoke to open and close the jaws.

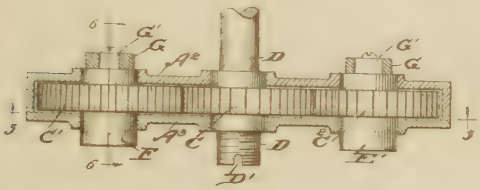
1,415,915. WEIGHING MECHANISM. HENRY B. BARTLETT, Holyoke, Mass., assignor to B. F. Perkins & Son, Inc., Holyoke, Mass., a Corporation of Massachusetts. Filed Oct. 3, 1919. Serial No. 328,247. 8 Claims. (Cl. 265—62.)



1. In a weighing mechanism, a weight arm pivoted on a knife edge for swinging movement, a load-receiving mem-

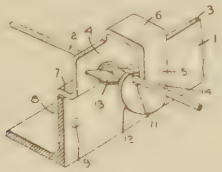
ber connected to swing such arm, a pointer arm separately pivoted for swinging movement in a plane parallel to that of the weight arm, and means connecting the weight arm pivot and pointer pivot including drums on one and arms on the other pivot and flexible tapes connecting each drum to its respective arm, each tape being secured at one end to one of the drums and at its opposite end to one of the arms.

1,415,916. BENCH TIRE TOOL. JOHN W. BARTON, Flint, Mich. Filed Mar. 8, 1920. Serial No. 364,142. 7 Claims. (Cl. 85—57.)



6. In a device of the character described, a supporting frame, a crank shaft journaled in the supporting frame, a gear keyed to the crank shaft, socket wrenches mounted within the frame, gears keyed to the socket wrenches and meshing with the gear on the crank shaft, the said socket wrenches slidably engaging a nut screw-threaded on a valve body, and means for holding the latter against rotation when the securing nut on the valve body is being removed or replaced by the rotation of the wrenches.

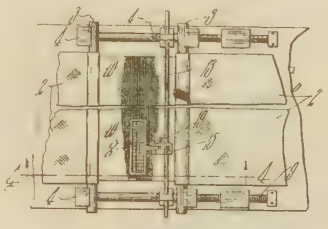
1,415,917. DETECTOR FOR ROVING AND SIMILAR MACHINES. THOMAS BENTLEY, Dracut Center, Mass., assignor of one-half to Bentley Machine Company, Dracut Center, Mass., a Corporation of Massachusetts. Filed Mar. 14, 1921. Serial No. 452,008. 4 Claims. (Cl. 119—25.)



4. In a roving machine or the like, the combination with a supporting rail, of a plurality of separate guiding members thereon, each guiding member having two guiding portions separated in the direction of the length of the sliver, one guiding portion of each guiding member having its lower edge spaced from the rail and provided with a sliver-guiding notch into which the sliver may be entered by passing it between the rail and said lower edge, the other guiding portion of each member having a sliver-guiding notch open at the top, whereby each sliver is supported by the rail and in the last-named notch and is guided by both notches, a detector pivoted between the guiding portions of each guiding member and adapted to rest on the sliver, and means for securing each guiding member to said supporting rail with both guiding portions on the same side of but spaced from the rail.

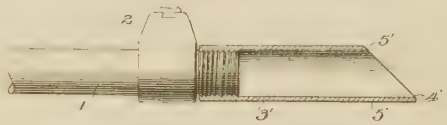
1,415,918. BAND-JOINING DEVICE. JOHN D. BROWNE, Springfield, Mass. Filed Mar. 25, 1921. Serial No. 455,612. 1 Claim. (Cl. 140—109.)

Apparatus for facilitating the joining of the ends of Fourdrinier wire comprising, an apron to partially encompass the wire when mounted on its roll, rods fixed to each end of the apron, mechanism located at each side of the apron for moving the rods toward one another for tightening the apron each of which comprises, a shank having a head fixed to one end thereof that is provided with a recess for receiving an end of one of said apron rods, a block fixed to the opposite end of said shank, a member sidable upon the said shank between the



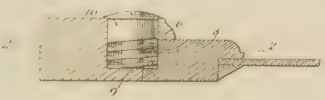
said head and block for supporting one end of the other of said apron rods and a screw threaded in the block and adapted to abut the slidable member for the tightening operation.

1,415,919. FLASH HIDER AND RECOIL ABSORBER. JOHN S. BUTLER and ELBERT FOWLER, U. S. Army. Filed Jan. 23, 1919. Serial No. 272,772. 4 Claims. (Cl. 42—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. A flash hider and recoil absorber embodying a tubular extension attachable to the muzzle of a fire arm, said extension formed with an annular groove near one end thereof, a split nipple encircling the extension, means on the nipple engaging the groove to lock the nipple to the extension, and means for securing the nipple against rotary movement with respect to the extension, the said nipple having a cutaway portion in its upper wall and an inclined lower wall underlying the cutaway portion.

1,415,920. COMBINED SCREEN AND STORM DOOR. FRED L. CIZEK, Cedar Rapids, Iowa. Filed Nov. 29, 1921. Serial No. 518,672. 2 Claims. (Cl. 20—36.)

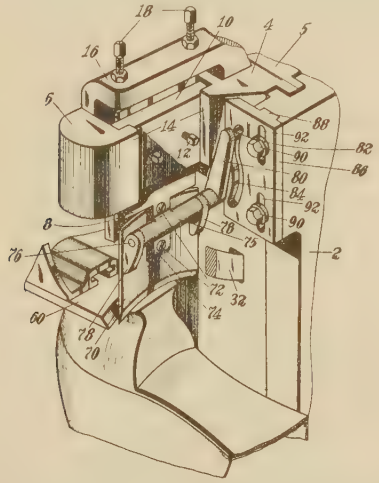


1. The combination with a door rabbeted to receive screen or storm-sash, and bored to receive fasteners, of sash partially bored coincidently with the door, clamping-plates set across said partial boring, and deeply-threaded fasteners set in the bored holes, and intercepting the clamping-plates at one side.

1,415,921. CUTTING MACHINE. CHARLES E. CONNER, Auburn, Me., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 13, 1918. Serial No. 253,901. 32 Claims. (Cl. 12—47.)

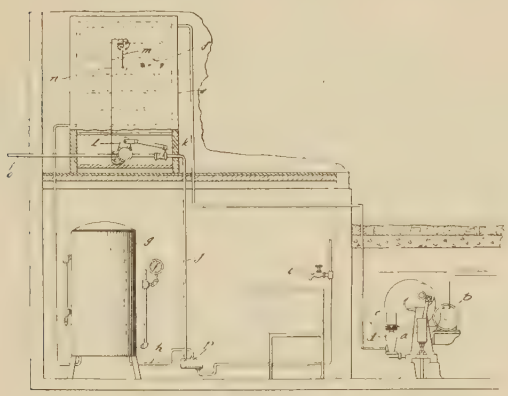
1. In a machine of the class described, the combination of a knife for effecting a cutting operation upon the breast of a shoe heel, and means for varying the shape of the cutting edge of the knife during its cutting action.

30. In a machine of the class described, the combination of a flexible knife, and means for giving the knife an initial transverse curvature at the beginning of its cut,



increasing the curvature of the knife during the cut and restoring the normal curvature to the knife before the cut is finished.

1,415,922. REFRIGERATING APPARATUS. LLOYD G. COPEMAN, Flint, Mich., assignor to Edwin W. Atwood, Flint, Mich. Filed Jan. 28, 1921. Serial No. 440,636. 5 Claims. (Cl. 62—6.)



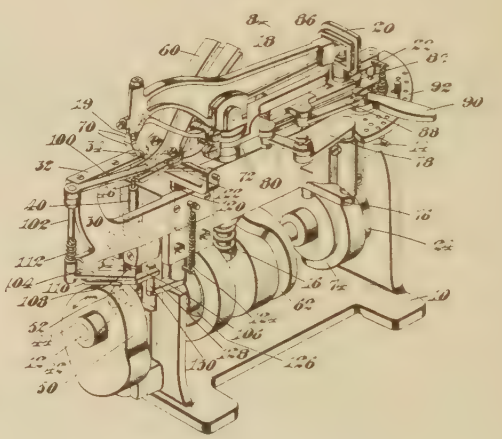
2. In a refrigerating apparatus, the combination of a refrigerator box, a water line passing through the box for keeping the box within a predetermined range of temperature, service taps connected with said water line on the side of the refrigerator box remote from the water source, a waste line connected with said water line on the side of the box remote from the water source, a thermostat affected by the temperature in the said box, a valve operated by the thermostat for controlling the flow through the waste line, and automatic means for cutting out the flow through the waste line when one or more of the service taps are open.

1,415,923. PREPARED-ROOFING SHINGLE STRIP. ROSCOE B. CRABBS, Cincinnati, Ohio, assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed May 24, 1919. Serial No. 299,538. 1 Claim. (Cl. 108—7.)

A shingle strip having a body portion, portions representative of spaced shingle ends, and portions between said last named portions extending from one edge of the strip to points intermediate opposite edges of the strip, to simulate spaces between shingles, said strip being composed of a base saturated with bituminous material having an area co-extensive with all of said portions, a layer of bituminous bonding material on said base and having an area at least co-extensive with said body portion and portions representative of shingle ends, and a

layer of mineral particles arranged over the entire body portion and portions representative of shingle ends, the portion of the strip covered with mineral particles being of uniform thickness throughout, and the portions of the strip simulating spaces between shingles being free of mineral particles and of less thickness than the mineral surfaced portion by an amount substantially equal to the depth of the mineral covering.

1,415,924. MACHINE FOR INSERTING FASTENERS. JOHN F. DAVEY, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 8, 1918. Serial No. 210,890. 24 Claims. (Cl. 218—14.1.)

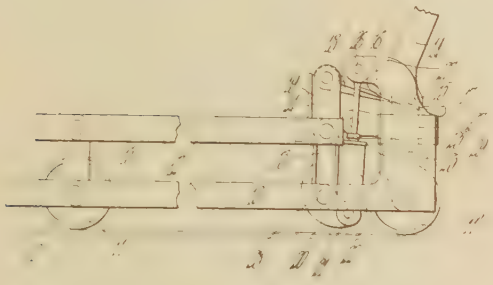


1. A fastener-inserting machine comprising a clenching member formed and arranged to clench a blind or invisible eyelet between superposed layers of an article of work, an eyelet-inserting tool and a punching tool telescopically related and arranged to function against one side of said clenching member, means arranged to operate said punching tool relatively to said inserting tool while in registration with said clenching member, means arranged to operate said inserting tool relatively to said punching tool while in registration with said clenching member, and work-punching means arranged to function against the opposite side of said clenching member substantially opposite the clenching area thereof.

1,415,925. COMPOSITION OF MATTER FOR AND METHOD OF SOLDERING AND WELDING ALUMINUM. PHILIPPE DE CLAMECY, Boston, Mass., assignor to B. F. Sturtevant Company, Boston, Mass., a Corporation of Massachusetts. Filed July 8, 1919. Serial No. 309,422. 2 Claims. (Cl. 148—23.)

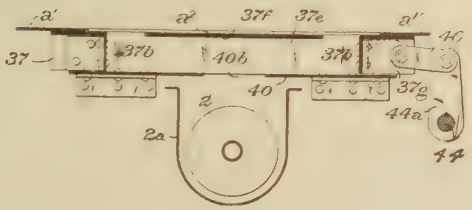
1. A composition of matter for soldering or welding aluminum comprising aluminum, tin, nitrate of silver, and chloride of silver.

1,415,926. ELEVATING TRUCK. FRANK L. EIDMANN, Holyoke, Mass., assignor to J. Lewis Wyckoff, Edward N. White, and George F. Jenks, Holyoke, Mass., trustees, doing business as Cowan Truck Company. Filed Aug. 4, 1919. Serial No. 315,287. 6 Claims. (Cl. 254—10.)



1. In an elevating truck, a base frame, having a head extending upwardly therefrom, an elevating platform movable up and down on said base, an arm pivoted on said base and connected to swing with the up and down movement of said platform, and a vertically disposed checking mechanism connected between said swinging arm and the head for controlling the descent of said platform.

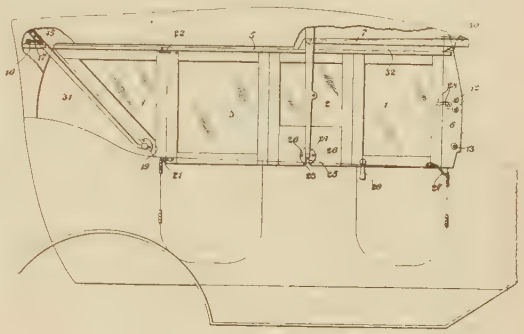
1,415,927. FUEL-FEEDING MECHANISM. ADAM B. FAHNESTOCK, Great Neck, N. Y., assignor, by mesne assignments, to Elvin Mechanical Stoker Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 28, 1918. Serial No. 268,636. 2 Claims. (Cl. 83—26.)



1. In an apparatus for delivering disintegrated material, the combination with an elongated hopper of substantially rectangular shape, of a discharge opening in the bottom of said hopper, a reciprocating agitator also of rectangular shape, a top plate carried by said agitator provided with a longitudinal opening at all times in communication with and located beneath the discharge opening of said hopper, through which the contents of the hopper are continuously discharged, said agitator also being provided with a longitudinal member and a multiplicity of spaced, transversely extending bars, and a stationary drop plate beneath the agitator, the longitudinal member of said agitator being operative to push the material from the drop plate to increase or decrease its continuous discharge therefrom.

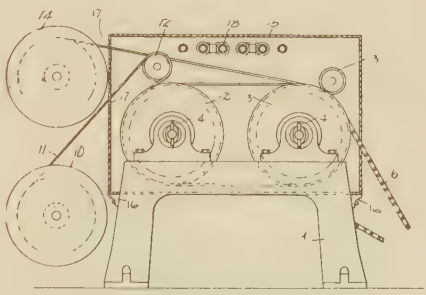
1,415,928. VEHICLE BODY INCLOSURE. JAMES B. FISHER, St. Louis, Mo. Filed Feb. 18, 1920. Serial No. 359,494. 5 Claims. (Cl. 296—45.)

1. The combination with a vehicle body having a swinging door and a cape top; of a frame including a top stringer extending from the front end to the rear below a side edge of the top, a device removably supporting the rear end of the stringer in connection with the top, and a removable upright member supporting the forward



end of the stringer and the top; a plurality of panels arranged to be supported by the frame; and hinges connecting the front panel with said upright member and also with the vehicle body in a manner to swing with the door of the body.

1,415,929. METHOD OF AND APPARATUS FOR CONTINUOUS VULCANIZING. OLIVER GROSVENOR, Akron, Ohio. Filed Feb. 5, 1921. Serial No. 442,610. 15 Claims. (Cl. 18—6.)

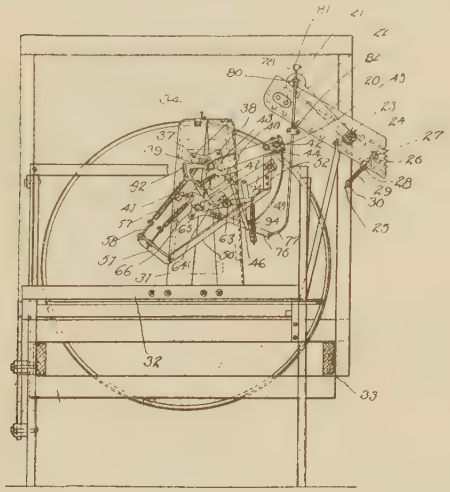


1. In a machine for continuously vulcanizing strip material, the combination of a base, two internally heated drums rotatably mounted on said base, said drums being adapted to receive the material to be treated on their surfaces, such material passing continuously around from one to the other of said drums, and means for revolving said drums and thereby move such material to vulcanize the same at a predetermined rate.

1,415,930. FIBER-HANDLING MECHANISM. LUD. HOLLAND-LETZ, Oak Park, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed July 17, 1919. Serial No. 311,522. 27 Claims. (Cl. 19—13.)

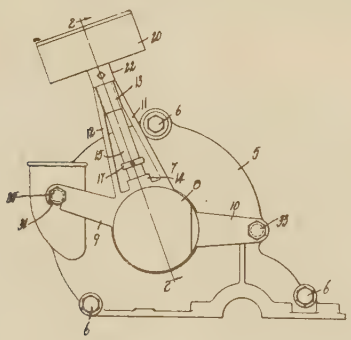
1. Means for handling fiber, including a supporting

member in combination with means for receiving fiber as it is being fed longitudinally, and means for positioning



said fiber transversely on said supporting member so that it may be fed in a direction transverse to its length.

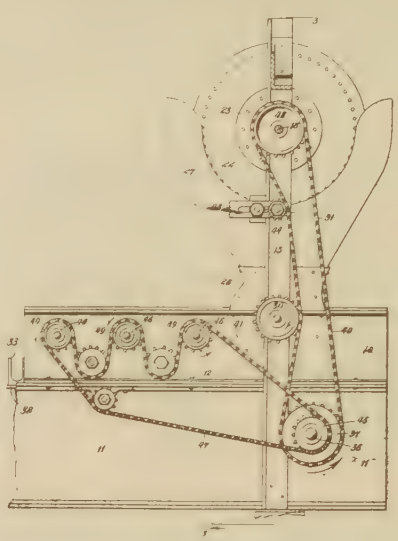
1,415,931. COMMUTATOR. HORACE W. HOWES, Waltham, Mass. Filed Sept. 22, 1920. Serial No. 411,943. 7 Claims. (Cl. 123—146.5.)



1. A commutator for internal combustion engines having, in combination, a frame, a sleeve rotatably mounted therein and supported at its opposite ends by bearings in said frame, a shaft rotatably mounted in said sleeve, a rotary contact member fast to said shaft, a plurality of stationary contact members adapted to be engaged by said rotary contact member, spaced apart, mounted upon said sleeve and insulated therefrom, means to rotate said shaft, and means to simultaneously adjust said stationary contact members concentrically with said shaft.

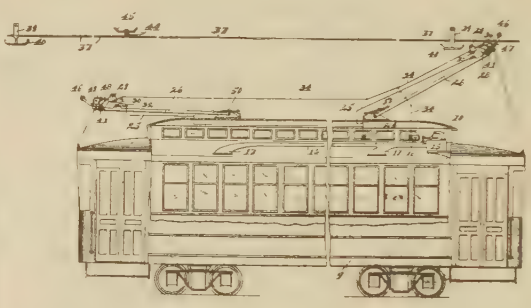
1,415,932. MECHANISM FOR FEEDING ELONGATED ARTICLES. CLARENCE A. HOY, Buffalo, N. Y., assignor to Peerless Husker Company, Buffalo, N. Y., a Copartnership. Filed Apr. 5, 1920. Serial No. 371,366. 5 Claims. (Cl. 198—29.)

1. A mechanism for feeding elongated articles to a movable carrier having pockets arranged transversely to the direction of movement of the carrier, comprising a plurality of closely-spaced separating and alining bars arranged above said carrier and parallel with the pockets thereof and adapted to receive on their upper sides the articles to be fed and to discharge the same from their



underside into said pockets in a position parallel with the latter.

1,415,933. STREET INDICATOR. JOHN R. HUME, Chicago, Ill. Filed Jan. 5, 1920. Serial No. 349,563. 11 Claims. (Cl. 246—174.)

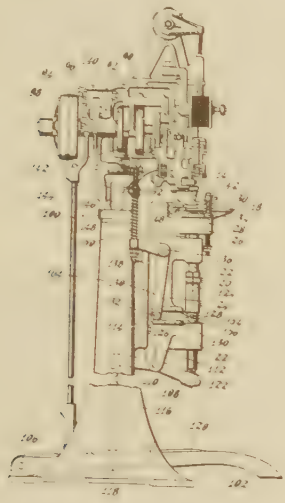


2. In combination with a trolley car carrying a street announcing machine; means for retaining said machine against operation; a local electric circuit including means for releasing said retaining means upon closing the said circuit; means mounted on said car for closing said circuit; and additional means mounted on said car and actuated by means on the trolley wire for breaking said circuit, substantially as described.

1,415,934. KEY RING. PHILIP JOFFE, New York, N. Y. Filed Dec. 28, 1918. Serial No. 268,584. 5 Claims. (Cl. 59—98.)

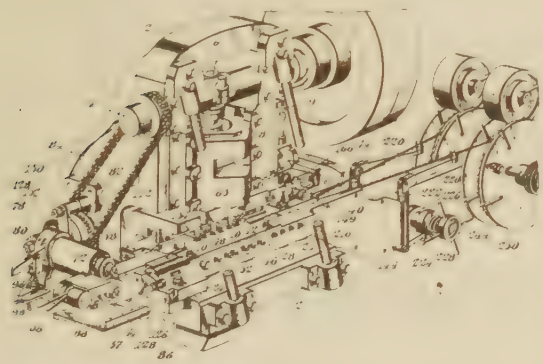
1. A key ring adapted to receive and retain keys removably thereon having one end thereof turned upon itself to form a loop, and the other end thereof enclosing said loop.

1,415,935. FASTENING-INSERTING MACHINE. FRED N. LA CHAPELLE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 1, 1919. Serial No. 280,033. 28 Claims. (Cl. 12—17.)



1. In a machine of the class described, a work support, fastening inserting mecahnism, and work shaping means mounted between the work support and said mechanism and having portions controlled by said work support and movable toward each other in a pressing operation to shape the work prior to the insertion of the fastening.

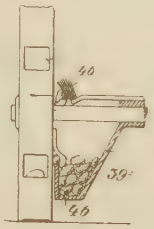
1,415,936. MACHINE FOR MAKING NAIL STRINGS. ALBERT LATHAM, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 5, 1918. Serial No. 257,034. 58 Claims. (Cl. 10—45.)



2. The method of making nail strings which consists in positioning a plurality of metal strips side by side with their contiguous edges in contact and then dieing out spaced portions from the contiguous edges of the strips to form them into nail strings.

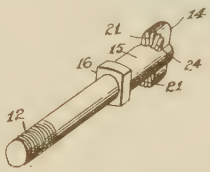
1,415,937. APPARATUS FOR PLANTING POTATOES AND THE LIKE. WILHELM LIPPITZ, Jauer, Germany. Filed Sept. 4, 1919. Serial No. 321,645. 7 Claims. (Cl. 221—127.)

1. In an apparatus for planting potatoes and the like, the combination with the dropping drum provided circumferentially with chambers for receiving and dropping the potatoes and provided in both its opposite side walls with openings permitting inspection of the chambers, of means



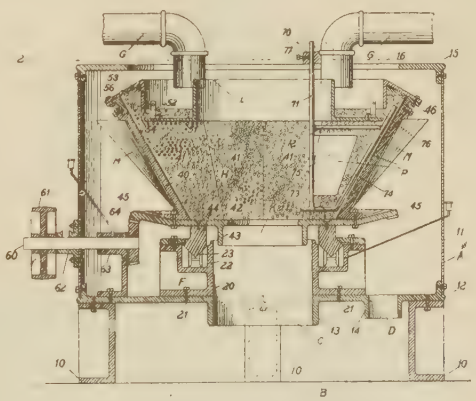
located on opposite sides of said drum to alternately supply potatoes through said openings and to said chambers.

1,415,938. BOLT LOCK FOR DEMOUNTABLE RIMS. WILLIAM E. LOTT, Newark, N. J. Filed Mar. 5, 1921. Serial No. 449,979. 2 Claims. (Cl. 85—1.)



1. The combination with a clamping member having a slotted opening, of a bolt having a cross head at one end, a nut on the other end of the bolt, a cam disc having a slot to permit passage of the bolt head and having a cam face on one side opposite each wall of the slot, adapted to engage the arms of the cross head, whereby turning of the disc in one direction will advance it on the bolt away from the head, said bolt having a flattened portion below the cross head to engage the slotted opening in the clamp piece to prevent turning of the bolt on the clamping member.

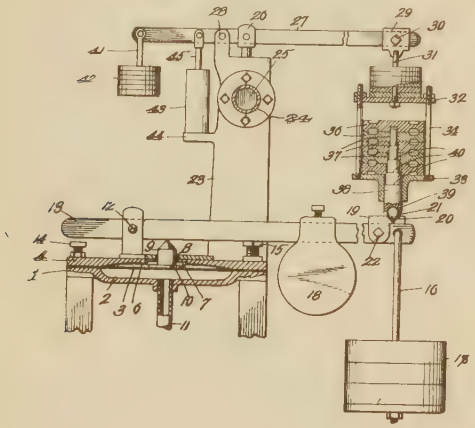
1,415,939. CENTRIFUGAL PULP-DRYING MACHINE. REXFORD C. MABRY, Nashua, N. H. Filed Apr. 28, 1921. Serial No. 465,192. 5 Claims. (Cl. 210—74.)



1. In a centrifugal machine for extracting liquid from paper pulp, the combination of a cone shaped screen with its large end at the top and its outlet at the bottom; and means for rotating said screen; with an annular feed hopper revoluble therewith having an annular outlet proximate the top rim of the screen; and a stationary member including a cleaning rod which extends proximate the conoidal inner surface of the screen and a compression guide plate proximate said rod and so set as to direct

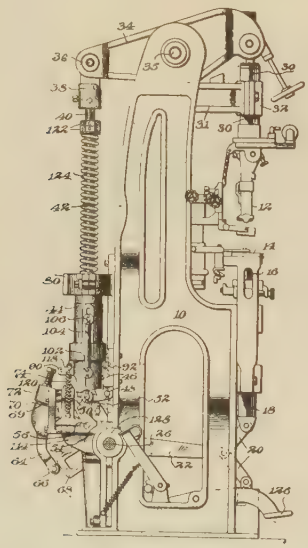
the thickened stock towards the outlet; together with wings extending outwardly and at an angle from the screen; and a water receiver which extends outside the screen and wings.

1,415,940. AUTOMATIC REGULATOR FOR BOILER FURNACES. WILLIAM J. MANHIRE, Kansas City, Mo., assignor to Combustion Specialty Company, Kansas City, Mo., a Corporation of Missouri. Filed May 27, 1920. Serial No. 384,766. 8 Claims. (Cl. 236—28.)



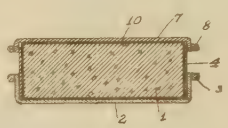
1. The combination of a pipe for supplying fluid under pressure to a fan engine, a controlling valve for said pipe, a counterbalanced lever for operating said valve, a series of weights carried by said lever for conjointly holding the valve fully open, and means actuated by fluid under pressure beyond a predetermined degree, for movement in one direction to successively relieve the lever of said weights to permit it to operate and impart closing movement to said valve; said means under decreasing pressure of the fluid, reverses its movement to successively reimpose said weights upon said lever.

1,415,941. HEELING MACHINE. BENJAMIN F. MAYO, Salem, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 21, 1918. Serial No. 212,978. 33 Claims. (Cl. 1—32.)



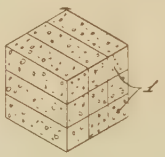
1. In a heeling machine, actuating mechanism for the machine, a co-operating jack-post and nail-block relatively movable under the influence of the actuating mechanism, and means controlled by the actuating mechanism and including relatively movable sections and an interposed resilient member for producing initial movement of the jack-post and the work.

1,415,942. PROCESS FOR FORMING CHEESE. JULIUS R. MEYERS, Glencoe, Ill. Filed Dec. 17, 1920. Serial No. 431,453. 7 Claims. (Cl. 99—11.)



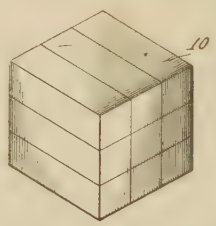
4. A process of forming cheese consisting of compressing curd to provide a large green cheese, dividing the large green cheese into pieces of predetermined size, compressing and locking the pieces of green cheese in individual molds, subjecting the filled molds to moist heat for a short period to cause expansion of the cheese within the molds to fill out irregularities in the surfaces of the cheese, then permitting the cheese to gradually cool in the molds, and then removing the cooled smooth cheeses from the molds and setting the removed cheeses away to be cured.

1,415,943. PROCESS OF MAKING CHEESE. JULIUS R. MEYERS, Glencoe, Ill. Filed Apr. 11, 1921. Serial No. 460,549. 11 Claims. (Cl. 99—11.)



6. The process of forming a rindless cheese by wrapping a piece of green cheese in a metallic wrapper, surrounding the metallic wrapper by a non-metallic covering, compressing the doubly wrapped cheese in a mold to force the air from between the cheese and the metallic wrapper, placing the mold in a room having a predetermined temperature, then gradually increasing the temperature of the room to expand the cheese and cause the formation of a sealing medium between the cheese surfaces and the metallic wrapper, then permitting the cheese to gradually cool in the mold, and then removing the cheese from the mold taking off the non-metallic covering and leaving the metallic wrapper in place.

1,415,944. PROCESS OF CHEESE PACKING. JULIUS R. MEYERS, Evanston, Ill. Filed Apr. 21, 1921. Serial No. 463,166. 5 Claims. (Cl. 99—8.)

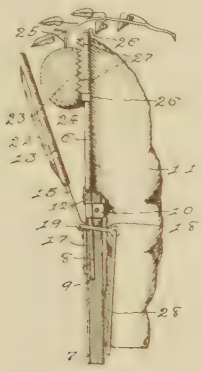


2. The process of protecting blocks of cheese including wrapping the blocks in a covering of metal foil and subsequently applying heat through the foil so as to form a bond between the cheese and the foil.

4. An article of manufacture, a block of cheese covered with a protective coating of metal foil, the same having

been incorporated into the outer surfaces of the cheese by fusion of the casein at the outer surfaces of the cheese effected by applying heat to the surfaces of the wrapped block.

1,415,945. FRUIT PICKER. JEMERSON MOORE, Oklahoma, Okla. Filed Feb. 6, 1920. Serial No. 356,735. 2 Claims. (Cl. 56—333.)



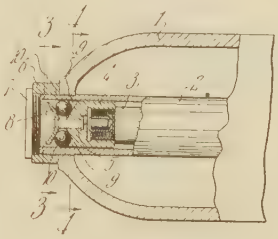
2. In a fruit picker, an annular jaw, a polygonal pole, the said jaw having ends turned downward upon opposite sides of said pole and inserted tightly in the latter, a metal clip hooked around the downturned ends and riveted to the pole, a flexible bag having its upper end secured to said jaw, with an edge portion of the bag drawn forward through the lower part of the jaw and secured to the upper end of the pole, and a jaw pivoted to the pole at a point below the first-named jaw and having a flexible covering and a pivotal portion mounted on the pole and having a crank portion and an eye embracing the same.

1,415,946. CHANNEL-FLAP-LAYING MACHINE. LEWIS J. MORRISON, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 12, 1920. Serial No. 373,079. 7 Claims. (Cl. 12—29.)

1. A channel flap laying machine having, in combination, a flap laying tool comprising a series of unyielding elements for delivering a succession of blows to the channel flap, and yielding means in engagement with the operative faces of such elements and bridging the spaces therebetween, whereby the blows are delivered through the yielding means and are dampened or softened.

1,415,947. BOMB STRUCTURE. ELMER E. NEAL, New Haven, Conn., assignor to Marlin-Rockwell Corporation, New York, N. Y., a Corporation of New York. Filed July 22, 1918. Serial No. 245,987. 8 Claims. (Cl. 102—39.)

1. In a bomb structure, safety means, comprising in combination, a firing pin, a striking plug, a firing pin holder, said striking plug and firing pin holder being relatively movable toward and from each other, and antifriction balls located between the striking plug and firing

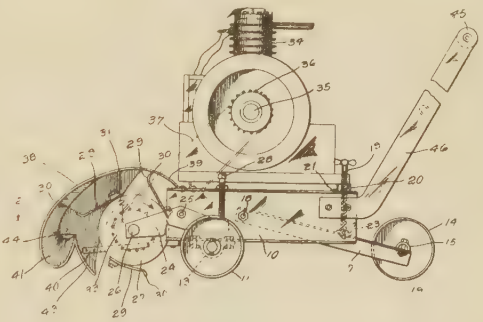


holder to normally prevent movement of said striking plug and said firing pin holder toward each other when the bomb is assembled, all for the purpose described.

1,415,948. HAND GRIP FOR FILES. JOHN L. OSGOOD, Buffalo, N. Y. Filed Feb. 16, 1921. Serial No. 445,343. 4 Claims. (Cl. 29—80.)

1. A hand grip for the unhandled front ends of files, comprising a resilient body having an external transverse shoulder which is adapted to bear against the hand of an operator, said hand grip having a socket which extends into said body beyond said shoulder and which is adapted to receive the end of a file.

1,415,949. ROOF-SCRAPING MACHINE. JOSEPH S. PERELMAN, Norwood, R. I. Filed May 24, 1921. Serial No. 472,219. 7 Claims. (Cl. 144—115.)

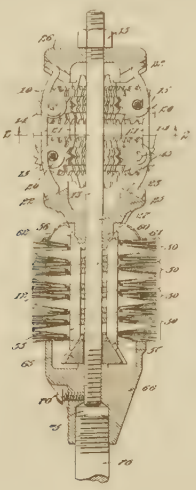


1. A portable scraping machine comprising a carriage, a scraping roll operatively mounted thereon and having a multiplicity of flexible scraping fingers each having its working edges turned at an angle to the plane of its body portion for yieldably engaging the surface to be operated upon with a scooping action, and a motor on said scraper for driving said roll.

1,415,950. FLUE CLEANER. SAMUEL S. POOLE, Boston, Mass. Filed Sept. 29, 1920. Serial No. 413,481. 4 Claims. (Cl. 15—104.13.)

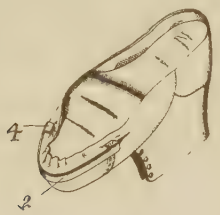
1. A flue cleaner having, in combination, a support and a cutter mounted on the support, said cutter comprising a plurality of longitudinal spring members, a plurality of expansible bearings carried by said spring members, a plurality of cutter wheels mounted on each bearing, two

cam members mounted on the support adapted to engage the ends of the spring members, and means for adjusting



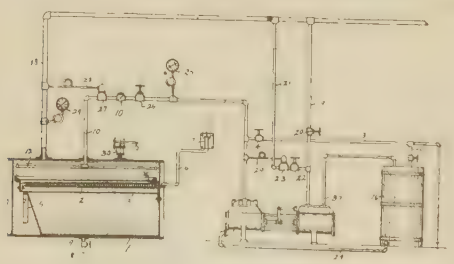
the position of one of the cam members to cause outward movement of the longitudinal spring members to effect expansion of the cutter wheels.

1,415,951. BINDER FOR USE IN LASTING SHOES. CHARLES F. PYM, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 25, 1918. Serial No. 259,642. 24 Claims. (Cl. 12—107.)



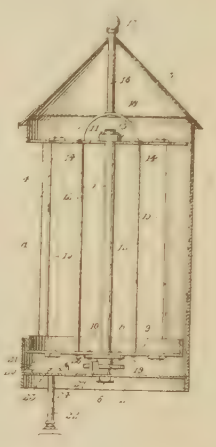
1. A binder for use in retaining an upper in conformity to the contour of the end portion of a last comprising a member formed to extend round the end of the shoe exteriorly of the periphery of the shoe bottom and having a projection thereon constructed to enter a portion of the shoe materials on the bottom of the last to fasten the binder to the shoe.

1,415,952. STEAM GENERATOR. JOE B. ROGILLIO, Houston, Tex. Filed July 26, 1920. Serial No. 399,028. 2 Claims. (Cl. 122—451.)



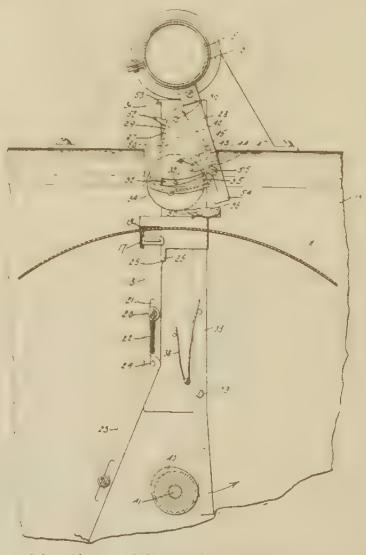
1. A steam generator including a boiler, a pump, a water pressure line connected into the boiler, a cut off valve controlling said pressure line, a water line leading from the pump and terminating in the pressure line between the valve and boiler, a steam line leading from the boiler and formed into branches which unite into a common line which is connected to the pump through which steam is delivered to the pump for operating the same, shut off valves controlling said branch lines, a water cistern, a pipe connecting the cistern with the intake of the pump, an exhaust steam line leading from the exhaust steam chamber of the pump and entering said cistern, a discharge pipe leading from the pressure line into said cistern, a valve controlling said discharge pipe, and governors actuated by steam and water pressure respectively, and automatically controlling said water pressure line and one of said branch steam lines, respectively.

1,415,953. MILK-BOTTLE RECEPTACLE. JOHN SANDOR and JOHN TOTH, Lorain, Ohio. Filed May 18, 1921. Serial No. 470,644. 5 Claims. (Cl. 232—41.)



1. A milk bottle receptacle comprising a casing, a bottle supporting frame rotatably supported therein, said casing having a bottle entrance opening in the side wall thereof, means for rotating the bottle supporting frame, means to prevent retrograde movement thereof, means for locking the bottle supporting frame against rotation, said bottle supporting frame including a base supporting disk and an upper plate, rods connecting the disk and plate and guard rails extending between the disk and plate adapted to be positioned in front of the casing opening when the bottle supporting frame is in a locked position.

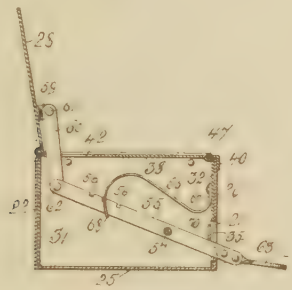
1,415,954. PHONOGRAPH STOP MECHANISM. CHARLES SCHATTE, New York, N. Y. Filed Sept. 13, 1920. Serial No. 409,835. 13 Claims. (Cl. 192—116.)



1. The combination with a phonograph including a rotating table and a swinging tone-arm traversing said table,

of a stop mechanism comprising a spring-actuated brake, means for holding said brake in its inoperative position, a stop pin carried by said tone-arm, a brake releasing mechanism mounted in the path of said pin, and means for rendering said releasing mechanism operative when engaged by said pin as the latter comes to a full stop at the end of the record, said tone-arm moving a predetermined distance across said rotating table before said pin is brought into operative relation to said brake releasing mechanism.

1,415,955. CUSPIDOR. NATHAN SCHLESINGER, Brooklyn, N. Y. Filed June 28, 1920. Serial No. 392,206. 3 Claims. (Cl. 4—39.)

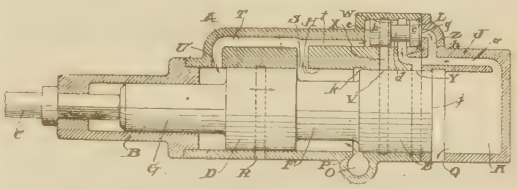


1. In a cuspidor the combination of a casing, a cover hinged to the casing, a well in the casing, a lifting lever having notches in one of its edges pivoted in the casing with one end thereof extending outside of the said casing, a spring with one end thereof secured to a wall of the casing and its other end adapted to lock with any of the notches of the lifting lever and a link connecting the other end of the lifting lever and said cover.

1,415,956. HAMMER. FRED E. SHOURDS, Hetland, S. Dak. Filed May 22, 1920. Serial No. 383,428. 1 Claim. (Cl. 254—26.)

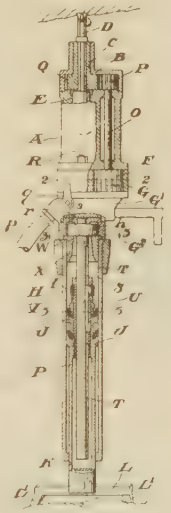
As a new article of manufacture, a hammer consisting of a body, having a forward end and a head, an elongated chisel-forming portion extending from said body, of a raised longitudinally extending reinforcing rib formed centrally upon said chisel-forming portion, one end of said rib merging in the forward end of said body, said chisel-forming portion and the opposite end portion of said rib merging into a broad notched portion, said rib and chisel-forming portion being curved throughout their entire lengths, said rib being comparatively narrow in cross section, whereby the rib will hold the hammer against side slipping when the device is in use and the hammer is being rocked upon said rib.

1,415,957. ROCK DRILL. WILLIAM A. SMITH, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 13, 1920. Serial No. 403,353. 2 Claims. (Cl. 121—18.)



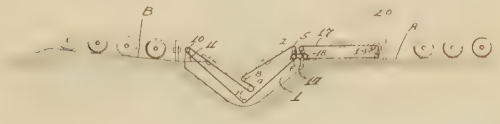
1. In a fluid operated rock drill of the hammer type, the combination of a cylinder and piston having front and rear heads of equal diameter, and a connecting neck of reduced diameter, means for constantly supplying fluid under pressure to the cylinder between the said two piston heads, a supply port controlled solely by the front piston head and communicating by means of a supply passage with an admission port at the front end of the cylinder for supplying motive fluid directly to the forward end of the cylinder in front of the front piston head, a forward admission port and another admission port rearward of the said forward admission port for supplying motive fluid to the rearward end of the cylinder behind the rear piston head, and a fluid actuated valve for controlling communication between forward and rearward admission passages leading to said forward and rearward admission ports.

1,415,958. AUTOMATIC AIR-FEED CONTROL FOR ROCK DRILLS. WILLIAM A. SMITH, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 25, 1921. Serial No. 447,757. 4 Claims. (Cl. 121—5.)



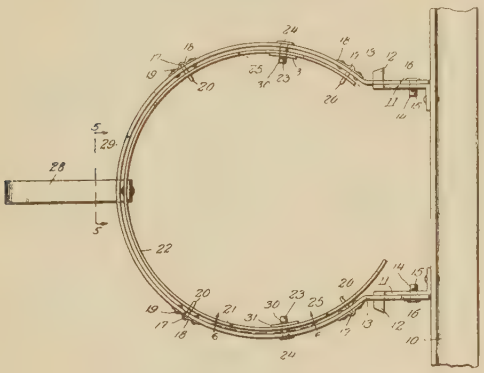
1. In a rock drill of the hammer type, the combination with the drill cylinder, of means for rotating the drill steel, a feeding element for feeding the machine forward, comprising a stationary non-rotatable member, a rotatable and longitudinally movable member connected to the drill cylinder, means for limiting the rotary movement of said longitudinally movable member, and means actuated by said rotary movement for automatically controlling said fluid pressure feeding element in accordance with the resistance to rotation.

1,415,959. DIPPING MACHINE. THOMAS STARK, Chicago, Ill. Filed Oct. 18, 1920. Serial No. 417,601. 3 Claims. (Cl. 91—46.)



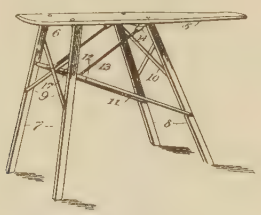
1. In a device of the class described, a paint pit, and means for dipping articles therein comprising a dipping conveyer member circulating in said pit, and so arranged as to provide a gap over which the articles must pass during the dipping operation.

1,415,960. BAG HOLDER. JOHN STURROCK, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Mar. 6, 1919. Serial No. 281,050. 8 Claims. (Cl. 83—26.)



1. In a bag holder, a frame, a ring positioned within said frame and concentrically movable with respect to said frame, bag piercing means carried thereby, and means fixed to said frame and extending through said ring for guiding said ring in its movement in actuating said piercing means to operative and inoperative position.

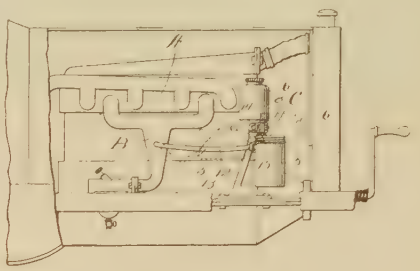
1,415,961. IRONING BOARD. AUGUST SWANSON, Cedar Rapids, Iowa. Filed Sept. 2, 1921. Serial No. 502,058. 2 Claims. (Cl. 68—10.)



2. A locking brace for ironing-tables, comprising a cross-rod pierced for brace-rods, headed brace-rods slidable therethrough, a tube revoluble on the cross-rod, provided with outlet holes for the heads of the brace-rods, and slots in the opposite side of said tube, and a spring adapted to turn the tube to locking position.

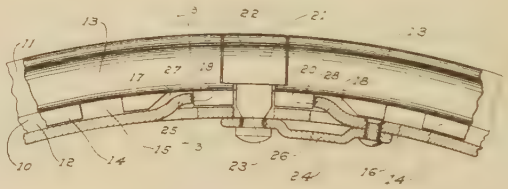
1,415,962. ENGINE STARTER. BOONE U. TAYLOR, Nashville, Tenn., assignor of one-half to James H. Campbell, Charles A. Nelson, Henry C. Moore, Jr., and Al D. McKnight, Murfreesboro, Tenn. Filed June 13, 1919. Serial No. 304,050. 8 Claims. (Cl. 123—180.)

1. The combination with an internal combustion engine including the intake manifold thereof, of a gas generator mounted on the frame of the engine, said gas generator comprising a water container, a carbide container rigidly connected to and in communication with said water container, means for delivering a charge of carbide to said



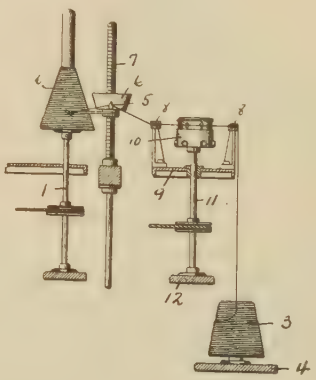
water container, said charge delivery being effected by a reversed turning movement of said carbide and water containers, and means for conveying the gas generated in said water container to the manifold of the engine.

1,415,963. VEHICLE WHEEL RIM. JOSEPH C. THEBERATH, Cleveland, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 9, 1919. Serial No. 288,803. 5 Claims. (Cl. 152—21.)



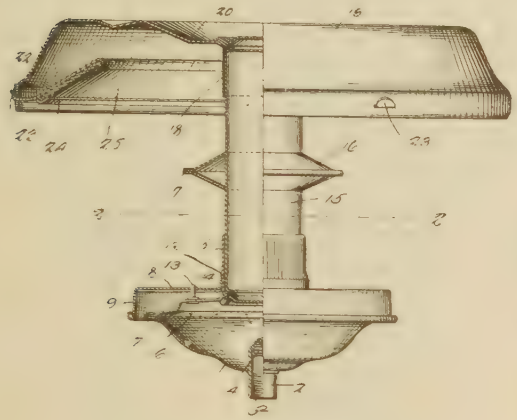
1. The combination with a wheel rim of a split side ring removably mounted on said rim, and means for locking said ring to said rim, said ring having opposed abutments, and said rim having integral lugs stamped-up therefrom, the juxtaposed edges of which are severed from the rim to form shoulders which engage said abutments to hold said ring against circumferential displacement.

1,415,964. WINDING AND DYEING MACHINE. EUGENE A. THOMPSON, Syracuse, N. Y. Filed Jan. 9, 1919. Serial No. 270,310. 5 Claims. (Cl. 8—19.)



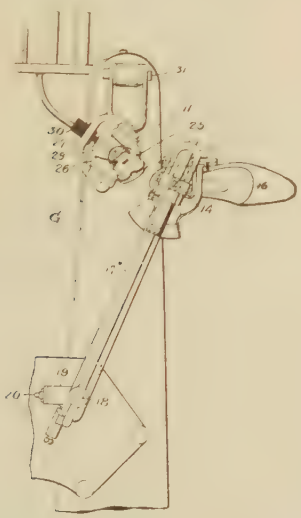
1. In a dyeing machine, a rotary element, a wick projecting from the surface of said element, means for supplying dye to the wick, means for moving a thread across the periphery of said element in contact with said wick, and means for rapidly and continuously rotating the element during the entire period that the thread is in contact with the wick.

1,415,965. BURNER. HERMAN WATERMAN, New York, N. Y. Filed Nov. 22, 1920. Serial No. 425,873. 3 Claims. (Cl. 126—248.)



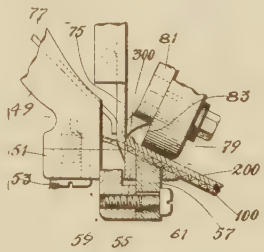
1. In a burner the combination with a body having an annular series of outlets for fuel, of a top or cover above the body, a telescopic connection between the middle portions of the body and cover, and a reflecting ring detachably mounted within the cover and spaced therefrom.

1,415,966. EDGE-TRIMMING MACHINE. HORACE D. WEBB, Rochester, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 24, 1919. Serial No. 292,336. 30 Claims. (Cl. 12—88.)



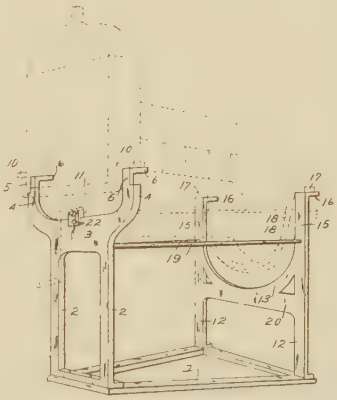
1. In a machine for trimming the edge of a sole attached to a last, a trimming cutter arranged to cut along lines substantially parallel to the plane of the sole, and guiding means relatively to which the last is movable, said means being arranged to maintain contact with the side of the last at two separate points simultaneously to guide the work relatively to the cutter so as to vary the depth of cut according to the variant curvature of the last.

1,415,967. LINING-TRIMMING MACHINE. MELBOURNE W. WHITE, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 1, 1919, Serial No. 314,698. Renewed Aug. 19, 1921. Serial No. 493,700. 23 Claims. (Cl. 12—51.)



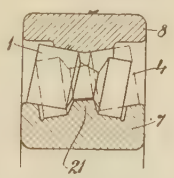
1. A machine for trimming the lining which projects from the top of a shoe, having in combination, a support for the upper edge of the shoe, means for feeding the upper edge over the support, and means for severing the lining close to said edge.

1,415,968. REPAIR STAND. LESLIE A. WILSON, Berlin, Wis. Filed Jan. 2, 1919. Serial No. 269,240. 4 Claims. (Cl. 29—89.)



1. A repair stand for garage work, comprising a skeleton frame having upwardly extending supporting members at the front and rear of said frame, yokes integral with said supporting members and having upwardly projecting arms provided with rests for the hanger flanges of an engine body.

1,415,969. ROLLER BEARING. SVEN GUSTAF WINGQUIST, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Sept. 9, 1919. Serial No. 322,753. 11 Claims. (Cl. 64—39.)

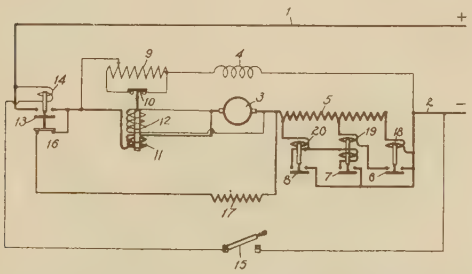


1. In a roller bearing an inner and an outer ring, and a plurality of rows of rollers interposed between said rings, there being load carrying engagement between each roller and at least one of the rings at a plurality of spaced apart contact areas, at least one of the rings having a plurality of load carrying races for rollers of each row, the races for one row alternating in axial direction with the races for the other row.

1,415,970. ROTATING KILN FOR BURNING CEMENT AND THE LIKE. NILS WINQVIST, Tollarp, Sweden. Filed Oct. 30, 1918. Serial No. 260,369. 2 Claims. (Cl. 222—7.)

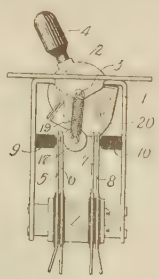
1. In combination, a rotary kiln having a preparatory heating zone, and flat projections extending from the wall of said zone and leaving a free central passage in the kiln, said projections being spaced longitudinally and circumferentially of the kiln and having large surfaces parallel to the direction of rotation and presenting thin edges and open spaces to the material in the direction of rotation thereby to prevent lifting of the material by said projections during rotation.

1,415,971. MOTOR-CONTROL SYSTEM. JOHN H. ALBRECHT, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 5, 1916. Serial No. 89,098. 5 Claims. (Cl. 172—288.)



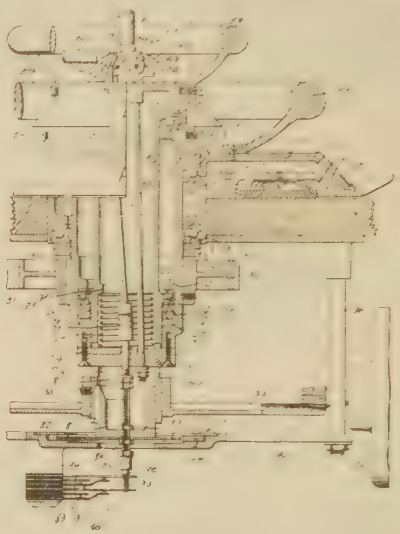
4. In a motor-control system, the combination with an electric motor, means for accelerating said motor, and means for dynamically braking said motor, of a relay having actuating means controlled in accordance with the values of the current and the voltage in the circuit of said motor for decreasing the field excitation of said motor when the speed of the latter reaches a predetermined rate in accelerating and for increasing the field excitation of said motor when its speed has fallen to a predetermined rate during dynamic braking.

1,415,972. ELECTRICAL SWITCHING DEVICE. ROY M. ALLEN, Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 13, 1920. Serial No. 403,210. 6 Claims. (Cl. 179—176.)



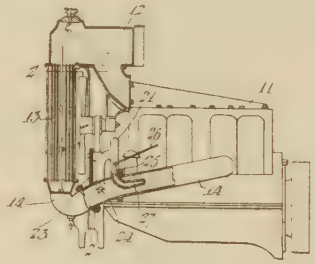
6. In a switching device, a plurality of switch members, a rotatable cam, and a member resiliently mounted on said cam and adapted reciprocate on the edge thereof whereby upon rotation of said cam said member is caused to alternately contact the said switch members.

1,415,973. COMPENSATOR. ROY M. ALLEN, Bloomfield, and PAUL NEILL, East Orange, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 8, 1921. Serial No. 436,011. 23 Claims. (Cl. 181—05.)



23. In an arrangement for measuring and indicating bearing angles, means for directly measuring the trigonometric function of an angle, and means for traslating said measurement into a direct indication of the angle.

1,415,974. ACCELERATOR FOR WATER-COOLED MACHINES. SCOTT E. ALLEN, Los Angeles, Calif. Filed Nov. 1, 1920. Serial No. 421,130. 6 Claims. (Cl. 123—175.)

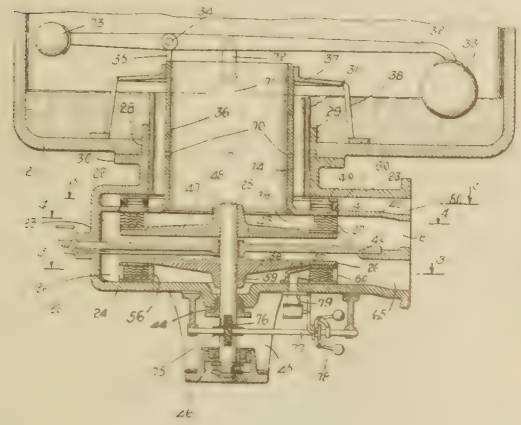


6. The combination with a motor and its water jacket, a radiator with a pipe connecting said jacket and radiator; of an impelling device adapted to be operated by said motor, a watertight casing encompassing said device and having pipes tapping said first mentioned pipe, one of said last mentioned pipes being adapted to direct water into said casing, and the other of said last mentioned pipes being arranged to direct water from the casing into the first mentioned pipe and in the direction of flow of water therein.

1,415,975. CONDENSER PUMP. EMIL ANDERSON, Brooklyn, N. Y., assignor to The Universal Turbine Company, Newark, N. J., a Corporation of New Jersey. Filed Feb. 9, 1915. Serial No. 7,096. Renewed Oct. 6, 1921. Serial No. 505,924. 12 Claims. (Cl. 103—79.)

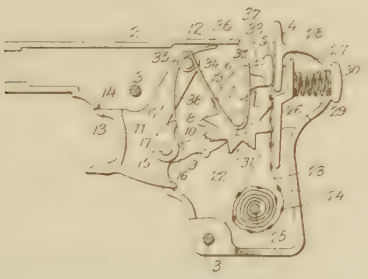
2. A condenser pump comprising a rotary pumping element having a water section and an independent air

section, a plate separating said section and means including said plate for providing an independent annular



water passage from the condenser well to and through the water section of the pump.

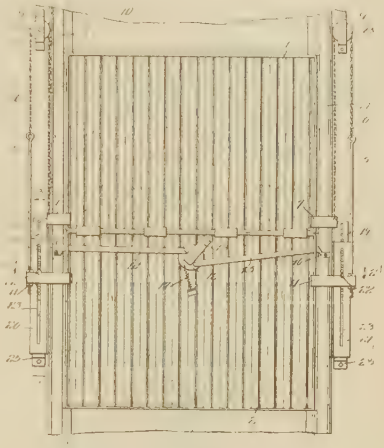
1,415,976. FIREARM. EUGENE B. ANDES, Lancaster, Pa. Filed Mar. 6, 1922. Serial No. 541,348. 4 Claims. (Cl. 42—57.)



3. In a pistol, an anvil, a pivoted hammer having an impact-head, a fulminate-cap tape adapted to move lengthwise between said anvil and said impact-head, a trigger, a sear carried by said trigger and releasably engaging said hammer, a toothed tape-engaging and feeding wheel actuated by the hammer upon movement of the latter away from the anvil, and spring means for moving said hammer toward the anvil.

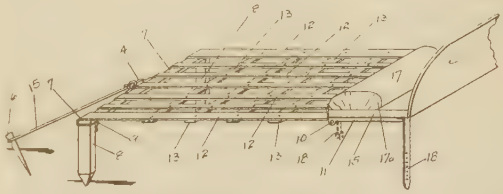
1,415,977. FIRE DOOR, SAFETY GATE, AND THE LIKE. HERMAN BACKMAN, Chicago, Ill., assignor to Variety Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 20, 1919. Serial No. 305,569. 2 Claims. (Cl. 189—45.)

1. In combination, a closure comprising upper and lower sections movable vertically away from each other, counterweight means tending tomove said vertically movable sections toward one another, counterweight means adapted to oppose the action of said first counterweight means and means adjustably carried by said second counterweight means for bringing said means into action to oppose the action of said first counterweight means, the adjustability of the means for bringing said counterweight means into action providing adjustability of the point at which the checking force of said means is brought into



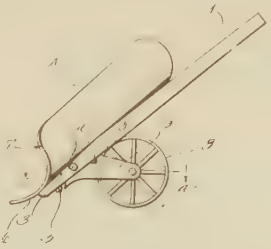
action whereby the speed at which the door sections are brought together may be varied.

1,415,978. BED. CHARLES L. BATCHELOR, Portland, Oreg. Filed Oct. 25, 1921. Serial No. 510,218. 2 Claims. (Cl. 5—72.)



1. A folding bed supported at one end thereof upon the running board of an automobile and adapted to be folded there-beneath, in combination with a cover attached to said bed and adapted to encase said bed when so folded and to form a pillow casing for said bed when the same is in use.

1,415,979. SNOWPLOW. LOUISE BEDFORD, Mount Pleasant, Iowa. Filed Jan. 20, 1921. Serial No. 438,680. 3 Claims. (Cl. 37—7.)

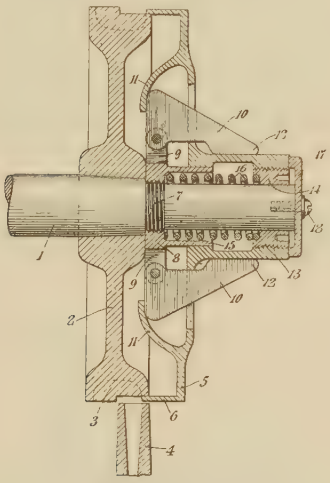


1. A snow plow comprising a pair of inclined downwardly converging handles, an inclined plate secured upon the upper edges of said handle and having its upper edge turned forwardly and disposed obliquely with respect to said handle, the lower edge of said plate being directed forwardly to provide a walk scraper, a wheel between said handles behind said plate and adapted to travel on the cleaned walk, and a bracket secured to said handles and carrying said wheel.

1,415,980. GLASS COMPOSITION. HARRY T. BELLAMY, Oak Park, and BURTON T. SWEELY, Cicero, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Nov. 16, 1918, Serial No. 262,852. Divided and this application filed Mar. 20, 1920. Serial No. 367,395. 3 Claims. (Cl. 106—36.1.)

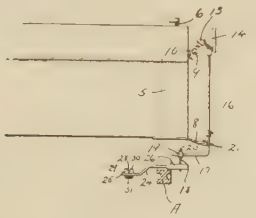
1. A binder for higher resistance compositions, comprising a non-electrolytic glass composed of silicates and borates of calcium and barium.

1,415,981. GOVERNOR. WILLIAM F. BOUCHÉ, Lancaster, N. Y., assignor to Gould Coupler Company, a Corporation of New York. Filed Feb. 28, 1920. Serial No. 362,153. 5 Claims. (Cl. 253—52.)



1. In a turbine the combination of a turbine runner and its shaft means for applying motive fluid to said runner to operate the same, an annular member movable relatively to the runner longitudinally of the shaft over the operative face of the runner to control the effect of the motive fluid thereon, pivotally mounted centrifugal means rotating with the runner and acting to move said member relatively over the operative face of the runner, said member having a frame work extending inwardly from its periphery and forming a part surrounding the axis of said shaft and between said axis and the pivotal points of said centrifugal means and a spring acting on said part to oppose the action of said centrifugal means.

1,415,982. DIRIGIBLE SPOTLIGHT. WILLIAM W. BOULINEAU, Cedartown, Ga. Filed July 6, 1921. Serial No. 482,660. 6 Claims. (Cl. 240—62.)

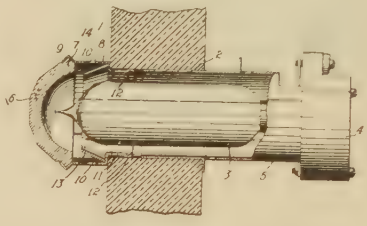


1. A dirigible spotlight for automobiles comprising a vertical shaft journaled at the forward intermediate portion of an automobile, a spotlight on the upper end of the shaft, the lower end of the shaft being extended beneath the automobile, an adjustable arm carried by the last mentioned end of the shaft, an an actuating arm connected to the steering means of the automobile, a connecting member rotatably mounted on the actuating arm, said connecting member being also rotatable on the adjustable arm.

1,415,983. METHOD OF TREATING NONAQUEOUS ELECTROLYTES. PORTER H. BRACE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 17, 1920. Serial No. 404,105. 12 Claims. (Cl. 204—19.)

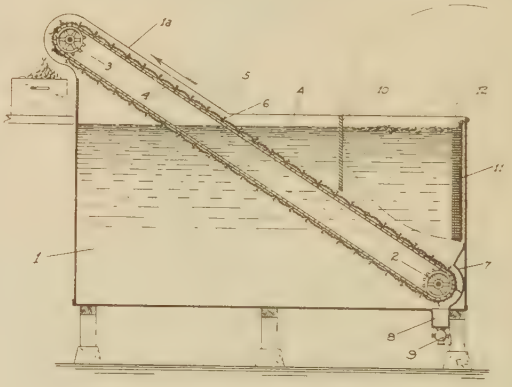
1. A method of treating a nonaqueous electrolyte which consists in adding to said electrolyte a material capable of causing dissolved or occluded gases to be released.

1,415,984. SWITCHBOARD LAMP. JAMES M. BROWN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 15, 1920. Serial No. 396,536. 4 Claims. (Cl. 240—1.)



1. In a switchboard signal device, the combination with a switchboard panel having a recess and a lamp in the recess, of a lens of substantially bowl-shape disposed with its open-side over said recess, a tubular member supporting the lens on the panel and having a ventilating passage communicating with the outer air adjacent to the panel, and a frusto-conical member disposed in the tubular member adjacent to the panel and converging toward the lens to prevent the direct emission of light rays through said passage.

1,415,985. METHOD OF SEPARATING FRUIT FROM LEAVES. JERRY BUCKLEY, Mills, Calif. Filed Oct. 3, 1921. Serial No. 505,011. 7 Claims. (Cl. 130—32.)

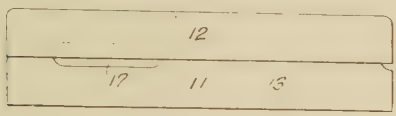


1. A method of separating fruit from floatable foreign matter consisting of submerging the fruit in a liquid, whereby the floatable matter will remain on the surface of the liquid and providing means for continuously removing the fruit from under the liquid for preventing the floating matter from again coming in contact with the fruit as the latter is withdrawn from the liquid, and for removing an accumulation of such floating matter at will and with a single operation.

1,415,986. CONTAINER. CHRISTOPHER DOVE BURTON, London, England. Filed Apr. 19, 1921. Serial No. 462,602. 2 Claims. (Cl. 220—43.)

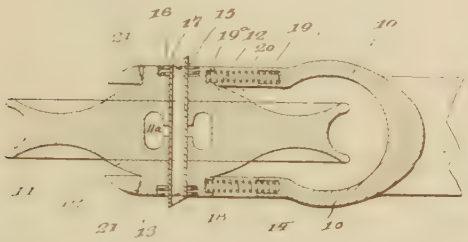
1. A container comprising a body presenting spaced inner and outer circumferential walls, the outer wall

having one or more openings extending therethrough and a cover presenting a flange adapted to telescope the said



outer wall and to partly overlie the opening or openings therein, whereby the edge of the flange is exposed to facilitate removal of the cover.

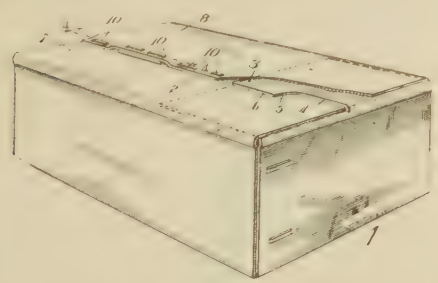
1,415,987. TROLLEY-WHEEL MOUNT. GEORGE O. BURWELL, Detroit, Mich., and CHARLES M. KURTZ, Bellevue, Pa. Filed Sept. 29, 1921. Serial No. 504,044. 2 Claims. (Cl. 191—63.4.)



1. The combination of a support having branches, a current collector between the branches, contact shoes engaging the sides of the collector and having outstanding bearing members carried by the aforesaid branches, and recessed at their outer ends, an axle supporting the collector, said axle being carried by the bearing members and extending into the end recesses thereof, springs engageable with the bearing members for maintaining a contact between the shoes and the collector, said springs seating in the aforesaid recesses, and abutments on the axles against which the springs bear at one end.

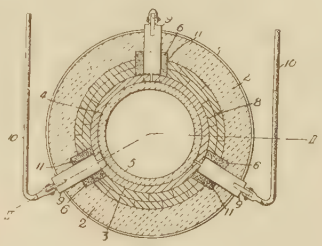
2. The combination with a current collector, of an axle on which said collector is mounted, said axle being hollow to provide an air-passageway extending from one end to the other, the ends of said axle being beveled in opposite directions.

1,415,988. CARTON. GEORGE F. CALLERY, Oak Park, and RUDOLPH WM. LOTZ, Chicago, Ill. Filed July 29, 1918. Serial No. 247,109. 6 Claims. (Cl. 229—44.)



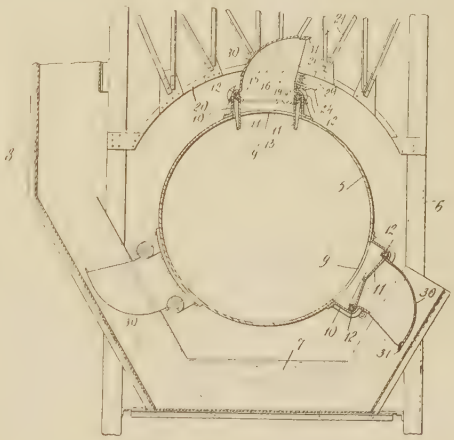
2. A carton having four closure flaps including end-flaps each comprising two parts one of which is of greater width at its free end than at its base and the other of which is of less width at its free end than at its base and side flaps adapted to overlap each other, one of the latter adapted to be partially overlapped by the wider portions of the end-flaps and said last-named portions of said end-flaps completely overlapped by the other side-flap, whereby fastening means passed through overlapping end portions of the side flaps will pass through portions of the end flaps and said flaps when closed presenting a free passage for an anvil member for assisting in the clinching of the fastening means.

1,415,989. THREE-PHASE CRUCIBLE FURNACE. CRANSTON H. CARPENTER, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 22, 1920. Serial No. 383,378. 10 Claims. (Cl. 204—64.)



1. In an electric furnace, the combination with a container, of a resistor surrounding said container, a plurality of wells symmetrically disposed around said container, granular electrical-conducting material contained in said wells and operatively engaging said resistor, and terminal electrodes in said wells adapted to connect said resistor to a source of electromotive force.

1,415,990. ROTARY KILN. ALEXANDER B. CARSTENS, Monterey, Mexico, assignor to The American Metal Company, Limited, a Corporation of New York. Filed Dec. 8, 1919. Serial No. 343,438. 10 Claims. (Cl. 222—7.)

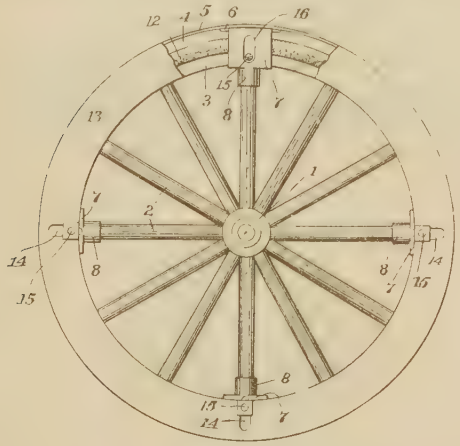


1. A rotary kiln having openings intermediate the ends thereof, means for normally closing said openings during substantially a complete revolution of the kiln to prevent the escape of gases therefrom, and means cooperating with said first-named means to cause a momentary opening of the same and thereby permit material to pass through said openings into the kiln.

1,415,991. VEHICLE WHEEL. HENRY F. CLEEVE, Jamaica, N. Y., assignor of one-third to William J. Billings, Jamaica, N. Y. Filed June 16, 1920. Serial No. 389,323. 11 Claims. (Cl. 152—35.)

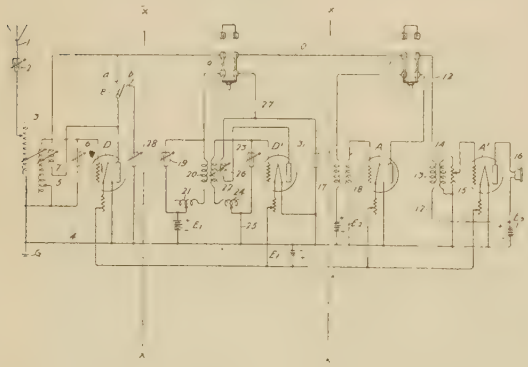
1. In a vehicle wheel, the combination with inner and outer concentric rims, of a pneumatic tube interposed

between them, and clamps surrounding said rims and tube and having collars embracing and adapted to slide on



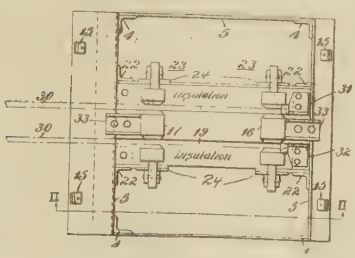
certain of the spokes of the wheel, for the purpose specified.

1,415,992. RECEIVING STATION. LEWIS M. CLEMENT, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 22, 1918. Serial No. 223,918. 18 Claims. (Cl. 250—20.)



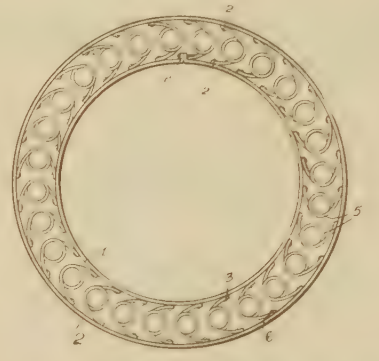
1. In a signal receiving station, a detector, a receiving instrument, associated means whereby simple wave trains are applied by said detector to said instrument, and means including a portion of said first named means whereby plurally detected waves may be applied to said instrument.

1,415,993. ELECTRIC HEATING DEVICE. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 30, 1920. Serial No. 406,770. 4 Claims. (Cl. 219—13.)



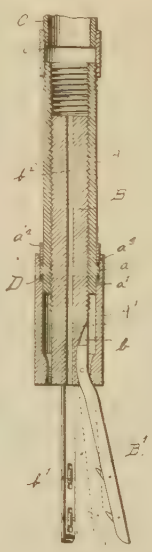
1. In an electric heating device, the combination comprising a core member, two primary windings associated with said core member, an open-circuit secondary winding located between said primary windings, and resilient means for holding a plurality of bars in position to close said secondary winding.

1,415,994. VEHICLE TIRE. GEORGE M. COLLINS, Sprague, Wash. Filed Sept. 8, 1919. Serial No. 322,288. 1 Claim. (Cl. 152—8.)



A tire including an inner ring, an outer ring, an annular series of springs interposed between the rings and out of contact with each other, each spring including a single length of spring metal folded to form an elongated loop, parallel members extending from the loop and each merging into a coil, the two coils being oppositely pitched, each coil terminating in an arm having a terminal eye, said arms and the elongated loop being extended along diverging lines in the same general direction from the coils, and means for securing the eyes of the spring to the outer ring and the free end of the loop of the spring to the inner ring.

1,415,995. FISHING TOOL. HORACE C. COOPER, Ardmore, Okla., assignor of one-half to David N. Stewart, Ardmore, Okla. Filed Apr. 15, 1921. Serial No. 461,513. 7 Claims. (Cl. 294—100.)



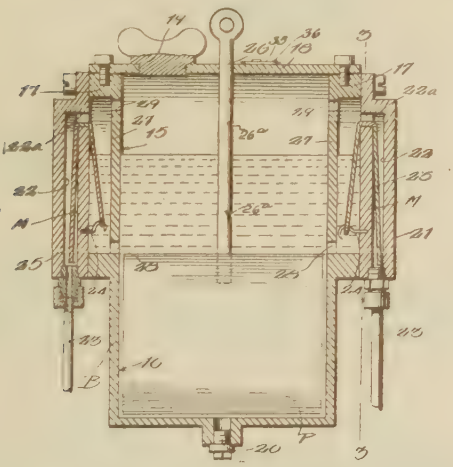
1. A fishing tool comprising upper and lower tubular members, said upper member being interiorly screw threaded and having said lower member swiveled thereto, an exteriorly threaded shank screwed into said upper member, said shank having a plurality of recesses in its lower end, and grappling fingers pivoted in said recesses; said lower member having an interior annular convex

surface adjacent the pivoted end portions of said fingers, and the latter having concave surfaces opposed to said convex surface of said lower member, whereby said fingers are caused to advance and be spread apart when said upper member is rotated in one direction and brought together and retracted within said lower member so as to firmly grip a tool or other article therebetween when said upper member is rotated in the opposite direction.

1,415,996. WATER MOTOR. THOMAS CRISP and THOMAS FRANCIS MARION CRISP, Junction, Tex., assignors of one-third to Jack Turner, Junction, Tex. Filed Sept. 13, 1920. Serial No. 409,894. 1 Claim. (Cl. 170—125.)

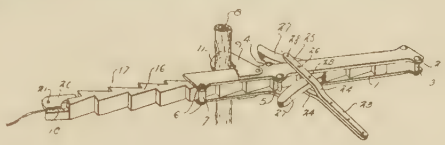
In a water motor, a rotatably mounted shaft, diametrically opposed spirally arranged series of scoop-shaped vanes secured to said shaft, each vane of a series being spaced from the adjacent vanes of the same series and being disposed at an angle to the spiral path of the series, the surfaces of adjacent vanes being approximately parallel and the water being received upon the concave sides of the vanes, substantially as described.

1,415,997. LUBRICATOR. CLARENCE CULLEN CRISPEN, Harrisburg, Pa. Filed Feb. 26, 1921. Serial No. 448,064. 6 Claims. (Cl. 184—64.)



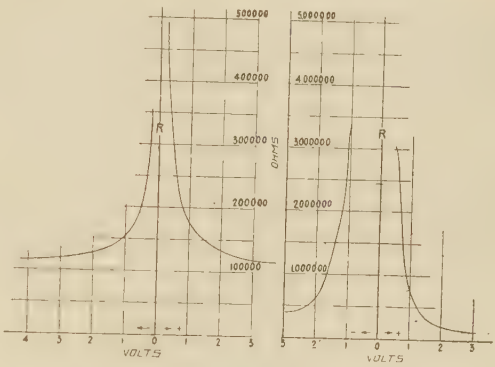
5. A lubricator comprising, an oil container including an upper chamber and a lower chamber, side members secured to the container at the sides of the upper chamber, ducts formed on the side members and communicating with the container at a point above the level of oil in the container, distributing pipes communicating with the lower ends of said ducts, wicks extending into the upper chamber and into said ducts for feeding oil from the container to said pipes, and a plunger movable in the container to cause the oil to contact with the wicks when in the lower chamber and to displace the oil out of contact with the wicks when in the upper chamber.

1,415,998. WIRE STRETCHER. PATRICK CULLERTON, Mansfield, Wash. Filed Aug. 31, 1920. Serial No. 407,132. 3 Claims. (Cl. 254—72.)



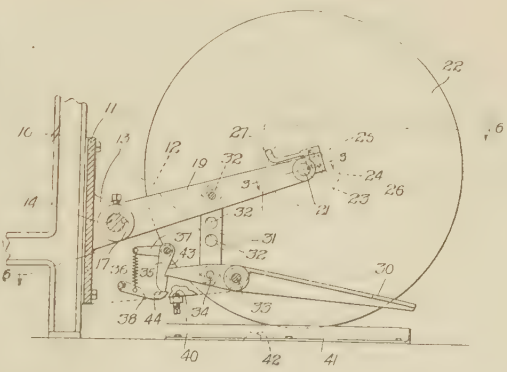
1. In a wire stretcher, the combination with a frame comprising a pair of elongated parallel spaced plates, ears provided upon said plates and rivets passing through said ears so as to hold said plate in spaced relation to each other, a bar slidably mounted between said plate, means for causing the progression of the bar in the frame, means for attaching said bar to a wire, and means for attaching the frame to a post.

1,415,999. STATIC REDUCER FOR WIRELESS SIGNALS. AUSTEN M. CURTIS, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 1, 1916. Serial No. 128,881. 10 Claims. (Cl. 250—31.)



1. A detector for electromagnetic waves consisting of a single rectifying device which has a non-uniform conductive path whose characteristic curve is asymmetrical for the lower voltages of the order used to give signal indications in electromagnetic wave receiving stations and symmetrical for all voltages of materially higher orders.

1,416,000. ATTACHMENT FOR REELING MACHINES. CHARLES J. DE COSTER, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 3, 1920. Serial No. 407,934. 4 Claims. (Cl. 242—58.)



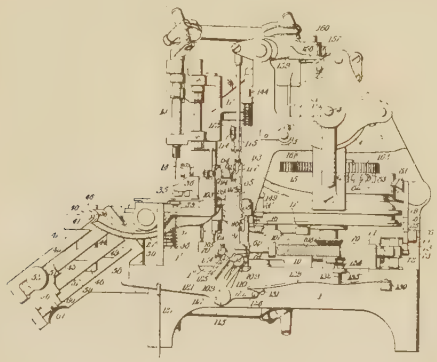
2. An attachment for reeling machines, comprising pivotal reel lifting arms adapted to hold a reel, an actuating

lever therefor, connecting means between said arms and said lever adapted to be adjusted therebetween whereby different diameter reels may be handled, means cooperating with said lever to automatically hold or release said lever upon actuation thereof, adjustable means for holding said reel lifting arms the required distance from a reel receiving position in their movement downward, and supporting means for the lifting mechanism.

1,416,001. THUMB AND FINGER PROTECTOR. ALFRED E. DETWILER, Chicago, Ill. Filed Aug. 19, 1921. Serial No. 493,530. 9 Claims. (Cl. 2—104.)

1. A thumb and finger protecting device, comprising a hollow thumb receptacle of rigid material, and a hollow finger receptacle of similar material, each of said receptacles being open at one end and provided with an open end covering of flexible material, there being thumb and finger insertion openings in said covering, and a flexible web connecting the open ends of the receptacles.

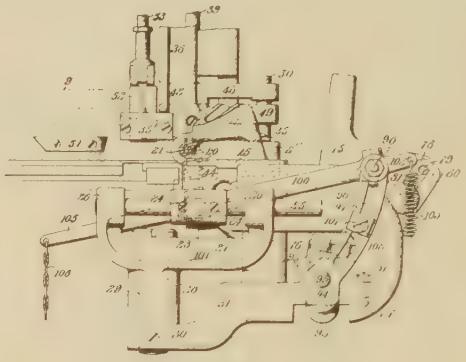
1,416,002. SEWING MACHINE. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Dec. 5, 1916. Serial No. 135,154. 36 Claims. (Cl. 112—65.)



1. In a sewing machine, in combination, a driven element, a driving element with means acting through the same for normally imparting to the driven element uniform movements, and means for selectively varying the amplitude of said movements either to a predetermined limit or beyond said limit, said means including a manually shiftable element and coacting devices for arresting movement of said element at a predetermined position under a normal impulse, one of said devices including means which shifts under an abnormal impulse to permit further movement of said manually shiftable element.

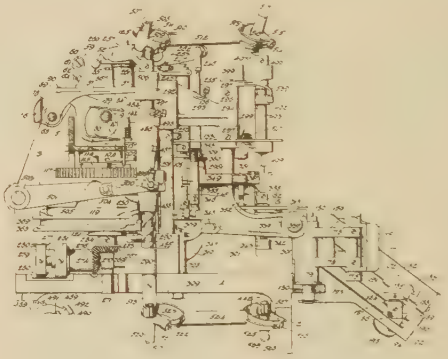
1,416,003. WORK-SHIFTING MECHANISM FOR SEWING MACHINES. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Feb. 21, 1917. Serial No. 150,003. 25 Claims. (Cl. 112—65.)

1. In a sewing machine, in combination, stitch-forming and feeding mechanisms for producing within a stitching cycle stitching upon the work in a defined pattern, and means acting upon the work and adapted to shift beyond the normal range of action of the stitch-forming mechanism that portion of the work last within such range in the stitching of said pattern, and comprising a work-



gripping device, and shifting means for moving it in a predetermined path and provided with adjusting means whereby said gripping device may be caused to travel either in a rectilinear or a curvilinear path.

1,416,004. BUTTONHOLE-SEWING MACHINE. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Dec. 31, 1915, Serial No. 69,644. Renewed Jan. 7, 1921. Serial No. 435,761. 85 Claims. (Cl. 112—65.)

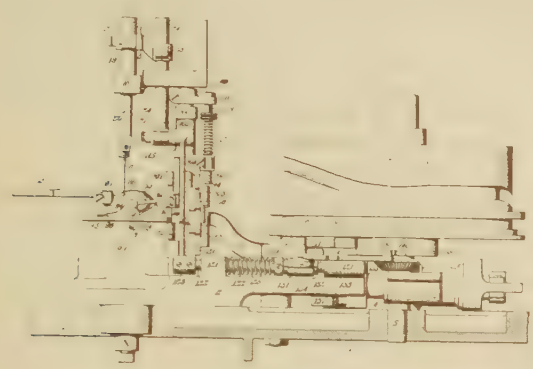


1. In a buttonhole sewing machine, in combination, stitch-forming mechanism, buttonhole cutting mechanism, and means including a common element which is normally subjected in each period of operation of the machine to successive manual and automatic control for setting said mechanisms successively in operation.

1,416,005. SEWING MACHINE. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed June 27, 1917, Serial No. 177,206. Renewed Jan. 4, 1922. Serial No. 527,055. 45 Claims. (Cl. 112—252.)

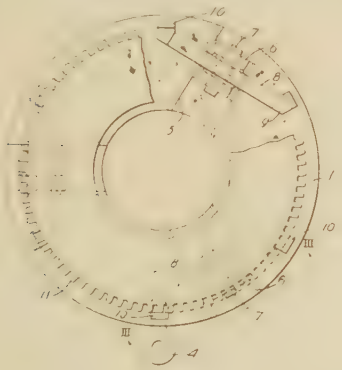
31. In a sewing machine, in combination, a work-support, stitch-forming mechanism including a reciprocating needle and cooperating loop-taking means sustained respectively at different sides of the work-support, needle-actuating means including a rotary crank and a pitman connected therewith and provided with a lateral shoulder, a vibratory tappet-arm movable into and out of operative relation with said shoulder, a thread-cutting device, an endwise movable rock-shaft sustaining said tappet-arm and provided with a thrust-sustaining shoulder, a shifting

device normally opposed to and engaging said thrust-sustaining shoulder and adapted to be disengaged therefrom



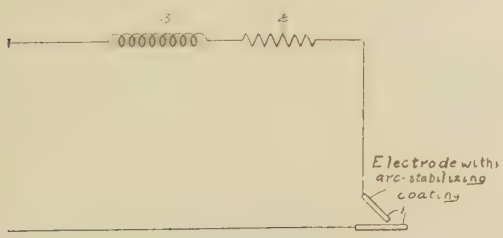
in the rocking of said shaft, and actuating means for said shifting device acting with less frequency than the operative movements of said crank and pitman.

1,416,006. SUPPORTING APPARATUS FOR USE IN TEMPERING FURNACES. GEORGE M. EATON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 26, 1919. Serial No. 319,858. 17 Claims. (Cl. 263—6.)



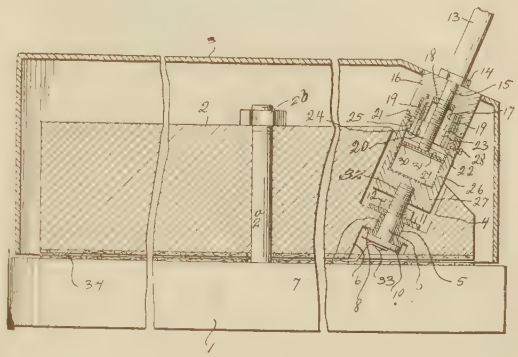
1. A supporting apparatus for use in tempering furnaces comprising a base and three spaced supporting means carried thereby.

1,416,007. ELECTRIC-ARC-WELDING SYSTEM. OTTO H. ESCHHOLZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 6, 1919. Serial No. 328,774. 5 Claims. (Cl. 219—15.)



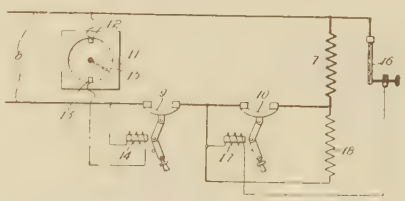
1. An arc welding system comprising a plurality of electrodes, one of which is coated, and a reactance connected in series with one of the electrodes, said system having a power factor of at least 80%.

1,416,008. FUSE FOR ELECTRIC IRONS. WILFRED H. FAYLE and WILLIAM G. CROWLE, Chisholm, Minn. Filed Jan. 3, 1921. Serial No. 434,534. 6 Claims. (Cl. 200—142.)



1. In a fuse construction, opposed fuse sections, one of insulating material, means connecting the two sections, a cord contact rod carried by the insulating section, a container carried within the other section, a fusible member, and means to support the fusible member in the container in contact with the lower end of the cord contact rod.

1,416,009. CONTROL SYSTEM FOR ELECTRIC RANGES. FRANK F. FORSHEE, Flint, Mich., assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Mar. 1, 1920. Serial No. 362,425. 11 Claims. (Cl. 219—20.)

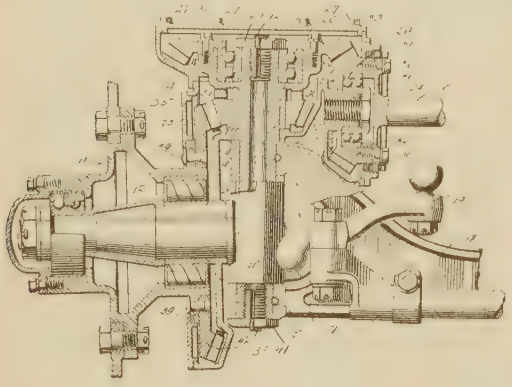


1. In an electrically-heated apparatus, the combination with a main electric heating element, of a circuit-controlling device for said main heating element, chronometrically-controlled means for actuating said circuit-controlling device, an auxiliary electric heating element, and means comprising a thermally-actuated device for permitting the energization of said auxiliary electric heating element in series-circuit relation with said main heating element.

1,416,010. FRONT-WHEEL DRIVE MECHANISM FOR MOTOR VEHICLES. FRANK L. FREEMAN, Omaha, Nebr. Filed Apr. 9, 1920. Serial No. 372,529. 8 Claims. (Cl. 74—101.)

1. A front wheel drive comprising a dead axle having bearings at its outer end, a king pin extended through and above the bearings, a driving axle, a spindle mounted upon the king pin between the bearings, a housing structure having swiveled members supported respectively upon the spindle and king pin, a wheel hub rotatably mounted upon the spindle, a gear loosely mounted upon the upper por-

tion of the king pin within the housing, a gear carried by the driving axle and meshing with the first gear, a gear

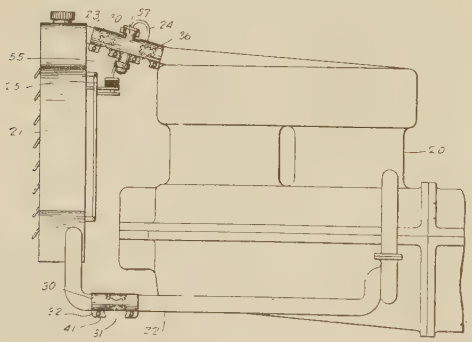


positioned beneath and turning with the first gear, and a gear carried by the wheel hub and meshing with the last gear.

1,416,011. PISTON RING. ALBERT F. FROUSSARD, St. Louis, Mo. Filed May 1, 1919. Serial No. 294,035. 2 Claims. (Cl. 74—109.)

1. A piston ring of substantially rectangular shape in cross section and having a channel in the cylinder bearing face of said ring, said channel having a curved face, and a spring member having a face to correspond with and fit within said channel, and an outer face to normally align with the cylinder engaging face of the ring.

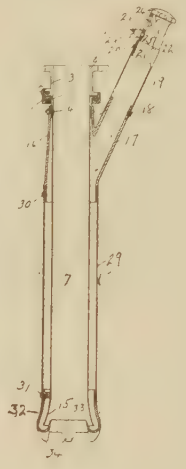
1,416,012. HOSE CLAMP. JOSEPH GENTILE, Brooklyn, N. Y. Filed Nov. 4, 1921. Serial No. 512,943. 7 Claims. (Cl. 24—19.)



1. A hose clamp comprising substantially cylindrical inner and outer members, tabs on the outer member extending from its adjacent edges, tabs integrally formed from the bodies of said inner members opposite their adjacent edges, said inner tabs extending co-incidently between said outer tabs, co-operative detent elements engaging between said inner and outer tabs, and bolts for drawing each group of tabs together whereby the inner and outer elements of said cylindrical members are contracted in diameter.

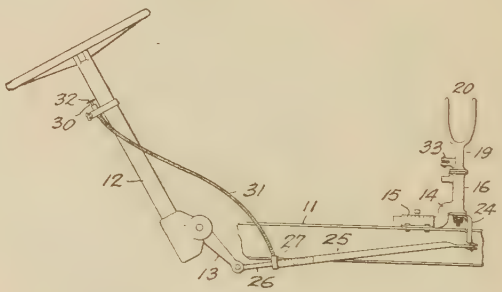
1,416,013. NOZZLE. GEORGE A. GIESELER, Cleveland, Ohio. Filed Feb. 14, 1921. Serial No. 444,924. 2 Claims. (Cl. 302—58.)

1. In a nozzle, an inner tube belled outwardly at its lower end, an outer tube attached to the upper part of the inner tube, a shoe for the outer tube at its lower end and belled outwardly to correspond to the inner tube and having an upwardly extending mouth piece extending within



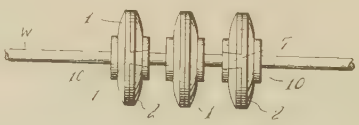
the belled end of the inner tube, a tube extending upwardly and laterally from the upper part of the outer tube, and an air valve on the extending tube.

1,416,014. DIRIGIBLE HEADLIGHT. ARTHUR N. GOODWIN and WILLIAM SUTHERLAND, Montreal, Quebec, Canada. Filed Mar. 3, 1921. Serial No. 449,319. 2 Claims. (Cl. 240—62.)



1. A dirigible headlight mechanism comprising a steering arm, a rotatable lamp support, a hollow member secured to said lamp support and provided with a laterally directed casing closed at its outer end and in direct communication with the bore of the hollow member, a second member slidable in the hollow member and secured at its outer end to the steering arm, said second member being provided with an aperture, a latch slidably mounted in said casing, adapted when projected therefrom, to enter the aperture in said second member, a spring for projecting said latch, confined therebetween and the outer end wall of the casing and an actuating stem for the latch extending outwardly from the casing.

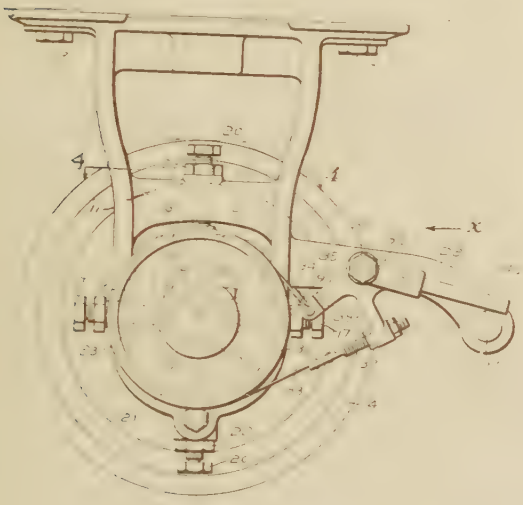
1,416,015. BILLIARD COUNTER. ADAM H. GRISWOLD, Denver, Colo. Filed July 20, 1921. Serial No. 486,100. 2 Claims. (Cl. 235—123.)



1. A device of the character described comprising a body composed of longitudinally divided complemental sec-

tions having oppositely disposed radial slots formed therein, oppositely disposed radial ribs formed on the inner sides of said sections aligning with the inner end of the slots in their respective sections and adapted to be slidably introduced into the radial slots of the opposite sections, the walls of said slots and the sides of said ribs being formed to permit of their sliding introduction but to prevent of relative lateral movement between said sections subsequently to such introduction.

1,416,016. COUNTERSHAFT BRAKE. WILLIAM F. GROENE, Cincinnati, Ohio, assignor to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 10, 1920. Serial No. 387,902. 10 Claims. (Cl. 192—17.)

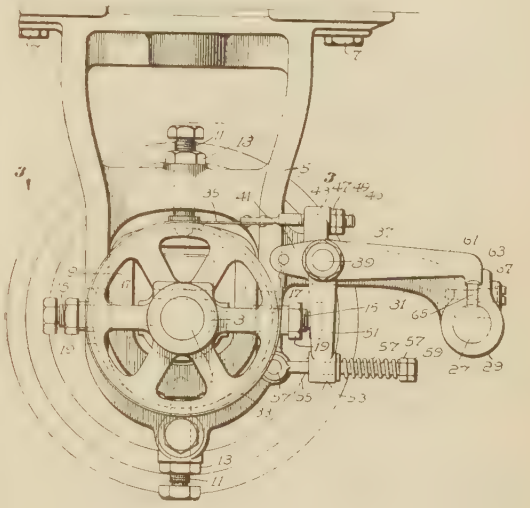


1. In a device of the class described, the combination of a countershaft, brackets for rotatably supporting the countershaft, a brake drum secured to the countershaft, a brake band for said drum, spaced independent pulleys for driving the countershaft, a shifter rod slidably supported to move parallel to the countershaft, means operable by the movement of the shifter rod in one direction to effect driving of the countershaft from one of said pulleys and movable in the opposite direction to effect driving of the countershaft from the other pulley, and means operable by the movement of the shifter rod to an intermediate position for tightening said brake band against the brake drum.

7. In a device of the class described, the combination of a countershaft, brackets for rotatably supporting the countershaft, a brake drum secured to the countershaft, a brake band embracing said drum, two different means for driving the countershaft, a shifter rod supported alongside the countershaft and movable in the direction of its length, means operable upon movement of the shifter rod in one direction to effect driving of the countershaft from one of said driving means and operable upon movement of the shifter rod in the opposite direction to effect driving of the countershaft from the other of said driving means, and mechanism controlled by the shifter rod when moving to an intermediate position to tighten the brake band on the brake drum.

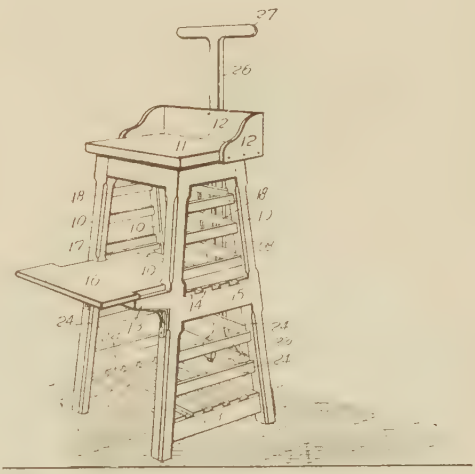
1,416,017. COUNTERSHAFT BRAKE. WILLIAM F. GROENE, Cincinnati, Ohio, assignor to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 1, 1921. Serial No. 457,785. 9 Claims. (Cl. 192—17.)

1. A mechanism of the character described, comprising a countershaft, driving means therefor, means to connect the driving means with the shaft or disconnect the same therefrom, including a shifter rod, a brake wheel mounted on said shaft, a brake band for said wheel, a lever having a pair of arms connected to the ends of the brake band, an applying arm and a releasing arm, a



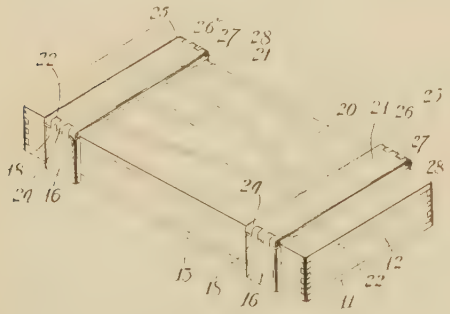
spring co-operating with the applying arm to apply the brake, and a finger for engagement with the releasing arm and adapted slidably to engage the shifter rod, the latter having a notch to allow the finger to drop therein to apply the brake.

1,416,018. COMBINATION ARTICLE OF FURNITURE. FRANCIS CADWALADER HALL, Washington, D. C. Filed Apr. 23, 1921. Serial No. 463,873. 1 Claim. (Cl. 155—1.)



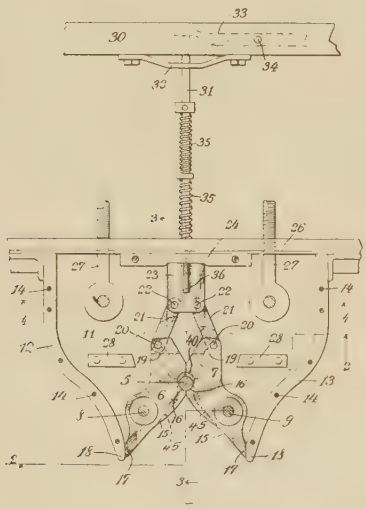
An article of manufacture comprising four legs arranged at the respective corners of a quadrangle, a board slidably supported by the legs at a level suitable for such board to serve as a seat, the board being slidable to project its forward portions beyond the legs at the front to serve as a seat and also as a step, a platform supported by the legs spaced above said board at a height enabling said platform to serve as a step, and slats extending above but adjacent the board, the space between the slats and said platform forming a receptacle for books.

1,416,019. CANDY BOX. PETER HALL, Pasadena, Calif. Filed Apr. 14, 1920. Serial No. 373,918. 2 Claims. (Cl. 217—57.)



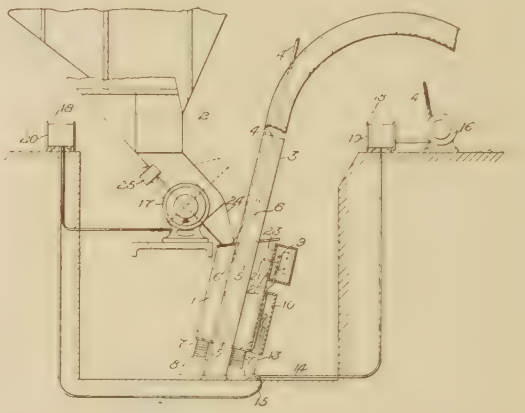
1. In combination, a box having a top, bottom, sides and ends, battons on each side and top, and pintles connecting the battons on each to the battons on the top of the box, thereby forming hinged connections for the top, both at the front and back of the box.

1,416,020. COUPLING DEVICE. NICHOLAS HANSEN, Bogota, N. J. Filed Oct. 1, 1920. Serial No. 414,013. 1 Claim. (Cl. 213—67.)



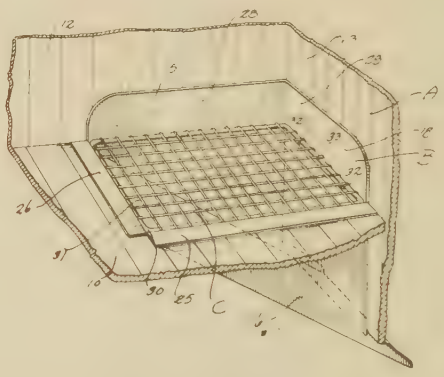
The combination with a relatively vertically disposed coupling member, of a coupling adapted to receive and to be coupled to said coupling member, said coupling comprising a relatively flat casing consisting of an upper and a lower symmetrical plate, a frame, means for joining said plates and frame, anchor bolts attached to the said plates for attaching the said casing to a vehicle, a pair of coupling jaws pivoted between said plates, a slide, links pivoted to the latter and to the said jaws, keyways formed in said plates, keys on said slide adapted to move in said keyways to guide the slide, a rod in the latter projecting rearwardly from the said casing, a plurality of springs on said rod for maintaining the slide in normal rearward position and the jaws in coupling position, means for operating the slide to open the jaws, stops secured to said plates to limit the opening movement of the jaws, stop portions formed on the latter and adapted to abut the said casing forwardly of the jaw pivots, said casing being provided with an open throat formed cut out portion adapted to receive and guide the said coupling member into automatic engagement with the said coupling irrespective of the relative vertical dimensions of the latter and the coupling member.

1,416,021. TELPHERAGE SYSTEM. WILLIAM E. HARRISON, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 3, 1920. Serial No. 349,240. 16 Claims. (Cl. 214—125.)



1. A conveyor system comprising a carrier adapted to transport material, a motor, for directly actuating said carrier, a device adapted to supply material to said carrier, and means responsive to the volume of material supplied to said carrier for controlling the operation of said motor.

1,416,022. WASTE CHUTE. JAMES F. HARTLEY, Chattanooga, Tenn. Filed Jan. 13, 1921. Serial No. 436,980. 4 Claims. (Cl. 119—15.)

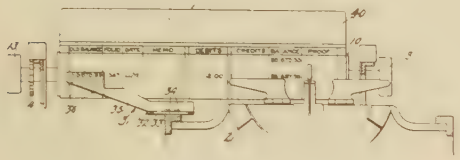


1. As an article of manufacture, a housing including a plurality of sides, certain of said sides projecting upwardly of certain other of said sides, and an inclined floor extending from one side of said housing to an opposite side, said last mentioned side having an opening therein adjacent said inclined floor.

1,416,023. COMBINED TYPEWRITING AND COMPUTING MACHINE. WALTER J. HAUSMAN, St. Louis, Mo., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Jan. 6, 1921. Serial No. 435,326. 13 Claims. (Cl. 235—61.)

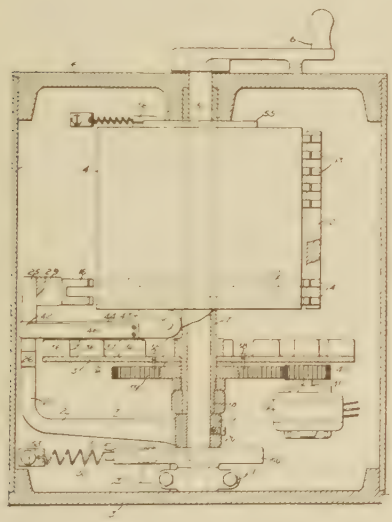
3. In a combined typewriting and computing machine comprising a carriage having a platen journaled therein

and around which a ledger-sheet is adapted to be fed, said ledger-sheet having an "old balance" column adjacent the left side edge thereof, a "balance" column near the right side edge, and a "proof" column adjacent said "balance" column, the amount in said "old balance" column being adapted to be copied from said "balance"



column, the same amount being adapted to be copied into said "proof" column, means mounted on said machine for blinding the amount in said "old balance" column to necessitate copying said amount from said "balance" column when it is desired to enter the amount in the "proof" column.

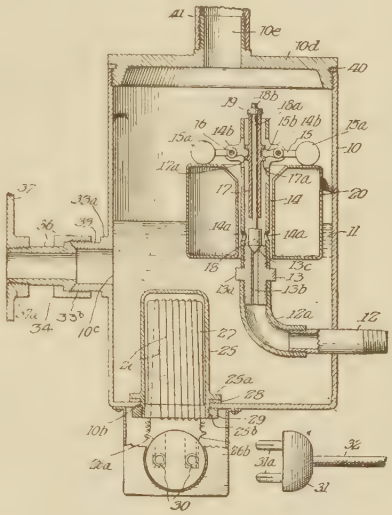
1,416,024. SYSTEM OF CONTROL. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 18, 1919. Serial No. 305,108. 7 Claims. (Cl. 172—179.)



7. In control apparatus, the combination with a rotatable contact-carrying drum, of a relatively movable contact-carrying arm bearing upon said drum, a pilot motor, manual means for actuating said arm and for effecting engagement of said motor and said drum, and means adapted to break the pilot-motor circuit upon engagement of said arm and a portion of said drum.

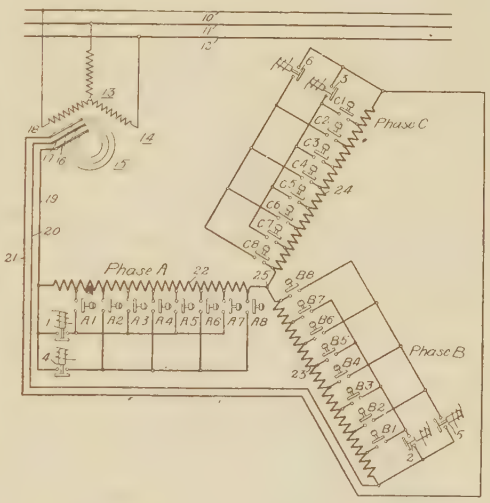
1,416,025. HEATING APPARATUS. JOSEPH I. HERBERT, Chicago, Ill. Filed July 29, 1920. Serial No. 399,867. 8 Claims. (Cl. 219—38.)

1. In apparatus of the class described, comprising a radiator, a steam supply pipe, and a condensation exhaust pipe leading to and from said radiator respectively, a tank located adjacent said radiator, said supply and exhaust ducts leading from and to said tank respectively,



a heating unit located in said tank, means to supply fluid to said tank, and means to maintain the level of said fluid constant.

1,416,026. SYSTEM OF CONTROL. LLOYD J. HIBBARD, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 14, 1920. Serial No. 381,279. 9 Claims. (Cl. 219—20.)

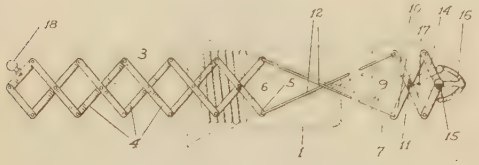


1. The combination with a plurality of resistors having a common terminal, of means including a plurality of sets of alternately-employed switches for progressively short-circuiting sections of said resistors in a predetermined rotation.

1,416,027. DIRECTION SIGNAL FOR MOTOR VEHICLES. JACOB G. HIEB, Oakland, Calif. Filed July 11, 1921. Serial No. 483,655. 7 Claims. (Cl. 116—40.)

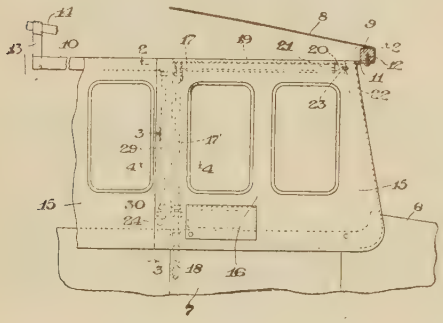
1. A direction signal for motor vehicles comprising a lazy tongs signal structure pivoted to a fixed member of

the vehicle, and a hand actuated means for contracting and extending said structure and for giving the same



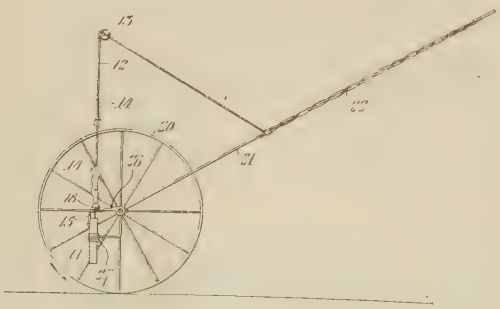
any one of a number of predetermined angular settings in a common vertical plane while so extending said structure.

1,416,028. SIDE-CURTAIN DOOR. GUSTAV E. HOLMES, JOHN M. BOSTROM, and AXEL G. BOSTROM, Milwaukee, Wis. Filed Dec. 22, 1920. Serial No. 432,492. 3 Claims. (Cl. 296—139.)



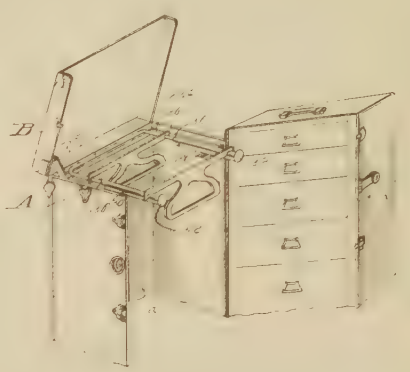
3. In an automobile enclosure, the combination of a side curtain having a door portion with a sealing flap along its opening side edge, a door rod for the curtain connected to the door of the automobile, and a reinforcing member having spaced laterally extending portions secured to the door rod and a vertically extending portion connecting said laterally extending portions to reinforce the outer edge, top and bottom portions of said flap.

1,416,029. TOY. HERBERT E. HOUSE, Pasadena, Calif. Filed Dec. 20, 1920. Serial No. 431,896. 8 Claims. (Cl. 46—45.)



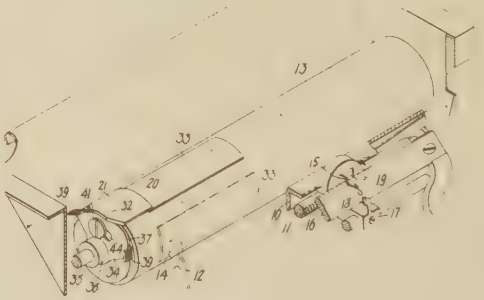
1. A toy comprising: a frame; an axle turning in bearings on said frame; a figure; means for restraining said figure to move in a definite path with relation to said axle; a wheel on said axle; spring means upon which said figure rests at one end of its path; and means by which said wheel compresses and suddenly releases said spring means.

1,416,030. HANGER SUPPORT FOR WARDROBE TRUNKS. THOMAS M. HOUSE, Richmond, Va. Filed Nov. 23, 1921. Serial No. 517,250. 1 Claim. (Cl. 211—16.)



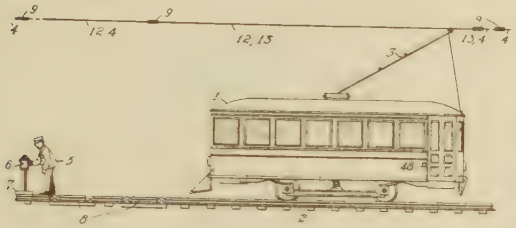
In a wardrobe trunk, a hanger section open at its top, a hinged cover for said top, a substantially U-shaped reinforcing bar attached to the upper end of the hanger section and bearing against the inner face thereof, a substantially U-shaped rod disposed within the reinforcing bar, the transverse portion of said rod being disposed adjacent to and slightly above the transverse portion of the reinforcing bar, the arms of the U-shaped rod being integral with the transverse portion thereof and being disposed inward of the arms of the reinforcing bar and extending parallel thereto, brackets rigidly connecting the transverse portion of said rod to the reinforcing bar at a plurality of points, brackets rigidly connecting the outer ends of the arms of the rod to the reinforcing bar and tubular members having telescopic engagement with the arms of the U-shaped member and adapted, when drawn out, to form continuations thereof, said tubular members having their inner end edges disposed at an angle to the axis of the tubular member, and stops limiting the outward movement of the tubular members.

1,416,031. TYPEWRITING MACHINE. ARTHUR E. HOWELL, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 7, 1919. Serial No. 315,812. 9 Claims. (Cl. 197—136.)



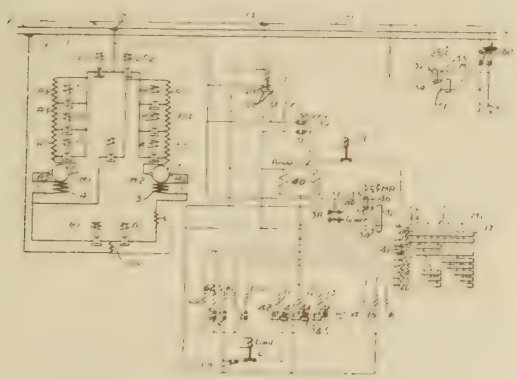
1. In a typewriting machine, the combination with a traveling carriage and a revoluble platen therein, of a clip extending from one end of the platen toward the middle thereof, a pivot within the platen about which the clip swings to and from the platen surface, an axle for the platen, and a cam journalled on the axle and lying against the end of the platen adapted to be rotated to control the clip.

1,416,032. MOTOR-CONTROL SYSTEM. GEORGE R. IRWIN, Turtle Creek, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1920. Serial No. 430,158. 11 Claims. (Cl. 104——149.)



1. The combination with a vehicle and a motor mounted thereon for actuating said vehicle, of a trolley wire having an energized portion and a normally de-energized portion, a stationary controller relatively removed from said vehicle for governing the operation of said motor by energizing said normally de-energized portion.

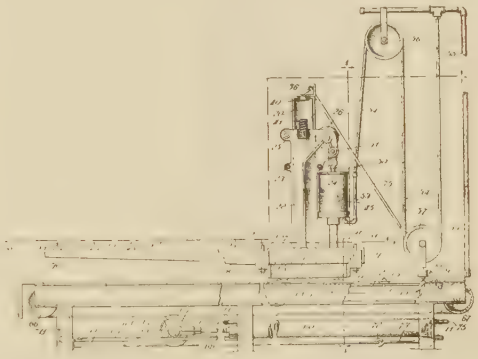
1,416,033. SYSTEM OF CONTROL. HOWARD H. JOHNSTON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 22, 1918. Serial No. 245,971. 4 Claims. (Cl. 104—149.)



3. In a system of vehicle control, the combination with a motor mounted on said vehicle, of means for operating said motor from a point on the vehicle, means for operating said motor from a point external to the vehicle, and independent switching means for permitting the one or the other type of operation in accordance with the position of said switching means.

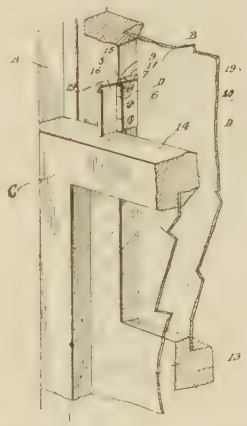
1,416,034. OVEN CHARGER. BERTRAND B. KAHN, Cincinnati, Ohio, assignor to The Estate Stove Company, Hamilton, Ohio, a Corporation of Ohio. Filed June 10, 1920. Serial No. 387,978. 13 Claims. (Cl. 214—26.)

1. The combination with a track, of a carriage horizontally movable thereon, a vertical guide column mounted on said carriage, a second carriage slidably mounted on said guide column and comprising an elongated guide member having an anti-friction roller at the lower end of its front side and the upper end of its rear side bearing on said guide column, a charging bar secured to said second carriage and projecting beyond the front end of said first-named carriage, means for elevating said second carriage comprising a cylinder supported on said first-named carriage and a piston mounted in said cylinder and connected with the upper end of said elongated guide member, and means for moving said first-named carriage backward and forward on said track comprising a second cylinder located beneath said track, a piston sliding in said second cylinder and having a piston rod projecting from the end thereof, two sheaves carried by the outer end of said piston rod, supporting wheels for the front end of said piston rod, tracks for said supporting wheels, a single



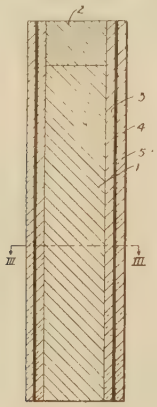
sheave at each end of said first-named track, a cable trained over said single sheave, one end of said cable passing over one of the sheaves carried by said piston rod and secured adjacent to the rear end of said track, the other end of said cable passing over the opposite side of said other sheave carried by said piston rod and secured adjacent to the front end of said track and means for securing said first-named carriage to the portion of said cable extending between said single sheaves.

1,416,035. WINDOW LOCK. MARTIN T. A. KELLY, Joliet, Ill. Filed Nov. 8, 1919. Serial No. 336,588. 3 Claims. (Cl. 292—207.)



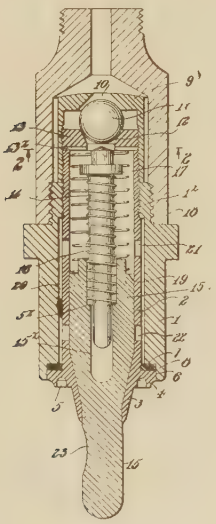
1. The combination with sliding sashes including side and end rails, of a fastener therefor including a stationary wing, means to secure the stationary wing to one of the side rails of one of the sashes in spaced relation to the end rails thereof, a movable wing hingedly secured to the outer end of the stationary wing adapted to extend in direct alignment with the stationary wing and in the path of the lower sash for engaging the upper end rail thereof, eyes formed on the upper ends of the wings and a removable pin arranged to fit in said eyes when the wings are in aligned position.

1,416,036. INSULATION AND METHOD OF MAKING SAME. WILLARD H. KEMPTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 25, 1918. Serial No. 246,764. 12 Claims. (Cl. 154—2.)



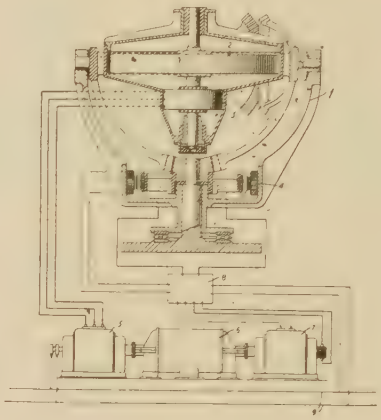
1. A molded composite insulation comprising a material which has great dielectric strength disposed between a plurality of layers of sheet material impregnated with a hardened binder.

1,416,037. DISPENSING VALVE. LOUIS KOOPERSTEIN, New York, N. Y., assignor to West Disinfecting Company, New York, N. Y., a Corporation of New York. Filed Feb. 20, 1920. Serial No. 360,147. 4 Claims. (Cl. 221—112.)



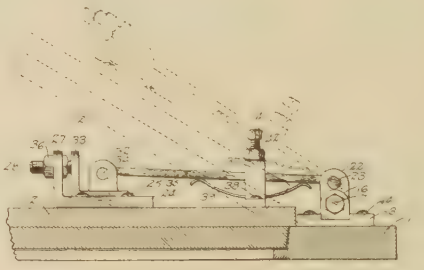
1. In a dispensing valve, in combination, a casing, a sleeve disposed within said casing to form a chamber intermediate its outer wall and the casing, inlet and outlet ducts for said chamber and communicating with the interior of the sleeve, a valve controlling the admission of fluid into the sleeve, a plunger normally closing the said outlet duct, the said plunger being adapted in its endwise movement to operate said valve and to successively close the inlet duct and open the outlet duct for the passage of fluid from the chamber, thence intermediate the sleeve and the plunger to a point exterior to the casing.

1,416,038. DRIVING SYSTEM FOR GYROSCOPIC STABILIZERS. BENJAMIN G. LAMME, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 19, 1917. Serial No. 149,567. 15 Claims. (Cl. 74—78.)



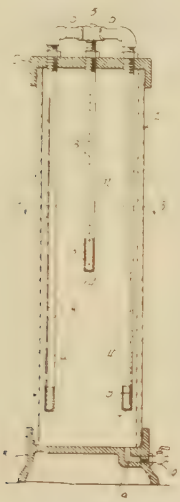
15. The combination with the moving fly-wheel of a gyroscopic stabilizer, of a substantially constant-speed induction motor spinning said flywheel, an alternating-current generator supplying said induction motor, means mechanically associated with said generator for supplying direct current, and a direct-current precession motor adapted to be connected thereto, said motors and generators adapted either to absorb or to deliver energy in such manner as to utilize said flywheel to equalize the total energy of the system over a complete cycle of operation.

1,416,039. HINGE. FREDERICK A. LANGSTON and GEORGE A. HOARD, Chicago, Ill. Filed Jan. 3, 1922. Serial No. 526,598. 4 Claims. (Cl. 16—130.)



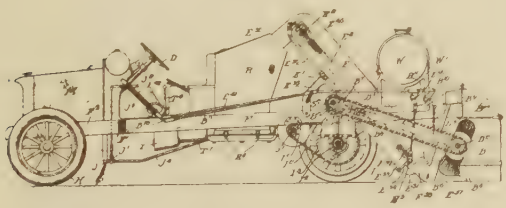
1. In a hinge, the combination of a plate adapted to be attached to a door jamb and provided wiah an undercut vertically disposed guideway and an outwardly projecting portion at the lower end of the guideway, a pintle-carrying member slidably disposed in said guideway, an adjusting screw threaded through said projecting portion and engaged with said pintle-carrying member, whereby said member is adjustably supported, a leaf strap pivoted on said member, a plate adapted to be attached to a door and provided with an undercut horizontally disposed guideway and an outwardly projecting portion at one end of said guideway, said strap being slidably engaged in said guideway, and an adjustable connection between said strap and the last mentioned projecting portion, whereby the position of said door relatively to said strap may be adjusted.

1,416,040. SEPARATOR. AXEL LEVEDAHL, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Original application filed May 26, 1920, Serial No. 384,502. Divided and this application filed Sept. 7, 1920. Serial No. 408,483. 3 Claims. (Cl. 183—81.)



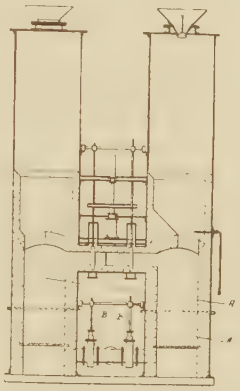
1. A separator for compressed air, comprising a cylindric casing closed at both ends and having a valve-controlled drain at one end, a compressed air supply pipe extending into said casing from the other end and arranged close to the side wall of the casing, said pipe having in its length a plurality of ports arranged to discharge air against the casing wall closely adjacent the pipe and at an angle causing the air to have a rotary movement in said casing for setting up centrifugal forces to separate from the air heavier matter carried thereby, and an outlet pipe extending into said casing substantially in the center thereof and having a plurality of ports in its length to carry off the clean dry air.

1,416,041. MOTOR-DRIVEN PICK-UP SWEEPER. MOSES VOLNEY LIDDELL, Harvey, Ill., assignor to Austin Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed July 24, 1918. Serial No. 246,437. 6 Claims. (Cl. 15—84.)



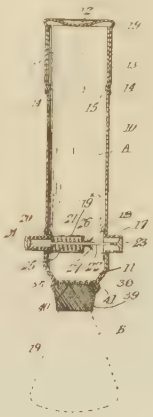
1. In a sweeping machine, inner and outer frames, each comprising longitudinal rails, a cross beam spacing the rear portions of said rails apart and leaving ends of the outer frame rails extending rearwardly beyond it, a sweepings receptacle mounted upon the forward portion of both frames, and an elevator mounted upon the rear portions thereof forward of the cross beam and extending rearwardly and downwardly into the space between the rear ends of the side rails and having its upper forward end in position to deliver to the sweepings receptacle.

1,416,042. GAS-GENERATING PLANT. JAMES LOWE, Auckland, New Zealand. Filed Oct. 11, 1919. Serial No. 330,041. 2 Claims. (Cl. 48—83.)



1. In a plant for the continuous, simultaneous manufacture of water gas and producer gas, the combination of a pair of co-ordinate, companion producers disposed side by side; an outlet flue for the producer gas located at one side of the producers and communicating with both of them; a separate outlet flue for the water gas located at the opposite side of the producers and likewise in communication with both of them; damper means associated with each of said flues to open either flue and simultaneously close the other; a steam valve and an air valve for each producer; and operating connections between said steam and air valves and said damper means for simultaneously opening the steam valve and water gas damper of either producer and closing those of the other producer, and for simultaneously closing the air valve and producer gas damper means of the first producer and opening those of the second producer.

1,416,043. POWDER DISPENSER. FRANK MCLAUGHLIN, Ottawa, Ontario, Canada. Filed Dec. 26, 1919. Serial No. 347,382. 1 Claim. (Cl. 221—102.)



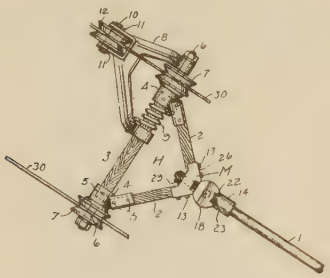
A dispenser for material in powdered form comprising a powder containing casing having a laterally directed powder discharge orifice in its wall, an annular flange surrounding such orifice, a spring held plunger rod having a head having its exterior diameter corresponding in diameter to the interior diameter of the annular flange and provided with a narrow annular edge portion fitting within

and around the interior periphery of the flange, manual means for operating the plunger rod to carry the head outward clear of the flange and means following up the head during its outward movement and entering the annular flange for ejecting the powder interposed between such head and the ejecting means when the head is clear of the flange.

1,416,044. DRESS SHIELD. ANITA MARTIN, New York, N. Y. Filed Apr. 28, 1920. Serial No. 377,191. 1 Claim. (Cl. 2—34.)

As a new article of manufacture, a dress shield for women's wearing apparel having a low cut and terminating in a straight top line, said dress shield being a single flap shield consisting of a layer of water-proof material covered with silk, the flap having a straight top line to be disposed with same along the straight top line of the garment on the inside of same.

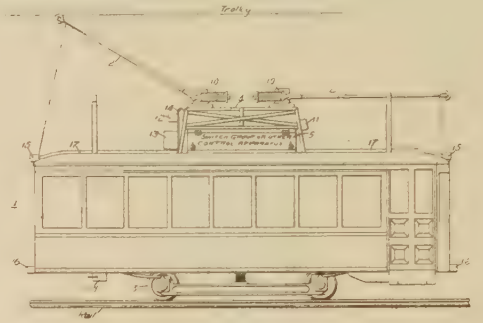
1,416,045. ELECTRIC-CURRENT-COLLECTING DEVICE. SAMUEL S. MATTHES, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Oct. 17, 1921. Serial No. 508,120. 15 Claims. (Cl. 191—57.)



1. A collector for electric currents comprising in combination a support member and a head mounted on the support member in rotatable and pivotal relation thereto, the head comprising a triangular shaped member having a contacting member at each of two of its corners and the third corner adjacent the support member, and having the contacting members insulated from each other and a trailing member at one corner of the triangular member to engage a trolley wire and maintain the head in alinement with the trolley wire.

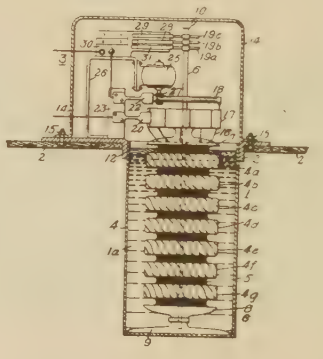
1,416,046. MOUNTING OF CONTROL APPARATUS. HARRY R. MEYER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 6, 1919. Serial No. 295,177. 2 Claims. (Cl. 105—49.)

2. In a motor-driven vehicle, the combination with a box-like structure mounted on the vehicle roof, of a plurality of trolley-poles mounted upon said structure and



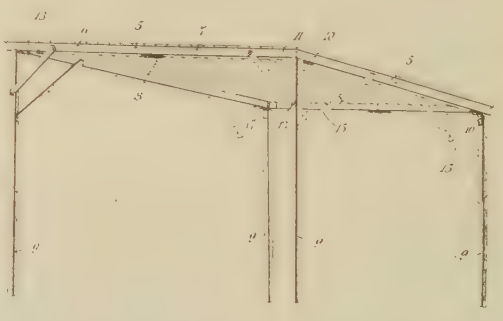
corresponding to different directions of travel, and control apparatus for a vehicle motor located within said structure.

1,416,047. CONTROL APPARATUS. HARRY R. MEYER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 9, 1920. Serial No. 387,592. 9 Claims. (Cl. 219—48.)



1. Control apparatus comprising a rotatable member, a plurality of resistors rotatable therewith, power-operated means for actuating said member and a switch governed by said member for controlling the circuit of said resistors.

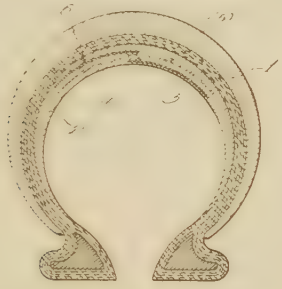
1,416,048. FOLDING TABLE. LLOYD J. MILLER, Newark, N. J., assignor to Telescope Cot Bed Company, Inc., a Corporation of New York. Filed Jan. 21, 1920. Serial No. 352,975. 10 Claims. (Cl. 45—11.)



1. A folding supporting frame for tables, cots, or similar articles, said frame provided with side members, fixedly

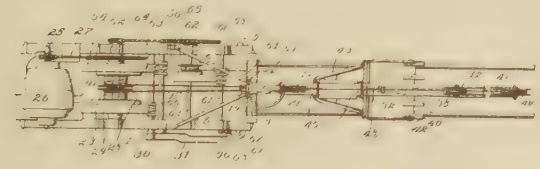
secured at one end and comprising a plurality of parts adapted to be placed in collapsed or extended relation to each other; legs for said frame adapted to be folded, attached thereto; and releasable means at the free end of a side member adapted to hold said member in position when the frame is in use.

1,416,049. PUNCTUREPROOF TIRE. EDWARD J. MORAN, Chicago, Ill. Filed Oct. 19, 1921. Serial No. 508,642. 3 Claims. (Cl. 152—18.)



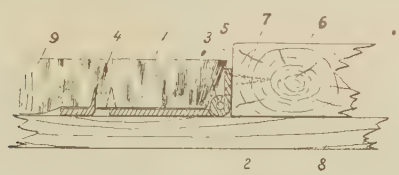
1. A cushioning member having imbedded therein a set of two groups of plates each arranged in a row and spaced apart from each other, the plates of one group overlying and completely covering the spaces between the plates of the other group, and a second set of two groups of plates similar to the other groups, the two sets lying on opposite sides of a center line and the plates of each set extending a short distance past said center line so as to overlap the adjacent ends of the plates of the other set.

1,416,050. MINE LOADING MACHINE. JAMES P. MOSIER, St. Francois, and ERNIST R. CAMPBELL, Desloge, Mo., assignors to National Lead Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 15, 1920. Serial No. 366,168. 12 Claims. (Cl. 214—102.)



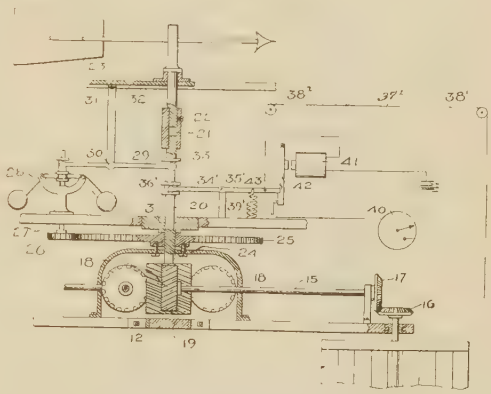
1. A loading machine comprising a mast, a boom pivotally mounted on the lower portion of said mast to swing vertically and sidewise, means for moving said boom comprising a rope operatively connected to the free end portion of the boom and supported from the top portion of the mast and means whereby the loading of the boom will bring about the lateral tilting of the mast to facilitate the swinging of the boom towards the point of discharge.

1,416,051. FASTENER FOR DOORMATS, CARPETS, RUGS, AND THE LIKE. HERMANN MÜLLER, St. Gallen, Switzerland. Filed Apr. 23, 1921. Serial No. 463,891. 2 Claims. (Cl. 16—4.)



1. A fastening device of the character set forth, comprising in combination, a member permanently attachable to a fixed object, and a member in hinged connection therewith with capability of relative angular displacement of at least 180 degrees, and wedge-shaped prongs extending from the second said member in relative angular arrangement, the second said member being substantially longer than the first said member.

1,416,052. WINDMILL. CLYDE NOLAN, Elkhart, Ind., assignor of one-half to B. F. Winterhoff, Elkhart, Ind. Filed Sept. 13, 1919. Serial No. 323,532. 3 Claims. (Cl. 170—25.)

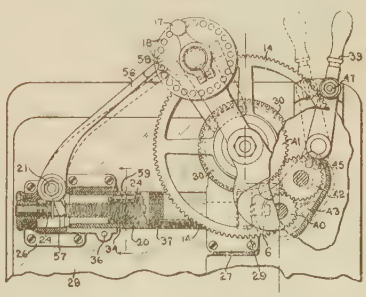


1. In a speed control device for wind mills, a master gear, a plurality of gears meshing therewith, each of said meshing gears having a shaft, and a wind blade geared to each of said shafts, said master gear being capable of rotation and reciprocation without disengaging said meshing gears and so constructed as to impart rotation to each of said shafts when rotated or reciprocated, whereby the angle of wind deflection of said blades may be changed.

1,416,053. PROCESS OF EXTRACTING BUTTER FAT OR OIL FROM MILK AND CREAM. CHARLES E. NORTH, New York, N. Y. Filed Sept. 4, 1920. Serial No. 408,339. 5 Claims. (Cl. 99—13.)

1. In the process of extracting oil from milk, subjecting cream to agitation to secure agglomeration of the fat particles, and admixing therewith water at a temperature to substantially liquefy said particles and in amount to effect the rising of such fat in an oily layer.

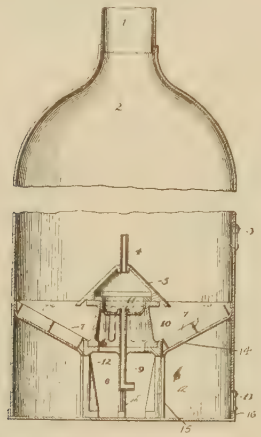
1,416,054. CROSS-FEED MECHANISM FOR MACHINE TOOLS. CHARLES H. NORTON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 2, 1921. Serial No. 457,929. 10 Claims. (Cl. 51—165.)



1. A machine tool comprising a slide, a cross feed screw for moving said slide and means for rotating said screw to move the slide rearwardly through the effective length of said screw and bring it forward again to a predetermined point, comprising a stopping device effective to limit

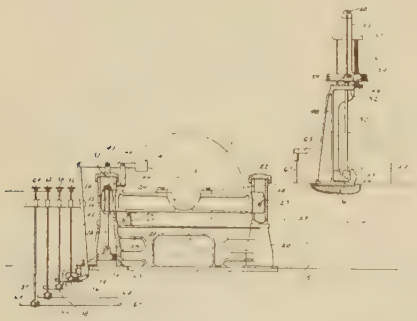
the movement of the screw, which is normally inoperative, and means to render said device operative only after a predetermined forward movement of the slide to stop said movement.

1,416,055. FURNACE. GEORGE L. PERRINE, Gladstone, Oreg. Filed Dec. 30, 1919. Serial No. 348,272. 3 Claims. (Cl. 126—112.)



1. A grate comprising a support having spaced standards adapted to extend into the ash pit of a furnace or the like, said support being provided with a shoulder at the top, a flanged grate seated on the support within said shoulder and having vertical slots in the same, a disc-shaped plate mounted in the top of the grate and having a bottom opening, and air pipe extending from said opening into the bottom portion of the support for receiving air from the ash pit, a cap mounted on the flanged grate above the plate and sloping downwardly and outwardly, and forming a heating space therebeneath for the air, and an outlet at the top of the cap.

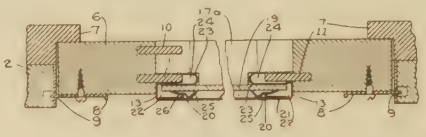
1,416,056. HYDRAULIC CONTROL ATTACHMENT FOR BEATING, BLEACHING, AND WASHING ENGINES. EMIL A. PETERSON and WILLIAM J. MCGINNIS, Appleton, Wis. Filed Jan. 26, 1920. Serial No. 354,155. 19 Claims. (Cl. 92—24.)



1. In a paper pulp machine, the combination with a bed plate and a beating roll coacting therewith to beat materials passing therebetween into a pulp, of means for raising said beating roll, and means for automatically lowering said roll as the density of the material being worked upon decreases.

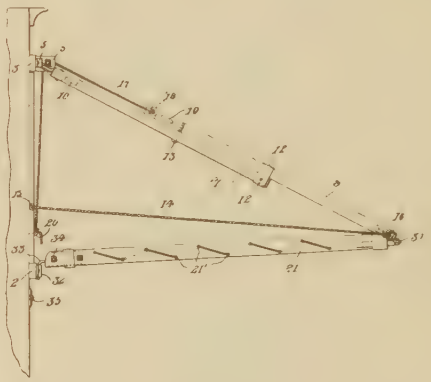
1,416,057. STORM WINDOW. JOHN PETERSON, Minneapolis, Minn. Filed Jan. 7, 1918. Serial No. 210,657. 4 Claims. (Cl. 189—76.)

1. In combination with a storm sash having vertical guides in its side rails, of a sliding frame composed of metallic top and bottom and side rails, the side rails formed with slots and the other rails formed with tongues



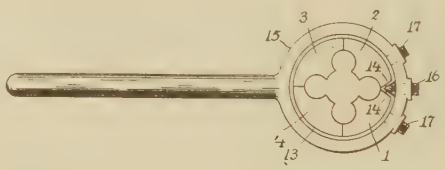
fitting in said slots, both sets of rails being formed with abutting lugs positioned at one corner of the frame, and means fastening one lug to the other.

1,416,058. COMBINED CLOTHES HANGER AND WINDOW LADDER. JOHN PETYO, Gary, Ind. Filed Feb. 10, 1921. Serial No. 443,944. 6 Claims. (Cl. 228—2.)



1. A combined clothes drier and ladder comprising an extensible support hinged at its upper end to a window frame, a rope attached to the extensible support for retracting the same, and a combined drying frame and ladder detachably connected at its ends to the extensible support and window frame respectively.

1,416,059. THREAD-CUTTING DIE. CARL J. PIHL, (now by judicial change of name Carl J. Piel,) Boston, Mass. Filed Apr. 18, 1919. Serial No. 291,375. Renewed July 10, 1920. Serial No. 395,381. 9 Claims. (Cl. 10—117.)

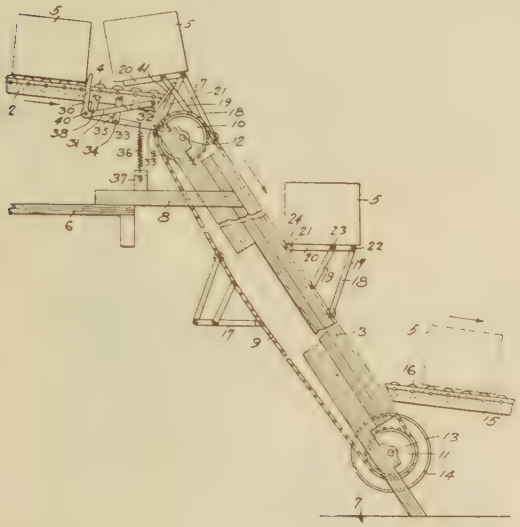


1. A die comprising a plurality of thread-bearing sections separable one from another and a spring clip peripherally binding them together said clip having an inturned hook at each end adapted to engage the opposed surfaces of two adjacent sections, substantially as described.

1,416,060. BOX OR PACKAGE HANDLING APPARATUS. WILLIAM G. PRICE, Yakima, Wash. Filed Oct. 11, 1919. Serial No. 329,983. 11 Claims. (Cl. 198—157.)

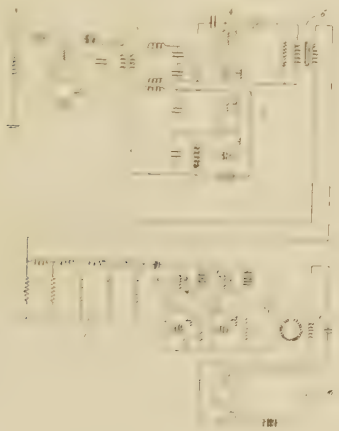
1. A conveyer comprising a traveling carrier traversing a non-rectilinear path at its upper end, an article-supporting member disposed to travel with said carrier

and adapted to rise above the said upper end thereof, and braces pivotally connected to said carrier and adapt-



ed to maintain said member in article-supporting position while passing around and above the said upper end of said carrier.

1,416,061. RADIORECEIVING SYSTEM HAVING HIGH SELECTIVITY. MICHAEL I. PUPIN, Norfolk, Conn., and EDWIN H. ARMSTRONG, Yonkers, N. Y. Filed Dec. 18, 1917, Serial No. 207,659. Renewed May 27, 1921. Serial No. 473,044. 11 Claims. (Cl. 250—8.)



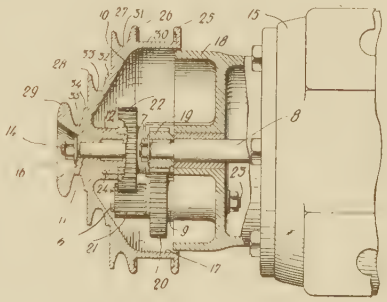
2. A radio-receiving system having means interacting with the received oscillations to produce two series of current pulsations of frequencies within the range of good audibility and so related that the ratio of the two frequencies corresponds to a simple musical interval, and a telephone circuit upon which the current pulsations are impressed to produce a compound hermonious tone.

1,416,062. COUMARONE RESIN AND PROCESS OF MAKING SAME. LOUIS RABINOVITZ, Brooklyn, N. Y., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Aug. 12, 1919. Serial No. 316,979. 6 Claims. (Cl. 260—7.)

2. A process of making coumarone resin which comprises polymerizing the courmarone contained in solvent naphtha by sulphuric acid of approximately 66 degrees Bé, in the absence of substantial amounts of more dilute sulphuric acid, while thoroughly agitating the mass, and thereafter hardening the resin by heating to about 180 degrees C. in a high vacuum.

5. A hard coumarone resin having an iodin number below 50.

1,416,063. PULLEY. CHARLES E. REDDIG, Long Island, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 20, 1920. Serial No. 352,688. 7 Claims. (Cl. 64—17.)

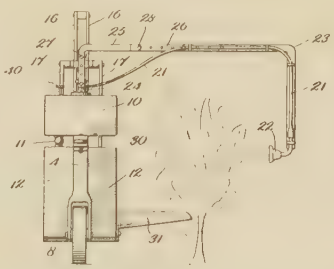


1. A pulley comprising a body portion and a plurality of annular rims carried thereby, one of said rims shaped to form sprocket teeth.

1,416,064. PROCESS OF MAKING ARTIFICIAL LEATHER. ROLAND B. RESPESS, New York, N. Y., assignor, by mesne assignments, to Respro Inc., Cranston, R. I., a Corporation of Rhode Island. Filed June 24, 1919. Serial No. 306,453. 1 Claim. (Cl. 91—68.)

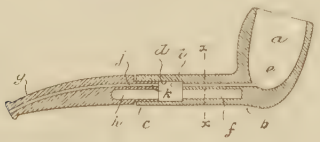
The herein described process of making artificial leather consisting in saturating a felted fabric under pressure with a binding agent to form a sheet, drying the sheet, pressing under tension and coating the surface of the sheet with a leather dressing.

1,416,065. SPRAYING APPARATUS. JOHN A. RHODES, Macon, Ga., assignor of one-third to Albert E. Jordan and one-third to Horatio H. Newman, Sandersville, Ga. Filed Oct. 23, 1920. Serial No. 419,060. 5 Claims. (Cl. 299—41.)



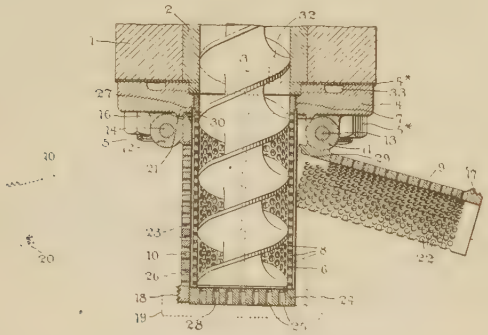
1. In a device of the class described the combination of a frame; a receptacle carried by said frame; a second receptacle carried by said frame; regulable connections between said receptacles to control the flow from the second to the first receptacle; a nozzle adapted to deliver liquid to a plant; a pump associated with said first receptacle adapted to deliver liquid therefrom to said nozzle; and means associated with said first receptacle adapted to receive surplus liquid delivered from said nozzle to said plant and to return it to said receptacle, substantially as described.

1,416,066. TOBACCO PIPE. JOHANNES RIEDEL, Pinnaroo, South Australia, Australia. Filed Mar. 16, 1920. Serial No. 366,329. 1 Claim. (Cl. 131—12.)



A tobacco pipe comprising a bowl and a bowl stem having a smoke passage, an enlarged air space between the end of the passage and the end of the stem, a portion of said space being reduced in diameter and projected beneath said passage and parallel to the latter, in combination with a mouth-piece having an annular reduced portion at one end thereof adapted to closely fit the walls of the enlarged air space in the stem, said reduced portion being substantially shorter than the depth of the said air space into which it is received, whereby a chamber is formed between the end of the inner wall of the air space and the adjacent end of the mouth-piece, the transverse section of the said chamber being equal to the full bore of the air space, an outlet smoke passage extending longitudinally of said mouth-piece and having its inlet end at the end of the reduced portion thereof and in axial alignment with the first named smoke passage, and a separate air space in the mouth-piece extending parallel to the smoke passage and communicating with the said chamber.

1,416,067. STRAINER HEAD FOR TUBING MACHINES. VERNON ROYLE, Paterson, N. J. Filed Dec. 26, 1919. Serial No. 347,568. 30 Claims. (Cl. 100—48.)



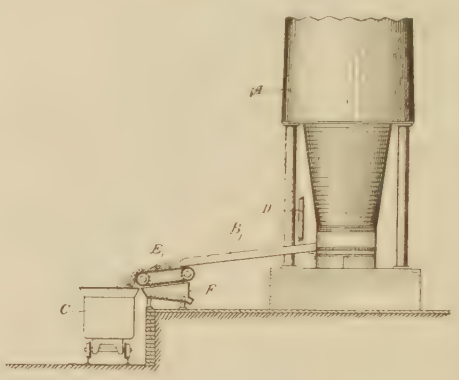
1. A device of the character described comprising, a tubular element including a member divided to form two parts, said parts being fitted to be moved into and out of operative position, and a cap for locking the parts in operative position.

20. A device of the character described comprising, a tubular element including inner and outer perforated members, the perforations in said inner member being noncoincident with and of different size from the perforations in said outer member.

1,416,068. GAME. FERDINAND A. SCHAETZKE, Milwaukee, Wis. Filed Jan. 3, 1920. Serial No. 349,266. 2 Claims. (Cl. 46—59.)

1. A game dart having a pointed leading end and a tail piece, said tail piece being made of a light flimsy material representing a flower and being normally folded while in flight but unfolding upon the abrupt arresting of the flight of the dart thereby having the appearance of an opened bud or flower.

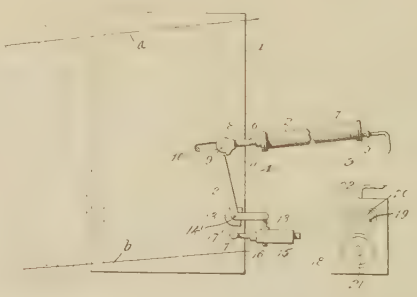
1,416,069. METHOD OF OBTAINING GRANULAR SLAG. WILHELM SCHUMACHER, Osnabruck, Germany. Filed Mar. 29, 1912. Serial No. 687,182. 2 Claims. (Cl. 75—146.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. The herein described method of producing a substantially water-free granular slag, which consists in subjecting the surface of a stream of molten slag as it discharges from the furnace, to the cooling action of water and separating the water from the slag while the latter still retains sufficient heat to reject the water and before the slag becomes cool enough to permit water to exist in liquid form adjacent to its surfaces, thus preventing water from at any time penetrating into the pores of the slag.

2. The herein described method of producing a substantially water-free, granular slag, which consists in subjecting the surface of a stream of molten slag as it discharges from the furnace to the cooling action of water, separating the water from the slag while the latter still retains sufficient heat to reject the water and before the slag becomes cool enough to permit water to exist in liquid form adjacent to its surfaces, thus preventing water from at any time penetrating into the pores of the slag, and then passing the separated hot slag into a suitable receptacle for further cooling.

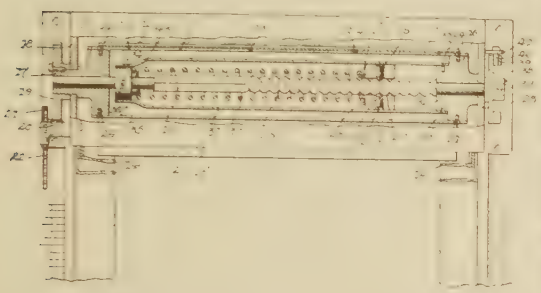
1,416,070. MEANS FOR AUTOMATICALLY OPERATING BULKHEAD DOORS AND SLUICE GATES. DAVID JOSEPH SMITH, London, and CHARLES TOWL, Forest Gate, Essex, England. Original application filed Feb. 3, 1916, Serial No. 76,031. Divided and this application filed Nov. 20, 1919. Serial No. 339,319. 1 Claim. (Cl. 114—119.)



Means for operating a door or the like, comprising a cylinder having a piston therein, a generator, for automatically producing pressure gases upon the introduction

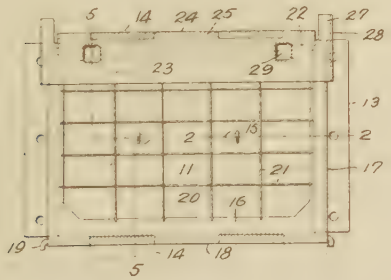
of water thereto, in communication with the cylinder, means for normally holding the door in an open position, said means being adapted to be actuated upon movement of the piston, to release the door, said door being moved to a closed position after the release of said holding means upon a continued operation of the piston.

1,416,071. CLOSURE OPERATOR. SAMUEL P. SMURR, Chicago, Ill., assignor to Variety Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 3, 1919. Serial No. 274,654. 12 Claims. (Cl. 189—57.)



1. In combination, a vertically movable member varying in weight throughout its various vertical positions, a spring having a varying expansive stress opposing the varying weight of said vertically movable member throughout its vertical movement, the varying expansive stress of said spring counterbalancing said vertically movable member throughout its vertical movement.

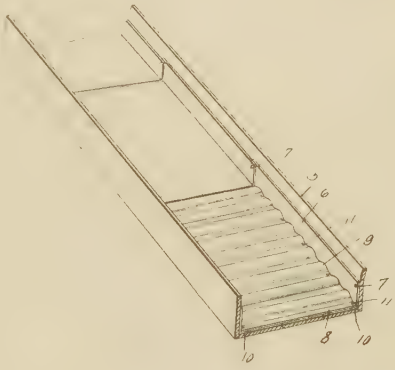
1,416,072. CARD HOLDER FOR RAILWAY CARS. ALBERT EDWARD SOPP, Montreal, Quebec, Canada. Filed Dec. 3, 1920. Serial No. 428,015. 7 Claims. (Cl. 40—14.)



7. A card holder comprising a base plate to be secured to the wall of a car, a front clamping plate hinged to the lower edge of said base plate, and a cover hinged to the upper edge of the base plate, and swingable to either side of the hinged connection, said cover being adapted to rest against the wall of the car when disposed upon one side of the hinged connection and to engage the upper edge of the clamping plate when disposed upon the opposite side of the hinged connection.

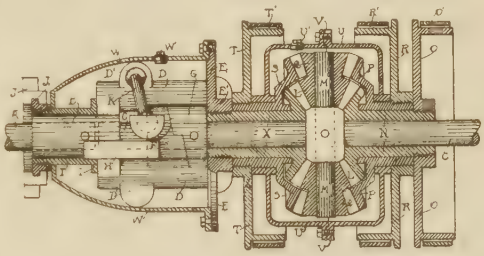
1,416,073. COAL CHUTE. HENRY STEINBACH, Scranton, Pa., assignor to John J. Steinbach, Scranton, Pa. Filed Nov. 5, 1919. Serial No. 335,967. 1 Claim. (Cl. 193—29.)

In a coal retarding attachment for chutes, plates having corrugations extending transversely, side plates having inturned lower edges forming flanges to which the first mentioned plates are secured, the said plates and side



plates being adapted to be secured in a chute at different pitches for offering resistance to the passage of material down the chute, according to the pitch of the chute.

1,416,074. TRANSMISSION CLUTCH AND GEAR. OLE O. STORLE, Tacoma, Wash. Filed Aug. 25, 1917. Serial No. 188,219. 3 Claims. (Cl. 74—34.)

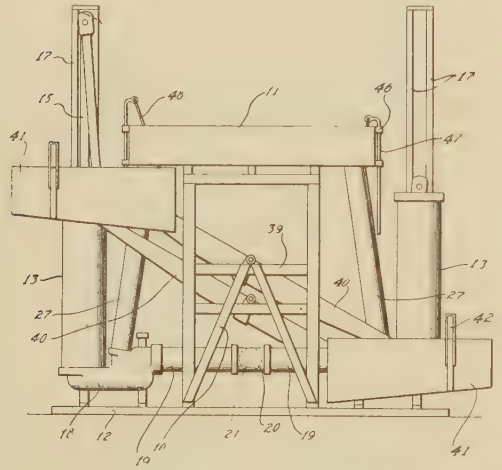


1. In a transmission gear and clutch, the combination with drive and transmission shafts, of a gear connected to the transmission shaft to rotate therewith and formed of inner and outer disposed gears, a drive gear sleeved upon the transmission shaft and meshing with the inner disposed gear of the shaft and connected with the drive shaft to be driven therefrom, variable speed gears for idle movement around the transmission shaft and meshing one with the inner and the other with the outer disposed gears of the transmission shaft, means for locking the respective variable speed gears against rotative movement relatively to the transmission shaft, a reversing gear meshing with the outer disposed gear of the transmission shaft and mounted for idle movement, means for locking said gear against idle movement to reverse the direction of rotation of the transmitting shaft when the variable speed gears are free for idle movement, and means for effecting locking connection between the transmission shaft drive gear and the drive shaft.

1,416,075. WATER-ELEVATING DEVICE. WILLIAM A. STUART, Tacoma, Wash. Filed Oct. 9, 1920. Serial No. 415,729. 3 Claims. (Cl. 103—67.)

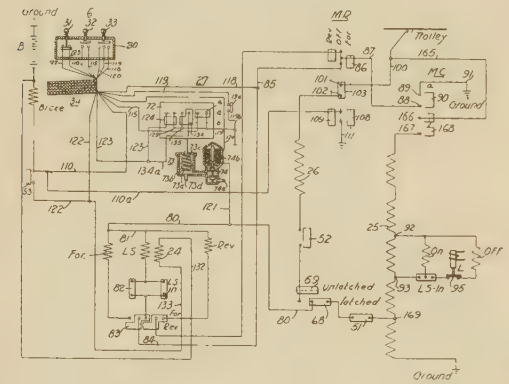
1. A device of the character described comprising an elevated tank provided with a water inlet and provided in its bottom with normally closed openings, a walking beam pivoted beneath said tank, upright cylinders at the ends of the tank, pistons within said cylinders, tanks carried by the ends of the walking beam and connected with said pistons, pipes leading into the bottom of said first named tank and connected with the lower ends of said cylinders, normally closed valves cutting off communication between said pipes and said cylinders, check

valved outlet pipes connected with said cylinders, and means operated by up and down movement of said mov-



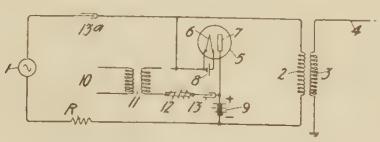
able tanks for uncovering said openings and opening said first named valve.

1,416,076. SYSTEM OF CONTROL. KARL A. SIMMON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 13, 1920. Serial No. 358,550. 25 Claims. (Cl. 104—149.)



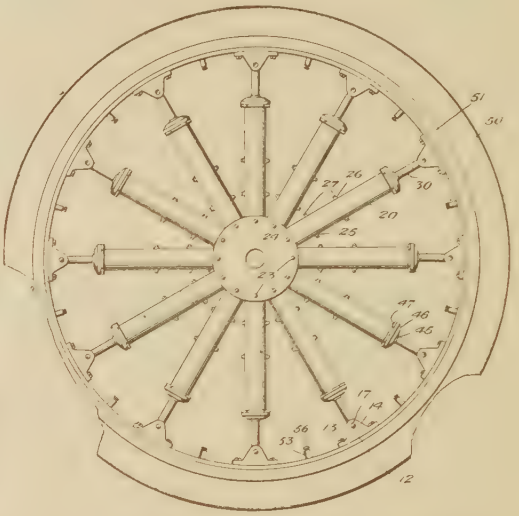
23. The combination with an electric vehicle, of external means for inaugurating movement of the vehicle, and means for then maintaining movement of the vehicle for a given distance.

1,416,077. SYSTEM FOR ELECTRICAL SIGNALING. DE WITT C. TANNER, Glen Ridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 8, 1919. Serial No. 281,459. 8 Claims. (Cl. 179—171.)



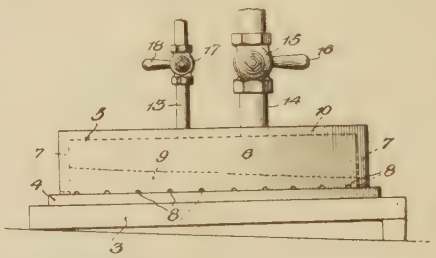
1. A source of carrier currents, two parallel paths connected to said source, one of said paths comprising an electron discharge device having a cathode and an anode, the other of said paths being closed and having associated therewith a translating device, and means connected to said cathode and anode for varying the impedance of said device in accordance with signals.

1,416,078. RESILIENT WHEEL. ACA COLUMBUS TAYLOR, Kellyville, Okla. Filed May 22, 1920. Serial No. 383,456. 2 Claims. (Cl. 152—47.)



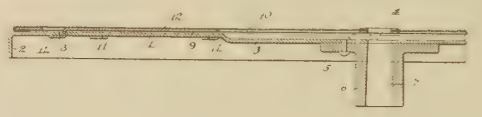
1. In a resilient wheel, a rim, spokes pivotally connected with the rim, a hub, tubular members pivotally connected with the hub, the spokes and tubular members having telescoping connection, sleeves rigidly mounted within each tubular member at spaced intervals, each spoke being provided with shoulders at spaced intervals and with a plurality of springs one of which is normally in engagement with one of the shoulders, means engaging one end of each of the remaining springs, the remaining shoulders of the spokes successively compressing the springs last named, by engagement with said means.

1,416,079. SHINGLE MOLD. JOHN M. VAN HOUTEN, Beacon, N. Y. Filed Apr. 2, 1920. Serial No. 370,796. 5 Claims. (Cl. 25—42.)



1. A bottomless molding dome, having an air inlet, a material inlet, and a plurality of water outlets adjacent to the open bottom.

1,416,080. TURNTABLE. ANTHONY VASSELLI, Newark, N. J., assignor, by mesne assignments, to Harriman National Bank of the City of New York, trustee. Filed June 7, 1919. Serial No. 302,436. 6 Claims. (Cl. 274—39.)



1. A turn-table, comprising a base plate, a disc carried by the plate, a yielding material interposed between the base plate and disc, and means for holding the disc to the base plate.

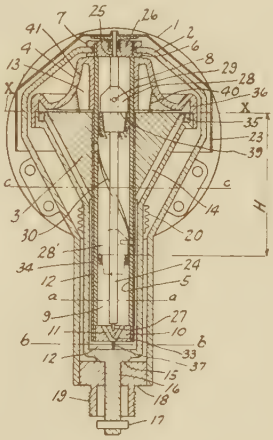
1,416,081. BRUSH HANDLE. JAMES A. WHITE, Galt, Ontario, Canada. Filed June 11, 1920. Serial No. 388,175. 2 Claims. (Cl. 306—4.)

1. A brush handle comprising a bar provided with means for securing it to a short brush handle; a supplemental handle pivotally connected to one end of the bar; a divided clamp embracing the supplemental handle; the parts of which are provided with apertured lugs; a U-shaped link pivotally connected with the bar, its legs being threaded and extending through the apertures in the lugs of the divided clamp; and nuts screwed on said legs on each side of said lugs.

1,416,082. ROTARY SPEED INDICATOR. EMERY J. WILSON, Cleveland, Ohio. Filed Dec. 21, 1916. Serial No. 138,212. 18 Claims. (Cl. 264—19.)

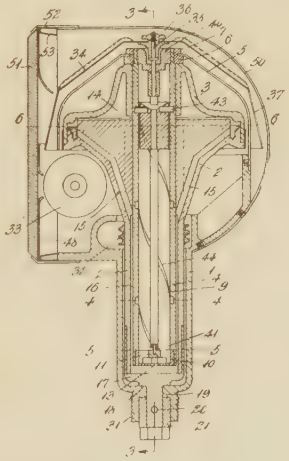
9. In speed indicators, wherein a confined liquid mass is subjected to centrifugal action to produce characteristics of a vortex, wherein the carrier for the mass is formed with connected chambers to receive the mass and to provide a plurality of spaced-apart free liquid surfaces of and in permanent connection through the body of the mass, and wherein the indications are made responsive to the changes in position of one of such free surfaces, means operative to establish definite positions of equilibrium of the mass at definite speeds of rotation in presence of mass-increment flow produced by variations in speed, said means including a carrier face having a cross-sectional contour of mathematically-derived characteristic such as to cause the volumetric displacement represented by the movement of one of the free surfaces of the liquid mass in moving from one position of mass equilibrium to another to be equal for equal increments of speed.

1,416,083. ROTARY SPEED INDICATOR. EMERY J. WILSON, Cleveland, Ohio. Filed May 29, 1917. Serial No. 171,725. 16 Claims. (Cl. 264—19.)



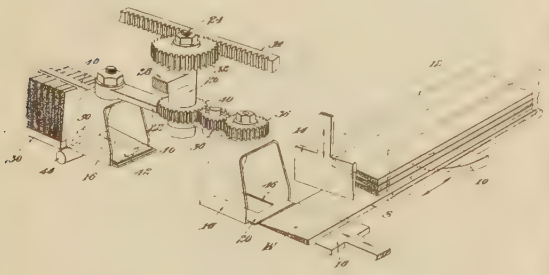
1. In a speed indicator, a rotatable liquid receptacle having an axial chamber, a discharge chamber, an annular groove in said discharge chamber, and one or more passages uniting the axial chamber with the groove, said passages entering the groove at points below the normal level of the liquid when the instrument is at rest.

1,416,084. ROTARY SPEED INDICATOR. EMERY J. WILSON, Cleveland, Ohio. Filed June 24, 1918. Serial No. 241,720. 29 Claims. (Cl. 264—19.)



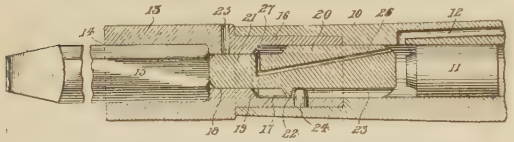
1. A speed indicator having inner and outer communicating chambers for receiving a liquid, the outer chamber constituting a discharge chamber into which the liquid flows upon rotation, said discharge chamber having a portion thereof bounded by two surfaces traversed by the liquid surface during variations in speed of rotation, one of said surfaces being an assumed cylindrical surface, the surface of the inner chamber being also assumed, the other surface of the outer chamber being calculated with reference to said assumed surfaces in such manner that equal variations in speed throughout a given range produce equal variations in liquid level in the inner chamber.

1,416,085. METHOD OF FORMING STACKS OF WEDGE LIFTS. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Jan. 22, 1917, Serial No. 143,738. Patent No. 1,352,492, dated Sept. 14, 1920. Divided and this application filed June 23, 1920. Serial No. 391,237. 8 Claims. (Cl. 12—147.)



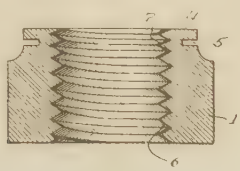
1. The method of forming a stack of wedge articles which includes feeding a succession of wedge articles in similar positions, successively transferring said wedge articles to another position and turning the alternate articles end-for-end in substantially their own planes during the transferral, and stacking the transferred articles with their thick and thin ends alternating.

1,416,086. AIR HAMMER. JOHN W. WOLFE, Washington, D. C., assignor of one-third to John T. Scott, Washington, D. C. Filed Nov. 12, 1920. Serial No. 423,686. 4 Claims. (Cl. 121—32.)



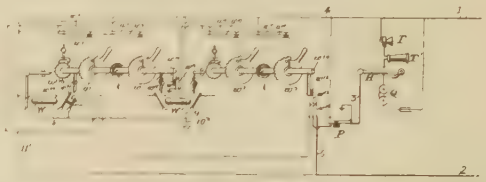
1. A tool socket for air hammers comprising a sleeve having one end arranged to engage an air hammer detachably and the other end arranged to engage a tool loosely, a plunger slidably mounted in the air hammer engaging end of the sleeve and adapted to be struck by the piston of the air hammer, and means to limit the movement of the plunger, said sleeve having a lateral port therein opening outwardly to the atmosphere and the plunger having an air relief vent extending from its inner end and opening laterally in registry with the sleeve port upon the plunger reaching the forward limit of its movement.

1,416,087. NUT BLANK AND LOCKING NUT. IRVING C. WOODWARD, Syracuse, N. Y., assignor to Eugene A. Woodward, Iron Mountain, Mich. Filed Jan. 13, 1921. Serial No. 436,861. 3 Claims. (Cl. 151—21.)



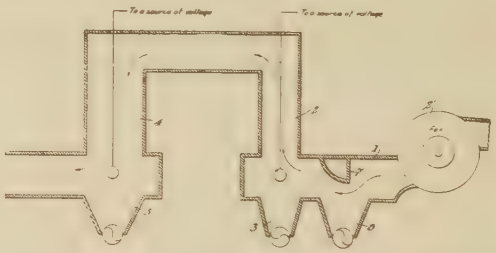
1. A nut with a thread having two groups of turns of substantially equal pitch joined together by a group of turns having a different pitch.

1,416,088. TELEPHONE-EXCHANGE SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor, by mesne assignments, to James R. Garfield, trustee, Cleveland, Ohio. Filed Mar. 14, 1905. Serial No. 250,055. 52 Claims. (Cl. 179—27.)



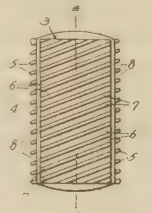
2. Connecting means for telephone systems consisting of answering terminals and a series of switching or connecting terminals, a certain number of subscribers' lines being connected with their answering terminals in one group, and a certain number of lines being connected to the switching or connecting terminals in one group, of trunk lines leading from each group of answering terminals to the various groups of switching terminals, automatic switching apparatus connected with each trunk-line and adapted to co-operate with one group of switching or connecting terminals, together with means under the control of an operator to connect an answering terminal in her group with a trunk leading to any desired switching apparatus and group of connecting terminals, and further means whereby said switching apparatus may be controlled over the trunk by the calling subscriber, substantially as described.

1,416,089. ELECTRIC HIGH-VELOCITY CLASSIFIER. CARL WILLIAM JULIUS HEDBERG, New Britain, Conn., assignor to Research Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 26, 1919. Serial No. 340,809. 4 Claims. (Cl. 83—49.)



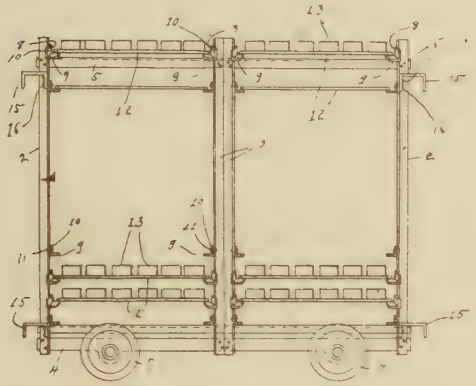
1. The process of separating particles normally suspended in a gas including impalpable material according to size from a gas in which they are suspended, which consists in passing the gas into and through an electric field at such high velocity that the kinetic energy of the relatively larger articles will resist the electric precipitating action while the finer particles are precipitated and then collecting separately the larger particles.

1,416,090. SAFETY RAZOR. WILLIAM J. KLAUBERG, New York, N. Y.; Charles J. Klauberg and William W. Klauberg, executors of said William J. Klauberg, deceased, assignors to C. Klauberg & Bros. Inc., New York, N. Y., a Corporation of New York. Filed Mar. 17, 1920. Serial No. 366,649. 6 Claims. (Cl. 30—12.)



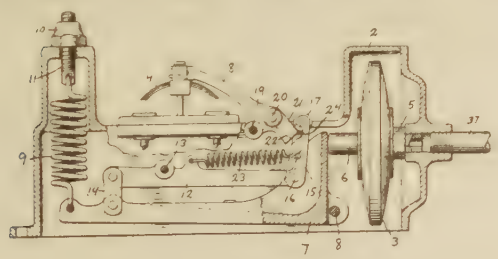
1. A safety razor comprising a bed plate and a clamping plate, the outer surface of the clamping plate being provided with parallel grooves and ribs positioned to engage the face of the user to guide the razor over the face.

1,416,091. DRIER CAR. CHARLES H. KLEIN, Chaska, Minn. Filed July 21, 1919. Serial No. 312,147. 2 Claims. (Cl. 105—373.)



1. A drier car, comprising, in combination, a skeleton car frame having upright supports, substantially horizontal and parallel shelf bars mounted upon said supports upon which brick pallets are adapted to slide, said shelf bars being composed of angle members, each of said members being arranged with one side extending upwardly and its remaining lower side extending inwardly and each member of a pair of the ends of said shelf bars being split longitudinally along a line between its upright and lower sides, said pair having their upright portions deflected outwardly and their lower split portions deflected downwardly to form guiding surfaces for directing the pallets longitudinally on and between said bars.

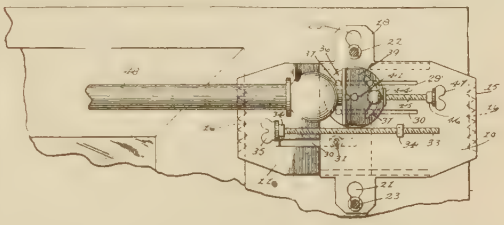
1,416,092. CONTROLLING APPARATUS. GEORGE A. KNAAK, Milwaukee, Wis. Filed Dec. 1, 1919. Serial No. 341,702. 3 Claims. (Cl. 230—24.)



1. In controlling apparatus, the combination with a fluid-pressure condition responsive element for opening an electric switch, of an electric switch, means for closing the switch, means for positively retaining the switch opened or closed regardless of the fluid-pressure condition responsive element except at a predetermined pressure, and a pressure relief valve adapted to be actuated only in unison with the switch.

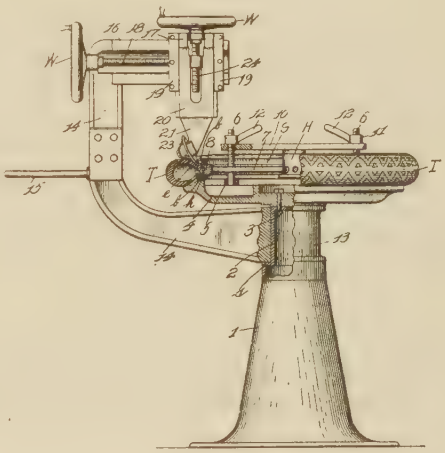
1,416,093. COMBINATION SHADE AND CURTAIN HANGER. CHESTER KONDRACKI, Elwood City, Pa. Filed Feb. 26, 1921. Serial No. 448,057. 1 Claim. (Cl. 156—24.)

In a mounting for curtain poles and shade rollers, a pair of slotted adjustable members, flanges on one of said members to guide the other, teeth at the outer flanged and turned ends of each of said members, pins sliding in the slots of said members for limiting their relative movements, guiding cleats on both members, a screw held in said cleats for adjusting the said members against and from each other, perforated projections at the upper and lower edge of one of said members, a disc having a segmental slot, pins on said disc for slidably holding the same against one of said members, an outwardly turned flange on said disc, a screw engaging said flange and held on one of said members for allowing an adjustment and locking of said disc relative to one of said members, a curtain pole holder having shanks adapted to be passed through the perforations of said projections, beads on



the ends of the shanks of said pole holder for holding said shanks against falling off said members under the weight of a curtain pole placed on said holders, and a shade roller supporting bracket, a pin traveling in the segmental slot of said disc for adjustably securing said shade roller supporting bracket to one of said members.

1,416,094. TIRE-SETTING MACHINE. THOMAS KRAUSKA, St. Louis, Mo., assignor to Alastic Tire Cushion Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 5, 1920. Serial No. 371,308. 3 Claims. (Cl. 157—6.)

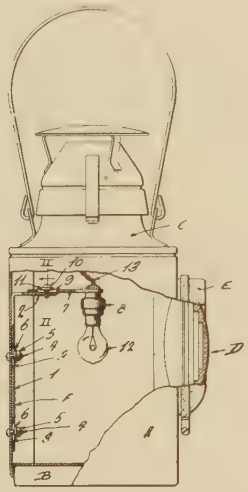


1. In a tire-setting machine, a bell-shaped tire engaging roller, the outer surface of which is concave, and the inner surface of which is dished, means for causing said roller to traverse circularly the periphery of the tire, the axis of the roller being inclined to the plane of traverse, and its plane of rotation intersecting the plane of traverse along a line inclined to the tangent to the arc of the circular traverse of the roller.

1,416,095. LOOM SHUTTLE. STANLEY KRAWCZYK and ADOLF KÖNIG, Plainfield, N. J. Filed May 3, 1921. Serial No. 466,544. 7 Claims. (Cl. 139—27.)

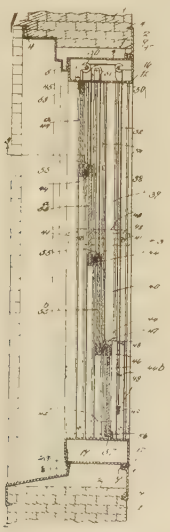
2. The combination with a shuttle body having an opening, of a split spindle pivoted thereto adapted to receive a cop, a lever pivoted to said body, and means wholly disposed within said spindle and connected to said lever for causing an expansion of said split spindle when the latter is swung into said opening and causing a contraction thereof when said spindle is raised out of said opening.

1,416,096. ELECTRIC LAMP. LOUIS C. KUEHNER, St. Louis, Mo., assignor to Handlan-Buck Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed June 23, 1920. Serial No. 391,172. 2 Claims. (Cl. 240—44.)



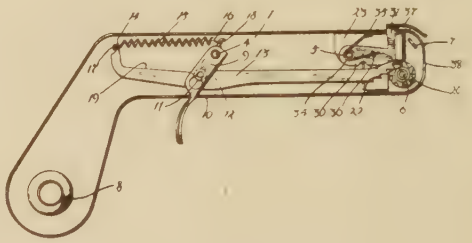
2. A lamp having a casing, a lens, a lamp socket adapted to receive a bulb, and a lamp-supporting device whereby said lamp socket may be adjusted relative to said lens, said lamp-supporting device comprising an upright supporting member adjustable vertically relative to said lens, a supporting arm extending from said upright supporting member, said supporting arm having an extension secured to and supporting said lamp socket, said extension being adjustable in a straight line relative to said arm so as to move said lamp socket toward and away from said lens, said extension being also adjustable horizontally in an arc of a circle, and a screw whereby said extension is secured to said supporting arm.

1,416,097. INTERLOCKING SWINGING SASH AND CASEMENT AND LOCK THEREFOR. GEORGE W. LANCASTER, Richmond, Va., assignor to Perfected Window Company, (Incorporated,) Richmond, Va. Filed Jan. 5, 1921. Serial No. 435,234. 8 Claims. (Cl. 189—66.)



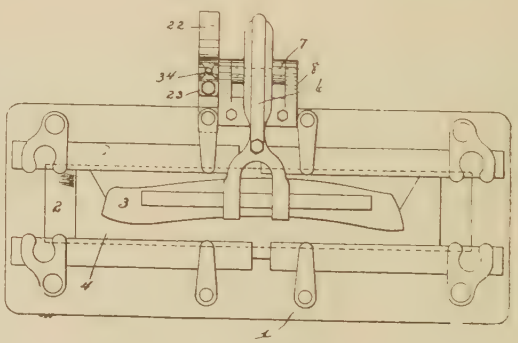
1. In a window construction, a window casement, a swinging closure hingedly mounted therein, the wall of the casement having channels, the inner wall of the swinging closure having marginal flanges to engage said channels, and means for locking the closure and drawing the marginal flanges into interlocking engagement with the channel to insure precluding the air or wind.

1,416,098. GAS LIGHTER. CHARLES F. LARSEN, Chicago, Ill. Filed Sept. 2, 1921. Serial No. 497,820. 4 Claims. (Cl. 67—6.1.)



3. In a device of the character described, a casing, a striker rotatably supported within the casing, means for actuating the striker at will, a carrying member supported within the casing and formed to provide a socket positioned with an open end thereof adjacent to the peripheral wall of the striker, a pyrophoric element projected into the socket and arranged to rest upon the peripheral wall of the striker, an arm pivotally supported at one end within the casing and provided with an extension arranged to protrude exteriorly of the casing, said extension being formed with an integral finger arranged to enter the socket and to rest upon the pyrophoric element, and spring means arranged to re-act against said arm to cause said finger to constantly press said pyrophoric element against the striker.

1,416,099. FOLDING MACHINE. ROY S. LATIMER, Troy, N. Y., assignor to Thomas H. Latimer, Saratoga Springs, N. Y. Filed Apr. 12, 1917. Serial No. 161,598. 6 Claims. (Cl. 219—20.)

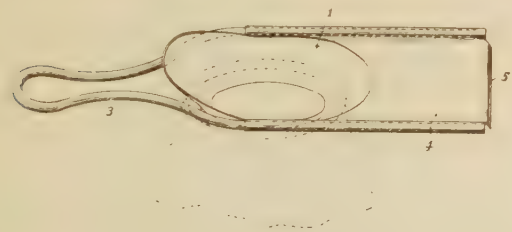


1. In a machine of the class described and in combination, a heater; means for transmitting to said heater a continuous supply of heat units; shunt means with respect to said means for supplying heat units, for supplying additional heat units to more or less of said heater: and automatic means for intermittently controlling the supply through said shunt means in the operation of the machine.

1,416,100. MIXING-DEVICE AGITATOR. HENRI G. LEVY, San Francisco, Calif. Filed Mar. 14, 1921. Serial No. 451,937. 6 Claims. (Cl. 259—134.)

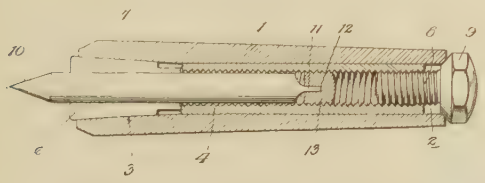
1. A mixing device comprising in combination a rotary mechanism and an agitator shaft connected at one end therewith, said shaft comprising a polygonal portion merging into a circular portion and a spherical member on the end of said shaft.

1,416,101. FRUIT FUNNEL. MARY L. LITTLE, Los Angeles, Calif. Filed Aug. 4, 1919. Serial No. 315,052. 1 Claim. (Cl. 226—30.)



In a filling funnel adapted to be placed over the mouth of a receptacle and tilted thereon, the combination of a funnel having a raised side thereon and a wire handle, and a tray for the funnel extending outwardly from the rim thereof, and having upraised sides, the wire handle having extended members forming a part of the upraised edge structure of said tray.

1,416,102. LATHE CENTER. RAYMOND F. LUSK, Columbus Grove, Ohio, assignor of one-half to Charles A. Gettman, Columbus Grove, Ohio. Filed Oct. 14, 1920. Serial No. 416,829. 3 Claims. (Cl. 82—33.)

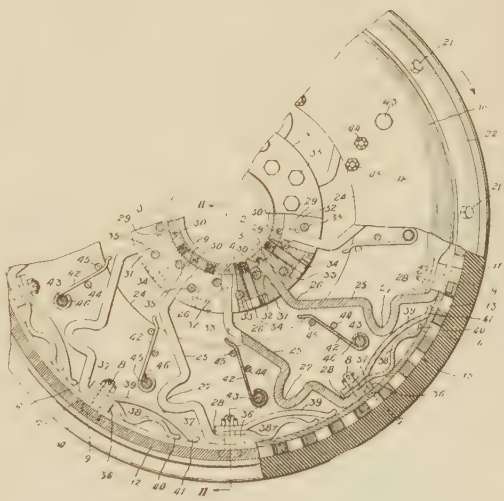


1. The combination of an outer casing, a gripping sleeve disposed axially in said casing and internally threaded at its inner end, a point held by and within said sleeve, and an adjusting screw inserted through the end of the casing to engage the inner end of the sleeve and secure the same.

1,416,103. METATARSAL-ARCH SUPPORT. JOHN J. MCCARTIN, Rockville, Conn. Filed May 16, 1921. Serial No. 469,992. 2 Claims. (Cl. 36—71.)

1. A device of the class described comprising an insole, a rigid convex plate shaped to conform to and restore the metatarsal arch, said plate including an integral tongue extending inwardly beneath its body portion and provided with a slot, a retaining bolt passing through said slot and insole, and a nut on the bolt for holding the plate in various adjusted positions.

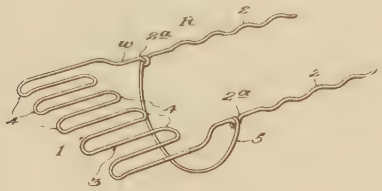
1,416,104. RESILIENT WHEEL. JAMES R. MCFALL, Cleveland, Ohio. Filed June 19, 1919. Serial No. 305,298. 13 Claims. (Cl. 152—28.)



1. A resilient wheel comprising a hub, a rim, resilient spokes attached to both hub and rim at points in a line at an angle to any particular radial plane, and such that the points of attachment of every spoke with the rim is ahead of its point of attachment to the hub with reference to the intended direction of rolling movement of the wheel, the ends of said spokes which are attached to said rim being furthermore bent to lie along a measure of the inner annular surface thereof continuing ahead in the same general direction as the inclination of said spokes. springs attached to said rim and adapted to be engaged

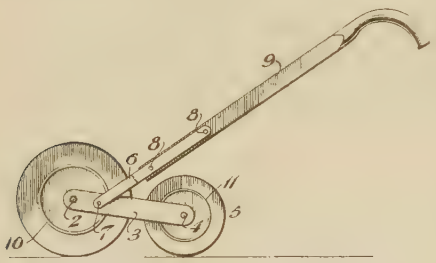
each by one of said spokes when the latter is partially deflected, and other springs adapted to be engaged each by one of said spokes when the latter is still further deflected.

1,416,105. WASTE RETAINER FOR JOURNAL BOXES. ROBERT GILMORE MCKEE, Peru, Ind. Filed Aug. 17, 1921. Serial No. 492,998. 1 Claim. (Cl. 64—64.)



A waste retainer for journal boxes including in combination with the journal box and the journal end of the axle therein, a horizontally disposed waste retaining frame of skeleton formation adapted to be located between the end of the axle and the opening in the journal box and having rearwardly extending arms, an anchoring strap depending from said arms and adapted to be positioned beneath the journal end of the axle to prevent the said retaining frame from working upwardly.

1,416,106. GRASS-EDGE TRIMMER. ALLEN MCWHORTER, Riverton, N. J. Filed Dec. 17, 1920. Serial No. 431,344. 4 Claims. (Cl. 97—28.)



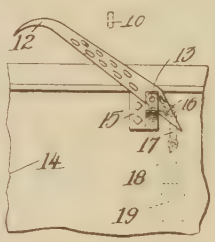
1. A grass edge trimmer consisting of a rotatable grass shearing blade, a frame on which the same is mounted, a handle connected with said frame, said blade having one face formed with a bevel extending to its periphery thereof and the opposite face flat to said periphery, said periphery being adapted to shear the grass overhanging the side of a walk and to form a groove between the walk and sod, and a trailer mounted on said frame rearward of the shearing blade in the same longitudinal direction thereof and consisting of a body having a comparatively narrow periphery adapted to enter and run in said groove and serve to guide said shearing blade true and steady in its work.

1,416,107. GAME BOARD. THOMAS MAHER, Mount Clemens, Mich. Filed Feb. 24, 1919. Serial No. 278,666. 1 Claim. (Cl. 46—61.)

A game board of rectangular form in plan view with a plane, unobstructed surface from end to end and provided with transverse rows of cup-shaped pockets in said surface adjacent one end of the board, the pockets of each row being in staggered relation to the pockets of adjacent rows, and each pocket being of semi-circular form in cross-section to receive balls rolled over said surface and to hold said balls with a major portion of the balls projecting above the plane of said surface of the board, marginal side and end walls for the board forming cushions, having an opening at each corner of the board and openings intermediate the ends of the side walls,

pockets for all of said openings in such marginal walls, and balls to be played upon the surface of the board into the pockets in said surface.

1,416,108. TRAIN-STOPPING DEVICE. CHARLES W. MARDEN, Portsmouth, N. H. Filed Mar. 13, 1920. Serial No. 365,594. 2 Claims. (Cl. 246—200.)



1. In a train stopping device, a contact arm actuated by a semaphore signal in danger position, said arm being substantially kite-shaped in plan and having a convex edge engaging said semaphore signal.

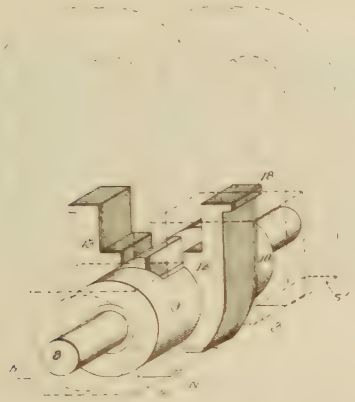
1,416,109. LENS. HARRY H. MARRIOTT, Kansas City, Mo. Filed June 11, 1920. Serial No. 388,392. 1 Claim. (Cl. 240—106.)

A sign-forming element comprising a body having a reduced neck defining a shoulder, the neck being provided with an outstanding crescent-shaped fin disposed parallel to the shoulder, and being equipped with outstanding lugs disposed approximately opposite to the ends of the fin, those surfaces of the lugs which are remote from the shoulder slanting toward the neck.

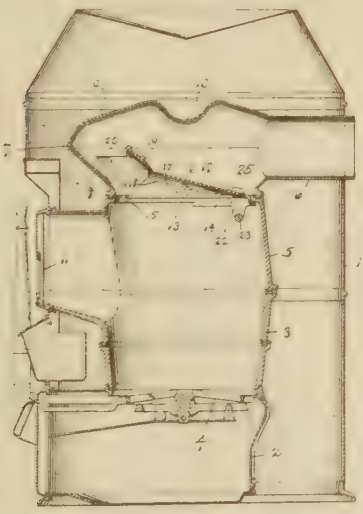
1,416,110. APPARATUS FOR GENERATING ELECTRIC CURRENTS. CHARLES THOMAS MASON, Sumter, S. C., assignor to Splitdorf Electrical Company, Newark, N. J., a Corporation of New Jersey. Filed June 8, 1918. Serial No. 238,934. 14 Claims. (Cl. 171—209.)

5. In a magneto, a base, a pair of apertured blocks supported thereby, a pair of pole pieces spaced apart non-

magnetic rivets passing through said pole pieces and embedded in said blocks, a rotor having a shaft and magnetizable portions in said apertured blocks adapted to receive flux from said blocks regardless of the position of said rotor and laterally adjustable bearings for the rotor carried by said blocks.



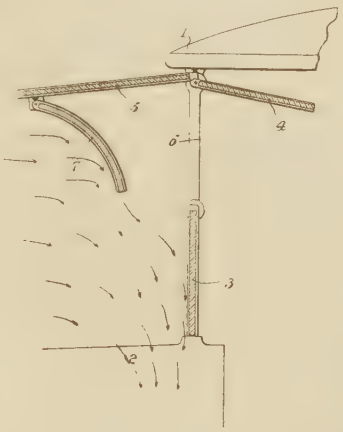
1,416,111. FURNACE. WILLIAM L. MERSFELDER, Detroit, Mich. Filed Oct. 15, 1921. Serial No. 508,042. 8 Claims. (Cl. 126—102.)



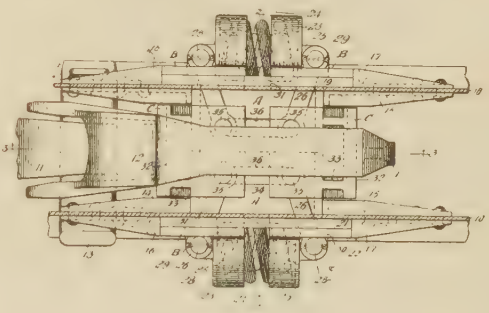
1. In a furnace, a radiator constituting the upper portion thereof, a smoke pipe connecting thereto, and a conoidal deflector mounted in the radiator to partially close the lower end thereof, the lower surface of the deflector being concave and inclining longitudinally upwardly away from the smoke pipe to cause hot gases to sweep against the top of the radiator.

1,416,112. WIND AND RAIN SHIELD. GEORGE F. MILES, New York, N. Y. Filed Oct. 28, 1920. Serial No. 420,084. 4 Claims. (Cl. 296—91.)

1. In a device of the character described, a transparent windshield including a lower section and a movable upper section arranged to project forwardly of the former, a deflector arranged in front of said lower section and suspended from and below the forward part of said upper section and inclining downwardly and rearwardly therefrom and toward said lower section and adjustable to terminate in a plane below and to the rear edge of the upper section and above and in front of the upper edge of said lower section to afford an open space for unobstructed vision.



1,416,113. RAILWAY FRICTION DRAFT RIGGING. WILLIAM H. MINER, Chazy, N. Y., and JOHN F. O'CONNOR, Chicago, Ill.; said O'Connor assignor to said Miner. Filed Dec. 22, 1919. Serial No. 346,653. 8 Claims. (Cl. 213—64.)

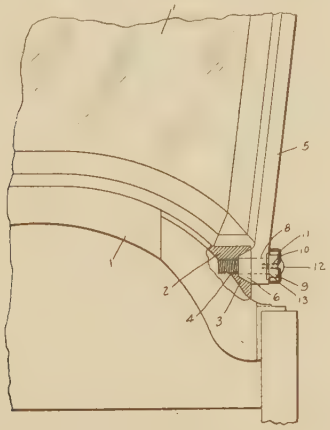


1. In a draft rigging, the combination with draft sills having stops thereon, a drawbar, and yoke-acting means; of stationary friction elements disposed outside of the draft sills; movable friction elements cooperable with said stationary friction elements; spring means located on the outer sides of the sills associated with said movable friction elements; and means actuated upon movement of the draw bar and yoke-acting means for moving said movable friction elements with respect to the stationary friction elements.

1,416,114. WINDSHIELD-SUPPORTING BRACKET. OTTO F. MÖLLER, Indianapolis, Ind., assignor to National Motor Car & Vehicle Corporation, Indianapolis, Ind., a Corporation of New York. Filed Apr. 24, 1920. Serial No. 376,352. 1 Claim. (Cl. 296—92.)

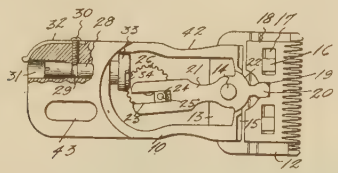
A supporting means comprising a bracket having a conical socket formed therein the inner end of which terminates in a threaded portion, a support, an integral cone shaped projection at the lower end of said support, said support and projection having an opening and a depression at the outer end of said opening, a washer fitting in said depression, a screw passing through said opening and washer and engaging the threaded portion of said socket, the head of said screw projecting beyond the outer face of said support, and having a thread-

opening, a cup shaped cover fitting over the projecting head of said screw and having its flange edge resting against the face of said support, and a second screw pass-



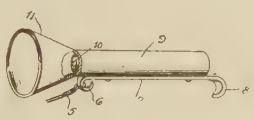
ing centrally through said cover and into the threaded opening in said screw for securing the cover member in position.

1,416,115. HAIR CLIPPER. COLLIER MONROE, Waco, Tex. Filed May 16, 1921. Serial No. 469,842. 3 Claims. (Cl. 30—1.)



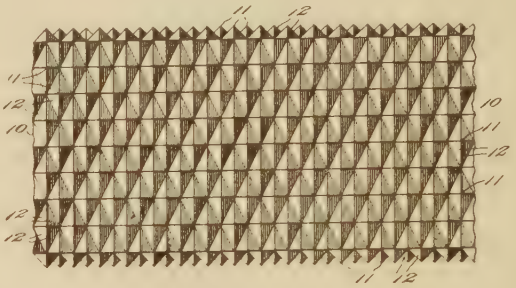
1. In a hair clipping device, a casing, a cutter blade carried by the forward end of the casing, a reciprocating cutter blade coacting with the first named cutter blade, a gear arranged within the casing, a lever pivotally mounted within the casing to swing in a plane approximately parallel with the plane of rotation of the gear, said lever having its forward end connected with the reciprocating cutter and its rear end extending over one side of the gear and terminating at a point inwardly of the rear portion of the gear, means connecting the lever and gear, a gear-disk mounted within the casing rearwardly of the gear and having its plane of rotation at substantially a right angle to the plane of rotation of said gear, said gear-disk being provided upon its forward side with a curved drive rib for engaging the teeth of said gear, said gear-disk extending laterally beyond the gear and being free from engagement with the rear end of said lever, and a shaft carrying the gear-disk and journaled in the rear portion of the casing.

1,416,116. TELEPHONE ATTACHMENT FOR MOTOR VEHICLES. JOHN ARTHUR MOREN, Webster, Wis. Filed Dec. 27, 1920. Serial No. 433,201. 1 Claim. (Cl. 179—29.)



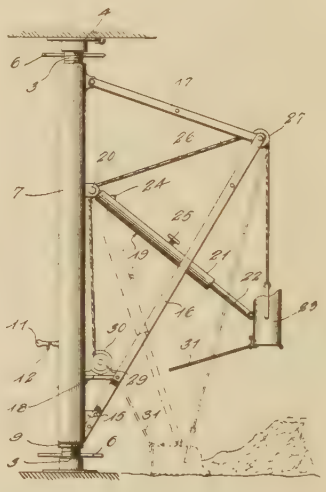
In combination with a portable telephone set for tapping into a telephone line, lead wires one constituting a ground wire and the other a line connecting wire, a tube provided at one end with a pole centering funnel, and a longitudnally extending contact strip secured to the tube at one side thereof, said strip being provided at one end with an eye accommodating the line connecting wire and at its opposite end with a hook to engage over a line wire.

1,416,117. REENFORCING BAR FOR CEMENTITIOUS MATERIALS. HERBERT H. MUIR, Western Springs, Ill. Filed May 17, 1919. Serial No. 297,791. 1 Claim. (Cl. 72—111.)



A reinforcement for cementitious material comprising a bar having its exterior surface composed of interfitting pyramidal projections with faces of equal area adapted to offer uniform resistance to displacement in all directions, the base of each interfitting pyramidal projection being of substantially diamond shape and having each of its edges coincident with and common to the corresponding contiguous edge of the base of the adjacent interfitting pyramidal projection, thereby, forming transverse and longitudinal rows of staggered projections adapted to eliminate transversely extending weakening grooves and recesses.

1,416,118. LOADER. GUSTAV CHRISTIAN NUESSE, Hibbing, Minn. Filed Apr. 25, 1921. Serial No. 464,071. 3 Claims. (Cl. 214—132.)

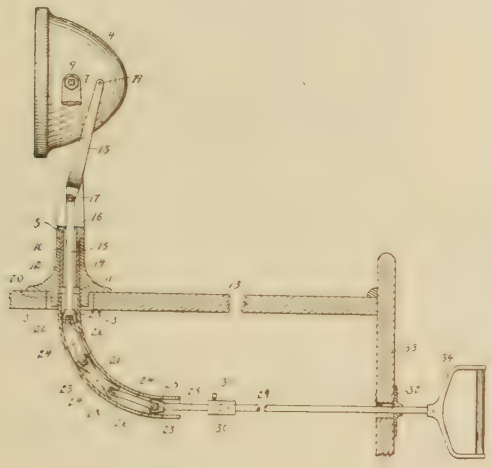


1. A device of the class described comprising a vertical standard having clamping screws at its upper and lower ends, a vertical sleeve rotatably surrounding said standard, a handle extending from said sleeve for turning the same, a load-raising boom pivoted to said sleeve, a frame structure supported by said sleeve and carrying cable guiding means, a hoisting cable for said boom trained over said cable guiding means, a motor support carried by said frame structure and sleeve, a motor mounted on said support, and a motor driven drum upon which said hoisting cable is wound.

1,416,119. DIRIGIBLE LIGHT PROJECTOR. MALCOLM P. NICHOLS, New Haven, Conn. Filed Jan. 2, 1920. Serial No. 348,801. 3 Claims. (Cl. 240—7.)

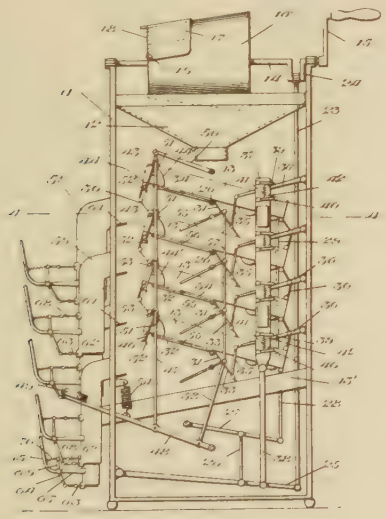
1. In a dirigible light-projector, the combination with the head thereof, of mountings for the said head designed

to permit the same to swing in diverse planes, a rotatable and reciprocal controller, a rotary and reciprocal flexible shaft connecting the said controller and the said head and



whose opposite ends are rigidly supported for rotation and reciprocation in divergent planes, whereby the movements of the controller are transmitted to the head and means for preventing the buckling of the flexible-shaft.

1,416,120. COIN SORTER. WILLIAM L. PAUL, Beaufort, N. C. Filed Feb. 19, 1921. Serial No. 446,337. 21 Claims. (Cl. 133—8.)



1. A sorter comprising a rocking tray having sorting openings at opposite ends, and means operable for lifting articles out of said openings at each end of the tray when it is in raised position.

1,416,121. PRIMER FOR SMALL-ARMS AMMUNITION. HARLEY T. PECK, Lebanon, Ohio, assignor to The Peters Cartridge Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 20, 1921. Serial No. 486,223. 8 Claims. (Cl. 52—4.)

4. A priming composition containing trinitro-resorcinol, a sulpho-cyanate, potassium chlorate and normal lead trinitro-resorcinol.

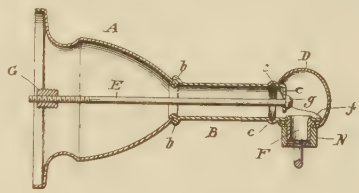
1,416,122. PRIMER FOR SMALL-ARMS AMMUNITION. HARLEY T. PECK, Lebanon, Ohio, assignor to The Peters Cartridge Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 20, 1921. Serial No. 486,224. 5 Claims. (Cl. 52—4.)

1. A priming composition containing tri-nitro-resorcinol, a sulpho-cyanate, an oxidizing agent and di-plumbic di-tri-nitro-resorcinol.

1,416,123. PRIMER FOR SMALL-ARMS AMMUNITION. HARLEY T. PECK, Lebanon, Ohio, assignor to The Peters Cartridge Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 20, 1921. Serial No. 486,225. 4 Claims. (Cl. 52—3.)

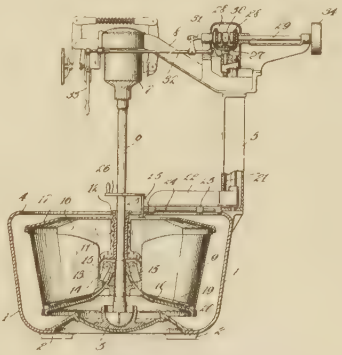
1. A priming composition containing tri-nitro-resorcinol, sulpho-cyanate, an oxidizing agent and mercury fulminate.

1,416,124. ELECTRIC-LIGHT FIXTURE. PAUL J. PFEIFER, Cleveland, Ohio, assignor to The Virden Company, Cleveland, Ohio. Filed July 11, 1921. Serial No. 483,952. 7 Claims. (Cl. 240—73.)



1. An electric light bracket comprising a hollow arm formed at its outer end with a bead, a nipple carrying extension and an inwardly extending lug engaging a fastening rod; and a cap seated against said bead and concealing said lug.

1,416,125. CENTRIFUGAL EXTRACTOR. SYDNEY PRESTWICH, Wilmington, Del., assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Nov. 6, 1919. Serial No. 336,198. 13 Claims. (Cl. 210—74.)

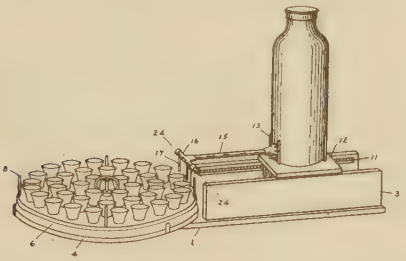


1. An extractor, comprising a frame including a stationary curb, and a rotating basket therein, said basket including a series of individual work holding receptacles movable as a unit to a position outside of said curb, and each of said receptacles being movable outwardly relative to the axis of rotation to unloading position.

1,416,126. CHURCH COMMUNION TRAY AND FILLING DEVICE. WILLIAM J. RAINEY, Philadelphia, Pa. Filed Nov. 12, 1919. Serial No. 337,580. 2 Claims. (Cl. 226—94.)

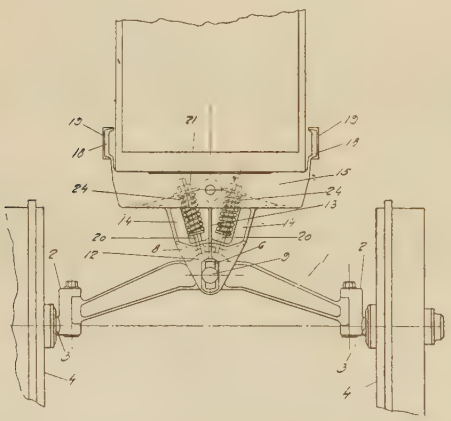
1. A church communion tray and filling device comprising a base, a tray adapted to be placed upon a portion

of the base, said base having another portion extending beyond the said portion carrying the tray, panels secured in a vertical position upon the last mentioned portion of the base and forming supports extending in parallel relation to each other, a carriage slidably mounted upon the said panels, a container adapted to rest upon the upper



surface of the carriage and freely removable therefrom, an outlet pipe extending from the side wall of the container and projecting over the edge of the carriage and over the tray, a valve upon the said outlet pipe and means upon the carriage for engaging the container and holding it in alignment with the tray.

1,416,127. TRACTOR. ALFRED M. SCHLAGEL, Montgomery County, near Dayton, Ohio, assignor to Rial T. Parrish, Dayton, Ohio. Filed May 9, 1921. Serial No. 467,889. 3 Claims. (Cl. 280—112.)

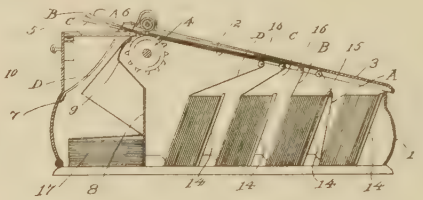


1. In a device of the type described, the combination with an axle, of a supporting bracket vertically movable in proximity to the middle portion of said axle, a segmental projection on the top middle portion of said axle, and resilient means resting upon the periphery of said segmental projection and movable laterally over it, to support said bracket.

1,416,128. PROCESS OF TREATING NUT KERNELS TO PRODUCE FOOD INGREDIENTS. HOWARD R. SCOTT and LILLIAN E. SCOTT, San Jose, Calif. Filed July 1, 1920. Serial No. 393,381. 1 Claim. (Cl. 99—11.)

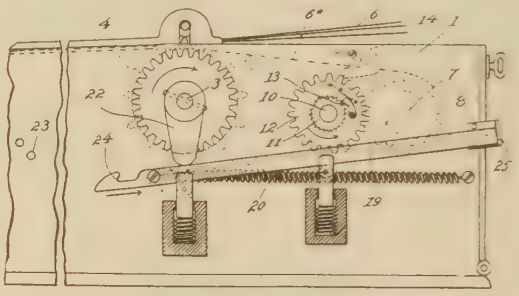
The herein described process for treating prune, peach and apricot kernels to realize a food ingredient, which consists in first subjecting the kernels to the presence of water to effect the decomposition of the amygdalin content by the action of the existing ferment emulsin, removing by filtration the benzaldehyde and hydrocyanic acid products which are present in the water solution, distilling the filtrate separately to recover the benzaldehyde and hydrocyanic acid products and washing the residue of wet kernel meal to remove the soluble products remaining from the first treatment.

1,416,129. AUTOGRAPHIC REGISTER. JOHN Q. SHERMAN, Dayton, Ohio. Filed Apr. 10, 1919. Serial No. 289,049. 3 Claims. (Cl. 281—14.)



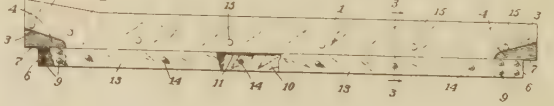
1. In an autographic register, a means for taking a record of the entries made on the duplicate strips thereof, upon a strip of paper folded in reverse folds of sections corresponding to the sections of the duplicate strips comprising a feeding device and a receptacle in the casing provided with a constricted mouth to receive the said strip, and of a size to permit it to fall naturally into a bundle, of the original form.

1,416,130. AUTOGRAPHIC REGISTER. JOHN Q. SHERMAN, Dayton, Ohio. Filed May 10, 1919. Serial No. 296,099. 9 Claims. (Cl. 282—16.)



1. In an autographic register, the combination of a feeding device for feeding a plurality of strips of paper, including a record strip to be retained in the machine simultaneously in one direction, a means for positively accumulating the record strip and an operating device therefor adapted to operate automatically during the stationary period of the feeding device.

1,416,131. CENTER REST BAR FOR BOILER GRATES. LEE HOWARD SIMMONS, Goldsboro, N. C., assignor to Simmons Manufacturing Company, Wilmington, N. C., a Corporation of North Carolina. Filed Mar. 21, 1921. Serial No. 454,135. 5 Claims. (Cl. 126—167.)

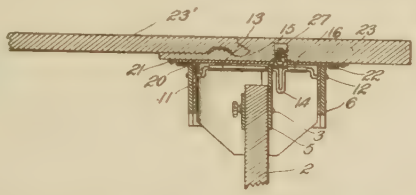


1. A center rest bar comprising a main body portion of cast iron and having its opposite ends undercut, steel supporting end members placed in the undercut portions, and steel reinforcing strips secured to the steel ends and to the outer opposite sides of the main body portion.

1,416,132. MOVABLE-CHAIR DESK. WILLIAM A. SMILEY, Kansas City, Mo., assignor to The Inner Braced Seating Company, Kansas City, Mo., a Corporation of Missouri. Filed Feb. 17, 1921. Serial No. 445,849. 4 Claims. (Cl. 45—110.)

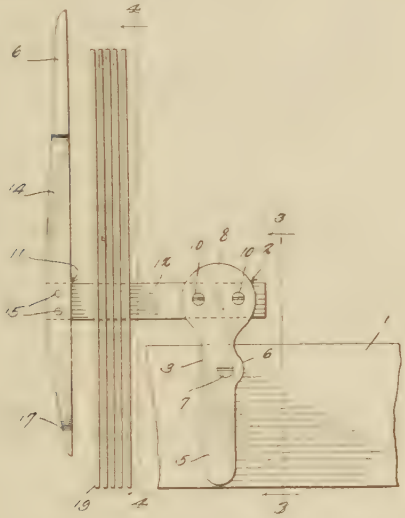
1. In a desk, a base having sides provided with slots curved in the same direction, a top support hinged thereto and having slots curved in the direction opposite to the

curvature of the first named slots, the slots in the base support having notches, and a rock shaft pivotally



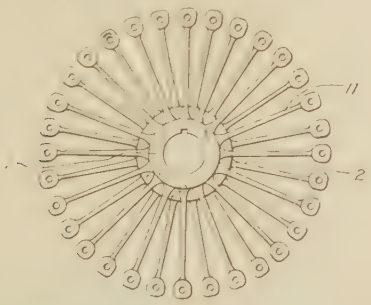
mounted on the base and having crank arms extending through the slots and engageable with the notches.

1,416,133. TAPE-SELVAGE STOP-MOTION STAND. JAMES ALEXANDER SORRELLS, Gainesville, Ga. Filed Jan. 10, 1922. Serial No. 528,196. 2 Claims. (Cl. 139—92.)



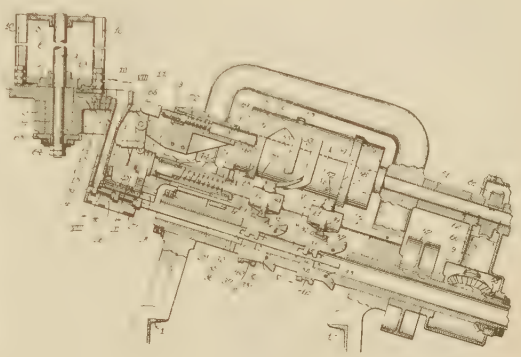
1. A device of the class described, comprising a pedestal, and a bracket including a shank and a head disposed transversely of the shank, the shank being assembled with the pedestal and constituting a drop wire carrier.

1,416,134. FLEXIBLE COUPLING. CLARENCE W. SPICER, Plainfield, N. J., assignor to Spicer Mfg. Corporation, South Plainfield, N. J., a Corporation of Virginia. Filed Jan. 5, 1921. Serial No. 435,173. 6 Claims. (Cl. 64—96.)



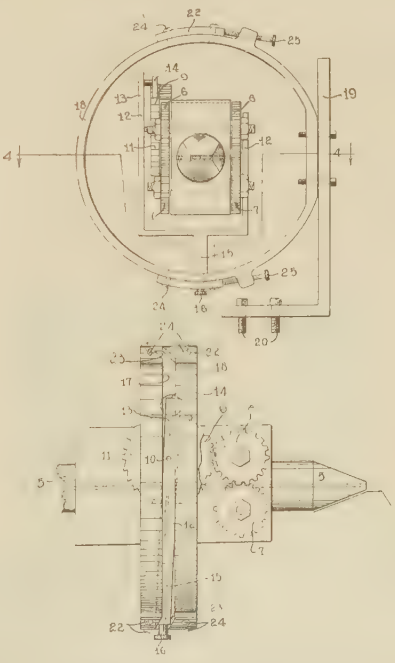
6. A flexible coupling comprising in combination two hub members, each of said members having a plurality of circumferential rows of flexible arms, the inner ends of the arms of one row being in a different plane transverse to the axis of a given member than the inner ends of any other row and staggered with respect to the adjacent row, and the outer ends of the arms of one member being connected to arms in homologous rows on the other member, and all arms having the same radial extension from the axis when the axes of the two hub members are in alinement.

1,416,135. NUT-TAPPING MACHINE. PETER N. SPURK and ROMAN STRAMITZ, Detroit, Mich. Filed Dec. 15, 1919. Serial No. 344,885. 7 Claims. (Cl. 10—133.)



3. In a machine of the character described, the combination of a horizontally disposed table, a hopper for nut blanks supported by the table, a reciprocable feed slide for feeding nut blanks one at a time from the hopper, a reciprocable head supported at an inclination to the horizontal plane of the table and slide and provided with a channel to receive and hold nut blanks, a chute connecting the slide and head to deliver nut blanks to the channel of the head, a tap supported within the channel to engage and tap the nut blanks, a rod to form a continuation of the tap, a tubular shaft in longitudinal alignment with the tap and into which the rod extends, gripping members arranged in pairs and pivotally attached to the tubular shaft to engage and grip the rod, means for operating each pair of gripping members in timed relation to the other pair, and means for reciprocating the slide and head in timed relation to the operation of the means for operating the gripping members.

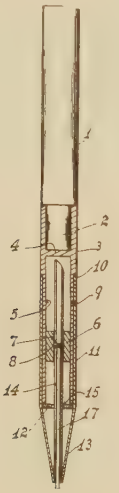
1,416,136. TACK MACHINE. EDWARD O. STARKA, Chicago, Ill. Filed Jan. 3, 1921. Serial No. 434,594. 8 Claims. (Cl. 10—172.)



1. A tack machine comprising an oscillatory guide; feeding means on said guide; a cam member; and means,

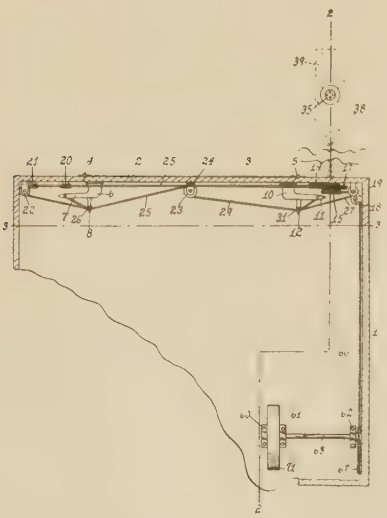
attached to said cam member and adapted to be oscillated thereby for operating said feeding means, substantially as described.

1,416,137. PENCIL. CONRAD STEHL, Oakland, Calif. Filed May 16, 1921. Serial No. 470,196. 2 Claims. (Cl. 120—18.)



2. In a refillable pencil, a tube threaded internally from its lower end upwardly and formed with a reduced portion, extending from its lower end, and with an annular external shoulder at the upper end of said reduced portion, a nut in said tube engaging its internal thread, said nut having an axial bore, a lug on said nut extending into its bore, a rotatable sleeve mounted on the reduced portion of said tube with its upper end engaging said annular shoulder, a lead tube in said sleeve secured in the lower end of said sleeve and extending through the bore of said nut, said lead tube being provided with a longitudinal slot into which said lug extends over the upper end of the lead in said lead tube.

1,416,138. DOOR OPENING AND CLOSING APPARATUS. PAUL K. STROCHALEN, Oakland, Calif. Filed Nov. 15, 1920. Serial No. 424,079. 2 Claims. (Cl. 268—9.)

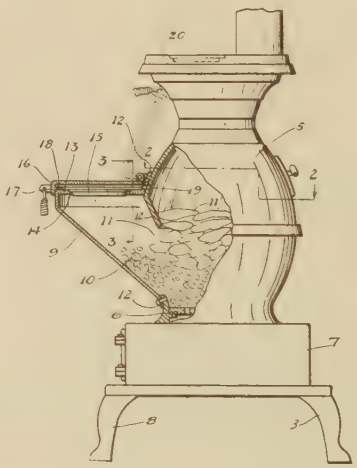


1. A door opening and closing apparatus including a casing embedded in the ground in front of the door, a vertical shaft journaled in said casing, a gear and a disk secured on said shaft, the upper face of said disk being flush with the surface of the ground, a pair of racks slidably mounted in said casing meshing with said gear at opposite sides thereof, a pulley, a rope passing around said pulley and connected at its ends to said racks respectively, and means for engaging and turning said disk to rotate said pulley, and means actuated by said pulley for opening and closing said door.

1,416,139. CARRYING CASE. ADELBERT A. THOMAS, Chicago, Ill., assignor to Chicago Case Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 22, 1921. Serial No. 502,404. 3 Claims. (Cl. 190—17.)

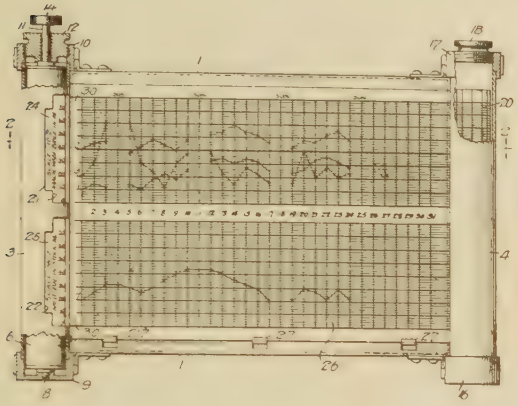
1. In a carrying case, the combination of an enclosing case, a series of superposed trays in the enclosing case, and pairs of parallel links between contiguous trays having their lower ends pivoted to the ends of one tray adjacent the upper margin thereof and their upper ends pivoted to the ends of the contiguous tray adjacent its lower margin so that the links will not overlap one another.

1,416,140. HEATING STOVE. ADAM P. THOMASSON, Chicago, Ill. Filed Oct. 31, 1921. Serial No. 511,557. 3 Claims. (Cl. 126—58.)



1. In a heating stove, the combination with the combustion chamber and fire pot thereof, of an opening in said fire pot; means for feeding moist ashes containing unburnt particles of combustion to said fire pot, a hopper fixedly secured to said stove and surrounding said opening; an inner closure member for the opening of said hopper; an outer closure member hingedly mounted on said apparatus and supported in spaced relation with said first mentioned closure member; and means for permitting the passage of gas into said combustion chamber from the space between said outer and inner closure members, substantially as described.

1,416,141. CHART HOLDER. JACOB O. TRAUTWEIN, Chicago, Ill. Filed Mar. 17, 1920. Serial No. 366,692. 2 Claims. (Cl. 235—86.)



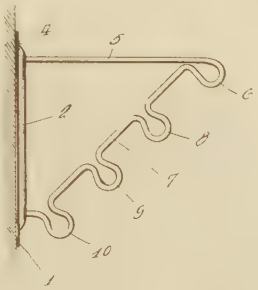
1. In a computing device, the combination of a chart having a plurality of independent curves, with a plurality of scales, adjustable at will into cooperative relation with said chart, each of said scales cooperating with said chart in a predetermined different factorial relation.

1,416,142. FISHING-SNELL CARRIER. CHAUNCEY B. TRUMBLE, Hartford, Conn. Filed Oct. 17, 1921. Serial No. 508,235. 3 Claims. (Cl. 43—32.)

1. A fishing-snell-carrier involving a longitudinally-tapered body having means to receive the hooks of the snells, and an annulus slidable on the body, for holding the snells removably thereagainst.

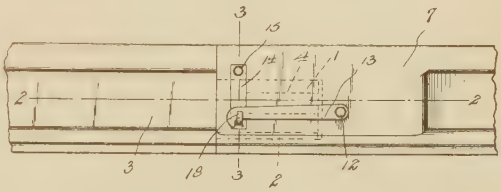
1,416,143. SUIT HANGER. WILLIAM F. WAGNER, Washington, D. C. Filed Oct. 17, 1921. Serial No. 508,104. 1 Claim. (Cl. 45—13.)

A device of the class described comprising a stamped metal base, having a central longitudinal rib pressed therefrom; and a hanger supporting member formed of a length of wire bent to provide two parallel portions, one being of a greater length than the other, extending from the base at opposite ends thereof and at right angles thereto, and a third connecting portion, joining the outer ends of the said two end portions, the said third portion



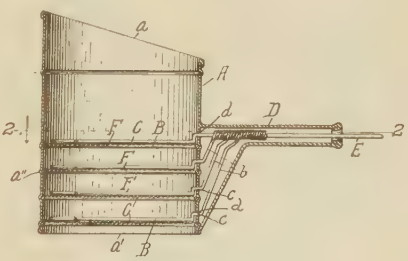
being bent upon itself at spaced intervals to form outwardly projecting loops to support the hangers thereon.

1,416,144. RAIL JOINT. SEBA R. WEEKS and CLARENCE C. BROWN, Campbell, Calif. Filed Feb. 24, 1922. Serial No. 538,853. 1 Claim. (Cl. 238—231.)



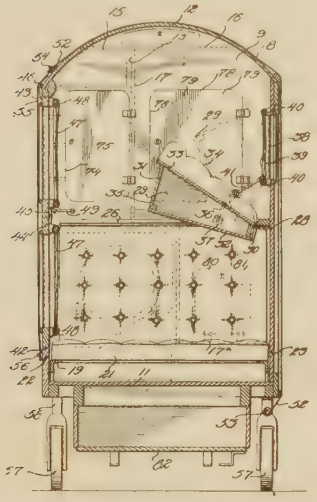
A rail joint comprising two rail ends, one rail end having an extended reduced portion and a lug at one side of said portion, and the other rail end having a socket and a sub-socket to receive said reduced portion and lug and also having a transverse opening intersecting said sub-socket, the said lug having a beveled forward and a square rear end, in combination with a key in said transverse opening and engaged with said lug, said key having a transverse opening in its upper portion and a hook on the outer side of its lower portion, a headed bolt extending loosely through said opening of the key and connected to the second-named rail end, a spring on the bolt and between the head thereof and the key, and a gravitational latch pivotally connected to said rail end and seated in said hook.

1,416,145. SIFTER. CARRIE WERNER, St. Louis, Mo. Filed Sept. 19, 1921. Serial No. 501,641. 3 Claims. (Cl. 83—60.)



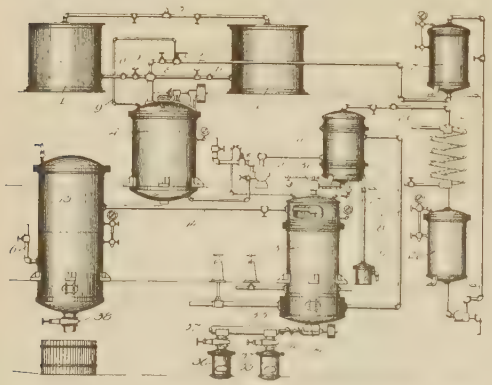
1. A sifter comprising a container a hollow handle connected thereto, a plurality of sieves located therein and spaced at intervals apart, an agitator located on the top of each sieve, said agitators all being connected to a single handle passing through and operating in said hollow handle for manipulating said agitators simultaneously, substantially as specified.

1,416,146. PORTABLE HOUSING DEVICE. JOHN S. WHITE, Wilmington, Del., assignor to Lilly B. Smith, Atlanta, Ga. Filed Nov. 26, 1920. Serial No. 426,397. 7 Claims. (Cl. 20—2.)



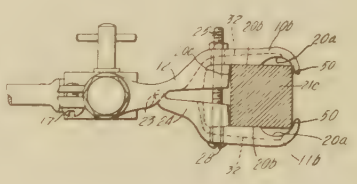
1. A portable housing device including a body portion providing a chamber; a bed bottom therein; a box hinged adjacent the back of said body portion and adapted to be swung from a position partly covering the bed bottom into a position spaced above the bed bottom, said box having an opening in its bottom; a door for closing said opening; and means for locking said door to prevent it from opening downwardly when the box is in said first position; substantially as described.

1,416,147. METHOD OF AND APPARATUS FOR RECOVERING COPPER. HENRY M. WILCOX, Chicago, Ill., assignor to Frederic C. L. D'Aix, Chicago, Ill. Filed July 14, 1917. Serial No. 180,509. 6 Claims. (Cl. 75—18.)



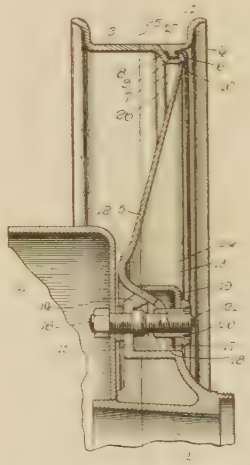
1. The continuous method of recovering copper from a copper sulphate solution which consists in continuously withdrawing spent liquid from the top of the precipitating tank or boiler, continuously introducing into the bottom of the tank or boiler quantities of copper sulphate solution in amounts sufficient to compensate for the withdrawal at the top of the tank or boiler, and feeding the precipitated copper out of the bottom of the tank or boiler and removing it without emptying the boiler of the liquid contained therein.

1,416,148. CLAMP FOR SPOTLIGHT BRACKETS AND THE LIKE. RALPH E. WILLIAMS, Los Angeles, Calif. Filed Aug. 8, 1919. Serial No. 316,055. 4 Claims. (Cl. 248—30.)



1. A clamp of the character described embodying two clamp members having jaw portions and engaging portions said jaw portions having corresponding curved surfaces and flat surfaces, said engaging portions being removed from the jaw portions and forming a single point of contact between the clamp members, and clamping means in connection with the clamp members between the engaging portion and the jaw portions.

1,416,149. VEHICLE DISK WHEEL. WILLIAM ERASTUS WILLIAMS, Chicago, Ill. Filed July 26, 1920. Serial No. 398,928. 6 Claims. (Cl. 301—63.)

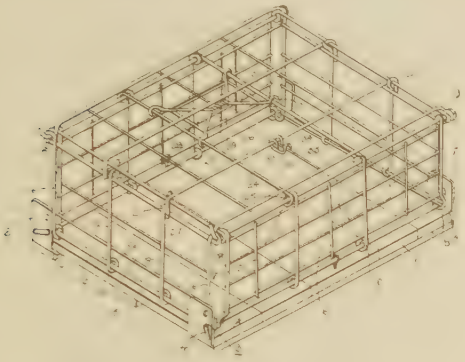


1. The combination with a hub barrel having a flange provided with an annular, inclined, peripheral bearing surface, of a wheel disk provided with a laterally inclined portion bearing on said surface and with a centrally perforated portion extending obliquely outward with respect to the plane of the wheel from said surface to said barrel, and a clamping ring resting against the body of said disk only near its contact with said surface and against the hub in front of said perforated portion.

1,416,150. COLLAPSIBLE CRATE. ANDREW WINTER, Covington, Ky. Filed Oct. 14, 1920. Serial No. 416,827. 11 Claims. (Cl. 220—6.)

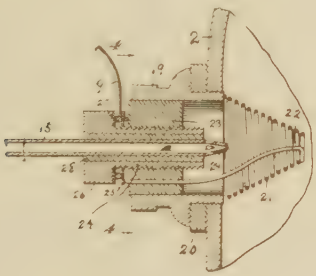
1. In a collapsible crate, a bottom, supports attached thereto, detachable side hinge-rods mounted on said supports, side gratings pivotally mounted on said side hinge-

rods, detachable end hinge-rods mounted on said side hinge-rods, end gratings pivotally mounted on said end



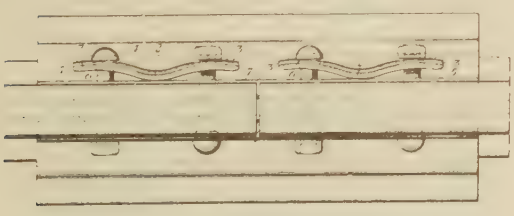
hinge-rods, a top grating and means for detachably connecting said sides, ends and top.

1,416,151. VAPORIZER. CARLOS WITTENMYER, Detroit, Mich. Filed Dec. 21, 1921. Serial No. 523,898. 2 Claims. (Cl. 219—38.)



1. A vaporizer comprising a hollow base, an insulating core therein, a conical heating coil mounted on the base and projecting therefrom and having its outer end bent back to extend through said core, a nozzle mounted in said core and adapted to spray a liquid onto the coil, means to convey a liquid to the nozzle, and an electric conductor connected to the coil.

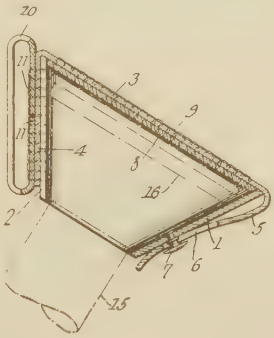
1,416,152. RAIL SPRING. EMANUEL WOODINGS, Verona, Pa., assignor to Verona Tool Works, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 7, 1922. Serial No. 527,793. 9 Claims. (Cl. 238—259.)



1. A rail joint spring having a compound longitudinal curvature with the greatest curvature in the middle portion, substantially as described.

1,416,153. FLASH-LIGHT HOLSTER. JOHN E. WRIGHT, Pleasant Lake, Ind. Filed Apr. 7, 1921. Serial No. 459,244. 1 Claim. (Cl. 224—5.)

A flash lamp holster comprising a body having meeting ends; a loop; a hinge strip extended between the loop, on the one hand, and the meeting ends of the body, on the other hand; means for connecting the loop, the hinge strip



and the meeting ends of the body; and a lid for the body, the lid being mounted on the hinge strip.
